18.10.5.1.4.1 Variation 1: Synthesis of Thiocarbonate O,O-Esters of Sugars and Nucleosides 852
18.10.5.1.5 Methods 5: Miscellaneous Methods 853
18.10.5.2 Applications of Product Subclass 5 in Organic Synthesis 854
18.10.5.2.1 Method 1: Intramolecular Elimination 855
18.10.5.2.2 Method 2: Application to Selected Organic Syntheses 856
18.10.6 Product Subclass 6: Dithiocarbonate O,S-Esters ........................................ 858
18.10.6.1 Synthesis of Product Subclass 6 859
18.10.6.1.1 Method 1: From Carbon Disulfide, Alcohols, and Alkyl Halides 859
18.10.6.1.1.1 Variation 1: From Carbon Disulfide and Complex Hydroxy Compounds 861
18.10.6.1.1.2 Variation 2: Insertion Reactions of Carbon Disulfide 864
18.10.6.1.2 Method 2: From Sodium or Potassium O-Alkyl Dithiocarbonates, Alkyl Halides (or Sulfonates), and Arenomediazonium Salts 865
18.10.6.1.2.2 Variation 2: Synthesis of Arenethiols By Diazotization of Aromatic Amines 867
18.10.6.1.3 Method 3: From Thiophosgene, Chlorothioformate O-Esters, Chlorodithioformates, or 1,1'-Thiocarbonyldimidazole 869
18.10.6.1.4 Method 4: From Organometallic Reagents and Sodium or Potassium O-Alkyl Dithiocarbonates 871
Method 5: Photochemical and Radical-Initiated Addition of Dithiocarbonates O,S-Esters to Terminal Alkenes

Applications of Product Subclass 6 in Organic Synthesis

Product Subclass 7: Trithiocarbonates

Synthesis of Product Subclass 7

Method 1: From Carbon Disulfide and Hydrogen Sulfide or Thiol}s with Alkyl Halides

Variation 1: Cyclization of Oxiranes, Thiiranes, and Acetylenic Compounds with Carbon Disulfide

Variation 2: Poly-1,3-dithiole-2-thione

Method 2: From Salts of Trithiocarbonic Acid and Monoesters of Trithiocarbonic Acid

Method 3: From Thiophosgene or 1,1'-Thiocarbonyldiimidazole

Method 4: From Chlorodithioformates

Methods 5: Miscellaneous Methods

Variation 1: Thiocarbonyl as Functional Group

Applications of Product Subclass 7 in Organic Synthesis

Method 1: From 2-Thioxo-1,3-dithiole-4,5-dithiolate and Its Zinc Complex

Product Subclass 8: Thioureas

Synthesis of Product Subclass 8

Method 1: From Urea

Method 2: From Thiophosgene or Carbon Disulfide

Method 3: From Isothiocyanates

Method 4: From Thiocarbamoyl Chloride

Methods 5: Miscellaneous Methods

Product Subclass 9: Thiosemicarbazides

Synthesis of Product Subclass 9

Method 1: Using Isothiocyanates and Hydrazine Derivatives

Variation 1: [3 + 2]-Cycloaddition Reactions

Variation 2: Intramolecular Cyclization Reactions

Method 2: From Compounds Containing the Thiocarbamoyl Moiety

Methods 3: Miscellaneous Methods

Applications of Product Subclass 9 in Organic Synthesis

Method 1: Cyclization of 1-Acylthiosemicarbazides

Product Subclass 10: Thiocarbonohydrazides

Synthesis of Product Subclass 10

Method 1: From Carbon Disulfide

Method 2: From Thiophosgene
18.10.11 Product Subclass 11: Thiocarbamate O-Esters

18.10.11.1 Synthesis of Product Subclass 11

18.10.11.1.1 Method 1: From Isothiocyanates

18.10.11.1.2 Method 2: From Chlorothioformate O-Esters

18.10.11.1.3 Method 3: From N,N-Disubstituted Thiocarbamoyl Chlorides

18.10.11.1.4 Method 4: From 1,1’-Thiocarbonyldiimidazole and Related Compounds

18.10.11.1.5 Method 5: From Amino Alcohols and Carbon Disulfide and Related Methods

18.10.12 Product Subclass 12: Dithiocarbamic Acid Esters

18.10.12.1 Synthesis of Product Subclass 12

18.10.12.1.1 Method 1: From Sodium Dithiocarbamates

18.10.12.1.2 Method 2: From Carbon Disulfide

18.10.12.1.3 Method 3: From Isothiocyanates

18.10.12.1.4 Method 4: From Thiocarbamoyl Chlorides

18.10.12.1.5 Method 5: From Thiuram Disulfides

18.10.13 Product Subclass 13: Thiocarbamoyl Chlorides

18.10.13.1 Synthesis of Product Subclass 13

18.10.13.1.1 Method 1: From Thiophosgene and Primary or Secondary Amines

18.10.13.1.2 Method 2: From Thiuram Disulfides

18.10.13.1.3 Method 3: From Thioformamides

18.10.14 Product Subclass 14: Phosphinecarbothioamides

18.10.14.1 Synthesis of Product Subclass 14

18.10.14.1.1 Method 1: From Isothiocyanates

18.10.14.1.2 Method 2: From Halothioamides

18.10.14.1.3 Method 3: Thiophosphorylidithioformate

18.10.14.1.4 Methods 4: Miscellaneous Methods

18.11 Product Class 11: Seleno- and Tellurocarbonic Acids and Derivatives

J. Schmidt and L. A. Silks

18.11.1 Product Subclass 1: Selenocarbonyl Dihalides

18.11.1.1 Synthesis of Product Subclass 1

18.11.1.1.1 Method 1: Selenocarbonyl Difluoride from Bis(trifluoromethyl)selenyl)mercury(II)

18.11.1.1.2 Method 2: Selenocarbonyl Difluoride from Trimethyl[(trifluoromethyl)selenyl]stannane

18.11.1.1.3 Method 3: Selenocarbonyl Difluoride by Controlled Decomposition of Tris[(trifluoromethyl)selenyl]borane

18.11.1.1.4 Method 4: Selenocarbonyl Dichloride by Vacuum Pyrolysis of 2,2,4,4-Tetrachloro-1,3-diselenetane
18.11.2 **Product Subclass 2: Selenocarbonates** ........................................ 973

18.11.2.1 Synthesis of Product Subclass 2 .................................................. 973

18.11.2.1.1 Method 1: From Viehe’s Salt and Sodium Hydrogen Selenide .... 973

18.11.2.1.2 Method 2: Selenocarbonyls from the Reaction of Acetal Derivatives with Bis(dimethylaluminum) Selenide .................................................. 974

18.11.2.1.3 Method 3: Selenocarbonates from Carbon Diselenide ............... 975

18.11.2.1.4 Method 4: Selenocarbonates from Substitution Reactions with Sodium Hydrogen Selenide and Hydrogen Selenide ...................... 975

18.11.3 **Product Subclass 3: Selenocarbamates** ........................................ 976

18.11.3.1 Synthesis of Product Subclass 3 .................................................. 977

18.11.3.1.1 Method 1: Synthesis of Cyclic Selenocarbamates from Metalation Reactions ................................................................. 977

18.11.3.1.2 Method 2: From Addition Reactions to Isoselenocyanates .......... 979

18.11.3.1.3 Method 3: By Addition of Alkoxides to Isoselenocyanates .......... 979

18.11.3.1.4 Method 4: Substitution Reactions with Sodium Hydrogen Selenide or Hydrogen Selenide ......................................................... 980

18.11.3.1.5 Method 5: Addition of Carbon Diselenide to 1,2-Amino Alcohols .. 981

18.11.3.1.6 Method 6: From Lithium Aluminum Hydride Hydrodiselenide and Viehe’s Salt ................................................................. 982

18.11.3.1.7 Method 7: Te-Alkyl Selenotellurocarbamates from Organoselenocyanates ................................................................. 983

18.11.3.2 Applications of Product Subclass 3 in Organic Synthesis ................. 984

18.11.3.2.1 Method 1: As an Analytical Tool for the Discrimination of Remotely Disposed Chiral Centers .............................................. 984

18.11.3.2.2 Method 2: Stereoselective C—C Bond Formation via Chiral Selone Promoted Aldol Reactions .............................................. 986

18.11.4 **Product Subclass 4: Selenosemicarbazides and Selenosemicarbazones** .......................... 986

18.11.4.1 Synthesis of Product Subclass 4 .................................................. 986

18.11.4.1.1 Method 1: Synthesis from Isoselenocyanates and Hydrazine .... 986

18.11.5 **Product Subclass 5: Selenoureas** .................................................. 987

18.11.5.1 Synthesis of Product Subclass 5 .................................................. 988

18.11.5.1.1 Method 1: From Metalation Reactions ...................................... 988

18.11.5.1.2 Method 2: From Carbon Diselenide ......................................... 989

18.11.5.1.3 Method 3: From Substitution Reactions with Sodium Hydrogen Selenide or Hydrogen Selenide ......................................... 990

18.11.5.1.4 Method 4: From Addition Reactions to Isoselenocyanates .......... 991

18.11.5.1.5 Method 5: From Carbene Reactions with Selenium .................. 991

18.11.5.1.6 Method 6: From Addition of Potassium Selenocyanate to Primary Ammonium Salts or Amines ............................................. 992

18.11.5.1.7 Method 7: From Cyanamide and Phosphorus Pentaselenide ....... 993

18.11.5.1.8 Method 8: From the Woollins Reagent .................................... 993
18.11.6  Product Subclass 6: Phosphorus-Substituted Selenocarbonyl Derivatives 994
18.11.6.1 Synthesis of Product Subclass 6 ........................................... 994
18.11.6.1.1 Method 1: From Addition Reactions to Carbon Diselenide ........ 994
18.11.7  Product Subclass 7: Tellurocarbonyl Dihalides ........................... 994
18.11.7.1 Synthesis of Product Subclass 7 ............................................ 995
18.11.7.1.1 Method 1: Tellurocarbonyl Dihalides from
Trimethyl[(trifluoromethyl)tellanyl]stannane ............................ 995
18.11.8  Product Subclass 8: Telluroreas .............................................. 995
18.11.8.1 Synthesis of Product Subclass 8 ............................................ 995
18.11.8.1.1 Method 1: From Carbene Insertion Reactions with Tellurium .... 995
18.11.8.1.2 Method 2: Starting from Stable Carbene ............................. 996
18.11.9  Product Subclass 9: Ditellurocarbonyl and Ditellurocarbamic Acids and
Their Metal Complexes .............................................................. 997
18.11.9.1 Synthesis of Product Subclass 9 ............................................ 997
18.11.9.1.1 Method 1: By the Uchida Method .................................... 997
18.12  Product Class 12: Imidic Acids and Derivatives, Isoureas and Derivatives,
Sulfur and Selenium Equivalents, and Analogously Substituted
Methylenephosphines
T. L. Gilchrist
18.12  Product Class 12: Imidic Acids and Derivatives, Isoureas and Derivatives,
Sulfur and Selenium Equivalents, and Analogously Substituted
Methylenephosphines .............................................................. 1001
18.12.1  Product Subclass 1: Carbonimidic Dihalides ............................ 1001
18.12.1.1 Synthesis of Product Subclass 1 ............................................ 1002
18.12.1.1.1 Method 1: From Glyoxyllic Acid Derivatives and Halogens .... 1002
18.12.1.1.2 Method 2: By Halogenation of Formanilides and Isocyanates ... 1002
18.12.1.1.3 Method 3: By Halogenation of Isothiocyanates and Related Compounds 1003
18.12.1.1.3.1 Variation 1: By Halogenation of Isothiocyanates ............... 1003
18.12.1.1.3.2 Variation 2: From Dithiocarbamates and Carbonimidodithioates ..... 1004
18.12.1.1.3.3 Variation 3: Dihaloiminium Salts from Dithiocarbamates and Dithiurams 1005
18.12.1.1.4 Method 4: By Chlorination of N-Methylamides .................... 1006
18.12.1.1.5 Method 5: By Reactions Involving Dichlorocarbene ............... 1007
18.12.1.1.6 Method 6: From Tetrahalomethanes and Aromatic Amines .......... 1008
18.12.1.1.7 Method 7: From Trihalomethylamines by Elimination ............. 1008
18.12.1.1.8 Method 8: By Addition of Halogens to Isocyanides ................ 1009
18.12.1.1.9 Method 9: By Addition to Cyanogen Chloride ...................... 1010
18.12.1.1.10 Method 10: From Other Carbonimidic Dihalides by Exchange of
a Halogen Atom Bonded to Carbon ............................................ 1011
18.12.1.1.11 Method 11: From Other Carbonimidic Dihalides by Exchange or
Modification of the Nitrogen Substituent .................................. 1012
Applications of Product Subclass 1 in Organic Synthesis

Product Subclass 2: Carbonohalidimidic Acid Derivatives

Synthesis of Product Subclass 2

Method 1: From Carbonimidic Dihalides and Oxygen Nucleophiles
Method 2: By Chlorination of Carbamates
Method 3: By Addition to Aryl Cyanates

Product Subclass 3: Carbonohalidimidothioates

Synthesis of Product Subclass 3

Method 1: From Carbonimidic Dichlorides and Sulfur Nucleophiles
Method 2: By Chlorination of Isothiocyanates and Related Compounds
Variation 1: By the Addition of Chlorine to Isothiocyanates
Variation 2: By Chlorination of Thio-carbamates and Dithiocarbamates
Variation 3: From Carbonimidodithioates
Method 3: By Addition of Sulfenyl Chlorides to Isocyanides
Method 4: By Electrophilic Additions to Nitriles
Variation 1: From Thiocyanates and Electrophiles
Variation 2: From Sulfonyl Cyanides and Electrophiles

Applications of Product Subclass 3 in Organic Synthesis

Product Subclass 4: Carbamimidic Halides

Synthesis of Product Subclass 4

Method 1: From Carbonimidic Dihalides and Amines
Method 2: From Dichloroiminium Salts and Nitrogen Nucleophiles
Method 3: By Chlorination of Ureas and Thioureas
Method 4: By Addition of Acid Chlorides to Carbodiimides
Method 5: By Electrophilic Addition to Cyanamides
Method 6: From Isocyanides and 1-Chlorobenzotriazole

Product Subclass 5: Carbonimidic Halides Bearing a Phosphorus Substituent

Synthesis of Product Subclass 5

Method 1: From (Dialkoxyphosphoryl)-α-haloacetaldehydes or from [Bis(dialkylamino)phosphoryl]-α-haloacetaldehydes by Diazo Coupling or Nitrosation
Variation 1: Arylhydrazones by Diazo Coupling
Variation 2: Oximes by Nitrosation
Method 2: From Dihalo(dichlorophosphoryl)methyl Isocyanates and Alcohols

Product Subclass 6: Carbonimidic Diesters

Synthesis of Product Subclass 6

Method 1: From Carbonimidic Dihalides and Oxygen Nucleophiles
Method 2: From Tetraethyl Orthocarbonate and Related Compounds with Amino Compounds
Method 3: By the O-Alkylation of Carbamates

18.13.1.1.1 Method 1: Reaction of Amines with Cyanamides ................. 1078
18.13.1.1.1.1 Variation 1: Reaction of Amines with Cyanogen Bromide .... 1078
18.13.1.1.2 Method 2: Reaction of Amines with Substituted Thioureas .... 1083
18.13.1.1.2.1 Variation 1: Reaction of Amines with Acylthioureas .......... 1087
18.13.1.1.2.2 Variation 2: Solid-Phase Reaction of Amines with Thioureas 1089
18.13.1.1.3 Method 3: Reaction of Amines with 2-Chloro-4,5-dihydro-
1H-imidazol-3-ium Chlorides ....................................................... 1092
18.13.1.1.4 Method 4: Reaction of Amines with Chloroformimidamides .... 1093
18.13.1.1.5 Method 5: Reaction of Primary Amines with O-Methylisoureas .. 1094
18.13.1.1.6 Method 6: Reaction of Amines with 2-Methylisothioureas .... 1095
18.13.1.1.6.1 Variation 1: Solid-Phase Synthesis of Amines with Methylisothioureas 1097
18.13.1.1.7 Method 7: Reaction of Primary Amines with Alkylamino(imino)-methanesulfonic Acids ..................................................... 1099
18.13.1.1.8 Method 8: Reaction of Primary Amines with (Trifluoromethylsulfonyl)guanidines ......................................................... 1100
Method 9: Reaction of Primary Amines with 1H-Pyrazole-1-carboximidamides ........................................ 1101

Variation 1: Reaction of Amines with Di-1H-benzotriazol-1-ylmethanimines and with Di-1H-imidazol-1-ylmethanimine .................. 1104

Method 10: Reaction of Guanidines with Alkyl and Aryl Halides .......... 1105

Method 11: Reaction of Guanidines with Alcohols or Activated Alcohols 1106

Method 12: Addition of Guanidine to Aldehydes, Ketones, and Esters To Give Cyclic Guanidinium Salts ........................... 1107

Method 13: Addition of 2-Methylisoureas to Aldehydes and Ketones .... 1109

Method 14: Addition of Guanidine to α,β-Unsaturated Aldehydes, Ketones, and Esters ............................................. 1110

Product Class 14: Phosphorus Analogues of Guanidine
T. L. Gilchrist

Method 1: Substitution of Hydrogen on Imines ........................................ 1117

Method 2: Displacement of a Halogen from Phosphorus-Substituted Imidoyl Halides by Nitrogen ........................................ 1117

Method 3: Displacement of Chlorine from a Chloroformamidinium Salt by Phosphorus ............................................. 1118

Method 4: Addition of Phosphorus Compounds to Carbodiimides ......... 1119

Method 5: Addition of Phosphorus Compounds to Bis(dialkylamino)difluoromethanes ............................................. 1120

Method 6: Addition of Phosphorus Compounds to Tetramethylisouronium and Tetramethylisothiouronium Salts .......................... 1121

Method 7: Exchange of Substituents on Phosphorus .............................. 1122

Product Subclass 2: Imines with Two Phosphorus Substituents ......... 1123

Method 1: Elimination of Cyanide from Dicyanophosphines .......................... 1123

Method 2: Addition of Phosphines to Bis(dialkylamino)difluoromethanes ........................................ 1124

Method 3: Addition of Phosphines to Tetramethylisouronium and Tetramethylisothiouronium Salts .......................... 1124

Method 4: Addition of Phosphines to Bis(dialkylamino)carbenes .......... 1125

Method 5: Exchange of Substituents on Phosphorus .............................. 1126
Product Subclass 4: Alkylidenephosphines with One Nitrogen and One Phosphorus Substituent ........................................... 1127

18.14.4.1 Synthesis of Product Subclass 4 .................................... 1127
18.14.4.1.1 Method 1: Substitution of Carbonimidic Dichlorides Using Bis(trimethylsilyl)phosphines ..................................... 1127
18.14.4.1.2 Method 2: Addition Reactions of Alkylidyne phosphines ................................................................. 1128
18.14.4.1.3 Method 3: Rearrangement Reactions ......................... 1129

Product Subclass 5: Alkylidenephosphines with Two Phosphorus Substituents ........................................... 1130

18.14.5.1 Synthesis of Product Subclass 5 .................................... 1130

Product Class 15: Tetraheterosubstituted Methanes with a Carbon—Halogen Bond
A. Y. Il’chenko

18.15

Product Class 15: Tetraheterosubstituted Methanes with a Carbon—Halogen Bond ............................................. 1135

18.15.1 Product Subclass 1: Tetrahalomethanes ............................................. 1135
18.15.1.1 Synthesis of Product Subclass 1 ............................................. 1136
18.15.1.1.1 Method 1: Carbon Tetrafluoride ............................................. 1136
18.15.1.1.2 Method 2: Chlorotrifluoromethane, Bromotrifluoromethane, and Trifluoroiodomethane ............................................. 1137
18.15.1.1.3 Method 3: Tetrahalomethanes Containing Zero to Two Fluorides ............................................. 1138
18.15.1.2 Applications of Product Subclass 1 in Organic Synthesis ............................................. 1140
18.15.1.2.1 Method 1: (Trifluoromethyl)metal Reagents ............................................. 1140
18.15.1.2.2 Method 2: Addition to Alkenes and Alkynes ............................................. 1141
18.15.1.2.3 Method 3: Trifluoromethylation of Arenes and Hetarenes ............................................. 1142
18.15.1.2.4 Method 4: Synthesis of Trimethyl(trifluoromethyl)silane (Ruppert’s Reagent) ............................................. 1143

Product Subclass 2: Compounds with Carbon—Halogen and Carbon—Oxygen Bonds ............................................. 1144

18.15.2.1 Synthesis of Product Subclass 2 ............................................. 1145
18.15.2.1.1 Method 1: Trichloromethoxy Derivatives ............................................. 1145
18.15.2.1.2 Method 2: (Trifluoromethoxy)benzenes from the Corresponding (Trichloromethoxy)benzenes ............................................. 1145
18.15.2.1.3 Method 3: Trifluoromethoxy Derivatives from the Corresponding Alcohols ............................................. 1146
18.15.2.1.4 Method 4: Trifluoromethyl Hypofluorite, Trifluoromethyl Hypochlorite, and Difluoromethylene Dihypofluorite ............................................. 1147
18.15.2.1.5 Method 5: Trifluoromethyl Peroxides ............................................. 1148
18.15.2.2 Applications of Product Subclass 2 in Organic Synthesis ............................................. 1148
18.15.2.2.1 Method 1: Addition of Trifluoromethyl Hypofluorite or Hypochlorite or Chloroperoxytrifluoromethane to Alkenes and Alkynes ............................................. 1148
Method 2: Fluorination by Trifluoromethyl Hypofluorite and Hypochlorite ........................................ 1150

Product Subclass 3: Compounds with Carbon—Halogen and Carbon—Sulfur Bonds ........................................ 1152

Synthesis of Product Subclass 3 ........................................ 1152

Method 1: Trifluoromethanethiol from Bis(trifluoromethylsulfanyl)-mercury(II) and Hydrogen Chloride or Bis(trifluoromethyl) Disulfide and Hydrogen Sulfide ........................................ 1152

Method 2: Trifluoromethyl Sulfides from the Corresponding Trichloromethyl Sulfides and Antimony(III) Fluoride .......... 1153

Method 3: Trichloromethyl Sulfides by Chlorination of the Corresponding Methyl Sulfides ........................................ 1154

Method 4: Phenyl Trihalomethyl Sulfides by Trihalomethylation of Benzenethiols or Benzenethiolates .......................... 1155

Method 5: Aryl or Methyl Trifluoromethyl Sulfides by Cross-Coupling Reactions between iodoarenes or iodomethane and (Trifluoromethyl)sulfanylmetal Reagents ........................................ 1155

Method 6: Bis-, Tris-, and Tetrakis(trifluoromethylsulfanyl)methanes and Halotris(trifluoromethylsulfanyl)methanes ............. 1156

Method 7: Trifluoro- and Trichloromethanesulfenyl Halides ........................................ 1157

Method 8: Mono- and Bis(trifluoromethylsulfanyl)amines from Trifluromethanesulfenyl Chloride and Ammonia .............. 1159

Method 9: Bis(trifluoromethyl) Sulfide, Disulfide, and Trisulfide ........................................ 1159

Method 10: (Trifluoromethyl)sulfur Trifluoride, Bis(trifluoromethyl)sulfur Difluoride, and Difluorobis(trifluoro-λ₄-sulfanyl)methane ........................................ 1160

Method 11: Trifluromethanesulfenyl Chloride and Chloride and Difluormethanedisulfenyl Fluoride ........................................ 1161

Method 12: Trifluromethyl Sulfoxides ........................................ 1162

Method 13: (Trifluoromethyl)sulfur Pentfluoride and (Trifluoromethyl)sulfur Chloride Tetrafluoride ........................................ 1163

Method 14: Trifluromethanesulfinic Acid, Metal Trifluromethanesulfonates, and Difluromethanesulfinic Acid ................... 1164

Method 15: Trifluromethanesulfonyl Fluoride from Alkanesulfonic Acid Halides or Esters ........................................ 1165

Method 16: Difluorohalomethanesulfonyl Fluorides by Photolytic Decarboxylation of the Corresponding Difluoro(halocarbonyl)methanesulfonyl Fluorides ........................................ 1165

Method 17: Dihalomethanesulfonyl Difluorides by Halogenation of Methanesulfonyl Difluoride ........................................ 1165

Method 18: Halomethanesulfonyl Trifluorides from Methanesulfonyl Trifluoride ........................................ 1166

Method 19: Trifluromethanesulfonyl Chloride ........................................ 1166

Method 20: Trichloromethanesulfonyl Chloride by Oxidation of Trichloromethanesulfenyl Chloride ........................................ 1167

Method 21: Trifluromethyl Trifluromethanesulfonate from Trifluromethanesulfonic Anhydride ........................................ 1167
18.15. Method 22: Methyl Trifluoromethanesulfonate from Trifluoromethanesulfonic Acid and Dimethyl Sulfate 1168
18.15. Method 23: Phenyl Trifluoromethanesulfonate from Trifluoromethanesulfonic Anhydride or Trifluoromethanesulfonyl Fluoride 1168
18.15. Method 24: Trifluoromethanesulfonic Acid 1169
18.15. Method 25: Chlorodifluoromethanesulfonic Acid and Trichloromethanesulfonic Acid 1169
18.15. Method 26: Trifluoromethanesulfonic Anhydride from Trifluoromethanesulfonic Acid and Phosphorus Pentoxide 1170
18.15. Method 27: Trifluoromethyl Sulfones 1170
18.15. Method 28: Bis- and Tris(trifluoromethylsulfonyl)methanes 1172
18.15. Method 29: Esters of Trifluoromethanethiosulfonic S-Acid or Trifluoromethaneselenosulfonic S-Acid from Metal Trifluoromethanesulfonates and Sulfonyl or Selenyl Chlorides 1173
18.15. Method 30: Difluorohalomethanesulfonamides and Difluorohalomethanesulfonyl Azides 1174
18.15. Applications of Product Subclass 3 in Organic Synthesis 1175
18.15. Method 1: Addition of Trifluoromethanethiol or Trifluoromethanesulfenyl Fluoride or Chloride to Alkenes and Alkynes 1175
18.15. Method 2: Applications of Trifluoromethanesulfonic Acid 1177
18.15. Method 3: Applications of Alkyl Trifluoromethanesulfonates and Trifluoromethanesulfonic Anhydride 1178
18.15. Method 4: An N-(Trifluoromethylsulfonyl)sulfimide from \(N, N\)-Dichlorotrifluoromethanesulfonamide and (Trifluoromethylsulfanyl)benzene 1180
18.15. Product Subclass 4: Compounds with Carbon—Halogen and Carbon—Selenium Bonds 1180
18.15. Synthesis of Product Subclass 4 1180
18.15. Method 1: Selenium(II) Compounds 1180
18.15. Method 2: Selenium(IV) Compounds 1182
18.15. Method 3: Selenium(VI) Compounds 1182
18.15. Applications of Product Subclass 4 in Organic Synthesis 1183
18.15. Method 1: Addition of Trifluoromethaneselenenyl Chloride to Ethene 1183
18.15. Product Subclass 5: Compounds with Carbon—Halogen and Carbon—Tellurium Bonds 1183
18.15. Synthesis of Product Subclass 5 1183
18.15. Method 1: Bis(trifluoromethyl) Telluride, Bis(trifluoromethyl)tellurium Dihalides, and Tetrakis(trifluoromethyl)-\(\lambda\)-tellane 1183
18.15. Applications of Product Subclass 5 in Organic Synthesis 1184
18.15. Method 1: Trifluoromethylation Using Bis(trifluoromethyl) Telluride 1184
18.15. Product Subclass 6: Compounds with Carbon—Halogen and Carbon—Nitrogen Bonds 1184
18.15. Synthesis of Product Subclass 6 1184
18.15.6.1 Method 1: Mono-, Bis-, and Tris(trifluoromethyl)amine ................. 1184
18.15.6.1.2 Method 2: Dimethyl(trifluoromethyl)amine from Dimethylformamide and Sulfur Tetrafluoride ........................................ 1185
18.15.6.1.3 Method 3: N-(Trihalomethyl)anlines .................................. 1185
18.15.6.1.4 Method 4: Dichloro- and Difluoro(trifluoromethyl)amine ............. 1186
18.15.6.1.5 Method 5: (Trifluoromethyl)imidosulfurous Difluoride from Cyanuric Fluoride and Sulfur Tetrafluoride ......................... 1186
18.15.6.1.6 Method 6: (Difluoromethylene)(trifluoromethyl)amine from Trifluoro(nitroso)methane and Tetrafluoroethylene ......................... 1187
18.15.6.1.7 Method 7: Trifluoro(nitroso)methane, N,N-Bis(trifluoromethyl)hydroxylamine, and the Bis(trifluoromethyl)nitroxide Radical ............... 1187
18.15.6.1.8 Method 8: Trifluoro(nitro)methane, Difluorodinitromethane, and Fluorotrinitromethane ........................................... 1188

18.15.6.2 Applications of Product Subclass 6 in Organic Synthesis .................. 1188
18.15.6.2.1 Method 1: Addition to Alkenes ......................................... 1188

18.15.7 Product Subclass 7: Compounds with Carbon—Halogen and Carbon—Phosphorus Bonds ..................................................... 1189
18.15.7.1 Synthesis of Product Subclass 7 ........................................... 1189
18.15.7.1.1 Method 1: Tris(trifluoromethyl)phosphine ................................ 1189
18.15.7.1.2 Method 2: Mono- and Bis(trifluoromethyl)phosphine, Dimethyl(trifluoromethyl)phosphine, Methylbis(trifluoromethyl)phosphine, and Phenylbis(trifluoromethyl)phosphine ........................................ 1190
18.15.7.1.3 Method 3: Mono- and Dihalo(trifluoromethyl)phosphines ............. 1191
18.15.7.1.4 Method 4: Amino(trifluoromethyl)phosphines ......................... 1191
18.15.7.1.5 Method 5: Tetrakis(trifluoromethyl)diphosphine ...................... 1192
18.15.7.1.6 Method 6: Halo(trifluoromethyl)phosphoranes, Tris(trifluoromethyl)-phosphine Oxide, and (Trifluoromethyl)phosphonic and (Trifluoromethyl)phosphinic Acids and Derivatives ........................................... 1192
18.15.7.1.7 Method 7: (Halomethyl)phosphonium Bromides and Trifluorotris(trifluoromethyl)phosphate ........................................ 1193

18.15.7.2 Applications of Product Subclass 7 in Organic Synthesis .................. 1194
18.15.7.2.1 Method 1: Additions of (Trifluoromethyl)phosphines and (Trifluoro- methyl)phosphoranes to Alkenes, and Wittig Reactions of (Halomethyl)phosphonium Bromides with Aldehydes or Ketones ......................... 1194

18.16 Product Class 16: Other Tetraheterosubstituted Methanes
C. M. Diaper

18.16 Product Class 16: Other Tetraheterosubstituted Methanes ...................... 1203
18.16.1 Product Subclass 1: Orthocarbonic Acid Tetraesters
(Tetraalkoxymethanes) .................................................................... 1203
18.16.1.1 Synthesis of Product Subclass 1 ........................................... 1204
18.16.1.1.1 Method 1: Substitution Reactions of Trichloromethane Derivatives with Alcohols or Alkoxides ........................................ 1204
Method 2: Substitution Reactions of Dichloroacetals .......................... 1205
Method 3: Metal-Mediated Desulfurization of Carbon Disulfide with Alkoxides or Alcohols ................................................. 1205
Method 4: Spiro Orthocarbonates from Epoxides and Cyclic Carbonates by Addition ........................................ 1206
Method 5: Transesterification of Orthocarbonic Acid Tetraesters with Alcohols .......................................................... 1207

Applications of Product Subclass 1 in Organic Synthesis ...................... 1208
Method 1: Generation of Trialkoxycarbenium Salts ......................... 1208
Method 2: Alkylation Reactions .................................................. 1208
Method 3: Protecting Group Chemistry ....................................... 1210

Product Subclass 2: Thioorthocarbonic Acid Tetraesters
[Trialkoxy(alkylsulfanyl)methanes] ............................................. 1211

Synthesis of Product Subclass 2 ................................................. 1211
Method 1: Substitution Reaction of Dichloroacetals with 2-Sulfanylethanol ....................................................... 1211
Method 2: Nucleophilic Addition of Alcohols to O-O-Dialkyl Thiocarbonates ......................................................................... 1211

Product Subclass 3: Orthocarbamic Acid Triesters ............................ 1212

Synthesis of Product Subclass 3 .................................................... 1213
Method 1: Addition of Alkoxides to Dialkoxyaminocarbenium and Chloroformamidinium Salts .................................................. 1214
Method 2: 2,5-Dihydro-1,3,4-oxadiazoles from Ketone Hydrazones by Oxidative Cyclization .................................................. 1215
Method 3: 2,2-Diaryloxy- and 2,2-Dialkoxydihydrooxadiazoles from 2-Acetoxy-2-aryloxydihydrooxadiazoles ................................ 1215

Applications of Product Subclass 3 in Organic Synthesis .................... 1216
Method 1: Dihydrooxadiazoles as Precursors of Dialkoxy carbeneis ..... 1216

Product Subclass 4: Trialkoxy(phosphino)methanes and Trialkoxy(phosphoryl)methanes ...................................................... 1217

Synthesis of Product Subclass 4 ..................................................... 1217
Method 1: Addition to Trialkoxycarbenium Salts ............................ 1217
Variation 1: Trialkoxy(phosphoryl)methanes by Addition of Sodium Dialkyl Phosphites .................................................. 1217
Variation 2: Trialkoxy(phosphino)methanes by Addition of Lithium Dialkyl phosphites .......................................................... 1217

Product Subclass 5: Dithioorthocarbonic Acid Tetraesters
[Dialkoxybis(alkylsulfanyl)methanes] ........................................... 1218

Synthesis of Product Subclass 5 ..................................................... 1218
Method 1: Substitution Reactions of Dihaloacetals and Dihalothioacetals ............................................................................. 1219
Method 2: Transesterification of Orthocarbonates with Dithiols ......... 1219
Product Subclass 6: Orthocarbonic Acid Diester Diamides (Dialkoxydiaminomethanes) ................................................. 1220

Synthesis of Product Subclass 6 ........................................ 1221

Method 1: Substitution Reactions of Halomethanes ................ 1222

Variation 1: Substitution Reactions of 3-Alkoxo-3-chlorodiazirines with Alkoxides .................................................. 1222

Variation 2: Unsymmetrical Dioxadiazaspirans by Substitution Reactions of 2,2-Dihaloacetals with Amines ........ 1222

Method 2: Symmetrical Dioxadiazaspirans by Desulfurization of Carbon Disulfide or N-Alkylthiocarbamates with Amino Alcohols ... 1223

Method 3: Addition of Alkoxides to Uronium and Formamidinium Salts ................................................................. 1224

Method 4: Oxidation of Dihydroimidazole N-Oxides ............. 1225

Method 5: Oxidation of Acetone Semicarbazones .................. 1225

Method 6: Symmetrical Dioxadiazaspirans from Dialkylcarbodiimides ................................................................. 1226

Applications of Product Subclass 6 in Organic Synthesis .......... 1227

Method 1: Dialkoxydiazirines and Amino(oxy)dihydrooxazoles as Dialkoxycarbene Precursors ........................................... 1227

Product Subclass 7: Dialkoxybis(phosphino)methanes and Dialkoxybis(phosphoryl)methanes ................................................. 1228

Synthesis of Product Subclass 7 ........................................ 1229

Method 1: Substitution Reactions of Dichloroacetals with Trialkyl Phosphites .................................................. 1229

Method 2: Hydrates of Carbonyldiphosphonates ..................... 1230

Product Subclass 8: Trithioorthocarbonic Acid Tetraesters [Alkoxytris(organosulfanyl)methanes] ................................................. 1230

Synthesis of Product Subclass 8 ........................................ 1231

Method 1: Addition of Alkoxide to Sulfanylcarbenium Salts ........ 1231

Method 2: Cycloaddition of Thiocarbonyl Compounds ............. 1231

Method 3: Oxatrithiaspirans by Addition of Epoxides to 1,3-Dithiolane-2-thiones .................................................. 1232

Method 4: Thermal Decomposition of Bisdithiocarbonates ........ 1233

Product Subclass 9: Alkoxytriaminomethanes and Alkoxytrinitromethanes ................................................................. 1234

Synthesis of Product Subclass 9 ........................................ 1234

Method 1: Addition of Alkoxides to Hexaalkylguanidinium Chlorides .................................................. 1235

Method 2: Heterocyclic Derivatives by Cycloaddition Reactions ...... 1236

Product Subclass 10: Tetrathioorthocarbonic Acid Tetraesters [Tetrakis(organosulfanyl)methanes], Bis(organosulfanyl)bis(organosulfinyl)methanes, Tris(organosulfanyl)(organosulfonyl)methanes, and Bis(organosulfanyl)bis(organosulfonyl)methanes ................................................. 1237

Synthesis of Product Subclass 10 ........................................ 1238

Method 1: Substitution Reactions of Halomethanes with Thiolates .... 1238
Method 2: Substitution Reactions of Tris(organosulfanyl)methyllithium Compounds and Bis(organosulfanyl)methanes

Variation 1: Substitution Reactions of Tris(organosulfanyl)methyllithium Compounds with Diorgano Disulfides

Variation 2: Reaction of Bis(alkylsulfanyl)methanes with N-(Organosulfanyl)phthalimides

Method 3: Addition of Thiols to Sulfanylcarbenium Salts

Method 4: Tetrathiaspirans from Dithiolane-2-thione or Carbon Disulfide by Addition Reactions

Method 5: Transesterification of Tetrathioorthocarbonic Acid Tetraesters with Dithiols

Product Subclass 11: Thithioorthocarbamic Triesters [Aminotris(organosulfanyl)methanes] and Nitrotris(organosulfanyl)methanes

Synthesis of Product Subclass 11

Method 1: Addition of Thiolates to Carbamidium Salts and Amines to Sulfanylcarbenium Salts

Method 2: Nitration of Tris(organosulfanyl)methanes

Product Subclass 12: Tris(alkylsulfanyl)phosphorylmethanes

Synthesis of Product Subclass 12

Method 1: Reaction of Phosphoryldithioformates with Organometallics

Product Subclass 13: Dithioorthocarbonic Acid Diamide Diesters [Diaminobis(organosulfanyl)methanes] and Bis(arylsulfanyl)dinitromethanes

Synthesis of Product Subclass 13

Method 1: Substitution Reactions of 2,2-Dichloroimidazolidine-4,5-diones with Organothiols

Method 2: Ring Closure of Iminodithiocarbonates and Thioureas

Method 3: Cycloaddition of Thiocarbonyl Compounds with Nitrilimines

Method 4: Reaction of Sulfenyl Halides with Dinitro Ylides

Method 5: From Heterocyclic Aminals

Product Subclass 14: Bis(alkylsulfanyl)- and Bis(alkylselanyl)-bis(phosphino)methanes and -bis(phosphoryl)methanes

Synthesis of Product Subclass 14

Method 1: Reaction of Metalated Phosphines or Phosphorines with Carbon Disulfide

Method 2: Dimerization of [Bis(alkylsulfanyl)methylene]phosphines

Method 3: Sulfenation of Bis(phosphoryl)methanes

Product Subclass 15: Thio- and Selenoorthocarbonic Acid Triamide Esters [Triamino(organosulfanyl)- and Triamino(organoselanyl)methanes] and Trinitro(organosulfanyl)- and Trinitro(organoselanyl)methanes

Synthesis of Product Subclass 15

Method 1: Addition of Amines to Thioureas or Isothioureas

Volume 19:
Three Carbon—Heteroatom Bonds:
Nitriles, Isocyanides, and Derivatives

Preface ................................................................. V
Table of Contents .................................................. IX

Introduction
S.-I. Murahashi ...................................................... 1

19.1 Product Class 1: Nitrile Oxides, Sulfides, and Selenides
S. Kanemasa ........................................................... 17

19.2 Product Class 2: Nitrile Imines
S. Kanemasa ........................................................... 41

19.3 Product Class 3: Nitrilium Salts
S. Kanemasa ........................................................... 53

19.4 Product Class 4: Nitrile Ylides
S. Kanemasa ........................................................... 67

19.5 Product Class 5: Nitriles
L. R. Subramanian ................................................... 79

19.5.1 Construction of the Cyano Group by Functional-Group Transformation from a Nitrogen-Free Starting Material
L. R. Subramanian ................................................... 95

19.5.2 Construction of the Cyano Group by Functional-Group Transformation from a Nitrogen-Containing Starting Material
L. R. Subramanian ................................................... 109

19.5.3 Introduction of the Cyano Group by Substitution of Hydrogen
A. Schmidt .............................................................. 133

19.5.4 Introduction of the Cyano Group by Substitution of Metals
L. R. Subramanian ................................................... 163

19.5.5 Introduction of the Cyano Group by Substitution of a Halogen
L. R. Subramanian ................................................... 173

19.5.6 Introduction of the Cyano Group by Substitution of Oxygen Functions
L. R. Subramanian ................................................... 197

19.5.1.2.1 Variation 1: Using Boron Trifluoride–Diethyl Ether Complex 99

Table of Contents
19.5.1.1.2.2 Variation 2: Using 4-Toluenesulfonic Acid ........................................... 100
19.5.1.1.2.3 Variation 3: Using Acetic Anhydride ................................................. 100
19.5.1.1.2.4 Variation 4: Using Phthalic Anhydride .............................................. 100
19.5.1.1.2.5 Variation 5: Using 1-Methylpyrrolidin-2-one .................................. 101
19.5.1.1.2.6 Variation 6: Using Pyridine/Formamide ............................................. 101
19.5.1.1.2.7 Variation 7: Using Sodium Iodide .................................................... 102
19.5.1.1.2.8 Variation 8: By Dehydration with Triphosgene ................................ 102
19.5.1.1.2.9 Variation 9: By Treatment with Iron(II) Chloride Modified Montmorillonite K 10 .............................................................. 102
19.5.1.1.2.10 Variation 10: Using Dry Alumina .................................................... 103
19.5.1.1.2.11 Variation 11: By Using Microwaves ................................................ 103
19.5.1.1.3 Methods 3: Miscellaneous Methods ................................................. 105
19.5.1.1.3.1 Variation 1: Using S,S-Dimethylsulfurdiimide as Iminating Agent .......... 105
19.5.1.1.3.2 Variation 2: Using Sodium Azide/Aluminum Trichloride .................... 105
19.5.1.2 Transformation of a Carboxylic Acid or Derivatives .................................. 105
19.5.1.2.1 Method 1: Transformation of Carboxy Groups .................................. 105
19.5.1.2.2 Method 2: Transformation of Carboxylic Ester Groups ...................... 106
19.5.1.2.3 Method 3: Transformation of Carboxylic Acid Halides ....................... 107

19.5.2

Construction of the Cyano Group by Functional-Group Transformation from a Nitrogen-Containing Starting Material
L. R. Subramanian

19.5.2.1 Method 1: Synthesis from Hydrazones ................................................. 109
19.5.2.1.1 Variation 1: By Alkylation Followed by Basic Cleavage ...................... 109
19.5.2.1.2 Variation 2: By Oxidation Reactions .................................................. 110
19.5.2.1.3 Variation 3: By Microwave-Assisted Oxidation with Oxone .................. 111
19.5.2.2 Method 2: Synthesis from Aldoximes .................................................. 111
19.5.2.2.1 Variation 1: By Microbial Dehydration of Aldoximes ............................ 112
19.5.2.2.2 Variation 2: By Chemical Dehydration at Room Temperature .............. 112
19.5.2.2.3 Variation 3: By Thermal Dehydration with Suitable Reagents ............... 114
19.5.2.2.4 Variation 4: By Microwave Irradiation .............................................. 118
19.5.2.3 Method 3: Synthesis from O-Substituted Aldoximes ............................. 118
19.5.2.4 Method 4: Synthesis from Primary Carboxamides and Thioamides .......... 121
19.5.2.5 Method 5: From Miscellaneous Nitrogen-Containing Carbonyl and Carboxy Derivatives .......................................................... 127
19.5.3  Introduction of the Cyano Group by Substitution of Hydrogen

A. Schmidt

19.5.3  Introduction of the Cyano Group by Substitution of Hydrogen  .......... 133

19.5.3.1  Synthesis of Heteroaromatic and Aromatic Cyanides  .......... 133

19.5.3.1.1  Method 1: Using Cyanogen Bromide  .......... 133

19.5.3.1.2  Method 2: Using Tosyl Cyanide  .......... 134

19.5.3.1.2.1  Variation 1: By Modified Reissert Reactions  .......... 135

19.5.3.1.3  Method 3: Using Trimethylsilyl Cyanide  .......... 136

19.5.3.1.3.1  Variation 1: By Modified Reissert–Henze Reaction  .......... 138

19.5.3.1.2.2  Variation 2: By Catalytic Asymmetric Reissert-Type Reactions  .......... 139

19.5.3.1.4  Method 4: Using Trichloroacetonitrile  .......... 140

19.5.3.1.5  Method 5: Using Chlorosulfonyl Isocyanate  .......... 141

19.5.3.1.6  Method 6: Using Ethyl (Triphenylphosphoranylidene)carbamate/Boron Trifluoride  .......... 142

19.5.3.1.7  Method 7: Using Triphenylphosphine/Thiocyanogen  .......... 143

19.5.3.1.8  Method 8: Using Acetone Cyanohydrin  .......... 144

19.5.3.1.9  Method 9: Using Diethyl Cyanophosphonate  .......... 144

19.5.3.1.10  Method 10: Using Tetranitromethane  .......... 145

19.5.3.1.11  Method 11: Using Viehe’s Reagent  .......... 146

19.5.3.1.12  Method 12: By Anodic Substitution  .......... 146

19.5.3.1.13  Method 13: By Modified Vilsmeier–Haack Reactions  .......... 147

19.5.3.1.14  Method 14: Oxidative Cyanation of Quinoline 1-Oxides with Potassium Cyanide in the Presence of Potassium Hexacyanoferrate(III)  .......... 147

19.5.3.1.15  Method 15: By Nucleophilic Aromatic Substitution of Hydrogen with Cyanides  .......... 148

19.5.3.2  Synthesis of Acetylenic Nitriles  .......... 148

19.5.3.2.1  Method 1: Using Copper(I) Cyanide  .......... 148

19.5.3.2.1.1  Variation 1: In the Presence of Chlorotrimethylsilane  .......... 148

19.5.3.2.1.2  Variation 2: In the Presence of Bis(trimethylsilyl) Peroxide  .......... 149

19.5.3.2.2  Method 2: Using Tosyl Cyanide and Zinc(II) Iodide  .......... 149

19.5.3.2.3  Method 3: Using Phenyl Cyanate  .......... 149

19.5.3.2.4  Method 4: Using 1H-Imidazole-1-carbonitrile  .......... 150

19.5.3.3  Synthesis of Vinyl Nitriles  .......... 151

19.5.3.3.1  Method 1: Using Cyanogen Bromide and Cyanogen Chloride  .......... 151

19.5.3.3.2  Method 2: Using Tosyl Cyanide  .......... 151

19.5.3.3.3  Method 3: Using Phenyl Cyanates  .......... 152

19.5.3.3.4  Method 4: Using Triphenylphosphine/Thiocyanogen  .......... 152

19.5.3.4  Synthesis of Aliphatic Nitriles  .......... 152

19.5.3.4.1  Method 1: Using 2,3-Dichloro-5,6-dicyanobenzo-1,4-quinone and Trimethylsilyl Cyanide  .......... 152

19.5.3.4.2  Method 2: By Aerobic Ruthenium-Catalyzed Oxidative Cyanation with Sodium Cyanide  .......... 154

19.5.3.4.3  Method 3: Using Chlorine Dioxide and Sodium Cyanide  .......... 154

Introduction of the Cyano Group by Addition to an Imino Group

M. North

19.5.10 Introduction of the Cyano Group by Addition to an Imino Group

- 19.5.10.1 α-Aminonitriles Derived from Aldimines
- 19.5.10.1.1 Method 1: Addition without Stereocontrol
- 19.5.10.1.2 Variation 1: Strecker Reactions under Aqueous Conditions
- 19.5.10.1.3 Variation 2: Strecker Reactions under Nonaqueous Conditions
- 19.5.10.1.4 Variation 3: Using Trimethylsilyl Cyanide
- 19.5.10.1.5 Variation 4: Addition of Cyanide to Aldimines Derived from Chiral Aldehydes
- 19.5.10.1.6 Method 2: Addition to Substrates Containing a Chiral Auxiliary on the Nitrogen Atom
- 19.5.10.1.7 Variation 1: Use of (1-Phenylethyl)amine
- 19.5.10.1.8 Variation 2: Use of 2-Phenylglycinol
- 19.5.10.1.9 Variation 3: Use of Phenylglycinamide
- 19.5.10.1.10 Variation 4: Use of Sugar-Derived Auxiliaries
- 19.5.10.1.11 Variation 5: Use of an α-Aminonitrile as a Chiral Auxiliary
- 19.5.10.1.12 Method 3: Addition to Achiral Substrates in the Presence of a Chiral Catalyst
- 19.5.10.1.13 Variation 1: Use of Nonmetallic Catalysts
- 19.5.10.1.14 Variation 2: Catalysis by Aluminum Complexes
- 19.5.10.1.15 Variation 3: Catalysis by First-Row Transition-Metal Complexes
- 19.5.10.1.16 Variation 4: Catalysis by Zirconium Complexes
- 19.5.10.1.17 α-Aminonitriles Derived from Ketimines
- 19.5.10.1.18 Method 1: Addition without Stereocontrol
- 19.5.10.1.19 Variation 1: Use of Ultrasound
- 19.5.10.1.20 Variation 2: Using Trimethylsilyl Cyanide
- 19.5.10.1.21 Variation 3: Other Addition Reactions
- 19.5.10.1.22 Method 2: Addition to Substrates Containing a Chiral Auxiliary on the Nitrogen Atom
- 19.5.10.1.23 Products Derived from Other Compounds Containing a C=N Bond
- 19.5.10.1.24 Method 1: Products Derived from Hydrazones
- 19.5.10.1.25 Variation 1: Processes Using Trimethylsilyl Cyanide
- 19.5.10.1.26 Variation 2: Reaction under Phase-Transfer Conditions
- 19.5.10.1.27 Method 2: Products Derived from Nitrones
- 19.5.10.1.28 Method 3: Products Derived from Sulfinimines
- 19.5.10.1.29 Method 4: Products Derived from Oximes

**Variation 2:** \([2 + 2 + 2]\)-Cyclotrimerization Reactions of Nitriles and Alkynes ........ 412

**Variation 3:** \([4 + 2]\)-Cycloaddition Reactions ................................................................. 416

**Variation 4:** \([3 + 2]\)-Cycloaddition Reactions ................................................................. 419

**Variation 5:** \([2 + 2]\)-Cycloaddition Reactions ................................................................. 422

### 19.6

**Product Class 6: Phosphaalkynes (Alkylidyneophosphines)**

U. Bergsträßer

**Synthesis of Product Class 6** .......................................................... 427

**Method 1:** Elimination of Hydrogen Halides .............................................................. 428

**Variation 1:** From Alkyl dichlorophosphines .......................................................... 428

**Variation 2:** From Substituted (Dihalomethyl)phosphines ........................................ 428

**Method 2:** Elimination of Organometallic Compounds ............................................. 430

**Variation 1:** Of Chlorotrimethylsilane ................................................................. 430

**Variation 2:** Of Hexamethyldisiloxane ................................................................. 430

**Variation 3:** Of Lithium Trimethylsilanolate .......................................................... 432

**Method 3:** Rearrangement of Halophosphaalkynes ................................................. 432

**Method 4:** Rearrangement of Alkynylphosphines .................................................. 433

**Method 5:** Rearrangement of Phosphiranes or Allylphosphines by Flash-Vacuum Pyrolysis ................................................. 434
19.6.1.6 Method 6: Rearrangement of 1-Aza-3-phosphaallenes ................................. 434
19.6.1.7 Methods 7: Other Methods ................................................................. 435
19.6.2 Applications of Product Class 6 in Organic Synthesis .............................. 436
19.6.2.1 Method 1: Cycloaddition Reactions of Phosphaalkynes ............................. 436
19.6.2.1.1 Variation 1: [2 + 1] Cycloadditions .................................................... 436
19.6.2.1.2 Variation 2: [3 + 2] Cycloadditions .................................................... 436
19.6.2.1.3 Variation 3: [4 + 2] Cycloadditions .................................................... 437
19.6.2.2 Method 2: 1,2-Addition Reactions of Phosphaalkynes ............................. 438
19.6.2.2.1 Variation 1: Addition of Enophiles .................................................... 438
19.6.2.2.2 Variation 2: Addition of Organometallic Groups ................................ 438
19.6.2.3 Method 3: Phosphaalkynes as Ligands in Transition-Metal Complexes ...... 439
19.6.2.4 Method 4: Cyclooligomerization Reactions of Phosphaalkynes .............. 440

19.7 Product Class 7: Isocyanides and Related Compounds

M. Suginome and Y. Ito

19.7.1 Product Subclass 1: Carbon-Bound Isocyanides ................................. 446
19.7.1.1 Synthesis of Product Subclass 1 ............................................................ 446
19.7.1.1.1 Method 1: Nucleophilic Substitution of Halides with Metal Cyanides .... 446
19.7.1.1.1.1 Variation 1: From Halides and Equivalents ..................................... 446
19.7.1.1.1.2 Variation 2: From Epoxides and Oxetanes ....................................... 450
19.7.1.1.2 Method 2: Reduction of Isocyanates and Related Compounds ............ 453
19.7.1.1.3 Method 3: Reduction of Carbamates .................................................. 455
19.7.1.1.4 Method 4: Dehalogenation of Isocyanide Dihalides ............................ 455
19.7.1.1.5 Method 5: Dehydration of Formamides ............................................. 456
19.7.1.1.5.1 Variation 1: With Phosgene ............................................................ 457
19.7.1.1.5.2 Variation 2: With Trichloromethyl Chloroformate (Diphosgene) ... 457
19.7.1.1.5.3 Variation 3: With Bis(trichloromethyl) Carbonate (Triphosgene) .... 459
19.7.1.1.5.4 Variation 4: With Thionyl Chloride/Dimethylformamide (Vilsmeier Reagent) .............................................................. 460
19.7.1.1.5.5 Variation 5: With Phosphoryl Chloride ........................................... 461
19.7.1.1.5.6 Variation 6: With Arenesulfonyl Chlorides ..................................... 466
19.7.1.1.5.7 Variation 7: With Other Reagents ................................................... 468
19.7.1.1.6 Method 6: By α-Elimination Reactions Involving Fragmentation of Heterocyclic Compounds .................................................. 472
19.7.1.1.7 Method 7: Addition of Cyanides to Alkenes ....................................... 475
19.7.1.1.8 Method 8: Reaction of Dihalocarbenes with Primary Amines ............... 478
19.7.1.1.9 Method 9: From Other Isocyanides through Their α-Anions ............... 480
19.7.1.1.9.1 Variation 1: Reaction with Alkyl Halides and Epoxides ................... 480
19.7.1.1.9.2 Variation 2: Reaction with Carbonyl Compounds and Michael Acceptors .... 484
19.7.1.1.9.3 Variation 3: Elimination and C=C Transposition Reactions ............ 486
19.7.1.2 Applications of Product Subclass 1 in Organic Synthesis .................... 488
19.7.1.2.1 Method 1: Simple α-Additions ......................................................... 488
19.7.1.1 Variation 1: Addition of Brønsted Acids ................................. 488
19.7.1.2 Variation 2: Addition of Hydrogen—Heteroatom Bonds and Heteroatom—Heteroatom Bonds ................................. 489
19.7.1.3 Variation 3: Addition of Metal Hydrides and Bimetals ................ 490
19.7.1.4 Variation 4: Addition of Organometallic Compounds .................. 491
19.7.1.5 Variation 5: Oxidative α-Additions Including the Addition of Halogen-Containing Reagents ........................................ 494
19.7.1.6 Variation 6: Addition of Acid Chlorides and Related Compounds ...... 494
19.7.1.7 Variation 7: Synthesis of Heteroaromatic Compounds by Intramolecular α-Addition Reactions of ortho-Functionalized Aryl Isocyanides 495
19.7.1.8 Variation 8: Addition to π-Systems (Including Aromatic Compounds) 496
19.7.1.2 Method 2: Cyclizations Utilizing Isocyanides as One-Carbon Donors 497
19.7.1.3 Method 3: The Passerini Reaction and Ugi Reaction: Multicomponent Couplings by an α-Addition Reaction ..................... 499
19.7.1.3.1 Variation 1: The Passerini Reaction: Synthesis of α-Acyloxy carbamides by the Three-Component Coupling of an Isocyanide, a Carbonyl Compound, and a Carboxylic Acid ...................... 500
19.7.1.3.2 Variation 2: The Ugi Reaction: Synthesis of α-Acylaminocarbamides by the Four-Component Coupling of an Isocyanide, a Carbonyl Compound, an Amine, and a Carboxylic Acid .............. 504
19.7.1.4 Method 4: Cycloadditions via α-Isocyanomethyl Anions ................. 509
19.7.1.5 Method 5: Transition-Metal Catalysis Involving Activation of C—H Bonds α to the Isocyano Group .................................. 512
19.7.1.6 Method 6: Oligomerization and Polymerization .......................... 514
19.7.1.6.1 Variation 1: Of Monoisocyanides .................................. 514
19.7.1.6.2 Variation 2: Of Diisocyanides .................................... 515
19.7.1.7 Method 7: Reactions Accompanied by Cleavage of the C—NC Linkage: Isomerization to Nitriles and Removal of the Isocyano Group 516
19.7.1.8 Method 8: Use of Transition-Metal Complexes of Isocyanide as Catalysts 518
19.7.2 Product Subclass 2: Oxygen-, Sulfur-, Nitrogen-, and Phosphorus-Bound Isocyanides ........................................................................ 520
19.7.2.1 Synthesis of Product Subclass 2 ............................................. 521
19.7.2.1.1 Method 1: Dehydration .................................................. 521
19.7.2.1.2 Method 2: Fragmentation of Heterocyclic Compounds ............. 523
19.7.2.1.3 Methods 3: Miscellaneous Methods .................................. 523

Three Carbon–Heteroatom Bonds:
Acid Halides; Carboxylic Acids and Acid Salts

Preface ........................................................................ V

Volume Editor’s Preface ............................................. VII

Table of Contents ....................................................... XI

Introduction
J. S. Panek ..................................................................... 1

20.1 Product Class 1: Acid Halides
S. G. Nelson .............................................................. 15

20.2 Product Class 2: Carboxylic Acids

20.2.1 Product Subclass 1: Alkanoic Acids

20.2.1.1 Synthesis from Carbonic Acid Derivatives
S. J. Collier and E. Kataisto ........................................ 53

20.2.1.2 Synthesis from Carboxylic Acid Derivatives
N. F. Jain and C. E. Masse ......................................... 75

20.2.1.3 Synthesis from Aldehydes, Ketones, and Derivatives
(Including Enol Ethers)
S. Lin, L. Yan, and P. Liu ............................................ 93

20.2.1.4 Synthesis from Organic Halides
G. Evano ..................................................................... 137

20.2.1.5 Synthesis from Alcohols
B. Figadère and X. Franck .......................................... 173

20.2.1.6 Synthesis from Alkenes
(Excluding Reactions with Carboxylic Acid Derivatives)
G. Evano ................................................................... 205

20.2.1.7 Synthesis by Rearrangement
A. J. Phillips and C. E. Love ........................................ 241

20.2.1.8 Synthesis with Retention of the Functional Group
P. Vedantham, M. Jiménez, and P. R. Hanson ............... 265

20.2.2 Product Subclass 2: Arenedicarboxylic Acids
L. R. Subramanian ..................................................... 307

20.2.3 Product Subclass 3: Butenedioic and Butynedioic Acids
C. E. Masse ............................................................. 329

20.2.4 Product Subclass 4: Alkanedioic Acids
C. E. Masse ............................................................. 337

# Table of Contents

**Introduction**
J. S. Panek

Introduction ............................................................... 1

20.1 **Product Class 1: Acid Halides**
S. G. Nelson

20.1.1 **Product Subclass 1: Acid Fluorides**

20.1.1.1 Method 1: Fluorination of Carboxylic Acids ................................. 21
20.1.1.1.1 Variation 1: Treatment with 2,4,6-Trifluoro-1,3,5-triazine .............. 21
20.1.1.1.2 Variation 2: Treatment with Tetramethylfluoroformamidinium Hexafluorophosphate ........................................... 22
20.1.1.1.3 Variation 3: Treatment with N,N-Diethylaminosulfur Trifluoride or N,N-Bis(2-methoxyethyl)aminosulfur Trifluoride .......................... 23
20.1.1.1.4 Variation 4: Treatment with Pyridinium Poly(hydrogen fluoride)/Dicyclohexylcarbodiimide ........................................... 25
20.1.1.1.5 Variation 5: Treatment with 1-Fluoro-N,N,2-trimethylprop-1-en-1-amine .... 26
20.1.1.2 Method 2: Reactions of Acid Chlorides with Fluoride Ion .................. 27
20.1.1.3 Method 3: Reactions of Carboxylate Esters and Anhydrides with Hydrogen Fluoride or Hydrogen Fluoride/Pyridine ...................... 28

20.1.2 **Product Subclass 2: Acid Chlorides** .................................... 29

20.1.2.1 Synthesis of Product Subclass 2 ............................................... 30
20.1.2.1.1 Method 1: Chlorination of Carboxylic Acids .................................. 30
20.1.2.1.1.1 Variation 1: Treatment with Oxalyl Chloride .............................. 30
20.1.2.1.1.2 Variation 2: Treatment with Thionyl Chloride ............................ 33
20.1.2.1.1.3 Variation 3: Treatment with Triphenylphosphine/Carbon Tetrachloride and Other Phosphorus-Based Reagents ........................................... 36
20.1.2.1.1.4 Variation 4: Treatment with 1-Chloro-N,N,2-trimethylprop-1-en-1-amine .... 38
20.1.2.1.1.5 Variation 5: Treatment with Bis(trichloromethyl) Carbonate ............ 39
20.1.2.1.1.6 Variation 6: Treatment with 2,4,6-Trichloro-1,3,5-triazine ............. 40
20.1.2.1.2 Method 2: Chlorination of Trialkylsilyl Carboxylate Esters ............ 41

20.1.3 **Product Subclass 3: Acid Bromides** ...................................... 42

20.1.3.1 Synthesis of Product Subclass 3 ............................................... 43
20.1.3.1.1 Method 1: Reactions of Carboxylic Acids with Phosphorus Tribromide ........ 43
20.1.3.1.2 Method 2: Reactions of Carboxylic Acids or Trialkylsilyl Carboxylate Esters with Dibromotriphenylenephosphorane ............................... 43
20.1.3.1.3 Method 3: Reactions of Carboxylic Acids with 1-Bromo-N,N,2-trimethylprop-1-en-1-amine .................................................. 45
20.1.3.1.4 Method 4: Halide-Exchange Reactions of Acid Chlorides .................. 46
20.1.3.1.5 Method 5: Oxidation of Aldehydes ........................................... 47

20.2.6.1.3.2  Variation 2: Addition of the Carboxy Group to Dithioates ............................ 380

20.2.6.1.3.3  Variation 3: Addition to an \( \alpha,\beta \)-Unsaturated Carboxylic Acid .................. 380

20.2.6.1.4  Method 4: Sigmatropic Rearrangement of Allyl Trihaloacetates ......................... 381

20.2.6.1.5  Method 5: Nucleophilic Substitution at the \( \alpha \)-Carbon of 2,2-Diheteroatom-Substituted Acetic Acids .............................. 382

20.2.7  Product Subclass 7: 2-Aminoalkanoic Acids (\( \alpha \)-Amino Acids)
S. E. Wolkenberg and R. M. Garbaccio

20.2.7.1  Synthesis of Product Subclass 7 ................................. 385

20.2.7.1.1  \( \alpha,\beta \)-Didehydroamino Acids ................................. 385

20.2.7.1.1.1  Synthesis of \( \alpha,\beta \)-Didehydroamino Acids through Elimination ...................... 385

20.2.7.1.1.1.1  Method 1: Acetamide Condensation with \( \alpha \)-Oxo Acids .......................... 385

20.2.7.1.2  \( \alpha \)-Aminoalkanoic Acids ........................................ 386

20.2.7.1.2.1  Introduction of the Side Chain: Alkylation of Glycine and Related Enolates ......... 386

20.2.7.1.2.1.1  Method 1: Alkylation of Chiral Cyclic Enolates .............................. 386

20.2.7.1.2.1.1.1  Variation 1: Alkylation of Chiral Oxazinones .......................... 386

20.2.7.1.2.1.1.2  Variation 2: Alkylation of Chiral Imidazolidinones .......................... 388

20.2.7.1.2.1.1.3  Variation 3: Alkylation of Transition-Metal Complexes .......................... 389

20.2.7.1.2.1.2  Method 2: Alkylation of Chiral Acyclic Schiff Bases .......................... 390

20.2.7.1.2.1.2.1  Variation 1: Alkylation of Chiral \( \text{trans-Pyrrolidine Amides} \) .................. 390

20.2.7.1.2.1.2.2  Variation 2: Alkylation of Chiral Acyloxazolidinones .......................... 391

20.2.7.1.2.2  Introduction of the Side Chain: Addition to Glycine Cations .......................... 392

20.2.7.1.2.2.1  Method 1: Alkylation of Cyclic Imines .............................. 393
20.2.71.2.3 Introduction of the \(\alpha\)-Amino Group: Nucleophilic Addition of Nitrogen to Electrophiles .............................................................. 395

20.2.71.2.3.1 Method 1: Intermolecular Nucleophilic Addition to Chiral Epoxides ..... 395

20.2.71.2.3.1.1 Variation 1: Nucleophilic Amination of \(\alpha,\beta\)-Epoxy Acids Using Ammonia 395

20.2.71.2.3.1.2 Variation 2: Nucleophilic Amination of 2,3-Epoxy Alcohols Using Diazidotitanium(IV) Diisopropoxide ........................................... 396

20.2.71.2.3.2 Method 2: Intramolecular Nucleophilic Addition to Epoxides ........... 396

20.2.71.2.3.2.1 Variation 1: Intramolecular Nucleophilic Nitrogen Addition to Epoxides To Generate Cyclic Carbamates ...................................... 397

20.2.71.2.3.2.2 Variation 2: Intramolecular Nucleophilic Addition to Epoxides Using Trichloroacetimidate ....................................................... 398

20.2.71.2.3.3 Method 3: Nucleophilic Displacement of Halides ........................... 399

20.2.71.2.3.4 Method 4: Using Azide via Chiral (Trichloromethyl)methanols .......... 400

20.2.71.2.4 Introduction of the \(\alpha\)-Amino Group: Electrophilic Amination of Enolates .... 401

20.2.71.2.4.1 Method 1: Electrophilic Amination of Chiral Enolates Using Azodicarboxylates ................................................................. 401

20.2.71.2.4.1.1 Variation 1: Electrophilic Amination of Chiral Silyl Enol Ethers with Azodicarboxylates ......................................................... 403

20.2.71.2.4.1.2 Variation 2: Direct Amination of Enolates with Azodicarboxylates ...... 404

20.2.71.2.4.2 Method 2: Electrophilic Amination of Chiral Enolates Using Sulfonyl Azides .......................................................... 405

20.2.71.2.4.3 Method 3: Electrophilic Amination of Enolates Using a Chiral Catalyst and Azodicarboxylate .............................................. 406

20.2.71.2.4.4 Method 4: Electrophilic Amination of Enolates Using 1-Chloro-1-nitrosocyclohexane ......................................................... 407

20.2.71.2.5 Introduction of the Nitrogen: Reductive Amination .............................. 409

20.2.71.2.5.1 Method 1: Rhodium(I)-Catalyzed Asymmetric Reductive Amination of \(\alpha\)-Oxo Acids .............................................................. 409

20.2.71.2.5.2 Method 2: Chiral Pyridoxamine Promoted Asymmetric Reductive Amination of \(\alpha\)-Oxo Acids .............................................................. 410

20.2.71.2.6 Asymmetric Hydrogenation of \(\alpha,\beta\)-Didehydroamino Acids Using Homogeneous Catalysis .................................................. 410

20.2.71.2.7 Introduction of the \(\alpha\)-Hydrogen: Asymmetric Hydrogenation of \(\alpha,\beta\)-Didehydroamino Acids Using Heterogeneous Catalysts ................. 411

20.2.71.2.7.1 Method 1: Asymmetric Reduction of Hydrazono Lactones Based on Chiral N-Aminodihydroindoles ............................................. 411

20.2.71.2.7.2 Method 2: Asymmetric Hydrogenation of Dehydropiperazinediones .... 412

20.2.71.2.7.3 Method 3: Asymmetric Hydrogenation Using Pinene-Based Cyclic Imino Esters as Templates ................................................. 413

20.2.71.2.8 Introduction of the Carboxylate: Catalytic Asymmetric Addition of Nitriles to Imines (Strecker and Ugi Syntheses) ................................. 414

20.2.71.2.8.1 Method 1: Chiral Salicylamine Catalyzed Strecker Reaction ................. 415

20.2.71.2.8.2 Method 2: Chiral Salicylamine–Titanium Complex Catalyzed Strecker Synthesis ................................................................. 416

20.2.71.2.8.3 Method 3: Chiral Guanidine Catalyzed Strecker Synthesis .................. 418
Table of Contents

20.7.1.2.8.4 Method 4: Addition of Cyanide to Chiral Sulfonimidines .................................................................. 419
20.7.1.2.8.5 Method 5: Carbohydrate Templates for Asymmetric Streater Synthesis ............................... 420
20.7.1.2.8.6 Method 6: 5-Amino-1,3-dioxanes as Chiral Auxiliaries ......................................................... 421
20.7.1.2.8.7 Method 7: α-Arylethylamines as Chiral Auxiliaries .............................................................. 422
20.7.1.2.8.8 Method 8: α-Arylethylamines as Chiral Auxiliaries .............................................................. 423
20.7.1.2.8.9 Method 9: Asymmetric Addition of Isocyanide to Imines (Ugi Synthesis) ........................... 424
20.7.1.2.9 Method 1: Copper-Catalyzed Alkylation of Imines .............................................................. 427
20.7.1.2.9.1 Method 2: Asymmetric Addition to Chiral Oximes ............................................................ 429
20.7.1.2.9.3 Method 3: Asymmetric Addition to Camphorsultam-Based Oximes ................................. 430
20.7.1.2.9.4 Method 4: [2 + 2] Cycloaddition and the β-Lactam Route to Amino Acids ....................... 430
20.7.1.2.10 Method 1: Photolysis of Chromium–Carbene Complexes .................................................... 431
20.7.1.2.10.1 Method 1: Photolysis of Chromium–Carbene Complexes .................................................... 431
20.7.1.2.10.2 Method 2: Intramolecular Amidomercuration ................................................................. 432
20.7.1.2.10.3 Method 3: Diastereoselective Michael Additon to Nitroalkenes ...................................... 433
20.7.1.2.10.4 Method 4: Rearrangement of Allylic Trichloroacetimidates ............................................ 435
20.7.1.2.10.4.1 Variation 1: Thermal Rearrangement of Allylic Trichloroacetimidates on a Chiral Template ........................................................................................................................................ 435
20.7.1.2.10.4.2 Variation 2: Diastereoselective Palladium-Catalyzed Rearrangement of Allylic Trichloroacetimidates ........................................................................................................................................ 436
20.7.1.2.11 Method 1: Copper-Catalyzed Alkylation of Imines .............................................................. 427
20.7.1.2.11.1 Method 1: Ester Enolate Claisen Rearranagement ............................................................ 437
20.7.1.2.11.1 Variation 1: Diastereoselective Ester Enolate Claisen Rearrangment ............................ 437
20.7.1.2.11.2 Variation 2: Enantioselective Ester Enolate Claisen Rearrangment .............................. 438
20.7.1.2.12 Method 1: Photolysis of Chromium–Carbene Complexes .................................................... 439
20.7.1.2.12.1 Method 1: Photolysis of Chromium–Carbene Complexes .................................................... 439
20.7.1.3 α-Alkyl-α-aminoalkanoic Acids .................................................................................................. 440
20.7.1.3.1 Method 1: Alkylation of cis- and trans-Imidazolidinones ................................................. 441
20.7.1.3.2 Method 2: Alkylation of cis- and trans-Oxazolidinones .................................................. 443
20.7.1.3.2.1 Variation 1: Alkylation of tert-Butyloxazolidinones ......................................................... 443
20.7.1.3.2.2 Variation 2: Alkylation of Aryloxazolidinones ............................................................... 444
20.7.1.3.3 Method 3: Alkylation of Oxazolidinones, Thiazolidinones, and Pyrroloindoles ................. 446
20.7.1.3.4 Method 4: Alkylation of OXazaboolizinones ................................................................. 447
20.7.1.3.5 Method 5: Alkylation of Chiral Borane–Amine Adducts .................................................. 449
20.7.1.3.6 Method 6: Memory of Chirality Alkylation ........................................................................... 450
20.7.1.3.2 Method 1: Alkylation of Dihydroimidazol-4-ones ............................................................... 451
20.7.1.3.2.2 Method 2: Oxazinone Alkylation ...................................................................................... 453
20.7.1.3.2.2.1 Variation 1: 5,6-Diphenyltetrahydro-1,4-oxazin-2-one Alkylation ............................. 453
20.7.1.3.2.2.2 Variation 2: 3,6-Dihydro-2H-1,4-oxazin-2-one Alkylation ............................................ 454
20.7.1.3.3 Method 3: Alkylation of Chiral Nickel Complexes .......................................................... 455
20.7.1.3.4 Method 4: Alkylation of Menthol Derivatives ................................................................. 455
20.2.7.1.3.3 Introduction of the Side Chain: Chiral β-Lactams as Building Blocks .......... 457
20.2.7.1.3.3.1 Method 1: Alkylation at C3 of a Chiral β-Lactam .......................... 458
20.2.7.1.3.3.2 Method 2: Alkylation at the α-Carbon of a Chiral β-Lactam .............. 459
20.2.7.1.3.4 Introduction of the Side Chain: Reductive Methods ........................ 461
20.2.7.1.3.4.1 Method 1: Stereoselective Birch Reduction of Chiral Pyrrole-2-carboxylates ................................................................. 461
20.2.7.1.3.5 Introduction of the Side Chain: Addition to C= N Bonds ................. 462
20.2.7.1.3.5.1 Method 1: Addition of Grignard Reagents to Chiral Dehydro- morpholinones ................................................................. 462
20.2.7.1.3.5.2 Method 2: Addition to Chiral Sulfinimines .............................. 462
20.2.7.1.3.6 Introduction of the Side Chain: Cycloaddition to C=C Bonds ....... 463
20.2.7.1.3.6.1 Method 1: Diels–Alder Cycloadditions .................................. 463
20.2.7.1.3.6.2 Method 2: Cyclopropanation ........................................... 464
20.2.7.1.3.6.3 Method 3: [3 + 2]-Dipolar Cycloaddition Reactions .................. 465
20.2.7.1.3.7 Introduction of the Carboxylate: Addition of Nitrile or α-Bromo Ester Enolates to Imines (Strecker and Darzens Syntheses) ............................. 466
20.2.7.1.3.7.1 Method 1: Chiral Salicylamine-Based Strecker Synthesis ......... 466
20.2.7.1.3.7.2 Method 2: Sulfinimine-Mediated Strecker Synthesis .............. 467
20.2.7.1.3.7.3 Method 3: Chiral Dioxane-Based Strecker Synthesis ................. 468
20.2.7.1.3.7.4 Method 4: 1-Phenylethylamine-Based Strecker Synthesis ......... 469
20.2.7.1.3.7.5 Method 5: Morpholinone-Based Strecker Synthesis ............... 470
20.2.7.1.3.7.6 Method 6: Darzens Condensation of α-Bromo Ester Enolates with Sulfinimines ............................................................. 471
20.2.7.1.3.8 Introduction of the Nitrogen and Carboxylate Groups .................. 472
20.2.7.1.3.8.1 Method 1: Spirohydantoins of Ketones (Bucherer–Bergs Reaction) .... 472
20.2.7.1.3.9 Introduction of the Side Chain: Sigmatropic Rearrangements ........ 473
20.2.7.1.3.9.1 Method 1: Claisen Rearrangement ................................... 473
20.2.7.1.3.10 Introduction of the α-Amino Group: Rearrangement of α,α-Dialkyl-β-carbonyl Carboxylic Acids and Sigmatropic Rearrangements ......................... 474
20.2.7.1.3.10.1 Method 1: Rearrangement of Allylic Trichloroacetimidates ....... 474
20.2.7.1.3.10.2 Method 2: Curtius Rearrangement of α,α-Dialkyl β-Ester Carboxylic Acids 475
20.2.7.1.3.10.3 Method 3: Hofmann Rearrangement of α,α-Dialkyl β-Amido Esters .... 476
20.2.8 Product Subclass 8: 2-Heteroatom-Substituted Alkanoic Acids

S. R. Chemler and T. P. Zabawa

20.2.8 Product Subclass 8: 2-Heteroatom-Substituted Alkanoic Acids 483
20.2.8.1 Synthesis of Product Subclass 8 .............................................. 483
20.2.8.1.1 2-Haloalkanoic Acids ......................................................... 483
20.2.8.1.1.1 2-Fluoroalkanoic Acids .................................................... 483
20.2.8.1.1.1 Method 1: Deaminative Fluorination (Fluorodediazoniation) of Chiral α-Amino Acids ....................................................... 484
Method 2: Electrophilic Fluorination with Acetyl Hypofluorite 485
Method 3: Enantioselective Hydrogenation of α-Fluoro-α,β-unsaturated Acids 485
Method 2: Deaminative Chlorination (Chloroamide) of α-Amino Acids 487
Method 2: Deaminative Bromination (Bromodediazoniation) of Chiral α-Amino Acids 489
Method 2: Catalytic Enantioselective Hydrogenation of 2-(Aryloxy)but-2-enoic Acids 496
Product Subclass 9: Alk-2-ynoic Acids
G. Evano

Synthesis of Product Subclass 9 ........................................ 507

Method 1: Oxidation of Propargylic Alcohols or Aldehydes ........ 507
Variation 1: Oxidation of Propargylic Alcohols ...................... 507
Variation 2: Oxidation of Conjugated Ynals or Synthetic Equivalents .... 510
Method 2: Carboxylation of Metalated Alk-1-ynes .................. 511
Variation 1: Carboxylation of Alk-1-ynes ........................ 511
Variation 2: Carboxylation of 1,1-Dibromoalkenes .................. 516
Variation 3: Carboxylation of 1-Haloalkenes ....................... 517
Method 3: Hydrolysis of Alk-2-ynoic Acid Esters .................. 518
Method 4: Bromination/Dehydrobromination of Alk-2-enoic Acids ...... 519
Variation 1: Coupling of Alk-1-ynes with Bromopropynoic Acid (Cadiot–Chodkiewicz Reaction) ......................... 521
Variation 2: Coupling of Haloarenes with Propynoic Acid ............. 522
Variation 3: Addition of Metalated Propynoic Acid to Electrophiles ... 525

Product Subclass 10: Arenecarboxylic Acids
T. P. Yoon and E. N. Jacobsen

Synthesis of Product Subclass 10 ......................................... 533
Method 1: Electrophilic Aromatic Substitution ....................... 533
Variation 1: Friedel–Crafts Carboxylation ............................ 533
Variation 2: Kolbe–Schmitt Reaction ................................ 534
Variation 3: Carboxylation of Phenols by Carbon Tetrachloride ....... 535
Method 2: Palladium-Mediated C—H Activation and Carboxylation ...... 535
Method 3: Oxidative Degradation ..................................... 536
Variation 1: Oxidation of Alkyl Substituents ......................... 536
Variation 2: Oxidation of Aryl Ketones ............................... 537
Method 4: Carboxylation of Arylmetal Species ....................... 538
Variation 1: Simple Metalation ........................................ 538
Variation 2: Directed ortho-Metalation ............................... 539
Variation 3: Reductive Metalation of Haloarenes .................... 540
Variation 4: Lithium–Halogen Exchange .............................. 540
Method 5: Base-Promoted Cleavage of Diaryl Ketones ................. 541
Method 6: Substitution of Halogen .................................. 542
Variation 1: Metal-Catalyzed Carboxylation of Haloarenes ........... 542
Variation 2: Cyanation/Hydrolysis of Haloarenes .................... 543
Method 7: Carboxylation of Arenediazonium Salts ................... 544
Method 8: Addition to Benzyne Intermediates ...................... 544
Method 9: The von Richter Rearrangement .......................... 545
Method 10: Metalation/Alkylation of Arene Carboxylates ............ 545
20.2.10.1.1  Variation 1:  *ortho*-Lithiation of Arene Carboxylates ................................. 545
20.2.10.1.2  Variation 2:  Lithiation of *ortho*-Alkyl Substituents of Arene Carboxylic Acids 546
20.2.10.1.11 Method 11:  *S*_<sub>N</sub>*Ar Reaction of 2-(Methoxyaryl)dihydrooxazoles .............. 547

20.2.11  **Product Subclass 11: Alk-2-enoic Acids**  
C. D. Vanderwal and E. N. Jacobsen

20.2.11  **Product Subclass 11: Alk-2-enoic Acids** ........................................... 551
20.2.11.1  Synthesis of Product Subclass 11 ........................................... 551
20.2.11.1.1 Method 1:  Carboxylation of Alkenyl Organometallics ................................. 551
20.2.11.1.1 Variation 1:  Metation/Carboxylation of Alkenyl Ethers, Carbamates, 
and Sulfides  ........................................................................ 551
20.2.11.1.2 Variation 2:  Reductive Metation/Carboxylation of Haloalkenes ................. 552
20.2.11.1.3 Variation 3:  Reductive Carboxylation of Alkynes ................................. 553
20.2.11.1.4 Variation 4:  Carbometalation/Carboxylation of Alkynes .......................... 554
20.2.11.1.5 Variation 5:  Palladium-Catalyzed Hydroxycarbonylation of Alkenyl 
Electrophiles ................................................................. 555
20.2.11.1.2 Method 2:  Elimination Reactions ......................................................... 556
20.2.11.1.2.1 Variation 1:  Elimination from β-Heteroatom-Substituted Alkanoic Acids .... 556
20.2.11.1.2.2 Variation 2:  Reductive Elimination of Vicinal Heteroatom Substituents ... 557
20.2.11.1.3 Variation 3:  Haloform Reaction of Alkenyl Methyl Ketones ...................... 558
20.2.11.1.3 Method 3:  Carboxyl Alkenations ........................................... 558
20.2.11.1.3.1 Variation 1:  Knoevenagel–Doebner Condensation .............................. 558
20.2.11.1.3.2 Variation 2:  Perkin Reaction ......................................................... 559
20.2.11.1.3.3 Variation 3:  Wittig Reaction ......................................................... 560
20.2.11.1.3.4 Variation 4:  Horner–Wadsworth–Emmons Reaction ........................... 560
20.2.11.1.3.5 Variation 5:  Peterson Reaction ...................................................... 561
20.2.11.1.3.6 Variation 6:  Alkenation of α-Oxo Acids ............................................. 562
20.2.11.1.4 Method 4:  Reduction of Alk-1-ynoic Acids ........................................... 562
20.2.11.1.5 Method 5:  Cycloaddition of Alkynoic Acids ........................................... 563
20.2.11.1.6 Method 6:  Palladium-Catalyzed Cross Coupling to β-Halogen-Substituted 
Alk-2-enoic Acids ......................................................... 564
20.2.11.1.7 Method 7:  Heck Reaction .............................................................. 564
20.2.11.1.8 Method 8:  Alkene Metathesis .......................................................... 565

20.2.12  **Product Subclass 12: 3-Oxoalkanoic and 3,3-Dioxyalkanoic Acids**  
J. Beignet

20.2.12  **Product Subclass 12: 3-Oxoalkanoic and 3,3-Dioxyalkanoic Acids** ................. 569
20.2.12.1  Synthesis of Product Subclass 12 ......................................................... 569
20.2.12.1.1  3-Oxoalkanoic Acids ................................................................. 569
20.2.12.1.1.1 Method 1:  Acylation of Bis(trimethylsilyl) Malonate .................................. 569
20.2.12.1.1.1 Variation 1:  Use of the Lithium Enolate of Bis(trimethylsilyl) Malonate .... 569
20.2.12.1.1.2 Variation 2:  Use of Triethylamine and Metal Salts .................................. 570
20.2.12.1.1.2 Method 2:  Carboxylation of Methyl Ketones ..................................... 571
20.2.12.1.1.1 Variation 1:  Use of Magnesium Methyl Carbonate ................................ 571

## 20.5 Product Class 5: Carboxylic Acid Esters

### 20.5.1 Product Subclass 1: Alkyl Alkanoates

M. Yus, C. Nájera, and R. Chinchilla ....................................... 643

#### 20.5.1.1 Synthesis from Carbonic Acid Derivatives

S. J. Collier ........................................................................... 665

#### 20.5.1.2 Synthesis from Carboxylic Acids and Derivatives

N. F. Jain and C. E. Masse .................................................. 711

#### 20.5.1.3 Synthesis from Aldehydes, Ketones, and Derivatives

(Including Enol Ethers)

L. Yan, S. Lin, and P. Liu ................................................... 725

#### 20.5.1.4 Synthesis from Organometallic Compounds, Alkyl Halides,

Primary Alcohols, or Ethers (Excluding Reactions with Carboxylic

Acid Derivatives)

M. Yus, C. Nájera, and R. Chinchilla ..................................... 777

#### 20.5.1.5 Synthesis from Alkenes (Excluding Reactions with Carboxylic

Acid Derivatives)

G. Evano ........................................................................... 795

#### 20.5.1.6 Synthesis by Rearrangement

A. J. Phillips and C. E. Love .............................................. 827

#### 20.5.1.7 Synthesis with Retention of the Functional Group

M. Zhang and P. R. Hanson .............................................. 863

### 20.5.2 Product Subclass 2: Arenedicarboxylic Acid Esters

L. R. Subramanian ............................................................. 947

### 20.5.3 Product Subclass 3: Butenedioic and Butynedioic Acid Esters

C. E. Masse ...................................................................... 957

### 20.5.4 Product Subclass 4: Alkanedioic Acid Esters

C. E. Masse ...................................................................... 987

### 20.5.5 Product Subclass 5: Alkynyl Alkanoates

S. G. Nelson ................................................................... 1047

G. Evano

20.5.1.5 Synthesis from Alkenes
(Excluding Reactions with Carboxylic Acid Derivatives) 795
20.5.1.5.1 Method 1: Oxidative C=C Bond Cleavage 795
20.5.1.5.2 Method 2: Hydroesterification with Carbon Monoxide
(Reppe Carbonylation) 797
20.5.1.5.3 Method 3: Hydroesterification with Formate Esters 802
20.5.1.5.4 Method 4: Cross Metathesis with Conjugated Esters 806
20.5.1.5.5 Method 5: Synthesis via Hydroboration with Two-Carbon Homologation 808
20.5.1.5.6 Method 6: Addition of Acetate Esters to Alkenes 811
20.5.1.5.7 Method 7: Hydroacyloxylation 813
20.5.1.5.7.1 Variation 1: Markovnikov Hydroacyloxylation Using Carboxylic Acids 814
20.5.1.5.7.2 Variation 2: Anti-Markovnikov Hydroacyloxylation via Hydroboration 818
20.5.1.5.8 Method 8: Allylic Acyloxylation 818
20.5.1.5.8.1 Variation 1: Allylic Acyloxylation without Double-Bond Migration 818
20.5.1.5.8.2 Variation 2: Allylic Acyloxylation with Double-Bond Migration 821
20.5.1.5.9 Method 9: The Prévost Reaction 822

20.5.1.6 Synthesis by Rearrangement
A. J. Phillips and C. E. Love

20.5.1.6 Synthesis by Rearrangement 827
20.5.1.6.1 Method 1: Baeyer–Villiger Oxidation 827
20.5.1.6.2 Method 2: Cope Rearrangement 831
20.5.1.6.2.1 Variation 1: Cope Rearrangement of Silyl Cyanohydrins 831
20.5.1.6.2.2 Variation 2: Cope Rearrangement of Divinylcyclopropanes 833
20.5.1.6.3 Method 3: Rearrangement of Vinylcyclopropanes 836
20.5.1.6.4 Method 4: Rearrangement of Ketene Acetals 839
20.5.1.6.4.1 Variation 1: Rearrangement of Ketene Acetals Derived from Ortho Esters
(The Johnson Protocol) 840
20.5.1.6.4.2 Variation 2: Rearrangement of Ketene Acetals Derived from Selenoxides 843
20.5.1.6.5 Method 5: [2,3]-Wittig Rearrangement of α-(Alkenyloxy) Esters 845
20.5.1.6.5.1 Variation 1: Via Lithium Enolates 845
20.5.1.6.5.2 Variation 2: Via Tin, Titanium, and Zirconium Enolates 848
20.5.1.6.6 Method 6: [3,3] Rearrangements of Allylic Esters 849
20.5.1.6.7 Method 7: The Pummerer Rearrangement 852
20.5.1.6.8 Method 8: Palladium-Catalyzed Carbonylation with Rearrangement 854
20.5.1.6.9 Method 9: Favorovskii Rearrangement 855
20.5.1.6.10 Method 10: Arndt–Eistert and Related Reactions 857
20.5.1.7 Synthesis with Retention of the Functional Group
M. Zhang and P. R. Hanson

20.5.1.7 Synthesis with Retention of the Functional Group .......................... 863
20.5.1.7.1 Conjugate Addition of α,β-Unsaturated Esters .............................. 863
20.5.1.7.1.1 Method 1: Addition of Organocopper Reagents .............................. 863
20.5.1.7.1.2 Method 2: Addition of Organoborane Reagents .............................. 865
20.5.1.7.1.3 Method 3: Addition of Nitroalkanes .................................. 868
20.5.1.7.1.4 Method 4: Hydrohalogenation Reactions of Substituted Allenoates ...... 869
20.5.1.7.1.5 Method 5: Addition of AlkylRadicals .................................. 870
20.5.1.7.1.6 Method 6: Addition of Organomanganese(II) Reagents ................. 871
20.5.1.7.1.7 Method 7: Addition of Grignard Reagents ................................ 871
20.5.1.7.1.8 Method 8: Nickel(0)-Catalyzed Conjugate Additions ................... 872
20.5.1.7.1.9 Method 9: Reductive C—C Bond Formation of α,β-Unsaturated Esters ... 873
20.5.1.7.1.10 Method 10: Addition of Allyltrimethylsilane ......................... 874
20.5.1.7.2 Alkylations of Alkyl Alkanoates .............................................. 875
20.5.1.7.2.1 Method 1: α-Alkylation .............................................. 875
20.5.1.7.2.1.1 Variation 1: Alkylation with Strong Base and an Alkylating Agent ... 875
20.5.1.7.2.1.2 Variation 2: Metal-Complex-Catalyzed α-Alkylation ................ 877
20.5.1.7.2.1.3 Variation 3: Michael Addition of Ester Enolates ..................... 878
20.5.1.7.2.2 Method 2: Deconjugate Alkylation .................................... 879
20.5.1.7.2.3 Method 3: Reductive Alkylation ........................................... 880
20.5.1.7.2.4 Method 4: Ene Reaction ............................................... 881
20.5.1.7.2.5 Method 5: Asymmetric Alkylation ......................................... 882
20.5.1.7.3 Cross-Coupling Reactions Catalyzed by Transition-Metal Complexes .... 883
20.5.1.7.3.1 Method 1: Sonogashira Coupling ................................................ 883
20.5.1.7.3.2 Method 2: Hydrovinylation ............................................... 884
20.5.1.7.3.3 Method 3: Hydroformylation ............................................. 885
20.5.1.7.3.4 Method 4: Other Palladium-Complex-Catalyzed Cross Couplings .... 886
20.5.1.7.4 Cleavage Reactions ................................................................. 889
20.5.1.7.4.1 Method 1: Cleavage of Oxalates ......................................... 889
20.5.1.7.4.2 Method 2: Cleavage of Malonates by Decarboxylation ................. 890
20.5.1.7.4.3 Method 3: Cleavage of α-Cyano Esters by Decyanation ............... 891
20.5.1.7.4.4 Method 4: Cleavage of β-Oxo Esters ......................................... 893
20.5.1.7.5 Oxidation Reactions ................................................................. 894
20.5.1.7.5.1 Method 1: Ozonolysis ......................................................... 894
20.5.1.7.5.2 Method 2: Photooxygenation ............................................... 895
20.5.1.7.6 Conjugate Reduction of α,β-Unsaturated Esters ................................. 895
20.5.1.7.6.1 Method 1: Use of Aluminum Hydride Reducing Agents ................. 896
20.5.1.7.6.2 Method 2: Use of Borohydride Reducing Agents .......................... 896
20.5.1.7.6.3 Method 3: Reduction Using Samarium(II) Iodide ....................... 898
20.5.1.7.6.4 Method 4: Use of Metals in Protic Solvents as Reducing Agents ....... 899
20.5.1.7.6.5 Method 5: Hydrostannation .................................................. 900
20.5.1.7.6.6 Method 6: Use of Hydrosilane Reducing Agents .......................... 900
Method 7: Use of Sodium Dithionite Reducing Agents ........................................ 902
Method 8: Asymmetric Conjugate Reduction ........................................ 902
Selective Reduction of Distant Multiple Bonds in Unsaturated Esters ........ 903
Method 1: Reduction of Triple Bonds ........................................ 904
Method 2: Reduction of Double Bonds ........................................ 905
Method 8: Asymmetric Conjugate Reduction ........................................ 902
Selective Reduction of Distant Multiple Bonds in Unsaturated Esters ........ 903
Method 1: Reduction of Triple Bonds ........................................ 904
Method 2: Reduction of Double Bonds ........................................ 905
Chemoselective Hydrogenations .................................................. 905
Method 1: Heterogeneous Hydrogenations ........................................ 906
Method 2: Homogeneous Hydrogenations ........................................ 907
Method 3: Asymmetric Hydrogenations ........................................ 909
Synthesis from Lactones by Ring Opening ........................................ 911
Method 1: Ring Opening under Basic Conditions .................................. 911
Method 2: Ring Opening under Acidic Conditions .................................. 912
Method 3: Enzyme-Catalyzed Ring Opening ........................................ 913
Synthesis from Alkyl Formates .................................................. 914
Method 1: Hydroesterifications Catalyzed by Transition-Metal Complexes 914
Method 2: Free-Radical Addition ........................................ 915
Method 3: Palladium-Catalyzed Reaction with Nitrobenzene .......... 916
Method 4: Carbynylation Reactions of Formates with Organic Halides ...... 917
Isomerizations .................................................. 917
Method 1: Deconjugation ........................................ 917
Method 2: Other Isomerizations ........................................ 919
Alkene Metathesis .................................................. 920
Method 1: Metathesis with Tungsten-Based Catalysts ........................ 920
Method 2: Metathesis with Molybdenum-Based Catalysts .................... 921
Method 3: Metathesis with Ruthenium-Based Catalysts ...................... 923
Method 4: Metathesis with Rhenium-Based Catalysts ....................... 925
 Transesterification .................................................. 926
Method 1: Transesterification without Catalysis .................................. 926
Method 2: Transesterification with Chemical Catalysis ....................... 927
Variation 1: By Brønsted Acids ........................................ 927
Variation 2: By Lewis Acids ........................................ 928
Variation 3: By Solid Acids ........................................ 930
Variation 4: By Bases ........................................ 931
Method 3: Transesterification with Enzymes ...................................... 932
Kinetic Resolution .................................................. 934
Method 1: Resolution with Enzymatic Catalysis .................................. 934
Method 2: Non-Enzymatic Resolution ........................................ 936

Product Subclass 2: Arenedicarboxylic Acid Esters
L. R. Subramanian

Synthesis of Product Subclass 2 ........................................ 947
20.5.2.1.1 Method 1: Direct Esterification of Arene-dicarboxylic Acids Using Alkyl Halides ................................................................. 947
20.5.2.1.2 Method 2: Direct Esterification of Arene-dicarboxylic Acids and Anhydrides Using Alcohols ........................................ 948
20.5.2.1.2.1 Variation 1: Using a Morpholinium Salt as Catalyst ............... 948
20.5.2.1.2.2 Variation 2: Using Heteropolyacids as Catalysts ......................... 949
20.5.2.1.3 Method 3: Direct Esterification of Arene-dicarboxylic Acids Using Pentafluorophenol and N,N’-Dicyclohexylcarbodiimide ...... 950
20.5.2.1.4 Method 4: Synthesis of Arene-1,2-dicarboxylic Acid Esters by Diels–Alder Reaction Followed by Aromatization ..................... 950
20.5.2.1.4.1 Variation 1: From 2H-Pyran-2-ones ........................................ 950
20.5.2.1.4.2 Variation 2: From 4-Nitrostyrene ............................................. 952
20.5.2.1.4.3 Variation 3: From Substituted Benzo[c]furan .................................. 953
20.5.2.1.5 Methods 5: Miscellaneous Methods .................................................. 953

20.5.3 Product Subclass 3: Butenedioic and Butynedioic Acid Esters

C. E. Masse

20.5.3.1 Synthesis of Product Subclass 3 ....................................................... 957
20.5.3.1.1 Method 1: Anhydride Cleavage .................................................. 957
20.5.3.1.1.1 Variation 1: Solvolysis of Maleic Anhydride .................................. 957
20.5.3.1.1.2 Variation 2: Using Lactam Acetals ........................................... 958
20.5.3.1.2 Method 2: Carbenoid Dimerization ............................................. 959
20.5.3.1.2.1 Variation 1: Ruthenium-Mediated Reactions .................................... 959
20.5.3.1.2.2 Variation 2: Rhodium-Mediated Reactions .................................... 961
20.5.3.1.2.3 Variation 3: Copper-Mediated Reactions ........................................ 961
20.5.3.1.3 Method 3: Phosphorus-Based Alkenations ....................................... 962
20.5.3.1.3.1 Variation 1: From Thiiranes .................................................... 962
20.5.3.1.3.2 Variation 2: From Lithiophosphoranes .......................................... 964
20.5.3.1.4 Method 4: 1,4-Addition of Alcohols ............................................... 965
20.5.3.1.4.1 Variation 1: Organic Base Mediated Reactions ................................. 965
20.5.3.1.4.2 Variation 2: Titanium-Mediated Reactions ...................................... 965
20.5.3.1.4.3 Variation 3: Lead-Mediated Reactions ........................................... 966
20.5.3.1.4.4 Variation 4: Silver-Mediated Reactions ........................................... 967
20.5.3.1.5 Method 5: Elimination Protocols .................................................. 968
20.5.3.1.5.1 Variation 1: From Aspartate Esters ............................................. 968
20.5.3.1.5.2 Variation 2: From Monohalosuccinic Acid Esters .............................. 969
20.5.3.1.5.3 Variation 3: From Hydroxysuccinic Acid Esters .............................. 970
20.5.3.1.5.4 Variation 4: From Dibromosuccinic Acid Esters with Dimethylformamide ................................................................. 970
20.5.3.1.5.5 Variation 5: From Tartrates via Phosphinate Activation ................. 971
20.5.3.1.5.6 Variation 6: From Tartrates via Cyclic Sulfates ............................... 972
20.5.3.1.5.7 Variation 7: From Bromosuccinic Acid Esters ................................. 973
20.5.3.1.5.8 Variation 8: From Dibromosuccinates with Sodium Dithionite .......... 974
20.5.3.1.5.9 Variation 9: From vic-Diols via 1,3-Dioxolanes ............................... 975
20.5.3.1.5.10 Variation 10: From vic-Diols via Phosphonium Sulfates ................. 976
20.5.3.1.5.11 Variation 11: From vic-Diols with Sodium Sulfide ............................ 978
20.5.3.1.5.12 Variation 12: From vic-Diols via Thermal Elimination .......................... 978
20.5.3.1.6 Method 6: Semihydrogenation ............................................................... 979
20.5.3.1.6.1 Variation 1: Using Homogeneous Palladium Catalysts ..................... 979
20.5.3.1.6.2 Variation 2: Using Hydrosilane Reagents .......................................... 980
20.5.3.1.6.3 Variation 3: Using Nickel Boride Catalysts ....................................... 981
20.5.3.1.6.4 Variation 4: Using a Polymer-Supported Palladium Catalyst ............... 982
20.5.3.1.6.5 Variation 5: Using a Rhodium Hydride Complex ............................ 982
20.5.3.1.6.6 Variation 6: Using an Indium Hydride Complex .................................. 983
20.5.3.1.7 Methods 7: Other Methods ................................................................. 984
20.5.3.1.7.1 Variation 1: Phosphine Additions to Butynedioates .......................... 984
20.5.3.1.7.2 Variation 2: Carbene Additions to Maleic Anhydride Derivatives .......... 985

20.5.4 Product Subclass 4: Alkanedioic Acid Esters
C. E. Masse

20.5.4.1 Synthesis of Product Subclass 4 .................................................................. 987
20.5.4.1.1 Method 1: Esterification of Oxalic Acid by the Fischer Method .......... 987
20.5.4.1.2 Method 2: Oxalate Esters by Nucleophilic Acyl Substitution on
Activated Oxalyl Derivatives ................................................................................. 988
20.5.4.1.2.1 Variation 1: From Oxalyl Chloride ..................................................... 988
20.5.4.1.2.2 Variation 2: From Ethyl Cyanooxalacetate ...................................... 988
20.5.4.1.3 Method 3: Oxalate Esters by Oxidative Methods ................................. 989
20.5.4.1.3.1 Variation 1: Palladium-Mediated Oxidative Coupling of Carbon Monoxide
20.5.4.1.3.2 Variation 2: Oxidative Cleavage of 2-Chlorobuta-1,3-diene ............... 990
20.5.4.1.4 Method 4: Esterification of Malonic Acids ............................................. 990
20.5.4.1.4.1 Variation 1: Using Isobutene .................................................................. 990
20.5.4.1.4.2 Variation 2: Via the Monoacid Chloride ............................................. 991
20.5.4.1.4.3 Variation 3: Via Mixed Carbonic Anhydrides .................................... 992
20.5.4.1.5 Method 5: Malonate Esters by Alkylation of Malonate Derivatives .. 993
20.5.4.1.5.1 Variation 1: Via Monoalkylation of Malonate Diesters ...................... 993
20.5.4.1.5.2 Variation 2: Phase-Transfer-Catalyzed Dialkylation of Malonates ........ 994
20.5.4.1.5.3 Variation 3: Intramolecular Cyclization of ω-(Bromoalkyl)malonates .... 995
20.5.4.1.5.4 Variation 4: Transition-Metal-Mediated Alkylations ......................... 996
20.5.4.1.5.5 Variation 5: Alkylation–Decarboxylation of Methanetricarboxylates .... 996
20.5.4.1.5.6 Variation 6: Via Alkylation of Meldrum’s Acid ................................... 997
20.5.4.1.6 Method 6: Malonate Esters by Acylation of Malonate Derivatives ....... 998
20.5.4.1.6.1 Variation 1: Via Ethoxymagnesium Malonates .................................. 998
20.5.4.1.6.2 Variation 2: C-Acylation Using Magnesium Oxide .......................... 999
20.5.4.1.6.3 Variation 3: C-Acylation Using Soft Enolization ............................. 1000
20.5.4.1.7 Method 7: Malonate Esters by Conjugate Additions to Malonate
Derivatives .............................................................................................................. 1001
20.5.4.1.7.1 Variation 1: Reduction of Alkylidenemalonates with Sodium
Cyanoborohydride ................................................................................................. 1001
20.5.4.1.7.2 Variation 2: Grignard Additions to Alkylidenemalonates .................. 1001
20.5.4.1.7.3 Variation 3: Phase-Transfer-Catalyzed Michael Addition of Malonate
Enolates .................................................................................................................. 1002
Method 8: Malonate Esters by Knoevenagel Condensation of Malonates

Variation 1: With Acetaldehyde and Acetic Anhydride ........................... 1003
Variation 2: With Paraformaldehyde and Copper(II) Acetate .................... 1003
Variation 3: From Pyrolysis of Malonate Diels–Alder Adducts .................... 1004

Method 9: Malonate Esters by Claisen Condensations with Oxalic Acid

Method 10: Malonate Esters by Arylation of Malonate Derivatives ............... 1006

Variation 1: Via Electrophilic Aromatic Substitution ............................ 1006
Variation 2: Via Nucleophilic Aromatic Substitution on Malonyl–Iron–Arene Complexes ........................ .................... 1008

Method 11: Malonate Esters by Addition of Allylsilanes to Activated Cyclopropanes ........................................ 1008

Method 12: Malonate Esters by Dichlorination of Malonates with Trifluoromethanesulfonyl Chloride ............................. 1009

Method 13: Esterification of Succinic Acid ........................................ 1010

Method 14: Succinate Esters by Reduction of Butenedioates ...................... 1010

Variation 1: Lewis Acid Mediated Reduction of Maleates ....................... 1010
Variation 2: Ruthenium-Mediated Hydrogenation of 2-Methylenesuccinate Esters .................................................. 1011
Variation 3: Rhodium-Mediated Hydrogenation of 2-Methylenesuccinate Esters .......................................................... 1012

Method 15: Succinate Esters by Alkene Dimerization ................................ 1013

Variation 1: Radical-Based Methods .................................................. 1013
Variation 2: Oxidative Dimerization of Titanium Enolates ...................... 1014
Variation 3: Oxidative Dimerization of Organocuprates ......................... 1015

Method 16: Succinate Esters by Rearrangement Reactions ....................... 1016

Variation 1: Ring Opening of Cyclopropanes ...................................... 1016
Variation 2: Malonate Displacements .................................................. 1017
Variation 3: Allylmalonate Rearrangement ......................................... 1018

Method 17: Succinate Esters by Carbonylation .................................... 1019

Variation 1: Dicarbonylation of But-2-enes ...................................... 1019
Variation 2: Dicarbonylation of Terminal Alkenes and Cycloalkenes ........ 1020
Variation 3: Monocarbonylation of Acrylates ..................................... 1022
Variation 4: From Allylic Carbonates ............................................... 1023

Method 18: Succinate Esters by Conjugate Additions ............................ 1023

Variation 1: Reaction of Thiols with Butenedioates .............................. 1023
Variation 2: Reaction of Enamines with Nitroalkenes .......................... 1024
Variation 3: Reaction of Cyanohydrins with Butenedioates .................... 1025

Method 19: Succinate Esters by Stobbe Condensations .......................... 1026

Method 20: Succinate Esters by α-Alkylation of Succinoyl Derivatives ....... 1027

Variation 1: Using an Organometallic Auxiliary ................................ 1027
Variation 2: Using Malate Esters ...................................................... 1028

Method 21: Succinate Esters by Asymmetric Nucleophilic Addition Using a Chiral Ketone Auxiliary .................................................. 1029

Method 22: Succinate Esters by Stereoselective [2,3]-Wittig Rearrangement .......................... 1030

Method 23: Succinate Esters by Asymmetric Alkylation Using N-Acylxazolidinones (Evans Asymmetric Alkylation) ... 1031
20.5.4.1.23.1 Variation 1: Application to the Synthesis of a Pharmaceutical Agent  1032
20.5.4.1.24 Method 24: Succinate Esters by Aldol Approaches  1033
20.5.4.1.24.1 Variation 1: Using Chiral Imines  1033
20.5.4.1.24.2 Variation 2: 2-Substituted 2-Hydroxysuccinates Using a Stoichiometric Chiral Tin Lewis Acid  1034
20.5.4.1.24.3 Variation 3: 2,3-Disubstituted 2-Hydroxysuccinates Using a Stoichiometric Chiral Tin Lewis Acid  1035
20.5.4.1.24.4 Variation 4: Using Chiral N-Acylhydrazones  1036
20.5.4.1.24.5 Variation 5: Using a Catalytic Chiral Titanium Lewis Acid  1037
20.5.4.1.24.6 Variation 6: Using a Catalytic Chiral Copper Lewis Acid  1038
20.5.4.1.24.7 Variation 7: Use of a Fluorous Lewis Acid Catalyst  1039
20.5.4.1.24.8 Variation 8: Use of a Catalytic Tin Lewis Acid  1041
20.5.4.1.24.9 Variation 9: Application of a Chiral Tin Lewis Acid in Total Synthesis  1042
20.5.4.1.24.10 Variation 10: Use of a Cationic Scandium Lewis Acid  1043

20.5.5 Product Subclass 5: Alkynyl Alkanoates
S. G. Nelson

20.5.5 Product Subclass 5: Alkynyl Alkanoates  1047
20.5.5.1 Synthesis of Product Subclass 5  1047
20.5.5.1.1 Method 1: Metalation and Rearrangement of $\alpha,\alpha$-Dihalo Ketones (Alkynolate Anions)  1047
20.5.5.1.2 Method 2: Reaction of Carboxylic Acids with Alkynyliodonium Salts  1048
20.5.5.1.2.1 Variation 1: Using Preformed Alkynyliodonium Ions  1048
20.5.5.1.2.2 Variation 2: Using (Diacyliodo)arenes  1049

20.5.6 Product Subclass 6: Aryl Alkanoates
S. G. Nelson

20.5.6 Product Subclass 6: Aryl Alkanoates  1051
20.5.6.1 Synthesis of Product Subclass 6  1052
20.5.6.1.1 Method 1: Acylation of Phenols  1052
20.5.6.1.1.1 Variation 1: Direct Acylation  1052
20.5.6.1.1.2 Variation 2: Lewis Acid Catalyzed Acylation  1057
20.5.6.1.1.3 Variation 3: Lewis Base Catalyzed Acylation  1059
20.5.6.1.2 Method 2: Oxidation of Arenes  1060
20.5.6.1.2.1 Variation 1: Acyl Peroxide Mediated Oxidation  1060
20.5.6.1.2.2 Variation 2: Lead(IV) Acetate Mediated Oxidation  1062
20.5.6.1.3 Method 3: Displacement of Diazonium Groups by Nucleophiles (The Sandmeyer Reaction)  1062

20.5.7 Product Subclass 7: Alkenyl Alkanoates
S. G. Nelson

20.5.7 Product Subclass 7: Alkenyl Alkanoates  1065
20.5.7.1 Synthesis of Product Subclass 7  1069
20.5.7.1 Method 1: O-Acylation of Enolates ........................................ 1069
  20.5.7.1.1 Variation 1: Kinetic Deprotonation .............................. 1069
  20.5.7.1.2 Variation 2: Fluoride-Catalyzed O-Acylation of Enolates ...... 1072
  20.5.7.1.3 Variation 3: O-Acylation of Enolates and Enols Generated under Equilibrating Conditions ........................................ 1074
  20.5.7.1.4 Method 2: O-Acylation of Aldehyde Enolates Derived from Alkynoate Anions .............................................................. 1076
  20.5.7.1.5 Method 3: Metal-Catalyzed Alkoxycarbonylation of Alkynes .... 1077
  20.5.7.1.6 Method 4: Cross-Coupling of Alkenymercury Halides or Alkenyl Halides with Metal Acetate Salts ................................. 1084
  20.5.7.1.7 Method 5: Coupling of Fischer Carbenes with Acid Chlorides .... 1086
  20.5.7.1.8 Method 6: Alkenation Reactions ...................................... 1086

20.5.8 Product Subclass 8: 2-Oxo- and 2-Imino-Substituted Alkanoic Acid Esters, and Related Compounds
J. A. Westbrook and S. E. Schaus

20.5.8 Product Subclass 8: 2-Oxo- and 2-Imino-Substituted Alkanoic Acid Esters, and Related Compounds ........................................ 1091
  20.5.8.1 Synthesis of Product Subclass 8 ....................................... 1091
    20.5.8.1.1 Method 1: Esterification of 2-Heteroatom-Substituted Acids .... 1091
    20.5.8.1.2 Method 2: Hydrolysis of 2-Heteroatom-Substituted Esters ........ 1094
    20.5.8.1.3 Method 3: Alcoholsysis of 2-Heteroatom-Substituted Nitriles ... 1097
    20.5.8.1.4 Method 4: Oxidation Reactions ...................................... 1098
      20.5.8.1.4.1 Variation 1: Oxidation of α-Hydroxy Esters ................. 1098
      20.5.8.1.4.2 Variation 2: Oxidation of α-Diazo Esters .................. 1100
      20.5.8.1.4.3 Variation 3: Oxidation of 3-Oxo-2-(triphenylphosphoranylidene)-propanoate .................................................. 1101
      20.5.8.1.4.4 Variation 4: Oxidation of 2-Alkylidene Esters ........... 1102
    20.5.8.1.5 Method 5: Addition of Organometallic Reagents to Oxalates .... 1103
    20.5.8.1.6 Method 6: Friedel–Crafts Acylation of Buta-1,3-dienes, Arenes, and Hetarenes .................................................. 1106
    20.5.8.1.7 Method 7: Sigmatropic Rearrangements ............................ 1108
      20.5.8.1.7.1 Variation 1: Claisen Rearrangement of Allyl Vinyl Ethers .... 1108
      20.5.8.1.7.2 Variation 2: Stevens Rearrangement of \(N,N\)-Dimethyl-\(N\)-(phenylethynyl)-glycinium Bromides .......................... 1109
    20.5.8.1.8 Method 8: Hetero-Diels–Alder Reactions .......................... 1110
    20.5.8.1.9 Method 9: Aldol Condensations ................................... 1110

20.5.9 Product Subclass 9: 2,2-Diheteroatom-Substituted Alkanoic Acid Esters
J. A. Westbrook and S. E. Schaus

20.5.9 Product Subclass 9: 2,2-Diheteroatom-Substituted Alkanoic Acid Esters 1115
  20.5.9.1 Synthesis of Product Subclass 9 ....................................... 1115
    20.5.9.1.1 Method 1: Esterification of 2,2-Diheteroatom-Substituted Acids ...... 1115
    20.5.9.1.2 Method 2: Synthesis by Acetal Formation ........................... 1117
    20.5.9.1.2.1 Variation 1: Formation of Acetals and Hemiacetals ............ 1117

20.5.10 Product Subclass 10: 2-Aminoalkanoic Acid Esters (α-Amino Acid Esters)
R. M. Garbaccio and S. E. Wolkenberg

20.5.10 Product Subclass 10: 2-Aminoalkanoic Acid Esters (α-Amino Acid Esters) 1131

20.5.10.1 Synthesis of Product Subclass 10 1131

20.5.10.1.1 α,β-Didehydroamino Acid Esters 1131

20.5.10.1.1.1 Synthesis of α,β-Didehydroamino Acid Esters through Palladium(0)-Catalyzed Cross-Coupling Reactions 1131

20.5.10.1.1.1.1 Method 1: Suzuki Coupling of β-Bromoamidoacrylates with Aryl- and Vinylboronic Acids 1131

20.5.10.1.1.1.2 Method 2: Heck Coupling of Amidoacrylates with Aryl and Vinyl Halides 1132

20.5.10.1.1.2 Synthesis of α,β-Didehydroamino Esters through Elimination 1133

20.5.10.1.1.2.1 Method 1: Erlenmeyer Condensation 1133

20.5.10.1.1.2.2 Method 2: Horner–Emmons Condensation 1134

20.5.10.1.2 2-Aminoalkanoic Acid Esters 1135

20.5.10.1.2.1 Introduction of the Side Chain: Alkylation of Glycine and Related Chiral Enolates 1136

20.5.10.1.2.1.1 Method 1: Alkylation of Chiral Cyclic Enolates 1136

20.5.10.1.2.1.1.1 Variation 1: Alkylation of Chiral Bis-lactim Ethers 1136

20.5.10.1.2.1.1.2 Variation 2: Alkylation of Chiral Oxazinones 1138

20.5.10.1.2.1.2 Method 2: Alkylation of Chiral Acyclic Schiff Bases 1139

20.5.10.1.2.1.3 Method 3: Alkylation Utilizing Chiral Phase-Transfer Reagents 1141

20.5.10.1.2.1.4 Method 4: Metal-Mediated Glycine Enolate Alkylation 1143

20.5.10.1.2.1.4.1 Variation 1: Palladium-Catalyzed Alkylation of Glycine Derivatives 1143

20.5.10.1.2.1.4.2 Variation 2: Gold-Catalyzed Aldol Reactions 1146

20.5.10.1.2.1.4.3 Variation 3: Titanium-Mediated Aldol Reactions 1147

20.5.10.1.2.1.4.4 Variation 4: Aluminum–Salen-Catalyzed Aldol Reactions of 5-Alkoxyoxazoles 1149

20.5.10.1.2.2 Introduction of the α-Amino Group: Nucleophilic Amination 1150
Method 1: Intermolecular Nucleophilic Addition to Chiral Epoxides
Method 2: Intramolecular Nucleophilic Addition to Epoxides
Method 3: Nucleophilic Displacement of Halides
Method 4: Nucleophilic Displacement of Sulfonic Esters and Cyclic Sulfates
Variation 1: Displacement of Trifluoromethanesulfonates
Variation 2: Opening Cyclic Sulfates
Method 5: Mitsunobu Displacement of an \( \alpha \)-Hydroxy Group
Method 6: Nucleophilic Addition to \( p \)-Allylpalladium Intermediates
Method 1: Proline Organocatalysis
Introduction of the \( \alpha \)-Amino Group: Electrophilic Amination of Enolates
Method 1: Proline Organocatalysis
Method 1: Homogeneous Catalysis
Variation 1: Cationic Rhodium Complexes of Chiral \( C_2 \)-Symmetric Bisphosphines
Variation 2: Cationic Rhodium Complexes of Chiral \( C_2 \)-Symmetric Bisphosphinites
Variation 3: Cationic Rhodium Complexes of P-Chirogenic Phosphines
Method 1: Enantioselective Michael Addition–Hydrogen Atom Transfer
Method 2: Diastereoselective Organocuprate Michael Addition to Chiral Piperazine-2,5-dione Acceptors
Introduction of Carboxylate: Asymmetric Addition of Nitriles to Imines (Strecker Synthesis)
Method 1: Chiral Binuclear Zirconium-Complex-Catalyzed Strecker Synthesis
Method 2: Chiral Aluminum–Salen Complex Catalyzed Strecker Synthesis
Method 1: Proline-Catalyzed Mannich Additions to Imino Esters
Method 2: Copper-Catalyzed Alkylationst of Imino Esters
Method 3: Catalytic Asymmetric Mannich Additions to Imino Esters
Method 4: Catalytic Asymmetric Aza-Henry Addition to Imino Esters
Method 5: Palladium-Catalyzed Silyl Enol Ether Additions of Imino Esters
Method 6: Catalytic Asymmetric Aromatic Additions to Imino Esters
Method 7: Organometallic Additions to Chiral Imino Esters
Method 8: Mannich-Type Reaction of Electron-Rich Aromatic Compounds with Chiral Imino Lactones
Method 9: Rhodium-Catalyzed Addition of Arylboronic Acids to \( N \)-(tert-Butylsulfinyl)imino Esters
Method 1: Catalytic Asymmetric Diels–Alder Cycloaddition Reactions
Method 1: Catalytic Asymmetric Diels–Alder Addition to Chiral Imino Esters
20.5.10.1.2.9.1 Method 1: Rearrangement of Allylic Trichloroacetimidates .......................... 1182
20.5.10.1.2.9.1.1 Variation 1: Thermal Rearrangement of Chiral Allylic Trichloroacetimidates 1183
20.5.10.1.2.9.1.2 Variation 2: Enantioselective Palladium-Catalyzed Rearrangement of Prochiral Allylic Trichloroacetimidates .......... 1184

20.5.10.1.10 Addition of the Carboxylate Group: Rearrangements .................................. 1185
20.5.10.1.10.1 Method 1: Photolysis of Chromium–Carbene Complexes ........................... 1185

20.5.10.1.3 α-Alkyl-α-aminoalkanoic Acid Esters ................................................................. 1186
20.5.10.1.3.1 Introduction of the Side Chain: Alkylation of Chiral Amino Acid Enolates ...... 1187
20.5.10.1.3.1.1 Method 1: Alkylation of Bis-lactim Ethers ...................................................... 1187
20.5.10.1.3.1.2 Method 2: Alkylation of Schiff Bases .................................................................. 1188
20.5.10.1.3.1.2.1 Variation 1: Alkylation of Galactodialdehyde Aldimines .............................. 1188
20.5.10.1.3.1.2.2 Variation 2: Alkylation of Camphor-Derived Sultams .............................. 1189
20.5.10.1.3.1.3 Method 3: Transition-Metal-Catalyzed Asymmetric Allylic Alkylation of Azlactones ......................................................... 1190
20.5.10.1.3.1.3.1 Variation 1: Palladium-Catalyzed Asymmetric Allylic Alkylation of Azlactones .................................................................. 1191
20.5.10.1.3.1.3.2 Variation 2: Molybdenum-Catalyzed Asymmetric Allylic Alkylation of Azlactones .................................................................. 1192
20.5.10.1.3.2 Introduction of the Side Chain: Rearrangements ............................................. 1193
20.5.10.1.3.2.1 Method 1: Rearrangement of O-Acylated Azlactones .................................. 1193
20.5.10.1.3.3 Introduction of the α-Amino Group: Rearrangement of α,α-Dialkyl-β-carbonyl Carboxylic Acid Esters ......................................................... 1194
20.5.10.1.3.3.1 Method 1: Curtius Rearrangement of α,α-Dialkyl β-Ester Carboxylic Acids .................................................................................. 1195
20.5.10.1.3.3.2 Method 2: Hofmann Rearrangement of α,α-Dialkyl-β-amido Esters ........... 1195
20.5.10.1.3.3.3 Method 3: Schmidt Rearrangement of β-Oxido Esters ................................. 1196
20.5.10.1.3.3.4 Method 4: Beckmann Rearrangement of β-Oxime Esters ......................... 1197

20.5.11 Product Subclass 11: 2-Heteroatom-Substituted Alkanoic Acid Esters
S. R. Chemler and T. P. Zabawa

20.5.11 Product Subclass 11: 2-Heteroatom-Substituted Alkanoic Acid Esters .......... 1203
20.5.11.1 Synthesis of Product Subclass 11 ................................................................. 1203
20.5.11.1.1 2-Haloalkanoates ............................................................................................. 1203
20.5.11.1.1.1 2-Fluoroalkanoates .......................................................................................... 1203
20.5.11.1.1.1.1 Method 1: Electrophilic Fluorination of Alkanoates ................................. 1204
20.5.11.1.1.1.1 Variation 1: Fluorination with N-Fluorobis(trifluoromethylsulfonyl)amine 1204
Variation 2: Fluorination with 2-Fluoro-1,3,2-benzodithiazole 1,1,3,3-Tetraoxide ................................................ 1205

Variation 3: Catalytic Asymmetric Fluorination of α-Cyano Esters by Treatment with Chiral Palladium Complexes and N-Fluorobis(phenylsulfonyl)amine ........................................ 1206

Variation 4: Catalytic Asymmetric Fluorination of β-Oxo Esters .......................... 1207

Method 2: Kinetic Enzymatic Resolution of Racemic 2-Fluoroalkanoates 1207

Variation 2: Tandem Chlorination/Esterification of Acid Halides .......................... 1209

Method 2: Nucleophilic Displacement of a Hydroxy Group .............................. 1211

Variation 2: Asymmetric Tandem Bromination/Esterification of Acid Chlorides .................. 1212

Method 1: Electrophilic Bromination of Carbon Nucleophiles .......................... 1212

Variation 1: Catalytic Asymmetric Bromination with Chiral Bis(dihydroxazole)–Copper(II) Complexes .................. 1212

Variation 2: Asymmetric Tandem Bromination/Esterification of Acid Chlorides .................. 1213

Method 1: Formation of 2-Iodoalkanoates with N-Iodosuccinimide under Microwave Conditions .................. 1214

Method 2: Catalytic Asymmetric C—C Bond-Forming Reactions .................. 1218

Variation 1: Asymmetric Alkylation of 2-Hydroxyacetates ............................ 1219

Variation 2: Enantioselective Addition of Silyl Enol Ethers to Ethyl Glyoxylate and 2-Oxoalkanoates .................. 1220

Variation 1: Oxidation of Enolates with Oxaziridines .................. 1221

Variation 2: Sharpless Catalytic Asymmetric Dihydroxylation of α,β-Unsaturated Esters .................. 1222

Variation 3: Synthesis of the Taxol Side Chain Using the Sharpless Catalytic Asymmetric Aminohydroxylation of Cinnamate Esters .................. 1224

Variation 2: 2-Alkoxyalkanoates by C—C Bond-Forming Reactions .................. 1226
20.5.11.4 2,3-Epoxyalkanoates ....................................................... 1227
20.5.11.4.1 Method 1: Asymmetric Epoxidation of \( \alpha,\beta \)-Unsaturated Esters with Chiral Dioxiranes ......................... 1228
20.5.11.4.2 Method 2: Chiral Manganese(III)–Salen Catalyzed Enantioselective Epoxidation of \( \text{cis}-\alpha,\beta \)-Unsaturated Esters ............... 1229
20.5.11.4.3 Method 3: Catalytic Enantioselective Epoxidation of \( \alpha,\beta \)-Unsaturated Esters Using a Lanthanide Lewis Acid Catalyst and tert-Butyl Hydroperoxide .......................... 1229
20.5.11.5 2-Sulfanylalkanoates ....................................................... 1230
20.5.11.5.1 Method 1: Sulfanylation of Enolates .................................. 1231
20.5.11.5.1.1 Variation 1: Sulfanylation of Ester Enolates .................... 1231
20.5.11.5.1.2 Variation 2: Catalytic Enantioselective Sulfanylation of \( \beta \)-Oxo Esters ........................................ 1231
20.5.11.5.2 Method 2: Nucleophilic Displacement with Thiolates .......... 1232
20.5.11.5.2.1 Variation 1: Direct Displacement of a Chiral Methanesulfonate ........................................ 1232
20.5.11.5.2.2 Variation 2: Dynamic Resolution of 2-Bromoalkanoic Acid N-Methyl-pseudoephedrine Esters with Triphenylmethylthiol .......................... 1233
20.5.11.6 2-Selanylalkanoates ....................................................... 1234
20.5.11.6.1 Method 1: Selanylation of Enolates .................................. 1234
20.5.11.6.2 Method 2: Synthesis Using the Selenide Anion ................. 1235
20.5.11.6.2.1 Variation 1: Opening of Epoxides ................................ 1235
20.5.11.6.2.2 Variation 2: Synthesis of Selenides by Nucleophilic Substitution ........................................ 1235
20.5.11.7 2-Tellanylalkanoates ....................................................... 1236
20.5.11.7.1 Method 1: Synthesis Using the Telluride Anion ................. 1236
20.5.11.7.2 Method 2: Synthesis from Iodotelluride .......................... 1237

20.5.12 Product Subclass 12: Alk-2-ynoic Acid Esters

G. Evano

20.5.12 Product Subclass 12: Alk-2-ynoic Acid Esters ........................................... 1243
20.5.12.1 Synthesis of Product Subclass 12 ........................................... 1243
20.5.12.1.1 Method 1: Esterification of Alk-2-ynoic Acids or Derivatives ........................................... 1243
20.5.12.1.1.1 Variation 1: Direct Esterification of Alk-2-ynoic Acids ........................................... 1243
20.5.12.1.1.2 Variation 2: Alkylation of Alk-2-ynoic Acids or Their Salts ........................................... 1249
20.5.12.1.1.3 Variation 3: Alcoholesis of Alk-2-ynoic Acid Derivatives ........................................... 1253
20.5.12.1.2 Method 2: Carboxylation of Alk-1-ynes ........................................... 1255
20.5.12.1.2.1 Variation 1: Carboxylation of Alk-1-ynes by Deprotonation–Carboxylation ........................................... 1255
20.5.12.1.2.2 Variation 2: Carboxylation of Lithium Acetylides Derived from 1,1-Dihaloalkenes Produced from Aldehydes by Corey–Fuchs Alkenation ........................................... 1259
20.5.12.1.2.3 Variation 3: Carboxylation of Lithium Acetylides Derived from 1-Haloalkenes ........................................... 1261
20.5.12.1.2.4 Variation 4: Palladium-Catalyzed Carboxylation of Alk-1-ynes with Chloroformates ........................................... 1261
20.5.12.1.2.5 Variation 5: Palladium-Catalyzed Carboxylation of Alk-1-ynes with Carbon Monoxide and Alcohols ........................................... 1262
20.5.12.2.6 Variation 6: Copper-Catalyzed Carboxylation of Alk-1-ynes with Carbon Dioxide and Alkyl Bromides .......................................................... 1264
20.5.12.1.3 Method 3: Synthesis from Alk-2-enoic Acid Esters by Bromination–Dehydrobromination .................................................. 1264
20.5.12.1.4 Method 4: Using Wittig-Type Reactions ........................................ 1265
20.5.12.1.4.1 Variation 1: Reaction of [(Alkoxycarbonyl)methylene]triphenylphosphoranes with Acyl Chlorides, Anhydrides, or Carboxylic Acids ........................................ 1265
20.5.12.1.4.2 Variation 2: Reaction of [(Ethoxycarbonyl)iodomethyl]triphenylphosphonium Iodide with Aldehydes ...................................... 1269
20.5.12.1.5 Method 5: Modifications of Propynoic Acid Esters or Derivatives ....... 1270
20.5.12.1.5.1 Variation 1: Coupling of Propynoic Acid Esters ........................................ 1270
20.5.12.1.5.2 Variation 2: Coupling of Bromopropynoic Acid Esters .................. 1274
20.5.12.1.5.3 Variation 3: Addition of Metalated Propynoic Acid Esters to Electrophiles 1275
20.5.12.1.6 Method 6: Deaminative Dehydration of β-Oxo Esters Derived from Aldehydes .................................................. 1279

20.5.13 Product Subclass 13: Arenecarboxylic Acid Esters
T. P. Yoon and E. N. Jacobsen

20.5.13 Synthesis of Product Subclass 13 .......................................................... 1285
20.5.13.1 Method 1: Friedel–Crafts Acylation ................................................. 1285
20.5.13.1.2 Method 2: Oxidation of Benzylic Ethers ........................................ 1286
20.5.13.1.3 Method 3: Radical Benzylxoylation .............................................. 1287
20.5.13.1.4 Method 4: Metallation/Carbonylation of Arenes .............................. 1288
20.5.13.1.4.1 Variation 1: Direct Metallation ..................................................... 1288
20.5.13.1.4.2 Variation 2: Reductive Metallation of Haloarenes ......................... 1289
20.5.13.1.4.3 Variation 3: Lithium–Halogen Exchange with Haloarenes ............. 1290
20.5.13.1.4.4 Variation 4: Metallation of Tricarbonylchromium–η⁶-Arene Complexes .................................................. 1291
20.5.13.1.5 Method 5: Palladium-Mediated C–H Activation and Carbonylation .... 1292
20.5.13.1.6 Method 6: Palladium-Catalyzed Carbonylation of Main-Group Arylmetal Species .................................................. 1293
20.5.13.1.6.1 Variation 1: Stille Coupling of Alkyl Chloroformates with Arylstannanes ............................... 1293
20.5.13.1.6.2 Variation 2: Carbyonlation of Arylboranes with Carbon Monoxide .... 1294
20.5.13.1.7 Method 7: Transition-Metal-Catalyzed Carbonylation of Haloarenes ...... 1294
20.5.13.1.8 Method 8: Construction of the Aromatic Ring by Anionic Methods ...... 1295
20.5.13.1.8.1 Variation 1: Anionic [3 + 3] Aromatic Ring Formation with Chan’s Diene ............................... 1295
20.5.13.1.8.2 Variation 2: Anionic [4 + 2] Aromatic Ring Formation by Phthalide Annulation .................................................. 1296
20.5.13.1.8.3 Variation 3: Anionic [5 + 1] Aromatic Ring Formation by Addition to Pyrylium Salts .................................................. 1297
20.5.13.1.9 Method 9: Construction of the Aromatic Ring by Radical Cyclizations of β-Oxo Esters .................................................. 1298
20.5.13.1.10 Method 10: Construction of the Aromatic Ring by Cycloadditions ...... 1298
20.5.13.1.10.1 Variation 1: [4 + 2] Diels–Alder Cycloadditions and Aromatization ...... 1298
20.5.13.1.10.2 Variation 2: Transition-Metal-Catalyzed [2 + 2 + 2] Cyclotrimerization of Alkynes .................................................. 1300
20.5.13.1.11 Method 11: Construction of the Aromatic Ring by Electrocyclization and Elimination ............................................. 1300
20.5.13.1.12 Method 12: Oxidative Rearrangement of 2-(Hydroxyaryl) Acylhydrazones 1301
20.5.13.1.13 Method 13: Lithiation and Alkylation of Benzoate Esters .................................................. 1301

20.5.14 Product Subclass 14: Alk-2-enoic Acid Esters
C. D. Vanderwal and E. N. Jacobsen

20.5.14 Synthesis of Product Subclass 14 ........................................ 1305
20.5.14.1 Method 1: Alkoxycarbonylation of Alkenyl Organometallics .................................................. 1305
20.5.14.1.1 Variation 1: Metalation/Alkoxycarbonylation of Alkenyl Ethers, Sulfides, and Enecarbamates .................................................. 1305
20.5.14.1.2 Variation 2: Reductive Metalation/Alkoxycarbonylation of Haloalkenes .................................................. 1306
20.5.14.1.3 Variation 3: Reductive Alkoxycarbonylation of Alkynes ........................................................................ 1307
20.5.14.1.4 Variation 4: Zirconium-Catalyzed Carboalumination/Alkoxycarbonylation of Alkenes .................................................. 1308
20.5.14.1.5 Variation 5: Palladium-Catalyzed Carboxylation/Alkoxycarbonylation of Alkenyl Electrophiles ........................................................................ 1308
20.5.14.1.6 Method 2: Elimination Reactions ........................................ 1309
20.5.14.1.7 Variation 1: Oxidative Elimination of Hydrogen from Alkanoic Acid Esters .................................................. 1309
20.5.14.1.8 Variation 2: Palladium-Mediated Oxidation of Silyl Enol Ethers .................................................. 1310
20.5.14.1.9 Variation 3: Elimination from \( \beta \)-Heteroatom-Substituted Alkanoic Acid Esters .................................................. 1311
20.5.14.1.10 Variation 4: Elimination from \( \alpha \)-Heteroatom-Substituted Alkanoic Acid Esters .................................................. 1312
20.5.14.1.11 Variation 5: Pericyclic \( \text{syn} \)-Elimination from \( \alpha \)-Acetoxy, \( \alpha \)-Sulfinyl, and \( \alpha \)-Seleninyl Alkanoic Acid Esters ........................................................................ 1313
20.5.14.1.12 Variation 6: Reductive Elimination of Vicinal Heteroatom Substituents .................................................. 1314
20.5.14.1.13 Variation 7: Conversion of \( \alpha \)-Oxo Esters into 2-Alkoxy- and 2-Aminoalk-2-enoic Acid Esters .................................................. 1315
20.5.14.1.14 Variation 8: Conversion of \( \beta \)-Oxo Esters into 3-Alkoxy- and 3-Aminoalk-2-enoic Acid Esters ........................................................................ 1316
20.5.14.1.15 Method 3: Aldol-Type Condensations ........................................................................ 1317
20.5.14.1.16 Variation 1: Knoevenagel and Doebner-Modified Knoevenagel Condensations ........................................................................ 1317
20.5.14.1.17 Variation 2: Stobbe Condensation ........................................................................ 1319
20.5.14.1.18 Variation 3: Carbonyl Homologation by Siloxyalkynes and Alkoxyalkynes ........................................................................ 1319
20.5.14.1.19 Method 4: Wittig and Related Alkenylations ........................................................................ 1320
20.5.14.1.20 Variation 1: Wittig Reaction ........................................................................ 1321
20.5.14.1.21 Variation 2: Horner–Wittig Reaction ........................................................................ 1322
20.5.14.1.23 Variation 4: The Peterson Alkenation ........................................................................ 1324
20.5.14.1.24 Variation 5: Alkenation of \( \alpha \)-Oxo Esters ........................................................................ 1325
20.5.14.1.25 Method 5: Eschenmoser Sulfide Contraction ........................................................................ 1326
20.5.14.1.6 Method 6: Semihydrogenation of Alk-2-ynoic Acid Esters .......................... 1326
20.5.14.1.7 Method 7: Phosphine-Catalyzed Internal Redox Isomerization of Alk-2-ynoic Acid Esters to Dienoic Acid Esters .......................... 1328
20.5.14.1.8 Method 8: Conjugate Addition to Alk-2-ynoic Acid Esters .......................... 1329
20.5.14.1.9 Method 9: Cycloadditions of Alk-2-ynoic Acid Esters .......................... 1330
20.5.14.1.10 Method 10: α-Alkylation of Preformed Alk-2-enoic Acid Esters .......................... 1332
20.5.14.1.12 Method 12: Transition-Metal-Catalyzed Cross Couplings of Alk-2-enoic Acid Esters .................................................. 1334
20.5.14.1.13 Method 13: Heck Reaction ........................................ 1336
20.5.14.1.14 Method 14: Alkene Metathesis ........................................ 1337

20.5.15 Product Subclass 15: 3-Oxo- and 3,3-Diheteroatom-Substituted Alkanoic Acid Esters

J. Beignet

20.5.15 Product Subclass 15: 3-Oxo- and 3,3-Diheteroatom-Substituted Alkanoic Acid Esters ........................................ 1341
20.5.15.1 Synthesis of Product Subclass 15 ........................................ 1341
20.5.15.1.1 3-Oxalkanoic Acid Esters ........................................ 1341
20.5.15.1.1 Method 1: Oxidation of 3-Hydroxyalkanoic Acid Esters ........................................ 1341
20.5.15.1.1.2 Method 2: Addition of Methyl Ketones to Carbonyl Compounds ........................................ 1342
20.5.15.1.2.1 Variation 1: Using Carbonates ........................................ 1342
20.5.15.1.2.2 Variation 2: Using Cyanooformates ........................................ 1342
20.5.15.1.2.3 Variation 3: Using Chloroformates ........................................ 1343
20.5.15.1.3 Method 3: Addition of 2,2-Dimethyl-1,3-dioxane-4,6-dione to Acylating Agents ........................................ 1344
20.5.15.1.3.1 Variation 1: Using Acid Chlorides ........................................ 1344
20.5.15.1.3.2 Variation 2: Using Activated Carboxylic Acids ........................................ 1345
20.5.15.1.3.3 Variation 3: Using Imidates ........................................ 1346
20.5.15.1.4 Method 4: Addition of Nitroalkanes to Ethyl Glyoxalate ........................................ 1346
20.5.15.1.4.1 Method 5: Addition of the Enolates of Acetates to Carbonyl Compounds ........................................ 1347
20.5.15.1.5.1 Variation 1: Using Acid Chlorides ........................................ 1347
20.5.15.1.5.2 Variation 2: Using Mixed Anhydrides ........................................ 1348
20.5.15.1.5.3 Variation 3: Using 1-Alkanoylimidazoles ........................................ 1349
20.5.15.1.5.4 Variation 4: Using N-Methoxy-N-methylamides ........................................ 1349
20.5.15.1.5.5 Variation 5: Using a Lithium (Trimethylsilyl)acetate and a 1-Acylimidazole 1350
20.5.15.1.6 Method 6: Addition of Acetates to Acid Chlorides (via a Titanium Enolate) ........................................ 1351
20.5.15.1.6.1 Method 7: Addition of Acetates to Carbonyl Compounds (via a Formal Zinc Enolate) ........................................ 1351
20.5.15.1.6.1.1 Method 1: Using a Reformatsky Reagent and an Acid Chloride ........................................ 1351
20.5.15.1.6.1.2 Method 2: Using a Reformatsky Reagent and a Nitrile ........................................ 1352
20.5.15.1.7 Method 8: Claisen Condensation of Acetates ........................................ 1353
20.5.15.1.8 Method 9: Rearrangement of (Alkanoylsulfanyl)acetates ........................................ 1353
20.5.15.1.9 Method 10: Addition of Ethyl Diazoacetate to Aldehydes ........................................ 1353

Science of Synthesis Original Edition Volume 20b
© Georg Thieme Verlag KG
Method 11: Reduction of Ethyl 3-Oxo-2-(triphenylphosphoranylidene)alkanoates ........................................... 1354

Method 12: Elimination of a Heterocyclic Substituent from a 3-Hetaryl-3-hydroxyalkanoate .................................... 1355

Variation 1: Elimination of Pyrrole from 3-Hydroxy-3-(1H-pyrrol-1-yl)alkanoates ........................................... 1355

Variation 2: Deprotection of tert-Butyl 3-Hydroxy-3-(1-methyl-1H-imidazol-2-yl)nonanoate .................................. 1355

Method 13: Pyrolysis of 3-Hydroxy-2-(phenylsulfinyl)alkanoic Acid Esters .......................................................... 1356

Method 14: Acylation of 3-Oxoalkanoic Acid Esters .................... 1356

Variation 1: Acylation of Methyl Acetoacetate with Acid Chlorides ..................................................... 1356

Variation 2: Acylation of 3-Oxoalkanoic Acid Esters with Nitriles ............................................................... 1357

Variation 3: Acylation of Ethyl Hydrogen Malonate .................. 1358

Variation 4: Acylation of Methyl Tetrahydro-2H-pyran-2-yl Malonate ...................................................... 1360

Method 15: Acylation of Malonates ................................... 1359

Variation 1: Acylation of Dialkyl Malonates with Acid Chlorides .......................................................... 1359

Variation 2: Acylation of Magnesium Methyl Malonate with 1-Acylimidazoles .................................................. 1360

Variation 3: Acylation of Ethyl Hydrogen Malonate .................. 1361

Variation 4: Acylation of Methyl Tetrahydro-2H-pyran-2-yl Malonate ..................................................... 1362

Method 16: Oxidation of Methyl Alk-2-ynoates ......................... 1362

Variation 1: Wacker Oxidation .................................................. 1363

Variation 2: Epoxidation and Rearrangement of Alk-2-enoates ........................................................... 1363

Method 17: Oxidation of Alk-2-enoates ................................. 1364

Method 18: Acetoacetylation of Alcohols Using Diketene ............... 1365

Variation 1: From Aldehydes ...................................................... 1366

Variation 2: From Acetals .......................................................... 1367

Method 20: Transesterification of 1,3-Dioxin-4-ones ....................... 1368

Method 21: Alkylation of 3-Oxoalkanoic Acid Esters ..................... 1369

Method 1: Fluorination of Ethyl 3-Oxoalkanoates ........................ 1369

Method 2: Reaction of Fluorinated Alkenes and Trimethyl Orthoacetate ....................................................... 1370

Method 3: Transesterification of 3,3-Difluoroalkanoic Acid Esters ...................................................... 1371

Method 1: Addition of a Silyl Ketene Acetal to 2-Ethoxy-2-methyl-1,3-dioxolane .................................................. 1371

Method 2: Addition of a Silyl Ketene Acetal to a 1,3-Dioxolan-2-yl Cation ...................................................... 1372

Method 3: Addition of Pyrocatechol to Alkyl Penta-2,3-dienoates .......................................................... 1372

Method 1: Addition of 2-Sulfanylphenol to Alkyl Penta-2,3-dienoates .......................................................... 1373

Method 1: Addition of the Lithium Enolate of an Ester to 1- Alkanoyl-1H-pyroles .................................................. 1373

Method 1: Addition of Magnesium Methyl Malonate with 1-Acylimidazoles .................................................. 1374
20.5.15.1.6.1 Method 1: Addition of 4-Methylbenzene-1,2-dithiol to Methyl Penta-2,3-dienoate ............................................. 1372
20.5.15.1.7 3-Amino-3-sulfanylalkanoic Acid Esters ................................................. 1372
20.5.15.1.7.1 Method 1: Addition of 2-Aminoethanethiol to an Alk-2-ynoic Acid Ester 1372

20.5.16 **Product Subclass 16: 3-Heteroatom-Substituted Alkanoic Acid Esters**
G. Sartori and R. Maggi

20.5.16 **Product Subclass 16: 3-Heteroatom-Substituted Alkanoic Acid Esters** ................................................................. 1375
20.5.16.1 Synthesis of Product Subclass 16 ......................................................... 1375
20.5.16.1.1 Haloalkanoic Acid Esters ........................................................................... 1375
20.5.16.1.1.1 Method 1: C=C Addition Reactions ......................................................... 1375
20.5.16.1.1.2 Method 2: Nucleophilic Substitutions ..................................................... 1376
20.5.16.1.1.3 Method 3: Cycloaddition Reactions ....................................................... 1377
20.5.16.1.1.4 Method 4: Ring Opening ................................................................. 1379
20.5.16.1.2 Hydroxy- and Sulfanylalkanoic Acid Esters and Derivatives ................ 1380
20.5.16.1.2.1 Method 1: Addition to \(\alpha,\beta\)-Unsaturated Esters .................................. 1380
20.5.16.1.2.1.1 Variation 1: Michael Addition .............................................................. 1380
20.5.16.1.2.1.2 Variation 2: Oxidative Addition ........................................................... 1381
20.5.16.1.2.2 Method 2: Nucleophilic Substitutions ..................................................... 1383
20.5.16.1.2.3 Method 3: Cycloaddition Reactions ....................................................... 1386
20.5.16.1.2.3.1 Variation 1: Cyclopropanation of Functionalized Alkenes ................. 1386
20.5.16.1.2.3.2 Variation 2: \([2+2]\) Cycloaddition ......................................................... 1387
20.5.16.1.2.3.3 Variation 3: Diels–Alder Reaction ....................................................... 1389
20.5.16.1.2.4 Method 4: Ring Opening of Cyclic Precursors ......................................... 1391
20.5.16.1.2.4.1 Variation 1: Ring Opening of Lactones ................................................ 1391
20.5.16.1.2.4.2 Variation 2: Ring Opening of Epoxides ............................................... 1392
20.5.16.1.2.5 Method 5: Reduction of \(\beta\)-Dicarbonyl Compounds ................................ 1393
20.5.16.1.2.5.1 Variation 1: Selective Reductions of \(\beta\)-Oxo Esters .............................. 1393
20.5.16.1.2.5.2 Variation 2: Monoreduction of Malonates .......................................... 1395
20.5.16.1.2.6 Method 6: Oxidation Reactions .......................................................... 1397
20.5.16.1.2.6.1 Variation 1: Oxidation of a Preexisting Alcohol or Aldehyde Function 1397
20.5.16.1.2.6.2 Variation 2: “Ex-novo” Oxidative Insertion of the Ester Function ........ 1399
20.5.16.1.2.6.3 Variation 3: Oxidative Insertion of the Hydroxy Function ............... 1400
20.5.16.1.2.7 Method 7: Carboxylation Reactions ..................................................... 1401
20.5.16.1.2.8 Methods 8: Miscellaneous Reactions ................................................... 1402
20.5.16.1.3 Amino- and Phosphorylalkanoic Esters and Derivatives ........................ 1402
20.5.16.1.3.1 Method 1: Addition to \(\alpha,\beta\)-Unsaturated Esters .................................. 1402
20.5.16.1.3.1.1 Variation 1: Michael Addition .............................................................. 1402
20.5.16.1.3.1.2 Variation 2: Oxidative Addition ........................................................... 1408
20.5.16.1.3.2 Method 2: Nucleophilic Substitutions ..................................................... 1410
20.5.16.1.3.3 Method 3: Cycloaddition Reactions ....................................................... 1412
20.5.16.1.3.3.1 Variation 1: Cyclopropanation of Functionalized Alkenes .................. 1412
20.5.16.1.3.3.2 Variation 2: \([2+2]\) Cycloaddition ......................................................... 1413
20.5.16.1.3.4 Method 4: Ring Opening of Cyclic Precursors ......................................... 1415
20.6 Product Class 6: Lactones

M. E. Maier

20.6 Product Class 6: Lactones ............................................. 1421
20.6.1 Synthesis of Product Class 6 ............................................ 1424
20.6.1.1 Method 1: Lactonization .............................................. 1424
20.6.1.1.1 Variation 1: Lactonization To Give Five-Membered Lactones ............ 1424
20.6.1.2 Method 2: Asymmetric Dihydroxylation Followed by Lactonization ...... 1426
20.6.1.2.1 Variation 1: Butyrolactones from 1,4-Unsaturated Esters .......... 1426
20.6.1.2.2 Variation 2: Butyrolactones from 1,3-Unsaturated Esters .......... 1429
20.6.1.2.3 Variation 3: Butyrolactones from Epoxides and C₃ Building Blocks .... 1431
20.6.1.2.4 Variation 4: Butyrolactones from the Addition of C₃ Building Blocks to Carbonyl Compounds ............................................. 1438
20.6.1.3 Method 3: Metalation of Aromatic Carboxylic Acid Derivatives .......... 1444
20.6.1.3.1 Variation 1: Base-Induced Lactonization ................................ 1447
20.6.1.3.2 Variation 2: Lactonization To Give Six-Membered Lactones .......... 1449
20.6.1.3.3 Variation 3: δ-Lactones from the Opening of Epoxides with C₃ Building Blocks .............................................................. 1451
20.6.1.3.4 Variation 4: δ-Lactones from the Addition of C₄ Building Blocks to Carbonyl Compounds ............................................. 1453
20.6.1.3.5 Variation 5: Lactonization To Give Four-Membered Lactones ........ 1455
20.6.1.4 Method 4: Macrolactonization and Difficult Lactonizations ............ 1456
20.6.1.4.1 Variation 1: The Corey–Nicolaou Method ................................ 1456
20.6.1.4.2 Variation 2: The Masamune Method .................................... 1459
20.6.1.4.3 Variation 3: The Mukaiyama Method .................................... 1459
20.6.1.4.4 Variation 4: The Steliou Method ........................................ 1460
20.6.1.4.5 Variation 5: The Yamaguchi Method .................................... 1462
20.6.1.4.6 Variation 6: Using Other Benzoic Acid Anhydrides .................... 1465
20.6.1.4.7 Variation 7: The Keck Method ........................................... 1466
20.6.1.4.8 Variation 8: Cyclization of 9-Hydroxydecanoic Acid ..................... 1468
20.6.1.4.9 Variation 9: The Trost Method ........................................... 1468
20.6.1.4.10 Variation 10: Other Routes ................................................. 1470
20.6.1.5 Method 5: Lactones by Cycloalkylating Reactions ......................... 1470
20.6.1.6 Method 6: Mitsunobu Lactonization ...................................... 1475
20.6.1.7 Method 7: Lactonization of Unsaturated Carboxylic Acids .............. 1481
20.6.1.7.1 Variation 1: Proton-Catalyzed Lactonization .......................... 1482
20.6.1.7.2 Variation 2: Halolactonization .......................................... 1482
20.6.1.7.3 Variation 3: (Phenylselanyl)- and (Phenylsulfanyl)lactonization.... 1493
20.6.1.8 Method 8: Lactones by Intramolecular Epoxide Opening with Carboxy Functions ......................................................... 1495
20.6.1.9 Method 9: Spiro Lactones by Oxidative Cyclization ....................... 1496
20.6.1.10 Method 10: Lactones by Baeyer–Villiger Oxidation ....................... 1498
20.6.1.10.1 Variation 1: Baeyer–Villiger Oxidation of Cyclobutanones ............ 1498
Variation 2: Baeyer–Villiger Oxidation of Monocyclic, Annulated, and Spirocyclic Ketones

Variation 3: Baeyer–Villiger Oxidation of Bi- and Polycyclic Ketones

Variation 4: Metal-Catalyzed Baeyer–Villiger Oxidation

Variation 5: Enzymatic Baeyer–Villiger Reactions

Variation 6: Macrolactones by Baeyer–Villiger Oxidation

Variation 6: Metal-Catalyzed Baeyer–Villiger Oxidation

Method 11: \( \beta \)-Lactones by \([2 + 2]\)-Cycloaddition Reactions

Method 12: Lactones from Heterocyclic Precursors

Method 13: Butenolides from Furans

Product Class 7: Peroxy Acids and Derivatives

Product Subclass 1: Peroxy Acids, Peroxy Acid Salts, and Peroxy Acid Esters

Synthesis of Product Subclass 1

Method 1: Synthesis of Phthaloyl Peroxide

Applications of Product Subclass 1 in Organic Synthesis

Method 1: Asymmetric Allylic Oxidation of Alkenes

Method 2: Diastereofacial Selective Epoxidation

Method 3: Hydrolysis of Peroxy Esters in the Presence of Bis(tributyltin) Oxide

Product Subclass 2: O-Acylhydroxylamines and Related Compounds

Synthesis of Product Subclass 2

Method 1: \( N \)-Aryl-O-benzoylhydroxylamines by Reaction of \( N \)-Arylhydroxylamines with Benzoyl Chloride

Method 2: \( N \)-Alkyl-O-benzoylhydroxylamines by Reduction of Oxime Benzoates

Method 3: O-Aroylhydroxylamines from Aroyl Cyanides or Aroyl Chlorides

Method 4: O-Acetyl-N-allyl-N-pent-4-enoylhydroxylamine from O-Acetyl-N-allylhydroxylamine

Method 5: Cysteine Protease Inhibitor

Method 6: Optically Active Isoxazolidin-5-ones from Nitrones

Method 7: 3-Phenylcyclobutanone \( O \)-Benzoyloxime from Hydroxylamine and Benzoyl Chloride

Method 8: Optically Pure Spiro-\( \lambda^4 \)-sulfanes from Sulfides

Variation 1: Stereospecific Synthesis of Optically Active (Acylamino)(acyloxy)diarylspiro-\( \lambda^4 \)-sulfanes

Variation 2: Bis(acyloxy)spiro-\( \lambda^4 \)-sulfanes from Sulfoxides
Method 9: Trihalomethanesulfenyl Acetates and Trifluoroacetates from Sulfenyl Chlorides ........................................ 1568

Method 10: (R)-Acetyl 1,1'-Binaphthyl-2,2'-diyl Phosphite .......... 1569

Method 11: Carboxyalkyl α-Aminoalkylphosphonic Acid Monoesters from Spirophosphoranes ........................................ 1570

Method 12: A (Benzyloxy)(benzyl)phenylphosphine–Tungsten Complex via Phospha-Wittig Reaction .................................. 1571

Method 13: Synthesis of 1,2-Oxaphosphole–Pentacarbonyltungsten Complexes .................................................. 1571

Method 14: Spiro-l4-selanes from Selenides ........................... 1572

Method 15: Applications of Product Subclass 2 in Organic Synthesis .......................................................... 1576

Method 1: Synthesis of Adenosine Derivatives ....................... 1576

Method 2: Conversion of Cyclobutanone O-Benzoyloximes into Nitriles 1577

Method 3: Synthesis of Secondary Amines ........................... 1577

Method 4: Synthesis of N-Hydroxy Peptides .......................... 1578

Method 5: Synthesis of the N-tert-Butyl-N-(3,5-dinitrobenzoyl)nitroxyl Radical .................................................. 1578

Method 6: Addition of Trihalomethanesulfenyl Acetates to Alkenes 1579

Method 7: Synthesis of Thioacytelated Lactosides ................... 1579

Method 8: Reaction of Cyclic Phosphites with β-Dicarbonyl Compounds 1580

Method 9: Applications of Benzeneselenenyl Trifluoroacetate ........ 1581

Method 10: One-Pot Method for Alkene Trifunctionalization ........... 1582

Method 11: Transformation of Allylsilanes into Allylamines via Phenyltellurinylnation .............................................. 1584

Method 12: Cyclofunctionalization of Alkenyl Carbamates Using Benzenetellurinic Trifluoroacetate ............................. 1585

Method 13: Diacetoxylation of Dienes by Acetoxytellurination Followed by Acetylation ........................................... 1585

Product Subclass 3: Acetyl Hypohalites ............................ 1587

Synthesis of Product Subclass 3 ........................................ 1587

Method 1: Synthesis of Acetyl Hypohalites ................................ 1587

Applications of Product Subclass 3 in Organic Synthesis .............. 1588

Method 1: Iodocyclization Using Acetyl Hypoiiodite .................... 1588

Method 2: Fluorination Using Acetyl Hypofluorite .................... 1589

Method 2.2.2.1 Variation 1: Direct Fluorination of Peptides Containing Tyrosine ................................................. 1589

Method 2.2.2.2 Variation 2: Fluorination of 1,3-Dicarbonyl Derivatives ................................................. 1589

Method 2.2.2.3 Variation 3: Fluorination of Nitro Compounds ................ 1590
20.7.3.2.2.4 Variation 4: Synthesis of α-Fluorocarboxylates ........................................ 1591
20.7.3.2.2.5 Variation 5: Acetoxylation of Nitrogen Heterocycles ................................. 1591
20.7.4 **Product Subclass 4: Peroxy Esters of Sulfur, Nitrogen, and Phosphorus** ............ 1592
20.7.4.1 Synthesis of Product Subclass 4 ....................................................................... 1592
20.7.4.1.1 Method 1: Pentfluorosulfur Peroxy Esters from Acyl Fluorides and Pentfluoro-\(\lambda^6\)-sulfane Hydroperoxide ................................................................. 1592
20.7.4.1.2 Method 2: 1-(Benzoylperoxy)-2,2,6,6-tetramethylpiperidine by Direct Reaction of Dibenzoyl Peroxide ......................................................... 1593
20.7.4.1.3 Method 2: Trifluoroacetyl Peroxynitrate by Nitration of Trifluoroperacetic Acid ................................................................. 1593
20.7.4.2 Applications of Product Subclass 4 in Organic Synthesis .................................. 1594
20.7.4.2.1 Method 1: As Radical Initiators Used in the Bulk Polymerization of Styrene ................................................................. 1594

20.8 **Product Class 8: Thiocarboxylic S-Acids, Selenocarboxylic Se-Acids, Tellurocarboxylic Te-Acids, and Derivatives**

S. J. Collier

Three Carbon–Heteroatom Bonds:
Amides and Derivatives; Peptides; Lactams

Preface ................................................................. V
Table of Contents .................................................. IX

21 Introduction
Y. R. Mahajan and S. M. Weinreb ................................. 1

21.1 Product Class 1: Amides
Y. R. Mahajan and S. M. Weinreb ................................ 17

21.1.1 Synthesis from Carbonic Acid Derivatives
D. Stien .................................................................. 27

21.1.2 Synthesis from Carboxylic Acids and Derivatives
T. Ziegler .................................................................. 43

21.1.3 Synthesis from Aldehydes, Ketones, and Related Compounds
D. J. Austin and S. M. Miller ....................................... 77

21.1.4 Synthesis from Amines
G. R. Cook .............................................................. 111

21.1.5 Synthesis by Rearrangement
W. R. Judd, C. E. Katz, and J. Aubé .............................. 133

21.1.6 Synthesis with Retention of the Functional Group
W.-R. Li ................................................................... 179

21.2 Product Class 2: Triacylamines, Imides (Diacylamines),
and Related Compounds
F. A. Luzzio ............................................................... 259

21.3 Product Class 3: N-[α-(Heteroatom)alkyl]-Substituted Alkanamides
J. K. Cha .................................................................. 325

21.4 Product Class 4: N-Arylalkanamides, Ynamides, Enamides,
Dienamides, and Allenamides
M. R. Tracey, R. P. Hsung, J. Antoline, K. C. M. Kurtz, L. Shen, B. W. Slafer,
and Y. Zhang ........................................................... 387

21.5 Product Class 5: α-Heteroatom-Substituted Alkanamides
M. Pätzel, S. Pritz, and J. Liebscher ................................ 477

21.6 Product Class 6: α,β- Unsaturated Amides: Alk-2-ynamides,
Arenecarboxamides, and Alk-2-enamides
M. F. Lipton and M. A. Mauragis .................................. 537

21.7 Product Class 7: β-Heteroatom-Substituted Alkanamides
S. Manyem and M. P. Sibi ............................................ 565

21.1.2.6.4 Variation 4: From Carbothioate Esters by Reaction with Alkyl Azides ................................................................. 56
21.1.2.7 Method 7: Synthesis from Acyl Azides ......................................... 57
21.1.2.7.1 Variation 1: By Reduction ....................................................... 57
21.1.2.7.2 Variation 2: By Substitution with Amines ................................. 58
21.1.2.8 Method 8: Synthesis from Imidates and Related Compounds ........... 58
21.1.2.8.1 Variation 1: By Rearrangement ................................................. 58
21.1.2.8.2 Variation 2: From 4,5-Dihydrooxazoles by Ring Opening ............ 58
21.1.2.9 Method 9: Synthesis from Nitriles by Functional Group Transformation ................................................................................ 58
21.1.2.9.1 Variation 1: By Hydrolysis ....................................................... 58
21.1.2.9.2 Variation 2: N-Alkylation by Ritter-Type Reactions ................... 61
21.1.2.10 Method 10: Synthesis from Isocyanides ....................................... 66
21.1.2.10.1 Variation 1: By Passerini-Type Reactions ................................. 66
21.1.2.10.2 Variation 2: By Ugi Reactions .................................................. 68
21.1.2.11 Method 11: Synthesis from 1,1,1-Trihaloalkanes ......................... 69
21.1.2.12 Method 12: Synthesis from Ketenes, Ketene Acetals, or Ynamines .... 70

21.1.3 Synthesis from Aldehydes, Ketones, and Related Compounds
D. J. Austin and S. M. Miller

21.1.3 Synthesis from Aldehydes, Ketones, and Related Compounds ............. 77
21.1.3.1 Method 1: Oxidation of Aldehydes ............................................. 77
21.1.3.1.1 Variation 1: Radical-Promoted Oxidation .................................. 78
21.1.3.1.2 Variation 2: Palladium-Catalyzed Oxidation ............................ 79
21.1.3.1.3 Variation 3: Manganese(IV) Oxide Promoted Oxidation ............ 80
21.1.3.1.4 Variation 4: Nickel Peroxide Mediated Oxidation ...................... 80
21.1.3.1.5 Variation 5: Photochemical Oxidation of Aryl Aldehydes .......... 81
21.1.3.1.6 Variation 6: Electrochemical Oxidation .................................... 82
21.1.3.2 Method 2: Oxidative Decyanation of α-Aminonitrile Derivatives of Aldehydes ................................................................. 83
21.1.3.3 Method 3: Amination and Hydrolysis of O-Trimethylsilyl Cyanohydrins .............................................................................. 84
21.1.3.3.1 Variation 1: Direct Hydrolysis of O-Trimethylsilyl Cyanohydrins .... 84
21.1.3.4 Method 4: Electrochemical Oxidation of Aryl and Aliphatic Ketones .... 85
21.1.3.5 Method 5: Fragmentation of Non-Enolizable Ketones (Haller–Bauer Reaction) .................................................. 87
21.1.3.6 Method 6: Hydrolysis of Iminium Salts Formed from Ketones and Dichloromethylenedimethylammonium Chloride .......... 88
21.1.3.7 Method 7: Reductive Amidation of Ketones (Leuckart Reaction) .......... 89
21.1.3.8 Method 8: Condensation of Carbonyl Compounds with Ynamines ....... 91
21.1.3.9 Method 9: Reaction of Ketones with Chloroform and Amines under Phase-Transfer Conditions .............................. 92
21.1.3.10 Method 10: Oxidation of Imines ........................................ 93
21.1.3.10.1 Variation 1: With 3-Chloroperoxybenzoic Acid ..................... 93
21.1.3.10.2 Variation 2: With Sodium Perborate .................................. 94
21.1.3.10.3 Variation 3: With Potassium Permanganate ............................ 95
21.1.3.10.4 Variation 4: Oxidation of Quinone Imines ................................ 96
21.1.3.10.5 Variation 5: With Chromyl Chloride ...................................... 97
21.1.3.10.6 Variation 6: With Phosphorus Pentachloride ........................... 97
21.1.3.11 Method 11: Oxidation of Cyclic Iminium Salts .............................. 99
21.1.3.12 Method 12: Transition-Metal-Catalyzed Carbonylation of Imines .......... 99
21.1.3.12.1 Variation 1: With Octacarboxylicobalt(0), Thiols, Imines, and Carbon Monoxide .......................................................... 100
21.1.3.12.2 Variation 2: With Octacarboxylicobalt(0), Alkyl Boranes, and Carbon Monoxide .......................................................... 102
21.1.3.13 Method 13: Base-Induced Cycloreversion of Nitrile Oxide Cycloadducts .... 103
21.1.3.14 Method 14: Reaction of Acetals with Isocyanides .......................... 104
21.1.3.15 Method 15: Acylation of Enamines ........................................... 105
21.1.3.16 Method 16: Palladium-Catalyzed Arylation with α-Anilinoalkenenitriles ........................................................................ 105
21.1.3.17 Method 17: Reaction of α-Aminoalkenenitriles ................................ 107

21.1.4 Synthesis from Amines
G. R. Cook

21.1.4 Synthesis from Amines ................................................. 111
21.1.4.1 By Oxidation ................................................................. 111
21.1.4.1.1 Method 1: Oxidation of Benzylamines with Potassium Permanganate ................................................................. 111
21.1.4.1.2 Method 2: Oxidation of 2-Aminonitriles ........................................ 112
21.1.4.1.3 Method 3: Oxidation of Aldimines ........................................ 112
21.1.4.1.3.1 Variation 1: With Sodium Perborate ..................................... 113
21.1.4.1.3.2 Variation 2: With 3-Chloroperoxybenzoic Acid ....................... 113
21.1.4.2 By Carbonylation ............................................................. 114
21.1.4.2.1 Method 1: Palladium-Catalyzed Aminocarbonylation of Aryl and Vinyl Halides and Trifluoromethanesulfonates, and Related Compounds ............................................................... 114
21.1.4.2.1.1 Variation 1: Aminocarbonylation of Vinyl Halides and Trifluoromethanesulfonates ......................................................... 114
21.1.4.2.1.2 Variation 2: Palladium-Catalyzed Insertion into Aryl Halides and Trifluoromethanesulfonates ........................................... 116
21.1.4.2.1.3 Variation 3: Palladium-Catalyzed Insertion into Hypervalent Iodine Compounds and Diazonium Salts .................................... 122
21.1.4.2.1.4 Variation 4: Palladium-Catalyzed Aminocarbonylation with In Situ Generated Carbon Monoxide .................................................. 123
21.1.4.2.1.5 Variation 5: Ammonia Equivalents for the Palladium-Catalyzed Preparation of N-Unsubstituted Amides ................................ 125
21.1.4.2.2 Method 2: Palladium-Catalyzed Aminocarbonylation via Insertion into C—H Bonds ..................................................... 126
21.1.4.2.2.1 Variation 1: Insertion into Aryl C—H Bonds .................... 126
21.1.4.2.2.2 Variation 2: Insertion into Acetylenic C—H Bonds ........ 127
21.1.4.2.3 Method 3: Aminocarbonylation Involving Migratory Insertion into Alkene and Alkyne π-Bonds ........................................ 128
21.1.4.2.3.1 Variation 1: Cobalt-Catalyzed Hydroformylation and Amination .......... 128
21.1.4.2.3.2 Variation 2: Palladium-Catalyzed Aminocarbonylation of Alkynes ..... 128
21.1.4.2.3.3 Variation 3: Palladium-Catalyzed Selenation and Carbonylation of Alkynes 129
21.1.4.2.4 Method 4: Photochemical Aminocarbonylation of Alkyl Iodides ........ 129
21.1.4.2.5 Method 5: Ring Expansion of Aziridines ................................ 130

21.1.5 Synthesis by Rearrangement
W. R. Judd, C. E. Katz, and J. Aubé

21.1.5 Synthesis by Rearrangement ........................................... 133
21.1.5.1 Method 1: Favorskii Rearrangement from α-Halo Ketones .......... 133
21.1.5.1.1 Variation 1: From Mono-α-halo Ketones ....................... 135
21.1.5.1.2 Variation 2: From α-Substituted α-Halo Ketones ................ 136
21.1.5.1.3 Variation 3: Reactions with α,α'-Dihalo Ketones ................ 138
21.1.5.2 Method 2: Arndt–Eistert Synthesis from Diazo Ketones .......... 139
21.1.5.2.1 Variation 1: Intermolecular Reactions with Amines ............ 142
21.1.5.2.2 Variation 2: Synthesis of β-Amino Acids and β-Peptides ....... 144
21.1.5.2.3 Variation 3: Intramolecular Reactions ................................ 145
21.1.5.2.4 Variation 4: Ring Contraction ........................................ 145
21.1.5.3 Method 3: Schmidt Reaction from Ketones with Hydrazoic Acid .... 146
21.1.5.3.1 Variation 1: From Ketones with Alkyl Azides .................. 150
21.1.5.3.2 Variation 2: By Intramolecular Reactions of Alkyl Azides with Ketones .... 152
21.1.5.3.3 Variation 3: From Hydroxyalkyl Azides ........................... 154
21.1.5.4 Method 4: Beckmann Rearrangement from Oximes ............. 156
21.1.5.4.1 Variation 1: The Photochemical Beckmann Rearrangement .... 161
21.1.5.5 Method 5: Chapman Rearrangement from Aryl Imidates .......... 162
21.1.5.6 Method 6: Aza-Claisen Rearrangement from Allyl Imidates ...... 164
21.1.5.7 Method 7: Rearrangement of Oxaaziridines ........................ 168
21.1.5.8 Method 8: Willgerodt Reaction from Aryl Ketones ................. 173
21.1.5.8.1 Variation 1: The Kindler Modification ............................. 175
21.1.6 Synthesis with Retention of the Functional Group
W.-R. Li

21.1.6 Synthesis with Retention of the Functional Group ........................................ 179
21.1.6.1 Synthesis from Acyl Nitroso Compounds, Acyl Azides, N-Hydroxy Amides, N-Nitroso Amides, N-Nitro Amides, Acyl Hydrazines, Acyl Nitrenes, and Related Compounds .......................................................... 179
21.1.6.1.1 Method 1: Synthesis from Acyl Nitroso Compounds ................................ 179
21.1.6.1.2 Method 2: Reduction of Acyl Azides ..................................................... 180
21.1.6.1.2.1 Variation 1: With Hydride Reducing Agents ....................................... 180
21.1.6.1.2.2 Variation 2: Conversion into Acetylated Amides with Acetic Anhydride and Chlorotrimethylsilane .............................................................. 181
21.1.6.1.3 Method 3: Synthesis from N-Hydroxy Amides and Their Derivatives ..... 182
21.1.6.1.3.1 Variation 1: By Reductive Cleavage of N-Alkoxy Amides .................. 182
21.1.6.1.3.2 Variation 2: By Reductive Cleavage of N-Benzylxy β-Lactams ............. 184
21.1.6.1.3.3 Variation 3: By Amidyl Radical–Alkene Cyclizations ........................... 185
21.1.6.1.3.4 Variation 4: By Diastereoselective Addition of Nucleophiles to the C3 Position of N-Tosyloxy β-Lactams ................................................................. 186
21.1.6.1.3.5 Variation 5: By Base-Promoted Reaction of O-Sulfonylated N-Hydroxy Amides with Nucleophiles ................................................................. 187
21.1.6.1.4 Method 4: Synthesis from N-Nitroso Amides or N-Nitro Amides .......... 189
21.1.6.1.5 Method 5: Synthesis from Acyl Hydrazines ........................................... 190
21.1.6.1.5.1 Variation 1: By Reductive Cleavage .................................................... 190
21.1.6.1.5.2 Variation 2: By Oxidative Amidation ................................................ 191
21.1.6.1.6 Method 6: Synthesis from Acyl Nitrenes ............................................. 192
21.1.6.2 Synthesis from Formamides by Substitution of Hydrogen ......................... 193
21.1.6.2.1 Method 1: Palladium-Catalyzed Aminocarbonylation ............................ 193
21.1.6.2.2 Method 2: Carboxamidation of Organolithium and Organomagnesium Reagents ............................................................... 195
21.1.6.3 Synthesis from Imides (Diacylamines) and Triacylamines by Decylation ..... 196
21.1.6.3.1 Method 1: Samarium(II) Iodide Mediated Coupling Reaction ................ 196
21.1.6.3.2 Method 2: Aluminum Trichloride Promoted Aminolysis of Cyclic Imides 197
21.1.6.3.3 Method 3: Hydride Reduction ............................................................... 198
21.1.6.3.4 Method 4: Photoinduced Single-Electron-Transfer (SET) Reaction ........ 199
21.1.6.4 Synthesis from Enamides ............................................................................. 199
21.1.6.4.1 Method 1: Asymmetric Hydrogenation .................................................. 199
21.1.6.4.2 Method 2: Enantioselective Hydrogen Atom Transfer Reactions .......... 206
21.1.6.4.3 Method 3: Chemoselective Conjugate Addition of Nucleophiles .......... 207
21.1.6.4.4 Method 4: Cycloaddition Reactions ..................................................... 208
21.1.6.5 Synthesis from Other Amides by Transamidation ...................................... 209
21.1.6.5.1 Method 1: Catalytic Transamidation ..................................................... 209
21.1.6.5.2 Method 2: Transamidation of Activated Amides .................................. 211
21.1.6.6 Synthesis from Other Amides by Acyl Exchange on Nitrogen .................. 211
21.1.6.6.1 Method 1: Conversion of Carbamates .................................................. 211
21.1.6.7 Synthesis from Other Amides by Modification of a Substituent on Nitrogen ........................................ 212
  21.1.6.7.1 Method 1: Amidoalkylation ................................................................. 212
  21.1.6.7.1.1 Variation 1: Under Lewis Acid Catalysis ...................................... 213
  21.1.6.7.1.2 Variation 2: By Nucleophilic Attack ........................................... 214
  21.1.6.7.2 Method 2: Catalytic Asymmetric Allylation ....................................... 215
  21.1.6.7.3 Method 3: Radical Cyclization or Addition ....................................... 216
  21.1.6.7.4 Method 4: Oxidation ........................................................................ 217
  21.1.6.8 Synthesis from Other Amides by N-Alkylation ........................................ 218
  21.1.6.8.1 Method 1: Palladium-Catalyzed Alkylation ..................................... 218
  21.1.6.8.2 Method 2: Rhodium Carbenoid Reactions ....................................... 219
  21.1.6.8.3 Method 3: Ruthenium-Catalyzed Propargylic Substitution Reactions .... 220
  21.1.6.8.4 Method 4: Copper(I)-Catalyzed Amidation ..................................... 221
  21.1.6.8.5 Method 5: Osmium-Catalyzed Asymmetric Aminohydroxylation of Alkenes .................................................. 222
  21.1.6.8.6 Method 6: Multicomponent Coupling of Aldehydes, Amides, and Dienophiles .......................................................... 223
  21.1.6.9 Synthesis from Other Amides by N-Dealkylation .................................... 223
  21.1.6.9.1 Method 1: Reduction by Lithium of Low-Molecular-Weight Amines and Ethane-1,2-diamine ...................................................... 223
  21.1.6.9.2 Method 2: Ruthenium(VIII) Oxidation of Serine/Threonine Peptides .... 224
  21.1.6.9.3 Method 3: Aza-Claisen Rearrangement ............................................ 225
  21.1.6.10 Synthesis from Lactams with Ring Opening ........................................ 226
  21.1.6.10.1 Method 1: Cleavage of the β-Lactam Ring ........................................ 226
  21.1.6.11 Synthesis from 2-Hydroxyamino Amides, α-Oxo Amides, α-Sulfanyl Amides, and Other Functionalized Amides .......................................................... 229
  21.1.6.11.1 Method 1: Reduction of 2-Hydroxyamino Amides ........................... 229
  21.1.6.11.2 Method 2: Reduction of α-Oxo Amides ........................................... 230
  21.1.6.11.3 Method 3: Desulfurization of α-Sulfanyl Amides ............................ 231
  21.1.6.11.4 Method 4: Reduction of α-Functionalized Amides ........................... 231
  21.1.6.11.5 Method 5: Free-Radical C-Allylation Reactions ................................ 233
  21.1.6.11.6 Method 6: Sequential Elimination–Cyclopropanation Reactions ........ 234
  21.1.6.12 Synthesis from α-Amido Nitriles by Decyanation ................................... 235
  21.1.6.12.1 Method 1: Catalytic Reduction of Nitriles ......................................... 235
  21.1.6.13 Synthesis from Alkynamides and Alkenamides by Reduction ................. 236
  21.1.6.13.1 Method 1: Enantioselective Conjugate Reduction with Semicorrin Cobalt Catalysts ..................................................... 236
  21.1.6.13.2 Method 2: Regioselective Reduction with the Sodium Borohydride/Iodine System ..................................................... 237
  21.1.6.14 Synthesis from Alkynamides and Alkenamides by Addition of Carbon Moieties to Carbon—Carbon Multiple Bonds, Other than 1,4-Addition of Heteroatoms ........................................................................ 238
  21.1.6.14.2 Method 2: Lewis Acid Promoted Cyclization ...................................... 240
Method 3: Palladium-Catalyzed Hydroarylation of Propynamides 241
Method 1: Asymmetric Alkylation Using Pseudoephedrine as a Chiral Auxiliary 243
Variation 1: By Alkylation with Haloalkanes 243
Variation 2: By Alkylation with Epoxides and Their Derivatives 244
Variation 3: By Asymmetric Michael Reactions 246
Variation 4: By Mannich Reaction with Enolizable Imines 247
Variation 5: By Asymmetric Aldol Reactions 247
Method 2: Diastereoselective α-Iodination Reactions 248

Product Class 2: Triacylamines, Imides (Diacylamines), and Related Compounds
F. A. Luzzio

Product Subclass 1: Triacylamines 259
Synthesis of Product Subclass 1 259
Method 1: Acylation of Imides 259
Method 2: Synthesis from Dicarboxylic Acids and Thiourea through Microwave Irradiation 263
Method 4: Acylation of Acid Anhydrides 264
Method 5: Amidation of Esters 265
Method 6: Synthesis from Ketene Dithioacetals via Nitriles 268
Method 7: Synthesis from Lactams 269
Method 8: Synthesis from Ketenes 296
Method 9: Photodecarboxylation of N-Acylamino Acids 271
Method 10: Oxidation/Rearrangement of Azlactones 272

Product Subclass 2: Imides (Diacylamines) Unsubstituted on Nitrogen 261
Synthesis of Product Subclass 2 262
Method 1: Acylation of Acid Halides 262
Method 2: Acylation of Dicarboxylic Acids 262
Method 3: Synthesis from Dicarboxylic Acids and Thiourea through Microwave Irradiation 263
Method 4: Acylation of Acid Anhydrides 264
Method 5: Amidation of Esters 265
Method 6: Synthesis from Ketene Dithioacetals via Nitriles 268
Method 7: Synthesis from Amides and Thioamides 269
Method 8: Synthesis from Lactams 269
Method 9: Photodecarboxylation of N-Acylamino Acids 271
Method 10: Oxidation/Rearrangement of Azlactones 272

Product Subclass 3: Imides (Diacylamines) Substituted at Nitrogen by Groups Other than Acyl 274
Synthesis of Product Subclass 3 274
Method 1: Acylation of Acid Halides 274
Method 2: Amination and Dehydration of Carboxylic Acids 275
Method 3: Synthesis from Carboxylic Acid Anhydrides 282
Method 4: Synthesis from Activated Esters 293
Method 5: Rearrangement of Amides and Lactams 294
Method 6: Synthesis from Ketenes 296
Method 7: Rearrangement of β-Oxo Esters 296
Method 8: Acylation of Amides 297
21.2.3.1.9 Method 9: Synthesis from Lactams by Oxidation of α-Methylene Groups 301
21.2.3.1.10 Method 10: Synthesis from Isoimides by Rearrangement 303
21.2.3.1.11 Method 11: Synthesis from Imides through N-Alkylation or N-Arylation 304
21.2.3.1.12 Method 12: Synthesis from Esters and Amido Esters 313
21.2.3.1.13 Method 13: Carbonylation of Alkynes and Amines 316
21.2.4 Product Subclass 4: Imides (Diacylamines) N-Substituted by Amino or Hydroxy Groups, or by a Halogen 317
21.2.4.1 Synthesis of Product Subclass 4 317
21.2.4.1.1 Method 1: N-Aminated Imides from Anhydrides 317
21.2.4.1.2 Method 2: N-Hydroxylated Imides from Anhydrides 318
21.2.4.1.3 Method 3: N-Acyloxylated Imides from N-Hydroxylated Imides 319
21.2.4.1.4 Method 4: N-Brominated Imides from Imides 320
21.2.4.1.5 Method 5: Hydroxylated Imides by the Rearrangement of Cyclic Nitro Ketones 321

21.3 Product Class 3: \(N-\left[\alpha-(\text{Heteroatom})\text{alkyl}\right]\)-Substituted Alkanamides

J. K. Cha

21.3.1 Product Subclass 1: \(N-(1-\text{Haloalkyl})\) Amides and Carbamates 325
21.3.1.1 Synthesis of Product Subclass 1 325
21.3.1.1.1 Method 1: Treatment of \(N-(1-\text{Hydroxyalkyl})\) Amides with Inorganic Halides 325
21.3.1.1.1 Variation 1: Treatment of Amides with Paraformaldehyde 326
21.3.1.1.2 Method 2: Addition of Acid Chlorides to Imines 326
21.3.1.1.3 Method 3: Halogenation of Glycinates 327
21.3.1.2 Applications of Product Subclass 1 in Organic Synthesis 328
21.3.1.2.1 Method 1: Displacement Reactions 328
21.3.1.2.2 Method 2: \(\alpha\)-Amidoalkylation 330
21.3.1.2.3 Method 3: Free-Radical Reactions 331
21.3.2 Product Subclass 2: \(N-(1-\text{Alkoxyalkyl})\) Amides and Carbamates 332
21.3.2.1 Synthesis of Product Subclass 2 332
21.3.2.1.1 Method 1: Addition of Amides to Aldehydes 332
21.3.2.1.1 Variation 1: Addition of N-Silylated Amides to Aldehydes 333
21.3.2.1.2 Variation 2: Cyclization of Amides to Tethered Aldehydes 334
21.3.2.1.3 Variation 3: Condensation of Amino Alcohols and Oxo Acids 335
21.3.2.2 Applications of Product Subclass 2 in Organic Synthesis 336
21.3.2.2.1 Method 1: Hetero [4 + 2] Cycloadditions 336
21.3.2.2.2 Method 2: Partial Reduction of Imides 338
21.3.2.2.1 Variation 1: Diastereoselective Reduction of Imides 341
21.3.2.2.2 Variation 2: Desymmetrization of meso-Imides 342
21.3.2.2.3 Method 3: Addition of Grignard Reagents to Cyclic Imides 343
21.3.2.2.4 Method 4: Kulinkovich Reactions of Vinyl-Tethered Imides 345
21.3.2.2.5 Method 5: Treatment of Imines with Carboxylic Acid Anhydrides 347
21.3.2.6 Method 6: Reduction of N-Acylimidates ........................................ 347
21.3.2.7 Method 7: Electrochemical Oxidation of Amides and Carbamates .... 348
21.3.2.7.1 Variation 1: Anodic Oxidation of Carbamates in Acetic Acid .......... 351
21.3.2.7.2 Variation 2: Decarboxylative Oxidation of N-Acylamino Acids ........ 351
21.3.2.7.3 Variation 3: Oxidative Decarboxylation of N-Acylamino Acids by Chemical Methods ................................................................. 352
21.3.2.8 Method 8: Ruthenium-Catalyzed Oxidation of Amides and Carbamates ................................................................. 353
21.3.2.8.1 Variation 1: Decomposition of Diazonium Salts of 1-(2-Aminobenzoyl)azacycloalkanes .................................................. 354
21.3.2.8.2 Variation 2: Oxidation of Amines by 2-Iodoxybenzoic Acid ............. 355
21.3.2.9 Methods 9: Miscellaneous Procedures .................................................. 355
21.3.2.10 Method 10: Further Applications of Iminium and N-Acyliminium Ions in Total Synthesis ................................................................. 358

21.3.3 Product Subclass 3: N-(1-Amino- or 1-Acylaminoalkyl) Amides and Carbamates ...... 358

21.3.3.1 Synthesis of Product Subclass 3 ................................................................. 358
21.3.3.1.1 Method 1: Condensation of Amides and Aldehydes ......................... 358
21.3.3.1.1 Variation 1: Treatment of Acetals with Isocyanates ......................... 359
21.3.3.1.2 Variation 2: Condensation of Amides, Formaldehyde, and Amines ...... 360
21.3.3.1.3 Variation 3: Use of Benzotriazole in a Mannich-Type Reaction .......... 360
21.3.3.1.2 Method 2: Curtius Rearrangement ..................................................... 361
21.3.3.1.3 Method 3: Treatment of N-(1-Haloalkyl) or N-(1-Acloyxalkyl) Amides and Carbamates with Amines or Azides ......................... 362
21.3.3.2 Applications of Product Subclass 3 in Organic Synthesis ..................... 362
21.3.3.2.1 Method 1: α-Amidoalkylation .............................................................. 362
21.3.3.2.2 Method 2: Reductive Cleavage of Reduced Pyridazines .................. 362
21.3.3.2.3 Method 3: α-Azidonation of Amides and Carbamates ..................... 363

21.3.4 Product Subclass 4: N-(1-Thioalkyl) Amides and Carbamates ..................... 365

21.3.4.1 Synthesis of Product Subclass 4 ................................................................. 365
21.3.4.1.1 Method 1: By Displacement Reactions .............................................. 365
21.3.4.1.2 Method 2: Acylation of Thiazolidines .............................................. 366
21.3.4.1.3 Method 3: Mannich Condensations Involving Sulfinic Acids ............. 367
21.3.4.1.3.1 Variation 1: Pummerer Reactions of Amido Sulfoxides ................. 368
21.3.4.2 Applications of Product Subclass 4 in Organic Synthesis ..................... 369
21.3.4.2.1 Method 1: Ring Cleavage via N-Acyliminium Ions ............................ 369
21.3.4.2.2 Method 2: Generation of α-Acylamino Radicals ............................. 373

21.3.5 Product Subclass 5: N-(1-Phosphoniumalkyl) or N-(1-Phosphonylalkyl) Amides and Carbamates ................................................................. 374

21.3.5.1 Synthesis of Product Subclass 5 ................................................................. 374
21.3.5.1.1 Method 1: Displacement by Phosphine or Phosphite ......................... 374
21.3.5.1.2 Method 2: Acylation of Amino Phosphonic and Phosphinic Acids ...... 375
21.3.5.1.2.1 Variation 1: Staudinger Reactions of 1-Azidoalkylphosphonates ...... 376
21.3.5.1.3 Method 3: Three-Component Coupling of Carbonyls, Amides, and Phosphorus-Based Nucleophiles ............................................. 376
21.3.5.1.4 Method 4: Curtius Rearrangements of α-Acylazido Phosphonates 379
21.3.5.2 Applications of Product Subclass 5 in Organic Synthesis 380
21.3.5.2.1 Method 1: Wittig Alkenation 380

21.4 Product Class 4: N-Arylalkanamides, Ynamides, Enamides, Dienamides, and Allenamides

21.4.1 Product Subclass 1: N-Arylalkanamides 387
21.4.1.1 Synthesis of Product Subclass 1 388
21.4.1.1.1 Method 1: Palladium-Catalyzed Intermolecular Coupling of Aryl Halides and Amides 388
21.4.1.1.1.1 Variation 1: Palladium(II)-Catalyzed Intermolecular Coupling of Aryl Halides and Lactams 389
21.4.1.1.1.2 Variation 2: Palladium(0)-Catalyzed Intermolecular Coupling of Aryl Halides and Carbamates 390
21.4.1.1.1.3 Variation 3: Palladium(II)-Catalyzed Intermolecular Coupling of Aryl Halides and Oxazolidinones 390
21.4.1.1.1.4 Variation 4: Palladium(0)-Catalyzed Intermolecular Coupling of Aryl Halides and Ureas 391
21.4.1.1.5.1 Variation 5: Palladium(II)-Catalyzed Intramolecular Cyclization of Amides 391
21.4.1.1.6.1 Variation 6: Palladium(II)-Catalyzed Intramolecular Cyclization of Chiral Amides 392
21.4.1.1.2 Method 2: Palladium(0)-Catalyzed Coupling of Epoxides and Isocyanates via a π-Allyl Intermediate 393
21.4.1.1.2.1 Variation 1: Palladium(0)-Catalyzed Coupling of Dicarbonates and Isocyanates via a π-Allyl Intermediate 393
21.4.1.1.3 Method 3: Copper(I)-Catalyzed Intermolecular Coupling of Aryl Halides and Amides (The Goldberg Reaction) 394
21.4.1.1.3.1 Variation 1: Copper(I)-Catalyzed Intermolecular Coupling of Hetaryl Halides with Carbamates 395
21.4.1.1.3.2 Variation 2: Copper(I)-Catalyzed Intermolecular Coupling of Aryl Halides and Hydrazides 395
21.4.1.1.3.3 Variation 3: Microwave-Enhanced Goldberg Reaction 396
21.4.1.1.4 Method 4: Alkylation of N-Aryl Amides with Alkyl Halides 396
21.4.1.1.4.1 Variation 1: Generation of Solid-Supported N-Arylalkanamides by Three-Component Coupling of N-Arylamines, Carbon Dioxide, and Merrifield’s Resin 397
21.4.1.1.5 Method 5: Oxidation of Thioamides with 3-Chloroperoxybenzoic Acid 398
21.4.1.1.5.1 Variation 1: Oxidation of Thioamides with Vinyl L3-Iodanes 398
21.4.1.1.6 Method 6: Dicyclohexylcarbodiimide Peptide Coupling 399
21.4.1.1.7 Method 7: Solid-Phase Synthesis of Boronic Acids Containing Amide Functionality via Ugi Reactions 400
21.4.1.8 Method 8: 2-Iodoxybenzoic Acid Mediated Radical Cyclization of N-Arylated Amides and Carbamates .......................... 400
21.4.1.9 Method 9: Intramolecular Epoxide Opening and Oxazolidinone Formation 401
21.4.1.9.1 Variation 1: Intermolecular Epoxide Opening and Oxazolidinone Formation ................................................................. 402
21.4.1.10 Method 10: N-Pyridinylation of Amides with Pyridine 1-Oxide .......... 402
21.4.1.11 Method 11: Anionic Additions of Prop-2-yn-1-ols to Isocyanates .......... 403
21.4.1.12 Method 12: Hydrolysis of Imidazolium Chlorides under Basic Conditions 403
21.4.2 Product Subclass 2: Ynamides ........................................... 404
21.4.2.1 Synthesis of Product Subclass 2 ........................................... 406
21.4.2.1.1 Method 1: Addition of Amides to Alkynyliodonium Trifluoromethanesulfonates ................................................................. 406
21.4.2.1.1 Variation 1: Ring-Opening of Aziridines with Lithium Alkynes, and Trapping with Alkynyliodonium Trifluoromethanesulfonates .......... 407
21.4.2.1.2 Method 2: Copper(II)-Catalyzed Coupling of Amides and Haloalkynes 407
21.4.2.1.2 Variation 1: Copper(I)-Catalyzed Coupling of Amides and Haloalkynes 408
21.4.2.1.2 Variation 2: Stoichiometric Copper(I) Coupling of Amides and Alkynes 409
21.4.2.1.3 Method 3: Base-Induced Isomerization of Prop-2-yn-1-yalted Amides 410
21.4.2.1.4 Method 4: Sonogashira Coupling of Unsubstituted Ynamides 410
21.4.2.1.4 Variation 1: Negishi Coupling of Unsubstituted Ynamides .......... 411
21.4.2.1.5 Method 5: Elimination of Vinyl Chlorides 412
21.4.2.1.5 Variation 1: Elimination of Vinyl Bromides 412
21.4.2.1.6 Method 6: Acylation of C-Halogenated Ketenimines 413
21.4.2.1.6.1 Variation 1: Acylation of β-Lithio-β-silyl Ketenimines 414
21.4.2.1.7 Method 7: Pyrolysis of Alkynyl Azides 415
21.4.3 Product Subclass 3: Enamides ........................................... 415
21.4.3.1 Synthesis of Product Subclass 3 416
21.4.3.1.1 Method 1: Copper(I)-Catalyzed Coupling of Amides and Vinyl Iodides with Copper(I) Thiophenecarboxylate 416
21.4.3.1.1 Variation 1: Copper(I)-Catalyzed Coupling of Amides and Vinyl Iodides with Copper(I) Iodide 417
21.4.3.1.1 Variation 2: Copper(I)-Catalyzed Coupling of Amides and Vinyl Iodides with (Acetonitrile)copper(1+) Phosphorus Hexafluoride(1–)/Rubidium Carbonate 417
21.4.3.1.2 Method 2: Palladium(II)-Catalyzed Amidation of Alkenes 418
21.4.3.1.2 Variation 1: Palladium(0)-Catalyzed Amidation of Enol Trifluoromethanesulfonates and 4-Toluenesulfonates 419
21.4.3.1.2.2 Variation 2: Palladium(II)-Catalyzed Amidation of Enol Ethers 420
21.4.3.1.2.3 Variation 3: Palladium(II)-Catalyzed N,O-Acetal Formation and Isomerization 420
21.4.3.1.3 Method 3: Titanium(II)-Mediated Coupling of Ynamides and Aldehydes 421
21.4.3.1.3.1 Variation 1: Ruthenium(II)-Mediated Coupling of Alkynes and N-Allylated Amides 421
21.4.3.1.3.2 Variation 2: Chromium(0)-Mediated Coupling of Amino Alcohols and Chromium Carbene Complexes 422
21.4.3.1.4 Method 4: Base-Promoted Elimination of Substituted Alcohols 423

21.7.4.1 Synthesis of Product Subclass 4 ................................................................. 576

21.7.4.1.1 Method 1: Addition of Lithium Selenolates ............................................ 576

21.7.5 **Product Subclass 5: β-Nitrogen-Substituted Alkanamides** ............................ 576

21.7.5.1 Synthesis of Product Subclass 5 ................................................................. 576

21.7.5.1.1 Method 1: Addition of Phthalimide Salts to Alkenimides ............................ 576

21.7.5.1.2 Method 2: Addition of Hydroxylamines to Alkenamides ....................... 577

21.7.5.1.3 Method 3: Chiral Lewis Acid Catalyzed Addition of Hydrazoic Acid to Alkenimides ................................................................. 579

21.7.5.1.3.1 Variation 1: Enantioselective Addition of Azidotrimethylsilane to Alkenimides Using a Peptide Catalyst ........................................... 580

21.7.5.1.3.2 Variation 2: Addition of Azide to Alkenimides Followed by Intramolecular Cycloaddition ................................................................. 580

21.7.5.1.4 Method 4: Addition of Carbamates to Alkenamides ............................... 581

21.7.5.1.5 Method 5: Addition of Lithium Amides .................................................... 581

21.7.5.1.6 Method 6: Addition of Amino Esters to Alkenamides ............................. 582

21.7.5.1.6.1 Variation 1: Enantioselective Addition of Amines Using Dibenzo[4,6-diyl-2,2’-bis(4-phenyl-4,5-dihydrooxazole)]–Nickel Catalyst . . 583

21.7.5.1.6.2 Variation 2: Aminohydroxylation Using a Solid-Supported Catalyst .... 584

21.7.5.1.7 Method 7: Diels–Alder Reaction of Buta-1,3-dien-1-amines with Alkenimides ................................................................. 585

21.7.6 **Product Subclass 6: β-Phosphorus-Substituted Alkanamides** ......................... 585

21.7.6.1 Synthesis of Product Subclass 6 ................................................................. 585

21.7.6.1.1 Method 1: Addition of Secondary Phosphines ....................................... 585

21.7.6.1.2 Method 2: Addition of Phosphinates ..................................................... 586

21.7.6.1.3 Method 3: Diastereoselective Addition of a Phosphite ............................ 587
21.8  **Product Class 8: α-Lactams**  
R. V. Hoffman and V. Cesare

21.8.1  Synthesis of Product Class 8  

21.8.1.1  Method 1: Dehydrohalogenation of α-Halo Amides  
21.8.1.1.1  Variation 1: Using the tert-Butoxide Ion  
21.8.1.1.2  Variation 2: Using Potassium Hydroxide and 18-Crown-6  
21.8.1.2  Method 2: Cycloelimination of N-Sulfonyloxy Amides

21.8.1.3  Variation 1: Using Amines as Bases  
21.8.1.4  Variation 2: Using Sodium Hydride as Base

21.8.2  Applications of Product Class 8 in Organic Synthesis

21.8.2.1  Method 1: Incorporation of Nucleophiles  
21.8.2.1.1  Variation 1: Synthesis of N-Aminohydantoins  
21.8.2.1.2  Variation 2: Synthesis of 1,2,4-Triazine-3,6-diones

21.8.2.2  Method 2: Cycloaddition Reactions Involving α-Lactams

21.9  **Product Class 9: β-Lactams**  
C. Coates, J. Kabir, and E. Turos

21.9.1  Synthesis of Product Class 9  

21.9.1.1  Method 1: Ketene–Imine Cycloadditions  
21.9.1.1.1  Variation 1: Using Acid Chlorides  
21.9.1.1.2  Variation 2: Using Carboxylic Acids or Their Salts  
21.9.1.1.3  Variation 3: Using Amides via an Azetidin-2-ylideneammonium Salt  
21.9.1.1.4  Variation 4: By Decomposition of α-Diazoketones  
21.9.1.2  Method 2: Ester Enolate–Imine Cyclocondensations  
21.9.1.2.1  Variation 1: From γ-Lactones  
21.9.1.2.2  Variation 2: From 2-Pyridyl Thioesters  
21.9.1.2.3  Variation 3: From 1,3-Dioxolan-4-ones  
21.9.1.2.4  Variation 4: From Ethyl Bromodifluoroacetate  
21.9.1.2.5  Variation 5: From Lithium Ynolates  
21.9.1.3  Method 3: Cyclocondensation of β-Amino Acid Derivatives  
21.9.1.3.1  Variation 1: Via Ugi Three-Component Reaction  
21.9.1.3.2  Variation 2: From β-Lactones  
21.9.1.4  Method 4: Ring Closure of 2-Aza-1,3-dienes  
21.9.1.5  Method 5: Alkene–Isocyanate Cycloadditions  
21.9.1.6  Method 6: Nitrone Cycloadditions Employing Alkynes  
21.9.1.7  Method 7: Ring Closures by Nucleophilic $S_N2$ Displacement  
21.9.1.8  Method 8: Radical Ring Closures  
21.9.1.9  Method 9: Photochemical Ring Contractions

21.9.1.10  Variation 1: Photochemical Processes in the Solid State
21.9.1.10 Method 10: Ring Contractions of Isoxazolidines (Non-Photochemical Processes) ................................................ 634
21.9.1.11 Method 11: Ring Expansion of Cyclopropanones ........................................... 635
21.9.1.12 Method 12: Transition-Metal-Catalyzed Processes ....................................... 636
21.9.1.12.1 Variation 1: Carbonylation of Aziridines .............................................. 637
21.9.1.12.2 Variation 2: Use of Organoiron–Alkene Complexes .................................. 638
21.9.1.12.3 Variation 3: Additions of Fischer Carbenes to Imines .................................. 639
21.9.1.12.4 Variation 4: Rhodium-Catalyzed C—H Bond Insertion .................................. 640
21.9.1.12.5 Variation 5: Reductive Coupling of Imines with Acrylates ......................... 641
21.9.1.13 Method 13: 1,4-Addition of Amines to 3-Phenylpropenoyl Chloride ................. 642

21.10 Product Class 10: γ-Lactams and Larger Ring Lactams

M. B. Smith

21.10 Product Class 10: γ-Lactams and Larger Ring Lactams ........................................... 647
21.10.1 Product Subclass 1: Saturated Lactams .................................................................. 647
21.10.1.1 Synthesis of Product Subclass 1 ................................................................. 647
21.10.1.1.1 Synthesis by Ring-Closure Reactions .................................................... 647
21.10.1.1.1.1 Method 1: Direct Cyclization of Amino Acids ....................................... 647
21.10.1.1.1.1.1 Variation 1: By Heating an Amino Acid on Alumina or Silica Gel ...... 648
21.10.1.1.1.1.2 Variation 2: By Heating with Titanium(IV) Isopropoxide ................. 649
21.10.1.1.1.1.3 Variation 3: By Dibutylin Oxide Cyclization of Amino Acids ............. 649
21.10.1.1.1.1.2 Method 2: Alkoxy and Alkylsulfanyl Lactams by Cyclization of
Functionalized Amino Acids ..................................................................................... 650
21.10.1.1.1.1.3 Method 3: Direct Cyclization of Amino Esters ................................... 650
21.10.1.1.1.1.4 Method 4: Formation of an α-Alkoxy Lactam by Cyclization of an
Alkoxy Amino Ester .................................................................................................... 652
21.10.1.1.1.1.5 Method 5: Cyclization of Amino Esters via Cyano Esters .................. 653
21.10.1.1.1.1.5.1 Variation 1: Nitrile Surrogates by Nitrile–Enolate Alkylation .......... 654
21.10.1.1.1.1.5.2 Variation 2: 1,4-Addition to Conjugated Nitriles ......................... 655
21.10.1.1.1.1.5.3 Variation 3: Enolate Alkylation of α-Halo Nitriles ......................... 656
21.10.1.1.1.1.6 Method 6: Cyclization of Amino Esters via Azido Esters ................ 657
21.10.1.1.1.1.7 Method 7: Cyclization of Amino Esters via Nitro Esters .................... 658
21.10.1.1.1.1.7.1 Variation 1: By Conjugate Addition of Nitro Enolates to Conjugated
Esters .......................................................................................................................... 658
21.10.1.1.1.1.7.2 Variation 2: By Conjugate Addition of Enolate Anions to Nitroalkenes .. 659
21.10.1.1.1.1.7.3 Variation 3: By Lewis Acid Catalyzed Addition of Silyl Ketene Acetals to
Nitroalkenenes .......................................................................................................... 660
21.10.1.1.1.1.8 Method 8: Oxo Lactams by Cyclization with Oxalates ....................... 661
21.10.1.1.1.1.9 Method 9: Oxo Lactams by Cyclization of Amido Diesters ............... 662
21.10.1.1.1.1.10 Method 10: Cyclization of Functionalized Acid Derivatives .......... 662
21.10.1.1.1.1.10.1 Variation 1: Reduction of Nitro Nitriles ......................................... 663
21.10.1.1.1.1.10.2 Variation 2: 1-Aryl Lactams by Cyclization of Aromatic Amides .... 664
21.10.1.1.1.1.10.11 Method 11: Iodolactamization ...................................................... 664
21.10.1.1.1.1.10.12 Method 12: Radical Cyclization ..................................................... 665
21.10.1.1.1.1.10.12.1 Variation 1: Tin Hydride Mediated Radical Cyclization of
N-Monosubstituted Amides ....................................................................................... 665

21.1.2.4.1 Variation 1: Synthesis of Peptides in Solution Using Carbodiimides .... 755
21.1.2.4.2 Variation 2: Solid-Phase Peptide Synthesis Using Carbodiimides .... 756
21.1.2.5 Method 5: Phosphonium and Uronium/Guanidinium Salts .................. 757
21.1.2.5.1 Variation 1: Phosphonium Salts ............................................. 759
21.1.2.5.2 Variation 2: Uronium/Guanidinium Salts .................................. 761
21.1.3 Racemization .............................................................................. 762
21.1.4 Supports for Solid-Phase Peptide Synthesis .................................... 766
21.1.4.1 Method 1: Polystyrene-Based Resins .......................................... 767
21.1.4.2 Method 2: Polyacrylamide-Based Resins .................................... 768
21.1.4.3 Method 3: Poly(ethylene glycol)-Based Resins ............................. 768
21.1.4.3.1 Variation 1: TentaGel ............................................................ 768
Variation 2: Poly(ethylene glycol)-Dimethylacrylamide Copolymer

Variation 3: Cross-Linked Ethoxylate Acrylate Resin

Variation 4: Polyethylene–Polystyrene and Polyethylene–Polyoxopropylene Resins

Variation 5: Super Permeable Organic Combinatorial Chemistry Resin

Variation 1: Merrifield Resin (Chloromethyl Cross-Linked Polystyrene Resin) 773

Variation 2: Wang Resin (4-Benzoyloxybenzyl Alcohol Cross-Linked Polystyrene) 776

Variation 3: Super Acid Sensitive Resin 778

Variation 4: PAM Resin 778

Variation 5: Trityl Resin 779

Variation 6: Rink Acid Resin 779

Variation 7: HYCRAM Resin 780

Variation 8: Photolabile Linkers 780

Method 2: Generation of C-Terminal Peptide Amides 781

Variation 1: Benzhydrylamine and 4-Methylbenzhydrylamine Resins 781

Variation 2: Rink Amide Resin 781

Variation 3: Sieber Amide Resin 782

Variation 4: Oxime-Based (Kaiser–DeGrado) Resin 782

Variation 5: 4-Hydroxymethylbenzoic Acid Resin 784

Variation 1: Fmoc Monitoring 786

Variation 2: Picric Acid Test 786

Variation 3: Ninhydrin (Kaiser) Test 787

Variation 2: 2,4,6-Trinitrobenzenesulfonic Acid Test 787

Variation 3: Chloranil Test 787

Method 6: Qualitative Tests for Determination of Free Amino Groups on the Solid Support 788

Variation 1: Native Chemical Ligation 789

Variation 2: Auxiliary-Mediated Chemical Ligation 792
21.12 Product Class 12: Metal Amides and Imides
T. R. Bailey

21.12 Product Class 12: Metal Amides and Imides .................................................. 811
21.12.1 Product Subclass 1: Group 15 (Arsenic, Antimony, and Bismuth) Amides and Imides ............................................................. 811
21.12.1.1 Synthesis of Product Subclass 1 .................................................................. 812
21.12.1.1.1 Method 1: Synthesis from Arsenic, Antimony, and Bismuth Halides ...... 812
21.12.1.1.2 Method 2: Generation by Ligand Displacement ...................................... 813
21.12.2 Product Subclass 2: Silicon Amides and Imides ........................................... 813
21.12.2.1 Synthesis of Product Subclass 2 ................................................................. 814
21.12.2.1.1 Method 1: Synthesis from Trialkylhalosilanes ......................................... 814
21.12.2.1.2 Variation 1: Anion Formation on Amide ................................................ 814
21.12.2.1.2 Variation 2: Using Nitrogenous Bases .................................................. 815
21.12.2.1.2 Method 2: Exchange with Silylated Nitrogen Compounds .................... 815
21.12.2.1.2 Variation 1: With Hexamethyldisilazane .............................................. 815
21.12.2.1.2 Variation 2: With N-Silylated Amides .................................................. 816
21.12.2.1.3 Method 3: Exchange with N,O-Bis(trimethylsilyl)acetamide ................. 816
21.12.2.1.3 Method 4: Synthesis from Acid Chlorides and Hexamethyldisilazane ...... 817
21.12.2.1.3 Method 5: Oxidative Addition of Trialkylsilanes ..................................... 817
21.12.3 Product Subclass 3: Group 14 (Germanium, Tin, and Lead) Amides and Imides .................................................................................. 818
21.12.3.1 Synthesis of Product Subclass 3 ................................................................. 818
21.12.3.1.1 Method 1: Synthesis from Trialkylmetal Halides .................................... 818

21.12.4 Product Subclass 4: Boron Amides and Imides ........................................... 819
21.12.4.1 Synthesis of Product Subclass 4 ................................................................. 820
21.12.4.1.1 Method 1: Synthesis from Boron Halides ............................................. 820
21.12.4.1.1 Variation 1: Via Transmetalation ......................................................... 820
21.12.4.1.1 Variation 2: By Addition of Dialkylbromoboranes ................................... 820
21.12.4.1.2 Method 2: Exchange with N-Silylated Amides ...................................... 821
21.12.4.1.3 Method 3: Synthesis from Boron Imidates ............................................ 822
21.12.5 Product Subclass 5: Groups 3–13 Transition Metal Amides ....................... 822
21.12.5.1 Synthesis of Product Subclass 5 ................................................................. 822
21.12.5.1.1 Method 1: Synthesis from Metal Halides .............................................. 822
21.12.5.1.2 Method 2: Synthesis from Diphenylmercury ....................................... 823
21.12.6 Product Subclass 6: Group 2 (Beryllium, Magnesium, Calcium, and Barium) Amides and Imides ......................................................... 824
21.12.6.1 Synthesis of Product Subclass 6 ................................................................. 824
21.12.6.1.1 Method 1: Metalation with Grignard Reagents ....................................... 824
21.12.6.1.2 Method 2: Metalation with Metal Carbonates and Metal Hydroxides ...... 825
21.12.7 Product Subclass 7: Group 1 (Lithium, Sodium, Potassium, Rubidium, and Cesium) Amides and Imides ........................................ 825

21.12.7.1 Synthesis of Product Subclass 7 ........................................ 826
21.12.7.1.1 Method 1: Metalation with Potassium Fluoride on Alumina .......... 826
21.12.7.1.2 Method 2: Metalation by Metal Hydrides ........................... 826
21.12.7.1.3 Method 3: Metalation with Metal Carbonates ....................... 827
21.12.7.1.4 Method 4: Metalation with Metal Hydroxides and Metal Alkoxides ...... 827
21.12.7.1.4.1 Variation 1: With Sodium Hydroxide ................................ 827
21.12.7.1.4.2 Variation 2: With Potassium tert-Butoxide ......................... 828
21.12.7.1.5 Method 5: Metalation with Metal Amides .......................... 828

21.13.1 Product Subclass 1: Acyl Nitro Compounds ................................ 833
21.13.2 Product Subclass 2: Acyl Nitroso Compounds ................................ 834
21.13.3 Product Subclass 3: N-Acyl Sulfoximides and N-Acyl Sulfimides .......... 835
21.13.3.1 Synthesis of Product Subclass 3 ........................................ 835
21.13.3.1.1 Method 1: Oxidative Imination of Sulfoxides and Sulfides ............ 836
21.13.3.1.2 Method 2: N-Acylation of Sulfoximides and Sulfimides ............ 837
21.13.4 Product Subclass 4: Acyl Azides .......................................... 838
21.13.4.1 Synthesis of Product Subclass 4 ........................................ 838
21.13.4.1.1 Method 1: Oxidative Azidonation of Aldehydes ......................... 838
21.13.4.1.2 Method 2: Acyl Substitution with an Azide Nucleophile .......... 840
21.13.4.1.2.1 Variation 1: From Activated Carboxylic Acid Derivatives .......... 840
21.13.4.1.2.2 Variation 2: From Carboxylic Acids Using Diphenylphosphoryl Azide .. 841
21.13.4.1.2.3 Variation 3: From Esters Using Diethylaluminum Azide ........... 843
21.13.4.1.3 Method 3: Nitrosation of Hydrazides ................................ 844
21.13.5 Product Subclass 5: Acyl Diazenes ....................................... 845
21.13.5.1 Synthesis of Product Subclass 5 ........................................ 846
21.13.5.1.1 Method 1: Oxidation of Hydrazides .................................. 846
21.13.6 Product Subclass 6: (Acylimino)phosphoranes .......................... 847
21.13.6.1 Synthesis of Product Subclass 6 ........................................ 847
21.13.6.1.1 Method 1: N-Acylation of Iminophosphoranes ......................... 847
21.13.6.1.2 Method 2: Staudinger Reaction of Acyl Azides ....................... 848
21.13.7 Product Subclass 7: N,N-Diheteroatom-Substituted Amides (Anomeric Amides) .................................................. 849
21.13.8 Product Subclass 8: N-Halo Amides .................................... 850
21.13.8.1 Synthesis of Product Subclass 8 ........................................ 850
21.13.8.1.1 Method 1: Oxidative Halogenation of Amides ......................... 850
21.13.8.1.1.1 Variation 1: Fluorination of Amides ................................ 851
21.13.8.1.2 Variation 2: Chlorination of Amides ........................................ 851
21.13.8.1.3 Variation 3: Bromination of Amides .................................... 853
21.13.8.1.4 Variation 4: Iodination of Amides ...................................... 854
21.13.9 **Product Subclass 9: N-Hydroxy Amides** ..................................... 855
21.13.9.1 Synthesis of Product Subclass 9 .................................................. 856
21.13.9.1.1 Method 1: Oxidation of Amides, Hydroxylamines, and Amines .... 856
21.13.9.1.2 Method 2: N-Acylation of Hydroxylamines ............................. 857
21.13.9.1.3 Method 3: Deprotection of N-Silox, N-Alkoxy, or N-Alkoxy Amides 860
21.13.9.1.4 Method 4: Ene Reactions of Acyl Nitroso Compounds ............... 862
21.13.9.1.5 Method 5: Synthesis from Nitro Compounds ............................ 864
21.13.10 **Product Subclass 10: N-Acyloxy Amides** ................................... 865
21.13.10.1 Synthesis of Product Subclass 10 .............................................. 865
21.13.10.1.1 Method 1: O- or N-Acylation .................................................. 865
21.13.10.1.1.1 Variation 1: By O-Acylation of N-Hydroxy Amides ............... 865
21.13.10.1.1.2 Variation 2: N-Acylation of O-Acyl Hydroxylamines .......... 867
21.13.11 **Product Subclass 11: N-Alkoxy Amides and O-Siloxy Amides** ....... 867
21.13.11.1 Synthesis of Product Subclass 11 .............................................. 868
21.13.11.1.1 Method 1: O-Alkylation or O-Silylation of N-Hydroxy Amides ...... 868
21.13.11.1.1.1 Variation 1: O-Silylation of N-Hydroxy Amides .................... 868
21.13.11.1.1.2 Variation 2: O-Alkylation of N-Hydroxy Amides .................... 869
21.13.11.1.2 Method 2: N-Acylation of O-Alkyl or O-Silyl Hydroxylamine Derivatives 871
21.13.11.1.2.1 Variation 1: With Activated Carboxylic Acid Derivatives .......... 871
21.13.11.1.2.2 Variation 2: Reactions of Esters and Imides with O-Alkyl N-Metalated Hydroxylamine Reagents 873
21.13.11.1.3 Method 3: Hetero-Diels–Alder Reaction of Acyl Nitroso Compounds 874
21.13.12 **Product Subclass 12: N-Sulfonyl and N-Sulfinyl Amides** ............. 876
21.13.12.1 Synthesis of Product Subclass 12 .............................................. 876
21.13.12.1.1 Method 1: Oxidation of N-Sulfinyl and N-Sulfanyl Amides ......... 876
21.13.12.1.2 Method 2: N-Acylation of Sulfonamides and Sulfinamides ......... 877
21.13.12.1.3 Method 3: N-Sulfonylation of Amides ..................................... 879
21.13.12.1.4 Method 4: Synthesis from N-Sulfonyl Isocyanates .................... 880
21.13.13 **Product Subclass 13: N-Sulfanyl Amides** .................................. 882
21.13.13.1 Synthesis of Product Subclass 13 .............................................. 882
21.13.13.1.1 Method 1: N-Sulfanylation of Amides ..................................... 882
21.13.13.1.2 Method 2: N-Acylation of Sulfinamides .................................. 883
21.13.14 **Product Subclass 14: N-Nitro and N-Nitroso Amides** .................. 884
21.13.14.1.2 Method 2: Synthesis from Imidoyl Chlorides ........................... 886
21.13.15 **Product Subclass 15: Acyl Hydrazones** .................................... 887
21.13.15.1 Synthesis of Product Subclass 15 .............................................. 887
21.13.15.1.1 Method 1: Acylation of Hydrazones ........................................ 887
21.13.15.1.2 Method 2: Synthesis from Hydrazides and Carbonyl Compounds ...... 888
21.13.16 Product Subclass 16: Hydrazides .................................................. 889
21.13.16.1 Synthesis of Product Subclass 16 ............................................... 890
21.13.16.1.1 Method 1: Electrophilic Amination of Amides .......................... 890
21.13.16.1.2 Method 2: Acylation of Hydrazide Derivatives .......................... 891
21.13.16.1.3 Method 3: Reductive Processes ............................................. 892
21.13.16.1.4 Method 4: Addition of Carbon-Centered Nucleophiles to N-Acyl Hydrazones .............................................................. 894

21.14 Product Class 14: Acylphosphorus Compounds .............................. 907
21.14.1.1 Synthesis of Product Subclass 1 ............................................... 907
21.14.1.1.2 Method 2: Dithiane Alkylation, Followed by Hydrolysis ................. 908
21.14.1.1.3 Method 3: Metal-Mediated Oxidations of α-Hydroxy Phosphonates ..... 909
21.14.1.1.3.1 Variation 1: Heterogeneous Reactions .................................. 910
21.14.1.1.3.2 Variation 2: Solvent-Free Reactions ..................................... 910
21.14.1.2 Applications of Product Subclass 1 in Organic Synthesis .................. 911
21.14.1.2.1 Variation 1: Halogenation Reactions of Acylphosphonates .............. 911
21.14.1.2.1.1 Variation 2: Formation of α-Chloro Carboxylic Acids ................ 911
21.14.1.2.1.2 Variation 2: Selective Chlorination of α-Phosphorylated Aldehydes .... 913
21.14.1.2.1.3 Variation 3: Fluorination of Acylphosphonates ......................... 913
21.14.1.2.2 Method 2: Condensation of Acylphosphonates with Amines and Hydrazines, and Subsequent Reactions ............................. 914
21.14.1.2.2.1 Variation 1: Reductive Amination ....................................... 914
21.14.1.2.2.2 Variation 2: Pyrazoles via the Vilsmeier–Haack Reaction .......... 915
21.14.1.2.2.3 Variation 3: Synthesis of Bis(acylphosphonates) ..................... 916
21.14.1.2.3 Method 3: Reduction of Acylphosphonates .............................. 917
21.14.1.2.3.1 Variation 1: Diastereoselective Reductions ............................ 917
21.14.1.2.3.2 Variation 2: Enantioselective Reductions .............................. 918
21.14.1.2.4 Method 4: Organometallic Additions to Acylphosphonates .......... 918
21.14.1.2.4.1 Variation 1: Grignard Additions ........................................ 918
21.14.1.2.4.2 Variation 2: Indium-Mediated Additions ............................. 919
21.14.1.2.5 Method 5: Diels–Alder Reactions of Acylphosphonates ................. 920
21.14.1.2.6 Method 6: Mukaiyama–Michael Reactions of β,γ-Unsaturated Acylphosphonates ................................................................. 921
21.14.1.2.7 Method 7: Enolization and Subsequent Reactions of Acylphosphonates .... 922
21.14.1.2.7.1 Variation 1: C-Alkylation of Acylphosphonates ....................... 922
21.14.1.2.7.2 Variation 2: Asymmetric Hydrogenation ................................ 923
21.14.1.2.7.3 Variation 3: Cross-Coupling Reactions ................................ 924

22.1.2.5.1 Methods 1: Miscellaneous Applications ................................. 64
22.1.2.6 Phosphorus-Substituted Sulfur Ylides ...................................... 66
22.1.2.6.1 Method 1: Reactions with Aldehydes ....................................... 66
22.1.2.6.2 Method 2: Reaction with Electron-Deficient Alkenes .................. 67
22.1.2.6.3 Method 3: Rearrangement Reactions ....................................... 68
22.1.2.6.4 Methods 4: Miscellaneous Applications ................................. 68

22.1.2. Product Subclass 2: Thioacyl Halides

R. S. Glass

22.1.2.1 Synthesis of Product Subclass 2 .............................................. 75
22.1.2.1.1 Method 1: Sulfuration ........................................................ 76
22.1.2.1.2 Method 2: Dehalogenation of Haloalkanesulfenyl Chlorides .......... 76
22.1.2.1.3 Method 3: By Substitution of Dithiocarboxylic Acids .................. 77
22.1.2.1.4 Method 4: By Nucleophilic Substitution of Thiophosgene ............ 77
22.1.2.1.5 Method 5: By C—S Cleavage of α-Thioether Cations .................. 78
22.1.2.2 Applications of Product Subclass 2 in Organic Synthesis ................ 79
22.1.2.2.1 Method 1: Acyl Nucleophilic Substitution ............................... 79
22.1.2.2.2 Method 2: Reductive Dimerization ........................................ 79
22.1.2.2.3 Method 3: Friedel–Crafts Thioacylation ................................... 80
22.1.2.2.4 Method 4: Cycloaddition Reactions ....................................... 81
22.1.2.2.5 Method 5: Oxidation ......................................................... 81

22.1.3 Product Subclass 3: Thiacarboxylic O-Acid Esters

R. S. Glass

22.1.3.1 Synthesis of Product Subclass 3 .............................................. 85
22.1.3.1.1 Method 1: Thioacylation of Alcohols ..................................... 85
| Variation 1: Thioacylation of Alcohols with Thioaroyl Chlorides | 86 |
| Variation 2: Thioacylation of Alcohols with Nitro(thioacyl)benzotriazoles | 86 |
| Method 2: Thionation of Esters | 87 |
| Variation 1: By Thionation of Esters with Lawesson’s Reagent | 87 |
| Variation 2: By Microwave Irradiation with Lawesson’s Reagent | 88 |
| Variation 3: With Phosphorus Pentasulfide and Hexamethyldisiloxane | 89 |
| Method 3: Thiolysis of Iminosulfuranes and Sulfuranes | 90 |
| Variation 1: From Carboxamides | 90 |
| Variation 2: From Nitriles | 91 |
| Method 4: Alkoxycarbonylation of Enolates | 92 |
| Method 5: Elimination of Monothioacetal Derivatives | 93 |
| Method 1: Photochemical Elimination | 93 |
| Variation 2: Thermolysis of Thiosulfinates | 94 |

**Applications of Product Subclass 3 in Organic Synthesis**

| Variation 1: Thioacylation | 94 |
| Variation 2: Nucleophilic Addition | 95 |
| Variation 1: Redox Glycosidation | 95 |
| Variation 2: Organometallic Addition and Methylation | 97 |
| Method 3: Synthesis of Heterocycles | 98 |
| Method 4: Enolate Reactions | 98 |
| Variation 1: Claisen Rearrangement | 98 |
| Variation 2: Aldol Addition | 99 |
| Variation 3: Michael Addition | 100 |
| Variation 4: Horner–Emmons Reaction | 100 |
| Method 5: Cycloaddition Reactions | 101 |
| Variation 1: Diels–Alder 2π-Components | 101 |
| Variation 2: Diels–Alder 4π-Components | 102 |
| Variation 3: 1,3-Dipolar Cycloaddition Reactions | 102 |
| Variation 4: Photochemical [2 + 2] Cycloaddition | 103 |
| Method 6: Reductive Desulfurization | 103 |
| Variation 1: Reductive Desulfurization with Triphenyltin Hydride | 103 |
| Variation 2: Reductive Desulfurization with Tributyltin Hydride | 104 |
| Method 7: Reductive Dimerization | 105 |
| Method 8: Barton–McCombie Deoxygenation of Secondary Alcohols | 105 |
| Method 9: Fluorinative Desulfurization | 106 |

**Product Subclass 4: Dithiocarboxylic Acid Esters**

R. S. Glass

|Synthesis of Product Subclass 4 | 109 |
|Method 1: Thioacetylation of Thiols | 109 |
|Method 2: Thionation of Carboxylic Acids | 110 |
|Method 3: Thiolysis of Iminosulfuranes and Sulfuranes | 111 |
|Method 4: Dithiocarboxylation | 112 |
|Method 1: Dithiocarboxylation of Grignard Reagents | 112 |
|Method 2: Dithiocarboxylation of Sulfone α-Carbanions | 113 |
22.1.4.3 Variation 3: Dithiocarboxyalkylation ........................................... 114
22.1.4.5 Method 5: Friedel–Crafts Alkylidithiocarboxylation ....................... 115
22.1.4.6 Method 6: Bromination of Tin Dithiocarboxylates ............................ 116
22.1.4.7 Method 7: Reaction of Dithiocarboxylates with Halophosphines, Thiophosphinic Chloride, and Selenophosphinic Chloride ............ 116
22.1.4.8 Method 8: Acylation of Dithiophosphoric Acids ............................... 117
22.1.4.9 Method 9: Amination of Arenedithiocarboxylates ............................ 118
22.1.4.2 Applications of Product Subclass 4 in Organic Synthesis ................ 118
22.1.4.2.1 Method 1: Thioacylation ............................................................ 118
22.1.4.2.1.1 Variation 1: Aminolysis of Dithioesters ..................................... 118
22.1.4.2.1.2 Variation 2: Aminolysis of S-Thioacyl Dithiophosphates ............ 119
22.1.4.2.1.3 Variation 3: Synthesis of Thiohydroxamic Acids ....................... 120
22.1.4.2.2 Method 2: Addition of Organometallic Reagents ......................... 120
22.1.4.2.2.1 Variation 1: Carbophilic Addition of Grignard Reagents ............... 120
22.1.4.2.2.2 Variation 2: Thiophilic Addition of Grignard Reagents ................ 121
22.1.4.2.3 Method 3: Synthesis of 5-Aryl-1,4,2-dithiazolium Salts .................. 122
22.1.4.2.4 Method 4: Synthesis of Penems ................................................ 123
22.1.4.2.5 Method 5: Enethiolates and Ketene Dithioacetals .......................... 123
22.1.4.2.5.1 Variation 1: S-Alkylation and S-Silylation of Enethiolates .......... 124
22.1.4.2.5.2 Variation 2: Aldol Addition ..................................................... 125
22.1.4.2.5.3 Variation 3: Addition to Imines .............................................. 125
22.1.4.2.5.4 Variation 4: Addition to Azodicarboxylates .............................. 126
22.1.4.2.5.5 Variation 5: Michael Addition ............................................... 127
22.1.4.2.6 Method 6: Cycloaddition Reactions ......................................... 128
22.1.4.2.6.1 Variation 1: Diels–Alder Cycloaddition Reactions ...................... 128
22.1.4.2.6.2 Variation 2: 1,3-Dipolar Cycloaddition with Diazomethane ........... 129
22.1.4.2.6.3 Variation 3: 1,3-Dipolar Cycloaddition with Phenyl Azide ............ 130
22.1.4.2.7 Method 7: Oxidation ............................................................... 130

22.1.5 Product Subclass 5: Selenothiocarboxylic Se-Acid Esters
R. S. Glass

22.1.5.1 Synthesis of Product Subclass 5 .................................................... 133
22.1.5.1.1 Method 1: Thioacylation of Areneselenolates .................................. 133
22.1.5.1.1.1 Variation 1: Thioacylation with Thioacyl Chlorides ................. 133
22.1.5.1.1.2 Variation 2: Thioacylation with Bis(thioacyl) Sulfides ............... 133
22.1.5.1.2 Method 2: Reaction of Thioiocarboxylic O-Acid Esters with Dialkylaluminum Alkaneselenolates ................................. 134
22.1.5.1.3 Method 3: Se-Alkylation of Selenothioates ................................... 134
22.1.5.1.4 Method 4: Sulfuration of a Selanynamine .................................... 135
22.1.5.2 Applications of Product Subclass 5 in Organic Synthesis ................ 135
22.1.5.2.1 Method 1: Thioacylation ............................................................ 135
22.1.5.2.2 Method 2: Alkylation of Enethiolates ......................................... 135
22.1.5.2.3 Method 3: Oxidation ............................................................... 136
Product Subclass 6: Tellurothiocarboxylic Te-Acid Esters
R. S. Glass

Product Subclass 7: Thioamides
H. Lebel

Synthesis of Product Subclass 6

Method 1: Thionation of Telluroesters

Synthesis of Product Subclass 7

Method 1: Sulfurization of Amides by Tetraphosphorus Decasulfide

Variation 1: With Sodium Carbonate as an Activator

Variation 2: With Ultrasonic Irradiation

Variation 3: With Hexamethyldisiloxane

Method 2: Sulfurization of Amides

Variation 1: With Lawesson’s Reagent

Variation 2: With Belleau’s Reagent

Method 3: Thioamidation of Carboxylic Acids

Method 4: Thiolysis of Imidoyl Chlorides

Variation 1: With Hexamethyldisilathiane

Variation 2: With Benzyltriethylammonium Tetrathiomolybdate

Method 5: Thiolysis of Pyridinium Imidates

Method 6: Thiolysis of Dihydrooxazoles

Method 7: Thiolysis of Amidines

Method 8: Thiolysis of Nitriles

Variation 1: Addition of Enamines

Variation 2: Addition of Ketene Acetals

Variation 3: Addition of Enolates

Variation 4: Addition of Grignard Reagents

Variation 5: Addition of Organolithium Reagents

Variation 6: Via Friedel–Crafts Procedures

Variation 7: Via Organosamarium Complexes

Variation 8: With O-Alkyl Thiocarboxylates
22.1.7.12.2 Variation 2: With Dithiocarboxylates ........................................ 168
22.1.7.12.3 Variation 3: With Carbon Disulfide ........................................ 169
22.1.7.13 Method 13: Transamidation of Thioamides ................................. 169
22.1.7.13.1 Variation 1: With Thioacylated Benzoazoles 170
22.1.7.13.2 Variation 2: With Thioacylated Benzimidazolones ..................... 171
22.1.7.13.3 Variation 3: With Thioacylated N-Phthalimides ......................... 171
22.1.7.14 Method 14: Synthesis from Ketones by the Willgerodt–Kindler Reaction .. 172

22.2 Product Class 2: Selenocarboxylic Acids and Derivatives
T. Wirth

22.2.1 Product Subclass 1: Selenocarboxylic Acids with Selenium in Higher Oxidation States ................................................................. 181
22.2.2 Product Subclass 2: Selenocarbonyl Halides ........................................ 181
22.2.2.1 Synthesis of Product Subclass 2 ..................................................... 182
22.2.2.1.1 Method 1: Reaction of Bis(perfluoroalkylselanyl)mercury(II) Compounds with Lewis Acids ....................................................... 182
22.2.2.1.2 Method 2: Synthesis by Flash-Vacuum Pyrolysis .......................... 183
22.2.2.3 Product Subclass 3: Chalcocelenocarboxylic Acids ......................... 183
22.2.2.3.1 Synthesis of Product Subclass 3 ................................................... 183
22.2.2.3.1.1 Method 1: Reaction of Imidates ............................................... 183
22.2.2.3.1.2 Variation 1: With Hydrogen Selenide ...................................... 183
22.2.2.3.1.3 Variation 2: With Sodium Hydrogen Selenide .......................... 184
22.2.2.3.1.4 Method 2: Reaction of Ketene Acetals with Hydrogen Selenide ...... 185
22.2.2.3.1.5 Method 3: Reaction of Alkyneselenolates and Alkyneselenols .......... 186
22.2.2.3.1.6 Method 4: Reaction of Chromium–Carbene Complexes with Selenium ................................................................. 187
22.2.2.3.1.7 Method 5: Reaction of Esters and Ortho Esters .............................. 188
22.2.2.3.1.8 Method 6: Reactions with Carbon Diselenide .............................. 188
22.2.2.3.1.9 Method 7: Synthesis by Transesterification or Isomerization ......... 189
22.2.2.3.2 Applications of Product Subclass 3 in Organic Synthesis .............. 190
22.2.2.3.2.1 Method 1: Reaction with Nucleophiles ..................................... 190
22.2.2.3.2.2 Method 2: Reaction with Electrophiles ..................................... 191
22.2.2.4 Product Subclass 4: Selenoamides .................................................. 191
22.2.2.4.1 Synthesis of Product Subclass 4 .................................................. 191
22.2.2.4.1.1 Method 1: Reaction of Amides ............................................... 191
22.2.2.4.1.1.1 Variation 1: With Phosphorus Pentaselenide .......................... 191
22.2.2.4.1.1.2 Variation 2: With Hexamethyldisilaselenane .......................... 192
22.2.2.4.1.1.3 Variation 3: With Selenium and Diisobutylaluminum Hydride .... 193
22.2.2.4.1.1.4 Variation 4: With Cyclic Phosphorus-Containing Reagents .......... 193
22.2.2.4.1.2 Method 2: Reaction of Nitriles ............................................... 194
22.2.2.4.1.2.1 Variation 1: With Elemental Selenium and Carbon Monoxide .......... 194
22.2.2.4.1.2.2 Variation 2: With Elemental Selenium and Sodium Borohydride ...... 195
22.2.2.4.1.2.3 Variation 3: With Aluminum Selenide .................................... 195
Variation 4: With Hexamethyldisilaselenane ............................ 196

Method 3: Reaction of Amidines or Amidinium Salts .......................... 197

Variation 1: Reaction of Imines ........................................ 197

Variation 3: Reaction via Imidothiocarbamates ........................... 199

Method 4: Reaction of Alkyneselenolates or Alkyneselenols .................. 199

Variation 1: Reaction of Alkyneselenolates Synthesized from Alkynes ... 200

Variation 2: Reaction of Alkyneselenolates Synthesized from 1,2,3-Selenadiazoles ........................................ 200

Method 5: Reaction of Isoselenocyanates .................................... 201

Variation 1: With Alcohols ............................................ 201

Variation 2: With Amines .............................................. 202

Method 6: Synthesis by Transesterification .................................. 203

Variation 1: From O-Alkyl Selenoates or S-Alkyl Selenothioates .......... 203

Variation 2: From Triselenocarbonates .................................. 204

Method 7: Synthesis via α-Amino-Substituted Diphenylphosphine Oxide Anions ........................................ 204

Method 8: Synthesis via Cycloreversion of Oxaselenazines ................. 205

Method 9: Reaction of 1,1-Dihaloalkanes with Elemental Selenium ........ 206

Method 10: Synthesis from Ynamines .................................. 207

Variation 1: Using Elemental Selenium .................................... 207

Variation 2: Using Metal Complexes of Selenocarbonyl Compounds ...... 207

Applications of Product Subclass 4 in Organic Synthesis .................. 208

Method 1: Reaction with Nucleophiles ................................ 208

Method 2: Reaction with Electrophiles ................................ 208

Product Class 3: Tellurocarboxylic Acids and Derivatives
T. Murai

Product Class 3: Tellurocarboxylic Acids and Derivatives .................. 213

Product Subclass 1: Tellurocarbonyl Halides ............................... 213

Synthesis of Product Subclass 1 ........................................ 213

Method 1: Elimination of a Fluorostannane from a Tellanylstannane .... 213

Product Subclass 2: Tellurocarboxylic O-Acids and O-Esters ............... 214

Synthesis of Product Subclass 2 ........................................ 214

Method 1: Addition of Sodium Telluride to Oxoiminium Salts ............... 214

Method 2: ........................................ 216

Product Subclass 3: Telluroformamides .................................. 215

Synthesis of Product Subclass 3 ........................................ 216

Method 1: Reaction of a Dialuminum Telluride with Formamides .......... 216

Variation 1: Reaction of Tellurium and Diisobutylaluminum Hydride with Formamides ........................................ 216

Applications of Product Subclass 3 in Organic Synthesis .................. 217

Method 1: Reaction of a Telluroformamide with Pentacarbonyl- chromium–Pyridine Complex ........................................ 217
22.3.4 Product Subclass 4: Telluroamides ........................................ 217
22.3.4.1 Synthesis of Product Subclass 4 ....................................... 217
22.3.4.1.1 Method 1: Reaction of a Sulfanyliminium Salt with Hydrogen Telluride 217
22.3.4.1.2 Method 2: Reaction of a Dialuminum Telluride with a Cyclic Amide 218
22.3.4.1.3 Method 3: Reaction of Selanyliminium Salt with Lithium Aluminum Hydride and Elemental Tellurium 218

22.4 Product Class 4: Imidic Acids and Derivatives

22.4.1 Product Subclass 1: Carbon-Substituted Iminium Salts
S. Cicchi and F. M. Cordero

22.4.1.1 Synthesis of Product Subclass 1 ........................................ 221
22.4.1.1.1 Halomethaniminium Salts ........................................... 221
22.4.1.1.1.1 Method 1: Halogenation of Amides ........................................ 222
22.4.1.1.1.2 Method 2: Reaction of (Dichloromethylene)dimethylammonium Chloride 224
22.4.1.1.1.3 Methods 3: Additional Methods ................................... 226
22.4.1.1.2 Alkoxymethaniminium Salts .......................................... 227
22.4.1.1.2.1 Method 1: Reaction of Other Methaniminium Salts ............. 227
22.4.1.1.2.1.1 Variation 1: Reaction of Alcohols with Trifluoromethanesulfonic Anhydride–Amide Adducts 227
22.4.1.1.2.1.2 Variation 2: Reaction of Alcohols with the Benzoyl Chloride–Dimethylformamide Adduct .............. 228
22.4.1.1.2.1.3 Variation 3: Reaction of Alcohols with N-Acylamidinium Salts ...................................................... 229
22.4.1.1.2.1.4 Variation 4: Reaction of Oximes with N-Acylamidinium Salts ...................................................... 230
22.4.1.1.2.2 Method 2: Reaction of Nitrilium Salts ................................. 230
22.4.1.1.2.2.1 Variation 1: With Aromatic Aldehydes .......................... 230
22.4.1.1.2.2.2 Variation 2: With α,β-Unsaturated Carbonyl Compounds ........ 231
22.4.1.1.2.2.3 Method 3: O-Alkylation of Amides and Lactams .............. 232
22.4.1.1.2.2.3.1 Variation 1: With Methyl Sulfoxides ........................... 232
22.4.1.1.2.2.3.2 Variation 2: With Dimethyl Sulfate ......................... 233
22.4.1.1.2.2.3.3 Variation 3: With Sulfonium Salts ............................. 233
22.4.1.1.2.2.3.4 Variation 4: With Oxonium Salts ............................... 234
22.4.1.1.2.2.3.5 Variation 5: With Haloalkanes ................................... 236
22.4.1.1.2.2.3.6 Method 4: N-Alkylation of Imidates ........................... 237
22.4.1.1.2.2.3.7 Variation 1: With Alkyl Sulfoxides and Dialkyl Sulfides .......................... 237
22.4.1.1.2.2.3.8 Variation 2: With Haloalkanes ................................... 238
22.4.1.1.2.2.3.9 Method 5: Electrochemical Oxidation of N,N-Disubstituted Amides ................................................. 240
22.4.1.1.2.2.3.10 Method 6: Ring Expansion of Cyclic Ketones by Reaction with β- and γ-Hydroxy Azides ................. 240
22.4.1.1.2.2.3.11 Method 7: Reaction of Alkoxymethaniminium Salts ........ 241
22.4.1.1.2.3 (Alkylsulfanyl)methaniminium Salts ................................ 242
22.4.1.1.2.3.1 Method 1: Reaction of (Sulfonyloxy)methaniminium Salts with Thiols ................................................. 242
22.4.1.1.2.3.2 Method 2: S-Alkylation of N,N-Disubstituted Thioamides ................................................. 243
22.4.1.1.3.2.1 Variation 1: With (Alk-1-enyl)-\(\lambda_3\)-iodanes ........................................ 243
22.4.1.1.3.2.2 Variation 2: With Alkyl Sulfonates and Dialkyl Sulfates ............................ 244
22.4.1.1.3.2.3 Variation 3: With Oxonium Salts ................................................................. 245
22.4.1.1.3.2.4 Variation 4: With Haloalkanes ..................................................................... 246
22.4.1.1.3.2.5 Variation 5: Reaction of N-Unsubstituted Thioamides with Aziridines ....... 247
22.4.1.1.3.3 Method 3: N-Alkylation of Thioimidates with Haloalkanes ............................. 248
22.4.1.1.4 Method 3: N-Alkylation of Thioimidates with Haloalkanes ................................. 249
22.4.1.1.4.1 Method 1: Reaction of Carboxylic Acid Derivatives with Secondary Amines .................................................. 249
22.4.1.1.4.1.1 Variation 1: Reaction of Ortho Esters with Secondary Amines ...................... 249
22.4.1.1.4.1.2 Variation 2: Reaction of Oxonium Salts with Secondary Amines ................ 251
22.4.1.1.4.2 Method 2: Reaction of Other Methaniminium Salts with Secondary Amines .......................... 251
22.4.1.1.4.2.1 Variation 1: Reaction of Chloromethaniminium Salts ................................... 252
22.4.1.1.4.2.2 Variation 2: Reaction of Alkoxymethaniminium Salts .................................. 254
22.4.1.1.4.3 Method 3: Reaction of Acyl Chlorides with Carbon Monoxide and Imines ... 255
22.4.1.1.4.4 Method 4: Cycloaddition of Keteniminium Trifluoromethanesulfonates with Imines ......................................................................................... 255
22.4.1.1.4.5 Method 5: Reaction of Nitriiun Salts with Amines and Aminolysis of the Adducts ........................................................................................................ 256
22.4.1.1.4.6 Method 6: Electrophilic Addition to 1,1-Bis(dialkylamino)alk-1-enes ............... 257
22.4.1.1.4.7 Method 7: Electrophilic Addition to N'-Thiaoacetyl- and N'-Selenoacylaminides ........................................................................................................... 258
22.4.1.1.4.8 Method 8: S-Alkylation of Alkyl 3,3-Diaminoprop-2-ene(dithioates) .............. 259
22.4.1.1.4.9 Method 9: N-Alkylation of Amidines ............................................................... 259
22.4.1.1.4.10 Method 10: Oxidation of Ethylenetetramines ................................................ 261
22.4.1.1.4.11 Methods 11: Additional Methods ................................................................. 262

22.4.2 Product Subclass 2: C-Heteroatom-Substituted Nitrones, Other Dipoles
F. M. Cordero and S. Cicchi

22.4.2.1 Synthesis of Product Subclass 2 ........................................................................... 267
22.4.2.1.1 C-Chloro-Substituted Nitrones ......................................................................... 267
22.4.2.1.1.1 Method 1: Substitution of Aldonitrones ......................................................... 267
22.4.2.1.1.2 Method 2: Alkylation of 2-Chloroquinoline 1-Oxide ....................................... 268
22.4.2.1.1.3 Method 3: Rearrangement of \(\alpha\)-Chloro Nitroso Compounds ...................... 268
22.4.2.1.2 C-Oxygen-Substituted Nitrones ..................................................................... 269
22.4.2.1.2.1 Method 1: Substitution of C-Chloronitrones ................................................. 270
22.4.2.1.2.2 Method 2: Oxidation of N,N-Disubstituted Hydroxylamines .................... 270
22.4.2.1.2.3 Method 3: Oxidation of Aldonitrones ......................................................... 271
22.4.2.1.2.4 Method 4: Hydrolysis of 2,2-Dimethoxy-1-phenylethanone Oxime .............. 272
22.4.2.1.2.5 Method 5: Condensation of Hydroxylamine .............................................. 273
22.4.2.1.2.5.1 Variation 1: Condensation of \(\beta\)-Hydroxyamino Alcohols with Ortho Esters 273
22.4.2.1.2.5.2 Variation 2: Condensation with Amide Acetals ........................................ 275
22.4.2.1.2.6 Method 6: Alkylation of Hydroxamic Acids ............................................... 275
Method 7: Isomerization of Oxaziridines ........................................ 277
Method 8: Acid-Promoted Rearrangement of Nitroso Acetals .......... 279
C-Sulfanyl- or C-Sulfonyl-Substituted Nitrones ................................. 280
Method 1: Substitution of C-Cyanonitrones ........................................... 280
Method 2: Substitution of C-Alkoxynitrones .......................................... 280
Method 3: Demethylation of 1-Methoxypyrrolidine-2-thiones ......... 282
Method 4: N-Alkylation of Oximes .......................................................... 282
Method 5: Reaction of Thiazolidin-4-ones with Nitrosobenzene ...... 283
Method 6: Reaction of Nitroalkenes with Ynamines ......................... 284
Method 7: Intramolecular Condensation of an S-Alkyl
4-(Hydroxyamino)butanethioate ......................................................... 285
Method 8: Alkylation of Thiohydroxamic Acid Derivatives .............. 286
Variation 1: Alkylation of Thiohydroxamic Acid with Alkyl Iodides .......... 286
Variation 2: Reaction of 1-Methoxypyrrolidine-2-thiones with
Iodotrimethylsilane ............................................................................. 288
Method 9: Isomerization of a Four-Membered Cyclic Nitrone ............... 289
Method 1: Substitution of Aldonitrones ................................................. 289
Method 2: Substitution of C-Methoxynitrones ........................................ 291
Method 3: Oxidation of N,N-Disubstituted Hydroxylamines .......... 292
Method 4: Dehydrogenation of 2-Amino-$N^2$-hydroxybenzimidamides .... 298
Method 5: Oxidation of Imidamides .......................................................... 299
Method 6: Oxidation of Imidazolidines ......................................................... 303
Method 7: Condensation of N-(2-Aminoethyl)hydroxylamines with
Ortho Esters ......................................................................................... 304
Method 8: Condensation of N-Substituted Hydroxylamines with
N-Aryl-Substituted Imidates ................................................................. 305
Method 9: Condensation of Amino-Substituted $N^2$-Hydroxyimidamides
with Aldehydes ..................................................................................... 306
Variation 1: Condensation of 2-Amino-$N^2$-hydrobenzimidamides with
Aldehydes .............................................................................................. 306
Variation 2: Condensation of 3-Amino-$N^2$-hydroxypropanimidamides and
Aldehydes .................................................................................................. 308
Method 10: Condensation of 2-(Hydroxyamino)propan-1-one Oximes with
Glyoxal Derivatives .......................................................... 310
Method 11: Reaction of N-Substituted Hydroxylamines with Alkyl
Cyanofornates ....................................................................................... 311
Method 12: Reactions with Nitroso Compounds ....................................... 312
Variation 1: Reaction of Nitroso Compounds with N-Methyleneamines ... 312
Variation 2: Reaction of Nitroso Compounds with
(Aryl)arylaminatocteyonitrile .............................................................. 313
Variation 3: Reaction of Nitroso Compounds with Nitrile Oxides or Nitrile
Imides ...................................................................................................... 313
Method 13: Reductive Cyclization of Nitroalkyl Cyanides .................. 315
Variation 1: Reductive Cyclization of 3-, 4-, and 5-Nitroalkyl Cyanides ... 315
Variation 2: Electrochemical Reduction of 4- and 5-Nitroalkyl Cyanides ... 317
22.4.2.1.5 C-Phosphorus-Substituted Nitrones ........................................ 319
22.4.2.1.5.1 Method 1: Substitution of Aldonitrones .......................... 319
22.4.2.1.5.2 Method 2: Oxidation of N,N-Disubstituted Hydroxylamines .... 320
22.4.2.1.6 C-Heteroatom-Substituted Azomethine Ylides .................. 321
22.4.2.1.6.1 Method 1: Synthesis of C-Oxygen- or C-Sulfur-Substituted Azomethine Ylides .................................................... 321
22.4.2.1.6.1.1 Variation 1: Desilylation of Iminium Salts ...................... 321
22.4.2.1.6.1.2 Variation 2: Photochemical Transformation of 2,3-Dihydroisoxazoles .... 322
22.4.2.1.6.1.3 Variation 3: Rhodium-Catalyzed Transformation of 1-(1-Acylpyrrolidin-2-yl)-2-diazoethanones ......................... 323
22.4.2.1.6.2 Method 2: Synthesis of C-Nitrogen-Substituted Azomethine Ylides ........ 324
22.4.2.1.6.2.1 Variation 1: Deprotonation of 1,3-Dialkyl-4,5-dihydro-1H-imidazolium Bromides .................................................. 324
22.4.2.1.6.2.2 Variation 2: Nucleophilic Addition to Oxazolium Salts ........ 326
22.4.2.1.7 C-Heteroatom-Substituted Azomethine Imides ................. 326
22.4.2.1.7.1 Method 1: Condensation of Hydrazino Alcohols with Ortho Esters .... 326

22.4.3 Product Subclass 3: Imidoyl (Imino) Halides
N. Nakajima and M. Ubukata

22.4.3 Product Subclass 3: Imidoyl (Imino) Halides ........................................ 331
22.4.3.1 Synthesis of Product Subclass 3 ............................................. 331
22.4.3.1.1 Method 1: Oxidation of Aldimines ................................... 331
22.4.3.1.2 Method 2: Halogenation of Amides .................................. 331
22.4.3.1.2.1 Variation 1: By Halogenating Reagents .................... 331
22.4.3.1.2.2 Variation 2: By Phosphorus-Containing Reagents .......... 333
22.4.3.1.3 Method 3: Addition of Perfluoroalkyl Iodides to Isocyanides .... 334
22.4.3.1.4 Methods 4: Miscellaneous Methods .................................. 334
22.4.3.2 Applications of Product Subclass 3 in Organic Synthesis .......... 335
22.4.3.2.1 Reactions with Nucleophiles ......................................... 335
22.4.3.2.1.1 Method 1: Alcohol Additions .................................. 335
22.4.3.2.1.2 Method 2: Thiol Additions ...................................... 336
22.4.3.2.1.3 Method 3: Amine Additions .................................... 337
22.4.3.2.1.4 Method 4: Addition Reactions with Other Nucleophiles .... 337
22.4.3.2.1.4.1 Variation 1: Hydride and Organometallic Additions .... 337
22.4.3.2.1.4.2 Variation 2: Internal Nucleophile Additions ........... 338
22.4.3.2.2 Reactions with Electrophiles ......................................... 338
22.4.3.2.2.1 Method 1: Reactions with Palladium Complexes (Heck Reaction, Carbonylation, and Cross Coupling) .................. 339
22.4.3.2.2.2 Method 2: Iodine–Metal Exchange Reactions ............ 340
22.4.3.2.3 Radical Reactions ..................................................... 340
22.4.3.2.3.1 Method 1: Synthesis of Heterocyclic Compounds ....... 340
22.4.4  
**Product Subclass 4: Imidates**  
N. Nakajima and M. Ubukata

22.4.4  
**Product Subclass 4: Imidates** ............................................ 343

22.4.4.1  
Synthesis of Product Subclass 4 ............................................ 344

22.4.4.1.1  
Method 1: Reaction of Imidoyl Chlorides by Base-Catalyzed Coupling .......................... 344

22.4.4.1.2  
Method 2: Conversion of Amides .............................................................................. 344

22.4.4.1.2.1  
Variation 1: By Alkylation ......................................................................................... 344

22.4.4.1.2.2  
Variation 2: By Acylation ......................................................................................... 346

22.4.4.1.3  
Method 3: Reaction of Ortho Esters with Amines ...................................................... 346

22.4.4.1.4  
Method 4: Coupling of Nitriles and Isocyanides with Alcohols .................................. 346

22.4.4.1.4.1  
Variation 1: Acid-Catalyzed Coupling (Pinner Synthesis) ........................................ 347

22.4.4.1.4.2  
Variation 2: Base-Catalyzed Coupling .................................................................... 347

22.4.4.1.4.3  
Variation 3: Palladium-Catalyzed Reaction .................................................................. 349

22.4.4.1.5  
Method 5: Synthesis from Metal Complexes and Organometallics ............................ 349

22.4.4.2  
Applications of Product Subclass 4 in Organic Synthesis ........................................ 350

22.4.4.2.1  
Method 1: Introduction of Nitrogen Functionality by [3,3]-Sigmatropic Rearrangement ................................................................. 351

22.4.4.2.1.1  
Variation 1: Thermal Conditions .............................................................................. 351

22.4.4.2.1.2  
Variation 2: Metal-Catalyzed Conditions and Asymmetric [3,3]-Sigmatropic Rearrangement ................................................................. 352

22.4.4.2.2  
Method 2: Glycosylation ............................................................................................ 353

22.4.4.2.3  
Method 3: Protection Reaction .................................................................................... 354

22.4.4.2.4  
Method 4: Cyclization ................................................................................................. 355

22.4.4.2.5  
Method 5: Synthesis of Heterocyclic Compounds ...................................................... 356

22.4.5  
**Product Subclass 5: Thioimidates and Their Derivatives**  
N. Nakajima and M. Ubukata

22.4.5  
**Product Subclass 5: Thioimidates and Their Derivatives** ........................................ 361

22.4.5.1  
Synthesis of Product Subclass 5 .................................................................................. 361

22.4.5.1.1  
Method 1: Coupling of Imidoyl Halides .................................................................... 361

22.4.5.1.2  
Method 2: Conversion of Thioamides ....................................................................... 362

22.4.5.1.2.1  
Variation 1: By Alkylation ......................................................................................... 362

22.4.5.1.2.2  
Variation 2: By Acylation ......................................................................................... 362

22.4.5.1.3  
Method 3: Coupling of Nitriles and Isocyanides with Thiols ........................................ 363

22.4.5.1.3.1  
Variation 1: Acid-Catalyzed Coupling .................................................................... 363

22.4.5.1.3.2  
Variation 2: Base-Catalyzed Coupling .................................................................... 363

22.4.5.1.4  
Method 4: Beckmann Rearrangement ....................................................................... 364

22.4.5.2  
Applications of Product Subclass 5 in Organic Synthesis ........................................ 364

22.4.5.2.1  
Method 1: Metalation .................................................................................................. 364

22.4.5.2.2  
Method 2: Synthesis of Heterocyclic Compounds ...................................................... 365
22.4.6  Product Subclass 6: Selenoimidates (Imidoselenoates) and Derivatives
N. Nakajima and M. Ubukata

22.4.6  Product Subclass 6: Selenoimidates (Imidoselenoates) and Derivatives  · 367
22.4.6.1  Synthesis of Product Subclass 6 · 367
22.4.6.1.1  Method 1: Conversion of Selenoamides · 367
22.4.6.1.2  Method 2: Coupling of Lithiated Hydrocarbons with Selenium and Isocyanate · 368
22.4.6.1.3  Method 3: Reactions of Organometallic Compounds · 369
22.4.6.2  Applications of Product Subclass 6 in Organic Synthesis · 370
22.4.6.2.1  Method 1: Cyclization of Ene Radicals · 370
22.4.6.2.2  Method 2: Use as Acyl Radical Synthons · 371

22.4.7  Product Subclass 7: Telluroimidates (Imidotelluroates) and Derivatives
N. Nakajima and M. Ubukata

22.4.7  Product Subclass 7: Telluroimidates (Imidotelluroates) and Derivatives  · 375
22.4.7.1  Synthesis of Product Subclass 7 · 375
22.4.7.1.1  Method 1: Displacement of Chloride from Imidoyl Chlorides · 375
22.4.7.1.2  Method 2: Reaction of Acyl Tellurides with Isocyanides · 375
22.4.7.2  Applications of Product Subclass 7 in Organic Synthesis · 376
22.4.7.2.1  Method 1: Photolysis and Indole Derivatives Synthesis · 376

22.4.8  Product Subclass 8: N-Alkyl-, N-Aryl-, and N-Hetaryl-Substituted Amidines (Imidamides)
K. Ostrowska and A. Kolasa

22.4.8  Product Subclass 8: N-Alkyl-, N-Aryl-, and N-Hetaryl-Substituted Amidines (Imidamides) · 379
22.4.8.1  Synthesis of Product Subclass 8 · 379
22.4.8.1.1  From Nitriles and Isocyanides · 379
22.4.8.1.1.1  Method 1: Addition of Nitrogen Bases to Nitriles · 379
22.4.8.1.1.1.1  Variation 1: Addition of Stoichiometric Amounts of Alkali Metal Amides · 381
22.4.8.1.1.1.2  Variation 2: Addition of Amines in the Presence of Alkyllithium or Grignard Reagents · 383
22.4.8.1.1.1.3  Variation 3: Addition of Silylimines · 385
22.4.8.1.1.1.4  Variation 4: Addition of Ammonia or Amines to Nitriles Substituted with Electron-Withdrawing Groups · 386
22.4.8.1.1.2  Method 2: Addition of Ammonia and Its Derivatives to Nitriles via Heterosubstituted Imines (The Pinner Method) · 386
22.4.8.1.1.2.1  Variation 1: Modifications of the Classical Pinner Method (via Imidates) · 392
22.4.8.1.1.2.2  Variation 2: Modifications of the Classical Pinner Method (via Thioimidates) · 395
22.4.8.1.3  Method 3: N-Substituted and N¹,N¹-Disubstituted Amidines by Addition of an Amine to a Nitrile Activated by a Lewis Acid  396
22.4.8.1.4  Method 4: Variously Substituted Amidines via Nitrilium Salts  400
22.4.8.1.5  Method 5: Reaction of Nitriles with Azides in the Presence of Samarium(II) Iodide  402
22.4.8.1.6  Method 6: Reaction of Nitriles with Nitroarenes in the Presence of Metals or Metal Salts  403
22.4.8.1.7  Method 7: Cyclic Amidines by Treatment with Catalytic Hydrogen Sulfide, Sulfur, Phosphorus Pentasulfide, or Carbon Disulfide  404
22.4.8.1.8  Method 8: Synthesis from Isocyanides  405
22.4.8.1.2  From Cumulenes  411
22.4.8.1.2.1  Method 1: Synthesis from Isonicocyanates, Isothiocyanates, or Isocyanates  411
22.4.8.1.2.1.1  Variation 1: Addition of Amines to Benzimidoyl Isonicocyanates, Isothiocyanates, or Isocyanates  411
22.4.8.1.2.1.2  Variation 2: 1,3-Dipolar Cycloaddition of Isothiocyanates or Isocyanates  412
22.4.8.1.2.1.3  Variation 3: Semicyclic Amidines Starting from Isothiocyanates or Isocyanates and α- or β-Amino Cyanides  413
22.4.8.1.2.1.4  Variation 4: Cycloaddition of Isothiocyanates with α- or β-Hydroxy Cyanides  415
22.4.8.1.2.1.5  Variation 5: Addition of N,N-Disubstituted Amides to Isocyanates  416
22.4.8.1.2.2  Method 2: Synthesis from Carbodiimides  418
22.4.8.1.2.2.1  Variation 1: Addition of Various Carbon Nucleophiles to Carbodiimides  418
22.4.8.1.2.2.2  Variation 2: Reduction of Carbodiimides  419
22.4.8.1.2.3  Method 3: Addition of Amines to Ketenimines  419
22.4.8.1.3  From Carboxylic Acids and Carboxylic Acid Esters  422
22.4.8.1.3.1  Method 1: Synthesis from Carboxylic Acids  422
22.4.8.1.3.1.1  Variation 1: Reaction of Carboxylic Acids with Amines Promoted by Polysilanes of Acid Trimethylisyl Ester  422
22.4.8.1.3.1.2  Variation 2: Cyclic Amidines from Carboxylic Acids and Diamines  423
22.4.8.1.3.2  Method 2: Synthesis from Carboxylic or Dithiocarboxylic Acid Esters  424
22.4.8.1.4  From Ortho Esters, Dialkyl(dialkoxy methyl)amines, and tert-Butoxybis(dimethylamino)methane  425
22.4.8.1.4.1  Method 1: Synthesis from Ortho Esters by Condensation with Amines  425
22.4.8.1.4.2  Method 2: Synthesis from Dialkyl(dialkoxy methyl)amines and tert-Butoxybis(dimethylamino)methane  427
22.4.8.1.4.2.1  Variation 1: Condensation of Dialkyl(dialkoxy methyl)amines and tert-Butoxybis(dimethylamino)methane  427
22.4.8.1.4.2.2  Variation 2: Cyclic Amidines by the Reaction of Dialkyl(dialkoxy methyl)amines with Diamines  429
22.4.8.1.5  From Thioamides and Amides  429
22.4.8.1.5.1  Method 1: Synthesis from Thioamides  429
22.4.8.1.5.1.1  Variation 1: Reaction of Thioamides with Ammonia or Amines in the Presence of Mercury(II) Oxide or Mercury(II) Salts  431
22.4.8.1.5.2.1 Variation 1: Amination of Amides via O-Silylated Imidates 435
22.4.8.1.5.2.2 Variation 2: Amination of Amides via O-Sulfonylated Imidates 435
22.4.8.1.5.2.3 Variation 3: Amination of Amides via O-Phosphorylated Imidates 437
22.4.8.1.5.2.4 Variation 4: Reaction of Amides with Activated Amines 438
22.4.8.1.5.2.5 Variation 5: Reaction of Amides with Azides Using Trisubstituted Phosphines as Activating Agent 438

22.4.8.1.6 From Imidoyl Chlorides 439
22.4.8.1.6.1 Method 1: Synthesis from Imidoyl Chlorides and Ammonia or Amines 439
22.4.8.1.6.2 Method 2: Synthesis from The Vilsmeier Reagent and Amines or Amides 442

22.4.8.1.7 From Thioimidates and Imidates 444
22.4.8.1.7.1 Method 1: Synthesis from Amines and Thioimidates or Their Salts 444
22.4.8.1.7.2 Method 2: Synthesis from Imidates 446
22.4.8.1.7.3 Method 3: Synthesis from Alkoxyliminium Salts Obtained from Imidates 447

22.4.8.1.8 From Amidines 450
22.4.8.1.8.1 Method 1: Transamination of Amidines 450
22.4.8.1.8.2 Method 2: Alkylation of Amidines 452
22.4.8.1.8.3 Method 3: Acylation of Amidines 455
22.4.8.1.8.4 Method 4: Urea and Thiourea Derivatives of Amidines from Isocyanates or Isothiocyanates 457

22.4.8.1.9 Miscellaneous Syntheses 457
22.4.8.1.9.1 Method 1: Oxidation of Aminals 457
22.4.8.1.9.2 Method 2: Reduction of Amidoximes 458
22.4.8.1.9.3 Method 3: Reduction of Various Compounds with the 1,3-Diaza Skeleton 460
22.4.8.1.9.4 Method 4: Synthesis from Reagents with a Good Leaving Group 461
22.4.8.1.9.5 Method 5: Decomposition of Various Nitrogen Heterocyclic Rings 462
22.4.8.1.9.6 Method 6: Other Methods 464

22.4.9 Product Subclass 9: Amidines (Imidamides) N-Substituted by Metals, Halogens, Oxygen, and Other Heteroatoms
K. Ostrowska and A. Kolasa

22.4.9.1 Synthesis of Product Subclass 9 489
22.4.9.1.1 N-Silylated, N,N-Disilylated, N,N’-Disilylated, and N,N,N’-Trisilylated Amidines 489
22.4.9.1.1.1 Method 1: Silylation of Amidines 489
22.4.9.1.1.2 Method 2: Synthesis from Silylated Nitrogen Compounds 490
22.4.9.1.1.3 Method 3: Synthesis from Non-Silylated or Silylated Carbodimides 490
22.4.9.1.2 N-Germanyl, N-Stannyl, N-Plumbyl, N-Arsenyl, and N-Antimonyl Amidines 491
22.4.9.1.2.1 Method 1: Synthesis from Amidines 491
22.4.9.1.3 Boron-Substituted Amidines ................................................. 492
22.4.9.1.3.1 Method 1: Synthesis from Amidines and Various Boron Compounds .................................................................................. 492
22.4.9.1.4 N-Haloamidines .......................................................................................................................... 493
22.4.9.1.4.1 Method 1: $N^1,N^1,N^2$-Trifluoroimidamides from Amidines and Fluorine with Sodium Fluoride as Catalyst ............................................. 493
22.4.9.1.4.2 Method 2: Dehydrofluorination of $N,N,N',N'$-Tetrafluoroalkane-1,1-diamines ........................................................................................................ 493
22.4.9.1.4.3 Method 3: N-Fluoroamidines from Imidoyl Fluorides and Amines ................................................................. 494
22.4.9.1.4.4 Method 4: N-Chloroamidines from Amidines and Hypochlorites or Chlorine in the Presence of Aqueous Sodium Hydrogen Carbonate .......................................................................................................................... 495
22.4.9.1.4.5 Method 5: Synthesis from Amidines and N-Chlorosuccinimide .......................................................................................... 496
22.4.9.1.4.6 Method 6: Synthesis from Amidines by the Action of Fluorine in Aqueous Potassium Chloride .......................................................................................................................... 496
22.4.9.1.4.7 Method 7: N-Bromoamidines from Amidines and Bromine in Acetic Acid or Sodium Hypobromite .......................................................................................... 496
22.4.9.1.4.8 Method 8: N-Iodoamidines from Amidines and Iodine in the Presence of Sodium Hydroxide, Potassium Iodide, or Nitrogen Iodide .......................................................................................... 497
22.4.9.1.5 Amidoximes (N-Hydroxylated Amidines) ...................................................... 497
22.4.9.1.5.1 Method 1: Addition of Hydroxylamine to Nitriles .................................................................................. 497
22.4.9.1.5.2 Method 2: Addition of Ammonia or Amines to Nitrile Oxides .................................................................................. 498
22.4.9.1.5.3 Method 3: Cycloaddition of Nitrile Oxides to Imines, Cyanates, Isocyanates, and Related Compounds .................................................................................. 499
22.4.9.1.5.4 Method 4: Reactions of N-Hydroxyimidoyl Chlorides with Ammonia or Amines .................................................................................. 500
22.4.9.1.5.5 Method 5: Reactions of Imidoyl Chlorides with Hydroxylamine, O-Substituted, or N-Substituted Hydroxyamines .................................................................................. 501
22.4.9.1.5.6 Method 6: Hydroxylation of Amidines .................................................................................. 502
22.4.9.1.5.7 Method 7: Reactions of Amides or Thioamides with Hydroxylamine .................................................................................. 502
22.4.9.1.5.8 Methods 8: Other Procedures .................................................................................. 504
22.4.9.1.6 Carbohydroximinohydrazides .................................................................................. 504
22.4.9.1.6.1 Method 1: Synthesis from Nitrile Oxides and Hydrazine Derivatives .................................................................................. 504
22.4.9.1.6.2 Method 2: Synthesis from N-Hydroxy or N-Amino Imidoyl Chlorides .................................................................................. 505
22.4.9.1.6.3 Method 3: Transamination with Hydroxylamine or Hydrazine Derivatives .................................................................................. 506
22.4.9.1.6.4 Methods 4: Other Procedures .................................................................................. 506
22.4.9.1.7 N-Sulfanylaminidines .................................................................................. 507
22.4.9.1.7.1 Method 1: Direct Sulfanylation of Amidines .................................................................................. 507
22.4.9.1.7.2 Methods 2: Other Procedures .................................................................................. 508
22.4.9.1.8 N-Sulfonylamidines .................................................................................. 509
22.4.9.1.8.1 Method 1: Cycloaddition Reactions of Arylsulfonyl Isocyanates, Sulfuryl Chloride Isocyanate, or N-Sulfinylsulfonamides .................................................................................. 509
22.4.9.1.8.2 Method 2: Cycloaddition of Arylsulfonyl Azides and Thioamides, Enamines, or Enaminones .................................................................................. 510
22.4.9.1.8.3 Method 3: Synthesis from Ortho Esters or (Dialkoxy)methyl dialkylamines .................................................................................. 511
22.4.9.1.8.4  Method 4: Synthesis from N-Thioacylated or N-Acylated Sulfonamides or Amides ................................................... 512
22.4.9.1.8.5  Method 5: Synthesis from Sulfonylimidoyl Chlorides and Amines or from Imidoyl Chlorides and Sulfonamides ..................... 513
22.4.9.1.8.6  Method 6: Synthesis from Imidates or N-Sulfonylated Imidates .............. 514
22.4.9.1.8.7  Method 7: Synthesis from Amidines and Sulfonyl Chlorides .................. 515
22.4.9.1.8.8  Methods 8: Other Procedures ........................................... 516
22.4.9.1.9  Method 1: General Procedures for the Synthesis of N"-Sulfanyl, N"-Sulfinyl, or N"-Selanyl Carboximidohydrazides ................. 517
22.4.9.1.9.1  Method 2: Synthesis of N"-Sulfonyl Carboximidohydrazides ................ 518
22.4.10  Carboximidohydrazides and Carbohydrazonamides ........................................ 520
22.4.10.1  Method 1: Addition of Hydrazine to Nitriles .................................... 520
22.4.10.2  Method 2: 1,2- or 1,3-Addition Reactions of Nitrilimines ............... 522
22.4.10.3  Method 3: Synthesis from Isocyanates or Isothiocyanates and Hydrazine Derivatives ........................................ 523
22.4.10.4  Method 4: Synthesis from 4-Phenyl-1,2,4-triazole-3,5-dione or Dialkyl Azodicarboxylate ........................................... 525
22.4.10.5  Method 5: Synthesis from Carboxylic Acid Thioamides and Amides .......... 526
22.4.10.6  Method 6: Synthesis from Imidoyl or Hydrazonoyl Chlorides by Nucleophilic Substitution ........................................ 527
22.4.10.7  Method 7: Synthesis from Thiimidates and Hydrazines or Hydrazones ...... 528
22.4.10.8  Method 8: Synthesis from Imidates and Various Hydrazine Derivatives .... 529
22.4.10.9  Methods 9: Other Procedures ............................................. 530
22.4.11  Carbohydrazonohydrazides .................................................................. 531
22.4.11.1  Method 1: Synthesis from Carboxylic, Thiocarboxylic, Dithiocarboxylic Acids, Carboxylates, or Ortho Esters ......................... 531
22.4.11.2  Method 2: Synthesis from Carboxylic Acid Hydrazides ...................... 533
22.4.11.3  Method 3: Synthesis from Hydrazonoyl Halides .................................. 533
22.4.11.4  Method 4: Synthesis from Imidates, N-Amino Imidates, or Their Salts and Hydrazine Derivatives ..................................... 535
22.4.11.5  Methods 5: Other Procedures ............................................. 536
22.4.12  Formazans ................................................................................... 536
22.4.12.1  Method 1: Synthesis from Aryldiazonium Salts by Azo Coupling with Aryl Hydrazones ...................................................... 536
22.4.12.2  Method 2: Synthesis from Aryldiazonium Salts by Azo Coupling with Active Methylene Compounds ............................... 538
22.4.12.3  Method 3: Synthesis from Hydrazonoyl Halides .................................. 539
22.4.12.4  Method 4: Synthesis from Various Heterocycles by Their Decomposition or Transformation ........................................... 540
22.4.12.5  Methods 5: Other Procedures ............................................. 541
22.4.13  Amidines Substituted with a Group Containing a Trivalent Phosphorus Atom .............................................................. 541
22.4.13.1  Method 1: Synthesis from Amidines and Chloro Derivatives of Phospholanes .............................................................. 541

22.5.2.1.19 Method 19: Isomerization of (1-Ethoxyvinyl)phosphines .......................................................... 586
22.5.2.1.20 Method 20: Lithium–Halogen Exchange of (E)-[Bromo(phenyl- sulfanyl)methylene](2,4,6-tri-tert-butylphenyl)phosphate Followed by Reaction with Methanol .................................................. 587
22.5.2.1.21 Method 21: Lithium–Halogen Exchange of (E)-[Bromo(phenyl- sulfanyl)methylene](2,4,6-tri-tert-butylphenyl)phosphate Followed by Oxidative Coupling .................................................. 588
22.5.2.1.22 Method 22: Reaction of an Alkylidyneephosphine with Benzeneselenenyl Fluoride .......................................................... 588

22.5.3 Product Subclass 3: 2-Aminophosphaalkenes [(2-Aminomethylene)phosphines] ................................................................. 588
22.5.3.1 Synthesis of Product Subclass 3 .......................................................... 589
22.5.3.1.1 Method 1: Reaction of an Arylphosphine with an Amide Dimethyl Acetal .......................................................... 589
22.5.3.1.2 Method 2: Reaction of Potassium Phosphide with an Ethoxyiminium Tetrafluoroborate .......................................................... 589
22.5.3.1.3 Method 3: Reaction of a Bis(trimethylsilyl)phosphine with Dimethylformamide .......................................................... 590
22.5.3.1.4 Method 4: Reaction of a Lithium (Trimethylsilyl)phosphide with Dimethylformamide ...................................................... 591
22.5.3.1.5 Method 5: Reaction of (Phenyl)[bis(trimethylsilyl)]phosphine with an Imidoyl Chloride .................................................. 591
22.5.3.1.6 Method 6: Reaction of a Chloroiminium Chloride with Tris(trimethylsilyl)phosphine .................................................. 592
22.5.3.1.7 Method 7: Reaction of a Chloroiminium Chloride with Lithium Phenyl(triphenylstannyl)phosphide ........................................ 592
22.5.3.1.8 Method 8: Synthesis from a Lithium Phosphide and a Nitrile Followed by Protonation .................................................. 593
22.5.3.1.9 Method 9: Synthesis from a Lithium Phosphide with Acetonitrile Followed by Silylation .................................................. 594
22.5.3.1.10 Method 10: Synthesis from (2,2-Dimethylpropyldyne)phosphine and a Thioketone S-Imide ............................................. 594
22.5.3.1.11 Method 11: Reaction of a 2-Chloro-1-ethylquinolinium Tetrafluoroborate with Tris(hydroxymethyl)phosphine ......................... 594
22.5.3.1.12 Method 12: Reaction of a 1-Alkyl-2-chloroquinolinium Salt with Tris(trimethylsilyl)phosphine .................................................. 595
22.5.3.1.13 Method 13: Reaction of 2-Chloro-1-methylquinolinium Tetrafluoroborate with Sodium Dicyanophosphide Followed by Sodium Diethyl Phosphate .................................................. 595
22.5.3.1.14 Method 14: Reaction of Phosphamethinecyanine Tetrafluoroborates with Sodium Dicyanophosphide ..................................... 596
22.5.3.1.15 Method 15: [2 + 2] Cycloaddition of Tri-tert-butylazete and a Phosphaalkyne ................................................................. 596
22.5.3.1.16 Method 16: Diels–Alder Reaction of [(Diisopropylamino)methylidyne]phosphine .......................................................... 597
22.5.3.1.17 Method 17: Synthesis from [2,2-Dimethyl-1-[phenyl(trimethylsilyl)amino]propyldene]phenylphosphine and Benzoyl Chloride ................................................................. 598
22.5.3.1.18 Method 18: Synthesis from (2,3-Di-tert-butylcycloprop-2-en-1-yldene)-(mesityl)phosphine and an Ynamine .................. 598

22.6 Product Class 6: 2-Functionalized Arsaalkenes and α-Functionalized Arsonium Ylides
R. A. Aitken

22.6 Product Class 6: 2-Functionalized Arsaalkenes and α-Functionalized Arsonium Ylides ................................................................. 601
22.6.1 Product Subclass 1: 2-Haloarsaalkenes ............................................ 601
22.6.1.1 Synthesis of Product Subclass 1 .................................................. 601
22.6.1.1.1 Method 1: Lithium–Halogen Exchange of a [(2,2-Dibromo)methylene]arsine Followed by Methanolysis ......................... 601
22.6.2 Product Subclass 2: 2-Alkoxyarsaalkenes ....................................... 602
22.6.2.1 Synthesis of Product Subclass 2 .................................................. 602
22.6.1.1 Method 1: Reaction of Bis(trimethylsilyl)arsines and Pivaloyl Chloride Followed by Thermal Rearrangement ........................................ 602
22.6.1.2 Method 2: Reaction of 2,4,6-Trimethylbenzoyl Chloride and Lithium Arsine–1,2-Dimethoxyethane Complex in a 1:2 Ratio ........... 603
22.6.1.3 Method 3: Reaction of 2,4,6-Trimethylbenzoyl Chloride and Lithium Arsine–Tetrahydrofuran Complex in a 2:3 Ratio ........... 604

22.6.2 Product Subclass 3: 2-Aminoarsaalkenes .......................................................... 605
22.6.2.1 Synthesis of Product Subclass 3 ............................................................... 605
22.6.2.1.1 Method 1: Reaction of Phenylbis(trimethylsilyl)arsine and an Imidoyl Chloride ......................................................... 605
22.6.2.1.2 Method 2: Reaction of Phenylbis(trimethylsilyl)arsine and Dimethylformamide ............................................. 605
22.6.2.1.3 Method 3: Reaction of a Lithium Trimethylsilylarsenide and Dimethylformamide ............................................. 606
22.6.2.1.4 Method 4: Reaction of (2,4-Di-tert-butyl-6-methylphenyl)arsine and an Amide Dimethyl Acetal ......................... 606
22.6.2.1.5 Method 5: Reaction of Tris(trimethylsilyl)arsine and a 1-Alkyl-2-chloroquinolinium Tetrafluoroborate .................... 607

22.6.3 Product Subclass 4: α-Sulfur- and Selenium-Substituted Arsonium Ylides ...................... 607
22.6.3.1 Synthesis of Product Subclass 4 ............................................................... 607
22.6.3.1.1 Method 1: Reaction of a Stabilized Arsonium Ylide and Benzenesulfonyl Chloride ......................................................... 607
22.6.3.1.2 Method 2: Reaction of Triphenyl(phenylsulfonylmethyl)arsonium Iodide with Triethylamine and Acetyl Chloride ................. 608
22.6.3.1.3 Method 3: Reaction of Triphenylarsine Oxide with Dimethyl(2-oxo-2-phenylethyl)sulfonium Tetraphenylborate and Acetic Anhydride ......................................................... 608
22.6.3.1.4 Method 4: Reaction of [2-(4-Bromophenyl)-2-oxoethylidene]triphenylarsorane and Phenylsulfine ......................... 609
22.6.3.1.5 Method 5: Reaction of [(Ethoxy carbonyl)methylene]triphenylarsorane and Phenylsulfonyl Chloride .................... 610
22.6.3.1.6 Method 6: Reaction of a Stabilized Arsonium Ylide with Benzeneselenenyl Iodide ......................................................... 610
22.6.3.1.6.1 Variation 1: With No Added Base ............................................. 610
22.6.3.1.6.2 Variation 2: In the Presence of Triethylamine ......................... 611
22.6.3.1.7 Method 7: Reaction of Triphenyl[(phenylselanyl)methyl]arsonium Iodide with Triethylamine and Acetyl Chloride ................. 611
22.6.3.1.8 Method 8: Reaction of (2-Oxo-2-phenylethyl)triphenylarsonium Tetrafluoroborate and Diphenyl Selenoxide in the Presence of Dicyclohexylcarbodiimide ................................ 612

22.6.3.2 Applications of Product Subclass 4 in Organic Synthesis .................................. 613
22.6.3.2.1 Method 1: Reaction of Triphenyl[(phenylsulfonyl)methyl]arsonium Iodide with Butyllithium ................................. 613
Product Subclass 5: α-Nitroarsonium Ylides

Method 1: Reaction of Dichloro(triphenyl)arsorane with (Nitromethyl)benzene and Triethylamine

Method 2: Reaction of Triphenylarsine Oxide with Nitromethane and Phosphorus Pentoxide

Method 3: Reaction of Triphenylarsine Oxide with Nitromethane and Acetic Anhydride

Product Class 7: Ortho Acid Derivatives

Product Subclass 1: Trihalomethyl Compounds

Method 1: Reaction of Trimethyl(trifluoromethyl)silane and Other Organosilicon Reagents

Variation 1: Fluoride-Induced Chemoselective Nucleophilic Trifluoromethylation and Perfluoroalkylation

Variation 2: Stereoselective Nucleophilic Trifluoromethylation with Trimethyl(trifluoromethyl) silane

Variation 3: Trifluoromethylation and Perfluoroalkylation by Copper(I)-Mediated Oxidative Addition

Method 2: Reaction of Trifluoromethane and Other Polyfluoroalkanes

Method 3: Reaction of Hemiaminals of Trifluoroacetaldehyde

Variation 1: Using the Silylated Morpholino Hemiaminal of Trifluoroacetaldehyde

Variation 2: Using Silylated and Non-Silylated Piperazino Hemiaminals of Trifluoroacetaldehyde

Method 4: Reaction of 2,2,2-Trifluoro-1-phenylethanone and Its Adduct

Method 5: Reaction of Trifluorohalomethanes and Perfluorohaloalkanes

Method 6: Reaction of Trifluoroacetic Acid and Trifluoromethanesulfonic Acid Derivatives

Method 7: Reaction of Phenyl Trifluoromethyl Sulfide, Sulfoxide, or Sulfone

Method 8: Reaction of Fluorinated Organometallic Reagents

Electrophilic Trifluoromethylation or Perfluoroalkylation

Method 1: Reaction of Aryl(perfluoroalkyl)iodonium Salts

Method 2: Reaction of Aryl(polyfluoroalkyl)iodonium Salts

Method 3: Reaction of 5-(Perfluoroalkyl)dibenzothiophenium, 5-(Perfluoroalkyl)dibenzoselenophenium, and 5-(Perfluoroalkyl)dibenzotellurophenium Salts

22.7.3.1.1.2 Method 2: Halogen Substitution Reactions of α,α-Difluoro-α-haloalkanes ........................................ 754
22.7.3.1.1.2.1 Variation 1: Substitution by Thiolates ........................................ 754
22.7.3.1.1.2.2 Variation 2: Substitution by Thiocyanates ........................................ 755
22.7.3.1.1.3 Method 3: Oxidative Desulfurization–Fluorination of Trithioortho Esters To Give α,α-Difluoro Sulfides ........................................ 756
22.7.3.1.1.4 Method 4: Oxidative Desulfurization–Fluorination of Dithioesters To Give α,α-Difluoro Sulfides ........................................ 757
22.7.3.1.1.5 Method 5: Halogenation of Dithioacetals ........................................ 758
22.7.3.1.1.5.1 Variation 1: Chlorination of Dithioacetals with N-Chlorosuccinimide ........................................ 759
22.7.3.1.1.5.2 Variation 2: Chlorination of Dithioacetals with Sulfuryl Chloride ........................................ 759
22.7.3.1.1.6 Method 6: Halogenation of Ketene Dithioketals ........................................ 760
22.7.3.1.2 Trithioortho Esters ........................................ 761
22.7.3.1.2.1 Method 1: Thionation of Dithioacetals with Disulfides 761
22.7.3.1.2.2 Method 2: Transorthoesterification of Ortho Esters with Thiols 762
22.7.3.1.2.3 Method 3: Sulfur–Metal Exchange of Thioorthocarbonates 762
22.7.3.1.2.4 Method 4: From Disubstituted Thriothiocarbonates by Nucleophilic Addition at the Sulfur Atom of the Thione Group 763
22.7.3.1.2.4.1 Variation 1: Addition of Organolithium Reagents to Thriothiocarbonates 763
22.7.3.1.2.4.2 Variation 2: Addition of Allylsilanes to Thriothiocarbonates 765
22.7.3.1.2.5 Method 5: From Disubstituted Thriothiocarbonates by Reaction with Thiocarbonyl Ylides 765
22.7.3.1.2.6 Method 6: From Tris(methylsulfanyl)carbenium Salts 766
22.7.3.1.2.7 Method 7: Thiolysis of Ketene Dithioacetals 768
22.7.3.1.2.8 Method 8: Addition of Tris(alkylsulfanyl)methanes and Tris(aryl- sulfanyl)methanes 769
22.7.3.1.2.8.1 Variation 1: Additions to Alkyl Halides 770
22.7.3.1.2.8.2 Variation 2: 1,2-Addition to Aldehydes and Ketones 771
22.7.3.1.2.8.3 Variation 3: 1,4-Addition to α,β-Unsaturated Carbonyl Compounds 771

22.7.4 Product Subclass 4: Triselenoortho Esters and Halogenated Derivatives

22.7.4.1 Synthesis of Product Subclass 4 776
22.7.4.1.1 Method 1: Dimerization of Selenocarbonyl Fluorides 776
22.7.4.1.2 Method 2: Halogen Exchange of 2,4-Difluoro-2,4-bis(perfluoroalkyl)-1,3-diselenetanes 778
22.7.4.1.3 Method 3: Alkylation of Aldehydes with Benzeneselenenyl Bromide 778
22.7.4.1.4 Method 4: Selenation of Diselenanes with Diselenides 779
22.7.4.1.5 Method 5: Halogen Substitution Reactions 780
22.7.4.1.5.1 Variation 1: From Bromoform and Carbon Tetrabromide 780
22.7.4.1.5.2 Variation 2: From Dichloromethyl Methyl Ether 781
22.7.4.1.6 Method 6: Transorthoesterification of Ortho Esters 782
22.7.4.1.6.1 Variation 1: Lewis Acid Catalyzed Transorthoesterification of Ortho Esters 782
22.7.4.1.6.2 Variation 2: Transorthoesterification of Ortho Esters with Tris(methylselenyl)borane 783
22.7.4.1.7 Method 7: Metalation of Selenoorthocarbonates 784
22.7.4.1.8 Method 8: Reduction of Tris(alkylselenyl)carbenium Salts 785
22.7.4.1.9 Method 9: Acid-Mediated Condensation of Benzeneselenol 785
22.7.4.1.10 Method 10: Addition of Tris(alkylselenyl)methanes and Tris(aryl- selenyl)methanes 786
Product Subclass 5: Tritelluroortho Esters and Halogenated Derivatives
H. Lebel and M. Grenon

Synthesis of Product Subclass 5

Method 1: Dimerization of Tellurocarbonyl Fluorides

Method 2: Halogen Exchange of 2,4-Difluoro-2,4-bis(perfluoroalkyl)-1,3-ditelluretanes

Method 3: Preparation of Tris(aryltellanyl)carbenium Ions

Product Subclass 6: Ortho Amides (Alkane-1,1,1-triamines)
W. Kantlehner

Synthesis of Product Subclass 6

Method 1: Substitution of Cyano Groups

Method 2: Substitution of Halogens

Variation 1: Substitution of Fluorine and Sulfur Groups in Disulfides

Variation 2: Other Substitutions

Method 3: Substitution of Amine Derivatives

Method 4: Substitution of Alkoxy Groups

Variation 1: Substitution of Alkoxy and Amino Groups

Variation 2: With Metal Hydrides

Variation 3: With Amidines

Variation 4: With Triethylsilane

Variation 5: With Bis(dialkylamino)acetonitriles

Method 5: Substitution of Alkylsulfanyl Groups

Method 6: Reactions of Guanidinium Salts

Method 7: Reaction of Pyrimidinium Salts with Amines

Method 8: Reaction of Tetrazolium Salts with Ammonia

Method 9: Reaction of Isocyanates

Variation 1: With Nucleophilic Carbenes

Variation 2: With Amides

Variation 3: With Amidines

Variation 4: With Triethylsilane

Variation 5: With Bis(dialkylamino)acetonitriles

Method 10: Reaction of Tetraaminoethenes with NH-Acidic Compounds

Method 11: Reaction of Azoalkenes with CH₂-Acidic Compounds

Method 12: Modification of Existing Ortho Amides

Variation 1: Transamination Reactions

Variation 2: N-Metalation, N-Acylation, and N-Sulfonylation

Variation 3: N-Alkylation

Variation 4: N-Dealkylation

Variation 5: Transformation of Carbonyl or Thiocarbonyl Groups into Methylene Groups

Variation 6: Sulfurization of Carbonyl Groups

Variation 7: Alteration of More Remote Functional Groups

Method 13: Cycloaddition Reactions

Methods 14: Other Methods
Product Subclass 7: Tris(diorganophosphino)methanes and Derivatives
W. Kantlehner

22.7.1 Synthesis of Product Subclass 7 .......................... 843

22.7.1.1 Method 1: Alkylation of Lithium Tris(dimethylphosphino)methanides ........................ 843

22.7.1.2 Method 2: Phosphorylation of Lithium Bis(diorganophosphino)methanides .................... 844

22.7.1.3 Method 3: Phosphorylation of [Diphenyl(thiophosphoryl)]methyllithium ......................... 846

22.7.1.4 Method 4: Synthesis of Phosphorylated Methanes by Addition of Oxygen, Sulfur, Selenium, and Azides ................................................. 846

22.7.1.5 Method 5: Synthesis of Phosphonium Iodides .......................................................... 848

23.2 Product Class 2: Silyketenes
D. M. George and R. L. Danheiser

23.2.1 Product Subclass 1: Silyl-Substituted Aldoketenes

23.2.1.1 Synthesis of Product Subclass 1

23.2.1.1 Method 1: Dehydrohalogenation of Acyl Halides

23.2.1.1 Method 2: Dehydration of Silylacetacids

23.2.1.1 Method 3: Thermolysis of 1-Alkoxy-2-silylacetylenes

23.2.1.1 Method 4: 1,3-Silyl Shift of (Trimethylsiloxy)acetylene

23.2.1.1 Method 5: Thermolysis of Silylacetic Anhydrides

23.2.1.2 Applications of Product Subclass 1 in Organic Synthesis

23.2.1.2 Method 1: [2 + 2] Cycloadditions Leading to β-Lactones

23.2.1.2 Method 2: [2 + 2] Cycloadditions Leading to β-Lactams

23.2.1.2 Method 3: [2 + 2] Cycloadditions Leading to Cyclobutanones

23.2.1.2 Method 4: Formation of Allenes via Wittig Reaction with Phosphorus Ylides

23.2.1.2 Method 5: Formation of Ketenimines via Reaction with Iminophosphoranes

23.2.1.2 Method 6: Formation of Cyclopropanones and Cyclobutanones via Reaction with Diazocompounds

23.2.1.2 Method 7: Formation of α-Silyl Ketones

23.2.1.2 Method 8: Formation of 2H-1-Benzopyran-2-ones from Phenols

23.2.1.2 Method 9: (Trimethylsilyl)acetylation of Alcohols and Amines

23.2.2 Product Subclass 2: (Silyl)(trialkylmetal)ketenes

23.2.2.1 Synthesis of Product Subclass 2

23.2.2.1 Method 1: Elimination from (Silyl)(trialkylmetal)acetates

23.2.2.1 Method 2: Trapping of Lithium 2-Lithioacetylen-1-olate Generated from 2-Phenyl-2,3-dihydrofurans or 3-Phenylisoxazoles

23.2.2.1 Method 3: Carbonylation and Trapping of Lithiated Diazotrimethylsilylmethane

23.2.2.1 Method 4: Lithiation of (Trialkylsilyl)ketenes and Trapping with Chlorosilanes

23.2.2.1 Method 5: Synthesis of Bis(silyl)ketenes from Other Bis(silyl)ketenes via Potassium 2-Silylacetylen-1-olates

23.2.3 Product Subclass 3: (Aryl)- and (Alkyl)silylketenes

23.2.3.1 Synthesis of Product Subclass 3

23.2.3.1 Method 1: 1,3-Silyl Shift of 1-(Siloxy)alk-1ynes

23.2.3.1 Method 2: Wolff Rearrangement of α-Diazo-α-silyl Ketones

23.2.3.1 Variation 1: By Thermolysis

23.2.3.1 Variation 2: By Photolysis

23.2.3.1 Variation 3: By Metal Catalysis

23.2.3.2 Applications of Product Subclass 3 in Organic Synthesis

23.2.3.2 Method 1: [2 + 2] Cycloadditions Leading to β-Lactones
23.2.3.2.2 Method 2: [4 + 1] Annulation Leading to 1,3-Dihydro-2H-inden-2-ones

23.2.4 Product Subclass 4: Silyl(vinyl)ketenes

23.2.4.1 Synthesis of Product Subclass 4

23.2.4.1.1 Method 1: Dehydrohalogenation of α-Silyl-α,β-unsaturated Acid Chlorides

23.2.4.1.2 Method 2: Wolff Rearrangement of α-Diazo-α-silyl α’,β'-Unsaturated Ketones

23.2.4.1.3 Method 3: Electrocyclic Ring Opening of 2-Silylcyclobut-2-enones

23.2.4.1.4 Method 4: Reaction of Bis(silyl)acetylenes with Chromium–Carbene Complexes

23.2.4.2 Applications of Product Subclass 4 in Organic Synthesis

23.2.4.2.1 Method 1: Formation of Cyclohexenones and Phenols by [4 + 2] Cycloadditions

23.2.4.2.2 Method 2: Formation of 5,6-Dihydro-2H-pyran-2-ones and 5,6-Dihydropyridin-2(1H)-ones by [4 + 2] Cycloadditions

23.2.4.2.3 Method 3: Formation of Cyclopent-2-en-1-ones by [4 + 1] Annulation

23.2.5 Product Subclass 5: Miscellaneous Silylketenes

23.2.5.1 Synthesis of Product Subclass 5

23.2.5.1.1 Method 1: Synthesis of Bromo(trialkylsilyl)ketenes by Dehydrohalogenation

23.2.5.1.2 Method 2: Synthesis of Alkoxy(triarylsilyl)ketenes from Pentacarbonyl Complexes

23.2.5.1.3 Methods 3: Miscellaneous Reactions

23.3 Product Class 3: Halogen-Substituted Ketenes

23.3.1 Product Subclass 1: Fluoro- and Difluoroketenes

23.3.1.1 Synthesis of Product Subclass 1

23.3.1.1.1 Method 1: Fluoroketene by Pyrolysis of Fluoroacetic Anhydride

23.3.1.1.2 Method 2: Fluoroketene by Dehydrochlorination of Fluoroacetyl Chloride

23.3.1.1.3 Method 3: Difluoroketene from 1,1,2-Trifluoro-2-(trifluoromethoxy)ethene

23.3.1.1.4 Method 4: Difluoroketene by Photolysis of Perfluorocyclobutanone

23.3.1.1.5 Method 5: Difluoroketene by Dehalogenation of Bromo(difluoro)acetyl Chloride with Zinc

23.3.1.1.6 Method 6: Acyl(fluro)ketenes by Thermolysis of α-Fluorodioxinones

23.3.1.1.7 Method 7: Fluoro(pentafluoroethyl)ketene by Fluoride-Induced Dephosphorylation

23.3.1.1.8 Method 8: Difluoroketene by Photoisomerization/Oxygenation of Difluoroacetylene

23.3.1.1.9 Method 9: Fluoro(1,2,3,4,4-pentafluorobuta-1,3-dienyl)ketene from Perfluorocyclohexa-2,4-dienone

23.3.1.2 Applications of Product Subclass 1 in Organic Synthesis
23.3.1.2.1 Method 1: Cyclobutanones by \([2 + 2]\) Cycloaddition of Fluoroketenes with Alkenes .............................................. 111

23.3.1.2.2 Method 2: \(\beta\)-Lactams by \([2 + 2]\) Cycloaddition of Fluoroketenes with Imines .......................... 113

23.3.2 Product Class 2: Chloro- and Dichloroketenes .......................... 113

23.3.2.1 Synthesis of Product Subclass 2 ........................................ 114

23.3.2.1.1 Method 1: Alkyl(chloro)ketenes by Dehydration of Carboxylic Acids .......................... 115

23.3.2.1.2 Method 2: Chloroketenes by Dehydrochlorination of Chloroalkanoyl Halides .......................... 116

23.3.2.1.2.1 Variation 1: Chloroketene by Pyrolytic Dehydrochlorination of Chloroacetyl Chloride .......................... 118

23.3.2.1.2.2 Variation 2: Substituted Chloroketenes by Dehydrochlorination of 2-Chloroacetyl Chlorides ........................................ 119

23.3.2.1.3 Method 3: Dichloroketene by Photolysis of a Cyclic Carbonate .......................... 119

23.3.2.1.4 Method 4: Dichloroketene by Dehalogenation of Trichloroacetyl Halides with Zinc .......................... 119

23.3.2.1.4.1 Variation 1: Chloroketenes by Dechlorination of 2-Chloroacetyl Chlorides with Diphenyl(trimethylsilyl)phosphine .......................... 124

23.3.2.1.5 Method 5: Chloro(cyano)ketene by Thermolysis of 4-Azido-3-chloro-5-methoxyfuran-2(5H)-one .......................... 125

23.3.2.2 Applications of Product Subclass 2 in Organic Synthesis ........................................ 126

23.3.2.2.1 Method 1: Cyclobutanones by \([2 + 2]\) Cycloadditions of Chloroketenes with Alkenes and Dienes .......................... 126

23.3.2.2.2 Method 2: Methylene cyclobutanones by \([2 + 2]\) Cycloaddition of Chloroketenes with Alkenes .......................... 137

23.3.2.2.3 Method 3: Cyclobutenones by \([2 + 2]\) Cycloaddition of Chloroketenes with Alkynes .......................... 138

23.3.2.2.4 Method 4: \(\beta\)-Lactams by \([2 + 2]\) Cycloaddition of Chloroketenes with Imines .......................... 140

23.3.2.2.4.1 Variation 1: \(\beta\) - and \(\delta\)-Lactams by \([2 + 2]\)- and \([4 + 2]\)-Cycloaddition Reactions of Chloroketenes with Vinylic Imines .......................... 141

23.3.2.2.4.2 Variation 2: \(\gamma\)-Lactams and \(\gamma\)-Lactones by \([3 + 2]\) Cycloaddition of Dichloroketene with N-Vinylsulfinimides .......................... 143

23.3.2.2.5 Method 5: \(\beta\)-Lactones by \([2 + 2]\) Cycloaddition of Chloroketenes with Carbonyl Compounds .......................... 146

23.3.2.2.6 Method 6: \(\gamma\)-Lactones from Dichloroketene with Vinyl Sulfoxides .......................... 148

23.3.2.2.6.1 Variation 1: \(\gamma\)-Lactones from Dichloroketene with Chiral Vinyl Sulfoxides .......................... 149

23.3.2.2.7 Method 7: Thioesters by Ketene-Claisen Reaction of Dichloroketene with Allyl Sulfoxides .......................... 150

23.3.2.2.8 Method 8: A Macrocyclic Lactone by the Ketene-Claisen Reaction of Dichloroketene with a Vinyltetrahydropyran .......................... 151

23.3.2.2.9 Method 9: \(\gamma\)-Lactones and Lactams by the Reactions of Dichloroketene with Three-Membered Heterocycles .......................... 152

23.3.2.2.9.1 Variation 1: A Lactam by the Reaction of Dichloroketene with a Vinylaziridine .......................... 153
23.3.2.9.2 Variation 2: Ketene Acetals from Cycloaddition of Chloro(cyano)ketene with 2-Phenylloxirane ........................................ 154

23.3.3 Product Subclass 3: Bromo- and Iodoketenes ............................................................... 154
23.3.3.1 Synthesis of Product Subclass 3 .................................................................................. 154
23.3.3.1.1 Method 1: Bromo- and Iodoketenes by Dehydrochlorination of Haloacetyl Chlorides .................................................. 154
23.3.3.1.1.1 Variation 1: Bromoketene by Dehydrochlorination of Bromoacetyl Chloride with a Strong Stoichiometric Base and a Shuttle Base 156
23.3.3.1.2 Method 2: Bromoketene by Pyrolysis of 2-Bromocyclobutanone ..................... 157
23.3.3.1.3 Method 3: Bromoketenes by Dehalogenation of Haloacyl Halides .................. 157
23.3.3.1.3.1 Variation 1: Dibromoketene by Triphenylphosphine-Induced Elimination from Trimethylsilyl Tribromoacetate ...................... 158
23.3.3.1.4 Method 4: An Aryl(bromo)ketene from a 3-Aryloxirane-2,2-dicarbonitrile 158

23.3.3.2 Applications of Product Subclass 3 in Organic Synthesis ................................. 159
23.3.3.2.1 Method 1: Cyclobutanones by [2 + 2] Cycloaddition of Bromoketenes with Alkenes or Dienes ........................................... 159
23.3.3.2.1.1 Variation 1: Cyclohex-2-en-1-ones by [4 + 2] Cycloaddition of Bromo(vinyl)ketenes with Enamines ........................ 160
23.3.3.2.2 Method 2: β- and δ-Lactams by Cycloaddition of Bromoketenes with Imines .................................................................. 161
23.3.3.2.3 Method 3: [3 + 2] Cycloaddition of Aryl(bromo)ketenes with Pyridiniumolate Betaines ........................................................ 161
23.3.3.2.4 Method 4: Chiral Aryl(halo)acetates by Stereoselective Addition of Chiral Alcohols to Bromo- and Iodoketenes ......................... 162
23.3.3.2.5 Method 5: A Chiral Bromo(chloro)acetate by Stereoselective Chlorination of Bromoketene ........................................ 163
23.3.3.2.6 Method 6: Mixed Dimerization of Bromo[(tert-butyl)ketenes with tert-Butylketene ................................................................ 163

23.4 Product Class 4: Oxygen-Substituted Ketenes

C. Palomo, M. Oiarbide, and J. M. Aizpurua

23.4.1 Synthesis of Product Class 4 .......................................................................................... 169
23.4.1.1 Method 1: Elimination Reactions of Carboxylic Acids or Their Derivatives .................. 170
23.4.1.1.1 Variation 1: Dehydration of Carboxylic Acids by Activating Reagents .......... 170
23.4.1.1.2 Variation 2: Dehydrohalogenation of Carboxylic Acid Chlorides with Tertiary Amines in Solution ............................................. 172
23.4.1.3 Variation 3: Dehydrohalogenation of Carboxylic Acid Chlorides with Solid-Supported Bases .................................................................. 174
23.4.1.2 Method 2: Photolysis of Metal–Carbene Complexes ................................................. 177
23.4.1.3 Method 3: Dirhodium Tetraacetate Catalyzed Decomposition of α-Diazo Anhydrides ........................................................................... 179
23.4.1.4 Methods 4: Miscellaneous Methods ...................................................................... 181
23.4.2 Applications of Product Class 4 in Organic Synthesis ............................................. 181
23.4.2.1 Method 1: \([2 + 2]\)-Cycloaddition Reactions Leading to Cyclobutanones, \(\beta\)-Lactones, and \(\beta\)-Lactams ........................................ 181

23.4.2.1.1 Variation 1: With Alkenes, Enol Ethers, or Enecarbamates ...................................... 181

23.4.2.1.2 Variation 2: With Aldehydes or Ketones ............................................................. 187

23.4.2.1.3 Variation 3: With Imines ...................................................................................... 189

23.4.2.2 Method 2: Lewis Acid Catalyzed \([3,3]\)-Sigmatropic Bellus–Claisen Rearrangements ...................................................... 194

23.5 Product Class 5: Sulfur- and Selenium-Substituted Ketenes
C. Palomo, J. M. Aizpurua, I. Ganboa, and E. Gómez-Bengoa

23.5 Product Class 5: Sulfur- and Selenium-Substituted Ketenes ........................................ 199

23.5.1 Product Subclass 1: Sulfur-Substituted Ketenes ................................................... 199

23.5.1.1 Synthesis of Product Subclass 1 .................................................................................. 200

23.5.1.1.1 Method 1: Elimination Reactions of Carboxylic Acids and Their Derivatives .................. 200

23.5.1.1.1.1 Variation 1: Dehydration of Carboxylic Acids .................................................... 200

23.5.1.1.1.2 Variation 2: Dehydrohalogenation of Acyl Halides ................................................. 201

23.5.1.1.2 Method 2: Wolff Rearrangement of Diazocompounds ........................................ 203

23.5.1.1.2.1 Variation 1: Photochemical Wolff Rearrangement .................................................. 203

23.5.1.1.2.2 Variation 2: Thermal Wolff Rearrangement ........................................................... 204

23.5.1.1.2.3 Variation 3: Metal-Catalyzed Wolff Rearrangement ............................................. 205

23.5.1.1.3 Method 3: Photolysis of Metal–Carbene Complexes ...................................... 205

23.5.1.1.4 Method 4: Fragmentation of Cyclobutene-1,2-diones ........................................... 206

23.5.1.1.5 Methods 5: Miscellaneous Preparations ................................................................. 207

23.5.1.2 Applications of Product Subclass 1 in Organic Synthesis ........................................ 208

23.5.1.2.1 Method 1: \([2 + 2]\)-Cycloaddition Reactions ................................................................. 208

23.5.1.2.1.1 Variation 1: Reaction with Alkenes and Alkynes Leading to Cyclobutanones and Cyclobutenones .............................................................. 208

23.5.1.2.1.2 Variation 2: Reaction with Imines Leading to \(\beta\)-Lactams ........................................ 212

23.5.1.2.2 Method 2: Formation of Allenes by Wittig Alkenation ............................................. 214

23.5.2 Product Subclass 2: Selenium-Substituted Ketenes .................................................. 215

23.5.2.1 Synthesis of Product Subclass 2 ................................................................................. 215

23.5.2.1.1 Method 1: Dehydrohalogenation of Acyl Chlorides .................................................. 215

23.5.2.1.2 Method 2: Reactions of Silver Ketenide ................................................................. 217

23.5.2.2 Applications of Product Subclass 2 in Organic Synthesis ......................................... 217

23.5.2.2.1 Method 1: \([2 + 2]\)-Cycloaddition Reactions Leading to \(\beta\)-Lactams ..................... 217

23.6 Product Class 6: Nitrogen- and Phosphorus-Substituted Ketenes
C. Palomo and J. M. Aizpurua

23.6 Product Class 6: Nitrogen- and Phosphorus-Substituted Ketenes ..................................... 221

23.6.1 Product Subclass 1: Nitrogen-Substituted Ketenes ................................................... 221

23.6.1.1 Synthesis of Product Subclass 1 .................................................................................. 222
Method 1: Elimination Reactions of α-Amino Acids or Their Derivatives
Method 2: Photolysis of Metal–Carbene Complexes
Applications of Product Subclass 1 in Organic Synthesis
Method 1: Addition of Nitrogen- or Oxygen-Nucleophiles
Method 2: Cycloaddition Reactions with Alkenes Leading to Cyclobutanones
Method 3: Cycloaddition Reactions with Imines or Hydrazones Leading to β-Lactams
Method 4: Lewis Acid Catalyzed Bellus–Claisen Rearrangement
Product Subclass 2: Phosphorus-Substituted Ketenes
Synthesis of Product Subclass 2
Method 1: Elimination Reactions of α-Phosphorylcarboxylic Acid Derivatives
Method 2: Wolff Rearrangement of α-Diazo-β-oxophosphonates
Method 3: Dehydroalkoxylation of α-Triarylphosphoranylidene Esters
Method 4: Thermolysis of Phosphinoethynyl Ethers
Product Class 7: Alkylideneketenes
Product Subclass 1: Substituted Methyleneketenes
Synthesis of Product Subclass 1
Method 1: Elimination from Carboxylic Acid Derivatives
Method 2: Cycloreversion Reactions
Method 3: Thermolysis of Alkylidene Derivatives of Meldrum’s Acid
Method 4: Dehalogenation of 2-Bromoacryloyl Chlorides
Method 5: Alkenation of Carbonyl Compounds with Phosphorylideneketenes
Applications of Product Subclass 1 in Organic Synthesis
Method 1: [2 + 2] Cycloadditions Leading to Cyclobutane-1,3-diones or α-Alkylidene-Substituted β-Lactones
Method 2: Generation of Vinylidenes by Thermolysis or Photolysis
Method 3: Rearrangements Triggering Cyclization Reactions
Product Subclass 2: Carbon Suboxide
Synthesis of Product Subclass 2
Method 1: Elimination from Malonic Acid Derivatives
Method 2: Thermolysis of O,O-Diacetyltartaric Anhydride
Method 3: Dehalogenation of Dibromomalonyl Chloride
Applications of Product Subclass 2 in Organic Synthesis
Method 1: Reaction with Nucleophiles Leading to Malonic Acid Derivatives
Method 2: Generation of Oxovinylidene by Photolysis
### Product Class 8: Cyanoketenes

23.9.5.2.1  Method 1: Cycloaddition Reactions ...................................... 300
23.9.5.2.2  Method 2: Addition of Nucleophiles .................................... 301
23.9.6  Product Subclass 6: MonoaroylketenEs ........................................ 302
23.9.6.1  Synthesis of Product Subclass 6 ............................................... 302
23.9.6.1.1  Method 1: Thermolysis Reactions ...................................... 302
23.9.6.1.1.1  Variation 1: Of β-Oxo Esters ........................................... 302
23.9.6.1.1.2  Variation 2: Of 4H-1,3-Dioxin-4-ones and 1,3-Dioxane-4,6-diones 302
23.9.6.1.1.3  Variation 3: Of Furan-2,3-diones .................................... 303
23.9.6.1.1.4  Variation 4: Of 2-Diaz0-1,3-diketones ................................. 305
23.9.6.1.2  Method 2: Photolysis Reactions .......................................... 310
23.9.6.1.2.1  Variation 1: Of 5-Phenylfuran-2,3-dione ............................ 310
23.9.6.1.2.2  Variation 2: Of 2-Diazo-1,3-diketones ................................ 310
23.9.6.1.2.3  Variation 3: Of a Mesoionic Compound ............................... 311
23.9.7  Product Subclass 7: DiaroylketenEs ............................................ 311
23.9.7.1  Synthesis of Product Subclass 7 ............................................... 311
23.9.7.1.1  Method 1: Flash-Vacuum Pyrolysis of 4-Benzoyl-5-phenylfuran-2,3-dione 311
23.9.7.1.2  Method 2: Thermolysis of 4-Benzoyl-5-phenylfuran-2,3-dione ....... 312
23.9.8  Product Subclass 8: CarboxyketenEs ........................................... 314
23.9.8.1  Synthesis of Product Subclass 8 ............................................... 314
23.9.8.1.1 Method 1: Flash-Vacuum Pyrolysis of 5-Alkylidene-2,2-dimethyl-1,3-dioxane-4,6-diones ........................................ 314

23.9.9 Product Subclass 9: (Alkoxycarbonyl)ketenes ........................................ 315

23.9.9.1 Synthesis of Product Subclass 9 ........................................ 315

23.9.9.1.1 Method 1: Dehydrochlorination of Acid Chlorides ........................................ 315

23.9.9.1.2 Method 2: Thermolysis Reactions ........................................ 316

23.9.9.1.2.1 Variation 1: Of Acid Derivatives ........................................ 316

23.9.9.1.2.2 Variation 2: Of 6-Methoxy-4H-1,3-dioxin-4-ones ........................................ 317

23.9.9.1.2.3 Variation 3: Of a Pyrrolo[1,2-a]quinoxalinetrione ........................................ 317

23.9.9.1.2.4 Variation 4: Of Dimethyl Diazomalonate ........................................ 317

23.9.9.1.3 Method 3: Photolysis of 2-Diazo-1,3-dicarbonyl Compounds ................. 318

23.9.9.2 Applications of Product Subclass 9 in Organic Synthesis ................. 318

23.9.9.2.1 Method 1: Cycloaddition Reactions ........................................ 318

23.9.9.2.2 Method 2: Addition of Nucleophiles ........................................ 319

23.9.10 Product Subclass 10: Acyl(alkoxycarbonyl)ketenes ......................... 319

23.9.10.1 Synthesis of Product Subclass 10 ........................................ 319

23.9.10.1.1 Method 1: Flash-Vacuum Pyrolysis of Methyl 2-tert-Butyl-4,5-dioxo-4,5-dihydrofuran-3-carboxylate ........................................ 319

23.9.10.1.2 Method 2: Thermolysis Reactions ........................................ 320

23.9.10.1.2.1 Variation 1: Of 4H-1,3-Dioxin-4-ones ........................................ 320

23.9.10.1.2.2 Variation 2: Of Ethyl 4,5-Dioxo-2-phenyl-4,5-dihydrofuran-3-carboxylate ........................................ 321

23.9.10.2 Applications of Product Subclass 10 in Organic Synthesis ................. 322

23.9.10.2.1 Method 1: Cycloaddition Reactions ........................................ 322

23.9.10.2.2 Method 2: Addition of Amines ........................................ 323

23.9.11 Product Subclass 11: Bis(alkoxycarbonyl)ketenes ........................................ 324

23.9.11.1 Synthesis of Product Subclass 11 ........................................ 324

23.9.11.1.1 Method 1: Thermolysis of 2-Diazo-3-oxosuccinates ........................................ 324

23.9.11.1.2 Method 2: Photolysis of 2-Diazo-1,3-dicarbonyl Compounds ........................................ 324

23.9.11.1.3 Method 3: Reaction of Tetraethoxyallene with Phosgene ........................................ 325

23.9.11.2 Applications of Product Subclass 11 in Organic Synthesis ................. 325

23.9.11.2.1 Method 1: Preparation of Allenetetra carboxylates ........................................ 325

23.9.11.2.2 Method 2: Cycloaddition Reactions ........................................ 326

23.9.11.2.3 Method 3: Ring Transformations of Five-Membered Heterocycles ........................................ 326

23.9.12 Product Subclass 12: (Chlorocarbonyl)ketenes ........................................ 327

23.9.12.1 Synthesis of Product Subclass 12 ........................................ 327

23.9.12.1.1 Method 1: Dehydrochlorination of Malonyl Chlorides ........................................ 327

23.9.12.2 Applications of Product Subclass 12 in Organic Synthesis ................. 329

23.9.12.2.1 Method 1: Cycloaddition Reactions ........................................ 329

23.9.12.2.2 Method 2: Condensation Reactions ........................................ 330

23.9.13 Product Subclass 13: Fluorinated Acylketenes ........................................ 333

23.9.13.1 Synthesis of Product Subclass 13 ........................................ 333
23.9.13.1.1 Method 1: Thermolysis Reactions .......................... 333
23.9.13.1.1 Variation 1: Of (Trifluoromethyl)malonic Acid Derivatives .......................... 333
23.9.13.1.2 Variation 2: Of Fluorinated 4H-1,3-Dioxin-4-ones .......................... 334
23.9.13.1.2 Method 2: Transformation of Fluorinated Alkenes and Alkynes .......................... 335
23.9.13.1.2 Variation 1: By Reaction with Sulfur Trioxide .......................... 335
23.9.13.1.2 Variation 2: With Lewis Acid Catalysis .......................... 336
23.9.13.1.3 Method 3: Photolysis of Methyl 2-Diazo-4,4,4-trifluoroacetooacetate .......................... 337
23.9.13.2 Applications of Product Subclass 13 in Organic Synthesis .......................... 337
23.9.13.2.1 Method 1: Cycloaddition Reactions .......................... 337
23.9.13.2.2 Method 2: Electrophilic Substitution Reactions .......................... 338
23.9.13.2.3 Method 3: Addition of Nucleophiles .......................... 339
23.9.14 Product Subclass 14: Acyl(phosphoryl)ketenes and Acyl(trialkylmetal)ketenes .......................... 341
23.9.14.1 Synthesis of Product Subclass 14 .......................... 341
23.9.14.1.2 Method 2: Photolysis or Thermolysis of Methyl 2-Diazo-3-(diisopropoxyphosphoryl)-3-oxopropanoate .......................... 341
23.9.14.1.4 Method 4: Transformation of Functionalized Ethoxyacetylene .......................... 342

23.10 Product Class 10: Imidoylketenes

G. Kollenz

23.10 Product Class 10: Imidoylketenes .......................... 351
23.10.1 Product Subclass 1: N-Unsubstituted and N-Alkyl-Substituted Imidoylketenes .......................... 351
23.10.1.1 Synthesis of Product Subclass 1 .......................... 351
23.10.1.1.1 Method 1: Pyrolysis Reactions .......................... 352
23.10.1.1.1 Variation 1: Flash-Vacuum Pyrolysis of Meldrum's Acid Derivatives .......................... 352
23.10.1.1.2 Variation 2: Flash-Vacuum Pyrolysis of Pyrrole-2,3-diones .......................... 353
23.10.1.1.3 Variation 3: Thermolysis of 3-Aminoacrylates .......................... 353
23.10.1.1.2 Method 2: Reaction of 1-Aminopyridinium Iodide with 2,3-Diphenylcycloprop-2-en-1-one .......................... 354
23.10.1.1.3 Method 3: Extrusion of Sulfur from Isothiazol-5(2H)-ones .......................... 355
23.10.2 Product Subclass 2: (N-Acylimidoyl)ketenes .......................... 356
23.10.2.1 Synthesis of Product Subclass 2 .......................... 356
23.10.2.1.1 Method 1: Pyrolysis of 3-(Acamino)acrylates .......................... 356
23.10.2.1.2 Method 2: Reaction of Pyridinium Ylides with 2,3-Diphenylcycloprop-2-en-1-one .......................... 357
23.10.2.1.3 Method 3: Reaction of Di-tert-butoxyacetylene with Benzoyl Isocyanate .......................... 357
23.10.3 Product Subclass 3: (N-Arylimidoyl)ketenes .......................... 358
23.10.3.1 Synthesis of Product Subclass 3 .......................... 358
23.10.3.1.1 Method 1: Thermolysis Reactions .......................... 359

Product Class 12: Aryl- and Hetarylketenes
T. T. Tidwell

Product Subclass 1: Monoarylketenes

Method 1: Monoarylketenes by Dehydration of Arylacetic Acids
Method 2: Monoarylketenes from Arylacetic Anhydrides
Variation 1: Monoarylketenes by Decarboxylation of Arylmalonic Acids
Method 3: Monoarylketenes from Arylacetic Esters
Method 4: Monoarylketenes by Dehydrohalogenation of Arylacetyl Chlorides
Variation 1: Monoarylketenes by Dehydrochlorination Using a Shuttle Procedure with a Kinetic Base and a Stoichiometric Base
Method 5: Monoarylketenes by Dehalogenation of Arylhaloacetyl Halides
Method 6: Monoarylketenes by Wolff Rearrangement of α-Diazoketones
Variation 1: Monoarylketenes by Metal-Catalyzed Wolff Rearrangement
Variation 2: Monoarylketenes by Microwave and Ultrasound-Enhanced Wolff Rearrangement
Variation 3: Monoarylketenes by Photochemical Wolff Rearrangement
Variation 4: Phenylketene by Wolff-Type Rearrangement of a Sulfur Ylide
Method 7: Monoarylketenes from Ynols and Ynolates
Method 8: Monoarylketenes by Oxidation of Arylacetylenes
Variation 1: Monoarylketenes by Oxidation of Lithium Arylacetylides
Variation 2: Monoarylketenes by Ruthenium-Catalyzed Alkyne Oxygenation
Method 9: Monoarylketenes from Metal–Carbene Complexes

Applications of Product Subclass 1 in Organic Synthesis

Method 1: Esters and Amides by Addition of Nucleophiles to Monoarylketenes
Method 2: Ketones and Vinyl Ethers by Addition of Carbon Electrophiles
Method 3: N-Aroyloxyamines by Aminoxyl Radical Addition to Monoarylketenes
Method 4: Cyclobutanones by [2 + 2] Cycloaddition with Alkenes and Dienes
Method 5: Cyclobutenones by [2 + 2] Cycloaddition of Monoarylketenes with Alkynes
Method 6: β-Lactams by [2 + 2] Cycloaddition of Monoarylketenes with Imines
Variation 1: Pyrimidinones by [4 + 2] Cycloaddition of Monoarylketenes with 1,3-Diazabuta-1,3-dienes
Method 7: 2-Arylaceto Derivatives by [4 + 2] Cycloaddition of o-Chloranil with Ketene Enolates
Method 8: Carbene Formation by Decarbonylation of Monoarylketenes

Product Subclass 2: Alkyl(aryl)- and Aryl(vinyl)ketenes

Synthesis of Product Subclass 2
23.12.2.1 Method 1: Alkyl(aryl)ketenes by Elimination from 2-Arylalkanoate Esters 421
23.12.2.2 Method 2: Alkyl(aryl)ketenes by Dehydrohalogenation of 2-Arylalkanoyl Chlorides ........................................ 423
23.12.2.3 Method 3: Alkyl(aryl)ketenes by Dehalogenation of 2-Aryl-2-haloalkanoyl Halides ........................................ 423
23.12.2.4 Method 4: Alkyl(aryl)ketenes by Wolff Rearrangement of \(\alpha\)-Diazoketones .................................................. 424
23.12.2.5 Method 5: Alkyl(aryl)ketenes by Decarboxylation of Malonic Acids 425
23.12.2.6 Method 6: Aryl(vinyl)ketenes by Cyclobutenone Ring Opening ................................................................. 426
23.12.2.7 Method 7: Aryl(vinyl)ketenes from Metal–Carbene Complexes ................................................................. 427
23.12.2.8 Method 8: Alkyl(aryl)ketenes by \([4 + 2]\) Cycloadditions of Cyclic Diazines 427
23.12.2.9 Applications of Product Subclass 2 in Organic Synthesis ................................................................. 428
23.12.2.10 Method 1: 2-Arylalkanoic Acid Derivatives by Stereoselective Esterification of Alkyl(aryl)ketenes .................. 428
23.12.2.11 Variation 1: Chiral 2-Arylalkanoate Esters by Catalytic Stereoselective Addition of Methanol to Alkyl(aryl)ketenes ...................................................... 431
23.12.2.12 Variation 2: Chiral 2-Arylalkanoate Enol Esters by Catalytic Stereoselective Esterification of Alkyl(aryl)ketenes with Aldehydes ........................................... 433
23.12.2.13 Variation 3: Chiral 2-Arylalkanamides by Stereoselective Amination of Alkyl(aryl)ketenes ............................ 434
23.12.2.14 Method 2: Ketones and Vinyl Esters and Ethers by Addition of Carbon Nucleophiles to Ethyl(phenyl)ketene .......................................................................................... 436
23.12.2.15 Method 3: Divinyl Ketone Formation by Iridium–Alkyne Complex Addition to Methyl(phenyl)ketene with Double C–H Activation ................................................................. 438
23.12.2.16 Method 4: Lactones and Cycloalkanones by Electrophilic Addition to Alkyl(aryl)ketenes ........................................ 438
23.12.2.17 Method 5: Allenyl Ketones and Esters by Wittig-Type Reactions of Alkyl(aryl)ketenes ......................................... 439
23.12.2.18 Method 6: Cyclobutanones by \([2 + 2]\) Cycloaddition of Methyl(phenyl)ketene with Alkenes and Dienes ..................... 440
23.12.2.19 Variation 1: Cyclobutanones by Intramolecular \([2 + 2]\) Cycloaddition of Aryl(pent-4-enyl)ketenes .............................. 441
23.12.2.20 Method 7: Naphthol Formation by Intramolecular Cyclization of an Alkyl(aryl)ketene with an Alkynyl Group .......... 441
23.12.2.21 Method 8: \(\beta\)-Lactone Formation by Intramolecular Cycloaddition of an Alkyl(aryl)ketene with a Carbonyl Group ..................... 442
23.12.2.22 Method 9: Succinic Anhydrides by Oxidation of Alkyl(aryl)ketenes ................................................................. 442
23.12.2.23 Method 10: Aminoxyl Radical Substituted Polymers from Alkyl(aryl)ketenes .................................................. 442

23.12 Product Subclass 3: Diarylketenes .................................................................................................................. 443
23.12.3.1 Synthesis of Product Subclass 3 .................................................................................................................. 444
23.12.3.1.1 Method 1: Diarylketenes by Dehydration of Diarylacetic Acids ................................................................. 444
23.12.3.1.2 Method 2: Diarylketenes by Dehydrochlorination of Diarylacetyl Chlorides ......................................................... 445
23.12.3.1.3 Method 3: Diarylketenes by Dehalogenation of Diarylhaloacetyl Halides ................................................................. 446
### 23.12.3.1.4 Method 4: Diaryketenes by Pyrolysis of Diarylketene Acetals  

Diarylketenes by Pyrolysis of Diarylketene Acetals  

- 448

### 23.12.3.1.5 Variation 1: Diaryketenes by Photochemical Wolff Rearrangement of \(\alpha\)-Diazoketones  

Variation 1: Diaryketenes by Photochemical Wolff Rearrangement of \(\alpha\)-Diazoketones  

- 449

### 23.12.3.1.6 Method 6: Diaryketenes by Oxidation of Diarylacetylenes  

Method 6: Diaryketenes by Oxidation of Diarylacetylenes  

- 449

### 23.12.3.2 Applications of Product Subclass 3 in Organic Synthesis  

Applications of Product Subclass 3 in Organic Synthesis  

- 450

### 23.12.3.2.1 Method 1: Diarylacetic Acid Derivatives by Nucleophilic Additions to Diaryketenes  

Method 1: Diarylacetic Acid Derivatives by Nucleophilic Additions to Diaryketenes  

- 450

### 23.12.3.2.2 Method 2: Alcohols, Aldehydes, Ketones, and Enol Derivatives by Addition of Hydrogen, Carbon, and Silicon Nucleophiles and Electrophiles to Diaryketenes  

Method 2: Alcohols, Aldehydes, Ketones, and Enol Derivatives by Addition of Hydrogen, Carbon, and Silicon Nucleophiles and Electrophiles to Diaryketenes  

- 450

### 23.12.3.2.2.1 Variation 1: Cyclopropanones by Diazoalkane Addition to Diaryketenes  

Variation 1: Cyclopropanones by Diazoalkane Addition to Diaryketenes  

- 453

### 23.12.3.2.3 Method 3: Aminoxy Esters from Aminoxyl Radical Addition to Diaryketenes  

Method 3: Aminoxy Esters from Aminoxyl Radical Addition to Diaryketenes  

- 454

### 23.12.3.2.4 Method 4: Allenes by Wittig Reactions  

Method 4: Allenes by Wittig Reactions  

- 454

### 23.12.3.2.4.1 Variation 1: Ketenimines by Aza-Wittig Reaction of Diaryketenes  

Variation 1: Ketenimines by Aza-Wittig Reaction of Diaryketenes  

- 455

### 23.12.3.2.5 Method 5: Cyclobutanones and Other Products by Cycloaddition Reactions with Alkenes and Dienes  

Method 5: Cyclobutanones and Other Products by Cycloaddition Reactions with Alkenes and Dienes  

- 455

### 23.12.3.2.6 Method 6: \([2 + 2]\) and \([2 + 2 + 2]\) Cycloadditions with Alk-1-ynyl Ethers  

Method 6: \([2 + 2]\) and \([2 + 2 + 2]\) Cycloadditions with Alk-1-ynyl Ethers  

- 459

### 23.12.3.2.7 Method 7: \(\beta\)-Lactams by \([2 + 2]\) Cycloaddition with Imines  

Method 7: \(\beta\)-Lactams by \([2 + 2]\) Cycloaddition with Imines  

- 459

### 23.12.3.2.7.1 Variation 1: \(\delta\)-Lactams by \([4 + 2]\) Cycloaddition with Chiral 2-Vinyl-4,5-dihydrothiazoles  

Variation 1: \(\delta\)-Lactams by \([4 + 2]\) Cycloaddition with Chiral 2-Vinyl-4,5-dihydrothiazoles  

- 461

### 23.12.3.2.8 Method 8: \(\beta\)-Lactones by \([2 + 2]\) Cycloaddition with Carboxyl Groups  

Method 8: \(\beta\)-Lactones by \([2 + 2]\) Cycloaddition with Carboxyl Groups  

- 462

### 23.12.3.2.8.1 Variation 1: \(\gamma\)-Lactone Formation by Diarylketene Reaction with Carboxyl Compounds  

Variation 1: \(\gamma\)-Lactone Formation by Diarylketene Reaction with Carboxyl Compounds  

- 463

### 23.12.3.2.9 Method 9: Polyesters by Oxidation of Diaryketenes  

Method 9: Polyesters by Oxidation of Diaryketenes  

- 463

### 23.12.3.2.10 Method 10: Diarylacetylenes by Deoxygenation of Diaryketenes  

Method 10: Diarylacetylenes by Deoxygenation of Diaryketenes  

- 464

### 23.12.3.2.11 Method 11: Carbenes and Carbocations by Decarbonylation of Diaryketenes

### 23.12.5.1.1 Method 1: Hetarylketenes by Ester Elimination of Hetarylacetates  

Method 1: Hetarylketenes by Ester Elimination of Hetarylacetates  

- 473
Method 2: Hetarylketenes by Dehydrochlorination of Hetarylacetyl Chlorides

Variation 1: Hetarylketenes by Dehydrochlorination Using a Shuttle Procedure with a Kinetic Base, and a Stoichiometric Base

Method 3: Hetarylketenes by Thermal Decarbonylation of Furan-2,3-diones

Method 4: Hetarylketenes by Wolff Rearrangement of $\alpha$-Diazo Ketones

Variation 1: Hetarylketenes by Rhodium-Catalyzed Wolff Rearrangement of $\alpha$-Diazo Ketones

Variation 2: Hetarylketenes by Wolff Rearrangement and [2 + 2] Cycloaddition with Alkynes

Variation 3: Hetarylketenes by Wolff-like Rearrangements of Triazoles and Other Substrates

Method 5: Hetarylketenes by Carbene Carbonylation

Method 6: Hetarylketenes from Chromium–Carbene Complexes

Applications of Product Subclass 5 in Organic Synthesis

Method 1: Esters and Amides by Addition of Nucleophiles to Hetarylketenes

Method 2: Imidazo[4,5-c]isoxazole Formation by Cyclization of Hetarylketenes

Product Subclass 6: Ferrocenylketenes

Synthesis of Product Subclass 6

Method 1: Ferrocenylketene by Activation of Ferrocenylacetic Acid

Method 2: Ferrocenylketenes by Wolff Rearrangement of $\alpha$-Diazo Ketones

Product Class 13: Alkenylketenes

R. L. Danheiser, G. B. Dudley, and W. F. Austin

Product Subclass 1: Vinylketenes

Synthesis of Product Subclass 1

Method 1: Elimination from Carboxylic Acid Derivatives

Method 2: Wolff Rearrangement of $\alpha'$-Diazo-$\alpha,\beta$-unsaturated Ketones

Method 3: Electrocyclic Ring Opening of Cyclobutenones

Applications of Product Subclass 1 in Organic Synthesis

Method 1: [2 + 2] Cycloadditions Leading to 4-Alkenylcyclobutanones

Variation 1: Intermolecular Cycloadditions

Variation 2: Intramolecular Cycloadditions

Method 2: [2 + 2] Cycloadditions Leading to $\beta$-Lactams

Product Subclass 2: 1,3-Dienylketenes and (2-Arylviny1)ketenes

Synthesis of Product Subclass 2

Method 1: Elimination from Carboxylic Acid Derivatives

Method 2: Wolff Rearrangement of 1,3-Dienyl $\alpha'$-Diazo Ketones
23.13.2.1.3 Method 3: Electrocyclic Ring Opening of Cyclobutenones  .... 527
23.13.2.1.3.1 Variation 1: Electrocyclic Ring Opening of 4-Alkenyl- and 4-Arylcyclobutenones  ............... 528
23.13.2.1.3.2 Variation 2: Electrocyclic Ring Opening of 2-(1,3-Dienyl)cyclobutenones and 2-(2-Arylvinyl)cyclobutenones  .... 530
23.13.2.1.4 Method 4: Electrocyclic Ring Opening of 6,6-Disubstituted Cyclohexa-2,5-dien-1-ones  .............. 531
23.13.2.2 Applications of Product Subclass 2 in Organic Synthesis ........................................ 533
23.13.2.2.1 Method 1: Six-Electron Electrocyclizations Leading to Phenols  ....................... 533
23.13.2.2.1.1 Variation 1: Of Ketenes from the Elimination of Carboxylic Acid Derivatives 534
23.13.2.2.1.2 Variation 2: Of Ketenes Generated by the Electrocyclic Ring Opening of Cyclobutenones  ........... 539
23.13.2.2.1.3 Variation 3: Of Ketenes Generated by Electrocyclic Ring Opening of 4-Hydroxycyclobutenones ... 547
23.13.3 Product Subclass 3: Alk-1-en-3-ynylketenes .......................................................... 555
23.13.3.1 Synthesis of Product Subclass 3 ................................................................. 556
23.13.3.1.1 Method 1: Elimination from Carboxylic Acid Derivatives ........................................ 556
23.13.3.1.2 Method 2: Wolff Rearrangement of Diazoketones ............................................. 557
23.13.3.1.3 Method 3: Electrocyclic Ring Opening of 4-Alkynylcyclobutenones .......................... 558
23.13.3.2 Applications of Product Subclass 3 in Organic Synthesis ........................................... 559
23.13.3.2.1 Method 1: Cyclizations Leading to Quinones .................................................. 559

23.14 Product Class 14: Alkyl- and Cycloalkylketenes
T. T. Tidwell

23.14.1.1 Product Subclass 1: Monoalkylketenes ............................................................. 571
23.14.1.1.1 Synthesis of Product Subclass 1 .................................................................. 571
23.14.1.1.1.1 Method 1: Dehydration of Alkanoic Acids .............................................. 572
23.14.1.1.1.1.1 Variation 1: Dehydration of Carboxylic Acids Using Mukaiyama’s Reagent 572
23.14.1.1.1.2 Method 2: Pyrolysis of Alkanoic Anhydrides .......................................... 574
23.14.1.1.1.2.1 Variation 1: From Alkanoic Anhydrides under Perkin Conditions .......... 575
23.14.1.1.1.3 Method 3: Michael Addition and Elimination Reaction of Alkanoate Esters 575
23.14.1.1.1.3.1 Variation 1: Ester Pyrolysis ................................................................. 576
23.14.1.1.1.4 Method 4: Dehydrohalogenation of Alkanoyl Chlorides ...................... 577
23.14.1.1.1.4.1 Variation 1: Dehydrochlorination Using a Shuttle Procedure with a Kinetic Base and a Stoichiometric Base ................................. 577
23.14.1.1.1.5 Method 5: Synthesis from Cycloalkanones and Hexa-1,5-dien-3-ones ... 579
23.14.1.1.1.5.1 Variation 1: Photolysis of Cyclobutanones ....................................... 581
23.14.1.1.1.5.2 Variation 2: Photolysis of Cyclohexanones .................................... 582
23.14.1.1.1.5.3 Variation 3: Photolysis of Hexa-1,5-dien-3-ones ................................... 583
23.14.1.1.1.6 Method 6: Dehalogenation of 2-Haloalkanoyl Halides ........................... 583
23.14.1.1.1.7 Method 7: Wolff Rearrangement of Diazoketones ............................... 585
23.14.1.1.1.7.1 Variation 1: Metal-Catalyzed Wolff Rearrangement ...................... 585
23.14.1.7.3 Variation 3: Microwave-Enhanced Wolff Rearrangement .......................... 587
23.14.1.7.4 Variation 4: Photochemical Wolff Rearrangement ............................... 587
23.14.1.1.8 Method 8: Thermolysis of Alkynyl Ethers ........................................ 588
23.14.1.1.9 Method 9: Synthesis from Ynolates (The Kowalski Homologation) ............ 590
23.14.1.2 Applications of Product Subclass 1 in Organic Synthesis .......................... 590
23.14.1.2.1 Method 1: Allenyl Esters by Wittig Reactions of Monoalkylketenes ........... 590
23.14.1.2.2 Method 2: Alkanoic Acid Derivatives by Addition of Heteroatom Nucleophiles to Monoalkylketenes .......................................................... 592
23.14.1.2.2.1 Variation 1: Alkanoic Acid Derivatives by the Arndt–Eistert Chain Elongation .......................................................... 592
23.14.1.2.2.2 Variation 2: β-Amino Acid Derivatives by the Arndt–Eistert Reaction .... 593
23.14.1.2.2.3 Variation 3: β-Amino Acid Esters by Kowalski Homologation of Esters ... 595
23.14.1.2.2.4 Variation 4: Aldols via Boron Enolates from the Addition of Sulfur Nucleophiles to Monoalkylketenes .......................................................... 596
23.14.1.2.2.5 Variation 5: γ-Lactams by Intramolecular Cyclization of Monoalkylketenes with Nitrogen Nucleophiles ....................................................... 597
23.14.1.2.2.6 Variation 6: Amides by Allylic Amino Addition and Aza-Claisen Rearrangement .......................................................... 598
23.14.1.2.3 Method 3: 2-Halo Esters by Addition of Electrophilic Halogenating Agents to Monoalkylketenes .......................................................... 599
23.14.1.2.4 Method 4: Ketones and Vinyl Ethers by Addition of Carbon Nucleophiles to Monoalkylketenes .......................................................... 600
23.14.1.2.5 Method 5: Trifluoromethyl Ketones and Oxo Esters by Acylation of Monoalkylketenes with Trifluoroacetic Anhydride ....................................... 601
23.14.1.2.6 Method 6: 3-Methylene-β-lactones by Dimerization of Monoalkylketenes .... 601
23.14.1.2.7 Method 7: Cyclobutanones by [2 + 2] Cycloaddition of Monoalkylketenes with Alkenes and Dienes ....................................................... 603
23.14.1.2.7.1 Variation 1: Polycyclic Ketones by Intramolecular [2 + 2] Cycloaddition of Monoalkylketenes with Alkenyl Groups ........................................ 606
23.14.1.2.10 Method 10: γ-Lactones by Intramolecular [3 + 2] Cyclization of Ketenes to Cyclobutanones .......................................................... 611
23.14.1.2.11 Method 11: Cyclopropanones by [2 + 1] Cycloaddition of Monoalkylketenes with Diazocarbonates ....................................................... 612
23.14.2 Product Subclass 2: Dialkylketenes and (Oxomethylene)cycloalkanes .......... 613
23.14.2.1 Synthesis of Product Subclass 2 ............................................................. 614
23.14.2.1.1 Method 1: Dehydration of Dialkylalkanoic Acids .................................... 614
23.14.2.1.2 Method 2: Pyrolysis of 2-Alkylalkanoic Anhydrides ............................... 615
23.14.2.1.2.1 Variation 1: Decarboxylation of Dialkylmalonic Anhydrides .................. 616
Variation 1: Elimination from Ester Enolates Formed by Michael Addition to Acrylates ................................. 619

Method 4: Dehydrochlorination of 2-Alkylalkanoyl Halides .......... 620

Method 5: Pyrolysis of Ketene Dimers ............................. 625

Method 6: Dehalogenation of 2-Haloalkanoyl Halides .................. 628

Variation 1: Dehalogenation of 2-Haloalkanoyl Halides with Other Metals 629

Method 7: Wolff Rearrangement of Diazoketones .................. 630

Variation 1: Photochemical Wolff Rearrangement of Diazoketones ..... 632

Variation 2: Ultrasound-Enhanced Wolff Rearrangement ............ 634

Variation 3: Photochemical Wolff Rearrangement of α-Oxo Ketenes 635

Method 8: Oxygenation of a Dialkylthioketene ........................ 635

Applications of Product Subclass 2 in Organic Synthesis .............. 635

Method 1: Carbenes by Decarbonylation of Dialkylketenes .......... 635

Method 2: Carboxylic Acid Derivatives by Nucleophilic Addition to Dialkylketenes ........................................ 636

Variation 1: Carboxylic Anhydrides and Derivatives by Electrophilic Addition to Dialkylketenes ...................................... 637

Variation 2: Esters and Free Radicals by Radical Addition to Dialkylketenes ........................................ 638

Method 3: Ketones and Vinyl Ethers by Addition of Carbon Nucleophiles to Dialkylketenes ........................................ 639

Method 4: Cyclobutane-1,3-diones by Dimerization of Dialkylketenes .... 642

Variation 1: Cyclobutane-1,3-diones by Mixed Dimerization of Dialkylketenes with tert-Butyl(cyano)ketene ...................... 643

Method 5: Cyclobutanones and Cyclobutenones by \([2 + 2]\) Cycloaddition of Dialkylketenes with Alkenes, Dienes, Allenes, or Alkynes 644

Variation 1: Bicyclo[\(n.2.0\)]alkanones by Intramolecular \([2 + 2]\) Cycloaddition with Alkenyl Groups ...................................... 649

Method 6: \(\beta\)-Lactams by \([2 + 2]\) Cycloaddition of Dialkylketenes with Imines .................................................. 653

Variation 1: Malonimides by \([2 + 2]\) Cycloaddition of Dialkylketenes with Isocyanates .................................................. 654

Method 7: \(\beta\)-Lactones by \([2 + 2]\) Cycloaddition of Dialkylketenes with Aldehydes .................................................. 655

Variation 1: \(\beta\)-Lactones by Asymmetric \([2 + 2]\) Cycloaddition of Dimethylketene with Chiral Aldehydes ................................. 655

Method 8: Cyclopropanones by \([2 + 1]\) Cycloaddition of Dialkylketenes with Diazoalkanes .................................................. 656

Method 9: Polymerization of Dialkylketenes ................................ 657

Product Subclass 3: Cyclopropylketene, (Cycloprop-2-enyl)ketene, and Oxiranylketene ................................................. 658

Synthesis of Product Subclass 3 ........................................ 658

Method 1: Elimination from Cyclopropylacetates ........................ 658

Method 2: Dehydrohalogenation of Cyclopropylacetyl Halides .......... 659

Method 3: Wolff Rearrangements of Diazoketones .................. 659

Variation 1: (Cycloprop-2-enyl)ketene by Wolff Rearrangement .......... 661

Variation 2: Oxiranylketenes by Wolff Rearrangement .................. 662
Method 4: Photochemical Rearrangement of 5,5-Dimethylcyclopent-2-enone .................................................... 662

Variation 1: Photolysis of Cyclopentadienones .......................... 662

Applications of Product Subclass 3 in Organic Synthesis ................. 663

Method 1: Bicyclooctadienones and Cycloheptadienones from Cyclopropylketenes by Cope Rearrangement .............. 663

Product Subclass 4: (Fluoroalkyl)ketenes .................................. 665

Synthesis of Product Subclass 4 ........................................... 666

Method 1: Dehydration of Fluoroalkanoic Acids ....................... 666

Method 2: Dehalogenation of 2-Haloacyl Halides ...................... 666

Method 3: Wolff Rearrangement of Diazoketones ........................ 667

Variation 1: Bis(trifluoromethyl)ketene by Wolff-Type Rearrangement upon Oxidation of an Alkyne ............................. 667

Method 4: Hydrolysis of a Perfluoroalkene ............................. 668

Method 5: Acyl(trifluoromethyl)ketenes by Cleavage of a 1,3-Dioxin-4-one ......................................................... 668

Applications of Product Subclass 4 in Organic Synthesis .............. 668

Method 1: Fluoroalkyl Cyclobutanones, Cyclobutenones, and Derivatives by [2+2]-Cycloaddition Reactions of (Fluoroalkyl)ketenes 668

Method 2: (Trifluoromethyl)malonates by Nucleophilic Additions to a (Trifluoromethyl)ketene ........................................ 671

Product Class 15: Bisketenes
T. T. Tidwell

Product Class 15: Bisketenes ............................................. 679

Product Subclass 1: 1,2-Bisketenes ........................................ 681

Synthesis of Product Subclass 1 ........................................... 681

Method 1: 1,2-Bisketenes by Thermal Ring Opening of Cyclobutene-1,2-diones ..................................................... 682

Variation 1: Stabilized 1,2-Bisketenes by Thermal Ring Opening of Cyclobutene-1,2-diones ........................................... 683

Method 2: 1,2-Bisketenes by Photochemical Ring Opening of Cyclobutene-1,2-diones ..................................................... 684

Method 3: Metal-Complexed 1,2-Bisketene ............................ 687

Method 4: 1,2-Bisketenes by Wolff Rearrangement of Bis(diazo ketones) ......................................................... 687

Applications of Product Subclass 1 in Organic Synthesis .............. 688

Method 1: Acids, Esters, and Amides by Nucleophilic Additions to 1,2-Bisketenes ......................................................... 688

Variation 1: (Carboxy)ketenes and Succinic Anhydrides by Water Addition to 1,2-Bisketenes ......................................................... 691

Method 2: Diamides by Amine Addition to 1,2-Bisketenes .......... 692

Variation 1: Carbamoyl-Substituted Esters by Successive Amine and Alcohol Addition ................................. 692
23.15.1.2.2.2 Variation 2: A Cyclic Carbamoyl Ester by Addition of an Amino Alcohol to a 1,2-Bisketene .................................................. 693
23.15.1.2.3 Method 3: A Fumaroyl Bromide by Bromine Addition to a 1,2-Bisketene 693
23.15.1.2.4 Method 4: Maleic Anhydride Formation by Aminoxyl Radical Addition to a 1,2-Bisketene ........................................... 694
23.15.1.2.5 Method 5: Furanone Formation by Dimerization of 1,2-Bisketenes .... 694
23.15.1.2.6 Method 6: Naphthofuranones by [4 + 2] Cycloaddition of 1,2-Bisketenes with Pendant Alkenes ........................................ 695
23.15.1.2.7 Method 7: Cyclopropenes and Quinones by [2 + 1] and [4 + 2] Cycloaddition of 1,2-Bisketenes with Alkynes ...................... 695
23.15.1.2.8 Method 8: A β-Lactone by [2 + 2] Cycloaddition of a 1,2-Bisketene with Acetaldehyde .................................................. 697
23.15.1.2.9 Method 9: Cyclopentenediones by [4 + 1] Cycloaddition of 1,2-Bisketenes with Carbenes and Diazooalkanes ................. 697
23.15.1.2.10 Method 10: Cyclopropenones and Alkynes by Photolysis of 1,2-Bisketenes 697

23.15.2 Product Subclass 2: 1,3- and Higher Bisketenes ........................................... 699
23.15.2.1 Synthesis of Product Subclass 2 .................................................. 699
23.15.2.1.1 Method 1: A Bisketene by Dehydration of a Dicarboxylic Acid ........ 699
23.15.2.1.2 Method 2: A Bisketene by Elimination from a Bis(isopropenyl) Ester .... 700
23.15.2.1.3 Method 3: Bisketenes by Dehydrochlorination of Dicarboxylic Acid Chlorides .................................................. 701
23.15.2.1.3.1 Variation 1: Bisketenes by Dehydrochlorination of Dicarboxylic Acid Chlorides by a Shuttle Procedure with a Kinetic Base and a Stoichiometric Base ........................................ 702
23.15.2.1.3.2 Variation 2: 1,4-Bis(oxovinyl)benzenes by Dehydrochlorination .... 705
23.15.2.1.4 Method 4: Bisketenes by Ring Opening of Benzo-1,2-quinones ....... 705
23.15.2.1.5 Method 5: Bisketenes by Wolff Rearrangement of Bis(diazo ketones) ... 706
23.15.2.1.6 Method 6: Bis- and Tris(oxovinyl)silanes by Thermolysis of (Ethoxyethyl)ylsilanes .................................................. 707
23.15.2.1.7 Method 7: A 1,5-Bisketene by [4 + 2] Cycloaddition of Norbornadiene with a 1,3,4-Oxadiazine Followed by Nitrogen Elimination ... 710
23.15.2.1.8 Method 8: A Bis(allenylketene) from a Bis(methylene)cyclobuteneone) ... 710
23.15.2.2 Applications of Product Subclass 2 in Organic Synthesis .................. 711
23.15.2.2.1 Method 1: Esters and Amides by Addition of Nucleophiles to Bisketenes 711
23.15.2.2.1.1 Variation 1: Polyamides and Polyesters from Bisketenes and Diamines or Diols .................................................. 711

23.15.3 Product Subclass 3: Bis(oxomethylene)cyclohexanes and -cyclohexadienes .................................................. 712
23.15.3.1 Synthesis of Product Subclass 3 .................................................. 713
23.15.3.1.1 Method 1: Bis(oxomethylene)cyclohexanes and -cyclohexadienes by Dehydrochlorination of Dicarboxylic Acid Chlorides ........ 713
23.15.3.1.2 Method 2: Bis(oxomethylene)cyclohexadienes by Dehalogenation of Terephthaloyl Halides ........................................... 714
23.15.3.1.3 Method 3: 1,2-Bis(oxomethylene)cyclohexane by Ring Opening of a Cyclobutene-1,2-dione ........................................... 714
Method 4: 5,6-Bis(oxomethylene)cyclohexa-1,3-diene by Ring Opening
of a Cyclobutene-1,2-dione

Variation 1: 5,6-Bis(oxomethylene)cyclohexa-1,3-diene by Thermal
Nitrogen Loss from Phthalazine-1,4-dione

Method 5: 5,6-Bis(oxomethylene)cyclohexa-1,3-diene by Cyclophane
Cleavage

Method 6: Bis(oxomethylene)cycloalkanes by Double Wolff
Rearrangement

Applications of Product Subclass 3 in Organic Synthesis

Method 1: Esters and Amides by Addition of Nucleophiles to Bisketenes

Method 2: [4 + 2] Cycloadditions of 1,2-Bisketenes with Alkenes and
Benzoquinones

Method 3: Spiro[cyclopropane-1,1¢(3¢H)-isobenzofuran]-3¢-ones by
Cycloaddition of a 1,2-Bisketene with Alkenes

Method 4: A 1,3,5-Oxathiazine by [4+ 2] Cycloaddition of a Bisketene
with an Isocyanate

Method 5: Benzyne by Photochemical Decarbonylation of
5,6-Bis(oxomethylene)cyclohexa-1,3-diene

Variation 1: A Bicyclic Enyne by Photochemical Decarbonylation of a
Bisketene

Method 6: Polymerization of a 1,4-Bisketene by [2 + 2] Cyclodimerization

Product Subclass 4: Other Bisketenes

Method 1: Bis(acylketenes) by Thermolysis of Bis(dioxinones) and
Bis(Meldrum’s acid) Derivatives

Method 2: A Tris(acylketene) by Thermolysis of a Triester

Method 3: A Bis(acylketene) by Carbon Dioxide Addition to a
Diynediamine

Method 4: Bis(acylketenes) by Wolff Rearrangement of Bis(diazo)
Tetraketones

Variation 1: Cyclic Bis(acylketene) Formation by a Wolff-Type
Rearrangement

Method 5: Bis(dienylketenes) by Photolysis of Bis(cyclohexadienones)

Method 6: A Bis(oxovinyl)platinum Complex by Addition of a Ketene
to an (Oxovinyl)platinum Complex

Method 7: Bis(ketenechromium) Complexes from
Bis(alkylidenechromium) Complexes

Product Class 16: Sulfur, Selenium, and Tellurium Analogues of Ketenes
C. Spanka and E. Schaumann

Product Subclass 1: Thioketenes

Synthesis of Product Subclass 1

Method 1: Sulfuration of Ketenes
23.16.1.2 Method 2: Synthesis from Dithiocarboxylates ........................................ 738
23.16.1.3 Method 3: Elimination Reactions of Ketene S,X-Acetals .................................. 739
23.16.1.4 Method 4: Synthesis by Cycloreversion ...................................................... 740
23.16.1.4.1 Variation 1: [2 + 2] Cycloreversion of 2,4-Bis(alkylidene)-1,3-dithietanes
(Thioketene Dimers) or 4-Alkylidene-1,3-dithietan-2-ones .................................. 740
23.16.1.4.2 Variation 2: [3 + 2] Cycloreversion of 2-Alkylidene-1,3-dithiolane
Derivatives ........................................................................................................ 742
23.16.1.4.3 Variation 3: 1,2,3-Thiadiazoles as Stable Thioketene Precursors
(Thio-Wolff Rearrangement) .............................................................................. 746
23.16.1.5 Method 5: Treatment of Alkylidenephosphoranes with Carbon Disulfide .... 750
23.16.1.6 Method 6: Thioketenes via Alkynyl Sulfides ................................................. 751
23.16.1.6.1 Variation 1: Protonation or Silylation of Alk-1-ynethiolates Followed by [1,3]-Hydrogen/Silicon Shift .......................................................... 753
23.16.1.6.2 Variation 2: Thia-Cope Rearrangement of Alkynyl Allyl Sulfides ............... 754
23.16.1.7 Methods 7: Other Methods .......................................................................... 758
23.16.2 Product Subclass 2: Cumulated Thioketenes and Their Derivatives ............... 760
23.16.2.1 Synthesis of Product Subclass 2 .................................................................... 760
23.16.2.1.1 Method 1: Synthesis of Alkylidenethioketenes ............................................. 760
23.16.2.1.2 Method 2: Synthesis of (Arylimino)thioketenes ......................................... 761
23.16.2.1.3 Method 3: Synthesis of Carbon Subsulfide (Propadienedithione) .......... 762
23.16.3 Product Subclass 3: Thioketene S-Oxides ......................................................... 764
23.16.3.1 Synthesis of Product Subclass 3 .................................................................... 764
23.16.3.1.1 Method 1: Direct Oxidation of Thioketenes ................................................. 764
23.16.3.1.2 Method 2: [3 + 2] Cycloreversion of 1,3-Dithiolane 1,1,3-Trioxides ............ 765
23.16.3.1.3 Method 3: Retro-Diels–Alder Reaction ....................................................... 765
23.16.4 Product Subclass 4: Selenoketenes .................................................................... 766
23.16.4.1 Synthesis of Product Subclass 4 .................................................................... 766
23.16.4.1.1 Method 1: Rearrangement of Alkynyl Selenides ........................................... 767
23.16.4.1.2 Method 2: [3,3]-Sigmatropic Rearrangement of Alkynyl Allyl Selenides
(Selena-Cope Rearrangement) ............................................................................ 769
23.16.4.1.3 Method 3: Nitrogen Extrusion from 1,2,3-Selenadiazoles ......................... 772
23.16.5 Product Subclass 5: Telluroketenes .................................................................... 776
23.17 Product Class 17: Ketenimines
H. Perst

23.17 Product Class 17: Ketenimines ............................................................................. 781
23.17.1 Product Subclass 1: Monoketenimines ............................................................. 783
23.17.1.1 Synthesis of Product Subclass 1 ..................................................................... 783
23.17.1.1.1 Synthesis by Formation of the C═C Bond .................................................... 784
23.17.1.1.1.1 Method 1: Dehydrocyanation of Imidoyl Cyanides .................................. 784
23.17.1.1.1.2 Method 2: Dehydration of Carboxamides by Oxophilic Reagents in the
Presence of Tertiary Amines .............................................................................. 785
23.17.1.1.2.1 Variation 1: Using Triphenylphosphine–Carbon Tetrachloride–Triethylamine ........................................ 787
23.17.1.1.2.2 Variation 2: Using Triphenylphosphine–Bromine–Triethylamine ........................................ 788
23.17.1.1.2.3 Variation 3: Using Diphosgene–Triethylamine ........................................ 791
23.17.1.1.3 Method 3: \( \beta \)-Elimination from Imidocarboxylic Acid Derivatives ........................................ 793
23.17.1.1.3.1 Variation 1: Dehydrohalogenation of Imidoyl Halides ........................................ 793
23.17.1.1.3.2 Variation 2: Dehalogenation of \( \alpha \)-Haloimidoyl Halides ........................................ 795
23.17.1.1.3.3 Variation 3: \( \beta \)-Elimination from Imidocarboxylic Acid Esters ........................................ 796
23.17.1.1.4 Method 4: \( \beta \)-Elimination from Other Precursors via Imidocarboxylic Acid Derivatives Formed In Situ ........................................ 798
23.17.1.1.4.1 Variation 1: From Oximes ........................................ 798
23.17.1.1.4.2 Variation 2: From 2,2-Dihaloaziridines ........................................ 799
23.17.1.1.5 Method 5: Elimination of Hydrogen Sulfide from Thioamides ........................................ 801
23.17.1.1.5.1 Variation 1: From Thioamides via Imidoyl Chlorides ........................................ 801
23.17.1.1.5.2 Variation 2: From Methyl Imidothioesters ........................................ 802
23.17.1.1.6 Method 6: Connective Alkene Formation by Reaction of Phosphonium Ylides or Related Reagents with Azaheterocumulenes ........................................ 804
23.17.1.1.6.1 Variation 1: Ketenimines from Wittig Reaction of Alkylidenetriphenylphosphoranes with Isocyanates ........................................ 804
23.17.1.1.6.2 Variation 2: Reaction of Alkylidenephosphoranes with Isothiocyanates or Carbodiimides ........................................ 808
23.17.1.1.6.3 Variation 3: Horner–Wittig Reaction of Isocyanates with Carbanions Derived from Diethyl Phosphonates ........................................ 809
23.17.1.1.7 Method 7: Cycloreversion ........................................ 809
23.17.1.1.8 Method 8: Cheletropic Reactions (Sulfur Extrusion from 2,5-Dihydroisothiazol-5-imines) ........................................ 811
23.17.1.1.9 Method 9: Addition of Isocyanides to Carbene Complexes ........................................ 812
23.17.1.1.10 Method 10: Addition of Isocyanides to Suitable Carbon Fragments in the Coordination Sphere of Transition-Metal Complexes ........................................ 814
23.17.1.1.10.1 Variation 1: Addition of Carbenes to Transition Metal–Isocyanide Complexes ........................................ 814
23.17.1.1.10.2 Variation 2: Addition of Isocyanides to Transition Metal–Carbene Complexes ........................................ 815
23.17.1.1.10.3 Variation 3: Rearrangement of a Transition Metal–Isocyanide Complex ........................................ 816
23.17.1.1.10.4 Variation 4: Palladium-Assisted Reactions of Isocyanides with Alkyl Chlorides ........................................ 817
23.17.1.1.11 Method 11: Addition of Isocyanides to Alkynes ........................................ 818
23.17.1.1.12 Method 12: Addition of Isocyanides to Cyclopropene Derivatives ........................................ 820
23.17.1.1.13 Method 13: Iminocarbene–Ketenimine Rearrangement ........................................ 821
23.17.1.1.13.1 Variation 1: Photochemical Transformation of 2-(Cyanooimino)-1-diazoalkanes ........................................ 821
23.17.1.1.13.2 Variation 2: Thermal or Photochemical Transformation of 1-Aryl-1,2,3-triazoles and 1H-Benzotriazoles ........................................ 822
23.17.1.1.12 Synthesis by Formation of the \( \text{C} = \text{N} \) Bond ........................................ 824
23.17.1.1.12.1 Method 1: Dehydrocyanation of \( \alpha \)-Cyanoenamines ........................................ 825
23.17.1.1.12.2 Method 2: Dehydrohalogenation of \( \alpha \)-Haloenamines ........................................ 826
23.17.1.1.12.3 Method 3: Eliminations from Ketene \( N,S \)-Acetals ........................................ 828
Method 4: Connective Imine Formation by Aza-Wittig Reaction of Iminophosphoranes or Related Compounds with Ketenes

Variation 1: With Preformed Iminophosphoranes and Preformed Ketenes

Variation 2: With Preformed Iminophosphoranes and In Situ Generated Ketenes

Variation 3: With In Situ Generated Iminophosphoranes and Preformed Ketenes

Variation 4: Reaction of N-Substituted Diethyl Phosphoramidate Anions with Ketenes

Method 5: Connective Imine Formation by the Reaction of Thioketenes with Sulfur Diimides

Method 6: Deprotonation and Ring Opening of Isoxazolium Salts

Method 7: Cycloreversion

Method 8: Cheletropic Reactions

Method 9: Thermolysis of Vinyl Azides

Method 10: Photolysis of Vinyl Azides or Aryl Azides

Synthesis by Formation of the C=C and C=N Bonds

Method 1: Addition–Elimination Reactions with Nitriles

Variation 1: Via Nitrilium Ions and Subsequent Deprotonation at the β-Carbon Atom

Variation 2: Via Nitrile Anions and Subsequent Addition of Electrophiles to the Nitrogen Atom

Variation 3: Addition of Trialkyl Phosphites to α-Halo Nitriles and Elimination of Haloalkanes

Method 2: [2,3]-Sigmatropic Rearrangement of 1-Cyanoalkyl Methylenesulfur Ylides

Method 3: [3 + 2]-Cycloaddition Reactions of Ketenimines

Variation 1: With 1,3-Dipoles

Variation 2: With Three-Membered Heterocycles

Variation 3: Via Intramolecular Reactions of C-(Aziridin-1-ylimino)ketenimines

Method 4: [4 + 2]-Cycloaddition Reactions Using Ketenimines as Dienophiles

Method 5: [4 + 2]-Cycloaddition Reactions Using Ketenimines as 1,3-Dienes

Variation 1: From a 1,3-Diene Formed by the Ketenimine C=C Bond and a Suitable C-Substituent
23.17.1.2.5.2 Variation 2: From a 1,3-Diene Formed by the Ketenimine C=H Bond and a C-Aryl Substituent; Intramolecular [4+2]-Cycloaddition Reactions .............................................................. 877

23.17.1.2.5.3 Variation 3: From a 1,3-Diene Formed by the Ketenimine C=N Bond and a Suitable N-Substituent ........................................ 879

23.17.1.2.5.4 Variation 4: From a 1,3-Diene Formed by the Ketenimine C=N Bond and an N-Aryl Substituent ................................. 882

23.17.1.2.6 Method 6: Rearrangements of Ketenimines ...................... 884

23.17.1.2.7 Method 7: Reactions with Loss of the N-Substituent ............ 885

23.17.1.2.7.1 Variation 1: Thermal Cleavage ..................................... 885

23.17.1.2.7.2 Variation 2: Addition–Elimination Reactions of N-Silyl- or N-Stannylketenimines ............................................. 886

23.17.1.2.7.3 Variation 3: Alk-2-enenitriles from C,C,N-Tris(trimethylsilyl)ketenimine and Aldehydes ............................................. 888

23.17.2 Product Subclass 2: Bisiminopropa-1,2-dienes ......................... 889

23.17.2.1 Synthesis of Product Subclass 2 ........................................ 889

23.17.2.1.1 Method 1: Thermolysis of Isoxazolonoketene N,S-Acetals .... 889

Product Subclass 6: 1,1-Bis(organooxy)allenes, 1,1-Bis(organooxy)-butatrienes, 1-(Organooxy)-1-siloxyallenes, and 1-(Organooxy)-allen-1-olates
R. Zimmer

Synthesis of Product Subclass 6

Synthesis of 1,1-Bis(organooxy)allenes and 1,1-Bis(organooxy)butatrienes

Method 1: 1,1-Bis(organooxy)allenes and 1,1-Bis(organooxy)butatrienes by Deprotonation–Alkylation of 1,1-Bis(organooxy)alk-2-ynes

Method 2: 1,1-Bis(organooxy)allenes by Ring Opening of Highly Functionalized Cyclopropanes

Method 3: 1,1-Bis(organooxy)allenes by Wittig Alkenation

Synthesis of 1-(Organooxy)-1-siloxyallenes

Method 1: Cuprate Addition and Silylation of Alkyl Propynoates

Synthesis of 1-(Organooxy)allen-1-olates

Applications of Product Subclass 6 in Organic Synthesis

[2 + 2]-Cycloaddition Reactions of 1,1-Bis(organooxy)allenes

Synthesis of 2H-Pyran-2,4(3H)-diones and Furan-2,5-diones from Tetraalkoxyallenes

Product Subclass 7: 1-(Organochalcogeno)-1-(organooxy)allenes
R. Zimmer

Synthesis of Product Subclass 7

Method 1: Deprotonation–Addition Reaction of 1-(Organooxy)allenes

Method 2: Wittig Alkenation

Product Subclass 8: 1-Nitrogen-Functionalized 1-(Organooxy)allenes and Allen-1-olates
R. Zimmer

Synthesis of Product Subclass 8

Method 1: 1-(Organooxy)allen-1-amines by Alkylation–Deprotonation of Malonamides
24.1.8.1.2 Method 2: 1-(Organooxy)-1-(1H-1,2,4-triazol-1-yl)allenes by Deprotonation–Alkylation of 3-(Organooxy)-3-(1H-1,2,4-triazol-1-yl)prop-1-ynes .................................. 57

24.1.8.1.3 Method 3: Generation of 1-Nitrogen-Functionalized Allen-1-olates from \( \alpha \)-Hydrazono N-Monosubstituted Amides by the Shapiro Reaction ............................................. 58

24.1.9 Product Subclass 9: 1-Phosphorus-Functionalized 1-(Organooxy)allenes and 1-Siloxyallenes
R. Zimmer

24.1.9.1 Synthesis of Product Subclass 9 .................................................. 61

24.1.9.1.1 Method 1: 1-Phosphorus-Functionalized 1-(Organooxy)allenes by the Addition of Phosphorus Compounds to 1-Alkoxyalk-1ynes ............................ 61

24.1.9.1.2 Method 2: 1-Phosphorus-Functionalized 1-Siloxyallenes by the Reaction of Carbon Suboxide with Silylated Phosphites ......................................... 61

24.1.10 Product Subclass 10: 1,1-Bis(organochalcogeno)allenes and 1,1-Bis(organochalcogeno)butatrienes
R. Zimmer

24.1.10.1 Synthesis of Product Subclass 10 .................................................. 63

24.1.10.1.1 Synthesis of 1,1-Bis(organochalcogeno)allenes .................................. 63

24.1.10.1.1 Method 1: Deprotonation–Addition Sequence .......................... 63

24.1.10.1.1.1 Variation 1: Starting from an Alk-1-yn-3-ol ................................ 63

24.1.10.1.1.2 Variation 2: Starting from an Alk-1-enyl-Substituted Allene .............. 63

24.1.10.1.2 Method 2: Alkylation–Elimination Starting from a Vinylphosphonium Salt .......................... 64

24.1.10.1.3 Method 3: Isomerization of 2-Ethylnyl-1,3-dithianes .......................... 64

24.1.10.1.4 Method 4: Reaction of 1-(Organosulfanyl)alk-1-yn-3-ols with Sulfenyl Halides and Subsequent Rearrangement .................................................. 64

24.1.10.1.2 Synthesis of 1,1-Bis(organochalcogeno)butatrienes .......................... 65

24.1.10.1.2.1 Method 1: Nucleophilic Substitution ........................................ 65

24.1.10.1.2.1.1 Variation 1: Of a Perchlorinated Enyne .................................. 65

24.1.10.1.2.1.2 Variation 2: Of Chloro-Substituted Butatrienes .......................... 65

24.1.10.1.2.2 Method 2: Reaction of 1,4-Dilithiobuta-1,3-diynes with Electrophiles .................................................. 66

24.1.10.1.2.3 Method 3: Wittig Alkenation of Diarylketenes .................................. 66

24.1.10.1.2.4 Method 4: Elimination–Isomerization Starting from 4-Alkoxy-1,1-bis(organosulfanyl)alk-2-ynes .......................... 67
Product Subclass 11: 1-Nitrogen-Functionalized 1-(Organochalcogeno)allenes
R. Zimmer

Synthesis of Product Subclass 11

Method 1: Deprotonation–Addition Reaction of 1-Nitrogen-Functionalized Allenes

Method 2: Deprotonation of Amidinium Salts

Method 3: Alkylation of 2-Ethynylbenzothiazolium Salts

Method 4: Isomerization of 1-Azido-1-(phenylsulfanyl)prop-2-ynne

Product Subclass 12: 1-Phosphorus-Functionalized 1-(Organochalcogeno)allenes
R. Zimmer

Synthesis of Product Subclass 12

Method 1: Deprotonation–Addition Reaction of 1-Phosphorus-Functionalized Allenes

Product Subclass 13: 1,1-Bis(nitrogen-functionalized) Allenes and Butatrienes
R. Zimmer

Synthesis of Product Subclass 13

Method 1: 1,1-Bis(nitrogen-functionalized) Allenes by Deprotonation of Amidinium Salts

Method 2: 1,1-Bis(nitrogen-functionalized) Allenes by Dehydrobromination of 2-Bromopropenes

Method 3: 1,1-Bis(nitrogen-functionalized) Allenes by the Reaction of 3,6-Dihydropyrimidinium-4-olates with N,N-Diethylprop-1-yn-1-amine

Method 4: 1,1-Bis(nitrogen-functionalized) Butatrienes by the Condensation Reaction of 1,1-Dichloroethenes with N,N,N′,N′-Tetramethylethene-1,1-diamine
24.1.14 Product Subclass 14: 1-Nitrogen-Functionalized 1-Phosphorus-Functionalized Allenes
R. Zimmer

24.1.14 Product Subclass 14: 1-Nitrogen-Functionalized 1-Phosphorus-Functionalized Allenes ........................................ 79
24.1.14.1 Synthesis of Product Subclass 14 ........................................ 79
24.1.14.1.1 Method 1: Reaction of an Iminium Iodide with Triphenylphosphine ...... 79

24.1.15 Product Subclass 15: 1,1-Bis(phosphorus-functionalized) Allenes
M. Stankević and K. M. Pietrusiewicz

24.1.15 Product Subclass 15: 1,1-Bis(phosphorus-functionalized) Allenes .......... 81
24.1.15.1 Synthesis of Product Subclass 15 ........................................ 81
24.1.15.1.1 Method 1: Synthesis from Phosphorus-Functionalized Alkynes ........ 81
24.1.15.1.2 Method 2: Synthesis from Other Phosphorus-Functionalized Allenes ... 82

24.2 Product Class 2: 1,1-Bis(heteroatom-functionalized) Alk-1-enes

24.2.1 Product Subclass 1: 1,1-Dihaloalk-1-enes
R. R. Kostikov

24.2.1 Product Subclass 1: 1,1-Dihaloalk-1-enes .................................... 85
24.2.1.1 Synthesis of Product Subclass 1 ........................................... 85
24.2.1.1.1 Method 1: Vinylic Substitution of Halogens, Metals, or Other Groups ... 85
24.2.1.1.1 Variation 1: Substitution of a Silyl Group or a Metal in 1-Metal-Substituted 1-Haloalk-1-enes ........................................... 86
24.2.1.1.2 Variation 2: From 1-Substituted Alk-1-ynes ................................ 87
24.2.1.1.2 Method 2: 2-Aryl- and 2-Hetaryl-Substituted 1,1-Dihaloalk-1-enes from Hydrazones of Aromatic Aldehydes and Ketones .......... 88
24.2.1.1.3 Method 3: Dehydrohalogenation of Oligohaloalkanes and Halovinyl Intermediates ........................................... 89
24.2.1.1.3.1 Variation 1: Dehydrohalogenation of Oligohaloalkanes ............... 89
24.2.1.1.3.2 Variation 2: From Vinyllithium Reagents ................................ 90
24.2.1.1.3.3 Variation 3: From Halovinylzinc or Halovinylmagnesium Reagents .... 91
24.2.1.1.4 Method 4: From 2,2,2-Trihaloethanols and Derivatives .................. 93
24.2.1.1.5 Method 5: Dehalogenation of Oligohaloalkanes ........................ 94
24.2.1.1.6 Method 6: Wittig-Type Reaction .......................................... 95
24.2.1.1.7 Method 7: Synthesis from Ketones and Lithium Carbenoids ............ 99
24.2.1.1.8 Method 8: Electrophilic Addition to 1-Haloalk-1-ynes ..................... 100
24.2.1.1.8.1 Variation 1: Halogen Addition to 1-Haloalk-1-enes ....................... 100
24.2.1.1.8.2 Variation 2: Dimerization of 1-Aryl-2-iodocetylenes .................... 102
24.2.1.1.9 Method 9: Synthesis by Rearrangement ..................................... 102
Variation 1: Friedel–Crafts Reactions ........................................ 102
Variation 2: From 1-Haloalk-1-yn-3-ols .................................. 103
Applications of Product Subclass 1 in Organic Synthesis .................... 104
Method 1: Substitution of Halogen for Hydrogen ............................ 104
Method 2: Substitution of Halogen for Nitrogen, Phosphorus, and Other Elements ................................................................. 105
Method 3: Synthesis of Substituted Allyl Alcohols with Vinyllithium Derivatives ................................................................. 107
Method 4: Styrene Synthesis with Perfluoroalk-1-enylzinc Derivatives 107
Method 5: Synthesis of 1,3-Dienes ............................................. 109
Method 6: Synthesis of Acrylates ................................................. 111
Method 7: Alkylation and Acylation .............................................. 111
Method 8: Synthesis of Stilbenes by Suzuki Coupling ...................... 112
Method 9: Synthesis of Enynes by Sonogashira Coupling .................. 112
Method 10: Intramolecular Cyclization for Fused Carbocycles and Heterocycles ................................................................. 113
Method 11: Synthesis of Alkynes .................................................. 116
Method 12: Synthesis of 1-Haloalk-1-ynes .................................... 116
Method 13: Synthesis of 1,3-Dienes ............................................. 117
Method 14: Synthesis of Esters ..................................................... 120
Variation 1: From 1,1-Dihaloalk-1-enes with a Hydrogen Atom in the α-Position ................................................................. 120
Variation 2: From 1,1,2-Trihaloalk-1-ynes without a Hydrogen Atom in the α-Position ................................................................. 121
Method 15: [2 + 1], [2 + 2], [2 + 3], and [2 + 4] Cycloadditions .......... 121

Product Subclass 2: 1-Halo-1-(organooxy)alk-1-enes
A. P. Molchanov and R. R. Kostikov

Synthesis of Product Subclass 2 .................................................. 129
Method 1: Substitution of Hydrogen for Halogen ............................ 129
Method 2: Substitution of Halogen for Oxygen ............................... 129
Variation 1: From 1,1-Dihaloalk-1-enes with a Hydrogen Atom in the α-Position ................................................................. 130
Variation 2: From 1,1,2-Trihaloalk-1-enes without a Hydrogen Atom in the α-Position ................................................................. 131
Method 3: Elimination of Hydrogen Halides or Halogens .................. 132
Method 4: Decarboxylation or Elimination of Carbonyl Difluoride ...... 134
Method 5: Addition of Oxygen Nucleophiles to 1-Haloalk-1-ynes ...... 136
Method 6: Addition of Hydrogen Halides to 1-Alkoxyalk-1-ynes ...... 136
Method 7: Addition of Phosgene to 1-Alkoxyalk-1-ynes .................. 137
Method 8: Addition of Halogens to 1-(Organooxy)alk-1-ynes .......... 138
24.2.1.9 Method 9: Addition of Heteroelement Halides to 1-(Organooxy)alk-1-ynes .................................. 139
24.2.1.9.1 Variation 1: Addition of Boron Halides .................................. 139
24.2.1.9.2 Variation 2: Addition of Carbon, Silicon, Germanium, and Tin Halides ... 140
24.2.1.9.3 Variation 3: Addition of Phosphorus Halides .................................. 140
24.2.1.9.4 Variation 4: Addition of Sulfur Halides .................................. 142
24.2.1.9.5 Variation 5: Addition of Mercury(II) Chloride ........................... 143
24.2.1.10 Method 10: Addition of Carbonyl Compounds to 1-Halo- or 1-Alkoxyalk-1-ynes ........................................ 143
24.2.1.11 Method 11: O-Acylation of Acyl Halides or Aldehydes ................... 143
24.2.2 Applications of Product Subclass 2 in Organic Synthesis .................... 145
24.2.2.1 Method 1: Thermolysis ............................................... 145
24.2.2.2 Method 2: Substitution of Halogen .................................. 145
24.2.2.3 Method 3: Elimination of Hydrogen Halides .................................. 148
24.2.2.4 Method 4: Elimination of Halogens .................................. 149
24.2.2.5 Method 5: Addition of Mineral Acids, Halogens, and Water ............... 150
24.2.2.6 Method 6: Addition of Alcohols, Phenols, and Amines .................. 153
24.2.2.7 Method 7: Addition of Carboxylic Acids and Their Derivatives ............. 155
24.2.2.8 Method 8: Radical Addition .................................. 157
24.2.2.9 Method 9: Addition of Alkyl Hypofluorites .................................. 157
24.2.2.10 Method 10: Addition of Sulfur-Containing Reagents ...................... 158
24.2.2.11 Method 11: Cycloadditions .................................. 159
24.2.2.11.1 Variation 1: [2 + 1] Cycloadditions .................................. 159
24.2.2.11.2 Variation 2: [2 + 2] Cycloadditions .................................. 159
24.2.2.11.3 Variation 3: Synthesis of Heterocyclic Compounds ..................... 160
24.2.2.12 Method 12: Rearrangements .................................. 161

24.2.3 Product Subclass 3: 1-Halo-1-(organochalcogeno)alk-1-enes
A. F. Khlebnikov and R. R. Kostikov

24.2.3.1 Synthesis of Product Subclass 3 .................................. 167
24.2.3.1.1 Method 1: Substitution of Metal for Halogen .................................. 167
24.2.3.1.2 Method 2: Substitution of Halogen for Chalcogen .......................... 170
24.2.3.1.3 Method 3: Substitution of Oxygen for Halogen .................................. 175
24.2.3.1.4 Method 4: Elimination of Hydrogen Halides or Halogens ............. 176
24.2.3.1.5 Method 5: Wittig-Type Reactions .................................. 180
24.2.3.1.6 Method 6: Miscellaneous Eliminations .................................. 185
24.2.3.1.7 Method 7: Addition of Hydrogen Halides to Alk-1ynes ................. 188
24.2.3.1.8 Method 8: Addition of Halogens to Alk-1ynes .......................... 190
24.2.3.1.9 Method 9: Addition of Heteroelement Halides to Alk-1ynes ............ 191
24.2.3.1.10 Method 10: Miscellaneous Additions to Alk-1ynes ..................... 193
24.2.3.1.11 Methods 11: Miscellaneous Reactions .................................. 195
24.2.3.2 Applications of Product Subclass 3 in Organic Synthesis ................. 196
24.2.3.2.1 Method 1: Substitution of Halogen by Hydrogen, Deuterium, or a Metal 197
24.2.3.2.2 Method 2: Substitution of a Halogen for a Carbon Group 199

Applications of Product Subclass 5 in Organic Synthesis ............ 289

Product Subclass 6: 1,1-Bis(organooxy)alk-1-enes
C. Schneider

Synthesis of Product Subclass 6 ........................................ 293
Method 1: Elimination from 2-Halo Acetals ......................... 295
Variation 1: Phase-Transfer-Catalyzed Elimination from 2-Halo Acetals ............... 296
Variation 2: Ultrasound-Accelerated Elimination from 2-Halo Acetals ................ 296
Variation 3: Elimination from 2-Bromo Peracetyl Glycosides ......... 296
Variation 4: Elimination from 2-Selanyl Acetals ..................... 297
Method 2: Elimination from Ortho Esters ............................. 297
Variation 1: Acid-Catalyzed Elimination from In Situ Formed Ortho Esters .............. 298
Method 3: O-Heteroacylation of Ester Enolates ...................... 299
Method 4: O-Alkylation of Ester Enolates ............................. 300
Method 5: Alkenation of Carbonates with Transition Metal–Carbene Complexes .... 301
Method 6: Horner–Wittig Alkenation of Carbonyl Compounds ...... 302
Method 7: Nucleophilic Addition to Alkoxyalkynes .................. 303
Method 8: Nucleophilic Addition to 1,1-Dihaloalk-1-enes .................. 303
Method 9: Decarboxylation of ß-Lactones ............................ 304
Applications of Product Subclass 6 in Organic Synthesis ............ 305
Variation 1: Alkylation and Aarylation of Ketene O,O-Acetals .......... 305
Variation 1: Lewis Acid Catalyzed Aarylation of Ketene O,O-Acetals ................. 306
24.2.6.2 Method 2: Acylation of Ketene O,O-Acetals .......................... 306
24.2.6.2.3 Method 3: Bromination of Ketene O,O-Acetals ................. 307
24.2.6.2.4 Method 4: Silylation of Ketene O,O-Acetals .................... 308
24.2.6.2.5 Method 5: Reaction of Ketene O,O-Acetals with Diazocompounds ...... 309
24.2.6.2.6 Method 6: Dihydroxylation of Ketene O,O-Acetals ............ 310
24.2.6.2.7 Method 7: [2 + 2] Cycloadditions of Ketene O,O-Acetals with Carbonyl Compounds ......................... 311
24.2.6.2.7.1 Variation 1: Lewis Acid Catalyzed [2 + 2] Cycloadditions .......... 312
24.2.6.2.7.2 Variation 2: High-Pressure-Promoted [2 + 2] Cycloadditions with Carbonyl Compounds ......................... 313
24.2.6.2.8 Method 8: [2 + 2] Cycloadditions of Ketene O,O-Acetals with Electron-Deficient Alkenes ......................... 313
24.2.6.2.8.1 Variation 1: Thermal [2 + 2] Cycloadditions .................. 314
24.2.6.2.8.2 Variation 2: Lewis Acid Catalyzed [2 + 2] Cycloadditions .......... 315
24.2.6.2.8.3 Variation 3: [2 + 2] Cycloadditions with 2-Halo-1,4-quinones .......... 315
24.2.6.2.9 Method 9: [4 + 2] Cycloadditions of Ketene O,O-Acetals with Electron-Deficient Heterodienes ......................... 316
24.2.6.2.10 Method 10: [4 + 2] Cycloadditions of Ketene O,O-Acetals with Electron-Deficient Dienes ......................... 318
24.2.6.2.11 Method 11: 1,3-Dipolar Cycloadditions of Ketene O,O-Acetals .......... 319

24.2.7 Product Subclass 7: 1-(Organoxy)-1-(organosulfanyl)alk-1-enes
W. Dölling

24.2.7 Synthesis of Product Subclass 7 ........................................ 323
24.2.7.1 Method 1: 1-(Organoxy)-1-(organosulfanyl)alk-1-enes from Acylated Ketene Acetals .................................. 323
24.2.7.2 Method 2: 1-(Organoxy)-1-(organosulfanyl)alk-1-enes by Addition of Sodium Alkanethiolates to Either Ethoxyacetylethylene or Phenoxycarbonylene .................................. 324
24.2.7.3 Method 3: 1-(Organoxy)-1-(organosulfanyl)alk-1-enes by Alkylolation of O-Alkyl Thiocarboxylates ......................... 324
24.2.7.4 Method 4: 2-Alkylidene-1,3-oxathiolanes from the Anions of Alkyl Thiocarboxylates and 4-Tolueneisulfonates ................. 325
24.2.7.5 Method 5: 1-(Organoxy)-1-(organosulfanyl)alk-1-enes from Carbonyl Compounds .................................. 326
24.2.7.5.1 Variation 1: From Aldehydes or Ketones by Horner–Emmons Reactions 326
24.2.7.5.2 Variation 2: From Ketones by the Peterson Reaction ............... 326
24.2.7.6 Method 6: 1-(Organoxy)-1-(organosulfanyl)alk-1-enes by Treatment of Sulfanylacetylenes with 4-Tolueneisulfonic Acid ......................... 328
24.2.7.7 Method 7: 1-(Organoxy)-1-(organosulfanyl)alk-1-enes from Ketene Dithioacetals .................................. 328
24.2.7.8 Method 8: 1-(Organoxy)-1-(organosulfanyl)alk-1-enes by Other Routes .................................. 329
24.2.8 Product Subclass 8: 1-(Organoxy)-1-(organoselanyl)- and 1-(Organoxy)-1-(organotellanyl)alk-1-enes
W. Dölling

24.2.8 Product Subclass 8: 1-(Organoxy)-1-(organoselanyl)- and 1-(Organoxy)-1-(organotellanyl)alk-1-enes ................................................. 331
24.2.8.1 Synthesis of Product Subclass 8 ............................................. 331
24.2.8.1.1 Method 1: Synthesis from Selenoates or Telluroates ................. 331
24.2.8.1.1.1 Variation 1: Se-Alkylation of O-Alkyl Selenoates ................. 331
24.2.8.1.1.2 Variation 2: O-Silylation of Se-Phenyl or Se-Methyl 2-Methylpropane-
selenoates and Te-Butyl Diphenylethanetelluroate .................... 332
24.2.8.1.1.3 Variation 3: Reaction of Halogenated Esters and Carbamates .......... 332
24.2.8.1.2 Method 2: Addition of 4-Toluenesulfonic Acid to 1-(Phenylselanyl)alk-1ynes .......................................................... 333
24.2.8.1.3 Method 3: Synthesis from Oxygen Heterocycles ..................... 333

24.2.9 Product Subclass 9: 1-Nitrogen-Functionalized 1-(Organoxy)alk-1-enes (Ketene O,N-Acetals)
W. Kantlehner

24.2.9 Product Subclass 9: 1-Nitrogen-Functionalized 1-(Organoxy)alk-1-enes (Ketene O,N-Acetals) ..................................................... 337
24.2.9.1 Synthesis of Product Subclass 9 ............................................. 337
24.2.9.1.1 Method 1: Synthesis from Dimethyl 3-Oxopentanedioate and Ortho Amide Derivatives of Alkynecarboxylic Acids ......................... 337
24.2.9.1.2 Method 2: Synthesis from Oxazoles and Their Derivatives and Isocyanates .............................................................. 337
24.2.9.1.3 Method 3: Synthesis from β-Dicarbonyl Compounds and Isocyanates .......... 338
24.2.9.1.4 Method 4: Synthesis from Aldehydes and Activated Isocyanates .......... 338
24.2.9.1.5 Method 5: Synthesis from 2-Alkylxazolium Salts .......................... 339
24.2.9.1.6 Method 6: Synthesis from Alkyl Carboximidates and Ethyl 2-Cyano-3-ethoxyacrylate ....................................................... 339
24.2.9.1.7 Method 7: Synthesis from Oxazoles and Their Derivatives by Self-Condensation ............................................................... 340
24.2.9.1.8 Method 8: Synthesis from 2-Alkylxazoles and Halogens ................ 340
24.2.9.1.9 Method 9: Synthesis from 3-Iodo-4H-1-benzopyran-4-one and Piperidine .................... 341
24.2.9.1.10 Method 10: Synthesis from 5-(Ethenylmethylene)-1,3-bis(2-methoxyphenyl)thiobarbituric Acid ........................................ 341
24.2.9.1.11 Method 11: Synthesis from 4-Halo-β-oxo Esters and Isocyanates ........... 342
24.2.9.1.12 Method 12: Synthesis from Carboxamides by Alkylation .............. 342
24.2.9.1.13 Method 13: Synthesis from 3-Aminoalk-2-enenitriles and Alcohols or Phenols .............................................................. 345
24.2.9.1.14 Method 14: Synthesis from 5-(4-Chloro-5H-1,2,3-dithiazol-5-ylidene)-2,2-dimethyl-1,3-dioxane-4,6-dione .............................. 345
24.2.9.1.15 Method 15: Synthesis from Oligohaloalkane Derivatives by Substitution and Concomitant Dehydrohalogenation .................. 346
**Method 16:** Synthesis from 1,1-Dihaloalkenes and Related Compounds ........................................  346

**Method 17:** Synthesis from β-Bromoenamines ............................................................  350

**Method 18:** Synthesis from Ketene O,O-Acetals ..........................................................  350

**Method 19:** Synthesis from α-Phosphoryl Thioamide Derivatives ......................................  353

**Method 20:** Synthesis from O,O-Dialkyl Dithiomalonates or Thiomalonic Acid O-Ester Nitriles and Amines ..................................................  354

**Method 21:** Synthesis from Iminocarbonic O,S-Esters .......................................................  357

**Method 22:** Synthesis from Benzoxazole-2-thiones .........................................................  358

**Method 23:** Synthesis from Ketene S,S-Acetals ...............................................................  358

**Method 24:** Synthesis from Ketene S,N-Acetals ...............................................................  360

**Method 25:** Synthesis from Ketene N,N-Acetals ...............................................................  363

**Method 26:** Deprotonation of Alkoxy(alkyl)(dialkylamino)carbenium Salts (Iminium Salts) ............................................................  364

**Method 27:** Elimination of Hydrogen Halides, Alcohols, or Sulfonic Acids from α-Halo or α-Oxy Aldehyde O,N-Acetals .................................................  370

**Method 28:** Elimination of Alcohols or Amines from Amide O,O-Acetals or Ester N,N-Acetals .............................................................  372

**Method 29:** Addition to 3-Oxocarboxylic Acid Derivatives .............................................  375

**Method 30:** Addition of CH-Acidic Compounds to Dialkoxy(amino)-carbenium Salts, Dialkoxy(diamino)methanes, (Trialkoxy)-aminomethanes, and Alkoxy(alkylsulfanyl)aminocarbenium Salts .............................................................  375

**Method 31:** Addition of CH-Acidic Compounds to Imidocarbonates .................................  379

**Method 32:** Addition of CH-Acidic Compounds to Alkyl or Aryl Cyanates ..........................  380

**Method 33:** Synthesis from Carbonyl Compounds and Barbituric Acid Derivatives ............  382

**Method 34:** Synthesis from α,β-Unsaturated Carbonyl Compounds and Malononitrile or Alkyl Cyanoacetates .............................................................  382

**Method 35:** Synthesis from Alkyl Methyleneacyanoacetates or Methyleneemalononitriles and Hydroxyarenes, Hydroxyhetarenes, or Enolizable Ketones .............................................................  383

**Method 36:** Synthesis from Isocyanides by Multicomponent Reactions .............................  390

**Method 37:** Synthesis from Furan-2,3-diones ......................................................................  391

**Method 38:** Synthesis from 2-(Alk-1-enyl)oxazole Derivatives by Cycloaddition Reactions ..........................................................................................................................  392

**Method 39:** Synthesis from Vinyliminophosphoranes .......................................................  393

**Method 40:** Synthesis from Nitriles and Alcohols ..............................................................  393

**Method 41:** Synthesis from Ketenes ....................................................................................  400

**Method 42:** Synthesis from Ketenimines .............................................................................  402

**Method 43:** Synthesis from 1-Alkoxyalk-1-ynes ..................................................................  403

**Method 44:** Synthesis from Alk-1-yne-1-amines ..................................................................  404

**Method 45:** Rearrangement of Cyclobuta-1,3-diene-2,4-diamines ......................................  407

**Method 46:** Synthesis from Oxazoles or Isoxazolum Salts .....................................................  407

**Method 47:** Synthesis from 2,6-Dialkoxy pyridines and Electron-Rich Alkenes ..................  408

**Method 48:** Synthesis from 2-Amino-4,5-dihydropthiophene-3-carbonitriles and Dibenzozyldiazomethane .............................................................  408

**Method 49:** Synthesis from N-Hydroxyenamines ..............................................................  409

24.2.10.1.7 Method 7: Generation of (1-Alkoxyalk-1-enyl)phosphonates by the Horner–Emmons Reaction ................................. 452
24.2.10.1.8 Method 8: Generation of (1-Alkoxyalk-1-enyl)phosphonates by the Peterson Alkenation Reaction .......................... 453
24.2.10.1.9 Method 9: [4 + 2]-Cycloaddition Reactions of Phosphorylated Hetero-1,3-dienes with Enol Ethers .......................... 453
24.2.10.1.10 Method 10: Addition of Phosphines, Phosphinites, Phosphonites, and Phosphites to Ketenes ................................ 454
24.2.10.1.11 Method 11: Addition of Esters of Diphenylphosphinous Acid to Unsaturated Acyl Phosphonates ......................... 455
24.2.10.1.12 Method 12: Addition of Trialkyl Phosphites or 1,1,2,2-Tetraalkoxy-diphosphines to Alk-1-ynyl Ethers ....................... 455
24.2.10.2 Applications of Product Subclass 10 in Organic Synthesis ................................................................. 456

24.2.11 Product Subclass 11: 1,1-Bis(organosulfanyl)alk-1-enes (Ketene S,S-Acetals)
W. Dölling

24.2.11.1 Synthesis of Product Subclass 11 ................................................................. 461
24.2.11.1.1 Method 1: Alkylation of Dithiocarboxylic Acids and Their Derivatives ..... 461
24.2.11.1.1.1 Variation 1: From Dithiocarboxylic Acids ........................................ 461
24.2.11.1.1.2 Variation 2: From Alkyl Dithiocarboxylates ................................. 462
24.2.11.1.1.3 Variation 3: From 1,1,1-Tris(alkylsulfanyl)ethanes .......................... 464
24.2.11.1.1.4 Variation 4: Reactions of Carboxylic Esters, Lactones, and Carboxylic Acids with Metal Thiolates .......................... 465
24.2.11.1.2 Method 2: Ketene S,S-Acetals from 1,1-Dihaloalkenes ...................... 466
24.2.11.1.3 Method 3: Ketene S,S-Acetals from 2-Substituted 1,1-Disulfanylated Ethanes ............................................ 468
24.2.11.1.3.1 Variation 1: O-Acylation of 1-Aryl-2,2-bis(methylsulfanyl)ethanones .... 468
24.2.11.1.3.2 Variation 2: Dehydrochlorination of 2-Chloro-1,1-disulfanylethanes .... 468
24.2.11.1.3.3 Variation 3: Dehydration of 2,2-Bis(methylsulfanyl)ethanols ............ 469
24.2.11.1.3.4 Variation 4: Elimination of a Thiol from 1,1,2-Tris(organosulfanyl)ethanes 472
24.2.11.1.3.5 Variation 5: Elimination of an Amine from 2-(Aminomethyl)-1,3-dithiane S,S-Dioxides ....................................... 473
24.2.11.1.4 Method 4: Alkenation of Carbonyl Compounds .............................. 473
24.2.11.1.4.1 Variation 1: Using Bis(phenylsulfanyl)methylboronates ................. 474
24.2.11.1.4.2 Variation 2: Wittig and Horner–Emmons Reactions ....................... 474
24.2.11.1.4.3 Variation 3: Peterson Reactions .................................................. 477
24.2.11.1.5 Method 5: Synthesis from 1,3-Dithianes, Nitriles, and Amides .......... 479
24.2.11.1.6 Method 6: Reactions of Carbon Disulfide with Carbaniions ............. 480
24.2.11.1.6.1 Variation 1: From Aldehydes and Ketones .................................... 481
24.2.11.1.6.2 Variation 2: From Esters, Lactones, Amides, Nitriles, and Hydrazones .... 486
24.2.11.1.6.3 Variation 3: From Isocyanides or Nitroalkanes .......................... 494
24.2.11.1.6.4 Variation 4: From Sulfur-Stabilized Carbanions .......................... 494
Variation 5: From Phosphorus-Stabilized Carbanions .......................... 497
Variation 6: From α-Aminated Carbanions or Nitrogen Ylides .................... 498
Variation 7: From Heterocycles Containing Endocyclic Methylene Groups 500
Variation 8: From Other Resonance-Stabilized Carbanions ......................... 501
Variation 9: From Nonstabilized Carbanions ........................................ 501
Method 7: Transformations of Other Ketene S,S-Acetals .......................... 503
Method 8: Synthesis from the Diesters of Thioicarbonates ........................ 507
Variation 1: Reactions with Acetonitriles and Other CH-Acidic Compounds ....... 507
Variation 2: By Desulfurization .............................................................. 508
Variation 3: By the Reactions of Carbenes or Ylides .................................. 509
Method 9: Ring Opening and/or Rearrangement ......................................... 509
Applications of Product Subclass 11 in Organic Synthesis .......................... 510

Product Subclass 12: 1-(Organoselanyl)-1-(organosulfanyl)alk-1-ynes
and 1-(Organosulfanyl)-1-(organotellanyl)alk-1-ynes
M. Yoshimatsu

Synthesis of Product Subclass 12 .................................................................. 517
Method 1: Alkylation of Alkaneselenothioate Esters .................................... 517
Variation 1: By Alkylation of Lithium Enethiolates or Eneselenolates .......... 517
Variation 2: By Alkylation of Ammonium Eneselenolates of
S-Alkyl Alkaneselenothioates ................................................................. 519
Variation 3: By Cadmium(II) Acetate Mediated Conversion of
S-Alkyl Alkaneselenothioates ................................................................... 520
Variation 4: By Reaction of S-Alkyl Alkaneselenothioates with
Trialkyl Phosphites ................................................................................. 521
Method 2: Chalcogenation of α-Metalated
1-(Organochalcogeno)alkenes ................................................................ 521
Method 3: Horner–Emmons Alkenation of Carbonyl Compounds ............... 524
Method 4: Alkylation with Thiols of Lithium Eneselenolates
Generated from Alkynylselenolates ......................................................... 525
Method 5: Selenenylation of 1-(Organosulfonyl)alkynes ............................ 526
Applications of Product Subclass 12 in Organic Synthesis .......................... 526

Product Subclass 13: 1-Nitrogen-Functionalized
1-(Organosulfanyl)alk-1-ynes
W. Dölling

Synthesis of Product Subclass 13 .................................................................. 529
Method 1: 1-(Organosulfanyl)alk-1-en-1-amines by
the S-Alkylation of Thiocarboxamides .................................................. 529
Method 2: Synthesis from 1-Halo-1-(organosulfanyl)alk-1-enes or Ketene S,S-Acetals

Variation 1: Reaction of 1-Halo-1-(organosulfanyl)alk-1-enes with Amines

Variation 2: Reaction of Ketene S,S-Acetals with Amines and Related Compounds

Variation 3: Reaction of 1-Chloroethenamines with Sodium Alkanethiolates

Method 3: Synthesis from Dithiocarboxylates or Dithiocarbonates

Method 4: Synthesis from Ynamines

Method 5: Synthesis from Isothiocyanates and S-Alkylation of the Adducts

Applications of Product Subclass 13 in Organic Synthesis

Method 1: Synthesis from 1-Phosphorus-Functionalized 1-(Organosulfanyl)alkanes

Variation 1: By Elimination of Hydrogen Chloride or Methanesulfenic or Methaneselenenic Acid

Variation 2: By the Pummerer Reaction

Variation 3: By Condensation with Carbonyl Compounds and Derivatives

Applications of Product Subclass 14 in Organic Synthesis

Method 1: Selenenylation of $\omega$-Metalated 1-(Organoselanyl)alkenes

Method 2: Nickel-Catalyzed Substitution of 1,1-Dibromoalkenes with Benzeneselenolates

Method 3: Alkenation of Carbonyl Compounds

Variation 1: Peterson Alkenation of Aldehydes with [Bis(organoselanyl)-(trimethylsilyl)methyl]lithium Reagents

Variation 2: Reaction of Lithiated 1,1-[Bis(organoselanyl)methyl]phosphonates with Aldehydes and Ketones

Method 4: $\beta$-Elimination from Selenoortho Esters with or without a 2-Hydroxy Group

Method 5: Reaction of Alkylidenecarbenes with Diselenides

Applications of Product Subclass 15 in Organic Synthesis
### 24.2.15.1.6 Method 6: Reaction of C—H Acidic Methylene Compounds with Carbon Diselenide ........................................ 553

### 24.2.15.1.7 Method 7: Reaction of Alkenes or Alkynes with Selenols, Selenolates, or Other Selenenylation Agents ............................ 555

### 24.2.15.2 Applications of Product Subclass 15 in Organic Synthesis ............................... 558

### 24.2.16 Product Subclass 16: 1,1-Bis(organotellanyl)alk-1-enes and Derivatives

#### M. Yoshimatsu

### 24.2.16 Synthesis of Product Subclass 16 .............................. 563

#### 24.2.16.1 Method 1: Chalcogenation of α-Metalated 1-(Organochalcogeno)alk-1-enes ........................................ 563

#### 24.2.16.2 Method 2: Reaction of Aldehydes with Lithium [Bis(organotellanyl)methyl]phosphonates .................. 564

#### 24.2.16.3 Method 3: Syntheses of [1-(Organotellanyl)alkenyl]phosphonates and [1-(Organotellanyl)alkenyl]stannanes .............................. 565

### 24.2.16 Applications of Product Subclass 16 in Organic Synthesis ...................................................... 566

### 24.2.17 Product Subclass 17: 1,1-Bis(nitrogen-functionalized) Alk-1-enes

#### W. Kantlehner

### 24.2.17 Alk-1-ene-1,1-diamines .................................................. 571

#### 24.2.17.1 Synthesis of Alk-1-ene-1,1-diamines .......................... 571

#### 24.2.17.1.1 Method 1: Synthesis from Chloroformamidinium Salts and Alkyllithium Compounds .............................. 571

#### 24.2.17.1.2 Method 2: Synthesis from But-2-yne-1,1,1,4,4,4-hexamines and Trimethylsilyl Cyanide .............................. 571

#### 24.2.17.1.3 Method 3: Synthesis from Amines and Carbenes or Carbenoids ............................. 572

#### 24.2.17.1.4 Method 4: Synthesis from Nitroketene N,N-Acetals and (Ethoxymethylene)malonic Acid Derivatives .......................... 572

#### 24.2.17.1.5 Method 5: Synthesis from Diaziridinones and Malonic Acid Derivatives ............................ 573

#### 24.2.17.1.6 Method 6: Synthesis from Alk-1-yn-1-amines 573

#### 24.2.17.1.7 Method 7: Synthesis from N-Aryl-2-chloroacetamides and Malononitrile ............................ 575

#### 24.2.17.1.8 Method 8: Synthesis from Alkyldienemalononitriles and Compounds Containing a CH-Acidic Group .......................... 576

#### 24.2.17.1.9 Method 9: Synthesis from Alkyldiene Malononitriles and Amines or Amine Derivatives .............................. 578

#### 24.2.17.1.10 Method 10: Synthesis from Aziridines and Malonic Acid Derivatives ............................. 580

#### 24.2.17.1.11 Method 11: Synthesis from 1,1,1-Trihaloalkanes ........................................ 581

24.2.17.3.3.1 Method 1: 1,1-Bisazoalk-1-enes from Formazans ...................................................................................... 747
24.2.17.3.1.1 Variation 1: By Dehydrogenation ...................................................................................... 747
24.2.17.3.1.1.2 Variation 2: By Base-Induced Deprotonation ...................................................................................... 748
24.2.17.3.1.1.3 Variation 3: By Dehydration ...................................................................................... 748
24.2.17.3.1.2 Method 2: 1,1-Diazidoalk-1-enes from 3,3-Dichloroacrylonitriles .............................................................. 749
24.2.17.3.1.3 Method 3: 1,1-Dinitroalk-1-enes by Formation of the C$\equiv$C Bond from Two Carbon Components ............................................................... 750
Variation 1: Reactions between Di- or Trinitromethyl Reagents and Diazo Compounds ........................................ 750
Variation 2: Reactions between Tetra- or Dinitromethane and Other Reagents ........................................... 750
Method 4: 1,1-Dinitroalk-1-enes by Formation of the C=C Bond by Elimination ........................................... 752
Method 5: 1,1-Dinitroalk-1-enes by Introduction of the Nitro Groups at the C=C Bonds of Alkenes ......................... 753
Method 6: 1,1-Dinitroalk-1-enes from Methyl-Substituted Heterocycles .......................................................... 755
Method 7: 1,1-Dinitroalk-1-enes by Substitution of Other 1,1-Dinitroalk-1-enes ........................................... 757
Variation 1: By Substitution at the C=C Bond ........................................... 757
Variation 2: By Other Substitutions ........................................... 759
Applications of 1,1-Bisazo-, 1,1-Diazo-, and 1,1-Dinitroalk-1-enes in Organic Synthesis ........................................... 760

Product Subclass 18: 1-Nitrogen-Functionalized 1-Phosphorus-Functionalized Alk-1-enes
M. Stankević and K. M. Pietrusiewicz

Synthesis of Product Subclass 18 ........................................... 767
Method 1: Synthesis from Haloenamines and Haloimines ........................................... 767
Method 2: Synthesis from 1-Phosphorus-Functionalized Alkanamines .......................................................... 768
Variation 1: By Condensation with Carbonyl Compounds ........................................... 768
Variation 2: By the Horner–Wadsworth–Emmons Reaction ........................................... 769
Variation 3: ByElimination ........................................... 769
Applications of Products Subclass 18 in Organic Synthesis ........................................... 770

Product Subclass 19: 1,1-Bis(phosphorus-functionalized) Alk-1-enes
M. Stankević and K. M. Pietrusiewicz

Synthesis of Product Subclass 19 ........................................... 775
Method 1: Substitution Reactions of 1,1-Dihaloalkenes ........................................... 775
Method 2: Synthesis from Methylenebis(phosphonates) and Methylenebis(phosphine sulfides) ........................................... 776
Method 3: Synthesis from α-Acyl Ylides ........................................... 777
Applications of Product Subclass 19 in Organic Synthesis ........................................... 777
24.3 Product Class 3: Bis(heteroatom-functionalized) Acetylenes

24.3.1 Product Subclass 1: Dihaloacetylenes
B. Witulski and C. Alayrac

24.3.1.1 Synthesis of Product Subclass 1

24.3.1.1.1 Method 1: Vacuum Pyrolysis

24.3.1.1.2 Method 2: Electrical Discharge

24.3.1.1.3 Method 3: Photolysis

24.3.1.1.4 Method 4: Dehydrohalogenation and Dehalogenation Reactions

24.3.1.1.5 Variation 1: Dehydrohalogenation of 2-Fluoro-1,1-dihaloalkenes

24.3.1.1.6 Variation 2: Dehydrohalogenation of Trihaloalkanes

24.3.1.1.7 Variation 3: Dehalogenation of Tetrahaloalkanes

24.3.1.1.8 Variation 4: Dehydrochlorination of Trichloroethene

24.3.1.5 Method 5: Halogenation of Acetylene

24.3.1.5.1 Variation 1: Metalation and Chlorination of Acetylene

24.3.1.5.2 Variation 2: Metalation and Bromination of Acetylene

24.3.1.5.3 Variation 3: Iodination of Acetylene Using Iodine in Liquid Ammonia

24.3.1.5.4 Variation 4: Iodination of Acetylenes Using Bis(2,4,6-collidine)iodonium Hexafluorophosphate

24.3.1.2 Applications of Product Subclass 1 in Organic Synthesis

24.3.2 Product Subclass 2: 1-Heteroatom-Functionalized 2-Haloacetylenes
B. Witulski and C. Alayrac

24.3.2.1 Synthesis of Product Subclass 2

24.3.2.1.1 Method 1: Synthesis of 1-Halo-2-(triorganosilyl)acetylenes

24.3.2.1.2 Variation 1: Halogenation of Silylated Acetylenes

24.3.2.1.3 Variation 2: Halogenation of Metal Silylacetylides

24.3.2.1.4 Variation 3: Synthesis of 1-Fluoro-2-(triisopropylsilyl)acetylene from 1,1-Difluoroethene

24.3.2.1.5 Variation 4: Silylation of Metal Chloro- or Bromoacetylides

24.3.2.1.6 Variation 5: Iodination of Disilylated Acetylenes

24.3.2.1.7 Method 2: Synthesis of 1-Alkoxy-2-haloacetylenes

24.3.2.1.8 Method 3: Synthesis of 1-Halo-2-(organosulfonyl)- and 1-Halo-2-(organosulfanyl)acetylenes

24.3.2.1.9 Variation 1: Bromination of Sulfonlated Acetylenes with N-Bromosuccinimide

24.3.2.1.10 Variation 2: By the Hypobromite or Hypochlorite Methods

24.3.2.1.11 Variation 3: Halogenation of Lithium 2-Sulfanylacetylides

24.3.2.1.12 Variation 4: Alkylthiolation of Lithium Chloroacetylde
24.3.1.3.5 Variation 5: 1-(Alkylsulfanyl)-2-chloroacetylenes under Phase-Transfer Conditions .................................................. 807
24.3.1.4 Method 4: Synthesis of 2-Haloacetylen-1-amines .......................... 808
24.3.1.4.1 Variation 1: By the Hypobromite Method .................................. 808
24.3.1.4.2 Variation 2: From 1,1-Dichloro-2-fluoroethene ............................ 808
24.3.1.4.3 Variation 3: From Chloroenamines ........................................... 809
24.3.1.5 Method 5: Synthesis of 1-Halo-2-(phosphoryl)acetylenes ............... 810
  24.3.1.5.1 Variation 1: By the Hypochlorite Method ................................. 811
  24.3.1.5.2 Variation 2: By the Ionin–Petrov Method .................................. 811
24.3.2 Applications of Product Subclass 2 in Organic Synthesis .................. 812
  24.3.2.1 Method 1: Substitution Reactions toward Diheterosubstituted Acetylenes ................................................................. 812
  24.3.2.1.1 Variation 1: Heterosubstituted Ynamines ................................. 812
  24.3.2.1.2 Variation 2: 1-Heteroatom-Functionalized 2-(Phosphoryl)acetylenes .......................................................... 813
  24.3.2.2 Method 2: Cross-Coupling Reactions in the Presence of Transition Metals ................................................................. 813
  24.3.2.2.1 Variation 1: With Aryl- or Alkylcopper Reagents ..................... 813
  24.3.2.2.2 Variation 2: With Alkenylcopper Reagents ............................... 814
  24.3.2.2.3 Variation 3: 1-Bromo-2-silylacetylenes in Cadiot–Chodkiewicz Coupling Reactions .......................................................... 814
  24.3.2.2.4 Variation 4: Chemoselective Two-Carbon Homologation of Aldehydes .......................... 815
  24.3.2.2.5 Variation 5: Catalytic ortho-Ethynylation of Phenols and Anilines with 1-Chloro-2-(triethylsilyl)acetylene .......................... 816
  24.3.2.3 Method 3: Cycloaddition Reactions ............................................ 816
24.3.3 Product Subclass 3: Bis(organooxy)acetylenes
  B. Witulski and C. Alayrac

24.3.3 Synthesis of Product Subclass 3 ...................................................... 821
  24.3.3.1 Method 1: Synthesis of Diphenoxyacetylene by Substitution Reactions ...................................................... 824
  24.3.3.1.1 Method 2: Synthesis of Bis(organooxy)acetylenes by Elimination Reactions .......................................................... 825
  24.3.3.1.2 Variation 1: From Polymeric Glyoxal ....................................... 825
  24.3.3.1.2 Variation 2: Dialkoxyacetylenes from Bromoalkenes ................ 826
  24.3.3.1.3 Variation 3: Di-tert-butoxyacetylene from trans,2,3-Dichloro-1,4-dioxane .......................................................... 828
  24.3.3.1.4 Method 3: Photochemical Synthesis of Acetylenediol ................ 829
24.3.3.2 Applications of Product Subclass 3 in Organic Synthesis ................ 829
  24.3.3.2.1 Method 1: Synthesis of Hexasubstituted Benzenes .................... 829
  24.3.3.2.2 Method 2: Synthesis of Deltic Acid ........................................ 830
  24.3.3.2.3 Method 3: Synthesis of Squaric and Semisquaric Acids ............. 830
  24.3.3.2.4 Method 4:Synthesis of Hydrocroconic Acid and Croconate Dianion .... 831
### 24.3.4 Product Subclass 4: 1-(Organochalcogeno)-2-(organooxy)acetylenes
B. Witulski and C. Alayrac

Bis(organosulfanyl)acetylenes ............................................ 849

Method 1: Reaction of Electrophilic Acetylenic Species with
Organosulfanyl Compounds ............................................ 849

Method 2: Reaction of Metal Acetylides with Organosulfanyl Compounds 851

Method 3: Elimination from 1-Chloro-1,2-bis(organosulfanyl)ethenes 853

Method 4: Oxidation of 1,2-Bis(organosulfanyl)acetylenes 854

1-(Organoselanyl)-2-(organosulfanyl)acetylenes ............................ 854

Method 1: Reaction of 1-Chloro-2-(organosulfanyl)acetylenes with
Organoselenols .......................................................... 854

1-(Organosulfanyl)-2-(organotellanyl)acetylenes ........................... 855

Method 1: Reaction of Diorgano Ditellurides with
1,1-Dichloro-2-(organosulfanyl)ethenes .................................. 855

Bis(organoselanyl)acetylenes ................................................ 855

Method 1: Reaction of Sodium Acetylide with Elemental Selenium and
Alkyl Halides .................................................................... 855

Method 2: Reaction of Lithium Acetylides with
Bis(selenocyanato)alkanes .................................................... 856

Method 3: Reaction of (Organoselanyl)acetylides with
Areneselenenyl Halides ........................................................ 856

Bis(organotellanyl)acetylenes .................................................. 856

Method 1: Reaction of Dimetal Acetylides with Elemental Tellurium and
Alkyl Halides or Organotellanyl Compounds ............................. 857

Method 2: Reaction of Acetylene with Dialkyl Ditellurides .............. 857

Product Subclass 8: 1-Nitrogen-Functionalized
2-(Organochalcogeno)acetylenes
T. Murai

Product Subclass 8: 1-Nitrogen-Functionalized
2-(Organochalcogeno)acetylenes ........................................... 859

Synthesis of Product Subclass 8 ............................................. 859

N,N-Dialkyl-2-(organosulfanyl)acetylen-1-amines ......................... 859

Method 1: Reaction of 1-Chloro-2-(organosulfanyl)acetylenes with
Amines or Metal Amides ...................................................... 859

Variation 1: Reaction of Phenyl(2-tosylethynyl)iodonium
Trifluoromethanesulfonate with Metal Amides .......................... 860

Method 2: Reaction of Metal 2-(Diorganoamino)acetylides with
Sulfur and Alkyl Halides or Sulfur Electrophiles ....................... 861

2-(Organoselanyl)acetylen-1-amines ...................................... 861

Method 1: Reaction of Phenyl 2,2,2-Trifluoroethyl Selenide with
Lithium Dialkylamides ....................................................... 861
24.3.9 Product Subclass 9: 2-Phosphorus-Functionalized 1-(Organochalcogeno)acetylenes
T. Murai

24.3.9.1 Synthesis of Product Subclass 9

24.3.9.1.1 Method 1: Reaction of 1-Chloro-2-(organosulfanyl)acetylenes with Trivalent Phosphorus Compounds

24.3.9.1.2 Method 2: Reaction of 1-Chloro-2-phosphorylacetylenes with Thiols or Metal Thiolates

24.3.10 Product Subclass 10: Bis(nitrogen-functionalized) Acetylenes
B. Witulski and C. Alayrac

24.3.10.1 Synthesis of Product Subclass 10

24.3.10.1.1 Method 1: Synthesis from α-Diiminium Salts

24.3.10.1.2 Method 2: Synthesis from 1-Bromoethene-1,2-diamines

24.3.10.1.3 Method 3: Synthesis from Chloroketene N,N-Acetals

24.3.10.1.4 Method 4: One-Pot Procedure from Trichloroethenamines

24.3.10.1.5 Method 5: Flash Pyrolysis

24.3.10.1.6 Method 6: Dimerization of Alkyl Isocyanides

24.3.10.1.7 Method 7: One-Pot Procedure from Trichloroethenamines

24.3.10.2 Applications of Product Subclass 10 in Organic Synthesis

24.3.10.2.1 Method 1: Synthesis of N,N,N',N'-Tetraethylchalcogenooxalamides

24.3.10.2.2 Method 2: Synthesis of Bis(dialkylamino)cyclopropane Derivatives

24.3.10.2.2.1 Variation 1: Bis(dialkylamino)cyclopropenethiones

24.3.10.2.2.2 Variation 2: Bis(dialkylamino)cyclopropenimines

24.3.10.2.3 Method 3: Synthesis of Bis(dialkylamino)cyclobutene Derivatives

24.3.10.2.3.1 Variation 1: Tris- or Tetrakis(dimethylamino)cyclobutenes

24.3.10.2.3.2 Variation 2: Spiro-Annulated Products

24.3.10.2.4 Method 4: Synthesis of Heterocyclic Compounds

24.3.10.2.4.1 Variation 1: N,N,N',N'-Tetramethylpyrazolediamines

24.3.10.2.4.2 Variation 2: 2,6-Diazabicyclo[2.2.2]oct-7-ene-3,5-diones

24.3.10.2.4.3 Variation 3: 2-Thia-1-phosphabicyclo[3.2.0]hepta-3,6-diene-6,7-diamines

24.3.10.2.4.4 Variation 4: 1,3-Diphospha-Dewar Benzenes

24.3.10.2.5 Method 5: Synthesis of Metal Complexes

24.3.10.2.5.1 Variation 1: Tricarbonyliron Complexes of Cyclopentadienones

24.3.10.2.5.2 Variation 2: Tricyanoiron Complexes of Cyclopentadienones
Variation 2: Cyclobutenylidene Complexes of Pentacarbonyltungsten 880

Variation 3: \(N,N',N'\text{-Tetraethyl-3-methoxyindene-1,2-diamine as a Ligand of Tricarbonylchromium}\) 881

Product Subclass 11: 1-Nitrogen-Functionalized 2-Phosphorus-Functionalized Acetylenes and Bis(phosphorus-functionalized) Acetylenes 883

Method 1: Synthesis of 1-Amino-2-(phosphoryl)acetylenes 885
Method 2: Synthesis of 1-Amino-2-(thiophosphoryl)acetylenes 887
Method 3: Synthesis of 1-Amino-2-(selenophosphoryl)acetylenes 887
Method 4: Synthesis of 1-Amino-2-(phosphorimidoyl)acetylenes 888
Method 5: Synthesis of (Aminoethynyl)triphenylphosphonium Salts 889
Method 6: Synthesis of 1-Amino-2-(phosphino)acetylenes 890
Method 7: Synthesis of Bis(phosphorylated) Acetylenes 890
Method 8: Synthesis of Bis(thiophosphoryl)acetylenes 891
Method 9: Synthesis of Bis(diorganoselenophosphoryl)acetylenes 894
Method 10: Synthesis of Bis(phosphorimidoyl)acetylenes 894
Method 11: Synthesis of Bis(dihalophosphino)acetylenes 895
Method 12: Synthesis of Bis[(dialkylamino)phosphino]acetylenes 896
Method 13: Synthesis of Bis(phosphino)acetylenes from Acetylene 896
Method 14: Synthesis of Bis(phosphino)acetylenes from Tetrachloroethene 897
Method 15: Synthesis of Bis(phosphino)acetylene from 1,4-Diphosphabutatriene 898

Method 1: Synthesis of 1-Amino-2-(phosphoryl)acetylenes 885
Method 2: Synthesis of 1-Amino-2-(thiophosphoryl)acetylenes 887
Method 4: Synthesis of 1-Amino-2-(phosphorimidoyl)acetylenes 888
Method 5: Synthesis of (Aminoethynyl)triphenylphosphonium Salts 889
Method 6: Synthesis of 1-Amino-2-(phosphino)acetylenes 890
Method 7: Synthesis of Bis(phosphorylated) Acetylenes 891
Method 8: Synthesis of Bis(thiophosphoryl)acetylenes 891
Method 9: Synthesis of Bis(diorganoselenophosphoryl)acetylenes 894
Method 10: Synthesis of Bis(phosphorimidoyl)acetylenes 894
Method 11: Synthesis of Bis(dihalophosphino)acetylenes 895
Method 12: Synthesis of Bis[(dialkylamino)phosphino]acetylenes 896
Method 13: Synthesis of Bis(phosphino)acetylenes from Acetylene 896
Method 14: Synthesis of Bis(phosphino)acetylenes from Tetrachloroethene 897
Method 15: Synthesis of Bis(phosphino)acetylene from 1,4-Diphosphabutatriene 898

Method 1: Synthesis of 1-Amino-2-(phosphoryl)acetylenes 885
Method 2: Synthesis of 1-Amino-2-(thiophosphoryl)acetylenes 887
Method 4: Synthesis of 1-Amino-2-(phosphorimidoyl)acetylenes 888
Method 5: Synthesis of (Aminoethynyl)triphenylphosphonium Salts 889
Method 6: Synthesis of 1-Amino-2-(phosphino)acetylenes 890
Method 7: Synthesis of Bis(phosphorylated) Acetylenes 891
Method 8: Synthesis of Bis(thiophosphoryl)acetylenes 891
Method 9: Synthesis of Bis(diorganoselenophosphoryl)acetylenes 894
Method 10: Synthesis of Bis(phosphorimidoyl)acetylenes 894
Method 11: Synthesis of Bis(dihalophosphino)acetylenes 895
Method 12: Synthesis of Bis[(dialkylamino)phosphino]acetylenes 896
Method 13: Synthesis of Bis(phosphino)acetylenes from Acetylene 896
Method 14: Synthesis of Bis(phosphino)acetylenes from Tetrachloroethene 897
Method 15: Synthesis of Bis(phosphino)acetylene from 1,4-Diphosphabutatriene 898

Method 1: Synthesis of 1-Amino-2-(phosphoryl)acetylenes 885
Method 2: Synthesis of 1-Amino-2-(thiophosphoryl)acetylenes 887
Method 4: Synthesis of 1-Amino-2-(phosphorimidoyl)acetylenes 888
Method 5: Synthesis of (Aminoethynyl)triphenylphosphonium Salts 889
Method 6: Synthesis of 1-Amino-2-(phosphino)acetylenes 890
Method 7: Synthesis of Bis(phosphorylated) Acetylenes 891
Method 8: Synthesis of Bis(thiophosphoryl)acetylenes 891
Method 9: Synthesis of Bis(diorganoselenophosphoryl)acetylenes 894
Method 10: Synthesis of Bis(phosphorimidoyl)acetylenes 894
Method 11: Synthesis of Bis(dihalophosphino)acetylenes 895
Method 12: Synthesis of Bis[(dialkylamino)phosphino]acetylenes 896
Method 13: Synthesis of Bis(phosphino)acetylenes from Acetylene 896
Method 14: Synthesis of Bis(phosphino)acetylenes from Tetrachloroethene 897
Method 15: Synthesis of Bis(phosphino)acetylene from 1,4-Diphosphabutatriene 898
Applications of Product Subclass 11 in Organic Synthesis

24.3.11.2 Method 1: Diels–Alder Reactions

24.3.11.2.1 Method 2: Synthesis of Triazoles by Addition to Azides

24.3.11.2.2 Method 3: Synthesis of Pyrazoles by [3 + 2]-Cycloaddition Reactions with Diazoolkanes

24.3.11.2.3 Method 4: Synthesis of 1,3-Diphosphaallylium Salts

24.3.11.2.4 Method 5: Synthesis of Metal Complexes from Bis(diphenylphosphino)acetylene

Product Class 4: 1-Heteroatom-Functionalized Alk-1-ynes

24.4 Product Subclass 1: 1-Haloalk-1-ynes and Alk-1-yn-1-ols

B. Witulski and C. Alayrac

Synthesis of Product Subclass 1

24.4.1 Method 1: Halogenation of Alk-1-ynes

24.4.1.1 Variation 1: By Reaction with N-Halosuccinimides

24.4.1.2 Variation 2: Bis(trimethylsilyl) Peroxide and Metal-Promoted Transfer of Halides

24.4.1.3 Variation 3: Straus Reaction

24.4.1.4 Variation 4: Bromination Reaction with Triphenylphosphine and Carbon Tetrabromide

24.4.1.5 Variation 5: Iodination with a Polymer-Supported Bis(acyloxy)iodate(I) Reagent

24.4.1.6 Variation 6: Iodination with Bis(2,4,6-collidine)iodonium Hexafluorophosphate

24.4.1.7 Variation 7: Iodination with Molecular Iodine

24.4.1.8 Method 2: Halogenation of Metal Acetylides

24.4.1.9 Variation 1: Halogenation with Molecular Bromine or Iodine

24.4.1.10 Variation 2: Chlorination of Lithium Acetylides with N-Chlorosuccinimide

24.4.1.11 Variation 3: Iodination of Sodium Acetylides with Bis(pyridine)iodonium Tetrafluoroborate

24.4.1.12 Method 3: Halodecarboxylation of Propynoic Acids

24.4.1.13 Variation 1: With N-Halosuccinimides and Tetrabutylammonium Trifluoroacetate

24.4.1.14 Variation 2: With Bis(2,4,6-collidine)iodonium or Bis(2,4,6-collidine)-bromonium Hexafluorophosphate

24.4.1.15 Method 4: Direct Transformation of Trimethylsilylalkynes into Haloalkynes

24.4.1.16 Method 5: Dehydrohalogenation of 1,1-Dihaloalkenes

24.4.1.17 Variation 1: Dehydrohalogenation under Phase-Transfer Conditions

24.4.1.18 Variation 2: Dehydrohalogenation in Organic Solvents

24.4.1.19 Method 6: Dehalogenation of Oligohaloalkanes with a Metal

24.4.1.20 Method 7: Functionalization of Metal Haloacetylides
Method 8: Synthesis of 1-Haloalk-1-ynes from Carbonyl Compounds

Variation 1: Synthesis of 2-Aryl-1-bromoacetylenes from Hydrazones

Variation 2: Synthesis of 1-Chloroalk-1-ynes from Dihydroisoxazolones

Variation 3: Synthesis of 1-Chloroalk-1-ynes from Esters

Variation 4: One-Pot Conversion of Aldehydes into 1-Haloalk-1-ynes with Dihalomethylphosphonates

Variation 5: One-Pot Conversion of Aldehydes into 1-Haloalk-1-ynes with Dihalomethylenetriphenylphosphoranes

Method 9: Base-Induced Rearrangement of (Z)-(2-Halovinyl)iodonium Salts

Method 10: Synthesis of 1-Fluoroalk-1-ynes by Electrical Discharge

Method 11: Synthesis of 1-Haloalk-1-ynes by Vacuum Pyrolysis

Method 12: Synthesis of 1-Haloalk-1-ynes by Photolysis

Method 13: Photochemical Synthesis of Alk-1-yn-1-ols

Applications of Product Subclass 1 in Organic Synthesis

Method 1: Cadiot–Chodkiewicz Coupling

Method 2: Cross Coupling of 1-Haloalk-1-ynes with Metalated Ethenes

Method 3: Cross-Coupling Reactions of 1-Haloalk-1-ynes with Alkylzinc–Copper Reagents

Method 4: Synthesis of Stereochemically Defined Vinylboronates by Hydroboration of 1-Haloalk-1-ynes

Product Subclass 2: 1-(Organooxy)alk-1-ynes and 1-(Heterooxy)alk-1-ynes

B. Witulski and C. Alayrac

Synthesis of Product Subclass 2

Method 1: Synthesis of Alk-1-ynyl Carbamates by Elimination

Method 2: Synthesis of Alk-1-ynyl Carboxylates from Alk-1-ynyliodonium Salts

Method 3: Synthesis of Alk-1-ynyl Ethers from 1-Alkoxy-2-haloacetylenes

Method 4: Synthesis of Alk-1-ynyl Ethers by Dehydrohalogenation

Variation 1: From Alkoxides and Trichloroethene

Variation 2: Dehydrohalogenation of 2-Halovinyl Ethers

Variation 3: From Chloroacctalddehyde Dialkyl Acetals

Variation 4: From 2,2,2-Trifluoroethyl Ethers

Variation 5: From Acetates

Method 5: Synthesis of Alk-1-ynyl Sulfonates from Alk-1-ynyliodonium Salts

Method 6: Synthesis of Dialkyl Alk-1-ynyl Phosphates from Alk-1-ynyliodonium Salts

Method 7: Synthesis of 1-Siloxyalk-1-ynes from Alk-1-ynyliodonium Salts

Method 8: From Lithium Alk-1-ynolates

Method 9: From 1-Siloxyalk-1-ynes
24.4.2.1.7.2 Variation 2: By Oxygenation of Acetylides .............................. 946
24.4.2.1.7.3 Variation 3: From Ester-Derived Ynoles ............................... 947
24.4.2.1.7.4 Variation 4: From (Z)-2-Halovinyl Silyl Ethers ........................ 948
24.4.2.1.7.5 Variation 5: From Silylated α-Diazo Carbonyl Compounds ............ 949
24.4.2.2 Applications of Product Subclass 2 in Organic Synthesis ................. 950
24.4.2.2.1 Method 1: Synthesis of Stereochemically Defined Metalated Vinyl Ethers 950
24.4.2.2.2 Method 2: Addition Reactions to Carbonyl Compounds .................. 952
24.4.2.2.3 Method 3: Enyne Metathesis .............................................. 952
24.4.2.2.4 Method 4: Metal- or Acid-Promoted Cycloisomerization of 1-Siloxyalk-1-ynes 953
24.4.2.2.5 Method 5: Aromatic Annulation Reactions ................................ 953

24.4.3 Product Subclass 3: 1-(Organosulfanyl)-, 1-(Organoselanyl)-, and 1-(Organotellanyl)alk-1-ynes
V. A. Potapov and B. A. Trofimov

24.4.3.1 (Organosulfanyl)-, (Organoselanyl)-, and (Organotellanyl)acetylenes .... 958
24.4.3.1.1 Synthesis of (Organosulfanyl)-, (Organoselanyl)-, and (Organotellanyl)acetylenes 958
24.4.3.1.1.1 Method 1: Synthesis from Metal Acetylides and Chalcogen Electrophiles 958
24.4.3.1.1.2 Method 2: Synthesis from Ethynylmagnesium Halides and Organochalcogeno Halides 960
24.4.3.1.1.3 Method 3: (Organotellanyl)acetylenes from Acetylene, Diorgano Ditellurides, and Iodomethane 961
24.4.3.1.1.4 Method 4: Dehydrohalogenation Reactions ................................. 962
24.4.3.1.1.5 Method 5: (Organosulfanyl)acetylenes from 1,2-Bis(organosulfanyl)-ethenes and 1-(Organooxy)-2-(organosulfanyl)ethenes .... 963
24.4.3.1.2 Applications of (Organosulfanyl)-, (Organoselanyl)-, and (Organotellanyl)-acetylenes in Organic Synthesis .................... 964
24.4.3.1.2.1 Method 1: The Mannich Reaction ........................................ 965
24.4.3.1.2.2 Method 2: Syntheses Based on the Reactions of Metal (Organosulfanyl)-acetylides .................................................. 965
24.4.3.1.2.3 Method 3: Syntheses Based on the Addition and Cycloaddition Reactions of (Organochalcogeno)acetylenes ......................... 966
24.4.3.1.2.4 Method 4: Oxidation of (Organosulfanyl)acetylenes to (Organosulfinyl)- and (Organosulfonyl)acetylenes ......................... 968
24.4.3.1.2.5 Method 5: Dialk-1-ynyl Sulfides, Selenides, and Tellurides ............. 968
24.4.3.1.2.6 Method 6: Synthesis of Dialk-1-ynyl Sulfides, Selenides, and Tellurides 969
24.4.3.1.2.7 Method 1: Synthesis from Metal Acetylides and Chalcogen Halides .... 969
24.4.3.1.2.8 Method 2: Dialk-1-ynyl Selenides and Tellurides from Selenium and Tellurium Amides and Alk-1-ynes ......................... 969
24.4.3.1.2.9 Method 3: Dialk-1-ynyl Sulfides by Dehydrohalogenation Reactions .. 970
24.4.3.1 Method 1: Synthesis of Heterocyclic Compounds from Dialk-1-ynyl Sulfides

24.4.3.2.1 Method 1: Synthesis of Heterocyclic Compounds from Dialk-1-ynyl Sulfides

24.4.3.3.1 Synthesis of 1-(Alkylsulfanyl)- and 1-(Arylsulfanyl)alk-1-ynes and Their Selenium and Tellurium Analogues

24.4.3.3.1.1 Method 1: Synthesis from Metal Acetylides, Elemental Chalcogens, and Haloalkanes

24.4.3.3.1.2 Method 2: Synthesis from Metal Acetylides and Electrophilic Chalcogen Species

24.4.3.3.1.3 Method 3: Synthesis from Alk-1-ynes, Chalcogen Electrophiles, and Copper(I) Salts

24.4.3.3.1.4 Method 4: Synthesis from Alk-1-ynylidonium Salts and Chalcogen Nucleophiles

24.4.3.3.1.5 Method 5: 1-(Phenylselanyl)alk-1-ynes from Alk-1-ynes, Diphenyl Diselenide, and (Diacetoxyiodo)benzene

24.4.3.3.1.6 Method 6: 1-(Arylchalcogeno)alk-1-ynes from Dialk-1-ynylmercurials and Diaryl Dichalcogenides

24.4.3.3.1.7 Method 7: Synthesis from 1-Haloalk-1-ynes in the Presence of Copper(I) Iodide

24.4.3.3.1.8 Method 8: 1-(Organosulfanyl)- and 1-(Organoselanyl)alk-1-ynes from 1,2,3-Thia- and 1,2,3-Selenadiazoles

24.4.3.3.1.9 Method 9: 1-(Alkylsulfanyl)- and 1-(Arylsulfanyl)alk-1-ynes by Elimination Reactions

24.4.3.3.1.10 Methods 10: Additional Methods

24.4.3.3.2 Applications of 1-(Alkylsulfanyl)- and 1-(Arylsulfanyl)alk-1-ynes and Their Selenium and Tellurium Analogues

24.4.3.3.2.1 Method 1: Generation of Alk-1-ynylmetals from 1-(Organoselanyl)- and 1-(Organotellanyl)alk-1-ynes

24.4.3.3.2.2 Method 2: Cross-Coupling Reactions

24.4.3.3.2.3 Method 3: Synthesis of Stereodefined Alkenes
24.3.2.4 Method 4: Cycloaddition Reactions ........................................ 992
24.3.2.5 Method 5: Oxidation of 1-(Organosulfanyl)alk-1-ynes to 1-(Organosulfinyl)- and 1-(Organosulfonyl)alk-1-ynes .............. 993
24.3.2.6 Methods 6: Additional Methods ........................................ 994
24.3.4.1 Synthesis of 1-(Vinylsulfanyl)-, 1-(Vinylselanyl)-, and 1-(Vinyltellanyl)-alk-1-ynes ........................................ 996
24.3.4.1.1 Method 1: Synthesis from Lithium Acetylides and Vinylsulfenamides 996
24.3.4.1.2 Method 2: Dehydrohalogenation Reactions ...................... 997
24.3.4.1.2 Applications of 1-(Vinylsulfanyl)-, 1-(Vinylselanyl)-, and 1-(Vinyltellanyl)-alk-1-ynes in Organic Synthesis .................. 998
24.3.4.1.2 Method 1: Synthesis of Heterocyclic Compounds from 1-(Vinylsulfanyl)alk-1-ynes ...................... 998

24.4 Product Subclass 4: 1-Nitrogen-Functionalized Alk-1-ynes

24.4.1 Alk-1-yn-1-amines
B. Witulski and C. Alayrac

24.4.1.1 Synthesis of Alk-1-yn-1-amines ........................................ 1009
24.4.1.1.1 Method 1: Electrophilic Amination of Metal Acetylides .......... 1009
24.4.1.1.2 Method 2: Synthesis from 1-Haloalk-1-ynes ........................ 1010
24.4.1.1.3 Method 3: Synthesis from Alk-1-ynyliodonium Salts .............. 1011
24.4.1.1.4 Method 4: Synthesis from 1-Alkoxyalk-1-ynes .................... 1012
24.4.1.1.5 Method 5: Synthesis from 1,1-Dihaloalkenes ........................ 1013
24.4.1.1.6 Method 6: Elimination Reactions of Halogenated Enamines .... 1014
24.4.1.1.6.1 Variation 1: From β-Halogenated Enamines .................... 1014
24.4.1.1.6.2 Variation 2: From α,β-Di- or Trihalogenated Enamines .......... 1014
24.4.1.1.7 Method 7: Shapiro-Type Eliminations ................................ 1016
24.4.1.1.8 Method 8: Fragmentation Reactions ................................ 1016
24.4.1.1.8.1 Variation 1: Lithiation and Fragmentation of 1-Phenyl-1,2,3-triazoles .... 1017
24.4.1.1.8.2 Variation 2: By Flash-Vacuum Pyrolysis ...................... 1017
24.4.1.1.8.3 Variation 3: Flash-Photolytic Generation of Primary, Secondary, and Tertiary Alk-1-yn-1-amines ...................... 1018
24.4.1.1.9 Method 9: Base-Catalyzed Isomerization of Propargylamines .... 1019
24.4.1.2 Applications of Alk-1-yn-1-amines in Organic Synthesis ............ 1020
24.4.1.2.1 Method 1: Stereochemically Defined Enamines by the Carbo- or Silylmetallation of Alk-1-yn-1-amines ...................... 1021
24.4.1.2.2 Method 2: One-Carbon Homologation of Carboxylic Acids ........ 1021
24.4.1.2.3 Method 3: Alkylation of Alk-1-yn-1-amines by Claisen Rearrangements 1022
24.4.1.2.4 Method 4: [2 + 2] Cycloadditions with Cyclopentenones and Cyclohexenones ................................. 1023
### 24.4.2 N-Acyl- and N-Sulfonylalk-1-yn-1-amines

B. Witulski and C. Alayrac

#### 24.4.2.1 Synthesis of N-Acyl- and N-Sulfonylalk-1-yn-1-amines

- **Method 1:** N-Alkynylation with Alkynyliodonium Salts .................................................. 1033
- **Method 2:** Copper-Promoted Cross Coupling of 1-Haloalk-1-ynes with Amides .............................. 1034
  - **Variation 1:** With a Stoichiometric Amount of a Copper(I) Salt ........................................ 1035
  - **Variation 2:** With Catalytic Amounts of Copper(I) or Copper(II) Salts .................................... 1036
- **Method 3:** Elimination Reactions ....................................................................................... 1037
  - **Variation 1:** By a Formamide to Ynamide Homologation .................................................... 1037
  - **Variation 2:** From /C226, /C226-Dichloroenamides by Suzuki–Miyaura Coupling and Dehydrochlorination ........................................ 1038
  - **Variation 3:** Bromination/Dehydrobromination of Enamides ............................................... 1039
  - **Variation 4:** Dechlorination of Trichlorinated Enamides Derived from Pyrimidine Bases .............. 1040
- **Method 4:** Functionalization of Ynamides ........................................................................... 1041
- **Method 5:** Deallylation of Ynamides .................................................................................... 1041
- **Method 6:** Negishi Coupling with Ynamides ....................................................................... 1043
- **Method 7:** Sonogashira Coupling with Ynamides ............................................................... 1044

#### 24.4.2.2 Applications of N-Acyl- and N-Sulfonylalk-1-yn-1-amines in Organic Synthesis

- **Method 1:** Regioselective Hydrometalation or Carbometalation of Ynamides .......................... 1048
- **Method 2:** Transition-Metal-Catalyzed Cross-Coupling Reactions with Ynamides ......................... 1049
- **Method 3:** Intramolecular Cyclizations .................................................................................. 1050
- **Method 4:** Ring-Closing Ene–yne Metathesis with Ynamides .................................................. 1051
- **Method 5:** Pauson–Khand Reactions with Ynamides ............................................................. 1052
- **Method 6:** [4 + 2] Cycloadditions ......................................................................................... 1054
- **Method 7:** [2 + 2 + 2] Cycloadditions ...................................................................................... 1054
24.4.3 Alk-1-ynyldiazonium Salts, 1-Azidoalk-1-ynes, and 1-Nitroalk-1-ynes
K. Banert

24.4.3 Synthesis of Alk-1-ynyldiazonium Salts, 1-Azidoalk-1-ynes, and 1-Nitroalk-1-ynes

24.4.3.1 Method 1: Synthesis of Alk-1-ynyldiazonium Salts

24.4.3.1.1 Variation 1: From a 1-Nitrosoalk-1-yne

24.4.3.1.2 Variation 2: From a 1-Chloro-1-(tosylazo)alk-1-ene

24.4.3.1.3 Method 2: Synthesis of 1-Azidoalk-1-ynes

24.4.3.1.4 Variation 1: Introduction of the Azido Group by Nucleophilic Substitution

24.4.3.1.5 Variation 2: Formation of the C≡C Bond by Elimination of Halogen

24.4.3.1.6 Variation 3: Oxidation of 1-Nitrosoalk-1-ynes

24.4.3.2 Method 3: Synthesis of 1-Nitroalk-1-ynes

24.4.3.2.1 Variation 1: Formation of the C≡C Bond by Elimination

24.4.3.2.2 Variation 2: Introduction of the Nitro Group by Substitution Reactions

24.4.3.2.3 Variation 3: Oxidation of 1-Nitrosoalk-1-ynes

24.4.4 Application of Alk-1-ynyldiazonium Salts, 1-Azidoalk-1-ynes, and 1-Nitroalk-1-ynes in Organic Synthesis

24.4.5 Product Subclass 5: 1-Phosphorus-Functionalized Alk-1-ynes
K. M. Pietrusiewicz and M. Stankević

24.4.5 Synthesis of Product Subclass 5

24.4.5.1 Method 1: Nucleophilic Substitution Reactions at Phosphorus with Alkali Metal Acetylides

24.4.5.2 Method 2: Reaction of Phosphorus Nucleophiles with Electrophilic Alkynes

24.4.5.2.1 Variation 1: From Triorgano Phosphites (Michaelis–Arbuzov Reaction)

24.4.5.2.2 Variation 2: From Diorgano Phosphites (Michaelis–Becker Reaction)

24.4.5.2.3 Variation 3: From Tertiary Phosphines by Quaternization

24.4.5.3 Method 3: Elimination

24.4.5.3.1 Variation 1: From Phosphorus-Substituted Alkenes

24.4.5.3.2 Variation 2: From α-Phosphorus-Substituted Ketones

24.4.5.4 Method 4: Coupling of Phosphorus Derivatives with Alkynes and Alkenes

24.4.5.5 Method 5: Structural Modification of Other Phosphorus-Substituted Alkynes

24.4.5.5.1 Variation 1: Modification of the Phosphorus Functionality

24.4.5.5.2 Variation 2: Modification of the Alkyne Fragment

24.4.5.6 Applications of Product Subclass 5 in Organic Synthesis

25.1.3 Synthesis by Isomerization  
A. Gansäuer and K. Muñiz

25.1.3 Synthesis by Isomerization ........................................... 57

25.1.3.1 Method 1: Transition-Metal-Catalyzed Isomerization of Allylic Alcohols 57

25.1.3.1.1 Variation 1: Enantioselective Transition-Metal-Catalyzed Isomerization of Allylic Alcohols 59

25.1.3.2 Method 2: Transition-Metal-Catalyzed Isomerization of Allylic Amines and Subsequent Hydrolysis 59

25.1.3.2.1 Variation 1: Enantioselective Transition-Metal-Catalyzed Isomerization of Allylic Amines and Subsequent Hydrolysis 61

25.1.4 Synthesis by Reduction or by Reduction Followed by Hydrolysis  
C. Harcken

25.1.4 Synthesis by Reduction or by Reduction Followed by Hydrolysis ........ 65

25.1.4.1 Reduction of Carboxylic Acid Chlorides ........................................... 66

25.1.4.1.1 Method 1: Rosenmund Reduction 66

25.1.4.1.2 Method 2: Reduction Using Complex Aluminum Hydrides 67

25.1.4.1.3 Method 3: Reduction Using Complex Borohydrides 69

25.1.4.1.4 Method 4: Reduction Using Triethylsilane 70

25.1.4.1.5 Method 5: Reduction Using Tributyltin Hydride 70

25.1.4.2 Reduction of Carboxylic Acids ...................................................... 71

25.1.4.2.1 Method 1: Reduction Using Complex Aluminum Hydrides 71

25.1.4.2.1.1 Variation 1: Using Lithium Aluminum Hydride 71

25.1.4.2.1.2 Variation 2: Using Lithium Bis(N-methylpiperazinyl)aluminum Hydride 72

25.1.4.2.1.3 Variation 3: Using Lithium Tri-tert-butoxyaluminum Hydride 73

25.1.4.2.2 Method 2: Reduction Using Boranes 75

25.1.4.2.3 Method 3: Reduction Using Formic Acid or Formates 76

25.1.4.2.4 Method 4: Reduction Using Alkali Metals 76

25.1.4.2.5 Method 5: Reduction Using Two-Step, One-Pot Procedures 76

25.1.4.2.5.1 Variation 1: Reduction of Carboxylic Acids through Silyl Esters 76

25.1.4.2.5.2 Variation 2: Reduction of Carboxylic Acids through an Imidazolide 77

25.1.4.2.5.3 Variation 3: Reduction of Carboxylic Acids through a Triazinyl Ester 78

25.1.4.2.5.4 Variation 4: One-Pot Reduction–Oxidation of Carboxylic Acids 79

25.1.4.3 Reduction of Esters .......................................................... 79

25.1.4.3.1 Method 1: Reduction Using Diisobutylaluminum Hydride 80

25.1.4.3.2 Method 2: Reduction Using Sodium Bis(2-methoxyethoxy)aluminum Hydride 84

25.1.4.3.3 Method 3: Reduction Using Other Complex Aluminum Hydrides 85

25.1.4.3.3.1 Variation 1: Using Lithium Aluminum Hydride 85

25.1.4.3.3.2 Variation 2: Using Lithium Tri-tert-butoxyaluminum Hydride 86

25.1.4.3.3.3 Variation 3: Using Lithium Bis(diethylamino)aluminum Hydride 86

25.1.4.3.4 Method 4: Reduction Using Alkali Metal Amalgam 87
25.1.4.4 Reduction of Thioesters ................................................... 87
25.1.4.4.1 Method 1: Reduction Using Raney Nickel .......................... 88
25.1.4.4.2 Method 2: Reduction Using Triethylsilane ......................... 88
25.1.4.4.3 Method 3: Reduction Using Diisobutylaluminum Hydride .......... 90
25.1.4.5 Reduction of Amides ...................................................... 90
25.1.4.5.1 Method 1: Reduction Using Lithium Aluminum Hydride .......... 92
25.1.4.5.1.1 Variation 1: Reduction of Weinreb Amides .................... 92
25.1.4.5.1.2 Variation 2: Reduction of Other Amides ....................... 94
25.1.4.5.2 Method 2: Reduction Using Diisobutylaluminum Hydride .......... 95
25.1.4.5.2.1 Variation 1: Reduction of Weinreb Amides .................... 95
25.1.4.5.2.2 Variation 2: Reduction of Other Amides ....................... 96
25.1.4.5.3 Method 3: Reduction Using Other Complex Aluminum Hydrides .... 97
25.1.4.5.3.1 Variation 1: Using Sodium Bis(2-methoxyethoxy)aluminum Hydride 97
25.1.4.5.3.2 Variation 2: Using Lithium Alkoxyluminum Hydrides ............ 98
25.1.4.5.3.3 Variation 3: Using Lithium Tris(dialkylamino)aluminum Hydrides 99
25.1.4.5.4 Method 4: Reduction Using Boranes or Complex Borohydrides ...... 99
25.1.4.5.5 Method 5: Reduction Using Chlorobis(η⁵-cyclopentadienyl)-
hydrodizirconium(IV) .......................................................... 100
25.1.4.6 Reduction of Lactones and Lactams ..................................... 101
25.1.4.6.1 Method 1: Reduction Using Complex Aluminum Hydrides .......... 101
25.1.4.6.1.1 Variation 1: Using Lithium Aluminum Hydride .................. 101
25.1.4.6.1.2 Variation 2: Using Sodium Bis(2-methoxyethoxy)aluminum Hydride 101
25.1.4.6.1.3 Variation 3: Using Lithium Tri-tert-butoxyaluminum Hydride ........ 102
25.1.4.6.1.4 Variation 4: Using Diisobutylaluminum Hydride ............... 102
25.1.4.6.2 Method 2: Reduction Using Boranes ................................ 105
25.1.4.6.3 Method 3: Reduction Using Alkali Metal Amalgam .................. 106
25.1.4.6.4 Method 4: Reduction of Lactams ................................... 106
25.1.4.7 Reduction of Heterocyclic Derivatives of Carboxylic Acids .......... 107
25.1.4.7.1 Method 1: Reduction of 5,6-Dihydro-4H-1,3-oxazines and
4,5-Dihydrooxazoles Using Sodium Borohydride ....................... 107
25.1.4.8 Reduction of Nitriles Followed by Hydrolysis ......................... 110
25.1.4.8.1 Method 1: Reduction Using Diisobutylaluminum Hydride .......... 111
25.1.4.8.2 Method 2: Reduction Using Complex Aluminum Hydrides .......... 118
25.1.4.8.2.1 Variation 1: Using Lithium Aluminum Hydride .................. 118
25.1.4.8.2.2 Variation 2: Using Lithium Triethoxyluminum Hydride .......... 118
25.1.4.8.2.3 Variation 3: Using Sodium Tris(dialkylamino)aluminum Hydrides 119
25.1.4.8.3 Method 3: Reduction Using Raney Nickel .......................... 119
25.1.4.8.4 Method 4: Reduction Using Tin(II) Chloride ........................ 120
25.1.4.9 Reduction of Enals ........................................................ 121
25.1.4.9.1 Method 1: Hydrogenation ........................................... 121
25.1.4.9.2 Method 2: Hydrostannylation ........................................ 122
25.1.4.9.3 Method 3: Hydrosilylation .......................................... 123
25.1.4.9.4 Method 4: Reduction Using Copper Reagents ........................ 124
25.1.4.9.5 Method 5: Reduction Using Inorganic Salts ........................ 125
25.1.5 Synthesis by Elimination or Rearrangement
M. Kalesse

25.1.5 Synthesis by Elimination or Rearrangement .................................................. 137
25.1.5.1 Method 1: Synthesis from Halohydrins .................................................. 137
25.1.5.2 Method 2: Synthesis from Glycols ........................................................ 139
25.1.5.3 Method 3: Semipinacol Rearrangement .................................................. 140
25.1.5.4 Method 4: Synthesis from Epoxides ...................................................... 142

25.1.6 Synthesis by Protonation
M. Kalesse

25.1.6 Synthesis by Protonation .............................................................................. 147
25.1.6.1 Method 1: Protonation of Enol Ethers .................................................... 147
25.1.6.2 Method 2: Asymmetric Protonation ....................................................... 148

25.1.7 Synthesis by Hydrolysis
B. Plietker

25.1.7 Synthesis by Hydrolysis .............................................................................. 151
25.1.7.1 Hydrolysis of Imines and Derivatives ..................................................... 151
25.1.7.1.1 Method 1: Hydrolysis of Imines ......................................................... 151
25.1.7.1.2 Method 2: Hydrolysis of Oximes and Derivatives ............................. 153
25.1.7.1.3 Method 3: Hydrolysis of Sulfonated Imines ..................................... 154
25.1.7.1.4 Method 4: Hydrolysis of N-Alkylimines .......................................... 155
25.1.7.1.5 Method 5: Hydrolysis of Hydrazones .............................................. 156
25.1.7.1.5.1 Variation 1: Hydrolysis of N-Arylhydrazones ................................ 156
25.1.7.1.5.2 Variation 2: Hydrolysis of N-Alkylhydrazones ............................ 158
25.1.7.1.6 Method 6: Hydrolysis of Hydrazides and Derivatives .................... 159
25.1.7.1.7 Method 7: Hydrolysis of Semicarbazones and Related Compounds .... 159
25.1.7.2 Hydrolysis of Acetals and Their Derivatives ......................................... 160
25.1.7.2.1 Method 1: Hydrolysis of O,O-Acetals and Hemiacetals .................. 160
25.1.7.2.1.1 Variation 1: Hydrolysis of Acyclic Hemiacetals .......................... 160
25.1.7.2.1.2 Variation 2: Hydrolysis of Carbohydrates and Higher Cyclic Hemiacetals .......................... 161
25.1.7.2.1.3 Variation 3: Hydrolysis of Acyclic Dialkyl Acetals ..................... 164
25.1.7.2.1.4 Variation 4: Hydrolysis of gem-Diacetates .................................. 165
25.1.7.2.1.5 Variation 5: Hydrolysis of Alkoxytetrahydrofurans and -pyrans 166
25.1.7.2.1.6 Variation 6: Hydrolysis of Cyclic Acetals .................................... 167
25.1.7.2.2 Method 2: Hydrolysis of O,S-Acetals .............................................. 169
25.1.7.2.2.1 Variation 1: Hydrolysis of \( \alpha \)-Hydroxy Sulphonic Acids .......... 169
25.1.7.2.2.2 Variation 2: Hydrolysis of Hemithioacetals ............................... 169
25.1.7.2.2.3 Variation 3: Hydrolysis of Acyclic O,S-Acetals .......................... 170
25.1.7.2.2.4 Variation 4: Hydrolysis of Alkyl Thiolactols or Alkoxothiopyrans and Related Compounds .......................... 172
25.1.7.2.3 Method 3: Hydrolysis of O,N-Acetals ............................................ 174
Variation 1: Hydrolysis of Acyclic O,N-Hemiacetals

Variation 2: Hydrolysis of Cyclic O,N-Hemiacetals

Variation 3: Hydrolysis of Acyclic O,N-Acetals

Variation 4: Hydrolysis of Cyclic O,N-Acetals

Variation 1: Hydrolysis of Acyclic S,S-Acetals

Variation 2: Hydrolysis of Cyclic S,S-Acetals

Variation 1: Hydrolysis of Acyclic S,N-Acetals

Variation 2: Hydrolysis of Cyclic S,N-Acetals

Variation 1: Hydrolysis of Enol Ethers and Their O-Derivatives

Variation 2: Hydrolysis of Vinyl Carboxylates

Method 1: Hydrolysis of Enamines and Derivatives

Variation 1: Hydrolysis of N,N-Dialkylamines

Variation 2: Hydrolysis of Enamides

Method 3: Hydrolysis of Vinyl Halides

Synthesis by Hydration of Alkynes

M. Oestreich

Synthesis by Direct Hydration

Method 1: Ruthenium(II)-Catalyzed Hydration

Variation 1: Simple Ruthenium(II) Catalysis

Variation 2: Ruthenium(II) Catalysis Assisted by Hydrogen Bonding

Variation 3: Ruthenium(II) Catalysis Using a Bifunctional Catalyst

Variation 4: Ruthenium(II) Catalysis Using a Self-Assembled Catalyst

Synthesis by Indirect Hydration

Method 1: Hydroboration Followed by Oxidation

Variation 1: Hydroboration with Sterically Hindered Boranes

Variation 2: Hydroboration with Catecholborane

Variation 3: Hydroboration with Haloboranes

Method 2: Hydrosilylation Followed by Oxidation

Method 3: Hydroamination Followed by Hydrolysis

Synthesis by Formylation of Enolates

T. J. J. Müller

Synthesis by Formylation of Enolates

Method 1: Crossed Claisen Condensations with Formates

Variation 1: Using Ketones or Esters and an Alkali Metal Alkoxide as the Base

Variation 2: Using Ketones or Esters and Sodium Metal as the Base

Variation 3: Using Ketones or Esters and Sodium Hydride as the Base
Variation 4: Using Preformed Lithium Enolates of Ketones or Esters 222
Method 2: Vilsmeier Formylation of Carbonyl Compounds, Enols, or Enol Ethers 223
Method 3: Condensation of Ketones, Esters, or Active Methylene Compounds with Dimethylformamide Acetals 227
Method 4: Condensation of Enol Ethers with Orthoformates 229
Method 5: Condensation of Esters with Formyl Acetate 229
Method 6: Synthesis from Enols by the Reimer–Tiemann Reaction 230
Method 7: Synthesis from Enol Ethers and Related Compounds by Mukaiyama Condensation 230
Method 8: Formylation of Pyranones with Dichloromethyl Methyl Ether 231
Method 9: Synthesis from Reformatsky Enolates 232
Methods 10: Additional Syntheses 232

Synthesis by Homologation of Aldehydes

Method 1: Homologation via the Darzens Reaction 237
Method 2: Homologation via the Nef Reaction 239
Method 3: Homologation via the Formation of a Nitrile Intermediate 242
Method 4: Homologation with Dihalomethane 246
Method 5: Homologation with Diazomethane 248
Method 6: Homologation with Phosphorus Reagents 249
Variation 1: Via 1-Heteroatom-Substituted Alkene Intermediates 249
Variation 2: Via Terminal Acetylene Intermediates 257
Method 7: Homologation with Boron Reagents 260
Method 8: Homologation with Silicon Reagents 262
Variation 1: Via 1-Heteroatom-Substituted Alkene Intermediates 262
Variation 2: Via α,β-Epoxide Intermediates 267
Method 9: Homologation with Sulfur Reagents 268
Variation 1: Via 1-Heteroatom-Substituted Alkene Intermediates 268
Variation 2: Via Epoxide Intermediates 269

Synthesis by Hydroformylation of Alkenes

Method 1: Regioselective Hydroformylation: Substrate Control 283
Method 2: Regioselective Hydroformylation: Catalyst Control 290
Method 3: Isomerizing Hydroformylation 293
Method 4: Diastereoselective Hydroformylation: Passive Substrate Control 294
Variation 1: Cyclic Alkenes 295
Variation 2: Acyclic and Exocyclic Alkenes 296
25.1.11.5 Method 5: Diastereoselective Hydroformylation: Active Substrate Control .................................. 297
25.1.11.6 Method 6: Diastereoselective Hydroformylation: Catalyst Control ................................. 304
25.1.11.7 Method 7: Enantioselective Hydroformylation ................................................................. 306
25.1.11.7.1 Variation 1: Vinylarenes .................................................................................................. 307
25.1.11.7.2 Variation 2: Aliphatic Alkenes and Dienes ........................................................................ 311
25.1.11.7.3 Variation 3: Functionalized Alkenes ............................................................................... 313

25.1.12 Synthesis by C<sub>1</sub>-Extension of Alkyl Halides
A. S. K. Hashmi

25.1.12 Method 1: Synthesis from Formyl Anion Equivalents ...................................................... 319
25.1.12.1 Method 1: Synthesis from Formyl Anion Equivalents ...................................................... 319
25.1.12.1.1 Variation 1: Synthesis Using 1,3-Dithiane or Bis(phenylsulfanyl)methane ................. 321
25.1.12.1.2 Variation 2: Synthesis Using 1,3,5-Trithiane ................................................................ 321
25.1.12.1.3 Variation 3: Synthesis Using 5-Methyl-1,3,5-dithiazinane ............................................ 322
25.1.12.1.4 Variation 4: Synthesis Using Sulfur(VI) Reagents ...................................................... 323
25.1.12.1.5 Variation 5: Synthesis Using (Diethylamino)acetonitrile ............................................. 324
25.1.12.1.6 Variation 6: Synthesis Using Silicon, Selenium, and Tellurium Reagents ................. 325
25.1.12.2 Method 2: Reductive Carbonylation .................................................................................. 326
25.1.12.2.1 Variation 1: Using Hydrogen and a Platinum Catalyst ................................................. 326
25.1.12.2.2 Variation 2: Using Tributyltin Hydride and a Palladium Catalyst ............................... 327
25.1.12.2.3 Variation 3: Using Stoichiometric Amounts of Tetracarbonylhydridoferrate Salts .................................................. 328
25.1.12.2.4 Variation 4: Using Stoichiometric Amounts of Carbonylferrate Salts and an Acidic Workup ................................................................. 329
25.1.12.2.5 Variation 5: Using Stannanes by a Free-Radical Pathway ............................................ 330
25.1.12.3 Method 3: Reduction with Lithium Metal in the Presence of N,N-Disubstituted Formamides ................................................................. 331
25.1.12.4 Method 4: Synthesis Using Triphenylphosphine and Alkyl Formates .......................... 332

25.1.13 Synthesis by C<sub>1</sub>-Extension of Organometallics
A. S. K. Hashmi

25.1.13 Method 1: Reaction with Formamides ............................................................................... 338
25.1.13.1 Method 1: Reaction with Formamides ............................................................................... 338
25.1.13.1.1 Variation 1: Reaction with Dimethylformamide ........................................................... 338
25.1.13.1.2 Variation 2: Reaction with Piperidine-1-carbaldehyde ............................................... 342
25.1.13.1.3 Variation 3: Reaction with N-Methyl-N-phenylformamide .......................................... 344
25.1.13.1.4 Variation 4: Reaction with N-Methyl-N-(2-pyridyl)formamide .................................... 345
25.1.13.2 Method 2: Reaction with Ortho Esters ............................................................................. 345
25.1.13.2.1 Variation 1: Reaction with Triethyl Orthoformate ....................................................... 346
25.1.13.2.2 Variation 2: Reaction with Diethyl Phenyl Orthoformate ............................................ 347
25.1.13.3 Method 3: Reaction of Organoboranes with Carbon Monoxide and Hydride Reagents, Followed by Oxidative Workup ................................. 349

Synthesis by Diels–Alder Reactions with Enals or Their Acetals
B. Witulski and C. Alayrac

Method 1: Thermal Diels–Alder Reactions
Method 2: Lewis Acid Catalyzed Diels–Alder Reactions
Method 3: Bronsted Acid Catalyzed Diels–Alder Reactions
   (Cationic Diels–Alder Reactions)
Method 4: Stepwise Diels–Alder Reactions of π-Complexed 1,3-Dienes
Method 5: Enantioselective Diels–Alder Reactions Catalyzed by Chiral Lewis Acids
Method 6: Enantioselective Organocatalytic Diels–Alder Reactions
Method 7: Heterogeneously Catalyzed and Polymer-Supported Diels–Alder Reactions
Method 8: Diels–Alder Reactions Accelerated by High Pressure
Method 9: Diels–Alder Reactions in Aqueous Media

Product Class 2: 2-Oxoaldehydes and Heteroatom Analogues
T. Olpp

Product Subclass 1: 2-Oxoaldehydes
Synthesis of Product Subclass 1
Method 1: Oxidation of Activated C–H Bonds by Selenium Dioxide
Method 2: Oxidation via Bromomethyl Ketones
Method 3: Oxidation of α-Diazo Ketones
Method 4: Oxidation of Hydroxymethyl Ketones
Method 5: Hydrolysis of Glyoxal Dialkyl Acetals and Related Compounds
Method 6: Reduction of Glyoxylic Acid Chlorides
Method 7: Cleavage of C=C Bonds
Method 8: C=C Bond Formation

Product Subclass 2: 2-Imino-, 2-(Hydroxyimino)-, 2-Hydrazono-, and 2-Diazoaldehydes
Synthesis of Product Subclass 2
Method 1: Formylation of Imine Derivatives
Method 2: Functionalization of Enamines with N-Electrophiles
Method 3: Addition of Azides to π-Amino Acroleins
Method 4: Nitrosation of Enals and Alkynes

Product Subclass 3: 2-Thioxoaldehydes
Synthesis of Product Subclass 3
Method 1: Retro Pericyclic Reactions

Product Subclass 4: 2-Phosphoranylidenealdehydes
25.2.4.1.1 Method 1: Formylation of Phosphoranes 435
25.2.4.1.2 Method 2: Electrophilic Substitution in Phosphoranylideneacetaldehyde 436

25.3 Product Class 3: 2,2-Diheteroatom-Substituted Aldehydes
M. Harmata

25.3 Product Class 3: 2,2-Diheteroatom-Substituted Aldehydes 441
25.3.1 Product Subclass 1: 2,2-Dihaloaldehydes 441
25.3.1.1 Synthesis of Product Subclass 1 441
25.3.1.1 Method 1: Synthesis by Halogenation 441
25.3.1.1.1 Variation 1: Bromination of an Acetal 441
25.3.1.1.2 Variation 2: Halogenation of Enamines 442
25.3.1.1.3 Variation 3: Chlorination of Tetrahydrofuran 442
25.3.1.1.4 Variation 4: Chlorination of Aldehydes 442
25.3.1.2 Method 2: Synthesis by Acylation 445
25.3.1.3 Method 3: Synthesis by Rearrangement 448
25.3.1.4 Method 4: Synthesis by Oxidation or Reduction 449
25.3.1.5 Method 5: Synthesis by Radical Addition 451
25.3.1.6 Methods 6: Miscellaneous Procedures 452

25.3.2 Product Subclass 2: 2,2-Dialkoxyaldehydes and Related Species 453
25.3.2.1 Synthesis of Product Subclass 2 453
25.3.2.1 Method 1: Synthesis by Oxidation or Reduction 453
25.3.2.2 Method 2: Synthesis by Formation of Acetals or Ketals 454
25.3.2.3 Method 3: Synthesis by Rearrangement 455

25.3.3 Product Subclass 3: 2,2-Disulfanylaldehydes and Related Species 455
25.3.3.1 Synthesis of Product Subclass 3 455
25.3.3.1 Method 1: Synthesis by Sulfanylation or Selanylation 455
25.3.3.2 Method 2: Synthesis by Formylation 456
25.3.3.3 Method 3: Synthesis by Substitution and Alkylation 457
25.3.3.4 Method 4: Synthesis by Oxidation or Reduction 458

25.4 Product Class 4: 2-Heteroatom-Substituted Aldehydes and Sugar Aldehydes
M. Eckhardt

25.4 Product Class 4: 2-Heteroatom-Substituted Aldehydes and Sugar Aldehydes 463
25.4.1 Product Subclass 1: 2-Haloaldehydes 463
25.4.1.1 Synthesis of Product Subclass 1 464
25.4.1.1.1 2-Fluoroaldehydes 464
25.4.1.1.1 Method 1: Fluorination of Aldehydes 464
25.4.1.1.2 2-Chloroaldehydes 466
Method 1: Chlorination of Aldehydes ........................................ 466

Variation 1: Chlorination under Acidic Conditions .................... 466
Variation 2: Amine-Catalyzed Chlorination ............................. 467

2-Bromoaldehydes ................................................................. 468

Method 1: Bromination of Aldehydes ...................................... 468

Variation 1: Bromination under Neutral and Acidic Conditions ..... 469
Variation 2: Amine-Catalyzed Bromination ............................. 471

2-Iodoaldehydes ..................................................................... 472

Method 1: Iodination of Aldehydes ........................................... 472
Method 2: Iodination of Preformed Enolates ........................... 473

Product Subclass 2: 2-Oxyaldehydes ...................................... 474

Synthesis of Product Subclass 2 ............................................. 474

Method 1: Aminooxylation of Aldehydes ................................. 474
Method 2: Oxidation of Enol Ethers and Silyl Enol Ethers ........ 477
Method 3: Oxidative C–C Bond Cleavage of Glycols ................ 477
Method 4: Oxidation/Aminooxylation of Primary Alcohols ......... 480
Method 5: Addition of Formyl Anion Equivalents to Aldehydes ... 481

Variation 1: Via 2-(Trimethylsilyl)thiazole .............................. 481
Variation 2: Using Carbon Monoxide and a Silane .................. 485
Variation 3: Via Dialkylhydrazones ....................................... 486
Variation 4: Via Acetals ......................................................... 489

Product Subclass 3: 2-Aminoaldehydes ................................ 492

Synthesis of Product Subclass 3 ............................................. 493

Method 1: $\alpha$-Amination of Aldehydes ................................. 493
Method 2: Oxidative C–C Bond Cleavage of Glycols ............... 495
Method 3: Addition of Formyl Anion Equivalents to Aldimines and Their Derivatives ..................................................... 496

Variation 1: Via Thiazoles ...................................................... 496
Variation 2: Via Thioacetals .................................................. 501

Product Class 5: Ynals .............................................................. 507

B. Witulski and C. Alayrac

Synthesis of Product Class 5 .................................................. 508

Method 1: Substitution Reactions with Alk-1-ynes .................... 508

Variation 1: Direct Formylation .............................................. 508
Variation 2: Two-Step Protocol via Formation of an Acetal ...... 508
Variation 3: Two-Step Protocol via Formation of an Alcohol ..... 510
Variation 4: Functionalization of 3,3-Diethoxypropyne and Subsequent Acidic Treatment .............................................. 511

Variation 1: Oxidation of Propargyl Alcohols ......................... 512
Variation 1: With Chromium(VI) Oxide ................................. 512
Variation 2: With Dess–Martin Periodinane .......................... 512
Variation 3: Swern–Moffatt Reaction

Variation 4: With Titanium(IV) Chloride–Triethylamine

Method 4: Bromination–Dehydrobromination of Enals

Method 5: Fritsch–Buttenberg–Wiechell Rearrangement of 1,1-Dibromoalkenes and Subsequent Formylation

Method 6: Unmasking of Carbonyl Derivatives

Variation 1: Cleavage of Acetals

Variation 2: Synthesis of But-2-yne dial

Variation 3: Deprotection of Tosylhydrazones, Oximes, or Semicarbazones with Chlorotrimethylsilane–Dimethyl Sulfoxide

Method 7: Vacuum Pyrolysis

Product Class 6: Arenecarbaldehydes

Synthesis by Oxidative Cleavage of Carbon–Carbon Bonds

Method 1: Cleavage of Arene-Substituted Alkenes

Variation 1: Ozonolysis

Variation 2: Osmium-Catalyzed Cleavage

Variation 3: Cleavage by Permanganate and Periodate

Method 2: Cleavage of Arylacetic Acids

Method 3: Cleavage of ß-Aryl-Substituted ß-Hydroxycarboxylic Acids

Method 4: Cleavage of ß-Aryl-Substituted ß-Aminocarboxylic Acids

Synthesis by Oxidation

Method 1: Oxidation of Methylarenes

Variation 1: Aerobic Oxidation

Variation 2: Oxidation with Cerium Compounds

Variation 3: Electrochemical Oxidation

Variation 4: Oxidation by Halogenation

Variation 5: Oxidation by Hypervalent Iodine Compounds

Variation 6: Additional Procedures

Method 2: Oxidation of Arylmethanols

Variation 1: Oxidation with Oxygen or Hydrogen Peroxide

Variation 2: Oxidation with Sodium Hypochlorite

Variation 3: Oxidation with Cerium Compounds

Variation 4: Oxidation with Hypervalent Iodine Compounds

Variation 5: Oxidation with Chromium Compounds

Variation 6: Oxidation with Manganese Compounds

Variation 7: Oxidation with Perruthenates
25.6.2.8 Variation 8: Oxidation with Sulfoxides
(Swern and Pfitzner–Moffat Oxidations) ............... 545
25.6.2.9 Variation 9: Oxidation with N-Oxaoammonium Salts ............................................. 547
25.6.2.10 Variation 10: Additional Procedures ................................................................. 548
25.6.2.3 Method 3: Oxidation of Benzylic Ethers Including Silyl Ethers ............................ 551
25.6.2.4 Method 4: Oxidation of Benzylic Halides ............................................................ 552
25.6.2.4.1 Variation 1: Kornblum Oxidation ................................................................. 552
25.6.2.4.2 Variation 2: Sommelet Reaction ....................................................................... 554
25.6.2.4.3 Variation 3: Additional Procedures ................................................................. 554
25.6.2.5 Method 5: Oxidation of Benzylic Nitrogen Compounds ........................................ 557
25.6.2.5.1 Variation 1: C=N Bond Migration in Schiff Bases ............................................ 557
25.6.2.5.2 Variation 2: Oxidation of Benzylic Nitro Compounds (The Nef Reaction) .......... 558
25.6.2.5.3 Variation 3: Additional Procedures ................................................................. 559

25.6.3 Synthesis by Reduction
K. Ditrich

25.6.3 Synthesis by Reduction ................................................................. 563
25.6.3.1 Method 1: Reduction of Arenecarboxylic Acids .................................................. 563
25.6.3.2 Method 2: Reduction of Arenecarboxylic Acid Chlorides .................................... 564
25.6.3.2.1 Variation 1: Reduction by Hydrogenation (Rosenmund Reduction) .......... 564
25.6.3.2.2 Variation 2: Reduction by Metal Hydrides ...................................................... 566
25.6.3.3 Method 3: Reduction of Arenecarboxylic Acid Anhydrides ................................ 567
25.6.3.4 Method 4: Reduction of Arenecarboxylic Acid Esters ......................................... 568
25.6.3.5 Method 5: Reduction of Carboxylic Acid Amides and Hydrazides .................... 570
25.6.3.6 Method 6: Reduction of Arenecarbonitriles ......................................................... 571
25.6.3.6.1 Variation 1: Reduction by Hydrogenation ......................................................... 571
25.6.3.6.2 Variation 2: Hydride Reductions ............................................................... 573

25.6.4 Synthesis by Hydrolysis of Aldehyde Derivatives
K. Ditrich

25.6.4 Synthesis by Hydrolysis of Aldehyde Derivatives ............................................. 575
25.6.4.1 Method 1: Hydrolysis of α,α-Dihalo Compounds ............................................ 575
25.6.4.2 Method 2: Hydrolysis of O,O-Acetals ............................................................... 577
25.6.4.3 Method 3: Hydrolysis of S,S-Acetals ................................................................. 578
25.6.4.4 Method 4: Hydrolysis of Oximes ................................................................. 580
25.6.4.5 Method 5: Hydrolysis of Hydrazones and Semicarbazones ............................... 581

25.6.5 Synthesis by Formylation of Arylmetal Reagents
A. Schall and O. Reiser

25.6.5 Synthesis by Formylation of Arylmetal Reagents ............................................. 585
25.6.5.1 Formylation of Aryllithium Reagents .............................................................. 585
25.6.5.1.1 Method 1: Formylation of Aryllithium Reagents Generated by Metalation of Arenes ................................................................. 585
25.6.5.1.1 Variation 1: ortho-Lithiation Followed by Formylation with Dimethylformamide or Related Reagents ........................................ 586
25.6.5.1.2 Variation 2: ortho-Lithiation Followed by Formylation with Pentacarbonyliron(0) ................................................................. 592
25.6.5.1.3 Variation 3: Metalation of Arenes Using the Lochmann–Schlosser Base Followed by Formylation with Dimethylformamide ................ 593
25.6.5.1.2 Method 2: Formylation of Aryllithium Reagents Generated by Lithium–Halogen Exchange .................................................. 593
25.6.5.2 Formylation of Arylmagnesium Compounds ............................................ 596
25.6.5.2.1 Method 1: Formylation of Arylmagnesium Compounds Generated by Reductive Magnesiation or Magnesium–Halogen Exchange .......... 596
25.6.5.2.2 Method 2: Formylation of Arylmagnesium Reagents Generated by Addition of Magnesium Thiolates or Amides to Benzyne ...... 601
25.6.6 Synthesis by Formylation of Arene–Hydrogen Bonds
A. Schall and O. Reiser

25.6.6 Synthesis by Formylation of Arene–Hydrogen Bonds ........................................ 605
25.6.6.1 Method 1: Formylation with Formic Acid ............................................ 606
25.6.6.2 Method 2: Intramolecular Formylation with Formic Esters:
Lewis Acid Mediated Formylation of Phenols by
Fries Rearrangement of Aryl Formates ............................................ 606
25.6.6.3 Method 3: Formylation with Formyl Fluoride .................................... 608
25.6.6.4 Method 4: The Vilsmeier–Haack Reaction ......................................... 609
25.6.6.4.1 Variation 1: Using Dimethylformamide and Pyrophosphoryl Chloride .......... 618
25.6.6.4.2 Variation 2: Formylation in Solvent-Free Conditions Using Microwaves .... 619
25.6.6.4.3 Variation 3: Vilsmeier–Haack Formylation on Solid Support ................. 620
25.6.6.4.4 Variation 4: Formylation with Polymer-Bound Vilsmeier–Haack Reagent .................... 620
25.6.6.4.5 Variation 5: Vilsmeier–Haack Formylation in a Fluorous/Organic
Amphiphilic Ether Solvent ........................................................... 621
25.6.6.5 Method 5: Lewis Acid Mediated Formylation of Aromatic Compounds with Other Formamides ............................................ 622
25.6.6.5.1 Variation 1: Lewis Acid Catalyzed Formylation of Aromatic Compounds with Triformamide ............................................ 623
25.6.6.5.2 Variation 2: Formylation of Aromatic Compounds with
Tris(diformylamino)methane ......................................................... 626
25.6.6.6 Method 6: Formylation of Aromatic Compounds with
Tris(dichloromethyl)amine ......................................................... 628
25.6.6.7 Method 7: Formylation of Aromatic Compounds with
Hexamethylenetetramine ........................................................... 630
25.6.6.8 Method 8: Gross Formylation with Dichloromethyl Methyl Ether ............ 632
25.6.6.9 Method 9: Formylation with Triethyl Orthoformate ................................ 636
25.6.6.10 Method 10: The Gattermann Reaction ............................................. 636
25.6.6.10.1 Variation 1: In Situ Generation of Hydrogen Cyanide from Zinc(II) Cyanide ........ 639
25.6.6.10.2 Variation 2: In Situ Generation of Hydrogen Cyanide from 1,3,5-Triazine (Kreutzberger Modification) ............................................. 640
Method 11: The Gattermann–Koch Reaction

Method 12: Formylation of Arenes with Formaldehyde

Variation 1: Synthesis of Aromatic Aldehydes by Oxidative Hydroxymethylation with Formaldehyde and 2,3-Dichloro-5,6-dicyanobeno-1,4-quinone

Method 13: The Reimer–Tiemann Reaction

Synthesis by Carbonylation of Arylpalladium Intermediates

Method 1: Reductive Carbonylation of Haloarenes and Related Compounds Using Carbon Monoxide

Method 2: Reductive Carbonylation of Iodoarenes Using Acetic Formic Anhydride as a Carbon Monoxide Source

Synthesis by C–C Bond Formation

Method 1: Aminomethylation (Mannich Reaction)

Method 2: Chloromethylation

Method 3: Friedel–Crafts Acylation

Directed ortho-Metalation of In Situ Formed α-Amino Alkoxides Derived from Unprotected Arenecarbaldehydes

ortho-Claisen Rearrangement of (Allyloxy)arenecarbaldehydes

Transition-Metal-Catalyzed Cross-Coupling Reactions of Electrophilic or Nucleophilic Arenecarbaldehydes

Method 1: sp²–sp Cross-Coupling Reactions of Electrophilic Arenecarbaldehydes (Sonogashira Coupling)

Method 2: sp²–sp² Cross-Coupling Reactions of Electrophilic or Nucleophilic Arenecarbaldehydes

Variation 1: Classic Suzuki–Miyaura Coupling Reactions Using Electrophilic Arenecarbaldehydes

Variation 2: Ligand-Free Palladium Catalysis and “Transition-Metal-Free” Suzuki–Miyaura-Type Cross Coupling Using Electrophilic Arenecarbaldehydes

Variation 3: Nickel(0)-Catalyzed Suzuki–Miyaura Cross-Coupling Reactions Using Electrophilic Arenecarbaldehydes

Variation 4: Suzuki–Miyaura-Type Cross-Coupling Reactions Using Dihydroxyborylated Arenecarbaldehydes

Variation 5: Stille-Type Cross-Coupling Reactions Using Electrophilic Arenecarbaldehydes
25.6.8.4.2.6 Variation 6: Stille-Type Cross-Coupling Reactions Using Trialkylstannylated Arenecarbaldehydes ........................................ 680
25.6.8.4.2.7 Variation 7: Negishi-Type Cross-Coupling Reactions Using Electrophilic Arenecarbaldehydes ........................................ 681
25.6.8.4.2.8 Variation 8: Hiyama-Type Cross-Coupling Reactions Using Electrophilic Arenecarbaldehydes ........................................ 681
25.6.8.5 Palladium-Catalyzed Arylation of Alkenes Using Electrophilic Arenecarbaldehydes (Heck Reaction) ........................................ 682
25.6.8.6 Transition-Metal-Catalyzed Cyanation of Haloarenecarbaldehydes ........................................ 683
25.6.8.7 Transition-Metal-Catalyzed Homocoupling of 4-Halobenzaldehydes (Ullmann-Type Reactions) or Dihydroxyborylated Arenecarbaldehydes ........................................ 683

25.6.9 Synthesis by C–X Bond Formation
T. Berkenbusch

25.6.9 Synthesis by C–X Bond Formation ........................................ 689
25.6.9.1 Synthesis by Electrophilic Aromatic Substitution: Hydrogen–Heteroatom Exchange ........................................ 690
25.6.9.1.1 Halogenation of Arenecarbaldehydes ........................................ 690
25.6.9.1.1.1 Method 1: Fluorination ........................................ 690
25.6.9.1.1.2 Method 2: Chlorination ........................................ 691
25.6.9.1.1.3 Method 3: Bromination ........................................ 692
25.6.9.1.1.4 Method 4: Iodination ........................................ 693
25.6.9.1.2 Nitration of Arenecarbaldehydes ........................................ 694
25.6.9.1.3 Synthesis by Nucleophilic Aromatic Substitution: Heteroatom–Heteroatom Exchange ........................................ 695
25.6.9.1.3.1 Method 1: Halogen–Nitrogen Exchange ........................................ 696
25.6.9.1.3.1.1 Variation 1: Halogen–Nitrogen Exchange in the Absence of a Transition Metal ........................................ 696
25.6.9.1.3.1.2 Variation 2: Palladium-Mediated Halogen–Nitrogen Exchange ........................................ 698
25.6.9.1.3.1.3 Method 2: Halogen–Phosphorus Exchange ........................................ 699
25.6.9.1.3.1.4 Method 3: Halogen–Oxygen Exchange ........................................ 700
25.6.9.1.3.1.5 Variation 1: Halogen–Oxygen Exchange in the Absence of a Transition Metal ........................................ 700
25.6.9.1.3.1.6 Variation 2: Copper-Mediated Halogen–Oxygen Exchange ........................................ 701
25.6.9.1.3.1.7 Variation 3: Palladium- and Nickel-Mediated Halogen–Oxygen Exchange ........................................ 702
25.6.9.1.3.1.8 Method 4: Halogen–Sulfur Exchange ........................................ 703
25.6.9.1.3.1.9 Variation 1: Halogen–Sulfur Exchange in the Absence of a Transition Metal ........................................ 703
25.6.9.1.3.1.10 Variation 2: Copper-Mediated Halogen–Sulfur Exchange ........................................ 704
25.6.9.1.3.1.11 Method 5: Halogen–Fluorine Exchange ........................................ 705
25.6.9.1.3.1.12 Diazonium–Heteroatom Exchange Reactions ........................................ 705
25.6.9.1.3.3 Functionalization of ortho-Lithiated α-Amino Alkoxides Derived from Arenecarbaldehydes ........................................ 707
25.7  **Product Class 7: Polyenals**  
I. Escher and F. Glorius

25.7 Synthesis of Product Class 7 711

25.7.1 Method 1: Oxidation of Alcohols 711
25.7.1.1 Variation 1: Addition of α-Oxocarbenes to Furans 713
25.7.1.2 Variation 2: Addition of Organolithium Reagents to Pyrylium Salts 714
25.7.1.3 Method 3: Reduction of Carboxylic Acid Derivatives 716
25.7.1.4 Method 4: Synthesis by Elimination 717
25.7.1.5 Method 5: Formylation of Dienes 719
25.7.1.6 Method 6: Addition of Enolates and Derivatives to Carbonyl Compounds 721
25.7.1.6.1 Variation 1: Addition of Enolates and Silyl Enol Ethers to Carbonyl Compounds 721
25.7.1.6.2 Variation 2: Addition of Metalated Vinyl Ethers to Carbonyl Compounds 723
25.7.1.7 Method 7: Wittig and Horner–Wadsworth–Emmons Reactions 724
25.7.1.8 Method 8: Cross-Coupling Reaction of Enals and Polyenals 726
25.7.1.9 Methods 9: Additional Methods 728

25.8  **Product Class 8: α,β-Unsaturated Aldehydes**  
I. Escher and F. Glorius

25.8 Product Subclass 1: Nonheteroatom-Substituted α,β-Unsaturated Aldehydes 733

25.8.1 Synthesis of Product Subclass 1 733
25.8.1.1 Method 1: Oxidative Cleavage of Alkenes 733
25.8.1.2 Method 2: Oxidation of Allylic Alcohols 734
25.8.1.3 Method 3: Oxidation of Allylic Methyl Groups 736
25.8.1.4 Method 4: Unsaturation of Saturated Aldehydes 736
25.8.1.4.1 Variation 1: Unsaturation of Silyl Enol Ethers with Lead(IV) Acetate 736
25.8.1.4.2 Variation 2: Unsaturation of Alkenyl Allyl Carbonates or Methyl Enol Ethers by Palladium Catalysis 737
25.8.1.4.3 Variation 3: Conversion of Saturated Primary Alcohols or Aldehydes into α,β-Unsaturated Aldehydes 738
25.8.1.5 Method 5: Synthesis by Reduction 739
25.8.1.6 Method 6: Synthesis by Elimination 741
25.8.1.7 Method 7: Synthesis by Hydrolysis of Acetals or Imines 742
25.8.1.8 Method 8: One-Carbon-Atom Extension 742
25.8.1.8.1 Variation 1: By Formylation of Alkenes 743
25.8.1.8.2 Variation 2: One-Carbon-Atom Extension of Alkenyl Halides Using Organometallic Reagents 743
25.8.1.8.3 Variation 3: Formation of α,β-Unsaturated Aldehydes by Rearrangement of β-Hydroxy Alcohols 744
25.8.1.1.9 Method 9: Cross Metathesis of Terminal Alkenes with Acrolein .......... 745
25.8.1.1.10 Method 10: Aldol Condensations ........................................... 747
25.8.1.1.11 Method 11: Cross Aldolization of Aldehydes with Vinyl Acetate .......... 748
25.8.1.1.12 Method 12: Addition of Organometallic Reagents to Carbonyl Compounds 749
25.8.1.1.12.1 Variation 1: Addition of Vinyllithium Reagents to Carbonyl Compounds 749
25.8.1.1.12.2 Variation 2: Wittig Reaction ............................................ 750
25.8.1.1.12.3 Variation 3: Combined Alcohol Oxidation and Wittig Reaction .......... 751
25.8.1.1.12.4 Variation 4: Peterson Alkenation ....................................... 751
25.8.1.1.13 Method 13: Double Bond Migration ..................................... 752
25.8.1.1.13.1 Variation 1: Isomerization of β,γ- to α,β-Unsaturated Aldehydes .......... 752
25.8.1.1.13.2 Variation 2: Opening of Vinyl Epoxides ................................ 753
25.8.1.1.13.3 Variation 3: Isomerization of Alkynols by Meyer–Schuster–Rupe Reactions 753
25.8.1.1.14.2 Variation 2: Vinylogous-Vilsmeier Formylation ....................... 756
25.8.1.1.15 Method 15: Diels–Alder Reactions ...................................... 757
25.8.1.1.16 Method 16: Modification of α,β-Unsaturated Aldehydes .................. 757
25.8.1.1.16.1 Variation 1: Substitution of an Alkoxy or Siloxy Group by Nucleophiles .......... 757
25.8.1.1.16.2 Variation 2: Cross-Coupling Reactions ................................ 758
25.8.1.1.17 Methods 17: Additional Methods ....................................... 759
25.8.1.1.17.1 Variation 1: Formylalkenation ......................................... 760
25.8.1.1.17.2 Variation 2: Two-Carbon-Atom Homologation with α,α-Disilylated Aldimines ........................................ 760
25.8.1.1.17.3 Variation 3: Kharasch Addition ........................................ 761
25.8.1.1.17.4 Variation 4: Four-Carbon-Atom Extension of Grignard Reagents ...... 762
25.8.2 Product Subclass 2: Heteroatom-Substituted α,β-Unsaturated Aldehydes 763
25.8.2.1 Synthesis of Product Subclass 2 ........................................... 763
25.8.2.1.1 Method 1: Addition of Organometallic Reagents to Carbonyl Compounds 763
25.8.2.1.2 Method 2: Cyclopropanation with Halogenated Carbenes, Followed by Ring Opening of the Halogenated Cyclopropanes ......................... 764
25.8.2.1.3 Method 3: Reactions of 1,3-Dicarbonyl Compounds with Nitrogen Nucleophiles ........................................ 765
25.8.2.1.4 Method 4: Formylation Reactions ........................................ 765
25.8.2.1.4.1 Variation 1: Vilsmeier–Haack–Arnold Formylation ..................... 765
25.8.2.1.4.2 Variation 2: Formylation of Electron-Rich Double Bonds .............. 767
25.8.2.1.4.3 Variation 3: Sulfanylformylation of Alkynes .......................... 768
25.8.2.1.5 Method 5: α-Halogenation, Selenation, or Methoxylation of α,β-Unsaturated Aldehydes ........................................ 768
25.8.2.1.6 Method 6: Substitution of the Halogen Atom of α-Halogenated α,β-Unsaturated Aldehydes ........................................ 770
25.8.2.1.7 Methods 7: Additional Methods ........................................ 770
25.8.2.1.7.1 Variation 1: Addition to Acetylene Aldehydes ........................ 770
Product Class 9: 3-Heteroatom-Substituted Aldehydes
A. Lindenschmidt

25.9

Product Class 9: 3-Heteroatom-Substituted Aldehydes

25.9.1

Product Subclass 1: 3-Silicon-Substituted Aldehydes

25.9.1.1

Synthesis of Product Subclass 1

25.9.2

Product Subclass 2: 3-Tin-Substituted Aldehydes

25.9.2.1

Synthesis of Product Subclass 2

25.9.3

Product Subclass 3: 3-Boron-Substituted Aldehydes

25.9.3.1

Synthesis of Product Subclass 3

25.9.4

Product Subclass 4: 3-Halogen-Substituted Aldehydes

25.9.4.1

Synthesis of Product Subclass 4

25.9.5

Product Subclass 5: 3-Oxygen-Substituted Aldehydes

25.9.5.1

Synthesis of Product Subclass 5

25.9.5.1.1

Method 1: Oxidative Cleavage of Homoallylic Alcohols

25.9.5.1.1.1

Variation 1: By Ozonolysis

25.9.5.1.1.2

Variation 2: By Dihydroxylation/Diol Cleavage

25.9.5.1.2

Method 2: Wacker Oxidation of Homoallylic Alcohols

25.9.5.1.3

Method 3: Hydroboration of Allylic or Propargylic Alcohols

25.9.5.1.4

Method 4: Ruthenium-Catalyzed Anti-Markovnikov Hydration of Terminal Alkynes

25.9.5.1.5

Method 5: Ring Opening of Epoxides and 1,3-Dithianes

25.9.5.1.6

Method 6: Synthesis from 4,5-Dihydroisoxazoles

25.9.5.1.7

Method 7: Hydroformylation of Enol Ethers

25.9.5.1.8

Method 8: 1,4-Addition of Oxygen Nucleophiles to α,β-Unsaturated Aldehydes

25.9.6

Product Subclass 6: 3-Sulfur-Substituted Aldehydes

25.9.6.1

Synthesis of Product Subclass 6

25.9.7

Product Subclass 7: 3-Nitrogen-Substituted Aldehydes

25.9.7.1

Synthesis of Product Subclass 7

25.9.7.1.1

Method 1: 1,4-Addition of Nitrogen Nucleophiles to α,β-Unsaturated Aldehydes

25.9.7.1.2

Method 2: Oxidative Cleavage of Homoallylic Amines

25.9.7.1.3

Method 3: Oxidation of Allylic or Propargylic Amines

25.9.7.1.4

Method 4: Ring Opening of Aziridines or Cyclic Sulfamidates

25.9.7.1.5

Method 5: Synthesis by Substitution

25.9.8

Product Subclass 8: 3-Phosphorus-Substituted Aldehydes

25.9.8.1

Synthesis of Product Subclass 8

Volume 26: Ketones

Preface ................................................................. V
Volume Editor’s Preface ............................................... VII
Table of Contents ...................................................... XI

Introduction
J. Cossy ............................................................... 1

26.1 Product Class 1: Aliphatic and Alicyclic Ketones (Excluding Cyclobutanones and Cyclopropanones)
P. Vogel ............................................................... 13

26.1.1 Synthesis by Oxidation of Heterosubstituted Alkanes
S. von Angerer ....................................................... 39

26.1.2 Synthesis by Oxidation of Alkenes and Alkanes (Excluding Allylic or Benzylic Derivatives)
T. S. Balaban .......................................................... 127

26.1.3 Synthesis by Reduction of 1,2-Diketones and α-Diazo Ketones, α,α-Dihetero- and α-Heterosubstituted Ketones, Enones, and Ynones
M. Yus and C. Nájera ............................................. 153

26.1.4 Synthesis from Carboxylic Acids and Derivatives by Substitution with a Carbon Nucleophile
B. Figadère and X. Franck .......................................... 243

26.1.5 Synthesis from Aldehydes by Substitution of the Aldehyde Hydrogen
B. Figadère and X. Franck .......................................... 293

26.1.6 Synthesis from Thioketones, Acetals, Cyanohydrins, Enol Ethers, Enamines, Other Ene Derivatives, and Related Compounds
D. Desmaële .......................................................... 301

26.1.7 Synthesis by Addition
B. Figadère and X. Franck .......................................... 401

26.1.8 Synthesis by Fragmentation and Rearrangement
T. Constantieux and J. Rodriguez .............................. 413

26.1.9 Synthesis from Other Ketones
J.-C. Plaquevent, D. Cahard, and F. Guillen .................. 463

26.1.10 Synthesis from Enones by Formation of C–C Bonds
J.-C. Plaquevent, D. Cahard, and F. Guillen ................. 513

26.1.2.6 Method 6: Oxidation by Molecular Oxygen ........................................ 74
26.1.2.6.1 Variation 1: With Ruthenium-Based Catalysts .......................... 74
26.1.2.6.2 Variation 2: With Cobalt-Based Catalysts ................................ 75
26.1.2.6.3 Variation 3: With Vanadium-Based Catalysts ............................ 76
26.1.2.6.4 Variation 4: With Copper-Based Catalysts ................................ 78
26.1.2.6.5 Variation 5: With Palladium-Based Catalysts ............................. 79
26.1.2.6.6 Variation 6: With Other Reagents ............................................. 82
26.1.2.7 Method 7: Oxidation with Hydrogen Peroxide ............................ 83
26.1.2.8 Method 8: Oxidation with Hydroperoxides and Peracids ............... 84
26.1.2.8.1 Variation 1: With tert-Butyl Hydroperoxide ............................ 85
26.1.2.8.2 Variation 2: With Peracids ....................................................... 86
26.1.2.9 Method 9: Oxidation with Dioxiranes .......................................... 88
26.1.2.10 Method 10: Oxidation with Dimethyl Sulfoxide .......................... 89
26.1.2.11 Method 11: Oxidation with Peroxomonosulfate .......................... 95
26.1.2.12 Method 12: Oxidation with Nitrogen Compounds ........................ 96
26.1.2.12.1 Variation 1: With Organic Oxoammonium Salts ....................... 96
26.1.2.12.2 Variation 2: With N-Oxides .................................................... 98
26.1.2.12.3 Variation 3: With Other Nitrogen-Based Oxidants .................... 98
26.1.2.13 Method 13: Oppenauer Oxidation ............................................ 99
26.1.2.14 Method 14: Dehydrogenation with Alkenes and Alkynes ............... 102
26.1.2.14.1 Variation 1: With Alkenes ...................................................... 103
26.1.2.14.2 Variation 2: By Isomerization of Allyl Alcohols ....................... 103
26.1.2.14.3 Variation 3: By Isomerization of α-Hydroxyalkynes ................... 104
26.1.2.15 Method 15: Other Methods ..................................................... 105
26.1.3 Oxidation of Secondary Alcohol Derivatives ..................................... 108
26.1.3.1 Method 1: Oxidation of Ethers .................................................. 108
26.1.3.2 Method 2: Oxidative Deprotection of Silyl Ethers ......................... 111
26.1.4 Oxidation of Nitrogen Compounds ................................................. 113
26.1.4.1 Method 1: From Nitroalkanes (The Nef Reaction) ......................... 113
26.1.4.2 Method 2: From Amines ............................................................ 115

26.1.2 Synthesis by Oxidation of Alkenes and Alkanes (Excluding Allylic or Benzylic Derivatives)
T. S. Balaban

26.1.2.1 Method 1: Oxidation of Alkenes without Cleavage of the Skeleton .... 127
26.1.2.1.1 Variation 1: Using Mercury Salts ............................................ 127
26.1.2.1.2 Variation 2: Using Palladium Salts with Oxygen and a Copper Cocatalyst or Other Oxidant Systems ......................................................... 128
26.1.2.1.3 Variation 3: Using Rhodium Salts with Oxygen ........................ 131
26.1.2.1.4 Variation 4: By Oxidation of Intermediate Boron Adducts .......... 131
26.1.2.2 Method 2: Oxidation of Alkenes with Cleavage of a C=C Bond ....... 133
26.1.2.2.1 Variation 1: Using Transition Metal Compounds ....................... 134
26.1.2.2.2 Variation 2: Using Permanganate and Periodate Reagents .......... 134
## 26.1.2.3
Variation 3: By Ozonolysis ................................................. 135

## 26.1.2.4
Variation 4: By Other Methods ........................................ 136

## 26.1.2
Method 3: Transition-Metal-Catalyzed Oxidation of Alkanes ............ 137

## 26.1.2.3.1
Variation 1: Using Oxygen ............................................. 137

## 26.1.2.3.2
Variation 2: Using Ozone ............................................. 140

## 26.1.2.3.3
Variation 3: Using Hydrogen Peroxide and Organic Peroxides ........ 140

## 26.1.2.3.4
Variation 4: Using Sodium Periodate ................................ 144

## 26.1.2.3.5
Variation 5: Using Iodosylbenzene ................................... 145

## 26.1.2.3.6
Variation 6: Under Irradiation ........................................ 146

## 26.1.2.4
Method 4: Oxidation of Alkanes by Other Methods ..................... 146

## 26.1.2.4.1
Variation 1: Using Chromates and Permanganates under Lewis Acid Catalysis ................................................. 146

## 26.1.2.4.2
Variation 2: Using Dioxiranes ......................................... 147

## 26.1.2.4.3
Variation 3: Using Ozone ............................................. 148

## 26.1.2.4.4
Variation 4: Electrochemical Oxidation ................................ 148

## 26.1.3
Synthesis by Reduction of 1,2-Diketones and α-Diazo Ketones, α,α-Dihetero- and α-Heterosubstituted Ketones, Enones, and Ynones
M. Yus and C. Nájera

## 26.1.3
Synthesis by Reduction of 1,2-Diketones and α-Diazo Ketones, α,α-Dihetero- and α-Heterosubstituted Ketones, Enones, and Ynones ... 153

## 26.1.3.1
Reduction of 1,2-Diketones and α-Diazo Ketones ........................ 153

## 26.1.3.1.1
Method 1: Reduction of 1,2-Diketones ................................ 153

## 26.1.3.1.2
Method 2: Reduction of α-Diazo Ketones ................................ 155

## 26.1.3.2
Reduction of α,α-Diheterosubstituted Ketones .......................... 157

## 26.1.3.2.1
Method 1: Reduction of α,α-Dihalo Ketones ............................ 157

## 26.1.3.2.2
Method 2: Reduction of α-Oxo Thioacetals ............................ 158

## 26.1.3.3
Reduction of α-Heterosubstituted Ketones .............................. 160

## 26.1.3.3.1
Reduction of α-Silylated Ketones ...................................... 160

## 26.1.3.3.1.1
Method 1: Acidic Conditions .......................................... 161

## 26.1.3.3.1.2
Method 2: Basic Conditions .......................................... 162

## 26.1.3.3.2
Reduction of α-Halo Ketones ........................................... 163

## 26.1.3.3.2.1
Method 1: Reduction of α-Fluoro Ketones ............................... 165

## 26.1.3.3.2.2
Method 2: Reduction of α-Chloro Ketones .............................. 166

## 26.1.3.3.2.2.1
Variation 1: Active Metals and Salts .................................. 166

## 26.1.3.3.2.2.2
Variation 2: Nucleophilic Reagents .................................... 167

## 26.1.3.3.2.2.3
Variation 3: Hydrides ..................................................... 169

## 26.1.3.3.2.3
Method 3: Reduction of α-Bromo Ketones ............................... 170

## 26.1.3.3.2.3.1
Variation 1: Active Metals or Salts and Electrolysis ................... 170

## 26.1.3.3.2.3.2
Variation 2: Nucleophilic Reagents .................................... 172

## 26.1.3.3.2.3.3
Variation 3: Hydrides ..................................................... 173

## 26.1.3.3.2.4
Method 4: Reduction of α-Iodo Ketones ................................ 175

## 26.1.3.3.3
Reduction of α-Oxygenated Ketones .................................... 176
26.1.3.3.1 Method 1: Reduction of \(\alpha\)-Hydroxy Ketones ............................... 177
26.1.3.3.1 Variation 1: Active Metals and Salts ........................................ 177
26.1.3.3.1.1 Variation 1: Active Metals and Salts ........................................ 177
26.1.3.3.1.2 Variation 2: Nucleophilic Reagents ........................................... 178
26.1.3.3.2 Method 2: Reduction of \(\alpha\)-Alkoxy, \(\alpha\)-Acyloxy, and \(\alpha\)-Sulfonyloxy Ketones 180
26.1.3.3.2 Variation 1: Active Metals and Salts ........................................... 180
26.1.3.3.2.2 Variation 2: Nucleophilic Reagents and Hydrides ......................... 182
26.1.3.3.3 Method 3: Reduction of \(\alpha\)-\(\beta\)-Epoxy Ketones ............................... 184
26.1.3.3.3 Variation 1: Active Metals and Salts ........................................... 184
26.1.3.3.3.2 Variation 2: Nucleophilic Reagents ........................................... 186
26.1.3.3.4 Reduction of \(\alpha\)-Sulfurated Ketones ........................................... 187
26.1.3.3.4.1 Method 1: Reduction of \(\alpha\)-Sulfanyl Ketones ................................ 188
26.1.3.3.4.2 Method 2: Reduction of \(\alpha\)-Sulfinyl Ketones ................................ 190
26.1.3.3.4.3 Method 3: Reduction of \(\alpha\)-Sulfonyl Ketones ................................ 191
26.1.3.3.4.3.1 Variation 1: Active Metals and Salts ........................................ 191
26.1.3.3.4.3.2 Variation 2: Radicals and Nucleophilic Reagents ......................... 195
26.1.3.3.5 Reduction of \(\alpha\)-Selanyl Ketones .............................................. 195
26.1.3.3.6 Reduction of \(\alpha\)-Nitrogenated Ketones ......................................... 198
26.1.3.4 Reduction of Enones ................................................................. 199
26.1.3.4.1 Method 1: Catalytic Hydrogenation ............................................. 199
26.1.3.4.1.1 Variation 1: Hydrogenation under Heterogeneous Conditions .......... 199
26.1.3.4.1.2 Variation 2: Hydrogenation under Homogeneous Conditions ............ 202
26.1.3.4.1.3 Variation 3: Transfer Hydrogenation ......................................... 204
26.1.3.4.2 Method 2: Reduction with Hydrides .......................................... 206
26.1.3.4.2.1 Variation 1: Boron Hydrides ..................................................... 206
26.1.3.4.2.2 Variation 2: Aluminum Hydrides .............................................. 208
26.1.3.4.2.3 Variation 3: Silicon Hydrides .................................................... 210
26.1.3.4.2.4 Variation 4: Tin Hydrides and Metal Hydroxides ......................... 212
26.1.3.4.2.5 Variation 5: Transition Metal Hydrides ...................................... 214
26.1.3.4.3 Method 3: Reduction with Dissolving Metals ............................... 216
26.1.3.4.3.1 Variation 1: Main Group Metals ............................................... 216
26.1.3.4.3.2 Variation 2: Transition Metals and Salts ................................... 220
26.1.3.4.4 Methods 4: Other Methodologies ............................................ 221
26.1.3.5 Reduction of Ynones ................................................................. 224
26.1.3.5.1 Method 1: Partial and Full Reduction Methodologies ....................... 224

26.1.4 Synthesis from Carboxylic Acids and Derivatives by Substitution with a Carbon Nucleophile
B. Figadère and X. Franck

26.1.4 Synthesis from Carboxylic Acids and Derivatives by Substitution with a Carbon Nucleophile ................................. 243
26.1.4.1 Method 1: Synthesis from Acyl Halides ........................................... 243
26.1.4.1.1 Variation 1: With Organotin Reagents ........................................... 244
26.1.4.1.2 Variation 2: With Organoboron Reagents ...................................... 244
26.1.4.1.3 Variation 3: With Organocobalt Reagents ..................................... 245
Table of Contents

Variation 1: From Carbon Dioxide and Its Derivatives ........................................ 253
Variation 2: With Grignard Reagents ............................................................... 259
Variation 3: With Grignard Reagents ............................................................... 260
Variation 4: With Organolithium Reagents ....................................................... 255
Variation 5: With Organocadmium Reagents ..................................................... 254
Variation 6: With Organomercury Reagents ....................................................... 249
Variation 7: With Organocopper Reagents ......................................................... 249
Variation 8: With Organocobalt, Organorhodium, or Organoiron Reagents .............. 252
Variation 9: With Organomanganese Reagents .................................................... 253
Variation 10: With Organotitanium or Organozirconium Reagents ......................... 254

Method 1: Synthesis from S-Alkyl or S-Aryl Thioesters ........................................ 272
Method 2: Synthesis from Carboxylic Acids ....................................................... 258
Method 3: Synthesis from Carboxylic Esters ...................................................... 261
Method 4: Synthesis from Carboxylic Anhydrides ............................................. 264
Method 5: Synthesis from S-Alkyl or S-Aryl Thioesters ........................................ 272
Method 6: Synthesis from Amides ...................................................................... 275
Method 7: Synthesis from Nitriles ....................................................................... 277
Method 8: Synthesis from Dihydroimidazoles ..................................................... 280
Method 9: Synthesis from Miscellaneous Acylating Reagents ............................... 281
Method 10: Synthesis from Miscellaneous Acylating Reagents ......................... 270
Method 11: Synthesis from Miscellaneous Acylating Reagents ......................... 259
Method 12: Synthesis from Miscellaneous Acylating Reagents ......................... 260
Method 13: Synthesis from Miscellaneous Acylating Reagents ......................... 264
Method 14: Synthesis from Miscellaneous Acylating Reagents ......................... 266
Method 15: Synthesis from Miscellaneous Acylating Reagents ......................... 266
Method 16: Synthesis from Miscellaneous Acylating Reagents ......................... 267
Method 17: Synthesis from Miscellaneous Acylating Reagents ......................... 268
Method 18: Synthesis from Miscellaneous Acylating Reagents ......................... 268
Method 19: Synthesis from Miscellaneous Acylating Reagents ......................... 269
Method 20: Synthesis from Miscellaneous Acylating Reagents ......................... 270
Method 21: Synthesis from Miscellaneous Acylating Reagents ......................... 271

Method 32: Synthesis from Miscellaneous Acylating Reagents ......................... 277
Method 33: Synthesis from Miscellaneous Acylating Reagents ......................... 278
Method 34: Synthesis from Miscellaneous Acylating Reagents ......................... 278
Method 35: Synthesis from Miscellaneous Acylating Reagents ......................... 279
Method 36: Synthesis from Miscellaneous Acylating Reagents ......................... 279
Method 37: Synthesis from Miscellaneous Acylating Reagents ......................... 279
Method 38: Synthesis from Miscellaneous Acylating Reagents ......................... 280
Method 39: Synthesis from Miscellaneous Acylating Reagents ......................... 280
Method 40: Synthesis from Miscellaneous Acylating Reagents ......................... 281
Method 41: Synthesis from Miscellaneous Acylating Reagents ......................... 281
Method 42: Synthesis from Miscellaneous Acylating Reagents ......................... 281
Method 43: Synthesis from Miscellaneous Acylating Reagents ......................... 282
Method 44: Synthesis from Miscellaneous Acylating Reagents ......................... 282
Method 45: Synthesis from Miscellaneous Acylating Reagents ......................... 283
Method 46: Synthesis from Miscellaneous Acylating Reagents ......................... 283
26.1.4.9.4 Variation 4: From Ortho Esters ........................................... 283
26.1.4.9.5 Variation 5: From Acyl Cyanides ........................................ 284
26.1.4.9.6 Variation 6: From Acylsilanes ........................................... 284

26.1.5 Synthesis from Aldehydes by Substitution of the Aldehyde Hydrogen
B. Figadère and X. Franck

26.1.5 Synthesis from Aldehydes by Substitution of the Aldehyde Hydrogen ........................................... 293
26.1.5.1 Method 1: Radical Reaction of Aldehydes with Alkenes ................. 293
26.1.5.2 Method 2: Addition of Diazoolkanes to Aldehydes ......................... 294
26.1.5.3 Method 3: Hydroacylation of Aldehydes ................................... 295
26.1.5.3.1 Variation 1: With Ruthenium Complexes ................................ 296
26.1.5.3.2 Variation 2: With Cobalt Complexes ................................... 296
26.1.5.3.3 Variation 3: With Rhodium Complexes ................................... 297

26.1.6 Synthesis from Thioketones, Acetals, Cyanohydrins, Enol Ethers, Enamines, Other Ene Derivatives, and Related Compounds
D. Desmaële

26.1.6 Synthesis from Thioketones, Acetals, Cyanohydrins, Enol Ethers, Enamines, Other Ene Derivatives, and Related Compounds ........................................... 301
26.1.6.1 Synthesis from Thioketones ........................................... 301
26.1.6.1.1 Method 1: Hydrolysis of Thioketones ................................... 301
26.1.6.1.2 Method 2: Oxidative Cleavage of Thioketones .......................... 302
26.1.6.1.3 Method 3: Nitrosative Cleavage of Thioketones ........................ 304
26.1.6.2 Synthesis from Iminium Ions, Ketimines, and Derivatives .................. 304
26.1.6.2.1 Method 1: Hydrolysis of Iminium Salts and Imines ...................... 304
26.1.6.3 Synthesis from N-Sulfanyl- and N-Sulfonylimines .......................... 307
26.1.6.3.1 Method 1: Hydrolysis of N-Sulfanyl- and N-Sulfonylimines ........... 307
26.1.6.4 Synthesis from Oximes and Derivatives .................................... 307
26.1.6.4.1 Method 1: Hydrolysis of Oximes and Derivatives .......................... 307
26.1.6.4.1.1 Variation 1: Sodium Hydrogen Sulfite Assisted Hydrolysis of Oximes and Derivatives .................................................. 308
26.1.6.4.1.2 Variation 2: Metal Salt Assisted Hydrolysis of Oximes and Derivatives .......................................................... 309
26.1.6.4.2 Method 2: Cleavage of Oximes and Derivatives by the Exchange Method ......................................................... 310
26.1.6.4.3 Method 3: Oxidative Cleavage of Oximes and Derivatives .............. 311
26.1.6.4.3.1 Variation 1: Aerobic Oxidation and Ozonolysis of Oximes and Derivatives .......................................................... 311
26.1.6.4.3.2 Variation 2: Oxidative Cleavage of Oximes and Derivatives with Peroxodic Compounds ......................................................... 312
26.1.6.4.3.3 Variation 3: Oxidative Cleavage of Oximes and Derivatives with High-Valency Metals .................................................. 313
26.1.6.4.3.4 Variation 4: Other Oxidative Cleavages of Oximes and Derivatives ......................................................... 316
26.1.6.4.4 Method 4: Nitrosative Cleavage of Oximes and Derivatives ............. 317
26.1.6.4.5 Method 5: Reductive Cleavage of Oximes and Derivatives .............. 318
Method 2: Metal-Induced Cleavage of $S,S$-Acetals .................................................. 352
Method 3: Alkylative and Electrophilic Cleavage of $S,S$-Acetals .......................... 354
Method 4: Oxidative Cleavage of $S,S$-Acetals ......................................................... 355
Method 5: Nitrosative Cleavage of $S,S$-Acetals ....................................................... 358
Method 6: Photolysis of $S,S$-Acetals ........................................................................ 359

Synthesis from Dithioketal Monosulfoxides and Dithioketal Disulfoxides ............. 359
Method 1: Hydrolysis of Dithioketal Monosulfoxides and Dithioketal Disulfoxides ............................................................. 359
Method 2: Metal-Catalyzed Cleavage of Dithioketal Monosulfoxides and Dithioketal Disulfoxides ......................................................... 360

Synthesis from $S$- or $N\alpha$-Substituted Sulfones ...................................................... 361
Method 1: Acidic Hydrolysis of $S$- or $N\alpha$-Substituted Sulfones ............................ 361
Method 2: Metal-Induced Hydrolyses of $\alpha$-(Methylsulfanyl)methyl Sulfones ...... 362

Synthesis from 1-[(Methylsulfanyl)methyl]-1H-1,2,3-benzotriazoles, Dihydrobenzothiazoles, or Nitromethyl Sulfides ..................................................... 363
Method 1: Acidic Hydrolysis of 1-[(Methylsulfanyl)methyl]-1H-benzotriazoles........ 363
Method 2: Metal-Induced Hydrolysis of Dihydrobenzothiazoles ............................ 363
Method 3: Reductive Cleavage of Nitromethyl Sulfides .......................................... 364

Synthesis from Diselenoacetals .................................................................................. 365
Method 1: Metal-Induced Cleavage of Diselenoacetals .......................................... 365
Method 2: Oxidative and Nitrosative Cleavage of Diselenoacetals ......................... 365

Synthesis from $N,N$-Acetals ....................................................................................... 366
Method 1: Hydrolysis of $N,N$-Acetals ..................................................................... 366
Method 2: Hydrolysis of $\alpha$-Cyanodithiocarbamates ............................................. 371
Method 4: Hydrolytic Cleavage of $\alpha$-(Dialkylamino)nitriles .................................. 372

Synthesis from Haloalkenes ...................................................................................... 372
Method 1: Acidic Hydrolysis of Haloalkenes ............................................................ 372
Method 2: Metal-Assisted Hydrolysis of Haloalkenes .............................................. 374

Synthesis from Enol Derivatives ............................................................................... 374
Method 1: Synthesis from Enol Ethers ...................................................................... 374
Method 2: Hydrolysis of Enol Esters ......................................................................... 375
Method 3: Synthesis from Silylated Enol Ethers ....................................................... 376
Variation 1: Miscellaneous Cleavages of Silylated Enol Ethers .............................. 377
Variation 2: Alkylation of Silylated Enol Ethers ....................................................... 378
Method 4: Alkylation of Stannylated Enols ............................................................... 379
### 26.1 Synthesis by Addition

**B. Figadère and X. Franck**

### 26.1 Variations

#### 26.1.8.3.1 Variation 1: Fragmentation of 1,3-Amino Halides, 1,3-Amino Sulfonates, and 1,3-Hydroxy Halides ........................................ 420

#### 26.1.8.3.2 Variation 2: Fragmentation of 1,3-Amino Alcohols ........................................ 420

#### 26.1.8.3.3 Variation 3: Fragmentation of Acyclic 1,3-Diols and Derivatives .................. 421

#### 26.1.8.3.4 Variation 4: Fragmentation of Cyclic 1,3-Diol Monosulfonates and Derivatives (Wharton Fragmentation) .................. 422

#### 26.1.8.4 Method 4: Fragmentation of $\alpha,\beta$-Unsaturated Ketones (Eschenmoser Fragmentation) ........................................ 425

#### 26.1.8.5 Method 5: Fragmentation of Ketones (Norrish Type II Fragmentation) ............ 428

#### 26.1.8.6 Method 6: Electrocyclic Rearrangements ........................................ 430

#### 26.1.8.6.1 Variation 1: Claisen-Type Rearrangements ........................................ 431

#### 26.1.8.6.2 Variation 2: Oxy-Cope Rearrangement ........................................ 433

#### 26.1.8.7 Method 7: Isomerization of Allylic Alcohols ........................................ 434

#### 26.1.8.7.1 Variation 1: Metal-Promoted Isomerization ........................................ 435

#### 26.1.8.7.2 Variation 2: Tandem Isomerization–Aldol Reaction ........................................ 437

#### 26.1.8.7.3 Variation 3: Enantioselective Isomerization ........................................ 438

#### 26.1.8.7.4 Variation 4: Isomerization with Ring Expansion ........................................ 439

#### 26.1.8.8 Method 8: Rearrangement of 1,2-Diheterofunctionalized Compounds ............ 440

#### 26.1.8.8.1 Variation 1: 1,2-Diols and Derivatives ........................................ 441

#### 26.1.8.8.2 Variation 2: 2-Sulfanyl and 2-Selenyl Alcohol Derivatives .................... 443

#### 26.1.8.8.3 Variation 3: 2-Aza Alcohol Derivatives ........................................ 444

#### 26.1.8.8.4 Variation 4: 2-Halo Alcohols and Derivatives ........................................ 445

#### 26.1.8.8.5 Variation 5: 2-Hydroxy Ketones and Derivatives ........................................ 448

#### 26.1.8.8.6 Variation 6: 2-Epoxy Alcohols ........................................ 449

#### 26.1.8.9 Method 9: Rearrangement of Epoxides ........................................ 451

#### 26.1.8.9.1 Variation 1: Alkyl- and/or Aryl-Substituted Epoxides ........................................ 451

#### 26.1.8.9.2 Variation 2: $\alpha,\beta$-Epoxy Ketones ........................................ 454

#### 26.1.8.9.3 Variation 3: Epoxysilanes ........................................ 455

#### 26.1.9 Synthesis from Other Ketones

J.-C. Plaquevent, D. Cahard, and F. Guillen

#### 26.1.9.1 Method 1: Monoalkylation of Lithium Enolates ........................................ 464

#### 26.1.9.1.1 Variation 1: Enantioselective Alkylation via Chiral Lithium Amide Deprotonation ........................................ 470

#### 26.1.9.2 Method 2: Monoalkylation of Sodium Enolates ........................................ 471

#### 26.1.9.3 Method 3: Monoalkylation of Potassium Enolates ........................................ 473

#### 26.1.9.4 Method 4: Palladium-Catalyzed Asymmetric Alkylations and Arylations of Alkali Ketone Enolates ........................................ 475

#### 26.1.9.5 Method 5: Monoalkylation of Magnesium Enolates ........................................ 481

#### 26.1.9.6 Method 6: Monoalkylation of Manganese Enolates ........................................ 482

#### 26.1.9.7 Method 7: Monoalkylation Using Sodium Triethylgermanate(II) .................... 484

#### 26.1.9.8 Method 8: Miscellaneous Metal-Mediated Alkylations of Enolates .................. 485

#### 26.1.9.9 Method 9: Alkylation by Phase-Transfer Catalysis ........................................ 487

#### 26.1.9.10 Method 10: Free Radical Alkylation ........................................ 489

#### 26.1.9.11 Method 11: Polyalkylation of Enols and Enolates ........................................ 493

#### 26.1.9.12 Method 12: Isomerization by Carbonyl Transposition ........................................ 497
26.1.9.13 Method 13: Epimerization via Enols and Enolates .......................... 498
26.1.9.14 Method 14: Deracemization by Enantioselective Protonation of Enolates 502
26.1.9.14.1 Variation 1: With a Chiral Proton Source ....................................... 502
26.1.9.14.2 Variation 2: With an Achiral Proton Source under the Influence of a Chiral Ligand ............................................................................................. 505
26.1.9.14.3 Variation 3: Fungal Deracemization .................................................. 506
26.1.9.15 Method 15: Norrish Type II Fragmentation .......................................... 507
26.1.9.16 Method 16: Ring Expansion of Alicyclic Ketones ............................... 507

26.1.10 Synthesis from Enones by Formation of C—C Bonds
J.-C. Plaquevent, D. Cahard, and F. Guillen

26.1.10.1 Method 1: By Addition of Organosilicon Reagents ......................... 513
26.1.10.2 Method 2: By Addition of Organostannane Reagents .................... 515
26.1.10.3 Method 3: By Addition of Organoboron Reagents ........................ 516
26.1.10.4 Method 4: By Addition of Organoaluminum Reagents .................. 519
26.1.10.5 Method 5: By Addition of Organozinc Reagents ............................. 520
26.1.10.6 Method 6: By Addition of Organocopper Reagents ....................... 525
26.1.10.7 Method 7: By Addition of Grignard Reagents .................................. 532
26.1.10.8 Method 8: By Michael and Michael-Type Addition Reactions ......... 533
26.1.10.8.1 Variation 1: Organometallic Catalysis ......................................... 533
26.1.10.8.2 Variation 2: Heterobimetallic Catalysis ....................................... 537
26.1.10.8.3 Variation 3: Organocatalysis ..................................................... 541
26.1.10.8.4 Variation 4: Phase-Transfer Catalysis ....................................... 544
26.1.10.8.5 Variation 5: Mukaiyama–Michael Reaction ............................... 547
26.1.10.9 Method 9: By the Sakurai–Hosomi Reaction .................................. 549

26.2 Product Class 2: Cyclobutanones and Their Precursors
J. Salaün

26.2.1 Synthesis of Product Class 2 ................................................................. 557
26.2.1.1 Method 1: Ring Formation by Cyclodalkylation of Protected Carbonyl Groups by 1,3-Dihalopropanes .................................................. 557
26.2.1.1.1 Variation 1: From 1,3-Dithiane ................................................. 557
26.2.1.1.2 Variation 2: From Methyl (Methylsulfanyl)methyl Sulfoxide .......... 558
26.2.1.1.3 Variation 3: From Tosylmethyl Isocyanide ................................ 558
26.2.1.2 Method 2: Ring Formation by Cyclodalkylation of Ketones by 1,3-Dimetalated Propan-2-iminium Salts ................................................ 559
26.2.1.3 Method 3: Cyclization by Intramolecular Substitution .................... 559
26.2.1.3.1 Variation 1: Of a δ-Halo Cyanohydrin .................................... 559
26.2.1.3.2 Variation 2: Of O-Protected Alk-3-en-1-ols or Alk-3-yn-1-ols .......... 559
26.2.1.4 Method 4: Ring Formation by Carbonylation .................................. 560
26.2.1.4.1 Variation 1: Of Titanacyclobutanes ....................................... 561
26.2.1.4.2 Variation 2: Of (Alkoxyalkylidene)chromium Complexes .......... 561
26.2.1.4.3 Variation 3: Of a Cobaltacyclopentan-2-one .......................... 562
Method 5: Reduction

Variation 1: Of 2-Acetoxycyclobutanones

Variation 2: Of 2,2-Dichlorocyclobutanones

Method 6: Oxidation

Variation 1: Of Cyclobutanols

Variation 2: Of Methylenecyclobutane

Method 7: Ring Formation by [2 + 2] Cycloaddition

Variation 1: Of Ketenes and Alkenes

Variation 2: Of Mono- or Dichloroketenes and Alkenes

Variation 3: Of Keteniminium Salts and Alkenes

Variation 4: Of Ketene Acetals and Acrylic or Maleic Acid Derivatives

Variation 5: Of Ketene Thioacetals and Alkenes

Variation 6: Of Ketene Silyl Acetals and Alkenes

Variation 7: Of N,N-Diethylprop-1-yn-1-amine and Alkenes

Method 8: Ring Enlargement of Cyclopropanones Formed by Addition of Diazomethane to Ketenes

Method 9: Ring Enlargement of the Cyclopropane Intermediate Formed by a Simmons–Smith Cyclopropanation Reaction

Method 10: Rearrangement of Spiro[2.2]pentanes

Variation 1: Of 1-Oxaspiro[2.2]pentanes

Variation 2: Of 1-Azaspiro[2.2]pentanes

Method 11: Rearrangement of (1-Hydroxyalkyl)cyclopropanes

Variation 1: Of 1-Alkoxy-1-(1-hydroxyalkyl)cyclopropanes

Variation 2: Of 1-(Arylsulfanyl)-1-(1-hydroxyalkyl)cyclopropanes

Variation 3: Of 1-(1-Hydroxyalkyl)-1-selanylcyclopropanes

Variation 4: Of 1-(1-Hydroxyalkyl)-1-(trimethylsilyl)cyclopropanes

Variation 5: Of (1-Formylamino)-1-(1-hydroxyalkyl)cyclopropanes

Method 12: Rearrangement of Cyclopropanol Derivatives

Variation 1: Of 1-Vinylcyclopropanols

Variation 2: Of 1-(1-Hydroxyalkyl)- or 1-Formylcyclopropanols

Method 13: Rearrangement of (1-Bromoalkylidene)cyclopropanes

Method 14: Ring Contraction

Variation 1: Of γ-Lactone Tosylhydrazones

Variation 2: Of Cyclohex-2-eneones

Variation 3: Of Cyclohex-3-eneones

Variation 4: Of Cycloocta-2,4,6-trieneones

Method 15: Preparation from Preformed Four-Membered Rings

Variation 1: From Cyclobutanones

Variation 2: From Cyclobutenones

Variation 3: From 1,2-Bis(trimethylsiloxy)cyclobutene
26.3 Product Class 3: Cyclopropanones and Their Precursors
J. Salaün

26.3 Product Class 3: Cyclopropanones and Their Precursors ........................................... 607
26.3.1 Product Subclass 1: Cyclopropanones .......................................................... 607
26.3.1.1 Synthesis of Product Subclass 1 .......................................................... 607
26.3.1.1.1 Method 1: Photolysis of Strained Rings ........................................ 607
26.3.1.1.1 Variation 1: Photodecarbonylation of Cyclobutanediones ............... 607
26.3.1.1.2 Variation 2: Photodenitrogenation of Dihydropyrazolones .......... 608
26.3.1.1.2 Method 2: Ring-Closing Dehalogenation of \( \alpha \)-Halo and \( \alpha,\alpha' \)-Dihalo Ketones .......................................................... 608
26.3.1.1.2.1 Variation 1: With Sterically Hindered Bases ............................ 608
26.3.1.1.2.2 Variation 2: Electrochemical Dehalogenation ......................... 609
26.3.1.1.2.3 Variation 3: Sodium Iodide Induced Dehalogenation .............. 609
26.3.1.1.2.4 Variation 4: Carbonylmetalate-Induced Dehalogenation .......... 610
26.3.1.1.3 Method 3: Addition Reactions of Ketenes ..................................... 610
26.3.1.1.4 Method 4: Isomerization of Allene Oxides .................................. 611
26.3.1.1.4.1 Variation 1: Thermal Isomerization ....................................... 612

26.3.2 Product Subclass 2: Cyclopropanone Hemiacetals ............................................. 612
26.3.2.1 Synthesis of Product Subclass 2 .......................................................... 612
26.3.2.1.1 Method 1: Photodecarbonylation of Cyclobutanediones ............... 612
26.3.2.1.2 Method 2: Ring-Closing Dehalogenation ..................................... 613
26.3.2.1.2.1 Variation 1: Electroreduction of \( \alpha,\alpha' \)-Dihalo Ketones .......... 613
26.3.2.1.2.2 Variation 2: Base-Induced Dehydrohalogenation of \( \alpha \)-Halo Ketones .......................................................... 613
26.3.2.1.2.3 Variation 3: Sodium-Mediated Ring Closure of \( \beta \)-Halo Esters .... 614
26.3.2.1.2.4 Variation 4: Sodium-Mediated Ring Closure of \( \beta \)-Haloamides .. 614
26.3.2.1.3 Method 3: Addition Reactions of Ketenes .................................. 615
26.3.2.1.3.1 Variation 1: Cyclopropanation of Silylketene Acetals ............... 615
26.3.2.1.3.2 Variation 2: Cyclopropanation of 1-Alkoxyvinyl Esters ........... 615
26.3.2.1.3.3 Variation 3: Addition of Glacial Acetic Acid to Cyclopropanones .. 616

26.3.3 Product Subclass 3: Cyclopropanone Hemiaminals .............................................. 616
26.3.3.1 Synthesis of Product Subclass 3 .......................................................... 616
26.3.3.1.1 Method 1: Addition of Amines to Cyclopropanone ..................... 616

26.3.4 Product Subclass 4: Cyclopropanone Acetals ..................................................... 617
26.3.4.1 Synthesis of Product Subclass 4 .......................................................... 617
26.3.4.1.1 Method 1: Alcoholysis of 1'-Substituted Cyclopropyl Ethers .......... 617
26.3.4.1.1.1 Variation 1: From 1,1-Dihaloacyclopropanes .......................... 618
26.3.4.1.2 Method 2: Reductive Cyclization of \( \alpha,\alpha' \)-Dihaloacetoxypropane Acetals .................................................. 618
26.3.4.1.3 Method 3: Addition of Carbenes or Carbenoids to Ketene Acetals .. 619
26.3.4.1.3.1 Variation 1: Addition of Dialkoxyketenes to Ketones .............. 620
26.3.4.1.4 Method 4: Addition to Cyclopropanone Acetals ......................... 621
26.3.4.1.5 Method 5: Ring Closure of (\( \gamma,\gamma' \)-Dialkoxyallyl)zirconocenes .... 622
26.3.4.1.6 Method 6: Photoisomerization of Dienedione Monoacetals .......... 622
26.3.5 Product Subclass 5: Cyclopropane-1,1-diamines ........................................ 623
  26.3.5.1 Synthesis of Product Subclass 5 ....................................................... 623
    26.3.5.1.1 Method 1: Secondary Amine Induced Ring Closure of \( \alpha \)-Halo Ketones ........................................ 623
    26.3.5.1.2 Method 2: Amine Addition to Cyclopropanone ............................... 623
26.3.6 Product Subclass 6: Cyclopropane Thioacetals ........................................ 624
  26.3.6.1 Synthesis of Product Subclass 6 ....................................................... 624
    26.3.6.1.1 Method 1: Substitution of Cyclopropanone Derivatives .................. 624
      26.3.6.1.1.1 Variation 1: Using Basic Conditions .................................. 624
      26.3.6.1.1.2 Variation 2: By Metalation .............................................. 625
    26.3.6.1.2 Method 2: Ring Closure of 1,1,3-Tris(phenylsulfanyl)alkanes .......... 625
    26.3.6.1.3 Method 3: Addition of Thiols to Cyclopropanones ......................... 626
26.3.7 Product Subclass 7: 1,1-Bis(seleno)cyclopropanes .................................. 626
  26.3.7.1 Synthesis of Product Subclass 7 ....................................................... 626
    26.3.7.1.1 Method 1: Substitution of Cyclopropanone Derivatives .................. 626
    26.3.7.1.2 Method 2: Ring Closure of Seleno Derivatives ............................ 627
26.3.8 Product Subclass 8: Cyclopropenones .................................................. 628
  26.3.8.1 Synthesis of Product Subclass 8 ....................................................... 628
    26.3.8.1.1 Method 1: Hydrolysis ............................................................... 628
      26.3.8.1.1.1 Variation 1: Of Cyclopropenone Acetals ................................ 628
      26.3.8.1.1.2 Variation 2: Of Dichlorocyclopropenes ................................ 630
      26.3.8.1.1.3 Variation 3: Of Cyclopropenylum Salts ................................ 630
    26.3.8.1.2 Method 2: Oxidation of Cyclopropenones .................................. 631
    26.3.8.1.3 Method 3: Photodecarbonylation of Cyclobutenediones ................. 632
    26.3.8.1.4 Method 4: Dehydrohalogenation of \( \alpha,\alpha' \)-Dihalo Ketones .......... 632
26.3.9 Product Subclass 9: Cyclopropyl Ketones and Cyclopropanecarbaldehydes .... 633
  26.3.9.1 Synthesis of Product Subclass 9 ....................................................... 633
    26.3.9.1.1 Method 1: Ring-Closure Reactions ............................................. 633
      26.3.9.1.1.1 Variation 1: Of \( \gamma \)-Chloro Ketones ................................. 633
      26.3.9.1.1.2 Variation 2: Of 4-Oxopentyl Phosphate Carbionions .................. 634
      26.3.9.1.1.3 Variation 3: Of Methyl 2,3-Dihaloopropanoates ....................... 634
    26.3.9.1.2 Method 2: Addition Reactions ................................................. 635
      26.3.9.1.2.1 Variation 1: Of Carbenes to Undec-2-en-5-yn-1-ol .................... 636
      26.3.9.1.2.2 Variation 2: Of Diphenylsulfonium Isopropylide to Chiral Lactams 636
      26.3.9.1.2.3 Variation 3: Of Diazocyclopropane to Aldehydes .................... 638
    26.3.9.1.3 Method 3: Oxidation Reactions ................................................. 638
      26.3.9.1.3.1 Variation 1: Swern Oxidation of Cyclopropylcarbinols ............... 638
      26.3.9.1.3.2 Variation 2: Oxidative Ring Opening ..................................... 639
    26.3.9.1.4 Method 4: Rearrangement of Allene Oxides ................................ 640
    26.3.9.1.5 Method 5: Addition of Methylthiium to Cyclopropane Carboxylic Acids 640
    26.3.9.1.6 Method 6: Photolysis of \( \beta,\gamma \)-Unsaturated Ketones .................. 641
## 26.4 Product Class 4: 1,2-Diketones and Related Compounds

Y. Landais and J. M. Vincent

### 26.4.1 Product Subclass 1: 1,2-Diketones

#### 26.4.1.1 Synthesis of Product Subclass 1

- **Method 1:** Coupling Reactions
  - **Variation 1:** Coupling of Aldehydes
  - **Variation 2:** Coupling of Carboxylic Acid Derivatives
- **Variation 3:** Coupling of $\alpha$-Oxonitriles
- **Variation 4:** Carbonylative Coupling of Alkyl Halides with Organometallic Reagents
- **Variation 5:** Nucleophilic Acylation of Carboxylic Acid Derivatives by Acyllithium Reagents
- **Variation 6:** Addition of Organometallic Reagents to 1,2-Diacyl Derivatives
- **Variation 7:** Friedel–Crafts Acylation

#### 26.4.1.2 Substitution of Heteroatoms

- **Variation 1:** Hydrolysis of $\alpha$-Oxo Ketals
- **Variation 2:** Hydrolysis of $\alpha$-Oxo Thioketals
- **Variation 3:** Hydrolysis of $\alpha$-Oxo Imines
- **Variation 4:** Hydrolysis of $\alpha,\alpha$-Dihalo Ketones
- **Variation 5:** From $\alpha$-Diazo Ketones

#### 26.4.1.3 Oxidation

- **Variation 1:** Of Ketones
- **Variation 2:** Of Enones by Ozonolysis
- **Variation 3:** Of $\alpha$-Hydroxy Ketones
- **Variation 4:** Of 1,2-Diols
- **Variation 5:** Of Alkenes
- **Variation 6:** Of Alkynes
- **Variation 7:** Of Arenes, Phenols, and Catechols
- **Variation 8:** Of $\alpha$-Oxo Phosphorus Ylides
- **Variation 9:** Of $\alpha$-Bromo Ketones

#### 26.4.1.4 Rearrangements of $\alpha,\beta$-Epoxy Ketones

**Method 4:**
- **Variation 1:** Of 1,2-Bis(siloxy)alkenes

#### 26.4.1.5 Additional Methods

**Method 5:**
- **Variation 1:** Rearrangements of $\alpha,\beta$-Epoxy Ketones

**Method 6:**
- **Variation 1:** Additional Methods

#### 26.4.1.6 Applications of Product Subclass 1 in Organic Synthesis

- **Method 1:** Oxidation of 1,2-Diketones to Carboxylic Acids
- **Method 2:** Addition Reactions with 1,2-Diketones
  - **Variation 1:** Addition of Hydrogen
  - **Variation 2:** Addition of Organometallic Reagents
  - **Variation 3:** Addition of Carbon Functionalities
  - **Variation 4:** Addition of Heteroatoms
  - **Variation 5:** Cycloadditions of 1,2-Diketones
- **Method 3:** Ring Contraction of Cyclic 1,2-Diketones

26.5 Product Class 5: α,α-Diheterosubstituted Ketones
J.-L. Parrain and J. Thibonnet

26.5.1 Product Subclass 1: α,α-Difluoro Ketones

26.5.1.1 Synthesis of Product Subclass 1

26.5.1.2 Method 1: Direct Fluorination of Ketones

26.5.1.3 Method 2: Oxidation of α,α-Difluoro Alcohols

26.5.1.4 Method 3: Synthesis from Difluoro Enoxysilanes

26.5.1.5 Method 4: Synthesis via Reformatsky-Type Aldol Reactions

26.5.1.6 Method 5: Synthesis from Lewis Acid Mediated Aldol-Type Reactions

26.5.1.7 Method 6: Synthesis from Anhydrides, Esters, or Amides and Organometallic Reagents

26.5.1.8 Method 7: Addition of Difluorooiodomethyl Ketones to Alkenes

26.5.1.9 Method 8: Synthesis from Alkynes

26.5.1.10 Method 9: Conversion of Arylperfluoroalkanes into Aryl Perfluoroalkyl Ketones

26.5.2 Product Subclass 2: α,α-Dichloro Ketones

26.5.2.1 Synthesis of Product Subclass 2

26.5.2.2 Method 1: Synthesis by Direct Chlorination of Ketones

26.5.2.3 Method 2: Via Acylation Reactions

26.5.2.4 Method 3: By Addition of Organometallic Reagents

26.5.2.5 Method 4: Chlorination of Terminal Alkynes

26.5.2.6 Method 5: [2 + 2]-Cycloaddition Reactions of Dichloroketenes

26.5.2.7 Method 6: Intramolecular Insertion of Trichloromethyl Ketones into Alkenes, Catalyzed by Ruthenium Complexes

26.5.3 Product Subclass 3: α,α-Dibromo Ketones and α,α-Diiodo Ketones

26.5.3.1 Synthesis of Product Subclass 3

26.5.3.2 Method 1: Synthesis of Dibromo Ketones by Direct Bromination of Ketones

26.5.3.3 Method 2: Synthesis of Diiodo Ketones by Direct Iodination of Ketones

26.5.3.4 Method 3: Synthesis from α-Diazo Ketones

26.5.3.5 Method 4: Synthesis via α,α-Dibromo Anions

26.5.3.6 Method 5: Synthesis from Alkynes

26.5.4 Product Subclass 4: α-Alkoxy-α-halo Ketones

26.5.4.1 Synthesis of Product Subclass 4

26.5.4.2 Method 1: Fluorination of α-Alkoxy Ketones

26.5.4.3 Method 2: Chlorination of α-Alkoxy Ketones

26.5.4.4 Method 3: Bromination of α-Alkoxy Ketones

26.5.4.5 Method 4: From α-Alkoxy- or α-Halo-α,β-unsaturated Ketones
26.5.4.1.5 Method 5: From α-Diazo Ketones ........................................ 776
26.5.4.1.6 Method 6: By Addition of an Organometallic Group ............ 776
26.5.4.1.7 Method 7: By Addition of Bromine to 1,2-Dialkoxyalkenes .......... 777
26.5.5 Product Subclass 5: α-Halo-α-sulfanyl and α-Halo-α-sulfinyl Ketones .... 778
26.5.5.1 Synthesis of Product Subclass 5 .............................................. 778
26.5.5.1.1 Method 1: Substitution of Hydrogen with Sulfur Reagents ......... 778
26.5.5.1.2 Method 2: Halogenation of α-Sulfanyl Ketones ....................... 779
26.5.5.1.3 Method 3: Oxidation of α-Chloro-α-sulfanyl Alcohols .......... 781
26.5.6 Product Subclass 6: α-Amino-α-halo and α-Halo-α-nitro Ketones .......... 781
26.5.6.1 Synthesis of Product Subclass 6 .............................................. 782
26.5.6.1.1 Method 1: Synthesis of α-Fluoro-α-nitro Ketones Using Perchloryl Fluoride .......................................................... 782
26.5.6.1.2 Method 2: Chlorination of α-Amino Ketones ............................... 782
26.5.6.1.3 Method 3: Oxidation of α-Chloro-α-nitro Alcohols .................. 783
26.5.6.1.4 Method 4: Synthesis from Trichloronitromethane .................. 784
26.5.7 Product Subclass 7: α,α-Dialkoxy Ketones ..................................... 784
26.5.7.1 Synthesis of Product Subclass 7 .............................................. 785
26.5.7.1.1 Method 1: Synthesis of α,α-Dialkoxy Ketones from Ketones .......... 785
26.5.7.1.2 Method 2: Synthesis of α,α-Dialkoxy Ketones from α-Sulfinyl Ketones .... 786
26.5.7.1.3 Method 3: Oxidation of α-Hydroxy Acetals ............................... 786
26.5.7.1.3.1 Variation 1: Oxidation by Dess–Martin Periodinane .............. 787
26.5.7.1.3.2 Variation 2: Swern Oxidation ............................................. 787
26.5.7.1.3.3 Variation 3: Oxidation by Chromium(VI) Oxide .................. 788
26.5.7.1.3.4 Variation 4: Oxidation by Ruthenium(IV) Oxide .................. 789
26.5.7.1.4 Method 4: Oxidation of 2-Alkoxyphenols ............................... 789
26.5.7.1.5 Method 5: Synthesis from Anhydrides, Esters, or Amides and an Organometallic Reagent ............................................. 790
26.5.7.1.5.1 Variation 1: Synthesis from Functional Anhydrides, Esters, Nitriles, or Amides .................................................. 790
26.5.7.1.5.2 Variation 2: Synthesis from Dialkoxymethylithium Reagents .......... 791
26.5.7.1.6 Method 6: Synthesis from α-Diazo Ketones ......................... 792
26.5.7.1.7 Method 7: Synthesis of Dialkoxy cyclobutanones via [2 + 2]-Cycloaddition Reactions ................................................................. 793
26.5.7.1.8 Method 8: Synthesis by Insertion of a Dialkoxy carbene into Strained Cyclic Ketones ......................................................... 793
26.5.7.1.9 Method 9: Synthesis by Acetalization of 1,2-Diketones or 1,2-Oxaloaldehydes ................................................................. 794
26.5.7.1.10 Method 10: Synthesis by Rearrangement of α,α′-Dialkoxy Ketones .... 795
26.5.7.1.11 Method 11: Synthesis from Reagents Derived from α,α-Diazo Ketones .... 795
26.5.7.1.11.1 Variation 1: Reactions of Enolates Derived from Dialkoxy Ketones .... 795
26.5.7.1.11.2 Variation 2: By Wittig Reaction ............................................. 796
26.5.7.2 Applications of Product Subclass 7 in Organic Synthesis ............... 797
26.5.7.2.1 Method 1: Stereoselective Applications ..................................... 797
26.5.8 Product Subclass 8: α-Oxy-α-sulfanyl Ketones ........................................ 798
26.5.8.1 Synthesis of Product Subclass 8 ......................................................... 799
26.5.8.1.1 Method 1: By Oxidation of β-Oxo Sulfides ..................................... 799
26.5.8.1.2 Method 2: From α-Oxo Sulfoxides: Pummerer Reaction .................. 800
26.5.8.1.2.1 Variation 1: Synthesis of α-Acetoxy-β-oxo Sulfides ...................... 801
26.5.8.1.2.2 Variation 2: Synthesis of α-Siloxo-β-oxo Sulfides ....................... 802
26.5.8.1.3 Method 3: By Oxidation of Functional Secondary Alcohols .............. 802
26.5.8.1.3.1 Variation 1: By Swern Oxidation .................................................. 803
26.5.8.1.3.2 Variation 2: Using Pyridinium Dichromate or Pyridinium Chlorochromate 803
26.5.8.1.4 Method 4: Synthesis from α-Halo-α-sulfanyl- or α-Halo-α-oxo Ketones . 804
26.5.8.1.5 Method 5: Synthesis from α-Diazo-β-oxo Sulfones ......................... 805
26.5.8.1.6 Method 6: Synthesis from Anhydrides, Esters, or Amides and an Organometallic Reagent .......................................................... 806
26.5.8.1.7 Method 7: Synthesis from α-Oxocarboxylic acids or 1,2-Diketones .... 809
26.5.8.1.8 Method 8: Epoxidation of α-Sulfanyl-α,β-unsaturated Ketones .......... 810
26.5.8.1.9 Method 9: Synthesis by Rearrangement ........................................... 812
26.5.8.2 Applications of Product Subclass 8 in Organic Synthesis .................... 812
26.5.9 Product Subclass 9: α-Alkoxy-α-seleno Ketones .................................... 813
26.5.9.1 Synthesis of Product Subclass 9 ......................................................... 814
26.5.9.1.1 Method 1: Synthesis from α-Seleno Ketones ................................. 814
26.5.9.1.2 Method 2: Synthesis from α-Diazo Ketones .................................. 815
26.5.10 Product Subclass 10: α-Alkoxy-α-amino and α-Amino-α-hydroxy Ketones 816
26.5.10.1 Synthesis of Product Subclass 10 ..................................................... 817
26.5.10.1.1 Method 1: By Oxidation of α-Amino Ketones ............................... 817
26.5.10.1.2 Method 2: By Oxidation of α-Hydroxy N,O-Acetals ...................... 818
26.5.10.1.3 Method 3: By Substitution of Heteroatoms .................................. 820
26.5.10.1.3.1 Variation 1: From α,α-Dihydroxy Ketones ............................... 820
26.5.10.1.3.2 Variation 2: From α-Alkoxy-α-halo Ketones ............................ 821
26.5.10.1.3.3 Variation 3: From α-Amino-α-halo Ketones .............................. 822
26.5.10.1.4 Method 4: From α-Diazo Ketones ................................................. 823
26.5.10.1.5 Method 5: By Addition of Organometallic Reagents ...................... 824
26.5.10.1.5.1 Variation 1: From Functionalized Esters, Nitriles, or Amides ....... 824
26.5.10.1.5.2 Variation 2: From α-Lithio N,O-Acetal Reagents ....................... 825
26.5.10.1.6 Method 6: [3 + 2] Cycloaddition to Cyclopropenone ....................... 826
26.5.10.1.7 Method 7: Epoxidation of α,β-Unsaturated β-Amino Ketones .......... 826
26.5.10.1.8 Method 8: By Addition of Alcohols or Amines ............................ 827
26.5.10.1.8.1 Variation 1: Addition of Alcohols to 1,2-Oximines or 1,2-Oxoenamines 827
26.5.10.1.8.2 Variation 2: Addition of Amines to 1,2-Diketones ....................... 828
26.5.10.1.9 Method 9: By Cycloaddition ....................................................... 829
26.5.11 Product Subclass 11: α,α-Disulfanyl Ketones ...................................... 830
26.5.11.1 Synthesis of Product Subclass 11 ................................................... 831
26.5.11.1.1 Method 1: Substitution of Hydrogen with Sulfur Reagents .......... 831
26.5.11.1.2 Method 2: From α-Oxo Sulfoxides .............................................. 833
26.5.11.1.3 Method 3: Oxidation of α-Hydroxy-1,3-dithianes ........................ 833
Method 4: By Addition of Organometallic Reagents

26.5.11.5 Method 5: [2 + 2]-Cycloaddition Reactions of Disulfanyl Ketenes

26.5.11.6 Method 6: [3 + 2]-Cycloaddition Reactions from α-Oxo Dithioesters

26.5.11.7 Method 7: By Addition of Dithiols to 1,2-Diketones

26.5.11.8 Method 8: By Rearrangement

26.5.11.9 Method 9: Synthesis with Retention of the Functional Group

26.5.11.9.1 Variation 1: Oxidation of α-Oxo Dithianes

26.5.11.9.2 Variation 2: Alkylation of Enolates Bearing α-Dithianes

26.5.11.9.3 Variation 3: Enolates Bearing α-Dithiane Sulfoxides

Product Subclass 12: α-Amino-α-sulfanyl Ketones

Synthesis of Product Subclass 12

Method 1: Via Pummerer Reaction from α-Sulfoxy Ketones

Method 2: By Sulfanylation of α-Amino Ketones

Method 3: From α-Alkylsulfanyl Ketones

Method 4: By Substitution of Heteroatoms

Variation 1: From α-Amino-α-halo Ketones or Dihydroxy Ketones

Variation 2: From α,α-Diamino Ketones

Variation 3: From α-Diazo Ketones

Method 5: Using α-Amino-α-(sulfonylmethyl)lithium Reagents

Method 6: From 1,2-Diketones or 1,2-Oxoaldehydes

Product Subclass 13: α,α-Diselanyl Ketones

Synthesis of Product Subclass 13

Method 1: By Addition of Metal Enolates to Elemental Selenium

Method 2: From α-Selanyl Ketones

Method 3: From α-Diazo Ketones

Method 5: Using α-Amino-α-(sulfonylmethyl)lithium Reagents

Method 6: From 1,2-Diketones or 1,2-Oxoaldehydes

Product Subclass 14: α,α-Diamino Ketones

Synthesis of Product Subclass 14

Method 1: By Substitution of Halogen

Method 2: Via Cycloaddition

Method 3: By Addition of Diaminoalkylmetal Reagents

Method 4: From 1,2-Diketones or α-Oxoaldehydes

Product Class 6: α-Heterosubstituted Ketones

J. Suffert

Product Class 6: α-Heterosubstituted Ketones

Product Subclass 1: α-Fluoro Ketones

Synthesis of Product Subclass 1

Method 1: Substitution of a Hydrogen Atom from an Alkanone

Variation 1: Direct Fluorination of Ketones without a Base

Variation 2: Deprotonation with an External Base

Variation 3: From an Alkanone via a Preformed Acetate Enol Ether

Variation 4: From Alkanones through Preformed Enol Silyl Ethers

Variation 5: Via a Preformed Enamine or Enamide
Method 2: Synthesis from Trifluoromethyl Ketones via Fluorinated Silyl Enol Ethers

Product Subclass 2: \(\alpha\)-Chloro Ketones

Synthesis of Product Subclass 2

Method 1: Substitution of a Hydrogen Atom from an Alkanone

Variation 1: Direct Chlorination with Chlorine

Variation 2: Direct Chlorination with Sulfuryl Chloride

Variation 3: Direct Chlorination with Selenium Oxychloride

Variation 4: Direct Chlorination with Sodium Chlorite/Manganese(III) Acetylacetonate

Variation 5: Direct Chlorination with Manganese(IV) Chloride

Variation 6: Direct Chlorination with Chlorotrimethylsilane/Dimethyl Sulfoxide

Variation 7: Direct Chlorination with Copper(II) Chloride/Lithium Chloride/Permanganate

Variation 8: Direct Chlorination with Trichloroisocyanuric Acid

Variation 9: Direct Chlorination with Hydrogen Chloride and Potassium Permanganate

Variation 10: Deprotonation with a Base Prior to Chlorination

Variation 11: Via a Preformed Enamine

Variation 12: Via a Preformed Silyl Enol Ether

Variation 13: Via a Preformed Enol Ether or Enol Ester

Method 2: Synthesis from \(\alpha\),\(\alpha\)-Dichloro Ketones by Reduction

Method 3: Synthesis by Oxidative Addition to an Alkene

Variation 1: Oxidation of an Alkene with Nitrosyl Chloride

Variation 2: Oxidation of an Alkene with Chromyl Chloride

Variation 3: Oxidation of an Alkene with 2-Cyanopyridinium Chlorochromate

Variation 4: Oxidation of an Alkene with Chromium(VI) Oxide and Chlorotrimethylsilane

Variation 5: Oxidation of an Alkene with Iron(III) Chloride

Variation 6: Synthesis via the Opening of an Epoxide

Variation 1: Ring Opening of Epoxides with Chloro(dimethyl)sulfonium Chloride

Variation 2: Opening of an \(\alpha\),\(\beta\)-Epoxy Ketone with Benzoyl Chloride

Product Subclass 3: \(\alpha\)-Bromo Ketones

Synthesis of Product Subclass 3

Method 1: Substitution of Hydrogen by Bromine

Variation 1: Direct Bromination with Bromine in Acetic Acid/Water or in the Presence of Urea

Variation 2: Direct Bromination with Bromine in Concentrated Sulfuric Acid

Variation 3: Direct Bromination with Bromine in Methanol or Carbon Tetrachloride

Variation 4: Direct Bromination with Bromine in the Presence of Potassium Chlorate or Sodium Chlorate in Water

Variation 5: Bromination of an Enolate with Bromine
Variation 6: Bromination with Perbromide Salts

Variation 7: Bromination with Copper Bromide

Variation 8: Bromination with Bromine Donors in Dimethyl Sulfoxide

Variation 9: Bromination with Bromine Donors: Perfluoroalkanesulfonyl Bromides or Benzeneselenenyl Bromide

Variation 10: Bromination with Bromine Donors: Hexabromocyclopentadiene and Bromomalonic Derivatives

Variation 11: Bromination with Bromine Donors: N-Bromosuccinimide in the Presence of Ammonium Acetate

Variation 12: Bromination in the Presence of an Oxidant

Method 2: Synthesis from an Enol Ether

Method 3: Synthesis from an \( \alpha,\beta \)-Unsaturated Ketone by Reductive Bromination

Method 4: Synthesis via the Ring Opening of an Epoxide

Variation 1: Photocatalytic Bromination of an Epoxide

Variation 2: Opening of an Epoxide with Bromo(dimethyl)sulfonium Bromide

Methods 5: Additional Methods

Product Subclass 4: \( \alpha \)-Iodo Ketones

Method 1: Substitution of Hydrogen by Iodine

Variation 1: Direct Iodination under Acidic Conditions

Variation 2: Iodination of Enolates

Method 2: Synthesis by Conjugate Addition to \( \alpha \)-Iodocycloalkenones

Method 3: Synthesis from an Enol Ether by Enol Acetate

Variation 1: Via an Iodonium Ion Transfer Reagent and an Enol Acetate

Variation 2: Via an Iodonium Ion Transfer from the Reagent to a Silyl Enol Ether

Method 4: Synthesis via the Ring Opening of an Epoxide

Variation 1: Using Iodotrimethylsilane

Variation 2: Via the Ring Opening of an \( \alpha \)-Nitro Epoxide

Method 5: Synthesis via Oxidative Addition to an Alkene

Variation 1: Using Silver Chromate and Iodine

Variation 2: Using Pyridinium Dichromate and Iodine

Variation 3: Using Bis(2,4,6-trimethylpyridine)iodonium(I) Tetrafluoroborate/Dimethyl Sulfoxide

Method 3: Synthesis via Oxidative Addition to an Alkene

Variation 4: Using Reaction of a Tin Enolate with Nitrosobenzene

Variation 5: Using Oxidation with a Molybdenum Complex

Variation 6: By Oxidation with Thallium(III) Salts

Variation 7: By Oxidation with Hydroxy(mesityloxy)iodobenzene
26.6.5.1.8 Variation 8: By Treatment with Oxygen and Triethyl Phosphite ........................ 940
26.6.5.1.2 Method 2: Synthesis via a Silyl Enol Ether ................................................. 941
26.6.5.1.2.1 Variation 1: Oxidation with 3-Chloroperoxycbenzoic Acid ....................... 941
26.6.5.1.2.2 Variation 2: Oxidation with Osmium(VIII) Oxide/4-Methylmorpholine .............................. 942
26.6.5.1.3 Method 3: Synthesis via Oxidative Addition to an Alkene .............................. 942
26.6.5.1.3.1 Variation 1: By Oxidation with Permanganate Salts ................................. 942
26.6.5.1.3.2 Variation 2: By Oxidation with Ruthenium(III) Chloride and Peracetic Acid 943
26.6.6 **Product Subclass 6: $\alpha$-Sulfanyl Ketones** ........................................... 944
26.6.6.1 Synthesis of Product Subclass 6 ................................................................. 945
26.6.6.1.1 Method 1: Substitution of a Hydrogen Atom ............................................... 945
26.6.6.1.2 Method 2: $\alpha$-Sulfanylation of Silyl Enol Ethers or Enamines .................... 946
26.6.6.1.3 Method 3: Regioselective $\alpha$-Sulfanylation of Boryl Enol Ethers ................ 946
26.6.6.7 **Product Subclass 7: $\alpha$-Selanyl Ketones** ............................................ 947
26.6.6.7.1 Synthesis of Product Subclass 7 ................................................................. 947
26.6.6.7.1.1 Method 1: Substitution of a Hydrogen Atom ............................................... 947
26.6.6.7.1.2 Variation 1: Selanylation under Neutral Conditions ................................. 947
26.6.6.7.1.3 Variation 2: Selanylation under Basic Conditions ..................................... 949
26.6.6.7.1.3 Variation 3: Selanylation under Acidic Conditions .................................. 950
26.6.6.7.1.2 Method 2: Regioselective $\alpha$-Selanylation of O-Silylated Enols or Boryl Enol Ethers .............................. 952
26.6.6.7.1.3 Method 3: Synthesis by Homologation from Phenylselenoacetaldehyde 952
26.6.6.8 **Product Subclass 8: $\alpha$-Amino Ketones** ........................................... 953
26.6.6.8.1 Synthesis of Product Subclass 8 ................................................................. 954
26.6.6.8.1.1 Method 1: Neber Rearrangement ............................................................ 954
26.6.6.8.1.2 Method 2: Synthesis from Silyl Enol Ethers by Aminohydroxylation .......... 955
26.6.6.8.1.3 Method 3: Synthesis from $\alpha$-Bromo Ketones by Substitution ................. 956
26.6.6.8.1.4 Method 4: Synthesis from Aldehydes and Iminium Salts ....................... 957
26.6.6.8.1.5 Method 5: Synthesis from $\alpha$-Amino Acids via an Oxazolidin-5-one .......... 958
26.6.6.8.1.6 Method 6: Synthesis via the Cyclization of an $\alpha$-Amino Ester ............... 958
26.6.6.8.1.7 Method 7: Synthesis via the Electroreductive Coupling of Aliphatic Amides .................................................. 959
26.6.6.8.1.8 Method 8: Synthesis via the Selective Reduction of Acyl Cyanides .......... 959
26.6.6.8.1.9 Method 9: Synthesis from Amines ............................................................ 960
26.6.6.9 **Product Subclass 9: $\alpha$-Phosphino and $\alpha$-Phosphoryl Ketones** .............. 961
26.6.6.9.1 Synthesis of Product Subclass 9 ................................................................. 961
26.6.6.9.1.1 Method 1: 2-(Diphenylphosphoryl)cycloalkanones by Base-Mediated Phosphinylation/Oxidation of Cycloalkanones .................................................. 961
26.6.6.9.1.2 Method 2: $\alpha$-(Dialkoxyphosphoryl) Ketones by Rearrangement of a Vinyl Phosphate ................................................................. 962
26.6.6.9.1.3 Method 3: Diethyl (2-Oxoethyl)phosphonates from $\alpha$-Bromo Ketones and Diethyl Chlorophosphate ................................................................. 963
26.6.6.9.1.4 Method 4: $\alpha$-Phosphorylated Ketones from $\alpha$-Chloro Ketones .......... 964
26.7 Product Class 7: Ynones
A. Nelson

26.7 Product Class 7: Ynones .................................................. 971
26.7.1 Product Subclass 1: Propargyl Ketones ............................. 971
26.7.1.1 Synthesis of Product Subclass 1 .................................... 971
26.7.1.1.1 Method 1: Acylation of Organometallic Reagents ............ 971
26.7.1.1.1 Variation 1: Acylation of Lithiated Alkynes with Carbonyl Compounds .................................................. 972
26.7.1.1.2 Variation 2: Copper(I)-Catalyzed Coupling of Terminal Alkynes and Acid Chlorides .................................................................................. 973
26.7.1.1.3 Variation 3: Coupling of Terminal Alkynes and Acid Chlorides under Bimetallic Copper(I)/Palladium Conditions ........................................... 973
26.7.1.1.4 Variation 4: Palladium(0)-Catalyzed Coupling of Trialkynylindiums with Acid Chlorides ............................................................................... 974
26.7.1.1.5 Variation 5: By Acylation of an Organometallic Reagent with a Propargylic Ester ............................................................................................... 975
26.7.1.2 Method 2: Oxidation of Propargyl Alcohols ....................... 975
26.7.1.2.1 Variation 1: By Propargylic Oxidation of Alkynes ............ 976
26.7.1.3 Method 3: Three-Component Couplings Involving Carbon Monoxide ................................................................. 977
26.7.1.4 Method 4: By Elimination of Aminoalkenones .................... 977
26.7.1.5 Method 5: By Oxy-Cope Rearrangement ............................. 978
26.7.1.6 Method 6: By Elimination of $\alpha,\gamma$-Dioxo Phosphonium Ylides .......................................................... 978
26.7.2 Product Subclass 2: $\beta,\gamma$-Alkynyl Ketones .......................... 979
26.7.2.1 Synthesis of Product Subclass 2 ........................................ 979
26.7.2.1.1 Method 1: By Alkynylation of Enolates ......................... 979
26.7.2.1.2 Method 2: By Rearrangement of 3-Furyllithium .............. 980
26.7.2.1.3 Method 3: By 1,2-Shift of an Alkynyl Group .................... 980
26.7.3 Product Subclass 3: $\gamma,\delta$-Alkynyl Ketones .......................... 981
26.7.3.1 Synthesis of Product Subclass 3 ........................................ 982
26.7.3.1.1 Method 1: By Conjugate Addition to $\alpha,\beta$-Unsaturated Ketones .......................................................... 982
26.7.3.1.1 Variation 1: Addition of Alkynylaluminum Reagents ......... 982
26.7.3.1.1 Variation 2: Addition of Alkynylboronates ..................... 982
26.7.3.1.1 Variation 3: Transition-Metal-Catalyzed Addition of Terminal Alkynes .................................................. 983
26.7.3.1.2 Method 2: By Propargylation of Enolates ..................... 984
26.7.3.1.3 Method 3: By Fragmentation .......................................... 984
26.7.4 Product Subclass 4: Other Alkynyl Ketones ............................ 985
26.7.4.1 Synthesis of Product Subclass 4 ........................................ 985
26.7.4.1.1 Method 1: By Eschenmoser Fragmentation .................. 985
# Product Class 8: Aryl Ketones

Variation 4: By Electrocyclization and Aromatization

Product Class 9: Enones
S. P. Marsden

Product Subclass 1: \(\alpha,\beta\)-Unsaturated Ketones

Method 1: Oxidation Adjacent to Alkenes

Variation 1: Allylic Oxidation with Stoichiometric Chromium Reagents

Variation 2: Allylic Oxidation with Peroxides and Catalytic Metal Salts

Variation 3: Allylic Oxidation with Selenium Reagents

Method 2: Oxidation of Allylic Alcohols

Method 3: Acylation of Organometallic Reagents

Variation 1: Addition of Alkenylmetals to Carboxylic Acids

Variation 2: Addition of Alkenylmetals to Carboxylic Esters and Derivatives

Variation 3: Addition of Alkenylmetals to Carboxylic Amides and Derivatives

Variation 4: Direct Addition of Alkenylmetals to Carboxylic Acid Halides and Anhydrides

Variation 5: Lewis Acid Catalyzed Addition of Alkenylmetals to Carboxylic Acid Halides and Anhydrides

Variation 6: Transition-Metal-Catalyzed Coupling of Alkenylmetals with Carboxylic Acid Halides and Anhydrides

Variation 7: Transition-Metal-Catalyzed Coupling of Alkenylmetals with Organic Halides and Carbon Monoxide

Variation 8: Addition of Alkenylmetals to Nitriles

Variation 9: Addition of Organometallics to \(\alpha,\beta\)-Unsaturated Carboxylic Acids

Variation 10: Addition of Organometallics to \(\alpha,\beta\)-Unsaturated Carboxylic Amides

Variation 11: Transition-Metal-Catalyzed Coupling of Organometallics with Alkenyl Acid Halides

Variation 12: Transition-Metal-Mediated Coupling of Organometallics with Alkenyl Halides and Carbon Monoxide

Variation 13: Addition of Organometallics to \(\alpha,\beta\)-Unsaturated Nitriles

Method 4: Substitution of Alkenes

Variation 1: Lewis Acid Catalyzed Substitution with Acid Halides

Variation 2: Transition-Metal-Catalyzed Substitution with Acid Halides

Method 5: Elimination Reactions

Variation 1: Oxidative Elimination of Metal Hydride from Enol Derivatives

Variation 2: Elimination of a Hydrogen Halide from \(\alpha\)-Halo Ketones
Variation 1: Addition of Allylmetals to Carboxylic Acids

Variation 2: By Direct Transition-Metal-Promoted Coupling

Variation 1: Using Hexacarbonyldicobalt–Alkyne Complexes

Variation 2: Intermolecular Aldol Reaction of Enamines and Enol Ethers

Variation 2: Horner–Wittig Reaction of Oxophosphine Oxides

Variation 1: Wittig Reaction of Oxophosphoranes

Variation 4: Tandem Michael Addition/Intramolecular Aldol Reaction

Variation 3: Intramolecular Aldol Condensation

Variation 2: Substitution by Addition/Rearrangement

Variation 1: Direct Substitution

Variation 1: Wittig-Type Alkenations

Method 23: Alkene Metathesis

Method 22: Isomerization of Propargylic Alcohols

Method 21: Nazarov Cyclization of Dienones

Method 20: Retro-Diels–Alder Reaction

Method 19: Oxidative Ring Opening of Furans

Method 18: Hydroacylation of Alkynes

Method 17: Alkylation of Umpoled Enal Anion Equivalents

Method 16:

Method 15:

Method 14:

Method 13: Addition of Nucleophiles to Propargylic Ketones

Method 12: Transition-Metal-Catalyzed Addition of Aryl Halides and Carbon Monoxide to Allenes

Method 11: Union of Alkynes, Alkenes, and Carbon Monoxide

Method 10: Cyclocondensation of Danishefsky-Type Dienes with Alkenes

Method 9: Wittig-Type Alkenations

Method 8: Aldol Condensation

Method 7: Organometallic Addition to Heterosubstituted Ketones

Method 6: Reduction of Propargylic Ketones

Method 5: Wittig Alkenations

Method 4: Pericyclic Elimination of

Method 3: Elimination from

Method 2: Substitution by Addition/Rearrangement

Method 1: Acylation of Allyl Organometallics

Variation 1: Addition of Allylmetals to Carboxylic Acids
Variation 2: Addition of Allylmetals to Carboxylic Amides .................. 1106
Variation 3: Addition of Allylmetals to Reactive Carboxylic Acid Derivatives .................................................. 1107
Variation 4: Addition of Allylmetals to Nitriles .................................. 1109
Method 2: Deconjugative Alkylation of α,β-Unsaturated Ketones .......... 1109
Method 3: Transition-Metal-Catalyzed Vinylation of Enolates .............. 1110
Product Subclass 3: γ,δ-Unsaturated Ketones .................................. 1111
Synthesis of Product Subclass 3 .................................................. 1111
Method 1: Coupling of Enolates with Transition-Metal–Allyl Complexes 1111
Method 2: Claisen Rearrangement .............................................. 1115
Product Subclass 4: δ,ε-Unsaturated Ketones .................................. 1115
Product Class 10: Saturated and Unsaturated Ketones with an Additional Carbonyl, Nitrile, or Carboxy Substituent or Equivalent at a β- or More Remote Position: Synthesis of the Ketone Functionality
I. Chataigner, A. Harrison-Marchand, and J. Maddaluno
Product Class 10: Saturated and Unsaturated Ketones with an Additional Carbonyl, Nitrile, or Carboxy Substituent or Equivalent at a β- or More Remote Position: Synthesis of the Ketone Functionality .... 1123
Product Subclass 1: Oxonitriles .................................................... 1123
Synthesis of Product Subclass 1 .................................................. 1124
Method 1: Oxidation .................................................................. 1124
Variation 1: Of Hydroxynitriles .................................................. 1124
Variation 2: Of Nitronitriles ....................................................... 1124
Variation 3: Of Unsaturated Nitriles .......................................... 1125
Method 2: Electrophilic Acylation of Nitriles .................................. 1126
Variation 1: With Acyl Halides .................................................. 1126
Variation 2: With Carboxylic Acids, Esters, or Anhydrides .............. 1127
Variation 3: With Amides and Nitriles ....................................... 1128
Method 3: Nucleophilic Acylation of Cyano Derivatives .................. 1129
Variation 1: With Aldehydes and Derivatives (Cyanohydrins) ........ 1129
Variation 2: With Metal–Carbonyl Complexes ................................ 1130
Variation 3: With Miscellaneous Nucleophiles ................................. 1131
Method 4: Radical Acylation of Cyano Derivatives ........................ 1131
Variation 1: With Anhydrides or Aldehydes .................................. 1132
Variation 2: With Selenoesters .................................................. 1132
Variation 3: With Transition-Metal Complexes .............................. 1133
Variation 4: With β-Acyll Radicals .............................................. 1134
Method 5: Carbonylation of Cyano Compounds .............................. 1134
Variation 1: Free-Radical Carbonylation Reactions ......................... 1134
Variation 2: With Transition-Metal Complexes .............................. 1136
Method 6: Ring-Opening and Ring-Expansion Reactions .................. 1136
Method 7: Cyclizations and Cycloadditions .................................. 1138
Variation 1: Thorpe–Ziegler and Related Cyclizations ...................... 1138
Variation 2: Cycloaddition Reactions .......................................... 1139

Volume 27:
Heteroatom Analogues of Aldehydes and Ketones

Preface ................................................................. V

Volume Editor’s Preface ................................................ VII

Table of Contents ........................................................ XI

Introduction
A. Padwa ................................................................. 1

27.1 Product Class 1: Sulfur Ylides
V. Aggarwal and J. Richardson ....................................... 21

27.2 Product Class 2: Alkylidenesulfonium Salts or $\alpha$-Sulfanyl Carbocations
C. O. Kappe ........................................................... 105

27.3 Product Class 3: Thioaldehyde and Thioketone S,S-Dioxides and Oxyimides (Sulfenes and Derivatives)
B. Zwanenburg ......................................................... 123

27.4 Product Class 4: Thioaldehyde and Thioketone S-Oxides and S-Imides (Sulfines and Derivatives)
B. Zwanenburg ......................................................... 135

27.5 Product Class 5: Thioaldehydes
S. J. Collier ............................................................. 177

27.6 Product Class 6: Thioketones
M. J. Dabdoub ......................................................... 215

27.7 Product Class 7: Imines
K. Abbaspour Tehrani and N. De Kimpe ......................... 245

27.8 Product Class 8: Iminium Salts
K. Abbaspour Tehrani and N. De Kimpe ......................... 313

27.9 Product Class 9: N-Acylimines
L. Fišera ................................................................. 349

27.10 Product Class 10: N-Acyliminium Salts
R. A. Pilli and G. B. Rosso .......................................... 375

27.11 Product Class 11: Azomethine Ylides
W. Eberbach ............................................................ 441
| 27.12 | **Product Class 12: N-Haloimines** |
|       | Jie Jack Li | 499 |
| 27.13 | **Product Class 13: Nitrones and Cyclic Analogues** |
|       | P. Merino | 511 |
| 27.14 | **Product Class 14: Nitronic Acids and Their Derivatives** |
|       | Jie Jack Li | 581 |

Variation 2: Under Solid–Liquid Phase-Transfer Conditions

Variation 3: In a Biphasic Medium

Method 2: By Hydrogen Atom Substitution of an Existing Sulfonium Ylde

Variation 1: Replacement with Alkyl Groups

Method 3: Substitution of Groups on Sulfonium Salts

Variation 1: From Triarylsulfonium Salts

Variation 2: From Alkoxo- or Aminosulfonium Salts

Method 4: Nucleophilic Attack on Vinyl- and Buta-1,3-dienyl-Substituted Dimethylsulfonium Salts

Method 5: By Reaction of Sulfides with Carbenes and Carbenoids

Variation 1: Transition-Metal-Catalyzed Decomposition of Diazocompounds

Variation 2: By Reaction with Dihalocarbenes

Variation 3: Transylidation Reactions

Variation 4: Reaction with Zinc Carbenoids

Method 6: Desilylation of Æ-Silyl Sulfonium Salts

Applications of Product Subclass 3 in Organic Synthesis

Method 1: Reaction of Sulfonium Ylides with Aldehydes and Ketones

Variation 1: With Ylides Formed by Deprotonation

Variation 2: With Ylides Formed by Reaction with Carbenes

Variation 3: With Ylides Formed by Desilylation

Variation 4: With Ylides Formed by Nucleophilic Attack on Vinylsulfonium Salts

Method 2: Reaction of Sulfonium Ylides with Ketenes

Method 3: Reaction of Sulfonium Ylides with Imines

Variation 1: With Ylides Formed by Deprotonation of Sulfonium Salts

Variation 2: With Ylides Formed by Reactions with Carbenes

Variation 3: With Ylides Formed by Desilylation

Method 4: Reaction of Sulfonium Ylides with Michael Acceptors

Variation 1: With Ylides Formed by Deprotonation

Variation 2: With Ylides Formed from Carbenes

Method 5: Reactions with Alkynes

Method 6: Æ,—C₂—Elimination Reactions

Method 7: Rearrangement Reactions of Sulfonium Ylides

Method 8: Miscellaneous Applications

Product Subclass 4: Cyclic Conjugated Sulfonium Ylides

(1~4-Thiopyran 1-Oxides)

Synthesis of Product Subclass 4

Method 1: From Dimethylsulfonium Alk-2-enylides

Method 2: From 1,3-Diketones and Sulfonium Ylides

Method 3: From Other 1~4-Thiopyran 1-Oxides

Method 4: Miscellaneous Methods

Product Subclass 5: Cyclic Conjugated Sulfonium Ylides (1~4-Thiopyrans)
27.1.2 Method 2: Formation by Nucleophilic Addition of Alkyllithium Reagents to Thiopyrylium Salts .................................................. 96

27.1.2.1 Method 1: Reactions with Electrophilic Alkynes ......................... 97

27.1.2.2 Method 2: Rearrangements ................................................. 98

27.1.5 Product Subclass 5 in Organic Synthesis ........................................ 97

27.1.5.1 Method 1: Reactions with Electrophilic Alkynes ......................... 97

27.1.5.2 Method 2: Rearrangements ................................................. 98

27.2 Product Class 2: Alkylidenesulfonium Salts or α-Sulfanyl Carbocations
C. O. Kappe

27.2.1 Synthesis of Product Class 2 .................................................. 106

27.2.1.1 Method 1: Alkylation of Thioketones ...................................... 106

27.2.1.2 Method 2: α-Halo Elimination from α-Halo Sulfides ................. 106

27.2.1.3 Method 3: α-Alkoxy or α-Alkylamino Elimination from O,S- or N,S-Acetals 107

27.2.1.4 Method 4: α-Alkylsulfanyl Elimination from Dithioacetals .......... 107

27.2.1.5 Variation 1: Using Dimethyl(methylsulfanyl)sulfonyl Tetrafluoroborate 108

27.2.1.6 Variation 2: Using Copper(I) Trifluoromethanesulfonate .......... 110

27.2.1.7 Method 5: Protonation of Vinyl Sulfides .................................. 110

27.2.1.8 Method 6: Pummerer Rearrangement of Sulfoxides .................... 111

27.2.1.9 Variation 1: Acetic Anhydride Promoted Reaction ..................... 112

27.2.1.10 Variation 2: Trifluoroacetic Anhydride Promoted Reaction .......... 113

27.2.1.11 Variation 3: 4-Toluenesulfonic Acid Promoted Reaction .......... 116

27.2.1.12 Variation 4: Trimethylsilyl Trifluoromethanesulfonate Promoted Reaction 117

27.2.1.13 Variation 5: O-Silylated Ketene Acetal Promoted Reaction .......... 118

27.2.5 Product Class 3: Thioaldehyde and Thioketone S,S-Dioxides and
Oxyimides (Sulfenes and Derivatives)
B. Zwanenburg

27.3.1 Product Subclass 1: Thioaldehyde and Thioketone S,S-Dioxides (Sulfenes) 123

27.3.1.1 Synthesis of Product Subclass 1 ............................................ 123

27.3.1.1.1 Method 1: Dehydrohalogenation of Alkanesulfonyl Halides .......... 123

27.3.1.1.2 Method 2: Elimination of Chlorotrtrimethylsilane from
Trimethylsilymethanesulfonyl Chloride ..................................... 124

27.3.1.1.3 Method 3: Cope Rearrangement of Allyl Vinyl Sulfones .......... 124

27.3.1.1.4 Method 4: Ring Opening of Thiete 1,1-Dioxides ..................... 125

27.3.1.1.5 Method 5: Reaction of Diazoalkanes with Sulfur Dioxide .......... 125

27.3.1.1.6 Methods 6: Miscellaneous Methods .................................... 126

27.3.1.2 Applications of Product Subclass 1 in Organic Synthesis .......... 126

27.3.1.2.1 Method 1: In Situ Trapping with Enamines ............................ 126

27.3.1.2.2 Method 2: In Situ Cycloaddition with Vinyl Ethers ................ 127
Method 3: In Situ Trapping with Ketene Acetals
Method 4: In Situ Trapping with Ketene N,N-Acetals and Ketene O,N-Acetals
Method 5: In Situ Trapping with Carbonyl Compounds
Method 6: In Situ Trapping with Imines
Method 7: In Situ Trapping with Ynamines
Method 8: In Situ Trapping with Nitrones
Method 9: In Situ Trapping with /C226-Oxo Enamines and /C226-Thioxo Enamines
Method 10: In Situ Trapping with 1-(Dialkylamino)-1,3-dienes
Method 11: In Situ Trapping with Sulfonium Ylides
Method 12: In Situ Trapping with Cyclopentadiene
Method 13: Preparation of Thiirane 1,1-Dioxides

Product Subclass 2: Thioaldehyde and Thioketone Oxyimides (Sulfene Imides)

Method 1: Dehydrohalogenation of Sulfonimidoyl Chlorides
Method 2: Alkenation of Sulfur Dioxide with a Phosphonium Ylide (Wittig Reaction)
Method 2.1: Phosphonium Ylides with N-Sulfinylaniline
Method 2.2: Alkenation of Sulfur Dioxide with α-Silyl Carbanions
Method 2.3: α-Silyl Carbanions from Vinylsilanes
Method 3: Oxidation of Thiones
Method 4: Thioaldehyde S-Oxides from Thioacylsilanes
Method 5: Dehydrochlorination of Sulfanyl Chlorides
Method 5.1: Variation 1: α-Oxo Sulfinamides from Active Methylene Compounds and Thionyl Chloride
Method 6: Elimination of Phthalimide from N-Phthaloyl Sulfinamides
Method 7: Elimination of Chloroform from Trichloromethyl Sulfoxides
Method 8: In Situ Generation of Sulfinyl Chlorides by Retro-hetero-Diels–Alder Reactions
Method 9: Miscellaneous Methods
Method 10: In Situ Trapping with Ketene Acetals

Product Class 4: Thioaldehyde and Thioketone S-Oxides and S-Imides (Sulfines and Derivatives)

Method 1: Alkenation of Sulfur Dioxide with a Phosphonium Ylide
Method 2: Alkenation of Sulfur Dioxide with α-Silyl Carbanions
Method 3: Oxidation of Thiones
Method 4: Thioaldehyde S-Oxides from Thioacylsilanes
Method 5: Dehydrochlorination of Sulfanyl Chlorides
Method 5.1: Variation 1: α-Oxo Sulfinamides from Active Methylene Compounds and Thionyl Chloride
Method 6: Elimination of Phthalimide from N-Phthaloyl Sulfinamides
Method 7: Elimination of Chloroform from Trichloromethyl Sulfoxides
Method 8: In Situ Generation of Sulfinyl Chlorides by Retro-hetero-Diels–Alder Reactions
Method 9: Miscellaneous Methods
Method 10: In Situ Trapping with Ketene Acetals
27.4.1.9.2 Variation 2: Sulfines by a Wolff Rearrangement of Sulfinyl Carbenes ...... 155
27.4.1.9.3 Variation 3: Sulfines by Singlet Oxygen Oxidation of Thiophenes .......... 156
27.4.1.9.4 Variation 4: Sulfines by Dehydrodisulfolation of Silyl Sulfinates .......... 156
27.4.1.9.5 Variation 5: Synthesis of α-Disulfines from 1,2-Dithiethers ......... 157
27.4.1.9.6 Variation 6: Synthesis of Chlorosulfines from Alkanesulfonyl Chlorides .... 158
27.4.1.2 Applications of Product Subclass 1 in Organic Synthesis ........ 158
27.4.1.2.1 Method 1: 1,3-Dipolar Cycloaddition Reactions with Sulfines .......... 158
27.4.1.2.2 Method 2: Sulfines as 1,3-Dipoles ........................................ 161
27.4.1.2.3 Method 3: Diels–Alder Reactions ........................................ 163
27.4.1.2.4 Method 4: Inverse-Electron-Demand Diels–Alder Reactions of α-Oxo Sulfines ..................................................... 165
27.4.1.2.5 Method 5: Thiophilic Addition Reactions .................................. 166
27.4.2 Product Subclass 2: Thioketone S-Imides ......................................... 167
27.4.2.1 Synthesis of Product Subclass 2 ............................................ 167
27.4.2.1.1 Method 1: N-Sulfinyl-Substituted Sulfonamide with Phosphonium Ylides 167
27.4.2.1.2 Method 2: N-Sulfinylanilines with α-Silyl Carbanions ................. 168
27.4.2.1.3 Method 3: Sulfines with (Trimethylsilyl)amines ................. 168
27.4.2.1.4 Method 4: Thiocarbonyl Compounds with Chloroamines .......... 169
27.4.2.1.5 Method 5: α-Chloro Sulfinyl Chloride with Amines ................. 172
27.4.2.2 Applications of Product Subclass 2 in Organic Synthesis ........ 172
27.4.2.2.1 Method 1: Diels–Alder Reactions ........................................ 173
27.4.2.2.2 Method 2: 1,3-Dipolar Cycloaddition Reactions ...................... 173

27.5 Product Class 5: Thioaldehydes
S. J. Collier

27.5.1 Synthesis of Product Class 5 .................................................. 177
27.5.1.1 Method 1: Synthesis from Aldehydes ..................................... 180
27.5.1.1.1 Variation 1: By Using Hydrogen Sulfide and Acid ................. 180
27.5.1.1.2 Variation 2: By Using Metal and Metalloid Sulfides ............... 182
27.5.1.1.3 Variation 3: Via Phosphorus Sulfides .................................. 186
27.5.1.2 Method 2: Photofragmentation of Phenacyl Sulfides ............... 187
27.5.1.3 Method 3: 1,2-Elimination Reactions ..................................... 190
27.5.1.3.1 Variation 1: From Sodium Thiosulfate S-Esters (Bunte Salts) ..... 191
27.5.1.3.2 Variation 2: From Thiosulfonates ...................................... 192
27.5.1.3.3 Variation 3: Via Sulfenyl Chlorides .................................. 194
27.5.1.3.4 Variation 4: Via N-(Alkylsulfanyl)phthalimide Derivatives .......... 196
27.5.1.3.5 Variation 5: Other 1,2-Eliminations .................................. 196
27.5.1.4 Method 4: Synthesis by Cycloreversion Reactions .................. 198
27.5.1.4.1 Variation 1: Retro-Diels–Alder Reactions ............................ 198
27.5.1.4.2 Variation 2: Other Cycloreversion Reactions ...................... 201
27.5.1.5 Method 5: Modified Vilsmeier Reactions ............................. 202
27.5.1.6 Method 6: Synthesis from Acetals and Dihalomethyl Species ...... 203
Method 7: Reaction of Carbanions and Thioformate Esters ........................ 205
Method 8: Synthesis from Phosphorus Ylides .......................................... 207
Methods 9: Miscellaneous Syntheses ......................................................... 208

Product Class 6: Thioketones
M. J. Dabdoub

Synthesis of Product Class 6 ................................................................. 215
Method 1: Direct Transformation of Ketones .............................. 216
Variation 1: By Reaction with Hydrogen Sulfide and an Acid 216
Variation 2: By Reaction with Phosphorus-Based Reagents 218
Variation 3: By Reaction with Lawesson’s Reagent and Derivatives 219
Variation 4: By Reaction with Silicon-Based Reagents 221
Variation 5: By Reaction with Hexaorganyldistannanes or Bis(triorganoaluminum) Sulfides 222
Method 2: Synthesis from Ketimine Anions ............................ 223
Method 3: Synthesis from Hydrazones ............................................. 224
Variation 1: By Reaction with Sulfur Monochloride 224
Variation 2: By Reaction with Sulfur Dichloride 226
Variation 3: By Thermal Decomposition of (Triphenylphosphoranylidene)-hydrazones in the Presence of Elemental Sulfur 226
Method 4: Synthesis from 1,3-Dithiolanes or Ketals ............................ 227
Method 5: Retro-Diels–Alder Reaction .............................................. 229
Variation 1: Reaction of Diels–Alder Adducts in the Presence of a Suitable Unsaturated Compound 229
Variation 2: Flash-Vacuum Thermolysis of Diels–Alder Adducts 230
Variation 3: Thermolysis of Thioketone Dimers .......................... 232
Method 6: Synthesis from Noncarbonyl Precursors ....................... 233
Variation 1: From Halides via Bunte Salts ............................................. 233
Variation 2: By Reaction of 1,1-Dihalides with Potassium O-Ethyl Dithiocarbonate 234
Variation 3: By Reaction of Alkyl Halides with Elemental Sulfur, Mediated by Cesium Carbonate 235
Variation 4: By Reaction of Alkyl Halides with Elemental Sulfur, Mediated by 1,8-Diazabicyclo[5.4.0]undec-7-ene 236
Variation 5: By Elimination Reactions of Phthalimido Derivatives 237
27.7 **Product Class 7: Imines**  
K. Abbaspour Tehrani and N. De Kimpe

### 27.7.1 Product Subclass 1: N-Unsubstituted Imines

Method 3: Synthesis of Malonamides and Dihydropyrimidinediones

Method 4: Synthesis of Enantiopure β-Amidoaldehydes

Method 5: Synthesis of Trifluoromethylated Dipeptides

Method 6: N-Acylimines as Dienophiles in Diels–Alder
  Cycloaddition Reactions

Method 7: N-Acylimines as Dienophiles in Diels–Alder

Method 8: Taxol A-Ring Side Chain

Method 9: Functionalization of Penicillins at C6

Product Subclass 2: N-Acylimines Generated In Situ

Method 1: N-Acyl Hemiaminals as N-Acylimine Equivalents

Method 2: From Bisurethanes of Aldehydes

Method 3: Elimination Reactions of N-Acyl ß-Substituted Amines

Method 4: Elimination Reactions of ß-Amidoalkyl Phenyl Sulfones

Variation 1: Immobilization of N-Acylimines

Method 5: Radical-Based Methodology from N-tert-Butyl-N-(methoxyalkyl)benzamides

Applications of Product Subclass 2 in Organic Synthesis

Method 1: Allylic Primary Amines from N-Acylimine Equivalents

Variation 1: Propargylic Primary Amines

Method 2: Synthesis of β-Amino Ketones

Method 3: Synthesis of α-Amino Acids

Method 4: Synthesis of β-Amino Acid Esters

Variation 1: Immobilization of N-Acylimines

Method 5: Synthesis of Six-Membered Cyclic Carbamates from Immobilized N-Acylimines

Method 6: Synthesis of 1,2,3,4-Tetrahydronaphthalen-1-amines

Variation 1: Synthesis of (±)-Sertraline

Method 7: Alkylcarbamates from N-Acyl Hemiaminals

Variation 1: Alkylcarbamates from Bisurethanes of Aldehydes

Variation 2: Asymmetric Synthesis of Alkylcarbamates

Method 8: Synthesis of α-Amino Ketones

Method 9: Synthesis of Chiral N-Acetylamines

Product Class 10: N-Acyliminium Salts
R. A. Pilli and G. B. Rosso

Method 1: N-Acylation of Imines

Method 2: Reaction of Aldehydes with Amides, Imides, or Carbamates

Method 6: Synthesis of 1,2,3,4-Tetrahydronaphthalen-1-amines

Method 7: Alkylcarbamates from N-Acyl Hemiaminals

Variation 1: Alkylcarbamates from Bisurethanes of Aldehydes

Variation 2: Asymmetric Synthesis of Alkylcarbamates

Method 8: Synthesis of α-Amino Ketones

Method 9: Synthesis of Chiral N-Acetylamines

Product Class 15: Oximes
M. Yamane and K. Narasaka

Synthesis of Product Class 15

Method 1: Condensation of Carbonyl Compounds and Hydroxylamine
Method 2: By Nitrosation
Variation 1: Electrophilic Nitrosation of Active Methylene Compounds
Variation 2: Electrophilic Nitrosation of Alkenes
Variation 3: Radical Nitrosation

Method 3: By Oxidation of Amino Compounds
Variation 1: Oxidation of Hydroxylamines
Variation 2: Oxidation of Primary Amines

Method 4: By Reduction of Nitro and Nitroso Compounds
Variation 1: Reduction of Nitroalkanes
Variation 2: Reduction of Conjugated Nitroalkenes
Variation 3: Reduction of gem-Chloronitroso Compounds

Methods 5: Additional Methods

Applications of Product Class 15 in Organic Synthesis

Method 1: Formal Substitution with Cleavage of the O–N Bond
Variation 1: Via Oxidative Addition to Transition Metals
Variation 2: With Nucleophiles
Variation 3: Via Radical Intermediates

Method 2: Formal Elimination
Variation 1: Generation of 1,3-Dipoles
Variation 2: Conversion into Nitriles
Variation 3: Regeneration of Carbonyl Compounds

Method 3: Addition Reactions
Variation 1: Reduction to Primary Amines
Variation 2: Reduction to Hydroxylamines
Variation 3: With Radicals
Variation 4: With Carbon Nucleophiles

Method 4: Rearrangements
Variation 1: Beckmann Rearrangement
Variation 2: Neber Reaction

Method 5: Reactions with Retention of the Oxime Moiety
Variation 1: E/Z-Isomerization
Variation 2: α-Alkylation

Methods 6: Additional Reactions

Method 3: Fragmentation of \( \alpha,\beta \)-Epoxylation Tosylhydrazones

Method 4: Reduction of Tosylhydrazones

Method 5: Nucleophilic Additions to Tosylhydrazones

Variation 1: Conversion of Arylsulfonylhydrazones into Nitriles

Product Class 18: Hydrazonium Compounds

Y. Zhang and D. M. Wilson

Product Subclass 1: 1,1,1-Trialkyl-2-alkylidenehydrazinium Compounds

Method 1: Alkylation of Hydrazone Compounds

Method 2: Reaction of Carbonyl Compounds with Hydrazines

Applications of Product Subclass 1 in Organic Synthesis

Method 1: Synthesis of Azirines

Method 2: Synthesis of Aziridines

Method 3: Synthesis of Pyrroles

Method 4: Synthesis of 1,2,4-Oxadiazoles

Method 5: Synthesis of Nitriles

Product Subclass 2: 1,2,2-Trialkyl-1-alkylidenehydrazinium Compounds

Method 1: Alkylation of Hydrazone Compounds

Method 2: Reaction of Carbonyl Compounds and Hydrazines

Applications of Product Subclass 2 in Organic Synthesis

Method 1: Nucleophilic Additions to Hydrazonium Compounds

Product Class 19: Azomethine Imines

J. G. Schantl

Product Subclass 1: Acyclic Azomethine Imines

Synthesis of Product Subclass 1

Method 1: In Situ Generation from Hydrazones Followed by [3 + 2] Cycloaddition

Variation 1: Reaction of Aryl- and Hetarylhydrazones with Alkenic and Acetylenic Dipolarophiles

Variation 2: Reaction of Tosylhydrazones with a Diazonium Ion

Variation 3: Reaction of Arylhydrazones with In Situ Generated Cyanic Acid and Thiocyanic Acid

Variation 4: Reaction of Benzaldehyde Phenylhydrazone with 1-Methylene-1H-pyrrolium Ion

Variation 2: N-Acylation of 1,2-Substituted Hydrazine Followed by Intermolecular [3 + 2] Cycloaddition 762

Method 2: Deprotonation of N-Amino-Substituted Heterocycles 763

Variation 1: Deprotonation of N-Aminopyridinium and N-Aminoisoquinolinium Salts Followed by [3 + 2] Cycloaddition 764

Method 3: Catalytic Dehydrogenation of N-Phenyl-3,4-dihydroisoquinolin-2(1H)-amine Followed by [3 + 2] Cycloaddition 770

Method 4: Alkylation of Diazene by Intramolecular Attack on a Carbenoid 770

Method 5: Nonclassical “Criss-Cross” Reaction: [3 + 2] Cycloaddition of Dialkyl and Diphenyl Azodicarboxylates and Diphenylketenes; [3 + 2] Cycloaddition of Resulting Azomethine Imine 771

Method 6: Nonclassical “Criss-Cross” Reaction: [3 + 2] Cycloaddition of Azoalkenes with Thiocyanic Acid; [1,4]-H Shift of Resulting Azomethine Imine or [3 + 2] Cycloaddition with Thiocyanic Acid 773

Method 7: Base-Induced Partial Reversion of a Nonclassical “Criss-Cross” Product to Generate an Enehydrazine Followed by Reaction with Dipolarophiles 776

Method 8: Ring Transformation 778

Variation 1: Reaction of 1,3,4-Oxadiazol-2(3H)-one with 2H-Azirene 778

Variation 2: Exchange of One Ring Heteroatom in Olium Rings (Five-Membered Heterocycles with Positive Charge) with the Nitrogen Atom of Monosubstituted Hydrazines 778

Method 9: 1,5-Electrocyclization of 1,2-Diaza-1,3,5-heterotrienes 779

Variation 1: Oxidation of 1,2-Bis(hydrazones): Formation of 1,2,3-Triazol-1-ium-1-imides 780

Variation 2: Cyclization of 3-Hydrazonoprop-2-enylthiocyanates: Formation of Isothiazol-2-ium-2-imides 780

Product Subclass 3: Azomethine Imines with N-N Incorporated in a Ring 783

Synthesis of Product Subclass 3 783

Method 1: Intramolecular N-Alkylation of Hydrazine by Dehydrohalogenation of (Haloacyl)hydrazones 783

Variation 1: Dehydrohalogenation of (β-Haloacyl)hydrazones To Form 3-Oxo-1-methyleneprazolidin-1-ium-2-ides and Photoreversible Transformation 787

Method 2: Condensation of 1,2-Disubstituted Hydrazine Derivatives with Carbonyl Compounds 788

Variation 1: Condensation of the Hydrazine Moiety of 1,2-Diazetidinium Tosylates with Carbonyl Compounds 788

Variation 2: Condensation of the Hydrazide Moiety of Pyrazolidin-3-ones with Carbonyl Compounds 790

Variation 3: Reaction of the Hydrazide Moiety in Pyrazolidin-3-ones with Alkynes 799

Variation 4: Condensation of the Hydrazide Moiety of Six-Membered Rings with Carbonyl Compounds 801
27.19.3.1.3 Method 3: Chlorination of 1,2,4-Triazolidine-3,5-dione Followed by Base-Induced Dehydrohalogenation of the N-Chlorohydrazide Moiety ................................................... 804

27.19.3.1.4 Method 4: Reaction of a Diazene with a Carbene ...................... 805

27.19.3.1.4.1 Variation 1: Reaction of 2,5-Dihydro-1,3,4-oxadiazole with Carbocycles Followed by Cycloelimination .............................. 805

27.19.3.1.4.2 Variation 2: Reaction of Halocarbenes with Cyclic Diazenes Followed by Intramolecular [3 + 2] Cycloaddition ........................ 806

27.19.3.1.4.3 Variation 3: Reaction of a 1H,2,4-Triazole-1,5-dione with Benzo[c]furan ................................................................. 807

27.19.3.1.5 Method 5: Reaction of a Diazene with a Diazoalkane .................. 807

27.19.3.1.5.1 Variation 1: Reaction of a 3H-1,2,4-Triazole-3,5(4H)-dione with Diazoalkanes ....................................................... 807

27.19.3.1.6 Method 6: Classical “Criss-Cross” Reaction (Tandem [3 + 2] Cycloaddition): Reaction of Azines with Two Molecules of Dipolarophile .. 811

27.19.3.1.6.1 Variation 1: Reaction of Aldazine or Ketazine with Cyanic or Thiocyanic Acid To Give Tetrahydro-1H,5H-1,2,4-triazole-1,5-diones or the Corresponding 1,5-Dithiones ................................. 811

27.19.3.1.6.2 Variation 2: Reaction of Hexafluoroacetone Azine with Alkenes or Alkynes To Give an Azomethine Imine (1:1 Cycloadduct) and/or “Criss-Cross” (Heterobicyclic) Product (1:2 Cycloadduct) .......... 812

27.19.3.1.6.3 Variation 3: 1,5-Electrocyclization of Allenylazine (Intramolecular “Criss-Cross” Cycloaddition) ........................................ 813

27.19.3.1.7 Method 7: Ring Transformation ........................................ 814

27.19.3.1.7.1 Variation 1: Cycloreversion (Electrocyclic Ring Opening) of 2,3-Dihydro-1H,5H-pyrazole[1,2-a][1,2,4]triazole-1,5-diones or the Corresponding 1,5-Dithiones ................................. 814

27.19.3.1.7.2 Variation 2: Thermally Induced [3 + 2] Cycloelimination of Phenyl Isocyanate from 1-Methylene-3,5-dioxy-4-phenyl-1,2,4-triazolidin-1-ium-2-ide Followed by [3 + 2] Cycloaddition To Give 1-Methylene-5-oxo-1H-pyrazol-1-ium-2-ides ........... 815

27.19.3.1.7.3 Variation 3: Azomethine Imines Generated from the Diaziridine Ring in 1,5-Diazabicyclo[3.1.0]hexanes; Reaction with Diphenylpropanone ................................. 817

27.19.3.1.8 Method 8: Transformation of Oxo Azomethine Imines into Thioxo Azomethine Imines ................................................... 819

27.19.4 Product Subclass 4: Azomethine Imines with All Three Atoms Embedded in a Ring ............................................................... 819

27.19.4.1 Synthesis of Product Subclass 4 ........................................... 819

27.19.4.1.1 Method 1: N-Alkylation of Fused 1,2,4-Triazines ................. 819

27.19.4.1.2 Method 2: Ring Transformation ...................................... 820

27.19.4.1.2.1 Variation 1: Thermally or Acid-Induced Ring Enlargement of an Azomethine Imine with an Exocyclic Terminal Nitrogen into the Isomer with All Three Atoms in the Ring ............. 820

27.22.4.1.5  Method 5: Substitution Reactions of P-Halo- or P-Aminoalkylidene phosphines with Organolithium or Grignard Reagents .................. 952

27.22.4.1.6  Method 6: By Substitution Reactions of (Dichloromethylene)- (2,4,6-tri-tert-butylphenyl)phosphine .................................................. 953

27.22.4.1.7  Method 7: By Photochemical, Thermal, or Anionic Ring Opening of Diphosphiranes .................................................. 955

27.22.4.2  Applications of Product Subclass 4 in Organic Chemistry ................. 956

27.22.5  Product Subclass 5: Phosphaallene Derivatives .................................. 956

27.22.5.1  Synthesis of Product Subclass 5 .................................................. 956

27.22.5.1.1  Method 1: Condensation Reactions of Phosphaketenes, Aryl(dichloro)phosphines, or Aryl(diethynyl)phosphines .................. 957

27.22.5.1.1.1  Variation 1: From Aryl(trimethylsilyl)phosphides and Ketenes .............. 957

27.22.5.1.1.2  Variation 2: From Aryl(dichloro)phosphines with Monolithiated Allenes .......... 957

27.22.5.1.1.3  Variation 3: From Aryl(diethynyl)phosphines and Organolithium Reagents .................. 958

27.22.5.1.2  Method 2: Wittig Reaction of Phosphaketenes with Phosphoranyl Ylides .......... 959

27.22.5.1.3  Method 3: By Metal-Catalyzed Prototropic Isomerization .................. 959

27.22.6  Product Subclass 6: Diphosphirenes and Diphosphetes ...................... 961

27.22.6.1  Synthesis of Product Subclass 6 .................................................. 961
Method 1: Addition Reactions of Iminophosphines, Phosphinocarbenes, or Phosphinidyls to Alkylidyne phosphines .......... 961

Method 2: Condensation Reactions of Alkylidyne phosphines with Boron Trifluoride in the Presence of Base .......... 962

Method 3: Condensation Reactions of Alkylidyne phosphines with Perfluorinated Alkylidyne phosphines .......... 962

Method 4: Hydrostannylation of Alkylidyne phosphines To Give Stannyl-1,2-dihydro-1,3-diphosphetes .......... 963

Product Class 23: Alkylidyne phosphonium salts
E. Niecke, A. Ruban, and M. Raab

Synthesis of Product Class 23 ............................................ 969

Method 1: 1,2-Addition of an Electrophile to a Nucleophilic Phosphinocarbenes .......... 969

Method 2: Halide Abstraction from Halo(alkylidene)phosphoranes with Lewis Acids .......... 970

Applications of Product Class 23 in Organic Synthesis .......... 970

Product Class 24: Alkylidyne phosphoranes
R. Schobert and G. J. Gordon

Product Subclass 1: C-Heteroatom-Substituted Alkylidyne phosphoranes .......... 974

Synthesis of Product Subclass 1 ............................................ 975

Method 1: From Alkylidyne phosphoranes .......... 975

Variation 1: By Metalation .......... 975

Variation 2: By Halogenation .......... 977

Variation 3: By Sulfonation and Selenation .......... 978

Variation 4: By Silylation .......... 979

Method 2: From Phosphonium salts .......... 981

Variation 1: By Dehydrohalogenation .......... 981

Variation 2: By Dehalogenation .......... 982

Method 3: From Phosphines .......... 983

Applications of Product Subclass 1 in Organic Synthesis .......... 984

Method 1: Synthesis of Enol Ethers from and Homologation of Aldehydes and Ketones with α-Alkoxylated phosphoranes .......... 984

Method 2: Corey–Fuchs Synthesis of Alkynes .......... 986

Product Subclass 2: C-Carbon-Substituted Alkylidyne phosphoranes .......... 987

Synthesis of Product Subclass 2 .......... 987

Method 1: From Other Alkylidyne phosphoranes .......... 988
Variation 1: By Replacement of Ylidic Æ-Hydrogen Atoms by Alkylation
Variation 2: By Replacement of Ylidic Æ-Hydrogen Atoms through Arylation or Acylation
Variation 3: By Reactions with Electron-Poor Alkenes and Alkynes
Variation 4: By Replacement of a Hetero Substituent on the Ylidic Carbon Atom with a Carbon Residue
Variation 5: By Addition Across the C=Æ=C_2 Bond of Cumulated Ylides

Method 2: From Quaternary Phosphonium Salts
Variation 1: By Dehydrohalogenation
Variation 2: By Pyrolytic Elimination
Variation 3: By Addition of Nucleophiles
Variation 4: By Electrochemical Reduction

Method 3: From Tertiary Phosphines
Variation 1: By Addition to Carbenes
Variation 2: By Addition to Activated Multiple Bonds

Applications of Product Subclass 2 in Organic Synthesis
Method 1: Synthesis of Carbonyl Compounds
Variation 1: Hydrolysis of Acyl Ylides
Variation 2: Oxidation of Ylides
Variation 3: Reactions of Ylides with Nitriles

Method 2: Synthesis of Alkynes
Variation 1: Wittig–Trippett Pyrolysis of Acyl Ylides
Variation 2: Flash-Vacuum Pyrolysis of Acyl Ylides

Method 3: Synthesis of Alkenes by Reactions Other Than Wittig Procedures
Variation 1: Reaction of Ylides with Carbenes and Carbene Complexes
Variation 2: Allenes from the Reactions of Stabilized Ylides with Acyl Halides
Variation 3: Cycloalkenones from Hydrolysis of Bis[(triphenylphosphoranylidene)acyl] Compounds

Method 4: Alkenes by Wittig Alkenation of Carbonyl Compounds
Variation 1: Wittig Alkenation with Lithium Salt Free Ylides
Variation 2: Wittig Alkenation with Instant Ylides
Variation 3: In Situ Generation of Ylides with Oxiranes
Variation 4: Directed Stereoselective Alkenation Procedures
Variation 5: Cycloalkenes by Intramolecular Wittig Alkenation
Variation 6: Wittig Alkenation with Polymer-Bound Ylides
Variation 7: Wittig Alkenation under Phase-Transfer Conditions
Method 5: Synthesis of Cycloalkanes
Variation 1: Intramolecular S_n Reactions of α-Halogenated Ylides
Variation 2: Cyclopropanes from Ylides and Epoxides
Variation 3: Cyclopropanes from Reactive Ylides and α,β-Unsaturated Carbonyl Compounds
Variation 4: Cyclopropanes from Ester Ylides and cis-cis-γ-Hydroxygenones or 1,2-Dioxins

XXXVIII Table of Contents
27.24.1 Product Subclass 3: Phosphacumulene Ylides ........................................... 1042
  27.24.1.1 Synthesis of Product Subclass 3 ....................................................... 1043
  27.24.1.1.1 Method 1: From Phosphonium Methylides .................................. 1043
        Variation 1: (Triphenylphosphoranylidene)thioketene and -ketenimines,
                      and Allenylidene Ylides by Addition to 1,1-Dichloro(hetero)-
                      alkenes ................................................. 1043
  27.24.1.1.2 Variation 2: (Phosphoranylidene)ketenimines by Addition to
                          Isothiocyanates .......................................... 1045
  27.24.1.1.2 Method 2: From Phosphonium Alkoxy carbonyl- and
                       Alkyldithiocarbonylmethylides ................................ 1046
        Variation 1: (Triphenylphosphoranylidene)ketene and (Triphenyl-
                      phosphoranylidene)thioketene by Elimination with
                      Sodium Hexamethyldisilazanide .................................. 1046
  27.24.1.1.2 Variation 2: (Triphenylphosphoranylidene)ketene Acetals by
                         O-Alkylation/Deprotonation ...................................... 1047
  27.24.1.1.3 Method 3: Pyrolysis of Disilylated Ester Ylides ....................... 1049
  27.24.1.2 Applications of Product Subclass 3 in Organic Synthesis ............... 1050
  27.24.1.2.1 Method 1: Syntheses with Acyl Ylides Obtained from Addition of
                      Acidic Compounds to Cumulated Ylides .......................... 1050
        Variation 1: α,β-Unsaturated Esters (or Amides) by a Three-Component
                      Reaction of Alcohols (or Amines), Aldehydes, and
                      (Triphenylphosphoranylidene)ketene ................................ 1050
  27.24.1.2.2 Variation 2: Macrolides from ω-Hydroxy Aldehydes ...................... 1051
  27.24.1.2.3 Variation 3: Five- and Six-Membered Carbo- and Heterocycles from
                        Cumulated Ylides and Carbonyl Compounds Bearing
                        Acidic Functional Groups ...................................... 1052
  27.24.1.2.4 Variation 4: Five- to Seven-Membered Heterocycles from Triphenyl-
                         (phosphoranylidene)ketene and Hydroxy/Amino Esters .......... 1053
  27.24.1.2.5 Variation 5: Oxazol-2(3H)-ones and 1,3,4-Oxadiazoles from (Triphenyl-
                         phosphoranylidene)ketene and Amides/Hydrazides ............... 1054
  27.24.1.2.6 Method 2: Syntheses of E-α,β-Unsaturated Ketones by Tandem
                         Grignard/Wittig Alkenation Reactions of (Triphenyl-
                         phosphoranylidene)ketene ..................................... 1056
  27.24.1.2.7 Method 3: Synthesis of Carbocycles and Heterocycles by
                        Cycloaddition Reactions ........................................ 1057

Introduction
A. G. Griesbeck ........................................................... 1

28.1 Product Class 1: Benzo-1,4-quinones

28.1.1 Product Subclass 1: Metal-Substituted Benzo-1,4-quinones
B. G. Vong and E. A. Theodorakis ........................................ 13

28.1.2 Product Subclass 2: Halogen-Substituted Benzo-1,4-quinones
M. Balci, M. Çelik, and M. S. Gültekin ...................................... 31

28.1.3 Product Subclass 3: Chalcogen-Substituted Benzo-1,4-quinones
S. H. Kim and E. A. Theodorakis ........................................... 53

28.1.4 Product Subclass 4: Nitrogen- and Phosphorus-Substituted Benzo-1,4-quinones
H. Lee and E. A. Theodorakis .............................................. 71

28.1.5 Product Subclass 5: Benzo-1,4-quinones Substituted with Carbon with Three Bonds to Heteroatoms
M. Balci, M. Çelik, and M. S. Gültekin ...................................... 87

28.1.6 Product Subclass 6: Benzo-1,4-quinones Substituted with Carbon with Two Bonds to Heteroatoms
M. Balci, M. Çelik, and M. S. Gültekin ..................................... 105

28.1.7 Product Subclass 7: Benzo-1,4-quinones Substituted with Carbon with One Bond to a Heteroatom
M. Balci, M. S. Gültekin, and M. Çelik .................................... 115

28.1.8 Product Subclass 8: Alkynyl-, Aryl-, and Alkenyl-Substituted Benzo-1,4-quinones
M. Balci, M. S. Gültekin, and M. Çelik .................................... 131

28.1.9 Product Subclass 9: Alkyl-Substituted Benzo-1,4-quinones
M. Balci, M. S. Gültekin, and M. Çelik .................................... 157
28.2 Product Class 2: Benzo-1,2-quinones
V. Nair and K. V. Radhakrishnan ............................................. 181

28.3 Product Class 3: Naphtho-1,4-quinones
E. A. Couladouros and A. T. Strongilos ..................................... 217

28.4 Product Class 4: Naphtho-1,2-, Naphtho-1,5-, Naphtho-1,7-, Naphtho-2,3-, and Naphtho-2,6-quinones
C.-C. Liao and R. K. Peddinti .................................................. 323

28.5 Product Class 5: Anthra-9,10-quinones, Anthra-1,2-quinones, Anthra-1,4-quinones, Anthra-2,9-quinones, and Their Higher Fused Analogues
K. Krohn and N. Böker ............................................................. 367

28.6 Product Class 6: Phenanthrene-9,10-diones, Stilbenequinones, Diphenoquinones, and Related Ring Assemblies
A. M. Echavarren and S. Porcel ................................................ 507

28.7 Product Class 7: Hetarene-Fused Quinones

28.7.1 Product Subclass 1: Nitrogen-Containing Hetarene Quinones
U. Pindur and T. Lemster ......................................................... 561

28.7.2 Product Subclass 2: Oxygen- and Sulfur-Containing Hetarene Quinones
A. G. Griesbeck ................................................................. 593

28.8 Product Class 8: Sulfur Analogues of Quinones
M. Yoshifuji and S. Kawasaki ................................................. 623

28.9 Product Class 9: Benzo-1,2-, Benzo-1,4-, Naphtho-1,2-, and Naphtho-1,4-quinone Imines and Diimines
M. C. Carreño and M. Ribagorda .............................................. 629

28.10 Product Class 10: Anthraquinone and Phenanthrenedione Imines and Diimines
C. Avendaño and J. C. Menéndez ............................................. 735

28.11 Product Class 11: Quinone Diazides
A. G. Griesbeck and E. Zimmermann ..................................... 807

28.12 Product Class 12: Quinomethanes

28.12.1 Product Subclass 1: o-Quinomethanes
T. R. R. Pettus and C. Selenski ............................................... 831

28.12.2 Product Subclass 2: p-Quinomethanes

# Table of Contents

**Introduction**  
A. G. Griesbeck  

---

## 28.1 Product Class 1: Benzo-1,4-quinones

### 28.1.1 Product Subclass 1: Metal-Substituted Benzo-1,4-quinones  
B. G. Vong and E. A. Theodorakis  

---

### 28.1.1 Product Subclass 1: Metal-Substituted Benzo-1,4-quinones  

#### 28.1.1.1 Method 1:  
Tin-Substituted Benzo-1,4-quinones by Cyclobutenone Ring Expansion  

#### 28.1.1.2 Method 2:  
Tin-Substituted Benzo-1,4-quinones by Stannylation of Benzo-1,4-quinones  

#### 28.1.1.3 Method 3:  
Silicon-Substituted Benzo-1,4-quinones by Reaction of Organolithium Species  

#### 28.1.1.4 Method 4:  
Silicon-Substituted Benzo-1,4-quinones by Cyclobutenone Ring Expansion  

#### 28.1.1.5 Method 5:  
Silicon-Substituted Benzo-1,4-quinones by Carbene Annulation  

#### 28.1.1.6 Method 6:  
Silicon-Substituted Benzo-1,4-quinones by Nucleophilic Substitution  

#### 28.1.1.7 Method 7:  
Boron-Substituted Benzo-1,4-quinones by Carbene Benzannulation  

---

### 28.1.2 Applications of Product Subclass 1 in Organic Synthesis  

#### 28.1.2.1 Method 1:  
Palladium-Catalyzed Cross-Coupling Reactions of Tin-Substituted Benzo-1,4-quinones  

#### 28.1.2.2 Method 2:  
Silicon/Halide-Exchange Reactions of Silicon-Substituted Benzo-1,4-quinones  

#### 28.1.2.3 Method 3:  
Oxidation of the Boron Substituent in Boron-Substituted Benzo-1,4-quinones
28.1.2

Product Subclass 2: Halogen-Substituted Benzo-1,4-quinones
M. Balci, M. Çelik, and M. S. Gültekin

28.1.2

Product Subclass 2: Halogen-Substituted Benzo-1,4-quinones

28.1.2.1

Monohalobenzo-1,4-quinones

28.1.2.1.1

Synthesis of Monohalobenzo-1,4-quinones

28.1.2.1.1.1

Method 1: Oxidation of 4-Amino-3-iodophenol Using Potassium Dichromate

28.1.2.1.1.2

Method 2: Oxidation of 1,4-Hydroquinones with Persulfate or Ammonium Cerium(IV) Nitrate

28.1.2.1.1.3

Method 3: Oxidation of 1,4-Hydroquinones Catalyzed by an Oxovanadium Complex

28.1.2.1.1.4

Method 4: Oxidation of 1,4-Hydroquinones Catalyzed by Gaseous Nitrogen Oxides

28.1.2.1.1.5

Methods 5: Miscellaneous Oxidations of Anilines and 1,4-Hydroquinones

28.1.2.1.2

Applications of Monohalobenzo-1,4-quinones in Organic Synthesis

28.1.2.2

2,3-Dihalobenzo-1,4-quinones

28.1.2.2.1

Synthesis of 2,3-Dihalobenzo-1,4-quinones

28.1.2.2.1.1

Method 1: Halogenation of Benzo-1,4-quinone

28.1.2.2.1.2

Method 2: Oxidation of a 1,4-Hydroquinone Using Ammonium Cerium(IV) Nitrate

28.1.2.2.2

Applications of 2,3-Dihalobenzo-1,4-quinones in Organic Synthesis

28.1.2.3

2,5-Dihalobenzo-1,4-quinones

28.1.2.3.1

Synthesis of 2,5-Dihalobenzo-1,4-quinones

28.1.2.3.1.1

Method 1: Oxidation of 1,2,4,5-Tetrafluorobenzene

28.1.2.3.1.2

Method 2: Oxidation of 1,4-Hydroquinones

28.1.2.3.1.3

Method 3: Oxidative Demethylation of 1,4-Dimethoxybenzenes

28.1.2.4

2,6-Dihalobenzo-1,4-quinones

28.1.2.4.1

Synthesis of 2,6-Dihalobenzo-1,4-quinones

28.1.2.4.1.1

Method 1: Oxidation of Phenols and 1,4-Hydroquinones Catalyzed by Metalated Phthalocyanines

28.1.2.4.1.2

Method 2: Oxidation of a 1,4-Hydroquinone Using Ammonium Cerium(IV) Nitrate

28.1.2.4.1.3

Method 3: Oxidation of Phenols Using Metal Oxides

28.1.2.4.2

Applications of 2,6-Dihalobenzo-1,4-quinones in Organic Synthesis

28.1.2.5

2,3,5-Trihalobenzo-1,4-quinones

28.1.2.5.1

Synthesis of 2,3,5-Trihalobenzo-1,4-quinones

28.1.2.5.1.1

Method 1: Halogenation of Benzo-1,4-quinones

28.1.2.5.1.2

Method 2: Bromination of 2,5-Dichlorobenzo-1,4-quinone

28.1.2.5.1.3

Method 3: Oxidation of a 1,4-Hydroquinone Using Ammonium Cerium(IV) Nitrate

28.1.2.5.2

Applications of 2,3,5-Trihalobenzo-1,4-quinones in Organic Synthesis
### Product Subclass 3: Chalcogen-Substituted Benzo-1,4-quinones

S. H. Kim and E. A. Theodorakis

28.1.7.1.2 Method 2: Demethylation of Dimethoxybenzenes by Oxidation with Ammonium Cerium(IV) Nitrate ........................................... 116
28.1.7.1.3 Method 3: Demethylation of Dimethoxybenzenes by Oxidation with Nitric Acid .................................................. 116
28.1.7.1.4 Method 4: Allylic Bromination and Substitution ...................... 117
28.1.7.2 Method 3: Demethylation of Dimethoxybenzenes by Oxidation with Nitric Acid .................................................. 116
28.1.7.2.1 Synthesis of Benzo-1,4-quinones Substituted with Carbon with One Bond to Oxygen .................................................. 119
28.1.7.2.1.1 Method 1: (Diacetoxyiodo)benzene Oxidation ...................... 119
28.1.7.2.1.2 Method 2: Oxidation of Anilines .................................... 120
28.1.7.2.1.3 Method 3: Oxidation of Hydroquinones and 1,4-Dimethoxybenzenes with Nitric Acid .................................................. 120
28.1.7.2.1.4 Method 4: Oxidation of Hydroquinones and 1,4-Dimethoxybenzenes with Ammonium Cerium(IV) Nitrate ...................... 121
28.1.7.2.1.5 Method 5: Oxidation of Hydroquinones and 1,4-Dimethoxybenzenes with Silver(I) Oxide ........................................ 122
28.1.7.2.1.6 Method 6: Oxidation of Hydroquinones and 1,4-Dimethoxybenzenes with Iron(III) Chloride ........................................ 125
28.1.7.2.1.7 Methods 7: Additional Methods .................................... 126
28.1.7.3 Benzo-1,4-quinones Substituted with Carbon with One Bond to Sulfur .................................................. 129
28.1.7.3.1 Synthesis of Benzo-1,4-quinones Substituted with Carbon with One Bond to Sulfur .................................................. 129

28.1.8 Product Subclass 8: Alkynyl-, Aryl-, and Alkenyl-Substituted Benzo-1,4-quinones
M. Balci, M. S. Gültekin, and M. Çelik

28.1.8 Product Subclass 8: Alkynyl-, Aryl-, and Alkenyl-Substituted Benzo-1,4-quinones .................................................. 131
28.1.8.1 Alkynyl-Substituted Benzo-1,4-quinones ........................................ 131
28.1.8.1.1 Synthesis of Alkynyl-Substituted Benzo-1,4-quinones ......... 131
28.1.8.1.1.1 Method 1: Suzuki Cross Coupling of Benzo-1,4-quinones .......... 131
28.1.8.1.1.2 Method 2: Oxidative Demethylation of 1,4-Dimethoxybenzenes .......... 132
28.1.8.1.1.3 Method 3: Addition of Organolithium Compounds to Benzoquinone Derivatives ........................................ 134
28.1.8.1.1.3.1 Variation 1: Addition to 2,5-Dialkoxybenzo-1,4-quinones .......... 134
28.1.8.1.1.3.2 Variation 2: Addition to Dimethoxybenzo-1,2-quinones .......... 135
28.1.8.2 Aryl-Substituted Benzo-1,4-quinones ........................................ 137
28.1.8.2.1 Synthesis of Aryl-Substituted Benzo-1,4-quinones .............. 137
28.1.8.2.1.1 Method 1: Coupling Reactions of Benzo-1,4-quinones .......... 137
28.1.8.2.1.2 Method 2: Oxidative Demethylation and Coupling of a 1,4-Dimethoxybenzene ........................................ 139
28.1.8.2.1.3 Method 3: Oxidation of 1,4-Hydroquinones Catalyzed by an Oxovanadium Complex ........................................ 139
## Table of Contents

### 28.1.8.2.1.4 Method 4: Oxidation of Phenols and Derivatives Using Metals and Metal Oxides ........................................ 140

### 28.1.8.2.1.5 Method 5: Oxidation of Phenols with Fremy’s Salt .................. 141

### 28.1.8.2.1.6 Method 6: Reaction of Fischer Carbene Complexes with Phenylacetylenes ........................................ 142

### 28.1.8.2.1.7 Method 7: Reaction of Phenylacetylenes with a Tetracarbonyliron Species or with Carbon Monoxide ............... 143

### 28.1.8.2.1.8 Methods 8: Additional Methods ...................................... 144

### 28.1.8.3 Alkenyl-Substituted Benzo-1,4-quinones ................................ 147

### 28.1.8.3.1 Synthesis of Alkenyl-Substituted Benzo-1,4-quinones ............... 147

#### 28.1.8.3.1.1 Method 1: Direct Introduction of a Vinyl Group into Benzo-1,4-quinones 147

#### 28.1.8.3.1.2 Method 2: Suzuki Cross Coupling of Benzo-1,4-quinones ........ 147

#### 28.1.8.3.1.3 Method 3: Oxidation of 1,4-Hydroquinones with Silver(I) Oxide 148

#### 28.1.8.3.1.4 Method 4: Oxidation of a 1,4-Hydroquinone with 2,3-Dichloro-5,6-dicyanobenzo-1,4-quinone ............................ 149

#### 28.1.8.3.1.5 Method 5: Oxidative Demethylation of 1,4-Dimethoxybenzenes with Ammonium Cerium(IV) Nitrate .................. 150

#### 28.1.8.3.1.6 Method 6: Electrochemical Oxidation of 1,4-Dimethoxybenzenes ....... 150

#### 28.1.8.3.1.7 Method 7: Thermal Ring Expansion of Cyclobutenedione Derivatives ...... 151

#### 28.1.8.3.1.8 Methods 8: Additional Methods ...................................... 152

### 28.1.9 Product Subclass 9: Alkyl-Substituted Benzo-1,4-quinones

M. Balci, M. S. Gültekin, and M. Çelik

#### 28.1.9.1 Monoalkylbenzo-1,4-quinones ........................................ 157

#### 28.1.9.1.1 Synthesis of Monoalkylbenzo-1,4-quinones ............................. 157

#### 28.1.9.1.1.1 Method 1: Coupling Reactions of Benzo-1,4-quinones ............ 157

#### 28.1.9.1.1.2 Method 2: Oxidation of 1,4-Hydroquinones with an Organoselenium Reagent ................................. 158

#### 28.1.9.1.1.3 Method 3: Oxidation of 1,4-Hydroquinones with Ammonium Cerium(IV) Nitrate ........................................ 159

#### 28.1.9.1.1.4 Method 4: Oxidation of Phenols and Derivatives .................. 160

#### 28.1.9.1.2 2,3-Dialkylbenzo-1,4-quinones ........................................ 161

#### 28.1.9.2 Synthesis of 2,3-Dialkylbenzo-1,4-quinones ............................. 161

#### 28.1.9.2.1 Method 1: Oxidation of a 1,4-Hydroquinone with Silver(I) Oxide .......... 161

#### 28.1.9.2.1.1 Method 2: Oxidation of N-Arylsulfonamides .......................... 161

#### 28.1.9.2.1.3 Method 3: Reaction of Fischer Carbene Complexes with Alkynes ........ 162

#### 28.1.9.2.1.4 Methods 4: Additional Methods ...................................... 162

#### 28.1.9.3 2,5-Dialkylbenzo-1,4-quinones ........................................ 165

#### 28.1.9.3.1 Synthesis of 2,5-Dialkylbenzo-1,4-quinones ............................. 165

#### 28.1.9.3.1.1 Method 1: Oxidation of Phenols and 1,4-Hydroquinones Using Methyltrioxorhenium(VII) ............................. 165
28.1.9.3.1.2 Method 2: Oxidation of 1,4-Hydroquinones with Polymer-Supported (Diacetoxyiodo)benzene ............................................ 166
28.1.9.3.1.3 Method 3: Oxidation of 1,4-Hydroquinones and Derivatives with Ammonium Cerium(IV) Nitrate or Pyridinium Chlorochromate 166
28.1.9.3.1.4 Methods 4: Additional Methods ...................................... 168
28.1.9.4 2,6-Dialkylbenzo-1,4-quinones ........................................... 170
28.1.9.4.1 Synthesis of 2,6-Dialkylbenzo-1,4-quinones .......................... 170
28.1.9.5 2,3,5-Trialkylbenzo-1,4-quinones ......................................... 173
28.1.9.5.1 Synthesis of 2,3,5-Trialkylbenzo-1,4-quinones ........................ 173
28.1.9.5.1.1 Method 1: Oxidation of Phenols and 1,4-Hydroquinones .......... 173
28.1.9.5.1.2 Methods 2: Additional Methods ...................................... 174
28.1.9.6 2,3,5,6-Tetraalkylbenzo-1,4-quinones .................................... 175
28.1.9.6.1 Synthesis of 2,3,5,6-Tetraalkylbenzo-1,4-quinones ................. 175
28.1.9.6.1.1 Method 1: Oxidation of 1,4-Hydroquinones and Derivatives .... 175

28.2 Product Class 2: Benzo-1,2-quinones
V. Nair and K. V. Radhakrishnan

28.2.1 Synthesis of Product Class 2 .................................................. 182
28.2.1.1 Method 1: Oxidation of Catechols Using Silver(I) Salts ............... 182
28.2.1.2 Method 2: Oxidation of Catechols Using Cerium(IV) Reagents ...... 183
28.2.1.3 Method 3: Oxidation of Catechols Using Periodate Salts .............. 184
28.2.1.4 Method 4: Oxidation of Catechols Using N-Chlorosuccinimide .... 184
28.2.1.5 Method 5: Oxidation of Catechols Using Other Reagents ............ 185
28.2.1.6 Method 6: Oxidation of Phenols Using Benzeneselenenic Anhydride 185
28.2.1.7 Method 7: Oxidation of Phenols Using Fremy’s Salt .................. 186
28.2.1.8 Method 8: Oxidation of Phenols Using Other Reagents ............... 187
28.2.2 Applications of Product Class 2 in Organic Synthesis .................. 187
28.2.2.1 Method 1: Addition of Nucleophiles ..................................... 187
28.2.2.2 Method 2: Diels–Alder and Related Reactions ......................... 195
28.2.2.2.1 Variation 1: Benzo-1,2-quinones as Carbodienes and Heterodiens 195
28.2.2.2.2 Variation 2: Benzo-1,2-quinones as Dienophiles .................... 196
28.2.2.2.3 Variation 3: Benzo-1,2-quinones as Heterodienophiles ............ 198
28.2.2.3 Method 3: Dipolar Cycloadditions ..................................... 198
28.2.2.3.1 Variation 1: Nitrile Oxide Addition .................................. 198
28.2.2.3.2 Variation 2: Diazomethane Addition .................................. 200
28.2.2.3.3 Variation 3: Acyclic Carbonyl Ylide Addition ...................... 200
28.2.2.3.4 Variation 4: Cyclic Carbonyl Ylide Addition ...................... 201
28.2.2.3.5 Variation 5: Addition of Mesoionic Compounds .................... 202
28.2.2.3.6 Variation 6: Addition of Phosphorus Ylides ...................... 204
28.3 Product Class 3: Naphtho-1,4-quinones
E. A. Couladouros and A. T. Strongilos

28.3.1 Synthesis of Product Class 3 .............................. 220
28.3.1.1 Synthesis by Ring-Closure Reactions ....................... 220
28.3.1.1.1 Method 1: Reaction of Fischer-Type Carbene Complexes with Alkynes 220
28.3.1.1.2 Method 2: Synthesis from Cyclobutenediones ....................... 225
28.3.1.1.2.1 Variation 1: Reaction of Phthaloyl Complexes with Functionalized Alkynes 229
28.3.1.1.3 Method 3: Annulation Reactions of Phthalide Anions with Michael Acceptors ........................... 232
28.3.1.1.4 Method 4: [4 + 2]-Cycloaddition Reactions ....................... 234
28.3.1.1.4.1 Variation 1: Reaction of Benzo-1,4-quinones with Heterosubstituted Dienes ............................. 239
28.3.1.1.4.2 Variation 2: Reaction of Benzo-1,4-quinones with Vinylenes and Vinylhetarenes ......................... 241
28.3.1.1.4.3 Variation 3: Reaction of Benzo-1,4-quinones with Dienes of Fixed s-cis Conformation ......................... 242
28.3.1.1.4.4 Variation 4: Quinones as Dienes ............................... 245
28.3.1.1.5 Method 5: Condensation of Benzaldehydes with Succinic Acid Derivatives ................................. 246
28.3.1.1.6 Method 6: Friedel–Crafts Condensation of Hydroquinone Derivatives with Maleic Anhydrides .................. 248
28.3.1.1.7 Method 7: Annulation of ortho-Substituted Tertiary Benzamides ................................. 250
28.3.1.2 Synthesis by Oxidative Transformation .............................. 251
28.3.1.2.1 Method 1: Oxidation of Naphthalenes .............................. 252
28.3.1.2.1.1 Variation 1: Oxidation of Naphthalene Derivatives Bearing Oxidation Directing Groups ....................... 255
28.3.1.2.2 Method 2: Oxidation of Naphthols ............................... 255
28.3.1.2.3 Method 3: Oxidation of Hydroquinone Derivatives ....................... 261
28.3.1.2.3.1 Variation 1: Oxidation of Diprotected Hydroquinone Derivatives ....................... 261
28.3.1.2.3.2 Variation 2: Oxidation of Monoprotected Hydroquinone Derivatives ....................... 263
28.3.1.2.3.3 Variation 3: Oxidation of Hydroquinones .............................. 264
28.3.1.2.4 Method 4: Oxidation of Naphthols Bearing Substituents Other Than Oxygen at the 4-Position ....................... 265
28.3.1.2.5 Method 5: Aromatization and Benzyl Oxidation of Fused Carbocycles .............................. 267
28.3.1.3 Substitution of Hydrogen ............................... 267
28.3.1.3.1 Method 1: Using Nucleophilic Carbon Reagents .............................. 268
28.3.1.3.2 Method 2: Using Electrophilic Carbon Reagents .......................... 271
28.3.1.3.3 Method 3: Using Carbon Free Radicals .............................. 273
28.3.1.3.4 Method 4: Addition of Halides ......................................... 277
28.3.1.3.5 Method 5: Varvogli’s Iodonium Ylides ............................. 279
28.3.1.3.6 Method 6: Using Oxygen Nucleophiles ............................. 280
28.3.1.3.7 Method 7: The Thiele–Winter Acetoxylation Reaction ............. 282
28.3.1.3.8 Method 8: Using Sulfur Nucleophiles .............................. 283
28.3.1.3.9 Method 9: Addition of Amines, Azides, and Ammonia............... 286

28.3.1.4 Substitution of Heteroatoms ............................................. 289
28.3.1.4.1 Method 1: Substitution of Halogen by Another Halogen ............. 289
28.3.1.4.2 Method 2: Substitution of Halogen by Oxygen ...................... 289
28.3.1.4.3 Method 3: Substitution of Halogen by Sulfur ....................... 291
28.3.1.4.4 Method 4: Substitution of Halogen by Nitrogen .................... 292
28.3.1.4.5 Method 5: Substitution of Halogen by Carbon ..................... 294
28.3.1.4.5.1 Variation 1: Palladium-Mediated Coupling of Halogenated Naphtho-1,4-quinones ........................................ 295
28.3.1.4.6 Method 6: Substitution of Oxygen by Halogen, Nitrogen, or Carbon ... 297

28.4 Product Class 4: Naphtho-1,2-, Naphtho-1,5-, Naphtho-1,7-, Naphtho-2,3-, and Naphtho-2,6-quinones
C.-C. Liao and R. K. Peddinti

28.4.1 Product Subclass 1: Naphtho-1,2-quinones .................................. 323
28.4.1.1 Synthesis of Product Subclass 1 ......................................... 325
28.4.1.1.1 Method 1: Reaction of Fischer-Type Carbene Complexes with tert-Butyl Isocyanide ............................................. 325
28.4.1.1.2 Method 2: [4 + 2]-Cycloaddition Reactions .......................... 325
28.4.1.1.2.1 Variation 1: Reaction of Benzoquinones with 2,3-Dimethylbuta-1,3-diene ......................................................... 325
28.4.1.1.2.2 Variation 2: Reaction of Dihalocatechols with 1-(Trimethylsilyloxy)buta-1,3-diene ...................................................... 326
28.4.1.1.3 Method 3: Dieckmann Ring Formation with Subsequent Acyloin Cleavage ......................................................... 327
28.4.1.1.4 Method 4: Oxidation of α-Tetralones .................................. 327
28.4.1.1.5 Method 5: Oxidation of Naphthalenes ................................ 328
28.4.1.1.6 Method 6: Oxidation of 1-Naphthols .................................. 329
28.4.1.1.6.1 Variation 1: Oxidation of 1-Naphthols with Fremy’s Salt ........ 329
28.4.1.1.6.2 Variation 2: Oxidation of 1-Naphthols with Benzeneseleninic Anhydride .......................................................... 332
28.4.1.1.6.3 Variation 3: Oxidation of 1-Naphthols with Cobalt–Salen Complex/Oxygen ......................................................... 332
28.4.1.1.6.4 Variation 4: Synthesis of Emmotin-H Using Iodobenzene .......... 333
28.4.1.1.6.5 Variation 5: Oxidation of a 1-Naphthol Derivative with Sodium Periodate ............................................................ 333
28.4.1.1.6.6 Variation 6: Oxidation of Halo-1-naphthols with Lead(IV) Acetate .............................................................. 334
28.4.1.1.6.7 Variation 7: Transition-Metal-Catalyzed Oxidations of 1-Naphthols ............................................................. 334
28.4.1.1.7 Method 7: Oxidation of 2-Naphthols .................................... 336
28.4.1.7.1 Variation 1: Oxidation of 2-Naphthol ........................................ 336
28.4.1.7.2 Variation 2: Oxidation of 2-Naphthols with Fremy’s Salt .................. 336
28.4.1.7.3 Variation 3: Synthesis of o-Hibiscanone with Benzeneeseleninic Anhydride 337
28.4.1.7.4 Variation 4: Oxidation of 2-Naphthols with Copper Chloride/Oxygen ...... 337
28.4.1.7.5 Variation 5: Oxidation of 2-Naphthols with 3-Chloroperoxybenzoic Acid 338
28.4.1.7.6 Variation 6: Transition-Metal-Catalyzed Oxidations of 2-Naphthols .......... 339
28.4.1.7.7 Variation 7: Oxidation of 1-Amino-2-naphthol by Polymer-Supported Hypochlorite Ion ................................................................. 339
28.4.1.7.8 Method 8: Oxidation of Naphthalene-1,2-diols .................................. 339
28.4.1.7.9 Variation 1: Oxidation of Naphthalene-1,2-diol .................................. 340
28.4.1.7.10 Variation 2: Synthesis from Naphthalene-1,2-diol Disilyl Ether ............... 340
28.4.1.7.11 Variation 3: Aerial Oxidation of Naphthalene-1,2-diols ...................... 341
28.4.1.7.12 Variation 4: Synthesis of Sapororthoquinone via Silver(I) Oxide Oxidation 342
28.4.1.7.13 Variation 5: Oxidation of Naphthalene-1,2-diol with Oxygen and
Bis(propane-1,3-diamine)copper(II) Chloride ........................................... 342
28.4.1.7.14 Method 9: Oxidation of a 1-Methoxynaphthalen-2-amine Derivative .......... 342
28.4.1.7.15 Method 10: Rearrangement of Naphtho-1,4-quinone Adducts ................. 343
28.4.1.7.16 Method 11: Substitution of Hydrogen ............................................. 343
28.4.1.7.17 Variation 1: Reaction of Naphtho-1,2-quinone with Pyroles ................. 343
28.4.1.7.18 Variation 2: Reaction of Naphtho-1,2-quinone with Vinylogous Michael Donors ................................................................. 344
28.4.1.7.19 Variation 3: Palladium(II)-Catalyzed Oxidative Coupling of
Naphtho-1,2-quinone and Arenes .............................................................. 345
28.4.1.7.20 Variation 4: Photochemical Reactions of Naphtho-1,2-quinones ............. 345
28.4.1.7.21 Variation 5: Reactions of 4-Aminonaphtho-1,2-quinone with Diazenes ... 349
28.4.1.7.22 Variation 6: Metal Chloride Catalyzed Addition of Alcohols to
Naphtho-1,2-quinones ................................................................. 350
28.4.1.7.23 Variation 7: Reactions of Naphtho-1,2-quinones with Thiols ................. 351
28.4.1.7.24 Variation 8: Reactions of Sodium 4-Sulfonatonaphtho-1,2-quinone ......... 351
28.4.1.7.25 Variation 9: Reactions of 4-Alkoxynaphtho-1,2-quinones with Amines ....... 352
28.4.1.7.26 Variation 10: Alkylation of the Silver Salt of
2-Hydroxynaphtho-1,4-quinones .............................................................. 355
28.4.1.7.27 Variation 11: Substitution of Heteroatoms ....................................... 356
28.4.1.7.28 Variation 12: Reactions of 2,3-Dihydronaphtho-1,4-quinone Imine ........ 356
28.4.1.7.29 Variation 13: Oxidation of Naphthale-1,5-diols .................................. 356
28.4.1.7.30 Variation 14: Air Oxidation of a Naphthale-1,5-diol ............................ 356
28.4.1.7.31 Variation 15: 2,3-Dichloro-5,6-dicyanobenzo-1,4-quinone Oxidation of
3,7-Di-tert-butylphenanthrene-1,5-diol .................................................... 357
28.4.1.7.32 Method 3: Substitution of Hydrogen by Halogen .............................. 357
28.4.1.7.33 Variation 1: Substitution of Hydrogen by Chlorine ............................ 357
28.4.1.7.34 Variation 2: Substitution of Hydrogen by Bromine ............................ 358
28.4.1.7.35 Method 4: Substitution of 4,8-Diaminophenanthro-1,5-quinone ............. 358
28.4.3 Product Subclass 3: Naphtho-1,7-quinones ........................................ 358
28.4.3.1 Synthesis of Product Subclass 3 .................................................. 358
28.4.3.1.1 Method 1: 2,3-Dichloro-5,6-dicyanobenzo-1,4-quinone Oxidation of 3,6-Di-tert-butyl-8-methylnaphthalene-1,7-diol ........................................ 358
28.4.4 Product Subclass 4: Naphtho-2,3-quinones ..................................... 359
28.4.4.1 Synthesis of Product Subclass 4 .................................................... 359
28.4.4.1.1 Method 1: Generation and Trapping through Desilylation–Debromination Induced by Fluoride Ion .................................................. 359
28.4.4.1.2 Method 2: Oxidation of 1,4-Diarylnaphthalene-2,3-diols .................. 360
28.4.5 Product Subclass 5: Naphtho-2,6-quinones ..................................... 362
28.4.5.1 Synthesis of Product Subclass 5 .................................................... 362
28.4.5.1.1 Method 1: Photooxygenation of Naphthalen-2-amine .................. 362
28.4.5.1.2 Method 2: Oxidation of a Naphthalene-2,6-diol with Lead(IV) Oxide .......................... 362

28.5 Product Class 5: Anthra-9,10-quinones, Anthra-1,2-quinones, Anthra-1,4-quinones, Anthra-2,9-quinones, and Their Higher Fused Analogues
K. Krohn and N. Böker

28.5.1 Product Subclass 1: Anthra-9,10-quinones ...................................... 367
28.5.1.1 Synthesis of Product Subclass 1 .................................................... 369
28.5.1.1.1 Friedel–Crafts Reactions ......................................................... 369
28.5.1.1.1.1 Method 1: One-Pot Procedures Using Fused Salts (N-Alkylpyridinium Halides) with Aluminum Trichloride as the Catalyst .................. 371
28.5.1.1.1.2 Method 2: One-Pot Procedures Using Molten Aluminum Trichloride–Potassium Chloride–Sodium Chloride or Aluminum Trichloride–Sodium Chloride as the Catalysts ........................................ 372
28.5.1.1.1.3 Method 3: One-Pot Procedures Using Group 4 or Group 5 Metal Oxides as the Catalysts ................................................................. 373
28.5.1.1.1.4 Method 4: One-Pot Procedures Using Phthaloyl Dichlorides as the Electrophiles ............................................................... 373
28.5.1.1.1.5 Method 5: Stepwise Procedures with Benzoylbenzoic Acids as the Intermediates ................................................................. 374
28.5.1.1.1.5.1 Variation 1: Benzoylbenzoic Acids by Friedel–Crafts Reaction ........................................ 375
28.5.1.1.1.5.2 Variation 2: Benzoylbenzoic Acids by Addition of Grignard Reagents to Phthalic Anhydrides .................................................. 375
28.5.1.1.1.6 Method 6: Stepwise Procedures Involving Direct Cyclization of Benzoylbenzoic Acids ................................................ 376
28.5.1.1.1.7 Method 7: Stepwise Procedures Involving Sequential Cyclization of Benzoylbenzoic Acids and Oxidation ................................. 378
28.5.1.1.8 Method 8: Stepwise Procedures Involving Benzylbenzoic Acids Prepared by Displacement of a Methoxy Group in Aryldihydrooxazoles 380

28.5.1.1.9 Method 9: Stepwise Procedures Involving Friedel–Crafts-Type Alkylation of 3-Bromophthalides with Benzenes To Form 3-Arylphthalides ................................................... 381

28.5.1.2 Diels–Alder Reactions ............................................................................. 382

28.5.1.2.1 Method 1: Reaction of Open-Chain Dienes with Naphtho-1,4-quinones Followed by Elimination or Oxidation of Allylic Hydroxy Groups .................................................. 383

28.5.1.2.2 Method 2: Reaction of Open-Chain Dienes with Naphtho-1,4-quinones Followed by Two β-Eliminations .................................................. 388

28.5.1.2.2.1 Variation 1: Reaction of 1,3-Siloxy-1,3-dienes with Halonaphtho-1,4-quinones ........................................ 388

28.5.1.2.2.2 Variation 2: Reaction of 1,3-Siloxy-1,3-dienes with Dichloronaphtho-1,4-quinones ........................................ 390

28.5.1.2.2.3 Variation 3: Reaction of Vinylketene Acetals with 2- or 3-Halonaphtho-1,4-quinones ........................................ 391

28.5.1.2.2.4 Variation 4: Diels–Alder Reactions of Sulfinylnaphtho-1,4-quinones ........................................ 395

28.5.1.2.3 Method 3: Reaction of Cyclic Dienes with Naphtho-1,4-quinones, Followed by a Retro-Diene Reaction ........................................ 395

28.5.1.2.4 Method 4: Reaction of Cyclic Dienes with Naphtho-1,4-quinones Followed by Hydroxymethylation of 1,4-Ethan anthra-9,10-quinones ........................................ 399

28.5.1.2.5 Method 5: Reaction of Naphtho-1,4-quinones with Ketene Acetals ........................................ 400

28.5.1.2.6 Method 6: Coupling of Naphtho-1,4-quinones with Cyclobutenones ........................................ 401

28.5.1.2.7 Method 7: Thermolytic Rearrangement of Arylcyclobutenones ........................................ 401

28.5.1.2.8 Method 8: Electrocyclization of 2,3-Divinylnaphtho-1,4-quinones ........................................ 402

28.5.1.2.9 Method 9: Electrocyclization of 2,3-Divinylnaphtho-1,4-quinones to 1,4-Diacylanthra-9,10-quinones ........................................ 403

28.5.1.3 Ring-Closing Metathesis ............................................................................. 404

28.5.1.3.1 Method 1: Cyclization of 2,3-Diallylnaphtho-1,4-quinones ........................................ 404

28.5.1.4 [2 + 2 + 2]-Cycloaddition Reactions ........................................ 406

28.5.1.4.1 Method 1: Rhodium-Catalyzed Cycloaddition of 1,2-Dipropynoylbenzenes with Alkynes ........................................ 406

28.5.1.5 Anionic Condensation Reactions ........................................ 407

28.5.1.5.1 Method 1: Phthalide Annulation with Cyclohex-2-enones ........................................ 407

28.5.1.5.2 Method 2: Phthalide Annulation with Cyclohexadienones ........................................ 408

28.5.1.5.2.1 Variation 1: With Cyclohexa-2,5-dienones ........................................ 409

28.5.1.5.2.2 Variation 2: With Cyclohexa-2,4-dienones ........................................ 410

28.5.1.5.3 Method 3: Phthalide Annulation with Arynes ........................................ 410

28.5.1.6 Cyclization by Nucleophilic Aromatic Substitution/Addition ........................................ 411

28.5.1.6.1 Method 1: Cyclization of 2-(Cyanomethyl)benzophenones (The Hassall Reaction) ........................................ 411

28.5.1.6.2 Method 2: Addition of 2-(Cyanomethyl)benzoates to Arynes ........................................ 412

28.5.1.6.3 Method 3: Cyclization of (Nitromethyl)benzophenones ........................................ 413

28.7.2.1.4 Benzothiophenequinones 614
28.7.2.1.4.1 Method 1: Oxidation of Benzo[b]thiophene Derivatives 615
28.7.2.1.4.2 Method 2: Intramolecular Condensation of Thiophenecarboxylates 615
28.7.2.1.4.2.1 Variation 1: Using Thiophenecarboxylates 615
28.7.2.1.4.2.2 Variation 2: Using Benzoic Acid Derivatives 616
28.7.2.1.4.3 Method 3: Thiophene Metalation and Tandem Nucleophilic Addition 616
28.7.2.1.4.4 Method 4: Tandem Conjugate Addition and Cyclization 616
28.7.2.1.4.5 Method 5: Intra- and Intermolecular Friedel–Crafts Acylations 617

28.8 Product Class 8: Sulfur Analogues of Quinones
M. Yoshifuji and S. Kawasaki

28.8.1 Product Subclass 1: p-Monothioquinones 623
28.8.1.1 Synthesis of Product Subclass 1 623

28.8.2 Product Subclass 2: o-Monothioquinones 626
28.8.2.1 Synthesis of Product Subclass 2 626

28.8.3 Product Subclass 3: Dithioquinones 627
28.8.3.1 Synthesis of Product Subclass 3 627

28.9 Product Class 9: Benzo-1,2-, Benzo-1,4-, Naphtho-1,2-, and Naphtho-1,4-quinone Imines and Diimines
M. C. Carreño and M. Ribagorda

28.9.1 Product Subclass 1: Benzoquinone Imines and Diimines 629
28.9.1.1 Synthesis of Product Subclass 1 630
28.9.1.1.1 Method 1: Oxidation of Anilines and Benzenediamines 630
Variation 1: Using Lead(IV) Acetate ........................................ 630
Variation 2: Using Hypohalites ........................................... 635
Variation 3: Using Silver(I) Oxide ........................................ 638
Variation 4: Using Iron(III) Chloride ................................... 640
Variation 5: Using Manganese(IV) Oxide .............................. 642
Variation 6: Using Hypervalent Iodine Reagents ...................... 644
Variation 7: Using Peroxides ............................................. 645
Variation 8: Using Cobalt-Mediated Catalytic Oxidation by Oxygen 646
Variation 9: Using Fremy’s Salt ........................................... 647
Variation 10: Using Ammonium Cerium(IV) Nitrate ............... 647
Variation 11: Oxidative Coupling of Phenols and Anilines with Amines 647
Variation 12: Electrooxidation ........................................... 649

Method 2: Condensation of Quinone Derivatives with Amines ........ 658
Variation 1: Intermolecular Processes ................................... 658
Variation 2: Intramolecular Processes ................................... 663
Method 3: Transition Metal Quinone Diimine Synthesis .......... 667
Method 4: Organometallic C–N Coupling from N-Chloroquinone Imines 669

Product Subclass 2: Naphthoquinone Imines and Diimines ........ 706

Method 1: Oxidative Coupling of Naphthols with Amines .......... 706
Method 2: Oxidative Coupling of 1-Naphthylcyanamide with Anilines 710
Method 3: Substitutions on Naphthoquinones with Amines .... 712
Variation 1: Substitution of Sulfonic Groups ......................... 712
Variation 2: Substitution of Methoxy Groups ......................... 714
Method 4: Condensation of Naphthoquinones with Amines ...... 714
Method 5: Condensation of Naphthoquinones with N-Sulfinylarylamines 716
Method 6: Reactions of Naphthoquinones with N-Phenyliminophosphoranes 717
Method 7: Oxidation of Aminonaphthols, Naphthalenediamines, and Naphthylamines 718
Method 8: Diels–Alder Reactions of Isoindoles with Activated Acetylene Derivatives 721
Method 9: Synthesis and Oxidation of N-Hydroxy-N-phenyl-naphthalen-1-amines 722
Method 10: Reactions of Naphthoquinones with Bis(trimethylsilyl)carbodiimide 723
Method 11: Applications of Product Subclass 2 in Organic Synthesis 724
Method 1: Halogenation ................................................. 724
Method 2: [3 + 2] Photoaddition with Alkenes ..................... 726
28.9.2.3 Method 3: 1,4-Addition–Aromatization ............................ 726
28.9.2.4 Method 4: Oxidative Coupling ........................................ 729
28.9.2.5 Method 5: The Imino Group as Nucleophile ...................... 729

28.10 Product Class 10: Anthraquinone and Phenanthrenedione Imines and Diimines
C. Avendaño and J. C. Menéndez

28.10 Product Class 10: Anthraquinone and Phenanthrenedione Imines and Diimines ......................................................... 735
28.10.1 Product Subclass 1: Anthra-9,10-quinone Imines and Diimines ............................................................... 739
28.10.1.1 Synthesis of Product Subclass 1 ........................................ 739
28.10.1.1.1 Ring-Annulation or Ring-Closure Reactions ............ 739
28.10.1.1.2 Method 1: Diels–Alder Reactions of Naphthoquinone Imines ...................................... 739
28.10.1.1.3 Method 2: Oxidative Photochemical Cyclization of 9-(2-Iodoanilino)-4,5-phenanthrolin-10-ols .......................... 740
28.10.1.1.4 Method 3: Intramolecular Friedel–Crafts Acylation of 1-(2-Carboxyphenyl)isoquinolines ....................................... 741
28.10.1.1.5 Method 4: Intramolecular Friedel–Crafts Acylation of 10-Hetaryl-2,9-phenanthridine-1-carbonitriles .......................... 741
28.10.1.1.6 Method 5: Intramolecular Cyclization of 2,2’-Bis(phthalimido)biphenyls .......................... 742
28.10.1.1.7 Method 6: Double Cyclization of 3-(2-Arylethyl)amino]-benzo[c]furan-1(3H)-one .......................... 743
28.10.1.1.8 Method 7: Hydrolytic Cyclization of N-(3-{2-(5,8-Dioxo-5,8-dihydroquinolin-6-yl)amino]phenyl}-3-oxopropyl)-2,2,2-trifluoroacetamide ............................................... 744
28.10.1.1.9 Method 8: Oxidation of 9-Anthrones ............................... 750
28.10.1.1.10 Method 9: Oxidation of 10-Amino-9-anthrols .................. 750
28.10.1.1.11 Method 10: Condensation of Anthra-9,10-quinones or Anthra-9,10-quinone Acetals with Ammonia or Amines .......... 754
28.10.1.1.12 Method 11: Condensation of 1-Aminoanthra-9,10-quinones with Amides, Amidines, or Nitriles ......................... 756
28.10.1.1.2.13 Method 13: Intramolecular Condensations of Anthra-9,10-quinones with Masked Amino Groups .............................................. 757
28.10.1.1.2.14 Method 14: Reactions of Anthra-9,10-quinones with Aryliminodimagnesium Reagents ............................................. 759
28.10.1.1.2.15 Method 15: Reactions of Anthraquinones with Bis(trimethylsilyl)carbodiimide .......................................................... 760
28.10.1.1.2.16 Method 16: Intramolecular Cyclization of 1-(Cyanomethyl)- or 1-(Carbamoylmethyl)anthra-9,10-quinones ................................. 761
28.10.1.1.2.17 Method 17: Reactions of 9-Aryloxyanthra-1,10-quinones with Amines .............................................................. 761
28.10.1.1.2.18 Method 18: Reactions of 1-[2-(Dimethylamino)vinyl]azanthraquinones with Ammonia .......................................................... 762
28.10.1.1.2.19 Method 19: Self-Coupling of 1-Aminoanthra-9,10-quinones .................................................................................. 763
28.10.1.1.2.20 Method 20: Reactions of 1-Substituted Anthra-9,10-quinones with Nucleophiles ......................................................... 764
28.10.1.1.2.20.1 Variation 1: Reactions of 1-Haloanthra-9,10-quinones with Hydrazine or 2-Aminobenzenethiol ..................................... 764
28.10.1.1.2.20.2 Variation 2: Reactions of 1-Alk-1-ynylantha-9,10-quinones with Hydrazines ............................................................. 765
28.10.1.1.2.21 Method 21: Copper-Catalyzed Reactions of 1-Haloanthra-9,10-quinones with Amidines, Guanidines, and Related Compounds ......................................................... 766
28.10.1.1.2.22 Method 22: Synthesis from Anthracenes and Anthracene Diones Bearing a Nitrogen-Containing Group or Groups ........................................... 767
28.10.1.1.2.22.1 Variation 1: Hydrolysis of Anthra-9,10-quinone Diimines to Monoimines .............................................................. 767
28.10.1.1.2.22.2 Variation 2: Dipolar Cycloadditions between Quinomethanes and Azides, and Diazaoalkane Extrusion ......................... 768
28.10.1.1.2.22.3 Variation 3: Transformations of Anthra-9,10-quinone Imines and Hydrazones ............................................................. 769
28.10.1.1.2.22.4 Variation 4: Transformations of Anthra-9,10-quinone Oximes ........................................................................ 769
28.10.1.1.2.22.5 Variation 5: Reactions of 10-Diazoanthracen-9(10H)-ones with Nitrogen-Containing Electrophiles ......................... 770
28.10.1.1.2.22.6 Variation 6: Reductive Tautomerization of Anthra-1,4-quinone Imines ............................................................. 771

28.10.2 Product Subclass 2: Anthra-1,2-quinone and Anthra-1,4-quinone Imines and Diimines ............................................................. 771

28.10.2.1 Synthesis of Product Subclass 2 ...................................................................................................................... 771
28.10.2.1.1 Ring-Closure Reactions .................................................................................................................. 771
28.10.2.1.1.1 Method 1: Oxidative Coupling of 1-Phenyl-2,3-bis(pyrimidin-5-yl)benzenes ............................................................. 771
28.10.2.1.1.2 Method 2: Cycloaddition of Homophthalic Anhydrides and Benzo-1,4-quinone Imines and Subsequent Oxidation ............................................................. 772
28.10.2.1.2 Creation of the Quinone Imine Functionality on a Preexisting Six-Membered Ring ............................................................. 774
28.10.2.1.2.1 Method 1: Oxidation of 1-(Acylamino)-2-anthrols ........................................................................ 774
28.10.2.1.2.2 Method 2: Oxidation of Anthracenamines and Their Derivatives ........................................................................ 774
28.10.2.1.2.3 Method 3: Rearrangement of 4-Aryloxyanthracen-1-amines and Related Compounds ............................................................. 775
Method 4: Condensation of Anthra-9,10-quinone Diamines and Anthracenamines with Carbonyl Compounds

Method 5: Condensation of Anthra-1,2-quinones with Hydrazines

Product Subclass 3: Phenanthrene-9,10-dione Imines and Diimines

Synthesis of Product Subclass 3

Ring-Closure Reactions

Method 1: Transannular Cyclizations of [2\^2]Metacyclophanes with N-Bromosuccinimide

Method 2: Metal-Induced Oxidative Intramolecular Aryl–Aryl Coupling

Method 3: Synthesis of Oxoaporphine Alkaloids by Aryl–Aryl Coupling

Method 4: Pschorr Cyclization of 1-(2-Aminobenzyl)isoquinolines

Method 5: Oxidative Cyclization of Bisarylhydrazones

Creation of the Quinone Imine Functionality on a Preexisting Six-Membered Ring

Method 1: Reaction of Phenanthrene-9,10-diones with Nucleophiles

Variation 1: Reactions with 1,2-Diamines

Variation 2: Condensation of Phenanthrene-9,10-diones with Hydroxylamine or Sodium Hexamethyldisilazanide

Variation 3: Condensation of Phenanthrene-9,10-diones with Imino-hydrazides, Sulfanamide, Thiosemicarbazide, Semicarbazide, or Aminoguanidines

Variation 4: Condensation of Phenanthrene-9,10-diones with S-Alkylisothiosemicarbazides and Related Compounds

Variation 5: Reductive Condensation of Phenanthrene-9,10-diones with Aromatic Nitroso or Nitro Compounds

Method 2: Condensation of Phenanthrene-9,10-diamines with \(\alpha\)-Dicarbonyl Compounds

Method 3: Condensation of Phenanthrene-9,10-diamines with Bis(methyloximes)

Method 4: Reactions of Phenanthrene-9,10-diamines with \(\alpha\)-Nitro Ketones

Method 5: Condensation of Phenanthrene-3,9-diones with 1,2-Diamines

Method 6: Condensation of 9-Nitrophenanthrenes with Anilines

Method 7: Condensation of Iminophenanthren-9(10\textsuperscript{H})-ones with Amines

Method 8: Reaction of Phenanthrene-9,10-diones with Arsinimines

Method 9: Condensation of Phenanthrene-9,10-dione Monooxime with 1,1-Diarylalkenes

Method 10: Condensation of Phenanthrene-9,10-dione Diimines or Dioximes with gem-Dihalides

Method 11: Reaction of Phenanthrene with Trithiazyl Trichloride

Method 12: Ring Expansion of Phenanthro[9,10-d][1,2,3]triazoles or Phenanthro[9,10-c][1,2,5]oxadiazoles
28.11  Product Class 11: Quinone Diazides
A. G. Griesbeck and E. Zimmermann

28.11  Product Class 11: Quinone Diazides .............................................. 807
28.11.1  Synthesis of Product Class 11 .................................................. 809
28.11.1.1  Method 1: Diazotization of Amino-Substituted Aromatic Alcohols .......... 810
28.11.1.1  Variation 1: Diazotization in Aqueous Media ............................... 810
28.11.1.2  Variation 2: Diazotization in Organic Solvents .............................. 812
28.11.1.3  Variation 3: Nitration of Substituted Anilines ............................... 816
28.11.1.2  Method 2: Aromatic Substitution of Diazonium Salts ....................... 818
28.11.1.2.1  Variation 1: Hydrolysis of 2- or 4-Substituted Diazonium Salts .......... 818
28.11.1.2.2  Variation 2: Elimination of HX from Diazonium Salts .................... 819
28.11.1.2.3  Variation 3: Aromatic Substitution of Aryl Fluorides ................... 820
28.11.1.3  Method 3: Oxidation of Arenediazonium Cations ........................... 821
28.11.1.4  Method 4: o- or p-Nitrosylation of Phenols .................................. 821
28.11.1.5  Method 5: Formation of Tosylhydrazones from Quinones ................. 822
28.11.1.6  Method 6: Electrophilic Substitution of Quinone Diazides ................. 823
28.11.1.7  Method 7: Diazo Group Transfer Reactions .................................... 823
28.11.1.8  Methods 8: Additional Methods ............................................... 825
28.11.2  Applications of Product Class 11 in Organic Synthesis ..................... 825
28.11.2.1  Method 1: The Süs Reaction ..................................................... 825
28.11.2.2  Method 2: Application in Photolithographic Processes ...................... 827

28.12  Product Class 12: Quinomethanes

28.12.1  Product Subclass 1: o-Quinomethanes
T. R. R. Pettus and C. Selenski

28.12.1  Product Subclass 1: o-Quinomethanes ......................................... 831
28.12.1.1  Synthesis of Product Subclass 1 .............................................. 835
28.12.1.1.1  Quinone Enolization ............................................................... 835
28.12.1.1.1  Method 1: Heat-Assisted Quinone Enolization ............................... 835
28.12.1.1.1  Method 2: Base-Assisted Quinone Enolization ............................... 836
28.12.1.1.2.1  Variation 1: Using Lithium Methoxide .................................... 836
28.12.1.1.2.2  Variation 2: Using Sodium Methanethiolate ............................ 837
28.12.1.1.2.3  Variation 3: Using Amines .................................................. 838
28.12.1.1.3  Method 3: Photochemically Assisted Quinone Enolization ............... 839
28.12.1.1.2  Oxidation .............................................................................. 840
28.12.1.1.2.1  Method 1: Oxidation Using Silver(I) Oxide ............................... 840
28.12.1.1.3  Extrusions and Retrocycloadditions ......................................... 843
28.12.1.1.3.1  Method 1: Nucleophilic Displacement ..................................... 843
28.12.1.1.3.2  Method 2: Mannich Base Precursors ...................................... 843
Product Subclass 2: p-Quinomethanes

A. G. Griesbeck

28.12.2.1 Synthesis of Product Subclass 2  .................................................. 874
28.12.2.1.1 Method 1:  Oxidation of 4-Substituted Phenols  .............................. 876
28.12.2.1.1.1 Variation 1: Using Silver(I), Lead(IV), or Manganese(IV) Oxide  .... 876
28.12.2.1.1.2 Variation 2: Using Potassium Hexacyanoferrate(III)  .................. 877
28.12.2.1.1.3 Variation 3: Using Other Oxidants  ........................................... 877
28.12.2.1.2 Method 2: Dehydration of 4-(Hydroxyalkyl)- and 4-(Hydroxyalkyl)phenyl-Substituted Phenols  ........................................................................ 879
28.12.2.1.2.1 Variation 1: Thermal Dehydration of 4-(Hydroxyalkyl)-Substituted Phenols  879
28.12.2.1.2.2 Variation 2: Acid-Catalyzed Dehydration of 4-(Hydroxyalkyl)-Substituted Phenols  ................................................................. 879
28.12.2.1.2.3 Variation 3: Dehydration of 4-(Hydroxyalkyl)-Substituted Phenols Using Lithium Aluminum Hydride  ...................................................... 879
28.12.2.1.3 Method 3: Dehydrohalogenation of 4-Halomethyl-Substituted Phenols  880
28.12.2.1.3.1 Variation 1: Using Amine Bases  ............................................... 880
28.12.2.1.3.2 Variation 2: Using Weak Bases in Aqueous Media  ...................... 881
28.12.2.1.3.3 Variation 3: Using Metal Alkoxides  .......................................... 881
28.12.2.1.4 Method 4: Acid-Catalyzed Dehydration of 4-Methoxyphenyl-Substituted Alcohols  ...................................................................................... 882
28.12.2.1.5 Method 5: Elimination of Chloromethane from 4-Chloroalkyl-Substituted Anisoles  ................................................................. 882
28.12.2.1.6 Method 6: Acid Elimination from 4-(Acyloxy)alkyl-Substituted Phenols 883
Method 7: Decomplexation of Quinomethanes from \(\pi\)-Palladium Complexes ........................................ 884

Method 8: Condensation of Phenols with Alkyl or Acyl Halides .......... 884

Variation 1: Thermal Condensation ........................................ 885

Variation 2: Lewis Acid Catalyzed Condensation .............................. 885

Method 9: Reaction of Phenols with Carbenium Ions ......................... 885

Method 10: Reaction of Aryl Carbanions with Carbonyl Compounds ....... 886

Variation 1: Reaction of Metalated Phenols with Carbonyl Compounds 886

Variation 2: Reaction of Metalated Arenes with 4-Acylphenols ............. 887

Method 11: Oxidation of Phenols to \(\rho\)-Diphenoquinones ...................... 887

Method 12: Ring-Closure Reactions ....................................... 888

Method 13: Addition of Nucleophiles to \(\omega\)-Quinones ......................... 889

Method 14: Addition of Nucleophiles to \(\rho\)-Quinones ....................... 890

Method 15: Knoevenagel Addition to \(\rho\)-Quinones .......................... 890

Method 16: Wittig Reaction of \(\rho\)-Quinones ................................ 891

Method 17: Ketene Additions to \(\rho\)-Quinones .............................. 893

Method 18: Photochemical Addition of Alkynes to \(\rho\)-Quinones .......... 893

Method 19: Modification of \(\rho\)-Quinomethanes ............................ 894

Method 20: Condensation of Carbonyl Compounds with Anthrones ...... 894

Method 21: Oxidation of Nitrobenzylic Carbanions .......................... 895

Keyword Index ........................................................................... 901

Author Index ............................................................................. 949

Abbreviations ........................................................................... 1001

### Introduction

S. L. Warriner

1

### Product Class 1: F/Hal Acetals

S. Challenger

13

### Product Class 2: Hal/Hal Acetals (Hal ≠ F)

G. J. Rowlands

63

### Product Class 3: Hal/O Acetals

T. Benneche

117

### Product Class 4: Hal/S, Hal/Se, and Hal/Te Acetals

C. M. Diaper

193

### Product Class 5: Hal/N and Hal/P Acetals

B. Leroy

251

### Product Class 6: Acyclic and Semicyclic O/O Acetals

S. von Angerer and S. L. Warriner

303

### Product Class 7: 1,3-Dioxetanes and 1,3-Dioxolanes

C. Cordier, S. Leach, and A. Nelson

407

### Product Class 8: 1,3-Dioxanes, 1,3-Dioxepanes, and Larger-Ring O/O Acetals

C. Kouklovsky

487

### Product Class 9: Spiroketalts

S. V. Ley, L.-G. Milroy, and R. M. Myers

613

### Product Class 10: O/O Acetals with Functionalization Attached to the Acetal Carbon

H. Yorimitsu and K. Oshima

691

### Product Class 11: OR₁/OX Acetals

P. Merino

707

### Product Class 12: O/S, O/Se, and O/Te Acetals

F. Chemla, F. Ferreira, and B. Roy

801

### Product Class 13: Glycosyl Halides

S. J. Gunn, S. L. Warriner, and J. W. White

889
29.14  Product Class 14: Glycosyl Sulfur, Selenium, and Tellurium Compounds  
W. B. Turnbull, M. A. Fascione, and S. A. Stalford  ........................................ 923

29.15  Product Class 15: Glycosyl Oxygen Compounds  
(Except Di- and Oligosaccharides)  
B. Kryczka, J. Lewkowski, and A. Zawisza ................................................ 971

29.16  Product Class 16: Glycosyl Oxygen Compounds  
(Di- and Oligosaccharides)  
A. V. Demchenko and C. De Meo ............................................................. 1057

Keyword Index  .................................................................................. 1149
Author Index  .................................................................................... 1203
Abbreviations  .................................................................................. 1281
Table of Contents

Introduction
S. L. Warriner

- Introduction ............................................................................................................. 1

29.1 Product Class 1: F/Hal Acetals
S. Challenger

- Product Class 1: F/Hal Acetals ........................................................................... 13
- Product Subclass 1: F/F Acetals ....................................................................... 13
  - Synthesis of Product Subclass 1 ................................................................. 13
  - Method 1: Fluorination of Alkanes .............................................................. 13
  - Variation 1: Fluorination α to a Carbonyl Group ........................................ 13
  - Variation 2: Fluorination at the α-Carbon of Imines and Nitriles and at the β-Carbon of Enamines ...................................................... 16
  - Variation 3: Fluorination α to a Phosphonyl or Sulfonyl Group ............... 17
  - Method 2: Fluorodecarboxylation of Carboxylic Acids ............................. 18
  - Method 3: Synthesis from Haloalkanes ....................................................... 18
  - Method 4: Deoxofluorination of Carbonyl Compounds and Their Derivatives ................................................................. 19
    - Variation 1: Deoxofluorination of Aldehydes and Ketones ................. 19
    - Variation 2: From 1,1-Bis(trifluoromethylsulfonyloxy) Compounds ........ 22
  - Method 5: Fluorodesulfurization of Thioketones, Dithioacetals, or Dithioketals ................................................................. 23
    - Variation 1: By Fluorodesulfurization of Thioketones ......................... 23
    - Variation 2: By Fluorodesulfurization of Dithioacetals or Dithioketals ... 24
  - Method 6: Fluorination of C=N Compounds ............................................ 25
    - Variation 1: By Fluorination of Diazoo Compounds ............................ 25
    - Variation 2: Fluorination of Hydrazones, Azines, Oximes, or Oxime Ethers .......... 26
    - Variation 3: Fluorination of 2H-Azirines .............................................. 29
  - Method 7: Synthesis from Alkenes .............................................................. 30
    - Variation 1: From 1,1-Difluoroalkanes ................................................... 30
    - Variation 2: Synthesis of Diffurocyclopropanes .................................. 30
    - Variation 3: By Fluorination of Alkenes and Fluoroalkenes .................. 34
    - Variation 4: By Fluorination of Alkenylboron Derivatives and Alkenylsilanes .......... 36
  - Method 8: Synthesis from Alkyne .............................................................. 37
    - Applications of Product Subclass 1 in Organic Synthesis .................. 38

29.1.2 Product Subclass 2: F/Cl Acetals .............................................................. 39

- Synthesis of Product Subclass 2 ................................................................. 39
  - Method 1: Halogenation of Alkanes .......................................................... 39
  - Method 2: Synthesis from gem-Dihaloalkanes ....................................... 41
  - Method 3: Synthesis from C—O Compounds ......................................... 41
  - Variation 1: Synthesis from 1,1-Bis(trifluoromethylsulfonyloxy) Compounds 41
29.1.2.1.2 Variation 2: Synthesis from α-Chlorooxiranes ........................................ 42
29.1.2.1.4 Method 4: Synthesis from C=N Compounds ........................................ 42
29.1.2.1.5 Method 5: Synthesis from Alkenes ......................................................... 43
29.1.2.1.5.1 Variation 1: Synthesis of 1-Chloro-1-fluorocyclopropanes .................. 43
29.1.2.1.5.2 Variation 2: Synthesis from Haloalkenes ............................................ 44
29.1.2.2 Applications of Product Subclass 2 in Organic Synthesis ......................... 45

29.1.3 Product Subclass 3: F/Br Acetals ............................................................... 46
29.1.3.1 Synthesis of Product Subclass 3 .............................................................. 46
29.1.3.1.1 Method 1: Synthesis from Alkanes ......................................................... 46
29.1.3.1.2 Method 2: Bromodecarboxylation of α-Fluorocarboxylic Acid Derivatives 48
29.1.3.1.3 Method 3: Synthesis from Haloalkanes by Halogen Exchange ............... 48
29.1.3.1.4 Method 4: Halogenation of C—O Compounds ........................................ 49
29.1.3.1.5 Method 5: Halogenation of C=N Compounds ........................................ 49
29.1.3.1.6 Method 6: Synthesis from Alkenes ......................................................... 50
29.1.3.1.6.1 Variation 1: Synthesis of 1-Bromo-1-fluorocyclopropanes .................. 50
29.1.3.1.6.2 Variation 2: Synthesis from Haloalkenes ............................................ 51
29.1.3.1.7 Method 7: Fragmentation and Bromination of a 2-Deoxy-2-fluoro Carbohydrate Derivative ................................................................. 52
29.1.3.2 Applications of Product Subclass 3 in Organic Synthesis ......................... 52

29.1.4 Product Subclass 4: F/I Acetals ............................................................... 53
29.1.4.1 Synthesis of Product Subclass 4 .............................................................. 53
29.1.4.1.1 Method 1: Synthesis from Haloalkanes .................................................. 53
29.1.4.1.2 Method 2: Halogenation of C—O Compounds ........................................ 53
29.1.4.1.3 Method 3: Halogenation of C=N Compounds ........................................ 54
29.1.4.1.4 Method 4: Synthesis from Alkenes ......................................................... 54
29.1.4.1.5 Method 5: Synthesis from Fluorinated Alkenes ...................................... 54
29.1.4.1.6 Method 6: Fragmentation and Iodination of a 2-Deoxy-2-fluoro Carbohydrate Derivative ................................................................. 55
29.1.4.2 Applications of Product Subclass 4 in Organic Synthesis ......................... 55

29.2 Product Class 2: Hal/Hal Acetals (Hal ≠ F)
G. J. Rowlands

29.2 Product Class 2: Hal/Hal Acetals (Hal ≠ F) ................................................. 63
29.2.1 Product Subclass 1: Cl/Cl Acetals .............................................................. 63
29.2.1.1 Synthesis of Product Subclass 1 .............................................................. 63
29.2.1.1.1 Method 1: Chlorination of Alkanes ......................................................... 63
29.2.1.1.1.1 Variation 1: α-Dichlorination of Aldehydes ............................................ 64
29.2.1.1.1.2 Variation 2: α-Dichlorination of Ketones ............................................. 65
29.2.1.1.1.3 Variation 3: α-Dichlorination of Imines .............................................. 66
29.2.1.1.2 Method 2: Chlorination of the Carbonyl Group ..................................... 67
29.2.1.1.3 Method 3: Chlorination of Hydrazones ............................................... 68
29.2.1.1.4 Method 4: Synthesis from Dichloroalkanes ........................................... 69
29.2.1.1.4.1 Variation 1: Via Dichloro(metallo)alkanes ........................................... 69

Science of Synthesis Original Edition Volume 29
© Georg Thieme Verlag KG
Method 5: Radical Reactions of Trichloroalkanes

- Variation 1: Intermolecular Radical Reactions
- Variation 2: Intramolecular Radical Reactions

Method 6: Synthesis of gem-Dichlorocyclopropanes

- Variation 1: Synthesis from Chloroform
- Variation 2: Synthesis from Trichloroacetates
- Variation 3: Synthesis from Organomercury Carbene Precursors

Method 7: Trapping of Dichloroketene

- Variation 1: [2 + 2] Cycloaddition of Dichloroketene
- Variation 2: [3,3]-Sigmatropic Rearrangement of Ylides Derived from Dichloroketene

Method 8: Chlorination of Alkynes

Product Subclass 2: Cl/Br Acetals

- Method 1: Synthesis from Chloroalkanes
- Method 2: Synthesis from Bromo(chloro)(metallo)alkanes
- Method 3: Synthesis of gem-Bromo(chloro)cyclopropanes
  - Variation 1: Synthesis from Bromo(chloro)methane
  - Variation 2: Synthesis from Organomercury Carbene Precursors

Methods 4: Miscellaneous Methods

Product Subclass 3: Cl/I Acetals

- Method 1: Synthesis from Haloalkanes
- Method 2: Synthesis from [Chloro(iodo)methyl]lithium
- Method 3: Synthesis from α-Chloro Sulfoxides
- Method 4: Synthesis from 1,2-Halohydrins
- Method 5: Synthesis of gem-Chloro(iodo)cyclopropanes
  - Variation 1: α-Elimination from Bromoform
  - Variation 2: Synthesis from Organomercury Carbene Precursors

Product Subclass 4: Br/Br Acetals

- Method 1: Bromination of Alkanes
  - Variation 1: α-Dibromination of Carbonyl Compounds
- Method 2: Bromination of Aldehydes or Ketones
- Method 3: Bromination of Hydrazones
- Method 4: Synthesis of gem-Dibromocyclopropanes
  - Variation 1: α-Elimination from Bromoform
  - Variation 2: Synthesis from Organomercury Carbene Precursors
- Method 5: Synthesis from Dibromo(metallo)alkanes
- Method 6: Synthesis from Haloalkanes and Haloalkenes
- Method 7: Synthesis from Alkynes
- Method 8: Synthesis from Carboxylic Acids

Applications of Product Subclass 4 in Organic Synthesis

Product Subclass 5: Br/I Acetals
### 29.2.5.1.1 Method 1: Synthesis from Haloalkanes

- Synthesis from Haloalkanes

- Synthesis from 1,2-Haloalcohols

### 29.2.6 Product Subclass 6: I/I Acetals

- Synthesis of Product Subclass 6

- Method 2: Synthesis from 1,2-Haloalcohols

### 29.2.6.1 Method 1: Iodination of Hydrazones

- Variation 1: Oxidation of \(N\)-(tert-Butyldimethylsilyl)hydrazones with Iodine

### 29.2.6.2 Applications of Product Subclass 6 in Organic Synthesis

- Method 1: Formation of Alkenes

- Method 2: Cyclopropanation (The Simmons–Smith Reaction)

### 29.3 Product Class 3: Hal/O Acetals

#### 29.3.1 Product Subclass 1: F/O Acetals

- Synthesis of Product Subclass 1

- Method 1: Anodic Fluorination of Ethers

- Method 2: Nucleophilic Substitution with Fluoride Ions

- Method 3: Cleavage of O/S Acetals

- Variation 1: Using Xenon Difluoride

- Variation 2: Using \(N\)-Iodosuccinimide and \(N, N\)-Diethylaminosulfur Trifluoride

- Method 4: Cleavage of O/S(O) Acetals with \(N, N\)-Diethylaminosulfur Trifluoride

- Method 5: Decarboxylation with Xenon Difluoride

- Method 6: Addition of (Benzylxylo)fluorocarbene to Acrylonitrile

- Method 7: Peracid Oxidation of Fluoroalkenes

- Method 8: Transformation of Benzyl Alcohols into (Fluoromethoxy)benzenes Using Xenon Difluoride

- Method 9: Transformation of Epoxy Alcohols into \(\alpha\)-Fluoro Ethers

### 29.3.2 Product Subclass 2: Cl/O Acetals

- Synthesis of Product Subclass 2

- Method 1: Chlorination of Ethers

- Method 2: Cleavage of O/O Acetals
Table of Contents

29.3.2.1.1 Variation 1: Using Boron Trichloride ................................................. 127
29.3.2.1.2 Variation 2: Using Acid Chlorides .................................................... 127
29.3.2.1.3 Method 3: Cleavage of O/S Acetals ................................................. 129
29.3.2.1.3.1 Variation 1: Using Sulfuryl Chloride ............................................. 129
29.3.2.1.3.2 Variation 2: Using N-Chlorosuccinimide and Chlorotrimethylsilane ..... 130
29.3.2.1.4 Method 4: Cleavage of O/S(O) Acetals with Acetyl Chloride or Thionyl Chloride ................................................................. 131
29.3.2.1.5 Method 5: Decarbonylation of Alkoxy- and (Aryloxy)acetyl Chlorides ..... 131
29.3.2.1.6 Method 6: Decarboxylative Chlorination of O-Acyl Thiohydroxamates (Barton–Borodin–Hunsdiecker Reaction) ................................ 132
29.3.2.1.7 Method 7: Desulfonation of Aryloxymethanesulfonyl Chlorides ............ 133
29.3.2.1.8 Method 8: Addition of Hydrogen Chloride to Enol Ethers ...................... 133
29.3.2.1.9 Method 9: Reaction of Metalated Geminal Dichloroalkanes with Ketones 134
29.3.2.1.10 Method 10: Addition of Alkoxy(chloro)carbenes to Alkenes ................. 134
29.3.2.1.11 Method 11: Addition of Carbon Tetrachloride to Enol Ethers ............. 135
29.3.2.1.12 Method 12: Addition of Chlorine to Enol Ethers ............................. 135
29.3.2.1.13 Method 13: Addition of Arenesulfenyl Chlorides to Enol Ethers .......... 136
29.3.2.1.14 Method 14: Oxidation of Chloroalkenes ......................................... 137
29.3.2.1.15 Method 15: Reaction of Alcohols with Aldehydes in the Presence of a Chlorinating Agent ................................................................. 137
29.3.2.1.2 Applications of Product Subclass 2 in Organic Synthesis ...................... 139
29.3.2.2.1 Method 1: Formation of α-Metalated Ethers ...................................... 139
29.3.2.2.1.1 Variation 1: Formation of α-Lithio Ethers ...................................... 139
29.3.2.2.1.2 Variation 2: Formation of α-Silyl, α-Germyl, α-Stannyl, and α-Plumbyl Ethers ................................................................. 140
29.3.2.2.1.3 Variation 3: Samarium(II) Iodide Based Reactions ........................ 142
29.3.2.2.2 Method 2: Formation of O/O Acetals: Protection of Alcohols .............. 143
29.3.2.2.3 Method 3: Formation of α-Alkoxy Sulfur Compounds ........................ 146
29.3.2.2.4 Method 4: Formation of α-Alkoxy Nitrogen Compounds .................... 146
29.3.2.2.5 Method 5: Formation of α-Alkoxy Phosphorus Compounds ................ 148
29.3.2.2.6 Method 6: Formation of Enol Ethers ............................................. 148
29.3.2.2.6.1 Variation 1: Dehalogenation of 1,2-Dihalo Ethers .......................... 148
29.3.2.2.6.2 Variation 2: Carbonyl Alkenations with an Alkoxychloromethane/Titanocene(II) System ......................................................... 149
29.3.2.2.7 Method 7: Formation of Carboxyl Ylides ........................................ 150
29.3.2.2.8 Method 8: Chloromethylation of Aromatic Compounds ..................... 151
29.3.2.2.9 Method 9: Formation of Ethers ....................................................... 151
29.3.2.2.9.1 Variation 1: Reaction with Main-Group Organometallic Compounds 151
29.3.2.2.9.2 Variation 2: Transition-Metal-Based Reactions ............................ 153
29.3.2.2.9.3 Variation 3: Reaction with Enolates or Enolate Equivalents ............ 154
29.3.2.2.9.4 Variation 4: Addition to Alkenes ............................................. 156
29.3.2.2.10 Method 10: Carbenes/Carbenoid Formation .................................... 157
29.3.3 Product Subclass 3: Br/O Acetals ............................................................. 159
29.3.3.1.1 Method 1: Bromination of Ethers ............................................... 159
29.3.3.1.2 Method 2: Cleavage of α-Alkoxy Stannanes with Bromine ................ 160

29.6.1.2.4 Method 4: Synthesis from Aldehydes or Ketones and Alcohol Derivatives 336
29.6.1.2.4.1 Variation 1: From Alkoxy silanes ................................... 337
29.6.1.2.4.2 Variation 2: From Titanium or Antimony Alkoxides ............ 337
29.6.1.2.4.3 Variation 3: From Trialkyl Orthoformates .......................... 338
29.6.1.2.4.4 Variation 4: From Other Acetals .................................... 339
29.6.1.2.4.5 Variation 5: From Dialkoxytriphenylphosphoranes .............. 340
29.6.1.2.5 Method 5: Synthesis from Other O/O Acetals ....................... 341
29.6.1.2.5.1 Variation 1: With Other Acetals .................................... 341
29.6.1.2.5.2 Variation 2: By Exchange of Both Alkoxy Groups .............. 341
29.6.1.2.5.3 Variation 3: By Exchange of One Alkoxy Group .................. 342
29.6.1.2.6 Method 6: Synthesis from Acetals with Other Heteroatoms ........ 349
29.6.1.2.6.1 Variation 1: From O/S Acetals ..................................... 349
29.6.1.2.6.2 Variation 2: From S/S Acetals ..................................... 351
29.6.1.2.6.3 Variation 3: From O/N Acetals ..................................... 353
29.6.1.2.7 Method 7: Synthesis from Imines, Oximes, and Related Compounds .... 354
29.6.1.2.8 Method 8: Synthesis from Heterosubstituted Alkenes ................ 355
29.6.1.2.8.1 Variation 1: From Haloalkenes and Alcohols .................... 355
29.6.1.2.8.2 Variation 2: From Acyclic Enol Ethers and Alcohols ............ 356
29.6.1.2.8.3 Variation 3: From Cyclic Enol Ethers and Alcohols ............. 362
29.6.1.2.8.4 Variation 4: From Allenyl Enol Ethers and Alcohols ............ 365
29.6.1.2.8.5 Variation 5: From Enol Ethers via Cycloaddition ............... 366
29.6.1.2.8.6 Variation 6: From Aryl Ethers by Oxidation ....................... 368
29.6.1.2.8.7 Variation 7: From Enolates or Enol Esters and Alcohols .......... 370
29.6.1.2.8.8 Variation 8: From Furans and Alcohols ............................ 371
29.6.1.2.8.9 Variation 9: From Enol Ethers with Acetals ...................... 373
29.6.1.2.8.10 Variation 10: Dimerization of Enol Ethers ....................... 374
29.6.1.3 Synthesis from Compounds of Lower Oxidation State ............... 374
29.6.1.3.1 Method 1: Synthesis from Heterosubstituted Alkanes ............. 374
29.6.1.3.1 Variation 1: From Alcohols and Ethers .................................. 374
29.6.1.3.2 Variation 2: From Sulfides ............................................. 378
29.6.1.3.3 Variation 3: From Dimethyl Sulfoxide ................................. 378
29.6.1.3.4 Variation 4: From Amines and Other Nitrogen Derivatives .......... 379
29.6.1.3.2 Variation 2: Method 2: Synthesis from Alkynes ......................... 380
29.6.1.3.2.1 Variation 1: From Alkyl- and Arylalkynes ............................ 381
29.6.1.3.2.2 Variation 2: From Vinylacetylenes .................................... 383
29.6.1.3.2.3 Variation 3: From Alkenes with Electron-Withdrawing Substituents 384
29.6.1.3.3 Variation 3: Method 3: Synthesis from Alkenes ......................... 386
29.6.1.3.3.1 Variation 1: By Oxidation with Thallium(III) Salts .................. 386
29.6.1.3.3.2 Variation 2: By Oxidation with Molecular Oxygen ................. 388
29.6.1.3.3.3 Variation 3: By Oxidation with Ozone ................................ 388
29.6.1.3.3.4 Variation 4: By Oxidation with Alkyl Nitrites ....................... 389
29.6.1.3.3.5 Variation 5: By Electrochemical Oxidation ........................... 389
29.6.1.3.3.6 Variation 6: By Oxidation of Benzenes ................................ 390
29.6.1.3.4 Variation 4: Method 4: Synthesis from Alkanes ........................ 392

29.7 Product Class 7: 1,3-Dioxetanes and 1,3-Dioxolanes
C. Cordier, S. Leach, and A. Nelson

29.7.1 Product Class 7: 1,3-Dioxetanes and 1,3-Dioxolanes .......................... 407
29.7.1.1 Product Subclass 1: 1,3-Dioxetanes ........................................ 407
29.7.1.1.1 Synthesis of Product Subclass 1 ......................................... 407
29.7.1.1.1.1 Method 1: Synthesis by Formation of Two C—O Bonds ................ 407
29.7.1.2 Product Subclass 2: 1,3-Dioxolanes ......................................... 408
29.7.1.2.1 Synthesis of Product Subclass 2 ........................................ 411
29.7.1.2.1.1 Method 1: Synthesis by Formation of Two C—O Bonds ................ 411
29.7.1.2.1.1.1 Variation 1: Reactions of Carbonyl Compounds with 1,2-Diols ........ 411
29.7.1.2.1.1.2 Variation 2: Reactions of Acetals and Ketals with 1,2-Diols ........ 426
29.7.1.2.1.1.3 Variation 3: Reactions of Enol Ethers with 1,2-Diols ............... 437
29.7.1.2.1.1.4 Variation 4: Reactions of Carbonyl Compounds with 1,2-Bis(trimethylsilyl) Ethers .......................................................... 442
29.7.1.2.1.1.5 Variation 5: Reactions of Epoxides with Ketones .................... 444
29.7.1.2.1.1.6 Variation 6: By Double Michael Addition of 1,2-Diols to Electron-Deficient Alkenes ....................................................... 447
29.7.1.2.1.1.7 Variation 7: Reaction of 1,1-Dihalo Compounds with 1,2-Diols ........ 448
29.7.1.2.1.1.8 Variation 8: Reactions of Ketones and 2-Halo Alcohols ............... 451
29.7.1.2.1.1.9 Variation 9: From But-2-ene-1,4-diols and Ketones ................. 452
29.7.1.2.1.2 Method 2: Synthesis by Formation of One C—O Bond .................. 453
29.7.1.2.1.2.1 Variation 1: From Monoprotected 1,2-Diols .......................... 453
29.7.1.2.1.2.2 Variation 2: By Oxidation of Electron-Rich Arenes and Hetarenes and Cyclization ............................................................... 456
29.7.1.2.1.2.3 Variation 3: By Cyclization of Hydroxy-Substituted Enol Ethers ........ 458
29.7.1.2.1.2.4 Variation 4: By Intramolecular Transacetalization .................... 459
29.7.1.2.1.2.5 Variation 5: From Stable Acyclic Hemiacetals Derived from Allylic Alcohols 459
29.7.2.6 Variation 6: By Cyclization of 2-Hydroxyalkyl Hal/O Acetals and 2-Haloalkyl Hemiacetals .......................... 460

29.7.2.13 Method 3: Exchange of Ligands on Existing Acetals ......................... 461
29.7.2.1.3.1 Variation 1: Radical Epimerization ........................................ 461
29.7.2.1.3.2 Variation 2: Radical Reactions .............................................. 461
29.7.2.1.3.3 Variation 3: From Metalated Dioxolanes .................................. 464
29.7.2.1.3.4 Variation 4: From Methylenedioxolanes .................................. 464
29.7.2.1.3.5 Variation 5: Cycloaddition ..................................................... 465
29.7.2.1.3.6 Variation 6: From Ortho Esters ............................................... 466

29.7.2.2 Applications of Product Subclass 2 in Organic Synthesis .................. 469
29.7.2.2.1 Method 1: Deprotection Reactions ............................................. 469
29.7.2.2.1.1 Variation 1: Deprotection to Carbonyl Compounds and 1,2-Diols .... 469
29.7.2.2.1.2 Variation 2: Conversion into Monofunctionalized 1,2-Diols .......... 476
29.7.2.2.2 Method 2: Chiral 1,3-Dioxolanes in Asymmetric Synthesis ............. 477
29.7.2.2.3 Method 3: Chiral 1,3-Dioxolan-4-ones in Asymmetric Synthesis ..... 479

29.8 Product Class 8: 1,3-Dioxanes, 1,3-Dioxepanes, and Larger-Ring O/O Acetals
C. Kouklovsky

29.8.1.1 Synthesis of Product Subclass 1 ................................................. 491
29.8.1.1.1 Method 1: Synthesis by Formation of Two C—O Bonds ................ 491
29.8.1.1.1.1 Variation 1: From Reactions of Carbonyl Compounds with 1,3-Diols ... 491
29.8.1.1.1.2 Variation 2: From Reactions of 1,3-Diols with Acetals or Ketals ...... 503
29.8.1.1.1.3 Variation 3: From Reactions of Enol Ethers with 1,3-Diols .......... 517
29.8.1.1.1.4 Variation 4: From Reactions of Carbonyl Compounds with 1,3-Diol
Bis(silyl ethers) ................................................................. 523
29.8.1.1.5 Variation 5: From Reactions of 1,3-Diols with 1,1-Dihaloalkanes ...... 528
29.8.1.1.6 Variation 6: From Reactions of Alkenes with 1,3-Diols ................ 530
29.8.1.1.7 Variation 7: From Reactions of Phenols and 1,3-Diketones with Aldehydes 532
29.8.1.1.8 Method 2: Synthesis by Formation of One C—O Bond ................. 534
29.8.1.1.8.1 Variation 1: From 3-Hydroxy Hal/O Acetals .......................... 534
29.8.1.1.8.2 Variation 2: From Monoprotected 1,3-Diols .......................... 535
29.8.1.1.8.3 Variation 3: From Allylic and Homoallylic Alcohols .................. 548
29.8.1.1.8.4 Method 3: Synthesis by Ligand Exchange .................................. 554
29.8.1.1.8.4.1 Variation 1: From Ortho Esters .......................................... 554
29.8.1.1.8.4.2 Variation 2: From Substitution at the 4-Position of 1,3-Dioxanes ... 558
29.8.1.1.8.4.3 Variation 3: From 2-Lithio-1,3-dioxane ................................ 566
29.8.1.1.8.4.4 Variation 4: From 5-Methylene-1,3-dioxanes ......................... 567
29.8.1.1.8.4.5 Variation 5: From Reduction of Dioxins ............................. 572
29.8.1.1.8.6 Applications of Product Subclass 1 in Organic Synthesis ............ 575
29.8.1.1.8.6.1 Method 1: Deprotection Reactions of 1,3-Dioxanes ................ 575
29.8.1.1.8.6.2 Variation 1: Cleavage To Give Carbonyl Compounds and 1,3-Diols .... 576
29.8.1.2.2 Variation 2: Cleavage To Give Monoprotected 1,3-Diols ........................................ 580
29.8.1.2.2 Method 2: Chiral 1,3-Dioxanes in Asymmetric Synthesis ........................................ 583
29.8.1.2.2.1 Variation 1: As Chiral Reagents ............................................................................... 584
29.8.1.2.2.2 Variation 2: As Chiral Auxiliaries ........................................................................... 585
29.8.1.2.3 Method 3: Rearrangement of Methylene-1,3-dioxanes ............................................ 585
29.8.1.2.3.1 Variation 1: Claisen Rearrangement ....................................................................... 586
29.8.1.2.3.2 Variation 2: Ferrier Rearrangement ....................................................................... 586
29.8.1.2.4 Method 4: Synthesis of Cyclic Ethers from 1,3-Dioxanes ........................................ 587

29.8.2 Product Subclass 2: 1,3-Dioxepanes ........................................................................... 587
29.8.2.1 Synthesis of Product Subclass 2 .................................................................................... 588
29.8.2.1.1 Method 1: Synthesis by Formation of Two C—O Bonds ......................................... 588
29.8.2.1.1.1 Variation 1: From Reactions of Carbonyl Compounds and Diols ......................... 588
29.8.2.1.1.2 Variation 2: From Reactions of Acetals with 1,4-Diols ........................................... 591
29.8.2.1.1.3 Variation 3: From Reactions of 1,4-Diols with Enol Ethers ................................. 593
29.8.2.1.1.4 Variation 4: From Reactions of 1,4-Diols with 1,1-Dihaloalkanes ....................... 594
29.8.2.1.2 Method 2: Synthesis by Formation of One C—O Bond ........................................ 595
29.8.2.1.2.1 Variation 1: From Monoprotected 1,4-Diols ........................................................ 595
29.8.2.1.2.2 Variation 2: From Homoallylic Alcohols ........................................................... 596
29.8.2.2 Applications of Product Subclass 2 in Organic Synthesis ......................................... 597
29.8.2.2.1 Method 1: Deprotection Reactions ........................................................................... 597
29.8.2.2.1.1 Variation 1: Cleavage To Give 1,4-Diols .............................................................. 597
29.8.2.2.1.2 Variation 2: Cleavage To Give Monoprotected 1,4-Diols ..................................... 598

29.8.3 Product Subclass 3: Larger-Ring O/O Acetals ......................................................... 599
29.8.3.1 Synthesis of Product Subclass 3 ................................................................................... 600
29.8.3.1.1 Method 1: Synthesis by Formation of Two C—O Bonds ......................................... 600
29.8.3.1.1.1 Variation 1: From Reactions of Carbonyl Compounds with Diols ....................... 600
29.8.3.1.1.2 Variation 2: From Reactions of Acetals with Diols ................................................. 601
29.8.3.1.1.3 Variation 3: From Reactions of Enol Ethers with Diols ......................................... 602
29.8.3.1.1.4 Variation 4: From Reactions of Dihaloalkanes with Diols ................................. 603
29.8.3.1.1.5 Variation 5: From Reactions of Diazooalkanes with Diols ................................. 603
29.8.3.1.2 Method 2: Synthesis by Formation of One C—O Bond ........................................ 604
29.8.3.1.3 Method 3: Synthesis by Bond Disconnection ......................................................... 605
29.8.3.2 Applications of Product Subclass 3 in Organic Synthesis ......................................... 605
29.8.3.2.1 Method 1: Deprotection to Monoprotected Diols ................................................ 605

29.9 Product Class 9: Spiroketals
S. V. Ley, L.-G. Milroy, and R. M. Myers

29.9 Product Class 9: Spiroketals ....................................................................................... 613
29.9.1 Synthesis of Product Class 9 ....................................................................................... 616
29.9.1.1 Synthesis by Formation of Two C—O Bonds ......................................................... 616
29.9.1.1.1 Cyclization of Dihydroxy Ketones ......................................................................... 616
29.9.1.1.1.1 Method 1: Nucleophilic Addition to Aldehydes ............................................... 617
29.9.1.1.1.1 Variation 1: Using Sulfone-Stabilized Carbanions ...................................... 617
29.1.2.4.2 Variation 2: β-Lactone Ring-Opening Spirocyclization  .................. 655
29.1.2.5 Method 5: Polymer-Supported Ketal Protection  .......................... 655
29.1.2 Synthesis by Formation of One C—O and One C—C Bond  ................. 657
29.1.2.1 Method 1: Carbanion Addition to Lactones  .............................. 657
29.1.2.2 Method 2: Synthesis from Cyclic Vinyl Ethers  .......................... 659
29.1.2.2.1 Variation 1: Acylation .................................................. 659
29.1.2.2.2 Variation 2: Alkylation of Phenyl Sulfones  .......................... 660
29.1.2.2.3 Variation 3: From Enol Ethers via Wittig Alkenation ................. 661
29.1.2.2.4 Variation 4: From Cyclic Ether Phenyl Sulfones as Precursors  .... 662
29.1.2.2.5 Variation 5: Metal-Catalyzed Cross Coupling  ....................... 664
29.1.2.2.6 Variation 6: Sulfone Alkylation ....................................... 666
29.1.2.2.7 Variation 7: Asymmetric Oxyselanylation  ............................ 667
29.1.2.2.8 Method 3: Hetero-Diels–Alder Reactions  ............................ 668
29.1.2.2.9 Method 4: Silyl-Modified Sakurai Reactions  .......................... 669
29.1.3 Synthesis by Formation of One C—O Bond  ................................ 669
29.1.3.1 Method 1: Hydroboration–Cyclization .................................... 670
29.1.3.2 Method 2: Rearrangement of Bicyclic Acetals  .......................... 671
29.1.3.3 Method 3: Synthesis Using Hemiacetals Derived from Oxidation of Furans .......................................................... 671
29.1.3.4 Method 4: Intramolecular Epoxide Ring Opening ....................... 672
29.1.3.5 Method 5: Intramolecular Conjugate Addition  .......................... 673
29.1.3.5.1 Variation 1: Using α,β-Unsaturated Sulfoxides  ..................... 673
29.1.3.5.2 Variation 2: Using α,β-Unsaturated Ketones  ........................ 674
29.1.3.6 Method 6: Ring Expansion ................................................. 675
29.1.3.7 Method 7: Oxidative Insertion Reactions .................................. 675
29.1.4 Synthesis by Formation of One C—C Bond .................................. 676
29.1.4.1 Method 1: Norrish Type II Photochemical Reactions ................. 676
29.1.4.2 Method 2: Synthesis from Alkylidenecarbene Complexes .......... 676
29.1.4.3 Method 3: Stereoselective Ketal-Tethered Intramolecular Diels–Alder Reaction .................................................. 677
29.1.4.4 Method 4: Ring-Closing Metathesis ...................................... 678
29.1.5 Synthesis of Trioxadispiroketalts .............................................. 679
29.1.5.1 Method 1: Sulfone–Lactone Coupling Reactions ...................... 680
29.1.5.2 Method 2: Radical Cyclization of Pyran Derivatives Using Hypervalent Iodine .................................................. 680
29.1.5.3 Method 3: Acid-Catalyzed Carbonyl Cascade Process ............... 681

29.10 Product Class 10: O/O Acetals with Functionalization Attached to the Acetal Carbon
H. Yorimitsu and K. Oshima

29.10.1 Product Subclass 1: Halogenated O/O Acetals  .......................... 691

Science of Synthesis Original Edition Volume 29

| 29.10.1.1 | Synthesis of Product Subclass 1 | Method 1: Haloetherification  
Variation 1: Of Alkenes  
Variation 2: Of Alkynes |
| 29.10.2 | Product Subclass 2: Chalcogenated O/O Acetals | Method 1: Chalcogenoetherification  
Method 2: Addition of an Alcohol to a 1,2-Dialkoxyalkene |
| 29.10.3 | Product Subclass 3: Nitrated O/O Acetals | Method 1: Addition of Alcohols to Nitroalkenes |
| 29.10.4 | Product Subclass 4: Metalated O/O Acetals | Method 1: Alkoxymercuration of Alk-1-enyl Ethers  
Method 2: Nucleophilic Substitution Reactions of Halogenated O/O Acetals with a Cobalt-Centered Anion |
| 29.10.5 | Product Subclass 5: O/O Acetals with Alkenyl Functionality | Method 1: Elimination Reactions from Selanyl Acetals  
Method 2: Hetero-Diels–Alder Reactions of Alka-1,3-dienyl Ethers with Carbonyl Compounds  
Method 3: Mercury-Mediated Addition of Alcohols to Enynes |
| 29.10.6 | Product Subclass 6: O/O Acetals with Alkynyl Functionality | Method 1: Base-Mediated Rearrangement of gem-Dihalocyclopropyl Ethers Followed by Elimination  
Method 2: Reaction of Orthoformates with Alkynylmagnesium Compounds  
Method 3: Reaction of Orthoformates with Alk-1-yenes under Zinc Salt Catalysis |
| 29.10.7 | Product Subclass 7: O/O Acetals with Carbonyl Functionality | Method 1: 1,4-Addition of Alcohols to β-Halo or β-Alkoxy α,β-Unsaturated Carbonyl Compounds  
Method 2: Sequential 1,4-Addition of Alcohols to Electron-Deficient Alkynes  
Method 3: Reaction of Enolates or Enamines with Orthoformates |
| 29.11 | Product Class 11: OR¹/OX Acetals | P. Merino |
29.11  Product Subclass 1: OR^1/ON Acetals: Open-Chain Compounds  
29.11.1  Synthesis of Product Subclass 1  
29.11.1.1  Method 1: Synthesis from N—OH Compounds  
29.11.1.1.1  Variation 1: From Oximes  
29.11.1.1.2  Variation 2: From Hydroxylamines  
29.11.1.1.3  Variation 3: From Hydroxamic Acids and Imides  
29.11.1.2  Method 2: Synthesis from Diazenium Diolates  
29.11.1.2  Applications of Product Subclass 1 in Organic Synthesis  
29.11.1.2.1  Method 1: Use as a N—O Protecting Group  
29.11.1.2.2  Method 2: Use as Nitric Oxide Releasing Compounds  
29.11.2  Product Subclass 2: OR^1/ON Acetals: 5-Alkoxyisoxazoles and 
-isoaxazolidines  
29.11.2.1  Synthesis of Product Subclass 2  
29.11.2.1.1  Method 1: Synthesis by Cycloaddition Reactions  
29.11.2.1.2  Variation 1: From Nitrile Oxides  
29.11.2.1.2  Variation 2: From Nitrones  
29.11.2.2  Applications of Product Subclass 2 in Organic Synthesis  
29.11.2.2.1  Method 1: Use as Synthetic Intermediates  
29.11.3  Product Subclass 3: OR^1/ON Acetals: 6-Alkoxy-3H-1,2-oxazines and 
Related Compounds  
29.11.3.1  Synthesis of Product Subclass 3  
29.11.3.1.1  Method 1: Synthesis from Nitroso Compounds and N—OH Derivatives  
29.11.3.2  Applications of Product Subclass 3 in Organic Synthesis  
29.11.3.2.1  Method 1: Use as Synthetic Intermediates  
29.11.4  Product Subclass 4: OR^1/ON Acetals: 1-Aminooxy Carbohydrates and 
Related Compounds  
29.11.4.1  Synthesis of Product Subclass 4  
29.11.4.1.1  Method 1: Glycosylation with Imides  
29.11.4.1.2  Method 2: Formation of Glycosyl Nitrates  
29.11.4.2  Applications of Product Subclass 4 in Organic Synthesis  
29.11.4.2.1  Method 1: Synthesis of Carbohydrates  
29.11.5  Product Subclass 5: OR^1/ON Acetals: 1,3,4-Dioxazolidines and Related 
Cyclic Compounds  
29.11.5.1  Synthesis of Product Subclass 5  
29.11.5.1.1  Method 1: Synthesis from N—O Containing Compounds  
29.11.5.2  Applications of Product Subclass 5 in Organic Synthesis  
29.11.5.2.1  Method 1: Use as Protecting Groups  
29.11.6  Product Subclass 6: OR^1/Os Acetals: 1-Alkoxysulfonates  
29.11.6.1  Synthesis of Product Subclass 6  
29.11.6.1.1  Method 1: Synthesis from Sulfonyl Derivatives
29.11.2 Applications of Product Subclass 6 in Organic Synthesis ............... 758
29.11.7 Product Subclass 7: OR\(^1\)/OO Acetals: 1,2,4-Trioxolanes ............... 760
29.11.7.1 Synthesis of Product Subclass 7 ........................................ 760
29.11.7.1.1 Method 1: Ozonolysis ........................................ 760
29.11.7.1.1 Variation 1: In Protic and Nonparticipating Solvents .......... 760
29.11.7.1.2 Variation 2: In the Presence of Carbonyl Compounds .......... 764
29.11.7.1.3 Variation 3: In Unconventional Media .......................... 767
29.11.7.1.2 Method 2: Photooxygenation .................................. 769
29.11.7.1.3 Method 3: Cyclization of Hydroperoxides .................... 771
29.11.7.1.4 Method 4: Synthesis of Artemisinin and Related Compounds .... 773
29.11.7.2 Applications of Product Subclass 7 in Organic Synthesis .......... 776
29.11.7.2.1 Method 1: Synthesis of Carbonyl Compounds ................. 776
29.11.7.2.2 Methods 2: Other Synthetic Applications ....................... 777
29.11.8 Product Subclass 8: OR\(^1\)/OSi Acetals: Alkyl Silyl Acetals ............. 779
29.11.8.1 Synthesis of Product Subclass 8 ........................................ 779
29.11.8.1.1 Method 1: Direct Silylation of Alcohols .................... 779
29.11.8.1.2 Method 2: Synthesis from Enolates and Related Compounds .... 781
29.11.8.1.3 Methods 3: Other Methods ........................................ 784
29.11.8.2 Applications of Product Subclass 8 in Organic Synthesis ........... 787
29.11.8.2.1 Method 1: Use as Protecting Groups .............................. 787
29.11.9 Product Subclass 9: OR\(^1\)/OSi Acetals: Oxasilacycles and Related Compounds .................................................. 788
29.11.9.1 Synthesis of Product Subclass 9 ........................................ 788
29.11.9.1.1 Method 1: Synthesis from Carbonyl Compounds .................. 788
29.11.9.2 Applications of Product Subclass 9 in Organic Synthesis .......... 790
29.11.9.2.1 Method 1: Synthesis of 1,3-Diols .................................. 790
29.12 Product Class 12: O/S, O/Se, and O/Te Acetals
F. Chemla, F. Ferreira, and B. Roy

29.12.1 Product Class 12: O/S, O/Se, and O/Te Acetals ........................................ 801
29.12.1.1 Product Subclass 1: OH/SR\(^1\) Acetals .................................. 801
29.12.1.1.1 Method 1: Oxidation of 1,3-Thiazolidines ...................... 801
29.12.1.1.2 Method 2: Synthesis from OR\(^2\)/SR\(^3\) Acetals ................. 801
29.12.1.1.3 Method 3: Synthesis from Vinyl Thioethers .................... 802
29.12.1.1.4 Method 4: Synthesis from Aldehydes or Ketones ............... 803
29.12.1.1.5 Method 5: Pummerer Reaction ................................ 804
29.12.1.1.6 Method 6: Synthesis from Thiolactones ......................... 804
29.12.1.2 Applications of Product Subclass 1 in Organic Synthesis ........... 805
29.12.2 Product Subclass 2: OR\(^1\)/SH Acetals ........................................ 806
29.12.2.1 Synthesis of Product Subclass 2 ........................................ 801
29.12.2.1.1 Method 1: Synthesis of Carbonyl Compounds .................. 801
29.12.2.1.2 Method 2: Synthesis from OR\(^2\)/SR\(^3\) Acetals ................. 801
29.12.2.1.3 Method 3: Synthesis from Vinyl Thioethers .................... 802
29.12.2.1.4 Method 4: Synthesis from Aldehydes or Ketones ............... 803
29.12.2.1.5 Method 5: Pummerer Reaction ................................ 804
29.12.2.1.6 Method 6: Synthesis from Thiolactones ......................... 804
29.12.2.2 Applications of Product Subclass 2 in Organic Synthesis .......... 805
Table of Contents

29.12.2.1 Synthesis of Product Subclass 2 .................................................. 806

29.12.2.1.1 Method 1: Synthesis from Aldehydes and Ketones ....................... 806

29.12.3 Product Subclass 3: OR/SR Acetals ................................................. 806

29.12.3.1 Synthesis of Product Subclass 3 .................................................. 806

29.12.3.1.1 Method 1: Oxidation of Sulfides ............................................... 806

29.12.3.1.2 Method 2: Synthesis from Ethers ............................................. 807

29.12.3.1.1 Variation 1: From Hal/Hal Acetals ........................................... 809

29.12.3.1.2 Variation 2: From Hal/O Acetals ............................................. 809

29.12.3.1.3 Variation 3: From Hal/S Acetals ............................................. 810

29.12.3.1.4 Variation 4: From O/O Acetals ............................................... 811

29.12.3.1.5 Variation 5: From S/S Acetals ............................................... 813

29.12.3.1.6 Variation 6: From O/S Acetals ............................................... 814

29.12.3.1.7 Method 4: Synthesis from Vinyl Sulfides .................................. 815

29.12.3.1.8 Method 5: Synthesis from Aldehydes or Ketones ....................... 817

29.12.3.1.9 Method 6: Synthesis from Thiones .......................................... 820

29.12.3.1.10 Method 7: Synthesis from Vinyl Ethers ................................... 821

29.12.3.1.11 Method 8: Synthesis from Thionolactones ................................ 824

29.12.3.1.12 Method 9: Synthesis from Oxathioliun Salts ............................ 825

29.12.3.1.13 Method 10: Synthesis through Cycloaddition Reactions ............... 825

29.12.3.1.14 Variation 1: From Thiiones through Dipolar Cycloadditions .......... 826

29.12.3.1.15 Variation 2: From Thioketones through [4 + 2] Cycloadditions ...... 826

29.12.3.1.16 Variation 3: From Vinyl Sulfides by Cycloaddition Reactions ...... 827

29.12.3.1.17 Variation 4: From 2-(Alkylsulfonyl)- or 2-(Arylsulfonylfurans through 829

Cycloadditions ................................................................. 829

29.12.3.1.18 Method 11: Synthesis via the Pummerer Reaction .................... 830

29.12.3.1.19 Method 12: Metalation of OR/SR Acetals .............................. 836

29.12.3.1.20 Method 13: Synthesis from Metalated OR/SR Acetals ................ 838

29.12.3.1.21 Method 14: Reduction of OR/SOR Acetals Using Tebbe’s Reagent .... 839

29.12.3.2 Applications of Product Subclass 3 in Organic Synthesis .............. 839

29.12.4 Product Subclass 4: OR/SOR Acetals .............................................. 844

29.12.4.1 Synthesis of Product Subclass 4 ............................................... 844

29.12.4.1.1 Method 1: Oxidation of OR/SOR Acetals .................................. 844

29.12.5 Product Subclass 5: OH/SO Acetals ............................................... 846

29.12.5.1 Synthesis of Product Subclass 5 ............................................... 846

29.12.5.1.1 Method 1: Synthesis from Aldehydes or Ketones ..................... 847

29.12.5.1.2 Method 2: [4 + 1]-Cycloaddition Reactions ................................ 847

29.12.6 Product Subclass 6: OR/SO Acetals ............................................... 847

29.12.6.1 Synthesis of Product Subclass 6 ............................................... 848

29.12.6.1.1 Method 1: Synthesis from OH/SO Acetals .............................. 848

29.12.6.1.2 Method 2: Synthesis from Hal/OR, Hal/SO Acetals, or OR/O Acetals 849

29.12.6.1.2.1 Variation 1: From Hal/OR Acetals ...................................... 849

29.12.6.1.2.2 Variation 2: From Hal/SO Acetals ...................................... 849

29.12.6.1.2.3 Variation 3: From OR/O Acetals ...................................... 850
Method 3: Synthesis from Unsaturated Sulfones

Method 4: Synthesis from Enol Ethers

Method 5: Synthesis from OR1/SR2 Acetals by Oxidation

Method 6: Synthesis by [3 + 2]-Cycloaddition Reactions

Method 7: Synthesis by Carbene Insertions

Method 8: Metalation of OR1/SSR2 Acetals

Method 9: Reactions of Metalated OR1/SSR2 Acetals

Variation 1: With Alkylating Agents

Variation 2: With Carbonyl Compounds

Variation 3: With Acid Derivatives

Applications of Product Subclass 6 in Organic Synthesis

Product Subclass 7: OR1/SeR2 Acetals

Synthesis of Product Subclass 7

Method 1: Oxidation of Selenides

Method 2: Synthesis from Ethers

Method 3: Synthesis from Hal/O, Hal/Se, or O/O Acetals

Variation 1: From Hal/OR1 Acetals

Variation 2: From Hal/SeR2 Acetals

Variation 3: From O/O Acetals

Method 4: Synthesis from Vinyl Ethers

Method 5: Synthesis by Cycloaddition Reactions

Variation 1: From Tungsten-Coordinated Selenoaldehydes by [2 + 2] Cycloaddition

Method 6: Synthesis from Selenoxides by Seleno-Pummerer-Type Reaction

Method 7: Metalation of OR1/SeR2 Acetals

Method 8: Synthesis from Organometallic Compounds

Applications of Product Subclass 7 in Organic Synthesis

Product Class 13: Glycosyl Halides

Synthesis of Product Subclass 1

Method 1: Synthesis from Hemiacetals

Method 2: Synthesis from O-Acyl Glycosides

Method 3: Synthesis from Other O-Glycosides

Method 4: Synthesis from Thio-, Seleno-, and Telluroglycosides

Method 5: Synthesis with Migration

Method 6: Synthesis from Other Glycosyl Halides

Method 7: Synthesis from Glycals

Applications of Product Subclass 1 in Organic Synthesis

Product Subclass 2: Glycosyl Chlorides

Synthesis of Product Subclass 2
29.13.2.1 Method 1: Synthesis from Hemiacetals ................................ 899
29.13.2.1.2 Method 2: Synthesis from O-Acyl Glycosides .................... 900
29.13.2.1.2.1 Variation 1: Synthesis Using Dichloromethyl Methyl Ether ........ 901
29.13.2.1.2.2 Variation 2: Synthesis Using Hydrogen Chloride ............... 902
29.13.2.1.2.3 Variation 3: Synthesis Using Lewis Acids or Chlorinating Agents .... 903
29.13.2.1.3 Method 3: Synthesis from O-Alkyl Glycosides ..................... 904
29.13.2.1.4 Method 4: Synthesis from Thioglycosides ......................... 905
29.13.2.1.5 Method 5: Synthesis from Other Glycosyl Halides ................. 907
29.13.2.1.6 Method 6: Synthesis from Glycals ................................ 908

29.13.3 **Product Subclass 3: Glycosyl Bromides** ................................ 908
29.13.3.1 Synthesis of Product Subclass 3 ....................................... 908
29.13.3.1.1 Method 1: Synthesis from Hemiacetals .......................... 908
29.13.3.1.2 Method 2: Synthesis from O-Acyl Glycosides .................. 909
29.13.3.1.3 Method 3: Synthesis from O-Glycosides .......................... 912
29.13.3.1.4 Method 4: Synthesis from Thio-, Seleno-, and Telluroglycosides .... 914
29.13.3.1.5 Method 5: Synthesis from Glycals ................................ 915

29.13.4 **Product Subclass 4: Glycosyl Iodides** .................................. 916
29.13.4.1 Synthesis of Product Subclass 4 ....................................... 916
29.13.4.1.1 Method 1: Synthesis from O-Acyl Glycosides .................. 916
29.13.4.1.2 Methods 2: Miscellaneous Methods ................................ 917

29.14 **Product Class 14: Glycosyl Sulfur, Selenium, and Tellurium Compounds**
W. B. Turnbull, M. A. Fascione, and S. A. Stalford

29.14 **Product Class 14: Glycosyl Sulfur, Selenium, and Tellurium Compounds** ··· 923
29.14.1 **Product Subclass 1: Glycosyl Thiols, Glycosyl Selenols, and Glycosyl Tellurols** ......................................................... 923
29.14.1.1 Synthesis of Product Subclass 1 ....................................... 924
29.14.1.1.1 Method 1: Formation of the S—H Bond by Substitution of Metals .... 924
29.14.1.1.4 Method 4: Reduction of Dichalcogenides .......................... 926
29.14.2 **Product Subclass 2: O-Alkyl S-Glycosyl Dithiocarbonates and S-Glycosyl N,N-Dialkylidithiocarbamates** ......................................... 927
29.14.2.1 Synthesis of Product Subclass 2 ....................................... 927
29.14.3 **Product Subclass 3: Glycosyl Isothiouronium and Isoselenouronium Salts** 928
29.14.3.1 Synthesis of Product Subclass 3 ....................................... 928

Product Subclass 4: Glycosyl Thioesters and Selenoesters .............................. 930

Method 1: Formation of the Glycosyl—Sulfur/Selenium Bond by Substitution of Halides ........................................ 930

Method 2: Formation of the Acyl—Sulfur/Selenium Bond by Substitution of Carbon ........................................ 931

Product Subclass 5: 4,5-Dihydroglycopyranos[2,1-d]-1,3-thiazoles ........................ 932

Synthesis of Product Subclass 5 ........................................ 932

Method 1: Intramolecular Substitution of Oxygen by a Thioacetamido Group .................................................. 932

Product Subclass 6: Glycosyl Sulfones ........................................ 933

Synthesis of Product Subclass 6 ........................................ 933

Method 1: Oxidation of Thioglycosides ........................................ 933

Product Subclass 7: Glycosyl Sulfoxides and Selenoxides ........................................ 934

Synthesis of Product Subclass 7 ........................................ 934

Method 1: Oxidation of Thioglycosides and Selenoglycosides ............................... 934

Method 2: Substitution of Alkyl with Alkenyl Substituents ........................................ 936

Product Subclass 8: Glycosylsulfimides ........................................ 937

Synthesis of Product Subclass 8 ........................................ 937

Method 1: Oxidation of Thioglycosides with Chloramine-T ........................................ 937

Product Subclass 9: Alkyl/Aryl Thioglycosides, Selenoglycosides, and Telluroglycosides ........................................ 938

Synthesis of Product Subclass 9 ........................................ 938

Method 1: Formation of the S—Aglycone Bond by Substitution of Hydrogen .................................................. 939

Variation 1: Reactions with Aryl Fluorides ........................................ 939

Variation 2: Palladium(0)-Catalyzed Allylation ........................................ 939

Variation 3: From Alkyl Alcohols by the Mitsunobu Reaction ........................................ 940

Method 2: Formation of the S/Se—Aglycone Bond by Substitution of Carbon .................................................. 941

Method 3: Formation of the S/Se/Te—Aglycone Bond by Reduction of Dichalcogenides and Alklylation of the Products In Situ ........................................ 943

Method 4: Formation of the S/Se/Te—Aglycone Bond by Additions to Alkenes .................................................. 943

Variation 1: Michael-Type Conjugate Addition ........................................ 943

Variation 2: Free-Radical Additions ........................................ 944

Method 5: Formation of the Glycosyl—S/Se/Te Bond by Substitution of Halides .................................................. 945
Variation 1: With Thiols and Selenols under Biphasic Conditions

Variation 2: With (Alkylsulfanyl)- and (Arylsulfanyl)tributylstannanes and Trimethylsilanes

Variation 3: With Reduction of Dichalcogenides In Situ

Variation 1: Reactions of Reducing Sugars with Tertiary Alkanethiols in 90% Trifluoroacetic Acid

Variation 2: Reactions of Glycosyl Esters or Thioesters in the Presence of Lewis Acids

Variation 3: Reactions of O-Glycosylphosphine Oxides Generated In Situ

Method 7: Formation of the Glycosyl—S/Se/Te Bond by Addition to Glycals

Variation 1: Via 1,2-Anhydroglycopyranoses

Variation 2: Azidophenylselanylation

Product Subclass 10: Glycosylsulfenyl Halides

Synthesis of Product Subclass 10

Method 1: Formation of the Sulfur—Halogen Bond by Substitution of Carbon

Product Subclass 11: Glycosylsulfonates and Glycosylsulfonamides

Synthesis of Product Subclass 11

Method 1: Oxidation of 4,5-Dihydroglycopyranos[2,1-d]-1,3-thiazoles and Thioacetates

Product Subclass 12: S-Glycosyl/Alkyl Glycosylthiosulfonates and S-Glycosyl Alkane-/Arene-/Glycosylthiosulfonates

Synthesis of Product Subclass 12

Method 1: Formation of the Glycosyl—Sulfur Bond by Displacement of Halides

Method 2: Formation of the S—S Bond: Reactions between Glycosylsulfenyl Bromides and Water

Method 3: Oxidation of Glycosyl Disulfides

Product Subclass 13: Glycosyl Dichalcogenides

Synthesis of Product Subclass 13

Method 1: Air Oxidation of Thiols, Selenols, and Tellurols

Method 2: Reactions of Sulfonyl/Seleneny1 Halides with Thiols/Thiolates

Method 3: Substitution of Thiosulfonates

Method 4: Reductive Elimination of Tungsten/Molybdenum Disulfides

Method 5: Dichalcogenide Exchange

Product Subclass 14: Glycosylsulfinamides and Glycosylsulfonamides

Synthesis of Product Subclass 14

Method 1: Oxidation of Glycosylsulfenamides

Product Subclass 15: Glycosylsulfenamides
Method 1: Substitution of Halide Ion from Glycosylselenenyl Halides Generated In Situ ............................................. 963
Method 2: Substitution of Sulfur in Disulfides and Thiosulfonates ...... 964
Product Subclass 16: O,O-Dialkyl S-Se-Te-Glycosyl Phosphorothioates/ selenoates/-telluroates/-thioselenoates/-dithioates .......................... 964
Synthesis of Product Subclass 16 ........................................ 964
Method 1: Formation of the Glycosyl—S/Se/Te Bond ................... 964
Method 2: Formation of the S/Se/Te—P Bond .......................... 965

Product Class 15: Glycosyl Oxygen Compounds
(Except Di- and Oligosaccharides)
B. Kryczka, J. Lewkowski, and A. Zawisza

Product Subclass 1: 1-O-Methyl Glycosides .............................. 972
Synthesis of Product Subclass 1 ............................................ 972
Method 1: Synthesis from Free Sugars ................................... 972
Method 2: Synthesis from Glycosyl Halides ............................. 973
Method 3: Synthesis from 1-O-Acetyl Glycosides ....................... 975
Method 4: Synthesis from 1,2-Epoxides .................................. 976
Method 5: Synthesis from Glycals ......................................... 976
Method 6: Synthesis from 1-Thioglycosides ............................. 977
Method 7: Synthesis from 1-Phosphoramidates .......................... 978
Method 8: Synthesis from 1-Selenopyranoses ........................... 979
Applications of Product Subclass 1 in Organic Synthesis ............... 979
Method 1: Hydrolysis ......................................................... 979
Variation 1: Acid Hydrolysis ................................................. 979
Variation 2: Enzymatic Hydrolysis .......................................... 980
Method 2: Conversion of Methyl Glycosides into Glycosyl Halides ...... 981
Method 3: Thiolysis of 1-O-Methyl Glycosides ........................... 981
Method 4: Transglycosidation ............................................... 981

Product Subclass 2: 1-O-Nitro Glycosides ............................... 982
Synthesis of Product Subclass 2 ............................................ 982
Method 1: Nitrification of 1,2-Deoxy Pyranoses with Ammonium Cerium(IV) Nitrate ......................................................... 982
Method 2: Nitrification of 1-Bromo Pyranoses with Silver(I) Nitrate .... 984
Applications of Product Subclass 2 in Organic Synthesis ............... 984
Method 1: 1-O-Alkylation of 1-O-Nitro Glycosides ....................... 984
Method 2: 1-O-Acetylation of 1-O-Nitro Glycosides ..................... 985
Method 3: 1-Halogenation of 1-Thioglycosides ........................... 986
Method 4: 1-O-Phosphorylation of 1-O-Nitro Glycosides ................ 987
Method 5: 1-O-Denitration of 1-O-Nitro Glycosides ........................ 988
Method 6: Formation of 1-S-Glycosides from Azido Nitrates ............... 988
29.15.3 Product Subclass 3: 1-O-Acetyl Glycosides ........................................ 989

29.15.3.1 Synthesis of Product Subclass 3 .................................................. 989

29.15.3.1.1 Method 1:  Acetylation of Pyranoses with Acetic Anhydride ............ 989

29.15.3.1.1.1 Variation 1: O-Acetylation of 1-Hydroxy Pyranoses ................. 989

29.15.3.1.1.2 Variation 2:  Acetylation of 1-O-Methyl Pyranoses .................. 990

29.15.3.1.2 Method 2:  Acetylation of 1-Halo Pyranoses with Metal Acetates .... 991

29.15.3.1.3 Method 3:  Acetylation of 1-O-Nitro Glycosides ....................... 991

29.15.3.2 Applications of Product Subclass 3 in Organic Synthesis .................... 992

29.15.3.2.1 Method 1:  Hydrolysis of 1-O-Acetyl Glycosides .......................... 992

29.15.3.2.2 Method 2:  1-Halogenation of 1-O-Acetyl Glycosides .................... 992

29.15.3.2.3 Method 3:  1-O-Alkylation/Arylation of 1-O-Acetyl Glycosides ......... 993

29.15.3.2.3.1 Variation 1:  Formation of 1-O-Phenyl Glycosides .................... 993

29.15.3.2.3.2 Variation 2:  Formation of 1-O-Allyl Glycosides ....................... 994

29.15.3.2.4 Method 4:  Synthesis of 1-Thioglycosides from 1-O-Acetyl Glycosides .... 995

29.15.3.2.5 Method 5:  Synthesis of N-Glycosides from 1-O-Acetyl Glycosides ...... 996

29.15.3.2.6 Method 6:  Synthesis of C-Glycosides from 1-O-Acetyl Glycosides ...... 997

29.15.3.2.7 Method 7:  Synthesis of 1,2-Ortho Esters from 1-O-Acetyl Glycosides .... 997

29.15.3.2.8 Method 8:  Cyclization Reactions ........................................ 998

29.15.3.2.9 Method 9:  Formation of 1-Azido Pyranoses ................................ 999

29.15.3.2.10 Method 10:  Synthesis of 1-Selenopyranoses from 1-O-Acetyl Glycosides 1000

29.15.4 Product Subclass 4: 1-O-Vinyl Glycosides ................................ 1000

29.15.4.1 Synthesis of Product Subclass 4 .............................................. 1000

29.15.4.1.1 Method 1:  Transetherification and Related Reactions .................. 1001

29.15.4.1.2 Method 2:  Reactions of Pyranoses with Organometallic Vinyl Group Carriers .................................................. 1002

29.15.4.1.3 Method 3:  Isomerization of 1-O-Allyl Glycosides ....................... 1003

29.15.4.2 Applications of Product Subclass 4 in Organic Synthesis .................... 1003

29.15.4.2.1 Method 1:  Additions to the Vinylic Double Bond ....................... 1003

29.15.4.2.2 Method 2:  Substitution Reactions Using the Oxyvinyl Unit as a Leaving Group .................................................. 1004

29.15.5 Product Subclass 5: 1-O-Allyl Glycosides ................................ 1004

29.15.5.1 Synthesis of Product Subclass 5 .............................................. 1004

29.15.5.1.1 Method 1:  Reactions of Free Pyranoses .................................. 1004

29.15.5.1.2 Method 2:  Reactions of 1-Halo Pyranoses with Allyl Alcohol .......... 1005

29.15.5.1.3 Method 3:  Reactions of 1-O-Trichloroacetimidyl Pyranoses with Allyl Alcohol .................................................. 1006

29.15.5.1.4 Method 4:  Reactions of 1-Azido Pyranoses with Allyl Alcohol .......... 1007

29.15.5.1.5 Method 5:  Reactions of 1,3-Dioxolanes .................................. 1008

29.15.5.1.6 Method 6:  Reactions of 1,6-Anhydro Pyranoses with Allyl Alcohol Derivatives .................................................. 1008

29.15.5.1.7 Method 7:  Reactions of Dihydrooxazole Derivatives .................... 1009

29.15.5.1.8 Method 8:  Alkenylation of Free Pyranoses in the Presence of Palladium(0) Complexes .............................................. 1009

29.15.5.2 Applications of Product Subclass 5 in Organic Synthesis .................... 1010

### Product Subclass 3: Carbohydrate Derivatives (Including Nucleosides)

H. Yamada

30.1.3.1 Synthesis of Product Subclass 3 47
30.1.3.1.1 Pyrimidine Nucleosides 47
30.1.3.1.1.1 Method 1: Substitution of Furanosyl Acetates with Silylated Pyrimidines 47
30.1.3.1.1.2 Method 2: Synthesis from Furanosyl Halides (Hilbert–Johnson Method) 50
30.1.3.1.1.2.1 Variation 1: Substitution by Silylated Pyrimidines 51
30.1.3.1.1.2.2 Variation 2: Substitution by Pyrimidine Mercury Salts 55
30.1.3.1.1.2.3 Variation 3: Activation with Mercury(II) Cyanide in Nitromethane 55
30.1.3.1.1.3 Method 3: Synthesis from Sulfanylated Furanosides (Thiofuranosides) 56
30.1.3.1.1.3.1 Variation 1: Synthesis from Sulfanylated Furanosides 60
30.1.3.1.1.3.2 Variation 2: Intramolecular Glycosylation 60
30.1.3.1.1.4 Method 4: Synthesis from Furanosyl Trichloroacetimidates 61
30.1.3.1.1.5 Method 5: Synthesis from Pentenoses 62
30.1.3.1.6 Method 6: Synthesis from N-Furanosyl Derivatives ........................ 63
30.1.3.1.2 Purine Nucleosides ................................................................. 64
30.1.3.1.2.1 Method 1: Substitution of Furanosyl Acetates with Silylated Purines 64
30.1.3.1.1.1 Variation 1: Fusion of Sugars and Purines ............................ 67
30.1.3.1.2.2 Method 2: Synthesis from Furanosyl Halides  ......................... 68
30.1.3.1.2.2.1 Variation 1: Substitution by Purine Silver and Mercury Salts .... 69
30.1.3.1.2.3 Method 3: Synthesis from 1-Sulfanylated Furanosides (1-Thiofuranosides) ......................................................... 69
30.1.3.1.2.3.1 Variation 1: Synthesis from 1-Sulfinylated Furanosides ........... 70
30.1.3.1.2.4 Method 4: Synthesis from Furanosyl Trichloroacetimidates ......... 71
30.1.3.1.2.5 Method 5: Synthesis from Pentenoses ..................................... 72
30.1.3.1.3 Glycosyl Asparagine Derivatives ............................................. 72
30.1.3.1.3.1 Method 1: Synthesis from Glycosyl Azides ............................. 72
30.1.3.1.3.1.1 Variation 1: The Staudinger Reaction .................................. 74
30.1.3.1.3.2 Method 2: Synthesis from Hexenoses ................................... 75
30.1.3.1.3.3 Method 3: Synthesis from Glycosyl Isothiocyanates ................ 76
30.1.3.1.3.4 Method 4: Synthesis from Pentenyl Glycosides ...................... 77
30.1.3.1.3.5 Method 5: Synthesis from Glycosyl Phenyltrifluoroacetimidates .... 78

30.2 Product Class 2: O,P- and S,P-Acetals
M. Yamashita

30.2 Product Class 2: O,P- and S,P-Acetals ............................................. 83
30.2.1 Product Subclass 1: O,P-Acetals ................................................... 83
30.2.1.1 Synthesis of Product Subclass 1 .................................................. 83
30.2.1.1.1 Method 1: Addition of Phosphorus Compounds to Ketones or Aldehydes 83
30.2.1.1.2 Method 2: Substitution Reactions of α,β-Epoxy Phospholane 1-Oxides with Alcohols ................................................................. 88
30.2.1.1.3 Method 3: Oxidation of 2,3-Dihydro-1H-phosphole 1-Oxides .......... 89
30.2.1.1.3.1 Variation 1: Using Osmium(VIII) Oxide ................................ 89
30.2.1.1.3.2 Variation 2: Using Peroxides .............................................. 90
30.2.1.1.4 Method 4: Addition of Phosphorus Compounds to O,O-Acetals and Related Compounds ......................................................... 91
30.2.1.1.5 Methods 5: Miscellaneous Methods ......................................... 93
30.2.2 Product Subclass 2: S,P-Acetals ................................................... 96
30.2.2.1 Synthesis of Product Subclass 2 .................................................. 96
30.2.2.1.1 Method 1: Reaction of α-Lithio Sulfoxides with Chlorophosphines .... 96
30.2.2.1.2 Method 2: Reaction of Trialkyl Phosphites with Cl,S-Acetals ........ 97
30.2.2.1.3 Method 3: Reaction of α-Lithio Phosphonates or Phosphine Oxides with Sulfur Compounds ......................................................... 98
30.2.2.1.4 Method 4: Substitution Reactions of 1-Diazoalkylphosphonates .... 100
30.2.2.1.5 Method 5: Synthesis from Other S,P-Acetals ............................. 102
30.2.2.1.6 Methods 6: Miscellaneous Methods ......................................... 105
30.3 Product Class 3: \( S,S \)-Acetals
T.-Y. Luh and M.-k. Leung

30.3 Product Class 3: \( S,S \)-Acetals .............................................. 111

30.3.1 Product Subclass 1: Acyclic \( S,S \)-Acetals
T. Takeda and A. Tsubouchi

30.3.1 Product Subclass 1: Acyclic \( S,S \)-Acetals ................................... 119

30.3.1.1 Synthesis of Product Subclass 1 ........................................... 119

30.3.1.1 Method 1: Thioacetalization of Carbonyl and Related Compounds ........................................... 119
30.3.1.1.1 Variation 1: With Protic Acid Catalysts ........................................... 120
30.3.1.1.2 Variation 2: With Metal Salt Based Lewis Acid Catalysts ........................................... 121
30.3.1.1.3 Variation 3: With Other Lewis Acid Catalysts ........................................... 125
30.3.1.1.4 Variation 4: With Solid Acid Catalysts ........................................... 128
30.3.1.1.5 Variation 5: In Ionic Liquids ........................................... 128
30.3.1.1.6 Variation 6: With Functionalized Thiols ........................................... 129
30.3.1.1.7 Variation 7: With Reagents Other Than Thiols ........................................... 131
30.3.1.1.2 Method 2: Conversion of Acetals and Related Compounds ........................................... 134
30.3.1.1.2 Variation 1: \( O,O \)-Acetals ........................................... 134
30.3.1.1.2 Variation 2: \( O,S \)-Acetals ........................................... 137
30.3.1.1.2 Variation 3: \( O,N \)-Acetals ........................................... 137
30.3.1.1.2 Variation 4: \( N,N \)-Acetals ........................................... 138
30.3.1.1.2 Variation 5: Enol Ethers ........................................... 139
30.3.1.1.3 Method 3: Substitution of Halides with Thiolates ........................................... 140
30.3.1.1.3 Variation 1: Of \( \alpha \)-Haloalkyl Sulfides ........................................... 140
30.3.1.1.3 Variation 2: Of \( \text{gem} \)-Dihalides ........................................... 142
30.3.1.1.4 Method 4: Pummerer Reaction ........................................... 144
30.3.1.1.5 Method 5: Addition of Thiols to \( C=C \) Multiple Bonds ........................................... 147
30.3.1.1.5 Variation 1: Addition to Alkenyl Sulfides ........................................... 147
30.3.1.1.5 Variation 2: Addition to Alkynes ........................................... 148
30.3.1.1.6 Method 6: Sulfenylation of Methylene Groups Activated by Electron-Withdrawing Groups ........................................... 149
30.3.1.1.7 Method 7: Reaction of Bis(alkylsulfanyl)methyl lithium and \(-sodium Compounds with Electrophiles ........................................... 155
30.3.1.1.7.1 Variation 1: With Halides ........................................... 155
30.3.1.1.7.2 Variation 2: With Aldehydes and Ketones ........................................... 157
30.3.1.1.7.3 Variation 3: With Carboxylic Acid Derivatives ........................................... 158
30.3.1.1.7.4 Variation 4: With Nitriles ........................................... 161
30.3.1.1.7.5 Variation 5: With Epoxides ........................................... 161
30.3.1.1.8 Method 8: Addition of Organometallic Reagents to Dithiocarboxylates ........................................... 163
30.3.1.1.8.1 Variation 1: By Thiophilic Addition ........................................... 163
30.3.1.1.8.2 Variation 2: By Carbophilic Addition ........................................... 167
30.3.1.1.9 Method 9: Cycloadition of Dithioesters ........................................... 168
30.3.1.1.10 Method 10: Synthesis from Ketene Dithioacetals ........................................... 175
30.3.1.1.10.1 Variation 1: Reduction of \( C=C \) Bonds ........................................... 175
Variation 2: Addition of Organometallic Reagents to C=C Bonds

Method 11: Carbene Insertion into Disulfides and Thiols

Methods 12: Miscellaneous Methods

Applications of Product Subclass 1 in Organic Synthesis

Method 1: Acyl Anion Equivalents

Method 2: Reductive Desulfurization

Method 3: Dithioacetals as Thionium Ion Precursors

Method 4: Transformation of Diphenyl Dithioacetals into Titanium–Carbene Complexes

Product Subclass 2: 1,3-Dithietanes

T.-Y. Luh and M.-k. Leung

Synthesis of Product Subclass 2

Symmetrical Dithietanes

Method 1: Dimerization of Thioketones

Variation 1: Thioketones Formed In Situ from Ketones

Variation 2: Thioketones Formed In Situ from Disulfides

Variation 3: Thioketones Formed In Situ from \(-\)Chlorosulfenyl Chloride

Variation 4: Thioketones Formed In Situ from Carbon Suboxide

Method 2: Dimerization of Dithioacetic Acid

Method 3: Dimerization of 1,2-Dithiole-3-thiones

Method 4: Synthesis from Thiophosgene

Method 5: Dimerization of Thioketenes

Variation 1: Thioketenes Formed In Situ from Isothiazole-5(2H)-thione

Variation 2: Thioketenes Formed In Situ from Terminal Alkynes

Variation 3: Thioketenes Formed In Situ from Octafluoroisobutene

Method 6: Dimerization of Isothiocyanates

Method 7: Synthesis Using Carbon Disulfide

Variation 1: Reaction with Ketones

Variation 2: Reaction with Wittig Reagents

Variation 3: Reaction with Diazo Compounds

Unsymmetrical Dithietanes

Method 1: Synthesis from Ethene-1,1-dithiols

Method 2: Synthesis from Xanthates

Method 3: Synthesis from Thioketenes and Imines

Method 4: Synthesis from Ketones

Method 5: Synthesis from Bis(chloromethyl) Sulfoxide

Method 6: Cycloaddition of a Sulfinylalkane with a Thioketone

Variation 1: Sequential Oxidation of Disulfides

Variation 2: Thermolysis of Sulfenic Esters

Variation 3: Rearrangement Reactions

Method 7: Substitution Reactions of Dithietane

Variation 1: Fluoro-Substituted Dithietanes
### Acid Hydrolysis

Variation 25: Catalyzed by Cadmium(II) Iodides ........................................ 269
Variation 26: Catalyzed by Lanthanide(III) Trifluoromethanesulfonates .... 270
Method 3: Reaction of Ethane-1,2-dithiol with Aldehydes or Ketones
Catalyzed Using Heterogeneous Catalysts ........................................ 271
Method 4: Reaction of Ethane-1,2-dithiol with Aldehydes or Ketones
Catalyzed by Halogens and Derivatives ........................................ 273
Variation 1: Catalyzed by Iodine ..................................................... 273
Variation 2: Catalyzed by Tetrabutylammonium Tribromide ................. 276
Variation 3: Catalyzed by N-Bromosuccinimide ................................ 277
Variation 4: Catalyzed by Bromo(dimethyl)sulfonium Bromide ............ 277
Variation 5: Catalyzed by 2,3,5,6-Tetrabromobenzo-1,4-quinone .......... 278
Variation 6: Catalyzed by Trichloroisocyanuric Acid .......................... 280
Variation 7: Catalyzed by Thiouyl Chloride ...................................... 281
Method 5: Reaction of Ethane-1,2-dithiol with Aldehydes or Ketones
Catalyzed by Ionic Liquids .......................................................... 282
Method 6: Reaction of Ethane-1,2-dithiol with Aldehydes or Ketones
Catalyzed by Surfactant .................................................................. 283
Method 7: Reaction of Ethane-1,2-dithiol with Masked Carbonyl Groups
Variation 1: Reactions with Enol Ethers ......................................... 284
Variation 2: Reactions with Enamines, Imines, and Related Compounds 285
Variation 3: Double Michael Addition of Ethane-1,2-dithiol to
Dinitroalkenes and Related Compounds ........................................ 287
Variation 4: Displacement of Geminal Dichloro Compounds ................ 288
Method 8: Reaction of O,O-Acetals or Hemiacetals with
Ethane-1,2-dithiol ............................................................................ 289
Variation 1: Catalyzed by Protic Acid ............................................. 289
Variation 2: Catalyzed by Lewis Acids ............................................. 290
Variation 3: Catalyzed by Heterogeneous Catalysts ........................... 297
Variation 4: Catalyzed by Halogens and Derivatives .......................... 299
Variation 5: Catalyzed by Phosphoryl Chloride on Montmorillonite ..... 304
Method 9: Reaction of O,S-Acetals with Ethane-1,2-dithiol ................. 305
Method 10: Reaction of S,S-Acetals with Ethane-1,2-dithiol ................. 306
Method 11: Reaction of N,N-Acetals with Ethane-1,2-dithiol ............... 306
Method 12: Reaction of Ethane-1,2-dithiol with Oxazolidine Derivatives 307
Method 13: Reactions of Carbonyl Compounds or Masked Carbonyl
Compounds with Modified Ethane-1,2-dithiols .............................. 308
Variation 1: With Silyl Thioethers ................................................. 308
Variation 2: With Thiostannanes .................................................... 309
Variation 3: With 2-Substituted 1,3,2-Dithiaborolanes ....................... 311
Variation 4: With Bis(diisobutylaluminum) Ethane-1,2-dithiolate .......... 312
Variation 5: Dithioacetalization from a 1,3-Dithiolane to
Another Carbonyl Group .............................................................. 313
Method 14: Nucleophilic Displacements Using S,S’-Ethane-1,2-diyld
Bis(4-toluenesulfonothioate) ......................................................... 316
Variation 1: Reaction with 2-Naphthol .......................................... 316
Variation 2: Reactions with α-Hydroxymethylene Ketones .................. 316
Method 15: Reactions of Carbonyl Compounds with Substituted
Ethane-1,2-dithiols ........................................................................ 317
30.3.3.15.1 Variation 1: Catalyzed by Protic Acids ........................................... 317
30.3.3.15.2 Variation 2: Catalyzed by Lewis Acids ............................................. 318
30.3.3.15.3 Variation 3: Catalyzed by Sulfur Dioxide ........................................... 319
30.3.3.15.16 Method 16: Cycloaddition of Thiranes with Thiocarbonyl Compounds .... 320
30.3.3.15.17 Method 17: Reaction of Dithioacetic Acid with 3-Methylbut-3-en-1-yne .... 320
30.3.3.15.18 Method 18: 1,3-Dipolar Cycloaddition of Ylides with Thiocarbonyl Compounds ............................................................. 321
30.3.3.15.19 Method 19: Metalation ................................................................. 324
30.3.3.15.20 Variation 1: Electrophilic Addition of [1,3-Dithiolan-2-ylidene(ethoxy)- methoxy]trimethylsilane .......................................................... 326
30.3.3.15.21 Variation 2: 2-(Trimethylsilyl)-1,3-dithiolane as a Masked 1,3-Dithiolane Anion .......................................................... 327
30.3.3.15.22 Method 20: Reaction of 2-Ethoxy-1,3-dithiolane with Nucleophiles .... 328
30.3.3.15.23 Method 21: Reaction of 1,3-Dithiolan-2-ylidium Tetrafluoroborate with Nucleophiles .......................................................... 330
30.3.3.15.24 Method 22: Reduction of Ketene S,S-Acetals ...................................... 331
30.3.3.15.25 Method 23: Cycloadditions of Ketene S,S-Acetals ................................ 332
30.3.3.15.26 Method 24: [2 + 2] Cycloaddition .................................................... 332
30.3.3.15.27 Method 25: [4 + 2] Cycloaddition .................................................... 333
30.3.3.15.28 Method 26: [3 + 2] Cycloaddition .................................................... 338
30.3.3.15.29 Method 27: [8 + 2] Cycloaddition .................................................... 340

30.3.4 Product Subclass 4: 1,3-Dithianes
M. Nakata

30.3.4.1 Synthesis of Product Subclass 4 ......................................................... 351
30.3.4.1.1 Method 1: Thioacetalization of Carbonyl Compounds ......................... 351
30.3.4.1.1.1 Variation 1: Using Hydrogen Chloride, Zinc(II) Chloride, or Boron Trifluoride–Diethyl Ether Complex ........................................ 351
30.3.4.1.1.2 Variation 2: Using Lewis Acids Other than Zinc(II) Chloride ............ 352
30.3.4.1.1.3 Variation 3: Using Solid-Supported Catalysts .................................. 353
30.3.4.1.1.4 Variation 4: Using Other Catalysts or Reagents ............................ 354
30.3.4.1.2 Method 2: Thioacetalization of Hemiacetals, O,O-Acetals, O,N-Acetals, and Enol Ethers .................................................. 355
30.3.4.1.3 Method 3: Thioacetalization with Polymer-Supported Propane-1,3-dithiol .......................................................... 357
30.3.4.1.4 Method 4: Conjugate Addition of Propane-1,3-dithiol to Alk-1-ynyl Ketones and Esters .................................................. 357
30.3.4.1.5 Method 5: Synthesis from 1,3-Dithia-2-silacyclohexanes, 1,3-Dithia- 2-stannacyclohexanes, and 1,3,2-Dithiaborinane .................................. 359
30.3.4.1.6 Method 6: Other Syntheses ............................................................. 360
30.3.4.1.7 Method 7: Metalation of 1,3-Dithianes .............................................. 362
30.3.4.1.7.1 Variation 1: Using Butyllithium .................................................... 362
30.3.4.1.7.2 Variation 2: Using Other Metalation Reagents ............................ 363
30.3.4.1.7.3 Variation 3: Transmetalation of 2-Lithio-1,3-dithianes .................... 366

Product Subclass 4: 1,3-Dithianes
M. Nakata
Variation 4: Metalation of 1,3-Dithianes Containing an Electron-Withdrawing Substituent

Variation 5: Synthesis of 2-Stannyl-1,3-dithianes

Variation 6: Metalation of 2-Methylene-1,3-dithianes

Variation 7: Conformational Preference of 2-Metallo-1,3-dithianes

Method 8: Substitution Reactions

Variation 1: Of 2-Lithio-1,3-dithiane Derivatives with Primary Alkyl Halides

Variation 2: Of 2-Lithio-1,3-dithiane Derivatives with Secondary Alkyl Halides

Variation 3: Of 2-Lithio-1,3-dithiane Derivatives with Primary Sulfonates

Variation 4: Of 2-Lithio-1,3-dithiane with Monosubstituted Epoxides

Variation 5: Of 2-Lithio-1,3-dithiane with 1,1- and 1,2-Disubstituted Epoxides

Variation 6: Of 2-Lithio-1,3-dithiane Derivatives with Monosubstituted Epoxides

Variation 7: Of 2-Lithio-1,3-dithiane Derivatives with 1,2-Disubstituted Epoxides

Variation 8: Of 2-Lithio-1,3-dithiane Derivatives with Aziridines

Method 9: Addition Reactions

Variation 1: Of 2-Lithio-1,3-dithianes to Aldehydes

Variation 2: Of 2-Lithio-1,3-dithianes to Ketones

Variation 3: Of 2-Lithio-1,3-dithianes to Carboxylic Acid Derivatives

Variation 4: Of 2-Lithio-1,3-dithiane Derivatives to $\text{C}=\text{N}$ and $\text{C}=\text{C}$ Compounds

Method 10: 1,2- and 1,4-Addition Reactions

Variation 1: Of 2-Lithio-1,3-dithiane Derivatives to $\alpha,\beta$-Unsaturated Carbonyl Compounds

Variation 2: 1,2-Addition Reactions of 2-Lithio-1,3-dithiane Derivatives to $\alpha,\beta$-Unsaturated Carbonyl Compounds

Variation 3: 1,4-Addition Reactions of 2-Lithio-1,3-dithiane Derivatives to $\alpha,\beta$-Unsaturated Carbonyl Compounds

Variation 4: 1,4-Addition Reactions of 2-Lithio-1,3-dithiane Derivatives to Other $\alpha,\beta$-Unsaturated Compounds

Method 11: Double Alkylation of 1,3-Dithiane with Two Electrophiles

Method 12: Multicomponent Coupling of 2-Silyl-1,3-dithianes

Method 13: Reactions of 2-Silyl- and 2-Silylidene-1,3-dithianes

Method 14: Synthesis and Reactions of 2-Phosphoryl-1,3-dithiane Derivatives

Method 15: Reactions of 2-Vinyl- and 2-Vinylidene-1,3-dithiane Derivatives

Methods 18: Other Methods

Applications of Product Subclass 4 in Organic Syntheses

Method 1: Reductive Desulfurizations
30.3.4.2.2 Method 2: Ring-Expansion Reactions .............................................. 422
30.3.4.2.3 Methods 3: Miscellaneous Reactions ........................................... 425

30.3.5 Product Subclass 5: 1,3-Dithiepanes
M. Nakata

30.3.6 Product Subclass 6: Acyclic and Cyclic S,S-Acetal S-Oxides and S,S-Dioxides
K. Ogura
30.3.6.1.9.2 Variation 2: Dialkylation with Alkyl Halides ........................................ 472
30.3.6.1.9.3 Variation 3: Condensations with Carbonyl Compounds ....................... 474
30.3.6.1.9.4 Variation 4: Acylation Reactions .................................................. 475
30.3.6.1.9.5 Variation 5: Addition to Carbonyl Compounds ................................ 476
30.3.6.1.10 Method 10: Oxidation Reactions ..................................................... 479
30.3.6.1.10.1 Variation 1: Oxidation of S,S-Acetals ........................................... 479
30.3.6.1.10.2 Variation 2: Oxidation of S,S-Acetal S-Oxides ............................... 483
30.3.6.1.10.3 Variation 3: Oxidation of Ketene Dithioacetals ................................ 484
30.3.6.2 Applications of Product Subclass 6 in Organic Synthesis ......................... 485

30.3.6.2.1 Method 1: Synthesis of Aldehydes .................................................. 485
30.3.6.2.1.1 Variation 1: Synthesis from S,S-Acetan S-Oxides ........................... 485
30.3.6.2.2 Method 2: Synthesis of Ketones ..................................................... 488
30.3.6.2.2.1 Variation 1: Synthesis from S,S-Acetan S-Oxides ........................... 488
30.3.6.2.2.2 Variation 2: Synthesis from S,S-Acetan S-Dioxides ........................ 489
30.3.6.2.3 Method 3: Synthesis of Carboxylic Acid Derivatives .......................... 492
30.3.6.2.3.1 Variation 1: Synthesis from S,S-Acetan S-Oxides ........................... 492
30.3.6.2.3.2 Variation 2: Synthesis from S,S-Acetan S-Dioxides ........................ 495
30.3.6.2.4 Method 4: Synthesis of α-Amino Acid Derivatives ............................ 496
30.3.6.2.5 Method 5: Synthesis of α-Oxo Esters .............................................. 498

30.3.7 Deprotection of S,S-Acetals

H. Firouzabadi and N. Iranpoor

30.3.7 Deprotection of S,S-Acetals ................................................................. 505
30.3.7.1 Method 1: Generation of Carbonyl Compounds by Oxidation of
S,S-Acetals ........................................................................................................ 505
30.3.7.1.1 Variation 1: Using Molecular Oxygen Catalyzed by Bismuth(III) Nitrate or
Trichloroarsenate(V) ....................................................................................... 506
30.3.7.1.2 Variation 2: Using Periodic Acid ...................................................... 507
30.3.7.1.3 Variation 3: Using 3-Chloroperoxybenzoic Acid/Trifluoroacetic Acid ...... 508
30.3.7.1.4 Variation 4: Using tert-Butyl Hydroperoxide in Aqueous Methanol ...... 509
30.3.7.1.5 Variation 5: Using Nitrogen Oxides ................................................... 510
30.3.7.1.6 Variation 6: Using Dinitrogen Tetroxide Complexes of Iron(III) and
Copper(II) Nitrates ....................................................................................... 511
30.3.7.1.7 Variation 7: Using [Bis(trifluoroacetyl)iodo]benzene .......................... 512
30.3.7.1.8 Variation 8: Using 2-Iodobenzoic Acid ............................................. 513
30.3.7.1.9 Variation 9: Using Selenium Dioxide ............................................... 514
30.3.7.1.10 Variation 10: Using Solventless Microwave-Irradiated Ammonium Persulfate
Supported on Wet Montmorillonite K 10 Clay ............................................ 515
30.3.7.1.11 Variation 11: Using Potassium Peroxymonosulfate (Oxone) on Wet Alumina 517
30.3.7.1.12 Variation 12: Using Lead(IV) Oxide/Boron Trifluoride ....................... 518
30.3.7.1.13 Variation 13: Using Dimethyl Sulfoxide .......................................... 519
30.3.7.1.14 Variation 14: Using Silica Chloride/Dimethyl Sulfoxide ..................... 521
30.3.7.1.15 Variation 15: Using Bromotrimethylsilane or Iodotrimethylsilane in
Dimethyl Sulfoxide ...................................................................................... 522

30.4.2.5 Method 5: Rhodium-Catalyzed Carbonylation ...................................................................... 594
30.5 Product Class 5: Selenium- and Tellurium-Containing Acetals
T. Murai and M. Yoshimatsu

30.5.1 Product Subclass 1: S,Se- and S,Te-Acetals

30.5.1.1 Synthesis of Product Subclass 1

30.5.1.1.1 Method 1: Sulfanylation of α-(Organoselanyl)methylithium Reagents

30.5.1.1.2 Method 2: Selanylation of α-Chloromethyl Sulfides

30.5.1.1.3 Method 3: Reaction of Alkyneselenolates or S-Alkyl Selenothioacetates with Electrophiles

30.5.1.2 Applications of Product Subclass 1 in Organic Synthesis

30.5.2 Product Subclass 2: Se,Se- and Se,Te-Acetals

30.5.2.1 Synthesis of Product Subclass 2

30.5.2.1.1 Method 1: Diselanylation of Dihaloalkanes

30.5.2.1.2 Method 2: Selenoacetalization of Aldehydes and Ketones with Organoselenols

30.5.2.1.2.1 Variation 1: Acid-Mediated Selenoacetalization

30.5.2.1.2.2 Variation 2: Selenoacetalization with Selenium-Containing Reagents

30.5.2.1.3 Method 3: Reaction of Diazocompounds with Diorganodiselenides or Diphenyl Selenatelluride

30.5.2.1.4 Method 4: Addition of Butyllithium to Vinyl Selenides Followed by Selenylation

30.5.2.1.5 Method 5: Alkylation of Bis(organoselanyl)alkylmetals

30.5.2.1.6 Method 6: Reaction of Bis(organoselanyl)methyl Carbenium Ions with Soft Nucleophiles

30.5.2.2 Applications of Product Subclass 2 in Organic Synthesis

30.5.3 Product Subclass 3: Te,Te-Acetals

30.5.3.1 Synthesis of Product Subclass 3

30.5.3.1.1 Method 1: Ditellanylation of Dihaloalkanes

30.5.3.1.2 Method 2: Reaction of Aluminum Tellurolates with Acetals

30.5.3.1.3 Method 3: Reaction of Diazomethane with Diorganoditellurides

30.5.3.1.4 Method 4: Alkylation of Bis(organotellanyl)methylithium

30.5.3.1.5 Method 5: Halogenation of Bis(organotellanyl)methanes

30.5.4 Product Subclass 4: Se,N- and Se,P-Acetals

30.5.4.1 Synthesis of Product Subclass 4

30.5.4.1.1 Method 1: Phosphinomethylation of Benzeneselenenyl Chloride

30.5.4.1.2 Method 2: Aminomethylation of Benzeneselenol

30.5.4.1.3 Method 3: Organoselenylation of O,N-Acetals

30.5.4.1.4 Method 4: Alkyselenylation of N,N-Acetals

30.5.5 Product Subclass 5: Te,N- and Te,P-Acetals

30.5.5.1 Synthesis of Product Subclass 5

30.5.5.1.1 Method 1: Aminomethylation of Sodium Hydrogen Telluride
30.6 **Product Class 6: N,N-Acetals**  
C. Kibayashi and N. Yamazaki

30.6.1 Synthesis of Product Class 6 .............................................. 639
30.6.1.1 Method 1: Reaction of Methyl (Benzoylamino)bromoacetate with Methyl l-Valinate ............................................. 639
30.6.1.2 Method 2: N,N-Acetalization of Aldehydes .......................... 640
30.6.1.3 Method 3: Condensation of l-Asparagine with Pivalaldehyde .... 640
30.6.1.4 Method 4: Reaction of O,N-Acetals with Amines ................. 641
30.6.1.5 Method 5: Cyclization of Imines ...................................... 642
30.6.1.6 Method 6: Treatment of (3R,5S,8aR)-3-Phenylhexahydro-5H-[1,3]-oxazolo[3,2-a]pyridine-5-carbonitrile with Phenyllithium .... 643
30.6.1.7 Method 7: Reaction of 3-Bromo-3-phenyl-3H-diazirine with Secondary Amines ............................................. 643

30.6.2 Applications of Product Class 6 in Organic Synthesis .............. 644
30.6.2.1 Method 1: Aminomethylation of Aryl-Substituted Alkenes .......... 644
30.6.2.2 Method 2: Aminomethylation of Alkynes ............................ 645
30.6.2.3 Method 3: Rhodium-Catalyzed Reaction with Diethyl(methyl)silane and Carbon Monoxide .................................. 645
30.6.2.4 Method 4: Enantioselective Synthesis of α-Substituted β-Amino Acids 646

30.7 **Product Class 7: N,P- and P,P-Acetals**  
M. Yamashita

30.7.1 Product Subclass 1: N,P-Acetals ............................................. 649
30.7.1.1 Synthesis of Product Subclass 1 .............................................. 649
30.7.1.1.1 Method 1: Addition of P—H Compounds to Aldehydes or Ketones in the Presence of Amines, or to Imines .................. 649
30.7.1.1.2 Method 2: Substitution Reaction of α,β-Epoxides with Amines ........ 662
30.7.1.1.3 Method 3: Synthesis from O,P-Acetals .............................. 663
30.7.1.1.4 Method 4: Synthesis from O,N-Acetals .............................. 664
30.7.1.1.5 Method 5: Synthesis from O,P-Acetals .............................. 664
30.7.1.1.6 Method 6: Synthesis from Other N,P-Acetals ..................... 664
30.7.1.1.7 Methods 7: Miscellaneous Methods ................................. 666

30.7.2 Product Subclass 2: P,P-Acetals ............................................. 668
30.7.2.1 Synthesis of Product Subclass 2 .............................................. 669
30.7.2.1.1 Method 1: Addition of P—H Compounds to Acylphosphorus Compounds 669
30.7.2.1.2 Method 2: Substitution Reactions of α-Haloalkylphosphorus and Related Compounds with Phosphorus Anions or Phosphites (Michaelis–Arbuzov Reaction) .......................... 671
30.7.2.1.3 Method 3: Substitution Reaction of α,β-Epoxyalkylphosphorus Compounds with Phosphorus Anions ........................... 672

    31.2.1.2.4 Method 4: Transition-Metal-Catalyzed Decarbonylation ................ 92
  31.2.1.3 Synthesis by Cycloaddition .......................................................... 93
    31.2.1.3.1 Method 1: Cycloadditions Reactions of Tetrachlorothiophene Dioxide 94
    31.2.1.3.2 Method 2: Cobalt-Catalyzed Reactions ....................................... 95
  31.2.1.4 Synthesis by Rearrangement ........................................................ 95
    31.2.1.4.1 Method 1: Rearrangement During Chlorination ............................. 95
  31.2.2 Applications of Product Class 2 in Organic Synthesis .......................... 96
    31.2.2.1 Method 1: Cross-Coupling Reactions ............................................ 96
    31.2.2.1.1 Variation 1: Synthesis of Biaryls .............................................. 97
    31.2.2.1.2 Variation 2: Synthesis of Arylalkenes ....................................... 106
    31.2.2.1.3 Variation 3: Synthesis of Arylalkynes ....................................... 108
    31.2.2.1.4 Variation 4: Synthesis of Arylalkanes ....................................... 109
    31.2.2.1.5 Variation 5: Carbonylation and Cyanation Reactions ..................... 110
    31.2.2.1.6 Variation 6: Metal-Catalyzed Heterosubstitution Reactions ............. 111
    31.2.2.2 Method 2: Nucleophilic Substitution Reactions .............................. 114
    31.2.2.2.1 Variation 1: The S<sub>N</sub>Ar Reaction ...................................... 114
    31.2.2.2.2 Variation 2: The S<sub>RN</sub>1 Reaction ....................................... 115
    31.2.2.2.3 Variation 3: Substitution via Benzyne Intermediates .................... 115
    31.2.2.3 Method 3: Enzymatic Oxidation Reactions ..................................... 117
31.3 **Product Class 3: Bromoarenes**
S. P. Stanforth

31.3.1 Synthesis of Product Class 3 ............................................. 121
31.3.1.1 Synthesis by Substitution ............................................. 121
31.3.1.1.1 Method 1: Electrophilic Bromination .......................... 121
31.3.1.1.1.1 Variation 1: Of Phenols and Anisoles ......................... 122
31.3.1.1.1.2 Variation 2: Of Anilines ...................................... 125
31.3.1.1.1.3 Variation 3: Of Benzene and Alkylbenzenes ............... 126
31.3.1.1.1.4 Variation 4: Of Deactivated Benzenes ....................... 128
31.3.1.1.1.5 Variation 5: Of Polycyclic Aromatics ......................... 129
31.3.1.1.2 Method 2: Synthesis from Organometallics .................... 130
31.3.1.1.2.1 Variation 1: From Aryllithiums ............................... 130
31.3.1.1.2.2 Variation 2: From Arylsilanes ................................ 131
31.3.1.1.2.3 Variation 3: From Arystannanes .............................. 132
31.3.1.1.3 Method 3: The Sandmeyer Reaction ............................. 132
31.3.1.1.4 Method 4: Substitution of a Phenolic Group ................... 134
31.3.1.2 Synthesis by Elimination ............................................. 134
31.3.1.2.1 Method 1: Dehydrohalogeneration ............................. 135
31.3.1.2.2 Method 2: Dehalogenation ...................................... 135
31.3.1.2.3 Method 3: Transition-Metal-Catalyzed Decarbonylation .... 136
31.3.1.2.4 Method 4: The Cristol–Firth–Hunsdiecker Reaction ............ 136
31.3.1.3 Synthesis by Cycloaddition .......................................... 137
31.3.2 Applications of Product Class 3 in Organic Synthesis ............. 139
31.3.2.1 Cross-Coupling Reactions ........................................... 139
31.3.2.1.1 Method 1: Synthesis of Biaryls ................................. 139
31.3.2.1.2 Method 2: Synthesis of Arylalkenes ............................ 144
31.3.2.1.3 Method 3: Synthesis of Arylalkynes ............................ 146
31.3.2.1.4 Method 4: Synthesis of Arylalkanes ............................ 147
31.3.2.1.5 Method 5: Carbonylation and Cyanation Reactions .......... 149
31.3.2.1.6 Method 6: Metal-Catalyzed Heterosubstitution Reactions .... 150
31.3.2.2 Nucleophilic Substitution Reactions .............................. 153
31.3.2.2.1 Method 1: The S_{Ar}Ar Reaction ................................. 153
31.3.2.2.2 Method 2: The S_{En}1 Reaction .................................. 153
31.3.2.2.3 Method 3: Substitution via Benzyne Intermediates ............ 154
31.3.2.3 Generation of Aryl Radicals ......................................... 155
31.3.2.4 Generation of Organometallic Reagents ........................... 156
31.3.2.5 Enzymatic Oxidation Reactions .................................... 156
31.4 Product Class 4: Aryl Iodine Compounds

31.4.1 Product Subclass 1: Hypervalent Iodoarenes and Aryliodonium Salts
V. V. Zhdankin

31.4.1.1 Synthesis of Product Subclass 1

31.4.1.1.1 Method 1: Iodylarenes by Oxidation of Iodoarenes

31.4.1.1.2 Method 2: (Difluoroiodo)arenes by Fluorination of Iodoarenes

31.4.1.1.2.1 Variation 1: Fluorination by Powerful Fluorinating Reagents

31.4.1.1.2.2 Variation 2: Electrochemical Fluorination

31.4.1.1.3 Method 3: (Dichloroiodo)arenes by Chlorination of Iodoarenes

31.4.1.1.4 Method 4: (Diacyloxyiodo)arenes by the Oxidation of Iodoarenes in the Presence of a Carboxylic Acid

31.4.1.1.5 Method 5: Benziodazoles by Oxidation of 2-Iodobenzamides

31.4.1.2 Synthesis by Ligand Exchange of Hypervalent Iodine Compounds

31.4.1.2.1 Method 1: Aryliodine(V) Carboxylates from Iodylarenes

31.4.1.2.2 Method 2: (Dicycloxioxy)arenes from (Diaketoxyiodo)benzene by Ligand Exchange with a Carboxylic Acid

31.4.1.2.3 Method 3: Aryliodine(III) Peroxides by Exchange with tert-Butyl Hydroperoxide

31.4.1.2.4 Method 4: Aryliodine(III) Sulfonates from Arenes

31.4.1.2.4.1 Variation 1: [Hydroxy(organosulfonyloxy)iodo]arenes from (Diacetoxyiodo)arenes

31.4.1.2.4.2 Variation 2: Oxygen-Bridged Derivatives from (Diacetoxyiodo)benzene or Iodosylbenzene

31.4.1.2.4.3 Variation 3: (Organosulfonyloxy)benziodoxoles from 1-Hydroxybenziodoxoles

31.4.1.2.5 Method 5: Iodosylarenes by Hydrolysis of Aryliodine(III) Derivatives

31.4.1.2.5.1 Variation 1: Iodosylarenes by Hydrolysis of (Dicycloxioiodo)arenes

31.4.1.2.5.2 Variation 2: Iodosylarenes by Hydrolysis of (Dichloroiodo)arenes

31.4.1.2.6 Method 6: Aryliodine(III) Amides from (Acyloxyiodo)arenes

31.4.1.2.7 Method 7: Aryliodine(III) Azides from (Acyloxyiodo)arenes

31.4.1.2.8 Method 8: (Difluoroiodo)arenes from Hypervalent Iodoarenes

31.4.1.2.9 Method 9: Alkynyl(aryl)iodonium Salts from Hypervalent Iodoarenes

31.4.1.2.9.1 Variation 1: Alkynyl(aryl)iodonium Tetrafluoroborates

31.4.1.2.9.2 Variation 2: Alkynyl(aryl)iodonium Arenesulfonates

31.4.1.2.9.3 Variation 3: Alkynyl(aryl)iodonium Trifluoromethanesulfonates

31.4.1.2.10 Method 10: Aryl- and Hetaryliodonium Salts from Hypervalent Iodoarenes

31.4.1.2.10.1 Variation 1: Diaryliodonium Tetrafluoroborates

31.4.1.2.10.2 Variation 2: Aryl- and Hetaryliodonium Sulfates and Sulfonates

31.4.1.2.10.3 Variation 3: Aryl- and Hetaryliodonium Halides

31.4.1.2.11 Method 11: Alkenyl(aryl)iodonium Salts from Hypervalent Iodoarenes

31.4.1.2.11.1 Variation 1: Alkenyl(aryl)iodonium Tetrafluoroborates
31.4.1.2.11.2 Variation 2: Alkenyl(aryl)iodonium Organosulfonates .......................... 190
31.4.1.2.12 Method 12: Synthesis of Alkyl(aryl)iodonium Salts .............................. 192
31.4.1.2.12.1 Variation 1: Aryl(polyfluoroalkyl)iodonium Organosulfonates ............. 193
31.4.1.2.12.2 Variation 2: [(Arylsulfonyl)methyl](phenyl)iodonium Trifluoromethanesulfonates .......................... 194
31.4.1.2.13 Method 13: Aryl(cyano)iodonium Derivatives from Hypervalent Iodoarenes ..................................... 195
31.4.1.2.13.1 Variation 1: Aryl(cyano)iodonium Organosulfonates .......................... 195
31.4.1.2.13.2 Variation 2: Cyanobenziodoxoles ...................................................... 195
31.4.1.2.14 Method 14: Aryliodonium Ylides from Hypervalent Iodoarenes ............... 196
31.4.1.2.15 Method 15: Aryliodonium Imides from Hypervalent Iodoarenes ............. 197
31.4.1.2 Applications of Product Subclass 1 in Organic Synthesis ............................. 198
31.4.1.2.1 Preparation of Products with a New C—C Bond .......................................... 199
31.4.1.2.1.1 Method 1: Reactions of Alkynyl(aryl)iodonium Salts .......................... 199
31.4.1.2.1.1.1 Variation 1: Preparation of Substituted Alkynes ............................... 199
31.4.1.2.1.1.2 Variation 2: Synthesis of Substituted Cyclopentenes via Intramolecular Carbene Insertion .......................... 201
31.4.1.2.1.1.3 Variation 3: Synthesis of Nitrogen and Oxygen Heterocycles via Carbene Cyclizations ........................................... 202
31.4.1.2.1.2 Method 2: Reactions of Diaryliodonium Salts ......................................... 204
31.4.1.2.1.2.1 Variation 1: Reactions via a Benzyne Intermediate .......................... 204
31.4.1.2.1.2.2 Variation 2: Arylations ................................................................. 205
31.4.1.2.1.3 Method 3: Reactions of Alkenyl(aryl)iodonium Salts .......................... 206
31.4.1.2.1.3.1 Variation 1: Alkenylations ............................................................ 206
31.4.1.2.1.3.2 Variation 2: Reactions via Alkylidenecarbene Intermediates .............. 208
31.4.1.2.1.4 Method 4: Reactions of Aryl(aryl)iodonium Derivatives ...................... 208
31.4.1.2.1.4.1 Variation 1: Fluoroalkylations with Aryl(polyfluoroalkyl)iodonium Organosulfonates ........................................... 208
31.4.1.2.1.4.2 Variation 2: Reactions of [(Arylsulfonyl)methyl](phenyl)iodonium Trifluoromethanesulfonates with Nucleophiles .......................... 209
31.4.1.2.1.5 Method 5: Reactions of (β-Oxoalkyl)phenyliodonium Salts .................. 210
31.4.1.2.1.5.1 Variation 1: Reactions via Carbene Intermediates ........................... 210
31.4.1.2.1.5.2 Variation 2: Cycloadditions ......................................................... 211
31.4.1.2.2 Preparation of Products with a New C—F Bond .......................................... 211
31.4.1.2.2.1 Method 1: Fluorination with (Difluoroiodo)arenes ............................. 211
31.4.1.2.2.1.1 Variation 1: α-Fluorination of Carbonyl Compounds ....................... 211
31.4.1.2.2.1.2 Variation 2: Fluorination of Alkenes .............................................. 212
31.4.1.2.3 Preparation of Products with a New C—Cl Bond ...................................... 212
31.4.1.2.3.1 Method 1: Chlorination with (Dichloroiodo)arenes ............................ 212
31.4.1.2.4 Preparation of Products with a New C—I Bond ...................................... 213
31.4.1.2.4.1 Method 1: Oxidative Iodination Using Hypervalent Iodoarenes .......... 213
31.4.1.2.5 Oxidations and Oxidative Rearrangements .............................................. 214
31.4.1.2.5.1 Method 1: Oxidations with Iodylarenes and Aryliodine(V) Carboxylates .......................... 214
31.4.1.2.5.1.1 Variation 1: Oxidation of Alcohols to Aldehydes .............................. 214
31.4.1.2.5.1.2 Variation 2: Oxidation at a Benzylic Position .................................. 214
31.4.1.2.5.1.3 Variation 3: Oxidative Cyclizations .................................................. 215
31.4.1.2.5.1.4 Variation 4: Oxidation of Sulfides to Sulfoxides ................................. 215
31.4.1.2.5.2 Method 2: Oxidations with (Acyloxyiodo)arenes .................................. 216
31.4.1.2.5.2.1 Variation 1: Hydroxylation of Enolizable Ketones ............................... 216
31.4.1.2.5.2.2 Variation 2: Oxidation of Phenols and Phenol Ethers .......................... 217
31.4.1.2.5.3 Method 3: Oxidations with Peroxybenziodoxole .................................. 218
31.4.1.2.5.4 Method 4: Oxidations with [Hydroxy(organosulfonyloxy)iodo]benzenes .... 219
31.4.1.2.5.4.1 Variation 1: Tosyloxylation of Enolizable Ketones ............................... 219
31.4.1.2.5.4.2 Variation 2: Oxidative Rearrangements ............................................ 220
31.4.1.2.5.5 Method 5: Oxidations with Iodosylarenes ............................................ 221
31.4.1.2.5.5.1 Variation 1: Oxidation of Alcohols .................................................... 221
31.4.1.2.5.5.2 Variation 2: Oxidative Rearrangements ............................................ 221
31.4.1.2.6 Preparation of Products with a New C—S Bond ...................................... 221
31.4.1.2.6.1 Method 1: Oxidative Thiocyanation Using Hypervalent Iodoarenes ......... 221
31.4.1.2.7 Synthesis of Product Subclass 2 ............................................................. 222
31.4.1.2.7.1 Method 1: Reactions of Aryliodine(III) Amides ..................................... 222
31.4.1.2.7.2 Method 2: Reactions of Aryliodine(III) Azides ....................................... 222
31.4.1.2.7.2.1 Variation 1: Azidations with (Diazidoiodo)benzene In Situ .................... 222
31.4.1.2.7.2.2 Variation 2: Azidations with Azidobenziodoxole .................................. 223
31.4.1.2.7.3 Method 3: Reactions of Aryliodonium Imides ......................................... 223
31.4.1.2.7.3.1 Variation 1: C—H Amidation ............................................................ 224
31.4.1.2.7.3.2 Variation 2: Aziridination of Alkenes .................................................. 224
31.4.1.2.7.4 Method 4: Hypervalent Iodoarenes as Reagents for Hofmann Rearrangements ................................................................. 225

31.4.2 Product Subclass 2: Iodoarenes
S. R. Waldvogel and K. M. Wehming

31.4.2 Product Subclass 2: Iodoarenes ................................................................. 235
31.4.2.1 Synthesis of Product Subclass 2 ............................................................... 235
31.4.2.1.1 Method 1: Electrophilic Iodination .............................................................. 235
31.4.2.1.1.1 Variation 1: Of Phenols ............................................................................ 235
31.4.2.1.1.2 Variation 2: Of Naphthols ...................................................................... 239
31.4.2.1.1.3 Variation 3: Of Alkoxyarenes ................................................................. 240
31.4.2.1.1.4 Variation 4: Of Naphthyl Ethers .............................................................. 242
31.4.2.1.1.5 Variation 5: Of Anilines ........................................................................... 243
31.4.2.1.1.6 Variation 6: Of Benzenes and Their Alkyl Derivatives ......................... 245
31.4.2.1.1.7 Variation 7: Of Halobenzenes ................................................................. 248
31.4.2.1.1.8 Variation 8: Of Electron-Deficient Arenes ............................................. 250
31.4.2.1.2 Method 2: Iodination by Electrophilic Metalation .................................... 252
31.4.2.1.2.1 Variation 1: Iododethallation ................................................................. 253
31.4.2.1.2.2 Variation 2: Iododemercuration .............................................................. 254
31.4.2.1.2.3 Variation 3: Iododepalladation
31.4.2.1.3 Method 3: Iodination by ortho-Lithiation
31.4.2.1.3.1 Variation 1: With ortho-Directing Halogen Substituents
31.4.2.1.3.2 Variation 2: With ortho-Directing Alkoxy Substituents
31.4.2.1.3.3 Variation 3: With Strong Directing Groups for ortho-Metalation
31.4.2.1.4 Method 4: Sandmeyer-Type Reactions
31.4.2.1.4.1 Variation 1: Direct Conversion of Amino Groups or Diazonium Salts
31.4.2.1.4.2 Variation 2: Substitution of Triazenes
31.4.2.1.4.3 Variation 3: Reactions of 2,5-Dimethyl-1H-pyrrole-Substituted Aryls
31.4.2.1.5 Method 5: Replacement of Bromine
31.4.2.1.6 Method 6: Iododesilylation
31.4.2.1.7 Method 7: Iododestannylation

31.5 Product Class 5: Phenols and Phenolates

31.5.1 Product Subclass 1: Monohydric Phenols and Corresponding Phenolates
C. González-Bello and L. Castedo

31.5.1.1 Synthesis by Substitution
C. González-Bello and L. Castedo

31.5.1.1 Synthesis by Substitution
31.5.1.1.1 Method 1: Substitution of Hydrogen via Metal-Catalyzed Oxidation
31.5.1.1.1.1 Variation 1: Using Oxygen/Air
31.5.1.1.1.2 Variation 2: Using Nitrous Oxide
31.5.1.1.1.3 Variation 3: Using Hydrogen Peroxide
31.5.1.1.2 Method 2: Substitution of Hydrogen via Reductive Oxidation
31.5.1.1.3 Method 3: Substitution of Hydrogen via Electrochemical Hydroxylation
31.5.1.1.4 Method 4: Substitution of Hydrogen via Electrophilic Hydroxylation
31.5.1.1.4.1 Variation 1: Using Hydrogen Peroxide and Superacids
31.5.1.1.4.2 Variation 2: Using Peroxy Acids
31.5.1.1.5 Method 5: Substitution of Hydrogen via Nucleophilic Hydroxylation of Nitroarenes Using Alkyl Peroxides
31.5.1.1.6 Method 6: Substitution of Hydrogen via Biomimetic Processes
31.5.1.1.7 Method 7: Substitution of Organometallic Groups via Direct Oxidation
31.5.1.1.7.1 Variation 1: Using Oxygen
31.5.1.1.7.2 Variation 2: Using Hydroperoxides
31.5.1.1.7.3 Variation 3: Using Molybdenum Peroxides
31.5.1.1.7.4 Variation 4: Using 2-Sulfonyloxaziridines
31.5.1.1.8 Method 8: Substitution of Organometallic Groups via Indirect Oxidation
31.5.1.1.8.1 Variation 1: Oxidation of Boronic Esters
31.5.1.1.8.2 Variation 2: Using Bis(trimethylsilyl) Peroxide
31.5.1.9 Method 9: Substitution of Aryl Aldehydes ........................................ 290
31.5.1.10 Method 10: Substitution of Alkyl Aryl Ketones ............................ 293
31.5.1.11 Method 11: Substitution of Sulfonic Acids via Alkaline Fusion ......... 293
31.5.1.12 Method 12: Hydrolysis of Diazonium Salts .................................. 293
31.5.1.12.1 Variation 1: Thermal Hydrolysis .............................................. 294
31.5.1.12.2 Variation 2: Copper–Redox Hydrolysis .................................... 294
31.5.1.13 Method 13: Substitution of Sulfonic Acids via Alkaline Fusion ....... 295
31.5.1.14 Method 14: Substitution of Halides via Alkaline Fusion ................. 296
31.5.1.15 Method 15: Substitution of Halides via Metal-Catalyzed Carbon–Oxygen Coupling Reactions .................................................. 297
31.5.1.16 Method 16: Nucleophilic Hydroxylation of Fluoroarenes ............... 299
31.5.1.16.1 Variation 1: Reaction of Fluoronitroarenes with Alkyl Hydroperoxides .......... 299
31.5.1.16.2 Variation 2: Reaction of Fluoroarenes with Alkoxides ............... 299
31.5.1.17 Method 17: Reaction of Substituted 1,2-Dichloroarenes with Nitrites .. 301

31.5.1.2 Synthesis by Elimination
C. González-Bello and L. Castedo

31.5.1.2 Synthesis by Elimination ............................................................... 305
31.5.1.2.1 Method 1: Elimination of Esters by Hydrolysis ...................... 305
31.5.1.2.1.1 Variation 1: By Acid Alcoholysis/Hydrolysis ................. 305
31.5.1.2.1.2 Variation 2: By Basic Alcoholysis/Hydrolysis ............... 306
31.5.1.2.2 Method 2: Elimination of Esters by Addition of Metallic Hydrides .. 307
31.5.1.2.3 Method 3: Elimination of Alkyl Ethers .................................... 307
31.5.1.2.3.1 Variation 1: Reaction with Brønsted Acids .................... 308
31.5.1.2.3.2 Variation 2: Reaction with Lewis Acids .......................... 308
31.5.1.2.3.3 Variation 3: Reaction with Nucleophiles ....................... 309
31.5.1.2.4 Method 4: Elimination from Benzyl Ethers .......................... 310
31.5.1.2.4.1 Variation 1: Hydrogenolysis of Benzyl Ethers .......... 310
31.5.1.2.4.2 Variation 2: Radical Cleavage of Aryl 4-Methoxybenzyl Ethers .... 310
31.5.1.2.4.3 Variation 3: Photocleavage of Nitrobenzyl Ethers ............. 311
31.5.1.2.5 Method 5: Elimination of Sulfonates ................................. 312
31.5.1.2.5.1 Variation 1: By Basic Hydrolysis .................................. 312
31.5.1.2.5.2 Variation 2: By Reaction with Nucleophiles .................. 313
31.5.1.2.6 Method 6: Aromatization of Cyclohexanones and Cyclohexenones .... 314

31.5.1.3 Synthesis by Rearrangement
C. González-Bello and L. Castedo

31.5.1.3 Synthesis by Rearrangement ......................................................... 319
31.5.1.3.1 Method 1: Rearrangement of Alkyl Aryl Ethers .................... 319
31.5.1.3.2 Method 2: Rearrangement of Alkyl and Benzyl Aryl Ethers ...... 322
31.5.1.3.3 Method 3: Rearrangement of Diaryl Ethers ........................ 323
31.5.1.3.4 Method 4: Rearrangement of Dienones .............................. 324
31.5.1.3.5 Method 5: Rearrangement of Phenolic Esters ........................ 326
31.5.4 Synthesis with Retention of the Functional Group
C. González-Bello and L. Castedo

31.5.4 Synthesis with Retention of the Functional Group 331
31.5.4.1 Method 1: Electrophilic Substitution of Phenols 331
31.5.4.2 Method 2: Synthesis of Phenolates 334
31.5.4.2.1 Variation 1: Reaction of Phenols with Alkali Metal Hydrides 334
31.5.4.2.2 Variation 2: Reaction of Phenols with Metal Complexes 334

31.5.5 Synthesis from Nonaromatic Precursors
A. W. Thomas

31.5.5 Synthesis from Nonaromatic Precursors 337
31.5.5.1 Method 1: Benzannulation Reactions 337
31.5.5.1.1 Variation 1: Of Vinylketenes Derived from Cyclobutenones 337
31.5.5.1.2 Variation 2: Of Vinylketenes Derived from Diazo Ketones 339
31.5.5.1.3 Variation 3: Of Vinylketenes Derived from Benzo-1,4-quinones 340
31.5.5.1.4 Variation 4: Of Vinlycyclopropanes and Vinlycyclopropenes 341
31.5.5.1.5 Variation 5: Of Chromium Carbenes 343
31.5.5.1.6 Variation 6: Of Chromium Carbynes 343
31.5.5.2 Method 2: Cycloaromatization Reactions 344
31.5.5.2.1 Variation 1: Diels–Alder Reactions 344
31.5.5.2.2 Variation 2: Of Siloxy Dienes 356
31.5.5.3 Method 3: Cyclocondensation Reactions 364
31.5.5.3.1 Variation 1: Classical Cyclocondensation Reactions 364
31.5.5.3.2 Variation 2: Other Cyclization Reactions 374
31.5.5.4 Method 4: Free-Radical Methods 378
31.5.5.5 Method 5: Synthesis from Heterocyclic Precursors 379
31.5.5.6 Method 6: Synthesis from Cyclohexenones 379
31.5.5.7 Method 7: Synthesis from Cyclohexadienones 383
31.5.5.8 Method 8: Synthesis from Cyclohexene Oxides 387
31.5.5.9 Method 9: Synthesis from Cyclohexanones 389
31.5.5.10 Method 10: Synthesis from Benzo-1,2-quinones or Benzo-1,4-quinones 389
31.5.5.11 Method 11: Synthesis from Polyenes and Related Compounds 393

31.5.2 Product Subclass 2: Polyhydric Phenols and Corresponding Phenolates
M. A. Marsini and T. R. R. Pettus

31.5.2 Product Subclass 2: Polyhydric Phenols and Corresponding Phenolates 403

31.5.2.1 Synthesis by Substitution
M. A. Marsini and T. R. R. Pettus

31.5.2.1 Synthesis by Substitution 405
31.5.2.1.1 Method 1: Oxidation of Phenols with 1-Hydroxy-1,2-benziodoxol-3(1H)-one 1-Oxide 405
### 31.5.2 Method 2: Palladium-Catalyzed Substitution of Halides by Hydroxide

408

### 31.5.3 Method 3: Copper(I)-Mediated Phenol Oxidation

409

### 31.5.4 Method 4: Biooxidation of Arenes

409

### 31.5.5 Method 5: Dakin Oxidation

410

#### 31.5.5.1 Variation 1: Under Basic Conditions

411

#### 31.5.5.2 Variation 2: Using Urea/Hydrogen Peroxide

411

#### 31.5.5.3 Variation 3: Using Catalytic Selenium Dioxide

411

### 31.5.6 Method 6: Elb’s Persulfate Oxidation

412

### 31.5.7 Method 7: Oxidation–Reduction with Frémy’s Salt and Sodium Dithionite

412

### 31.5.2 Synthesis by Elimination

M. A. Marsini and T. R. R. Pettus

#### 31.5.2.1 Method 1: Condensation–Aromatization of Cyclohexane-1,4-diones

415

#### 31.5.2.2 Method 2: Aromatization of myo-2-Inosose

416

#### 31.5.2.3 Method 3: Aromatization of 3-Hydroxycyclohex-2-enone Derivatives

416

#### 31.5.2.4 Method 4: Oxidation of Cyclohexane-1,3-dione

417

#### 31.5.2.5 Method 5: Reductive Aromatization of an Epoxy Enone

418

### 31.5.3 Synthesis by Addition

M. A. Marsini and T. R. R. Pettus

#### 31.5.3.1 Method 1: Reduction of Quinones

421

##### 31.5.3.1.1 Variation 1: Reduction with Sodium Dithionite

421

##### 31.5.3.1.2 Variation 2: Reduction with Sodium Borohydride

421

##### 31.5.3.1.3 Variation 3: Reduction by Catalytic Hydrogenation

422

##### 31.5.3.1.4 Variation 4: Reduction with Raney Nickel

422

##### 31.5.3.1.5 Variation 5: Reduction with Tin(II) Chloride

423

##### 31.5.3.1.6 Variation 6: Reduction with Chromium(II) Chloride

423

##### 31.5.3.2 Method 2: Reductive Alkylation of Quinones

424

##### 31.5.3.2.1 Variation 1: 1,4-Addition of Trialkylboranes

424

##### 31.5.3.2.2 Variation 2: 1,4-Addition of Organonickel Reagents

424

##### 31.5.3.2.3 Variation 3: 1,4-Addition of Heterocyclic Amines

424

##### 31.5.3.2.4 Variation 4: Addition of Trimethylsilyl Cyanide

425

##### 31.5.3.2.5 Variation 5: Sulfenylation in Ionic Liquids

426

##### 31.5.3.2.6 Variation 6: Addition to an o-Quinomethane

426

##### 31.5.3.2.7 Variation 7: Arene Addition to 2-Formylbenzo-1,4-quinone

427

##### 31.5.3.3 Method 3: Photoacylation of Quinones

428

##### 31.5.3.4 Method 4: Benzopyran Reduction

428
31.5.2.4 Synthesis by Rearrangement
M. A. Marsini and T. R. R. Pettus

31.5.2.4 Synthesis by Rearrangement ........................................... 431
31.5.2.4.1 Method 1: Claisen Rearrangement .................................. 431
31.5.2.4.1.1 Variation 1: Under Thermal Conditions ......................... 431
31.5.2.4.1.2 Variation 2: Under Lewis Acidic Conditions ................. 432
31.5.2.4.1.3 Variation 3: Under Basic Conditions .......................... 432
31.5.2.4.1.4 Variation 4: Using a Chiral Reagent ........................... 433
31.5.2.4.2 Method 2: Fries Rearrangement ................................. 433
31.5.2.4.2.1 Variation 1: Using Zinc/Microwave Radiation ................ 433
31.5.2.4.2.2 Variation 2: Using a Lewis Acid ............................... 434
31.5.2.4.2.3 Variation 3: Photo-Fries Rearrangement .................... 435
31.5.2.4.3 Method 3: 1,2-Addition with Dienone–Phenol Rearrangement 435
31.5.2.4.3.1 Variation 1: Using Boron Trifluoride–Diethyl Ether Complex/Allylstannanes 436
31.5.2.4.3.2 Variation 2: Using Bismuth(III) Trifluoromethanesulfonate/Allylsilanes 437
31.5.2.4.3.3 Variation 3: By Addition of an Allylindium Reagent .......... 437
31.5.2.4.3.4 Variation 4: Using Tetrabutylammonium Fluoride/Trifluoro(3-methyl-but-2-ethyl)silane .......... 438
31.5.2.4.4 Method 4: Base-Induced Benzoyl Migration .................... 438

31.5.2.5 Synthesis with Retention of the Functional Group
M. A. Marsini and T. R. R. Pettus

31.5.2.5 Synthesis with Retention of the Functional Group .................................. 441
31.5.2.5.1 Method 1: Friedel–Crafts Formylation .............................. 441
31.5.2.5.1.1 Variation 1: Under Gattermann Conditions .................... 441
31.5.2.5.1.2 Variation 2: Under Vilsmeier–Haack Conditions .......... 442
31.5.2.5.1.3 Variation 3: Under Duff Formylation Conditions ............ 443
31.5.2.5.2 Method 2: Friedel–Crafts Acylation ............................... 443
31.5.2.5.2.1 Variation 1: By Houben–Hoesch Condensation ................ 444
31.5.2.5.2.2 Variation 2: Using Boron Trifluoride–Diethyl Ether Complex with Carboxylic Acid or Acid Anhydride .............. 444
31.5.2.5.2.3 Variation 3: Using Aluminum Trichloride with an Acid Anhydride or Acid Chloride .......................... 446
31.5.2.5.2.4 Variation 4: Using Aluminum Trichloride/(Trichloromethyl)benzene ...... 447
31.5.2.5.2.5 Variation 5: Using Zinc Dust with Microwave Irradiation ................ 448
31.5.2.5.2.6 Variation 6: Using N-Alkyltrinitrile Salts ...................... 448
31.5.2.5.2.7 Variation 7: Using Protic Acid .................................... 449
31.5.2.5.2.8 Variation 8: Using Zinc(II) Chloride/Phosphoryl Chloride ........ 449
31.5.2.5.3 Method 3: Friedel–Crafts Alkylation ............................... 450
31.5.2.5.3.1 Variation 1: By Protic Acid Catalyzed Condensation .......... 450
31.5.2.5.3.2 Variation 2: By Alkylation Catalyzed by Bis(trifluoromethylsulfonyl)amine .... 451
31.5.2.5.3.3 Variation 3: Using Solid-Supported Reagents ................ 452
31.5.2.5.3.4 Variation 4: Using Titanium(IV) Chloride with Imines .......... 453
31.5.2.5.3.5 Variation 5: By Mannich Reaction ............................. 453
31.5.2.5.3.6 Method 4: Alkylation of Phenolates ............................ 454
31.5.2.5.4.1 Variation 1: By Aldol Reaction with Aldehydes ................................................. 454
31.5.2.5.4.2 Variation 2: By Michael Reaction with Enones .................................................. 456
31.5.2.5.4.3 Variation 3: By Prenylation ................................................................................ 457
31.5.2.5.4.4 Variation 4: By Addition of an Iron–Dienyl Complex ........................................ 457
31.5.2.5.4.5 Variation 5: By Addition of an Aryllithium Followed by Deprotection .............. 458
31.5.2.5.4.6 Variation 6: By Carboxylation ............................................................................. 458
31.5.2.5.4.7 Variation 7: By Buffer-Mediated Addition ......................................................... 459
31.5.2.5.4.8 Variation 8: By Glycosylation under Basic Conditions ........................................ 460
31.5.2.5.4.9 Variation 9: By Glycosylation under Lewis Acidic Conditions ......................... 460
31.5.2.5.5 Method 5: Enzymatic Alkylation .......................................................................... 461
31.5.2.5.6 Method 6: Transition-Metal-Promoted Aryl Coupling .......................................... 462
31.5.2.5.6.1 Variation 1: Under Heck Conditions .................................................................... 462
31.5.2.5.6.2 Variation 2: Palladium-Catalyzed Allylation ...................................................... 463
31.5.2.5.6.3 Variation 3: Under Stille Coupling Conditions ................................................... 463
31.5.2.5.6.4 Variation 4: Rhodium(I)-Catalyzed Alkenylation ............................................... 464
31.5.2.5.6.5 Variation 5: Copper-Mediated Biaryl Formation ............................................... 464
31.5.2.5.6.6 Variation 6: Ruthenium(III)-Mediated Benzylolation ......................................... 465
31.5.2.5.7 Method 7: Decarboxylation .................................................................................. 465

31.6 Product Class 6: Aryl Ethers

31.6.1 Product Subclass 1: Diaryl Ethers

A. W. Thomas

31.6.1.1 Synthesis of Product Subclass 1 ............................................................................. 469
31.6.1.1.1 Method 1: Reaction of Phenols with Arylbismuth Compounds ....................... 469
31.6.1.1.2 Method 2: Reaction of Phenols with Arylboron Compounds ......................... 471
31.6.1.1.3 Method 3: Reaction of Phenols with Thallium(III) Nitrate and Some Related Oxidative Coupling Reactions ................................................................. 480
31.6.1.1.4 Method 4: Reaction of Phenols with Aryl Halides ........................................... 486
31.6.1.1.4.1 Variation 1: With Aryl Fluorides ....................................................................... 486
31.6.1.1.4.2 Variation 2: With Aryl Chlorides ....................................................................... 496
31.6.1.1.4.3 Variation 3: With Aryl Bromides ....................................................................... 499
31.6.1.1.4.4 Variation 4: With Aryl Iodides .......................................................................... 505
31.6.1.1.4.5 Variation 5: With Hypervalent Aryliodine Compounds .................................... 509
31.6.1.1.5 Method 5: Reaction of Phenols with Aryl Sulfides ............................................. 512
31.6.1.1.6 Method 6: Reactions of Sulfonyl- or Silicon-Activated Phenols ..................... 512
31.6.1.1.7 Method 7: Synthesis Using Metal–Arene Complexes ........................................ 517
31.6.1.1.8 Method 8: Pummerer-Type Rearrangements ..................................................... 522
31.6.1.1.9 Method 9: Benzannulation Methods ................................................................. 523
31.6.1.1.9.1 Variation 1: Chromium Carbene Induced Benzannulation ............................ 523
31.6.1.1.9.2 Variation 2: Robinson Annulation .................................................................... 525
31.6.1.1.9.3 Variation 3: Other Benzannulation Methods ..................................................... 525
31.6.1.1.10 Method 10: Diels–Alder and Related Cycloaddition Reactions ......................... 526
31.6.1.11 Method 11: Reactions of Benzo-1,2-quinones with Aryl Grignard and Other Reagents ........................................... 529
31.6.1.12 Method 12: Synthesis from Benzo-1,4-quinones ........................ 531
31.6.1.13 Method 13: Synthesis from Cyclohexenones and Their Derivatives  .... 534

31.6.2 Product Subclass 2: Alkyl Aryl Ethers
C. M. R. Low

31.6.2.1 Synthesis by Substitution
C. M. R. Low

31.6.2.1 Synthesis by Substitution ........................................... 547
31.6.2.1.1 Method 1: Synthesis by Substitution of Hydrogen ........................ 547
31.6.2.1.1.1 Variation 1: Oxidation of Arenes ........................................... 547
31.6.2.1.1.2 Variation 2: Methylation of Phenols ........................................... 550
31.6.2.1.1.3 Variation 3: Alkylation of Phenols ........................................... 559
31.6.2.1.1.4 Variation 4: Addition of Phenols to Alkenes ........................................... 576
31.6.2.1.1.5 Variation 5: Arylation of Alcohols ........................................... 578
31.6.2.1.2 Method 2: Synthesis by Substitution of Organometallic Groups .... 579
31.6.2.1.2.1 Variation 1: Copper-Catalyzed Cross Coupling ....................... 579
31.6.2.1.2.2 Variation 2: The Ullmann Ether Synthesis ............................... 581
31.6.2.1.2.3 Variation 3: The Hartwig–Buchwald Reaction ....................... 588
31.6.2.1.2.4 Variation 4: π-Allylpalladium Reactions (Trost Reaction) ....... 594
31.6.2.1.2.5 Variation 5: Reactions with Other Metals ............................... 603
31.6.2.1.3 Method 3: Synthesis by Substitution of Heteroatoms ............... 609
31.6.2.1.3.1 Variation 1: Nucleophilic Aromatic Substitution of Fluorine ...... 609
31.6.2.1.3.2 Variation 2: Nucleophilic Aromatic Substitution of Chlorine ...... 617
31.6.2.1.3.3 Variation 3: Nucleophilic Aromatic Substitution of a Nitro Group 619
31.6.2.1.3.4 Variation 4: Cleavage of a Siloxy Group (Si–O Bond Cleavage) 620
31.6.2.1.3.5 Variation 5: Nucleophilic Aromatic Substitution of a Trifluoroacetoxy Group ........................................... 621

31.6.2.2 Synthesis by Elimination
C. M. R. Low

31.6.2.2 Synthesis by Elimination ........................................... 627
31.6.2.2.1 Method 1: Synthesis of Anisole from Cyclohexanone ............... 627
31.6.2.2.2 Method 2: Synthesis of (Aryloxy)alkynes from Trihaloethenes and Phenols and of Halogenated (Aryloxy)alkenals and Derivatives 627
31.6.2.2.3 Method 3: 1-(Aryloxy)perfluoroalk-1-ynes from Phosphoranes .... 630

### 31.6.5.5.1
Variation 1: Synthesis of Resorcinol Derivatives by Diels–Alder Reactions

### 31.6.5.5.2
Variation 2: Other Cycloaromatizations

### 31.6.5.5.3
Variation 3: From Vinylketenes Derived from Cyclobuteneones

### 31.6.5.5.4
Variation 4: From Vinylketenes Derived from Tricarbonyliron Complexes

### 31.6.5.5.5
Variation 5: From Vinylketenes Derived from $\alpha',\beta$-Unsaturated $\alpha'$-Diazo-$\alpha'$-silyl Ketones

### 31.6.5.5.6
Variation 6: Synthesis from Vinylcyclobuteneones

### 31.6.5.6
Method 6: Synthesis from Chromium–Carbene Complexes

### 31.6.5.6.1
Variation 1: Dötz Benzannulation of $\alpha,\beta$-Unsaturated Fischer Carbene Complexes with Alkynes

### 31.6.5.6.2
Variation 2: Dötz Benzannulation of $\alpha,\beta$-Unsaturated Fischer Carbene Complexes with Ketene Acetals

### 31.6.5.6.3
Variation 3: Dötz Benzannulation of Chromium–Arylcarbene Complexes with Alkynes

### 31.6.5.6.4
Variation 4: Cycloaddition/Benzannulation Reactions of Chromium–Alkynylcarbene Complexes with Dienes

### 31.6.5.6.5
Variation 5: [5 + 5] Cycloadditions of Chromium–(Alkynylaryl)carbene Complexes with Enyne Aldehydes

### 31.6.5.6.6
Variation 6: Intramolecular Dötz Reactions

### 31.7
Product Class 7: Aryl Hypohalites, Aryl Peroxides, and Aryloxy Sulfur Compounds

J. Chen and C. K.-F. Chiu

#### 31.7.1
Product Subclass 1: Aryl Hypohalites

#### 31.7.1.1
Synthesis of Product Subclass 1

#### 31.7.1.1.1
Method 1: Synthesis by Formation of the Ar$^1$O–Hal Bond

#### 31.7.2
Product Subclass 2: Aryl Peroxides

#### 31.7.2.1
Synthesis of Product Subclass 2

#### 31.7.2.1.1
Method 1: Synthesis by Formation of the Ar$^1$–OOR$^1$ Bond

#### 31.7.2.1.2
Variation 2: Photo-Oxygenation

#### 31.7.2.1.3
Variation 3: Oxidation with 3-Chloroperoxybenzoic Acid

#### 31.7.2.1.4
Variation 4: $S_n$2 Displacement of Activated Aryl Halides by Hydroperoxides

#### 31.7.2.1.2
Method 2: Synthesis by Formation of the Ar$^1$O–OR$^1$ Bond

#### 31.7.3
Product Subclass 3: (Aryloxy)sulfur Polyhalides

#### 31.7.3.1
Synthesis of Product Subclass 3

#### 31.7.3.1.1
Method 1: Synthesis by Formation of the Ar$^1$–OSHal$^1$ Bond

#### 31.7.3.1.2
Method 2: Synthesis by Formation of the Ar$^1$O–SHal$^1$ Bond

#### 31.7.4
Product Subclass 4: Aryl Halosulfonates

#### 31.7.4.1
Synthesis of Product Subclass 4
31.7.4.1 Method 1: Synthesis by Formation of the Ar—OSO₂Hal Bond 673
            Variation 1: Via Arenediazonium Salts 673
            Variation 2: Via Oxidation of Arenes 673

31.7.4.2 Method 2: Synthesis by Formation of the Ar'O—SO₂Hal Bond 674

31.7.5 Product Subclass 5: Aryl Sulfates 679

31.7.5.1 Synthesis of Product Subclass 5 679
            Method 1: Synthesis by Formation of the Ar—OSO₂OR Bond 679
            Method 2: Synthesis by Formation of the Ar'O—SO₂OR Bond 680
            Variation 1: Via an Amine–Sulfur Trioxide Complex 680
            Variation 2: Via Alkyl Chlorosulfonates 681
            Variation 3: Via Sulfuryl Chloride 684
            Method 3: Synthesis by Formation of the ArO—SO₂OR Bond 685

31.7.5.2 Applications of Product Subclass 5 in Organic Synthesis 685
            Method 1: Synthesis of Sulfamates Using Catechol Sulfate 686
            Method 2: Synthesis of 5'-Aminoadenosines Using Bis(1H-benzotriazol-1-yl) Sulfate 686

31.7.6 Product Subclass 6: Aryl Thiosulfates 687

31.7.7 Product Subclass 7: Aryl Sulfamates 687

31.7.7.1 Synthesis of Product Subclass 7 688
            Method 1: Synthesis by Formation of the Ar—OS(O)NR Bond 688
            Variation 1: O-4-Nitrophenyl Sulfamates from 4-Nitrophenyl Chlorosulfonate 688
            Variation 2: O-2-Hydroxyphenyl Sulfamates from Catechol Sulfate 689
            Variation 3: O-Aryl Sulfamates from O-Aryl Chlorosulfonates: Lewis Acid Catalyzed Amination 689
            Method 2: Synthesis by Formation of the Ar'O—S(O)₂NR Bond 690
            Variation 1: O-Aryl Sulfamates via Reaction of Phenols with Sulfamoyl Chloride 690
            Variation 2: O-Aryl Sulfamates via Reaction of Phenols with Chlorosulfonyl Isocyanate Followed by Hydrolysis 691
            Variation 3: O-Aryl Sulfamates via Aryloxysulfonyl Azides 691

31.7.7.2 Applications of Product Subclass 7 in Organic Synthesis 691
            Method 1: Synthesis of Hydroxyaryl Sulfonamides via Fries-Type Rearrangement of N,N-Dialkylsulfamates 692
            Method 2: Synthesis of Sulfamates and Sulfamides via Nucleophilic Displacement of O-Aryl Sulfamates 692
            Method 3: O-Aryl Sulfamates as Precursors of Nitrenes for C—H Bond Insertion: Elaboration of Complex O-Aryl Sulfamates 693
31.7.8 Product Subclass 8: (Aryloxy)trifluorooxo-$\Delta^6$-Sulfanes ........................................ 694
31.7.8.1 Synthesis of Product Subclass 8 .......................................................... 694
31.7.8.1.1 Method 1: Formation of the $\text{Ar}^1\text{O}--\text{S(O)}\text{Hal}_3$ Bond ............... 694
31.7.9 Product Subclass 9: Aryl Halosulfites ......................................................... 695
31.7.9.1 Synthesis of Product Subclass 9 ............................................................ 695
31.7.9.1.1 Method 1: Synthesis by Formation of the $\text{Ar}^1\text{O}--\text{S(O)}\text{Hal}$ Bond .......... 695
31.7.9.1.2 Method 2: Synthesis by Formation of the $\text{Ar}^1\text{OS(O)}--\text{Hal}$ Bond .......... 695
31.7.9.1.3 Method 3: Synthesis by Formation of the $\text{Ar}^1\text{OS(=O)}\text{Hal}$ Bond .......... 696
31.7.9.2 Applications of Product Subclass 9 in Organic Synthesis ......................... 696
31.7.9.2.1 Method 1: Activation of Dimethyl Sulfoxide by Phenyl Chlorosulfite 
Leading to Selective ortho-(Methylsulfanyl)methylation of the Parent Phenol .......... 696
31.7.10 Product Subclass 10: Aryl Sulfites ............................................................ 697
31.7.10.1 Synthesis of Product Subclass 10 ......................................................... 698
31.7.10.1.1 Method 1: Symmetrical Diaryl Sulfites by Formation of 
($\text{Ar}^1\text{O})_2--\text{S(O)}$ Bonds ............................................................. 698
31.7.10.2 Applications of Product Subclass 10 in Organic Synthesis ....................... 699
31.7.10.2.1 Method 1: Use of Di(2-pyridyl) Sulfite in Dehydration Reactions .......... 699
31.7.10.2.2 Method 2: Use of Di(2-pyridyl) Sulfite in Condensation Reactions .......... 699
31.7.11 Product Subclass 11: O-Aryl Thiosulfites .................................................. 700
31.7.11.1 Synthesis of Product Subclass 11 ......................................................... 700
31.7.11.1.1 Method 1: Synthesis by Formation of the $\text{Ar}^1\text{OS(O)}--\text{SR}^1$ Bond .......... 700
31.7.11.1.1.1 Variation 1: Reaction of Aryl Halosulfites with Alkanethiols ............... 700
31.7.11.1.1.2 Variation 2: Reaction of an Aryl Halosulfite with a Thiocarboxylic Acid . 701
31.7.12 Product Subclass 12: Aryl Amidosulfites .................................................. 701
31.7.12.1 Synthesis of Product Subclass 12 ......................................................... 701
31.7.12.1.1 Method 1: Synthesis by Formation of the $\text{Ar}^1\text{OS(O)}--\text{NR}^1\text{Hal}$ Bond .... 701

31.8 Product Class 8: Cyclic Aryl Ethers
D. Craig

31.8 Product Class 8: Cyclic Aryl Ethers ............................................................ 705
31.8.1 Product Subclass 1: Cyclic Aryl Ethers with One $sp^2$-Carbon–Oxygen Bond 
and One $sp^3$-Carbon–Oxygen Bond ................................................................. 706
31.8.1.1 Synthesis of Product Subclass 1 ............................................................ 706
31.8.1.1.1 Method 1: Synthesis by Noncatalytic Ring Closure via Formation of 
an $sp^2$-Carbon–Oxygen Bond ........................................................................ 706
31.8.1.1.1.1 Variation 1: Intramolecular Addition of Alcohols to Benzyne Intermediates 706
31.8.1.1.1.2 Variation 2: Intramolecular Nucleophilic Aromatic Substitution Reactions 707
31.8.1.1.2 Method 2: Synthesis by Catalytic Ring Closure via Formation of 
an $sp^2$-Carbon–Oxygen Bond ........................................................................ 709
31.8.1.2.1 Variation 1: Palladium-Catalyzed Reactions ..................................... 709
31.8.1.2.2 Variation 2: Copper-Catalyzed Reactions ..................................... 711
31.8.1.3 Method 3: Synthesis by Ring Closure via Formation of an sp^3-Carbon—Oxygen Bond ................................................................. 712
31.8.1.3.1 Variation 1: Intramolecular Nucleophilic Substitution .................. 712
31.8.1.4 Method 4: Synthesis by Ring Closure via Formation of an Aryl Carbon—Non-Aryl Carbon Bond ...................................................... 718
31.8.1.4.1 Variation 1: Metal-Catalyzed Cyclization .................................... 718
31.8.1.4.2 Variation 2: Heck Reaction ............................................................. 719
31.8.1.4.3 Variation 3: Radical Cyclization ...................................................... 720
31.8.1.5 Method 5: Synthesis by Ring Closure via Formation of a Non-Aryl Carbon—Non-Aryl Carbon Bond .............................................. 720
31.8.1.5.1 Variation 1: Ring-Closing Alkene Metathesis ................................ 720
31.8.1.6 Method 6: Synthesis by Cycloaddition ................................................. 721
31.8.2 Product Subclass 2: Cyclic Aryl Ethers with Two sp^2-Carbon—Oxygen Bonds .................................................. 722
31.8.2.1 Synthesis of Product Subclass 2 ......................................................... 722
31.8.2.1.1 Method 1: Synthesis by Ring Closure via Formation of a Carbon—Oxygen Bond ................................................................. 722
31.8.2.1.2 Method 2: Synthesis by Ring Closure via Formation of an Aryl Carbon—Non-Aryl Carbon Bond ...................................................... 724
31.8.2.1.2.1 Variation 1: Aromatic Substitution ................................................ 725
31.8.2.1.2.2 Variation 2: Metal-Assisted Processes ....................................... 725
31.8.2.1.3 Method 3: Synthesis by Ring Closure via Formation of a Non-Aryl Carbon—Non-Aryl Carbon Bond .............................................. 726
31.8.2.1.4 Method 4: Synthesis by Reduction .................................................. 726
31.8.3 Product Subclass 3: Cyclic Aryl Ethers with Two sp^2-Carbon—Oxygen Bonds and Two sp^3-Carbon—Oxygen Bonds .................................................. 727
31.8.3.1 Synthesis of Product Subclass 3 ......................................................... 727
31.8.3.1.1 Method 1: Synthesis by Ring Closure via Formation of an sp^2-Carbon—Oxygen Bond ................................................................. 727
31.8.3.1.2 Method 2: Synthesis by Ring Closure via Formation of an sp^3-Carbon—Oxygen Bond ................................................................. 729
31.8.4 Product Subclass 4: Cyclic Aryl Ethers with Three sp^2-Carbon—Oxygen Bonds and One sp^3-Carbon—Oxygen Bond .................................................. 732
31.8.4.1 Synthesis of Product Subclass 4 ......................................................... 732
31.8.4.1.1 Method 1: Synthesis by Ring Closure via Formation of an sp^2-Carbon—Oxygen Bond ................................................................. 732
31.8.4.1.2 Method 2: Synthesis by Ring Closure via Formation of an sp^3-Carbon—Oxygen Bond ................................................................. 733
31.8.5 Product Subclass 5: Cyclic Aryl Ethers with One sp^2-Carbon—Oxygen Bond and Three sp^3-Carbon—Oxygen Bonds .................................................. 733
31.8.5.1 Synthesis of Product Subclass 5 ......................................................... 733
31.8.5.1.1 Method 1: Synthesis by Ring Closure via Formation of an sp^3-Carbon—Oxygen Bond ................................................................. 733
31.9 Product Class 9: Arenesulfonic Acids and Derivatives

31.9.1 Product Subclass 1: Arenesulfonic Acids and Arenesulfonate Salts
B. Fravel, R. Murugan, and E. F. V. Scriven

31.9.1.1 Synthesis of Product Subclass 1

31.9.1.1.1 Method 1: Sulfonation

31.9.1.1.1.1 Variation 1: With Sulfur Trioxide

31.9.1.1.1.2 Variation 2: With Sulfur Trioxide Complexes

31.9.1.1.1.3 Variation 3: With Oleum

31.9.1.1.1.4 Variation 4: With Fuming Sulfuric Acid

31.9.1.1.1.5 Variation 5: With Concentrated Sulfuric Acid or Chlorosulfonic Acid

31.9.1.1.1.6 Variation 6: With Sulfamic Acid

31.9.1.1.2 Method 2: Substitution of Halogen by Sulfite Ions

31.9.1.1.3 Method 3: The Jacobsen Reaction

31.9.1.1.4 Method 4: Oxidation of Sulfur-Containing Substituents

31.9.1.1.4.1 Variation 1: Of Thiols

31.9.1.1.4.2 Variation 2: Of Sulfides

31.9.1.1.4.3 Variation 3: Of Disulfides

31.9.1.1.4.4 Variation 4: Of Sulfoxides

31.9.1.1.4.5 Variation 5: Of Sulfones

31.9.1.1.4.6 Variation 6: Of Sulfonic Acids

31.9.1.1.5 Method 5: Hydrolysis of Sulfonic Acid Chlorides, Esters, and Amides

31.9.1.1.6 Method 6: Removal of Halogens by Reduction

31.9.1.1.7 Method 7: Removal of Amino Groups

31.9.1.1.8 Method 8: Synthesis of Haloarenesulfonic Acids by Diazo Reaction

31.9.1.1.9 Method 9: Synthesis Mediated by Diazonium Salts

31.9.1.1.9.1 Variation 1: Of Hydroxysulfonic Acids

31.9.1.1.9.2 Variation 2: Of Alkoxy sulfonic Acids

31.9.1.1.10 Method 10: Synthesis from Organometallic Compounds

31.9.1.2 Applications of Product Subclass 1 in Organic Synthesis

31.9.2 Product Subclass 2: Arenesulfonic Acid Derivatives
I. Shcherbakova

31.9.2.1 Synthesis of Product Subclass 2

31.9.2.1.1 Arylsulfur Pentahalides

31.9.2.1.1.1 Method 1: Synthesis via Fluorination of Diaryl Disulfides

31.9.2.1.1.1.1 Variation 1: Oxidative Fluorination with Silver(II) Fluoride

31.9.2.1.1.1.2 Variation 2: Oxidative Fluorination with Fluorine
31.9.2.1.2 Method 2: Synthesis from Cyclohexylsulfur Pentafluorides or Cyclohexa-1,4-dienylsulfur Pentafluorides ........................................ 777
31.9.2.1.2.1 Variation 1: Dehydrohalogenation of 2,4,5-Trihalocyclohexylsulfur Pentafluorides ........................................ 777
31.9.2.1.2.2 Variation 2: Dehydrogenation of Cyclohexa-1,4-dienylsulfur Pentafluorides ........................................ 778
31.9.2.1 Arenesulfonyl Halides ................................................................................................................................. 779
31.9.2.1.2 Method 1: Synthesis from Arenes via Electrophilic Aromatic Substitution of Hydrogen ........................................ 779
31.9.2.1.2.1 Variation 1: Reaction with Halosulfonic Acids .................................................................................... 780
31.9.2.1.2.2 Variation 2: Reaction with Chlorosulfonic Acid and Sodium Chloride ........................................ 781
31.9.2.1.2.2 Method 2: Synthesis from Arenes via Electrophilic Substitution of Aryl Organometallic Compounds ........................................ 781
31.9.2.1.2.2.1 Variation 1: Synthesis from Aryltrimethylsilanes and Trimethylsilyl Chlorosulfonate ........................................ 781
31.9.2.1.2.2.2 Variation 2: Synthesis from Aryl Grignard Reagents, Sulfur Dioxide, and Sulfuryl Chloride ......................... 782
31.9.2.1.2.2.3 Variation 3: Synthesis from Aryllithium Reagents and Sulfuryl Chloride ........................................ 783
31.9.2.1.2.2.4 Variation 4: Synthesis from Aryllithium Reagents, Sulfur Dioxide, and Sulfuryl Chloride ......................... 783
31.9.2.1.2.2.5 Variation 5: Synthesis from Aryllithium Reagents, Sulfur Dioxide, and N-Chlorosuccinimide ........................................ 784
31.9.2.1.2.3 Method 3: Electrophilic Substitution of Trialkyl(aryl)stannanes with Sulfuryl Chloride ........................................ 785
31.9.2.1.2.4 Method 4: Synthesis from Arenediazonium Halides (Meerwein Reaction) ........................................ 786
31.9.2.1.2.5 Method 5: Halogenation of Arenesulfonic Acids .................................................................................... 788
31.9.2.1.2.5.1 Variation 1: Reaction with Chlorosulfonic Acid and Thionyl Chloride ........................................ 788
31.9.2.1.2.5.2 Variation 2: Reaction with Phosphorus Pentachloride ................................................................. 789
31.9.2.1.2.5.6 Method 6: Halogenation of Arenesulfonic Acid Salts .................................................................................... 789
31.9.2.1.2.6.1 Variation 1: Reaction with Halosulfonic Acids .................................................................................... 789
31.9.2.1.2.6.2 Variation 2: Reaction with Phosphorus Pentachloride ................................................................. 790
31.9.2.1.2.6.3 Variation 3: Reaction with Phosphoryl Chloride .................................................................................... 790
31.9.2.1.2.7 Method 7: Halogenation of Arenesulfonylhydrazides .................................................................................... 791
31.9.2.1.2.8 Method 8: Oxidative Halogenation of Arenethiols .................................................................................... 792
31.9.2.1.2.9 Method 9: Oxidative Cleavage of Aryl Sulfides and Diaryl Disulfides ........................................ 792
31.9.2.1.2.9.1 Variation 1: Reaction with Chlorine ........................................................................................................... 792
31.9.2.1.2.9.2 Variation 2: Reaction with N-Chlorosuccinimide .................................................................................... 793
31.9.2.1.2.9.3 Variation 3: Reaction with Iodosobenzene, Hydrogen Chloride, and Silica Gel ........................................ 793
31.9.2.1.2.10 Method 10: Oxidative Halogenation of Arenesulfonic Acids or Arenesulfonic Acid Salts ........................................ 794
31.9.2.1.2.10.1 Variation 1: Reaction with Halogens ........................................................................................................... 794
31.9.2.1.2.10.2 Variation 2: Reaction with N-Chlorosuccinimide .................................................................................... 794
31.9.2.1.2.11 Method 11: Halogen Exchange of Arenesulfonyl Chlorides .................................................................................... 795
31.9.2.1.2.11.1 Variation 1: Chlorine–Fluorine Exchange ........................................................................................................... 795
31.9.2.1.2.11.2 Variation 2: Chlorine–Bromine Exchange ........................................................................................................... 796
31.9.2.1.3 Arenesulfonates, Arenesulfonic Anhydrides, and Arenesulfonyl Peroxides ........................................ 796
31.9.2.1.3.1 Method 1: Arenesulfonates from Arenesulfonyl Halides .......................... 796
31.9.2.1.3.2 Method 2: Arenesulfonates via Alkylation of Arenesulfonic Acids .......... 797
31.9.2.1.3.2.1 Variation 1: Reaction with Diazooalkanes ........................................ 798
31.9.2.1.3.2.2 Variation 2: Reaction with Resin-Bound Primary N-Alkyltriazenes .... 798
31.9.2.1.3.2.3 Variation 3: Reaction with Ortho Esters ........................................... 799
31.9.2.1.3.2.4 Variation 4: Reaction with Diethyl Carbonate .................................... 799
31.9.2.1.3.2.5 Variation 5: Reaction with Trialkyl Phosphates .................................. 800
31.9.2.1.3.2.6 Variation 6: Reaction with Dialkyl Acylphosphonates ...................... 800
31.9.2.1.3.3 Method 3: Arenesulfonates via Reaction of Arenesulfonic Acids with 
Alcohols ................................................................. 801
31.9.2.1.3.3.1 Variation 1: Synthesis Catalyzed by Silica Chloride ...................... 801
31.9.2.1.3.3.2 Variation 2: Synthesis Catalyzed by Iron(III)-Exchanged 
Montmorillonite Clay .............................................. 802
31.9.2.1.3.4 Method 4: Arenesulfonates from Arenesulfonic Acid Salts ............... 802
31.9.2.1.3.4.1 Variation 1: Reaction with Alkyl Halides ........................................... 802
31.9.2.1.3.4.2 Variation 2: Reaction with Pentafluorophenol ................................... 803
31.9.2.1.3.5 Method 5: Arenesulfonates from Arenesulfonic Anhydrides .......... 803
31.9.2.1.3.6 Method 6: Arenesulfonates from Arenesulfonamides ...................... 804
31.9.2.1.3.7 Method 7: Arenesulfonates via Oxidation of Arenesulfenates .......... 805
31.9.2.1.3.8 Method 8: Arenesulfonic Anhydrides from Arenes ..................... 805
31.9.2.1.3.9 Method 9: Arenesulfonic Anhydrides from Arenesulfonic Acids ...... 806
31.9.2.1.3.10 Method 10: Arenesulfonic Anhydrides via Oxidation of Diaryl Disulfides ........ 806
31.9.2.1.3.11 Method 11: Arenesulfonyl Peroxides via Oxidation of 
Arenesulfonyl Chlorides ........................................... 807
31.9.2.1.4 Arenesulfonamides, N-Haloarenesulfonamides, N-Hydroxyarenesulfonamides, 
and N-Oxoarenesulfonamides ..................................... 807
31.9.2.1.4.1 Method 1: Arenesulfonamides from Arenes via 
Electrophilic Substitution of Hydrogen ........................................... 808
31.9.2.1.4.1.1 Variation 1: Reaction with Sulfamoyl Chlorides .............................. 808
31.9.2.1.4.1.2 Variation 2: Thia-Fries Rearrangement of Phenyl Dialkylsulfamates .... 809
31.9.2.1.4.2 Method 2: Electrophilic Substitution of Aryltrimethylsilanes with 
Sulfamoyl Chloride .................................................. 810
31.9.2.1.4.3 Method 3: Electrophilic Substitution of Trialkyl(aryl)stannanes with 
Chlorosulfonyl Isocyanate ........................................... 810
31.9.2.1.4.4 Method 4: Arenesulfonamides from Arenesulfonic Acid Salts ............ 811
31.9.2.1.4.4.1 Variation 1: Reaction with N-Chlorodialkylamines ....................... 811
31.9.2.1.4.4.2 Variation 2: Reaction with Hydroxylamine-O-sulfonic Acid .......... 811
31.9.2.1.4.5 Method 5: Arenesulfonamides from Arenesulfonyl Halides ............ 812
31.9.2.1.4.5.1 Variation 1: Reaction with Ammonia .............................................. 812
31.9.2.1.4.5.2 Variation 2: Reaction with Amino-Functionalized Resins .................. 813
31.9.2.1.4.5.3 Variation 3: Reaction with Primary Amines .................................. 813
31.9.2.1.4.5.4 Variation 4: Reaction with Resin-Bound Secondary Amines .......... 814
31.9.2.1.4.5.5 Variation 5: Reaction with Secondary Amines .................................. 814
31.9.2.1.4.6 Method 6: Arenesulfonamides from Arenesulfonic Acid Salts ............ 815
31.9.2.1.4.7 Method 7: Arenesulfonamides via Reduction of Arenesulfonyl Azides .... 815
31.9.2.1.4.8 Method 8: N-Substituted Arenesulfonamides from Arenesulfonamides .... 817
31.9.2.1.4.8.1 Variation 1: N-Alkylation with Alkyl Halides .............................. 817

Science of Synthesis Original Edition Volume 31a
© Georg Thieme Verlag KG
31.9.2.1.4.8.2 Variation 2: N-Alkylation with Alcohols

31.9.2.1.4.8.3 Variation 3: N-Arylation with Trimethylsilylaryl Trifluoromethanesulfonates

31.9.2.1.4.8.4 Variation 4: N-Arylation with Aryloboronic Acids

31.9.2.1.4.8.5 Variation 5: N-Arylation with Bromoarenes

31.9.2.1.4.9 Method 9: Arenesulfonamides from N-Substituted Arenesulfonamides

31.9.2.1.4.9.1 Variation 1: N-Dealkylation of N-Alkylarenesulfonamides

31.9.2.1.4.9.2 Variation 2: Reaction of 1-(Phenylsulfonyl)-1H-Benzotriazole or 1-(Arylsulfonyl)-3-methylimidazolium Chlorides with Amines

31.9.2.1.4.10 Method 10: N-Haloarenesulfonamides via N-Halogenation of Arenesulfonamides

31.9.2.1.4.10.1 Variation 1: Reaction with Halogens

31.9.2.1.4.10.2 Variation 2: Reaction with Hypohalites

31.9.2.1.4.11 Method 11: N-Hydroxyarenesulfonamides via Reaction of Arenesulfonyl Chlorides with Hydroxylamines

31.9.2.1.4.12 Method 12: N-Oxoarenesulfonamides via Reaction of Arenesulfonic Acids with Dinitrogen Tetroxide

31.9.2.1.5 Arenesulfonylhydrazides, N-Nitrosoarenesulfonamides, and N-Nitroarenesulfonamides

31.9.2.1.5.1 Method 1: Arenesulfonylhydrazides from Arenesulfonyl Halides

31.9.2.1.5.2 Method 2: N-Nitrosoarenesulfonamides via Nitrosation of Arenesulfonamides with Nitrous Acid

31.9.2.1.5.3 Method 3: N-Nitroarenesulfonamides via Nitration of Arenesulfonamides with Nitric Acid

31.9.2.1.6 Arenesulfonyl Azides

31.9.2.1.6.1 Method 1: Synthesis from Arenesulfonyl Chlorides and Sodium Azide

31.9.2.1.6.2 Method 2: Synthesis from Arenesulfonylhydrazides and Nitrous Acid

31.10 Product Class 10: Aryl Sulfones and Nitrogen Derivatives

31.10.1 Product Subclass 1: Aryl Sulfones

31.10.1.1 Synthesis of Product Subclass 1

31.10.1.1.1 Method 1: Synthesis by Formation of the C—S Bond

31.10.1.1.2 Variation 1: Addition of Arenesulfonic Acids to Alkenes and Alkynes

31.10.1.1.3 Variation 2: Nucleophilic Displacement with Arenesulfinates

31.10.1.1.4 Variation 3: Addition of Arenesulfonyl Radicals to Alkenes and Alkynes

31.10.1.1.5 Variation 4: Reaction of Arenesulfonic Esters or Arenesulfonyl Halides with Nucleophiles

31.10.1.1.6 Variation 5: Rearrangement of Arenesulfonic Esters

31.10.1.2 Method 2: Oxidation of Aryl Sulfides and Sulfoxides

31.10.1.3 Method 3: Synthesis from α,β-Unsaturated Sulfones

31.10.1.3.1 Variation 1: Nucleophilic Addition to α,β-Unsaturated Sulfones

31.10.1.3.2 Variation 2: Radical Addition to α,β-Unsaturated Sulfones

31.10 Product Class 10: Aryl Sulfones and Nitrogen Derivatives

31.10. Product Class 10: Aryl Sulfones and Nitrogen Derivatives

31.10.1 Product Subclass 1: Aryl Sulfones

31.10.1.1 Synthesis of Product Subclass 1

31.10.1.1.1 Method 1: Synthesis by Formation of the C—S Bond

31.10.1.1.2 Variation 1: Addition of Arenesulfonic Acids to Alkenes and Alkynes

31.10.1.1.3 Variation 2: Nucleophilic Displacement with Arenesulfinates

31.10.1.1.4 Variation 3: Addition of Arenesulfonyl Radicals to Alkenes and Alkynes

31.10.1.1.5 Variation 4: Reaction of Arenesulfonic Esters or Arenesulfonyl Halides with Nucleophiles

31.10.1.1.6 Variation 5: Rearrangement of Arenesulfonic Esters

31.10.1.2 Method 2: Oxidation of Aryl Sulfides and Sulfoxides

31.10.1.3 Method 3: Synthesis from α,β-Unsaturated Sulfones

31.10.1.3.1 Variation 1: Nucleophilic Addition to α,β-Unsaturated Sulfones

31.10.1.3.2 Variation 2: Radical Addition to α,β-Unsaturated Sulfones

31.10 Product Class 10: Aryl Sulfones and Nitrogen Derivatives

31.10.1 Product Subclass 1: Aryl Sulfones

31.10.1.1 Synthesis of Product Subclass 1

31.10.1.1.1 Method 1: Synthesis by Formation of the C—S Bond

31.10.1.1.2 Variation 1: Addition of Arenesulfonic Acids to Alkenes and Alkynes

31.10.1.1.3 Variation 2: Nucleophilic Displacement with Arenesulfinates

31.10.1.1.4 Variation 3: Addition of Arenesulfonyl Radicals to Alkenes and Alkynes

31.10.1.1.5 Variation 4: Reaction of Arenesulfonic Esters or Arenesulfonyl Halides with Nucleophiles

31.10.1.1.6 Variation 5: Rearrangement of Arenesulfonic Esters

31.10.1.2 Method 2: Oxidation of Aryl Sulfides and Sulfoxides

31.10.1.3 Method 3: Synthesis from α,β-Unsaturated Sulfones

31.10.1.3.1 Variation 1: Nucleophilic Addition to α,β-Unsaturated Sulfones

31.10.1.3.2 Variation 2: Radical Addition to α,β-Unsaturated Sulfones

31.10 Product Class 10: Aryl Sulfones and Nitrogen Derivatives

31.10.1 Product Subclass 1: Aryl Sulfones

31.10.1.1 Synthesis of Product Subclass 1

31.10.1.1.1 Method 1: Synthesis by Formation of the C—S Bond

31.10.1.1.2 Variation 1: Addition of Arenesulfonic Acids to Alkenes and Alkynes

31.10.1.1.3 Variation 2: Nucleophilic Displacement with Arenesulfinates

31.10.1.1.4 Variation 3: Addition of Arenesulfonyl Radicals to Alkenes and Alkynes

31.10.1.1.5 Variation 4: Reaction of Arenesulfonic Esters or Arenesulfonyl Halides with Nucleophiles

31.10.1.1.6 Variation 5: Rearrangement of Arenesulfonic Esters

31.10.1.2 Method 2: Oxidation of Aryl Sulfides and Sulfoxides

31.10.1.3 Method 3: Synthesis from α,β-Unsaturated Sulfones

31.10.1.3.1 Variation 1: Nucleophilic Addition to α,β-Unsaturated Sulfones

31.10.1.3.2 Variation 2: Radical Addition to α,β-Unsaturated Sulfones
31.10.1.3.3 Variation 3: Cycloaddition of α,β-Unsaturated Sulfones

31.10.1.2 Applications of Product Subclass 1 in Organic Synthesis

31.10.1.2.1 Method 1: Reaction of α-Arylsulfonyl Carbanions

31.10.1.2.1.1 Variation 1: Protonation of α-Arylsulfonyl Carbanions

31.10.1.2.1.2 Variation 2: Alkylation of α-Arylsulfonyl Carbanions

31.10.1.2.1.3 Variation 3: Michael Addition of α-Arylsulfonyl Carbanions

31.10.1.2.1.4 Variation 4: Reaction of α-Arylsulfonyl Carbanions with Carbonyl Compounds

31.10.1.2.2 Method 2: Elimination of Arylsulfonyl Groups To Give Alkenes

31.10.1.2.3 Method 3: Reductive Elimination of Arylsulfonyl Groups

31.10.2 Product Subclass 2: S-Arylsulfoximides

31.10.2.1 Synthesis of Product Subclass 2

31.10.2.1.1 Method 1: Nucleophilic Substitution of Arenesulfonimidoyl Halides and Sulfonimidates

31.10.2.1.2 Method 2: Oxidation of S-Arylsulfoximides

31.10.2.1.3 Method 3: Imination of Aryl Sulfoxides

31.10.2.1.4 Method 4: N-Alkylation and N-Arylation of S-Arylsulfoximides

31.10.2.1.5 Method 5: Optical Resolution of Chiral S-Arylsulfoximides

31.10.2.2 Applications of Product Subclass 2 in Organic Synthesis

31.10.2.2.1 Method 1: Reactions of α-Carbanions Derived from S-Arylsulfoximides

31.10.2.2.2 Method 2: Reductive Elimination of S-Arylsulfoximides

31.10.2.2.3 Method 3: Catalytic Enantioselective Reactions Using Chiral S-Arylsulfoximides

31.10.3 Product Subclass 3: Arylsulfonediimines

31.10.3.1 Synthesis of Product Subclass 3

31.10.3.1.1 Method 1: Imination of S-Arylsulfoximides

31.10.3.2 Applications of Product Subclass 3 in Organic Synthesis

31.10.3.2.1 Method 1: Reactions of Arylsulfonediimines

31.11 Product Class 11: Arenesulfonic Acids and Derivatives

31.11.1 Product Subclass 1: Arenesulfinyl Chlorides

31.11.1.1 Synthesis of Product Subclass 1

31.11.1.1.1 Method 1: Synthesis from Arenesulfonic Acids and Their Derivatives

31.11.1.1.2 Method 2: Chlorination of Diaryl Disulfides

31.11.1.1.3 Method 3: Sulfinylation of Aromatic Compounds

31.11.1.2 Applications of Product Subclass 1 in Organic Synthesis

31.11.1.2.1 Method 1: Reaction of Arenesulfinyl Chlorides with Nucleophiles

31.11.2 Product Subclass 2: Arenesulfonic Acids

31.11.2.1 Synthesis of Product Subclass 2
31.11.2.1 Method 1: Reduction of Arenesulfonyl Halides ........................................... 883
31.11.2.1.2 Method 2: Hydrolysis of Arenesulfonic Acid Esters and Arenesulfonyl Halides ........................................... 884
31.11.2.1.3 Method 3: Reaction of Sulfur Dioxide with Nucleophiles ........................ 884
31.11.2.2 Applications of Product Subclass 2 in Organic Synthesis .......................... 884
31.11.2.2.1 Method 1: Nucleophilic Reaction of Arenesulfonic Acids and Their Salts with Electrophiles ........................................... 884
31.11.2.2.2 Method 2: Oxidation and Reduction of Arenesulfonic Acids .................... 886
31.11.3 Product Subclass 3: Arenesulfonic Acid Esters .............................................. 887
31.11.3.1 Synthesis of Product Subclass 3 ................................................................. 887
31.11.3.1.1 Method 1: Condensation of Arenesulfonic Acids and Alcohols ................ 887
31.11.3.1.2 Method 2: Oxidation of Arenethiols or Aryl Disulfides ............................ 888
31.11.3.1.3 Method 3: Reaction of Arenesulfonyl Chlorides with Alcohols ................. 888
31.11.3.1.3.1 Variation 1: Reaction of Arenesulfonyl Chlorides with Menthol .............. 888
31.11.3.1.3.2 Variation 2: Reaction of Arenesulfonyl Chlorides with Other Chiral Alcohols 889
31.11.3.1.3.3 Variation 3: Reaction of Arenesulfonyl Chlorides with Chiral Alcohols through Reduction of Arenesulfonyl Chlorides .............. 890
31.11.3.1.3.4 Variation 4: Enantioselective Reaction of Arenesulfonyl Chlorides and Alcohols with Chiral Bases ................................. 891
31.11.3.1.4 Method 4: Ring Opening of Chiral Sulfites .............................................. 893
31.11.3.2 Applications of Product Subclass 3 in Organic Synthesis ......................... 894
31.11.3.2.1 Method 1: Reaction with Organometallic Reagents ................................. 894
31.11.4 Product Subclass 4: Arenesulfinamides ...................................................... 896
31.11.4.1 Synthesis of Product Subclass 4 ................................................................. 896
31.11.4.1.1 Method 1: Reaction of Arenesulfinyl Chlorides with Amines .................... 896
31.11.4.1.2 Method 2: Substitution Reactions of Various Arenesulfinyl Derivatives .... 898
31.11.4.1.3 Method 3: Oxidation of Arenesulfenamides ............................................ 899
31.11.4.1.4 Method 4: Nucleophilic Addition of Grignard Reagents to N-Thionylanilines ................................................................. 900
31.11.4.2 Applications of Product Subclass 4 in Organic Synthesis ......................... 900
31.11.4.2.1 Method 1: Reaction with Nucleophiles .................................................. 900
31.11.4.2.2 Method 2: Reaction with Alcohols and Thiols ........................................ 901
31.11.4.2.3 Method 3: Oxidation of Arenesulfinamides to Arenesulfonimidates .......... 902
31.11.4.2.4 Method 4: Desulfinylation of Arenesulfenamides ................................... 902
31.11.4.2.5 Method 5: Direct ortho-Lithiation of Arenesulfenamides ........................ 902
31.11.4.2.6 Method 6: Thermal Treatment of Arenesulfenamides ............................ 903

31.12 Product Class 12: Aryl Sulfoxides and S-Arylsulfimides
S. G. Collins and A. R. Maguire

31.12.1 Product Subclass 1: Symmetrical and Racemic Aryl Sulfoxides .................... 907
31.12.1.1 Synthesis of Product Subclass 1 ............................................................... 907

Method 4: Kinetic Resolution of Sulfoxides

Applications of Product Subclass 2 in Organic Synthesis

Product Subclass 3: S-Arylsulfimides

Synthesis of Product Subclass 3

Method 1: Reaction of Dialkoxyl(diaryl)-\(\lambda^4\)-sulfanes with Amines and Amides

Method 2: Reactions of Aryl Sulfoxides with N-Sulfinylsulfonamides

Method 3: Reaction of Sulfides with N-Halo Compounds

Method 4: Preparation of N-Unsubstituted Sulfimides

Method 5: Asymmetric Sulfimidation

Applications of Product Subclass 3 in Organic Synthesis

Product Class 13: Arenethiols and Arenethiolates

O. A. Rakitin

Synthesis of Product Class 13

Method 1: Lithiation of Arenes Followed by Sulfur Addition

Method 2: Reduction of Thiocyanates Formed by the Reaction of Arenes with Bromine and Inorganic Thiocyanates

Method 3: Reaction of Activated Aryl Halides with Sodium Sulfide, Sodium Hydrosulfide, or Disodium Disulfide

Method 4: Reaction of Aryl Iodides with Thiourea and a Nickel Catalyst

Method 5: Reaction of Grignard Reagents with Sulfur

Method 6: Newman–Kwart Rearrangement of Phenols

Method 7: Diazotization of Anilines Followed by Reaction with Potassium Ethyl Dithiocarbonate

Method 8: Hydrolysis of Aryl Trialkylsilyl Sulfides

Method 9: Dealkylation of Alkyl Aryl Sulfides

Method 10: Debenzylation of Aryl Benzyl Sulfides with Lewis Acids

Method 11: Hydrolysis of tert-Butyl or Acetoxyethyl Aryl Sulfides

Method 12: Hydrolysis of Acyl Aryl Sulfides

Method 13: Debenzyolation of S-Aryl Thiobenzoates with Titanium(IV) Chloride and Zinc

Method 14: Reduction of Arenesulfonyl Chlorides

Method 15: Reduction of Arenesulfonic Acids with a Triphenylphosphine/Iodine Mixture

Method 16: Reduction of Sodium Arenesulfimates with Tin

Method 17: Reduction of Diaryl Disulfides

Method 18: Reduction of Sodium Aryl Sulfides with Zinc

Method 19: Reduction with Sodium Sulfide

Method 20: Reduction with Zinc in Acids
Variation 3: Reduction with Lithium Tri-tert-butoxyaluminum Hydride
Method 19: Reduction of $N$-(Arylsulfanyl)phthalimides with Lithium Aluminum Hydride
Variation 2: Ring Opening Accompanied by Ring-Forming Reactions of $N$-Acetonylbenzothiazol-2-ones with Aliphatic Amines
Variation 1: Hydrolysis with Sodium Hydroxide
Variation 2: Reaction of Dibenzothiophenes with Grignard Reagents
Method 23: Ring Opening of 1,4,2-Benzodithiazin-3-amine 1,1-Dioxides by Hydrolysis with Hydrazine Hydrate

Product Class 14: Aryl Sulfides
O. A. Rakitin

Method 1: Reaction of Arenes with Sulfur and Aluminum Trichloride
Method 2: Reaction of Arenes with Sulfur Chlorides
Method 3: Reaction of Arenes with Dialkyl Disulfides
Method 4: Reaction of Arylboronic Acids with Alkanethiols
Method 5: Reaction of Arylboronic Acids with $N$-Sulfanylated Succinimides
Method 6: Reaction of Arylboronic Acids with Diaryl Disulfides
Method 7: Synthesis of Symmetrical Aryl Sulfides by Reaction of Aryl Halides with Sodium Sulfide
Method 8: Synthesis of Alkyl Aryl Sulfides by Reaction of Aryl Halides with Alkanethiolates
Method 9: Reaction of Haloarenes with Thiolates under Copper or Nickel Catalysis
Method 10: Reaction of Haloarenes with Dialkyl Disulfides
Method 11: Synthesis of Alkyl Aryl Sulfides from Aryl Iodides and Organoboron Compounds
Method 12: Reaction of Aryl Trifluoromethanesulfonates with Alkyl Sulfides in the Presence of Palladium Catalysts
Method 13: Reaction of Phenols with Thiols
Method 14: Substitution of Amino Groups via Diazonium Salts
Method 15: Nucleophilic Substitutions of Alkyl and Aryl Halides with Arenethiols
Method 16: Reaction of Arenethiols with Diazo Compounds
Method 17: Reaction of Arenethiols with Quinones
Method 18: Oxidative Coupling Reactions between Arenethiols and Arenes
Method 19: Reaction of Activated Alkenes with Arenethiols

Table of Contents XXXIX
Method 20: Radical Additions of Arenethiols to Alkenes .......................... 988
Method 21: Reaction of Aryl Trimethylsilyl Sulfides and Haloarenes ........ 989
Method 22: Reduction of Sulfoxides ................................................. 990
Variation 1: With Zinc ................................................................. 990
Variation 2: With Phosphites ......................................................... 990
Variation 3: With Sodium Borohydride ........................................... 991
Method 23: Reduction of Sulfones ....................................................... 992
Method 24: Reaction of Aryl Thiocyanates with Haloarenes ................... 992
Method 25: Reaction of N-(Arylsulfanyl)phthalimides with Arenes .......... 993
Method 26: Reaction between Arenesulfenyl Chlorides and Arenes .......... 994
Method 27: Reaction of Diaryl Disulfides with Arenes ......................... 994
Variation 1: Sulfenylation of Arenes with Diaryl Disulfides Catalyzed by
Lewis Acids .................................................................................. 995
Variation 2: Sulfenylation of Arenes with Diaryl Disulfides in
the Presence of a Butyllithium ...................................................... 995
Method 28: Reaction of Diaryl Disulfides with Haloalkanes or Haloarenes .... 996
Variation 1: Synthesis of Aryl Sulfoxides from Grignard Reagents and
Diaryl Disulfides .............................................................................. 996
Variation 2: Synthesis of Aryl Sulfoxides from Aryl Iodides, Butyllithium,
and Diaryl Disulfides ................................................................. 996
Method 29: Reaction of Diaryl Disulfides with Organoboron Compounds ... 997
Method 30: Reaction of Diaryl Disulfides with Alkyl 4-Toluenesulfonates .... 997

Product Class 15: Arylsulfonium Salts and Derivatives
I. Fernández and N. Khiar

Synthesis of Product Subclass 1 ....................................................... 1001
Method 1: Reactions of Arenethiols with Diaryliodonium Salts ............... 1001
Method 2: Synthesis from Phenols and Thionyl Chloride ....................... 1002
Method 3: Synthesis from Arenes and Sulfur Monochloride ................... 1003
Method 4: Synthesis from Arenes and Diaryl(halo)sulfonium Salts .......... 1003
Method 5: Synthesis from Activated Diaryl Sulfoxides by
Electrophilic Aromatic Substitution ................................................ 1004
Variation 1: Using Sulfuric Acid as the Activator .................................. 1004
Variation 2: Using a Lewis Acid as the Activator ................................... 1004
Variation 3: Using Phosphorus Pentoxide/Methanesulfonic Acid as
the Activators .................................................................................. 1005
Variation 4: Using Acetic Anhydride and Sulfuric Acid as the Activators .... 1005
Method 6: Synthesis from Activated Diaryl Sulfoxides by
Reactions with Grignard Reagents ................................................... 1006
Method 7: Synthesis from Diaryl(ethoxy)sulfonium Salts by
Reactions with Grignard Reagents ................................................... 1007
Method 8: Synthesis from Sulfinimides .............................................. 1007
Variation 1: By Treatment with Arenes and Aluminum Trichloride ........ 1007
Variation 2: By Reactions with Grignard Reagents

Method 9: Arylation of Diaryl Sulfides

**Product Subclass 2: Alkyl- and Alkenyl(diaryl)sulfonium Salts**

Synthesis of Product Subclass 2

Method 1: Synthesis from Alkyl(aryl)(halo)sulfonium Salts by Electrophilic Aromatic Substitution

Method 2: Synthesis from Sodium Methanesulfinate by Electrophilic Aromatic Substitution

Method 3: Synthesis from Activated Sulfoxides by Reactions with Alkenes Using Trifluoromethanesulfonic Anhydride

Method 4: Synthesis from Alkoxysulfonium Salts by Reactions with Grignard Reagents

Method 5: Arylation of Aryl Sulfides Using Activated Quinones

Method 6: Alkylation of Diaryl Sulfides

Variation 1: Using Alkyl Halides in the Presence of Silver(I) Salts

Variation 2: Intramolecular Cyclization of Diazo Ketones

Method 7: Synthesis from Sulfonium Salts via Sulfonium Ylides (C-Alkylation)

**Product Subclass 3: Dialkyl(aryl)sulfonium Salts**

Synthesis of Product Subclass 3

Method 1: Synthesis from Arenes and Dialkyl(halo)sulfonium Salts

Method 2: Synthesis from Benzo-1,4-quinone, a Dialkyl Sulfide, and Perchloric Acid

Method 3: Synthesis from Arenes and Dialkyl Sulfoxides

Variation 1: Using Hydrogen Chloride

Variation 2: Using Phosphorus Pentoxide/Methanesulfonic Acid

Method 4: Synthesis from Dialkyl Sulfoxides Using Nitrilium Salts

Method 5: Synthesis from Alkoxysulfonium Salts by Reactions with Grignard Reagents

Method 6: Synthesis from Arenes or Hetarenes and Azasulfonium Salts

Method 7: Synthesis from Dialkyl(nitrosyl)sulfonium Salts and Arenes

Method 8: Arylation of Dialkyl Sulfides with 4-Nitrophenyl 4-Toluensulfonate

Method 9: S-Alkylation of Alkyl Aryl Sulfides

Variation 1: Using Alkyl Halides

Variation 2: Using Dialkyl Sulfates

Method 10: Reactions of Sulfides with Diazo Ketones

Method 11: Synthesis via Sulfonium Ylides by Reactions of Dialkyl Sulfides with Benzylene

**Product Subclass 4: Arylsulfonium Derivatives**

Synthesis of Product Subclass 4

Halosulfonium Salts

Method 1: Reactions between Sulfides and Halides

Alkox(diaryl)sulfonium Salts

31.16 Product Class 16: Arenesulfenic Acids and Derivatives
S. Perrio, V. Reboul, and P. Metzner

31.16.1 Product Subclass 1: Arenesulfenyl Chlorides

31.16.1.1 Method 1: Synthesis from Thiols

31.16.1.1.1 Variation 1: By Reaction with Chlorine

31.16.1.1.2 Variation 2: By Reaction with Sulfuryl Chloride

31.16.1.1.3 Variation 3: By Reaction with N-Chlorosuccinimide

31.16.1.1.4 Variation 4: By Reaction with (Dichloroiodo)benzene

31.16.1.2 Method 2: Synthesis from Thioesters and Sulfuryl Chloride

31.16.1.3 Method 3: Synthesis from Sulfides

31.16.1.3.1 Variation 1: By Reaction with Sulfuryl Chloride

31.16.1.4 Method 4: Synthesis from Disulfides

31.16.1.4.1 Variation 1: By Reaction with Chlorine

31.16.1.4.2 Variation 2: By Reaction with Thionyl Chloride

31.16.1.4.3 Variation 3: By Reaction with Sulfuryl Chloride

31.16.2 Product Subclass 2: Arenesulfenyl Bromides

31.16.2.1 Synthesis of Product Subclass 2

31.16.3 Product Subclass 3: Arenesulfenyl Iodides

31.16.3.1 Synthesis of Product Subclass 3

31.16.3.1.1 Method 1: Reaction of Thiols with Iodine

31.16.4 Product Subclass 4: Arenesulfenic Acids

31.16.4.1 Synthesis of Product Subclass 4

31.16.4.1.1 Method 1: Oxidation of Thiols

31.16.4.1.2 Method 2: Alkaline Hydrolysis of Sulfenic Acid Esters

31.16.4.1.3 Method 3: Thermolysis of Sulfoxides

31.16.4.1.4 Method 4: Thermolysis of N-(Sulfinyl)phenylmethanimines

31.16.5 Product Subclass 5: Arenesulfenic Acid Salts

31.16.5.1 Synthesis of Product Subclass 5

31.16.5.1.1 Method 1: Oxidation of Thiols

31.16.5.1.2 Method 2: Synthesis from Silylated Sulfenic Acid Esters and Tetrabutylammonium Fluoride

31.16.5.1.3 Method 3: Addition/Elimination Reactions of Sulfoxides

31.16.5.1.4 Method 4: Deprotonation/Elimination Reactions of Sulfoxides

31.16.5.1.5 Method 5: Synthesis from a 4-Tolylsulfinylacetylene by Transmetalation with Diethylzinc and a Palladium Catalyst

31.16.6 Product Subclass 6: Arenesulfenic Acid Esters

31.16.6.1 Synthesis of Product Subclass 6

31.16.6.1.1 Method 1: Reactions of Sulfenic Acid Salts with Hard Electrophiles
31.16.6.1.2 Method 2: Synthesis from Sulfenyl Chlorides .................................. 1055
31.16.6.1.2.1 Variation 1: By Reaction with Alcohols ......................................... 1055
31.16.6.1.2.2 Variation 2: By Reaction with Alkoxides .......................................... 1056
31.16.6.1.3 Method 3: Reaction of Sulfenic Acid Esters with Alcohols .................... 1057
31.16.7 Product Subclass 7: Arenesulfenamides .................................................. 1057
31.16.7.1 Synthesis of Product Subclass 7 .......................................................... 1057
31.16.7.1.1 Method 1: Synthesis from Thiols ....................................................... 1057
31.16.7.1.1.1 Variation 1: By Reaction with Hydroxylamine-O-sulfonic Acids .......... 1057
31.16.7.1.1.2 Variation 2: By Reaction with N-Chlorosuccinimide or N-Bromophthalimide .......................... 1058
31.16.7.1.2 Method 2: Synthesis from Sulfenyl Chlorides ..................................... 1059
31.16.7.1.2.1 Variation 1: By Reaction with Amines ............................................. 1059
31.16.7.1.2.2 Variation 2: By Reaction with Amides or Lactams ............................ 1061
31.16.7.1.3 Method 3: Reactions of Sulfenic Acid Esters with Amines ..................... 1061
31.16.7.1.4 Method 4: Synthesis from Disulfides .................................................. 1062
31.16.7.1.4.1 Variation 1: By Reaction with Amines ............................................. 1062
31.16.7.1.4.2 Variation 2: By Reaction with Lithium Amides ............................... 1063
31.16.7.1.4.3 Variation 3: By Electrosynthesis .................................................... 1064
31.16.7.1.4.4 Variation 4: By Reaction with N-Chloro- or N-Bromosuccinimide or N-Bromophthalimide .......................................................... 1064
31.16.7.1.5 Method 5: Reaction of Thiosulfonates with Amines .............................. 1065
31.16.7.1.6 Method 6: Reaction of N-Sulfanylated Imines with Organolithiums ......... 1065
31.16.7.1.7 Method 7: 2,3-Sigmatropic Rearrangements of Sulfinimides ................. 1066
31.16.7.1.8 Method 8: Pummerer Rearrangement of β-Sulfinylated Amines ............. 1067
31.16.7.1.9 Method 9: Synthesis from Sulfenamides ............................................ 1068
31.16.7.1.9.1 Variation 1: By Acylation ............................................................... 1068
31.16.7.1.9.2 Variation 2: By Amino Transfer ..................................................... 1069
31.16.7.8 Product Subclass 8: N-(Arylsulfanyl)imines .......................................... 1071
31.16.7.8.1 Synthesis of Product Subclass 8 ...................................................... 1071
31.16.7.8.1.1 Method 1: Synthesis from Sulfenic Acid Chlorides .......................... 1071
31.16.7.8.1.1.1 Variation 1: By Reaction with Amines ......................................... 1071
31.16.7.8.1.1.2 Variation 2: By Reaction with Imines .......................................... 1072
31.16.7.8.1.2 Method 2: Synthesis from Disulfides .............................................. 1073
31.16.7.8.1.2.1 Variation 1: By Reaction with Ammonia and Carbonyl Compounds or with Imines ......................... 1073
31.16.7.8.1.2.2 Variation 2: By Reaction with Oximes ......................................... 1074
31.16.7.8.1.2.3 Variation 3: From α-Aminoalkanoates ........................................ 1075
31.16.7.8.1.3 Method 3: Synthesis from Sulfenamides ........................................ 1075
31.16.7.8.1.3.1 Variation 1: By Reaction with Carbonyl Compounds ...................... 1075
31.16.7.8.1.3.2 Variation 2: By Oxidation .......................................................... 1076
31.16.7.8.1.3.3 Variation 3: By Fluoride-Catalyzed Reactions ............................... 1076
31.16.7.8.1.4 Method 4: Reaction of a Sulfenamide Enolate Equivalent with Electrophiles .................................................. 1077
31.16.7.8.1.5 Method 5: Synthesis from Tris(phenylsulfanyl)amine ...................... 1078
31.16.9  Product Subclass 9: S-Nitrosoarenethiols ................................................. 1078
31.16.9.1 Synthesis of Product Subclass 9 ............................................................. 1078
31.16.9.1.1 Method 1: Nitrosation of Thiols ....................................................... 1078
31.16.10 Product Subclass 10: S-Nitroarenethiols ....................................................... 1079
31.16.10.1 Synthesis of Product Subclass 10 .......................................................... 1079
31.16.10.1.1 Method 1: Oxidation of Arenethiols ............................................. 1079
31.16.10.1.2 Method 2: Oxidation of S-Nitrosoarenethiols ................................ 1079
31.16.11  Product Subclass 11: (Arylsulfanyl)diazenes ................................................ 1079
31.16.11.1 Synthesis of Product Subclass 11 ......................................................... 1080
31.16.11.1.1 Method 1: Reaction of Thiols with Anilines .................................. 1080

31.17  Product Class 17: Aryl Polysulfides

31.17.1 Product Subclass 1: Aryl Hydrodisulfides ...................................................... 1085
31.17.1.1 Synthesis of Product Subclass 1 ............................................................ 1085
31.17.1.1.1 Method 1: Synthesis of Aryl Hydrodisulfides by Hydrolysis of Acetyl Aryl Disulfides ................................................................. 1085

31.17.2 Product Subclass 2: Diaryl Disulfides ............................................................. 1086
31.17.2.1 Synthesis of Product Subclass 2 ............................................................. 1086
31.17.2.1.1 Method 1: Symmetrical Diaryl Disulfides by Oxidation of Arenethiols 1086
31.17.2.1.1.1 Variation 1: Oxidation with Iodine ............................................... 1086
31.17.2.1.1.2 Variation 2: Oxidation with Bromine ......................................... 1087
31.17.2.1.1.3 Variation 3: Oxidation with Air .................................................. 1087
31.17.2.1.1.4 Variation 4: Oxidation with Hydrogen Peroxide ......................... 1088
31.17.2.1.1.5 Variation 5: Oxidation with Potassium Hexacyanoferrate(III) .... 1088
31.17.2.1.1.6 Variation 6: Oxidation with Iron(III) Chloride ............................ 1089
31.17.2.1.1.7 Variation 7: Oxidation with Dimethyl Sulfoxide ......................... 1089
31.17.2.1.2 Method 2: Symmetrical Diaryl Disulfides by Reduction of Arenesulfonyl Chlorides .......................................................... 1089
31.17.2.1.2.1 Variation 1: Reduction with Phosphorus and Iodine .................... 1090
31.17.2.1.2.2 Variation 2: Reduction with Zinc in Acids .................................. 1090
31.17.2.1.2.3 Variation 3: Reduction with Phenol in Hydrobromic Acid ............ 1091
31.17.2.1.2.4 Variation 4: Reduction with Hydriodic Acid ................................ 1091
31.17.2.1.3 Method 3: Symmetrical Diaryl Disulfides by Reaction of Aryl Halides with Disodium Disulfide .................................................. 1092
31.17.2.1.3.1 Variation 1: Reaction of Arenediazonium Salts with Disodium Disulfide ................................................................. 1092
31.17.2.1.4 Method 4: Symmetrical Diaryl Disulfides by Reaction of Arenediazonium Salts with Disodium Disulfide .................................................. 1092
31.17.2.1.5 Method 5: Unsymmetrical Diaryl Disulfides by Reaction of N-(Arylsulfanyl)trifluoroacetamides with Arenethiols .................. 1093
31.17.2.1.6 Method 6: Unsymmetrical Diaryl Disulfides by Reaction of Arenethiols with Arenesulfenyl Chlorides ................................. 1094

31.19.2 Applications of Product Subclass 1 in Organic Synthesis

31.19.2 Product Subclass 2: Aryl Selenones and Their Nitrogen Derivatives

31.19.2.1 Method 1: Aryl Selenones by Oxidation of the Selenium Atom

31.19.2.2 Method 2: Se-Arylselenoximides by Addition of N-Sulfinyl-4-toluenesulfonamide to Selenones

31.19.2.2 Applications of Product Subclass 2 in Organic Synthesis

31.19.2.2.1 Method 1: Synthesis of Small-Ring Compounds

31.19.2.2.2 Method 2: Alkylation

31.19.3 Product Subclass 3: Areneseleninic Acids and Derivatives

31.19.3.1 Method 1: Areneseleninic Acids and Derivatives by Oxidation of the Selenium Atom

31.19.3.1.1 Variation 1: Synthesis of Areneseleninic Acids

31.19.3.1.2 Variation 2: Synthesis of Areneseleninic Anhydrides

31.19.3.1.3 Variation 3: Synthesis of Areneperoxyseleninic Acids

31.19.3.2 Applications of Product Subclass 3 in Organic Synthesis

31.19.4 Product Subclass 4: Aryl Selenoxides and Their Nitrogen Derivatives

31.19.4.1 Method 1: Aryl Selenoxides by Oxidation of the Selenium Atom

31.19.4.1.1 Variation 1: Using 3-Chloroperoxybenzoic Acid

31.19.4.1.2 Variation 2: Using Hydrogen Peroxide

31.19.4.1.3 Variation 3: Using Sodium Periodate

31.19.4.1.4 Variation 4: Using tert-Butyl Hypochlorite

31.19.4.1.5 Variation 5: Using Other Oxidants

31.19.4.1.6 Variation 6: Synthesis of Chiral Selenoxides

31.19.4.1.7 Method 2: Se-Arylselenimides by Addition of 4-Toluenesulfonamide to Selenoxides

31.19.4.1.8 Method 3: Se-Arylselenimides by Addition of Chloramine-T to Selenides

31.19.4.2 Applications of Product Subclass 4 in Organic Synthesis

31.19.4.2.1 Method 1: Selenoxide Elimination

31.19.4.2.2 Method 2: [2,3]-Sigmatropic Rearrangement

31.19.5 Product Subclass 5: Areneselenols and Areneselenolates

31.19.5.1 Synthesis of Product Subclass 5

31.19.5.1.1 Method 1: Areneselenols and Areneselenolates by Substitution

31.19.5.1.2 Variation 1: Synthesis of Areneselenols

31.19.5.1.3 Variation 2: Synthesis of Areneselenolates

31.19.5.1.4 Method 2: Areneselenols by Addition of Metal Carbanions

31.19.5.2 Applications of Product Subclass 5 in Organic Synthesis

31.19.5.2.1 Method 1: Synthesis of Aryl Silyl Selenides

31.19.5.2.2 Method 2: Synthesis of Areneselenol Esters
31.19.6 Product Subclass 6: Aryl Selenides ................................................. 1132
31.19.6.1 Synthesis of Product Subclass 6 .............................................. 1133
31.19.6.1.1 Method 1: Synthesis of Diaryl Selenides by Substitution .............. 1133
31.19.6.1.2 Method 2: Synthesis of Alkyl Aryl Selenides by Substitution .......... 1135
31.19.6.1.3 Method 3: Synthesis of Diaryl Selenides by Elimination ............... 1138
31.19.6.2 Applications of Product Subclass 6 in Organic Synthesis .................. 1138
31.19.6.2.1 Method 1: Utilization of Aryl Selenides as Catalysts ................. 1138
31.19.7 Product Subclass 7: Arylselenonium Salts ....................................... 1139
31.19.7.1 Synthesis of Product Subclass 7 .............................................. 1139
31.19.7.1.1 Method 1: Synthesis of Arylselenonium Salts by Substitution .......... 1139
31.19.7.1.2 Method 2: Synthesis of Arylselenonium Salts by Addition Reactions ... 1140
31.19.7.2 Applications of Product Subclass 7 in Organic Synthesis .................. 1141
31.19.7.2.1 Method 1: Vinylselenonium Ylide Formation ............................ 1141
31.19.8 Product Subclass 8: Areneselenenic Acids and Derivatives ................... 1141
31.19.8.1 Synthesis of Product Subclass 8 .............................................. 1142
31.19.8.1.1 Method 1: Areneselenenic Acids by Oxidation of the Selenium Atom 1142
31.19.8.1.2 Method 2: Areneselenenamides by Substitution .......................... 1143
31.19.8.2 Applications of Product Subclass 8 in Organic Synthesis .................. 1144
31.19.8.2.1 Method 1: Synthesis of β-Hydroxy Selenides Using Diselenides ....... 1145
31.19.9 Product Subclass 9: Areneselenenyl Halides .................................... 1145
31.19.9.1 Synthesis of Product Subclass 9 .............................................. 1145
31.19.9.1.1 Method 1: Areneselenenyl Halides by Substitution Reactions ........... 1145
31.19.9.2 Applications of Product Subclass 9 in Organic Synthesis .................. 1147
31.19.10 Product Subclass 10: Diaryl Diselenides ....................................... 1147
31.19.10.1 Synthesis of Product Subclass 10 ............................................ 1148
31.19.10.1.1 Method 1: Diaryl Diselenides by Substitution Reactions .............. 1148
31.19.10.2 Applications of Product Subclass 10 in Organic Synthesis ................ 1149

31.20 Product Class 20: Aryl Tellurium Compounds
T. Kataoka and S. Watanabe

31.20 Product Class 20: Aryl Tellurium Compounds .................................... 1159
31.20.1 Product Subclass 1: Aryl Tellurones ............................................. 1159
31.20.1.1 Synthesis of Product Subclass 1 .............................................. 1159
31.20.1.1.1 Method 1: Tellurones by Oxidation of the Tellurium Atom .......... 1160
31.20.2 Product Subclass 2: Arenetellurinic Acids and Derivatives .................... 1160
31.20.2.1 Synthesis of Product Subclass 2 .............................................. 1160
31.20.2.1.1 Method 1: Synthesis by Oxidation ...................................... 1161
31.20.3 Product Subclass 3: Aryl Telluroxides

31.20.3.1 Synthesis of Product Subclass 3

31.20.3.1.1 Method 1: Synthesis by Oxidation

31.20.3.1.2 Method 2: Synthesis by Hydrolysis of Diaryltellurium Dichlorides

31.20.3.2 Applications of Product Subclass 3 in Organic Synthesis

31.20.4 Product Subclass 4: Arenetellurolates

31.20.5 Product Subclass 5: Aryl Tellurides

31.20.5.1 Synthesis of Product Subclass 5

31.20.5.1.1 Method 1: Synthesis by Substitution

31.20.5.1.2 Method 2: Synthesis by Elimination

31.20.5.2 Applications of Product Subclass 5 in Organic Synthesis

31.20.6 Product Subclass 6: Aryltelluronium Salts

31.20.6.1 Synthesis of Product Subclass 6

31.20.6.1.1 Method 1: Synthesis by Substitution

31.20.6.2 Applications of Product Subclass 6 in Organic Synthesis

31.20.7 Product Subclass 7: Arenetellurolenic Acid Derivatives

31.20.7.1 Synthesis of Product Subclass 7

31.20.7.1.1 Method 1: Synthesis by Substitution

31.20.7.2 Applications of Product Subclass 7 in Organic Synthesis

31.20.8 Product Subclass 8: Diaryl Ditellurides

31.20.8.1 Synthesis of Product Subclass 8

31.20.8.1.1 Method 1: Synthesis by Substitution

31.20.8.2 Applications of Product Subclass 8 in Organic Synthesis

Volume 31b: Arene—X (X = N, P)

Preface ...................................................................... V

Volume Editor’s Preface .............................................. VII

Table of Contents ........................................................ XI

31.21 Product Class 21: Nitroarenes
K. M. Aitken and R. A. Aitken ........................................ 1183

31.22 Product Class 22: Nitrosoarenes
K. Rück-Braun and B. Priewisch ...................................... 1321

31.23 Product Class 23: Arenediazonium Salts
P. O’Leary ................................................................... 1361

31.24 Product Class 24: Azoxyarenes (Di- and Monoaryldiazene Oxides)
K. Rück-Braun and B. Priewisch ...................................... 1401

31.25 Product Class 25: Azoarenes
K. Rück-Braun, S. Dietrich, S. Kempa, and B. Priewisch .... 1425

31.26 Product Class 26: (Arylimino)phosphines and (Arylimino)phosphoranes
M. Alajarín, C. López-Leonardo, and J. Berná .................. 1539

31.27 Product Class 27: Arylamine N-Oxides and Arylaminoxyl Radicals
A. Schmidt .................................................................. 1555

31.28 Product Class 28: Arylamines
U. Scholz and B. Schlummer .......................................... 1565

31.29 Product Class 29: Arylammonium Salts
B. Schlummer and U. Scholz .......................................... 1679

31.30 Product Class 30: N-Silylarylamines
J. L. Chiara .................................................................. 1697

31.31 Product Class 31: N-Borylarylamines
J. L. Chiara .................................................................. 1711

31.32 Product Class 32: N-Haloarylamines
J. L. Chiara .................................................................. 1725

31.33 Product Class 33: N-Arylhydroxylamines
A. Schmidt .................................................................. 1739
31.34 Product Class 34: Arylhydrazines
M. Begtrup and L. K. Rasmussen ............................................... 1773

31.35 Product Class 35: Aryl Azides
S. Bräse, D. Keck ................................................................. 1827

31.36 Product Class 36: Aryltriazenes, Aryltetrazenes, and Related Compounds
S. Bräse and T. Muller ............................................................. 1845

31.37 Product Class 37: N-Phosphinoarylamines
M. Alajarín, C. López-Leonardo, and J. Berná ............................. 1873

31.38 Product Class 38: Cyclic Arylamines
P. J. Stevenson ............................................................... 1885

31.39 Product Class 39: Arylphosphonic Acids and Derivatives
I. B. Gorrell and T. P. Kee ..................................................... 1939

31.40 Product Class 40: Arylphosphinic Acids and Derivatives
H.-J. Cristau and D. Virieux .................................................. 1963

31.41 Product Class 41: Arylphosphine Oxides
C. A. Ramsden ............................................................... 2035

31.42 Product Class 42: Arylphosphines and Derivatives
P. J. Murphy and H. Böckemeier ............................................. 2057

31.43 Product Class 43: Arylphosphonium Salts and Derivatives
J. C. Tebby and D. W. Allen .................................................. 2083

31.44 Product Class 44: P-Heteroatom-Substituted Arylphosphines
M. Alajarín, C. López-Leonardo, and J. Berná ................................ 2105

Keyword Index ................................................................. 2155

Table of Contents

31.21 Product Class 21: Nitroarenes  K. M. Aitken and R. A. Aitken

31.21.1 Method 1: Substitution of Hydrogen Using Nitric Acid Alone  1183
31.21.1.1 Variation 1: Using Dilute Nitric Acid  1183
31.21.1.2 Variation 2: Using Concentrated Nitric Acid  1185
31.21.1.3 Variation 3: Using Fuming Nitric Acid  1186
31.21.1.4 Variation 4: Using Nitric Acid on a Solid Support  1188
31.21.1.5 Variation 5: Using Nitric Acid in an Ionic Liquid  1190
31.21.1.6 Method 2: Substitution of Hydrogen Using Nitric and Sulfuric Acids  1191
31.21.1.7 Method 3: Substitution of Hydrogen Using Nitric and Acetic Acids  1194
31.21.1.8 Method 4: Substitution of Hydrogen Using Nitric and Acetic Acids with Additional Acid Catalysts  1196
31.21.1.9 Method 5: Substitution of Hydrogen Using Nitric Acid and Acetic Anhydride  1197
31.21.1.10 Method 6: Substitution of Hydrogen Using Nitric Acid and Acetic Anhydride–Acetic Acid  1198
31.21.1.11 Method 7: Substitution of Hydrogen Using Nitric and Trifluoroacetic Acids  1198
31.21.1.12 Method 8: Substitution of Hydrogen Using Nitric Acid and Trifluoroacetic Anhydride  1198
31.21.1.13 Method 9: Substitution of Hydrogen Using Nitric Acid and Other Acids  1199
31.21.1.14 Variation 1: Using Nitric and Trifluoromethanesulfonic Acids  1199
31.21.1.15 Variation 2: Using Nitric and Hydrochloric Acids  1199
31.21.1.16 Variation 3: Using Nitric and Fluorosulfonic Acids  1200
31.21.1.17 Variation 4: Using Nitric and Triflatoboric Acids  1200
31.21.1.18 Variation 5: Using Nitric Acid and Trifluoromethanesulfonic Anhydride  1201
31.21.1.19 Variation 6: Using Nitric Acid and Phosphorus Pentoxide  1202
31.21.1.20 Variation 7: Using Nitric Acid and Brønsted Acidic Ionic Liquids  1202
31.21.1.21 Method 10: Substitution of Hydrogen Using Alkali Metal Nitrates and Bronsted Acids  1202
31.21.1.22 Variation 1: Using Sulfuric Acid  1203
31.21.1.23 Variation 2: Using Acetic Acid  1206
31.21.1.24 Variation 3: Using Hydrofluoric Acid  1206
31.21.1.25 Variation 4: Using Hydrochloric Acid  1207
31.21.1.26 Variation 5: Using Trifluoroacetic Acid  1207
31.21.1.27 Variation 6: Using Boron Trifluoride Monohydrate  1208
31.21.1.28 Method 11: Substitution of Hydrogen Using Nitric Acid or Its Salts and Lewis Acid Catalysts  1209
31.21.1.29 Variation 1: Using Nitric Acid and Tin(IV) Chloride  1209
31.21.1.30 Variation 2: Using Alkali Metal Nitrates, Aluminum Trichloride, and Chlorotrimethylsilane  1210
Variation 3: Using Alkali Metal Nitrates and Iron(III) Chloride or Titanium(IV) Chloride

Variation 4: Using Nitric Acid and Indium(III) Bis(trifluoromethylsulfonyl)amide

Variation 5: Using Nitric Acid and Lanthanide or Group 4 Metal Trifluoromethanesulfonates

Variation 6: Using Nitric Acid and Other Lanthanide Perfluoroalkanesulfonates

Variation 7: Using Nitric Acid and Lanthanide Arenesulfonates

Variation 1: Using Sodium Nitrate, Hydrogen Chloride, and Lanthanum(III) Nitrate

Variation 2: Using Nitric Acid and Mercury(II) Nitrate with an Acid Resin

Method 12: Substitution of Hydrogen Using Nitric Acid or Its Sodium Salt with Another Metal Nitrate

Method 13: Substitution of Hydrogen Using Nitric Acid and Mercury(II), Thallium(III), or Lead(IV) Acetate

Method 14: Substitution of Hydrogen Using Nitric Acid and Ammonium Molybdate

Method 15: Substitution of Hydrogen Using Vanadyl Nitrate

Method 16: Substitution of Hydrogen Using Transition Metal Nitrates

Variation 1: Using Iron(III) Nitrate

Variation 2: Using Copper(II) Nitrate

Variation 3: Using Chromium(III) Nitrate

Method 17: Substitution of Hydrogen Using Yttrium or Lanthanide Nitrates

Method 18: Substitution of Hydrogen Using Clay-Supported Metal Nitrates

Variation 1: Using Ammonium Nitrate

Variation 2: Using Iron(III) Nitrate

Variation 3: Using Copper(II) and Chromium(III) Nitrates

Variation 4: Using Bismuth(III) Nitrate

Method 19: Substitution of Hydrogen Using Bismuth Subnitrate and Thionyl Chloride

Method 20: Substitution of Hydrogen Using Sodium Nitrate and Phosphorus Pentoxide

Method 21: Substitution of Hydrogen Using Silver(I) Nitrate and Boron Trifluoride

Method 22: Substitution of Hydrogen Using Silver(I) Nitrate and Benzeneselenenyl Chloride

Method 23: Substitution of Hydrogen Using Copper(II) or Lead(II) Nitrate and Acetic Acid with Microwave Irradiation

Method 26: Substitution of Hydrogen Using Ammonium Nitrate and Trifluoroacetic or Trifluoromethanesulfonic Anhydride
Method 27: Substitution of Hydrogen Using Clay-Supported Metal Nitrates and Acetic Anhydride ............................................. 1225

Variation 1: Using Copper(II) Nitrate .................................................. 1225
Variation 2: Using Other Metal Nitrates ............................................... 1226

Method 29: Substitution of Hydrogen Using Ammonium Cerium(IV) Nitrate Alone .......................................................... 1227
Variation 1: Using Acetic Anhydride ...................................................... 1229
Variation 2: Using Hydrogen Peroxide .................................................. 1228

Method 30: Substitution of Hydrogen Using Ammonium Cerium(IV) Nitrate with Oxidizing Agents .............................. 1228
Variation 1: Using Iodine .................................................................. 1228
Variation 2: Using Hydrogen Peroxide .................................................. 1228

Method 31: Substitution of Hydrogen Using Ammonium Cerium(IV) Nitrate with Dehydrating Agents ............................ 1229
Variation 1: Using Acetic Anhydride ...................................................... 1229
Variation 2: Using Sulfuric Acid ............................................................. 1229
Variation 3: Using Sulfuric Acid and an Additive ................................. 1230

Method 32: Substitution of Hydrogen Using Ammonium Cerium(IV) on Silica Gel ............................................................... 1230

Method 33: Substitution of Hydrogen Using Acyl and Alkyl Nitrates .................................................................................... 1231
Variation 1: Using Acetyl Nitrate ............................................................ 1231
Variation 2: Using Benzoyl Nitrate ......................................................... 1231
Variation 3: Using 1-Alkyl-3-[(nitrooxy)carbonyl]pyridinium Salts .......... 1231

Method 34: Substitution of Hydrogen Using Nitroalkanes ..................... 1232
Variation 1: Using Tetranitromethane .................................................... 1232
Variation 2: Using Nitrocyclohexadienones ........................................... 1233

Method 35: Substitution of Hydrogen Using Organic Nitrates ................. 1234
Variation 1: Using Pyridinium Nitrate ..................................................... 1234
Variation 2: Using Urea Nitrate .............................................................. 1234
Variation 3: Using Guanidinium Nitrate .................................................. 1235

Method 36: Substitution of Hydrogen Using Nitrogen Dioxide Alone ...... 1236

Method 37: Substitution of Hydrogen Using a Photochemical Reaction with Nitrogen Dioxide .................................................. 1237

Method 38: Substitution of Hydrogen Using Nitrogen Dioxide with Bronsted Acids ................................................................. 1237
Variation 1: Using Sulfuric Acid .............................................................. 1237
Variation 2: Using Trifluoroacetic Acid .................................................. 1237

Method 39: Substitution of Hydrogen Using Nitrogen Dioxide with Lewis Acids ........................................................................ 1237
Variation 1: Using Boron Trifluoride ....................................................... 1237
Variation 2: Using Aluminum Trichloride .............................................. 1238

Variation 1: Using Silica Gel ........................................ 1240
Variation 2: Using Silica Acetate ................................. 1240
Method 42: Substitution of Hydrogen Using Nitrogen Dioxide with Oxygen ........................................ 1241
Variation 1: Iron-Catalyzed Reaction ............................... 1241
Variation 2: Zeolite-Catalyzed Reaction ........................... 1241
Method 43: Substitution of Hydrogen Using Nitrogen Dioxide with Ozone: “Kyodai” Nitration ........................................ 1242
Method 44: Substitution of Hydrogen Using Dinitrogen Pentoxide .................................................. 1245
Variation 1: Using Zeolites ........................................... 1246
Variation 2: Using Iron(III) Acetylacetonate ....................... 1246
Variation 3: Using Zirconium(IV) Acetylacetonate ................. 1247
Variation 4: In Perfluorinated Solvents ............................. 1247
Method 48: Substitution of Hydrogen Using Nitronium Salts and Complexes .............................................. 1248
Variation 1: Using Nitronium Tetrafluoroborate ...................... 1248
Variation 2: Using Nitronium Hexafluorophosphate ................ 1250
Variation 3: Using Nitronium Hydrogen Sulfate .................... 1250
Variation 4: Using Nitronium Fluoride ............................... 1250
Variation 5: Using Sodium Nitrite and Selectfluor .................. 1251
Variation 6: Using Nitronium Chloride ............................... 1251
Variation 7: Using Nitrodiazonium Tetrafluoroborate .............. 1252
Variation 8: Using Heterocyclic N-Nitro Salts ......................... 1252
Method 49: Substitution of Hydrogen Using Nitric Oxide and Oxygen .................................................. 1254
Method 50: Substitution of Hydrogen Using Nitrosonium Salts and Oxygen .................................................. 1254
Variation 1: Using Sulfuric Acid ...................................... 1254
Variation 2: Using Acetic Acid ........................................ 1255
Variation 3: Using Trifluoroacetic Acid .............................. 1256
Variation 4: Using Ammonium Peroxydisulfate ...................... 1257
Variation 5: Using Silica Sulfuric Acid ............................... 1257
Variation 6: Using Trichloroisocyanuric Acid and Silica Gel ........ 1258
Variation 7: Using Sodium or Magnesium Hydrogen Sulfate and Silica Gel .................................................. 1258
Variation 8: Using Oxone and Silica Gel ............................. 1259
Method 52: Substitution of Hydrogen Using Electrochemical Reactions .................................................. 1259
Variation 1: With Nitric Acid ........................................ 1259
Variation 2: With Nitrogen Dioxide ................................. 1259
Method 53: Substitution of Lithium by Reaction of Aryllithium Reagents with Nitrogen Dioxide .................. 1260
Method 54: Substitution of Copper by Reaction of Phenylcopper with Nitric Acid .......................................................... 1260
Method 55: Substitution of Boron by Reaction of an Arylboronic Acid with a Metal Nitrate and a Dehydrating Agent 1260
Variation 1: Using Ammonium Nitrate and Trifluoroacetic Anhydride 1260
Variation 2: Using Ammonium or Silver(I) Nitrate and Chlorotrimethylsilane ................................................................. 1261
Method 56: Substitution of Silicon by Reaction of an Aryltrimethylsilane with a Nitrating Agent ........................................ 1261
Variation 1: Using Nitric Acid and Acetic Anhydride .................. 1262
Variation 2: Using Nitric and Sulfuric Acids ............................ 1263
Variation 3: Using Nitronium Tetrafluoroborate ....................... 1263
Method 57: Substitution of Tin by Reaction of an Aryltrimethylstannane with Nitrosyl Chloride Followed by Potassium Permanganate Oxidation ............................................. 1263
Method 58: Substitution of a Carboxylic Acid Group Using Nitric Acid ............................................................... 1264
Method 59: Substitution of a Carboxylic Acid Group Using Nitric and Acetic Acids ........................................................ 1264
Method 60: Substitution of a Carboxylic Acid Group Using Nitric Acid and 2,2'-Azobisisobutyronitrile ................................. 1265
Method 61: Substitution of an Aldehyde Group Using Nitric and Sulfuric Acids ............................................................. 1265
Method 62: Substitution of a tert-Butyl Group in a Calixarene or a [2.2.2]Metacyclophane .............................................. 1266
Variation 1: Using Nitric and Sulfuric Acids ............................ 1266
Variation 2: Using Nitric and Acetic Acids .............................. 1267
Variation 3: Using Nitric and Trifluoroacetic Acids .................... 1268
Variation 4: Using Copper(II) Nitrate and Trifluoroacetic Acid .... 1269
Variation 5: Using Copper(II) Nitrate and Trifluoroacetic Acid .... 1270
Method 63: Substitution of a tert-Butyl or an Isopropyl Group Using Nitronium Tetrafluoroborate ...................................... 1271
Method 64: Substitution of a Methyl Group Using Nitric and Sulfuric Acids ................................................................. 1271
Method 65: Substitution of Chlorine Using Nitric Acid ............... 1272
Method 66: Substitution of Chlorine Using Nitric and Acetic Acids 1272
Method 67: Substitution of Chlorine Using Alkali Metal Nitrites ..... 1272
Method 68: Substitution of Bromine Using Nitric Acid ............... 1273
Method 69: Substitution of Bromine Using Nitric and Sulfuric Acids 1274
Method 70: Substitution of Bromine Using Nitric Acid and Acetic Anhydride .............................................................. 1275
Method 71: Substitution of Bromine Using Sodium Nitrite and Acetic Acid ................................................................. 1276
Method 72: Substitution of Bromine Using Ethyl Nitrite ............... 1276
Method 73: Substitution of Bromine Using Sodium Nitrite and Sulfuric Acid ............................................................... 1278
Method 74: Substitution of Iodine Using Nitric Acid .................... 1277
Method 75: Substitution of Iodine Using Nitric and Acetic Acids 1278
Method 76: Substitution of Iodine Using Sodium Nitrite and Sulfuric Acid ............................................................... 1278
Method 77: Substitution of Iodine Using Silver(I) Nitrate ............. 1278
31.21.1.78 Method 78: Substitution of Sulfur by Reaction of an Arenesulfonic Acid with Nitric Acid ........................................ 1278
31.21.1.79 Method 79: Substitution of Nitrogen by Reaction of Diazonium Salts with Sodium Nitrite ........................................ 1279
31.21.1.80 Method 80: Substitution of Nitrogen by Reaction of Diazonium Salts with Sodium Nitrite and Copper Metal ............. 1280
31.21.1.80.1 Variation 1: Using Conventional Diazotization .......................... 1280
31.21.1.80.2 Variation 2: Using Nitrosonium Tetrafluoroborate .................... 1281
31.21.1.81 Method 81: Substitution of Nitrogen by Reaction of Diazonium Salts with Sodium Nitrite and Copper(I) Oxide .............. 1282
31.21.1.81.1 Variation 1: Using Conventional Diazotization .......................... 1282
31.21.1.81.2 Variation 2: Using Diazonium Hexanitrocobaltates(III) ............... 1283
31.21.1.82 Method 82: Substitution of Nitrogen by Reaction of Diazonium Salts with Sodium Nitrite and Copper(II) Sulfate .......... 1283
31.21.1.82.1 Variation 1: Using Conventional Diazotization .......................... 1283
31.21.1.82.2 Variation 2: Using Isopentyl Nitrite ........................................ 1283
31.21.1.83 Method 83: Substitution of Nitrogen by Reaction of Diazonium Salts with Sodium Nitrite, Copper(I) Oxide, and Copper(II) Sulfate 1284
31.21.1.83.1 Variation 1: Using Diazonium Sulfates or Chlorides ..................... 1284
31.21.1.83.2 Variation 2: Using Diazonium Hexanitrocobaltates(III) ............... 1285
31.21.1.84 Method 84: Substitution of Nitrogen by Reaction of Diazonium Salts with Sodium Nitrite and Copper(I,II) Sulfite .......... 1286
31.21.1.85 Method 85: Oxidation of Primary Amines Using Oxygen with a Metal Catalyst ........................................ 1287
31.21.1.86.1 Variation 1: With a Transition Metal Complex Catalyst .................. 1287
31.21.1.86.2 Variation 2: With Ruthenium(III) Chloride and a Phase-Transfer Catalyst .......................... 1288
31.21.1.86.3 Variation 3: With Enzymatic Catalysis ...................................... 1288
31.21.1.86.4 Variation 4: With an Acetylcholine Catalyst ................................ 1288
31.21.1.86.5 Variation 5: With a Silica Gel Supported Fluoro Ketone Catalyst .... 1289
31.21.1.87 Method 87: Oxidation of Primary Amines Using Sodium Peroxide ..... 1289
31.21.1.88 Method 88: Oxidation of Primary Amines Using Hypofluorous Acid .... 1289
31.21.1.89 Method 89: Oxidation of Primary Amines Using Nitrogen Oxides ...... 1290
31.21.1.90 Method 90: Oxidation of Primary Amines Using Peroxydisulfuric Acid or Peroxysulfuric Acid ........................................ 1290
31.21.1.91 Method 91: Oxidation of Primary Amines Using Sodium Perborate ...... 1292
31.21.1.92 Method 92: Oxidation of Primary Amines Using Sodium Peroxycarbonate 1293
31.21.1.93 Method 93: Oxidation of Primary Amines Using Quaternary Ammonium Bromates ........................................ 1293
31.21.1.94 Method 94: Oxidation of Primary Amines Using Potassium Permanganate ........................................ 1293
31.21.1.95 Method 95: Oxidation of Primary Amines Using Potassium Ferrate .... 1293
31.21.1.96 Method 96: Oxidation of Primary Amines Using Organic Peroxides ..... 1294
31.21.1.96.1 Variation 1: Using Dimethyldioxirane ...................................... 1294
31.21.1.96.2 Variation 2: Using a Polymer-Bound Dioxirane .......................... 1295
31.21.1.96.3 Variation 3: Using Other Dioxiranes ......................................... 1295
31.21.1.96.4 Variation 4: Using tert-Butyl Hydroperoxide with a Metal Catalyst ...... 1295
31.21.1.96.5 Variation 5: Using Oxaziridinium Salts ...................................... 1296
31.21.97 Method 97: Oxidation of Primary Amines Using Organic Peroxy Acids 1296
31.21.97.1 Variation 1: Using Performic Acid 1296
31.21.97.2 Variation 2: Using Peracetic Acid 1296
31.21.97.3 Variation 3: Using Trifluoroperoxyacetic Acid 1297
31.21.97.4 Variation 4: Using Peroxymaleic Acid 1299
31.21.97.5 Variation 5: Using 3-Chloroperoxybenzoic Acid 1299
31.21.97.6 Variation 6: Using Peroxytrifluoromethanesulfonic Acid 1300
31.21.98 Method 98: Oxidation of Tertiary Amines Using Trifluoroperoxyacetic Acid 1300
31.21.100 Method 100: Oxidation of Acetanilides Using Ozone in Oleum 1301
31.21.101 Method 101: Oxidation of Nitroso Compounds Using Oxygen with a Transition Metal Catalyst 1301
31.21.102 Method 102: Oxidation of Nitroso Compounds Using Aqueous
Hydrogen Peroxide 1302
31.21.102.1 Variation 1: With a Base 1302
31.21.102.2 Variation 2: With a Transition Metal Catalyst 1302
31.21.103 Method 103: Oxidation of Nitroso Compounds Using Nitrogen Oxides 1303
31.21.104 Method 104: Oxidation of Nitroso Compounds Using Nitrous Acid 1303
31.21.105 Method 105: Oxidation of Nitroso Compounds Using Nitric Acid 1303
31.21.106 Method 106: Oxidation of Nitroso Compounds Using Sulfuric Acid 1304
31.21.107 Method 107: Oxidation of Nitroso Compounds Using Fluorosulfonic Acid 1305
31.21.110 Method 110: Oxidation of Nitroso Compounds Using Potassium Permanganate 1306
31.21.111 Method 111: Oxidation of Nitroso Compounds Using Potassium Hexacyanoferrate(III) with a Base 1307
31.21.112 Method 112: Oxidation of Nitroso Compounds Using Peracetic Acid 1307
31.21.113 Method 113: Oxidation of Nitroso Compounds Using Trifluoroperoxyacetic Acid 1308
31.21.114 Method 114: Oxidation of Nitroso Compounds Using 3-Chloroperoxybenzoic Acid 1309
31.21.115 Method 115: Oxidation of Nitroso Compounds Using Iodosylbenzene with a Metal Catalyst 1309
31.21.116 Method 116: Oxidation of Sulfimides Using 3-Chloroperoxybenzoic Acid 1309

31.22 Product Class 22: Nitrosoarenes
K. Rück-Braun and B. Priewisch

31.22 Product Class 22: Nitrosoarenes 1321
31.22.1 Synthesis of Product Class 22 1321
31.22.1.1 Nitrosation Reactions 1321
31.22.1.1.1 Method 1: Nitrosation of Phenols by Nitrous Acid 1322
31.22.1.1.1.1 Variation 1: Nitrosation of Phenols by Alkyl Nitrites 1325

Product Class 22: Nitrosoarenes
K. Rück-Braun and B. Priewisch

31.22 Product Class 22: Nitrosoarenes 1321

31.23 Product Class 23: Arenediazonium Salts
P. O’Leary

31.23 Product Class 23: Arenediazonium Salts .................................................. 1361
31.23.1 Product Subclass 1: Simple Arenediazonium Salts ................................. 1362
31.23.1.1 Synthesis of Product Subclass 1 ............................................................. 1363
31.23.1.1.1 Method 1: Direct Introduction of the Diazonium Group ...................... 1363
31.23.1.1.2 Method 2: Diazotization of Primary Aromatic Amines ..................... 1364
31.23.1.1.2.1 Variation 1: Diazotization Using 2,2-Dimethylpropane-1,3-diy1 Dinitrite 1364
31.23.1.1.2.2 Variation 2: Formation of Arenediazonium Salts by Diazotization in Acidic Solution .................................................. 1365
31.23.1.1.3 Method 3: Reactions of Anilines with Sodium Nitrite in Acidic Media, Followed by Anion Exchange ............................................. 1369
31.23.1.1.3.1 Variation 1: Use of an Inorganic Salt To Alter the Anion .................. 1370
31.23.1.1.3.2 Variation 2: Use of an Acid To Alter the Anion ............................... 1373
31.23.1.1.4 Method 4: Diazotization of Weakly Basic Amines by Dissolution in Pyridine, Prior to Treatment with Sodium Nitrite and Sulfuric Acid .................................................. 1374
31.23.1.1.5 Method 5: Diazotization of Aromatic Amines under “Anhydrous” Conditions .................................................. 1375
31.23.1.1.5.1 Variation 1: Diazotization Using Alkyl Nitrates and an Acid as the Anion Donor .................................................. 1375
31.23.1.1.5.2 Variation 2: Reactions Using Boron Trifluoride as the Anion Source 1377
31.23.1.1.5.3 Variation 3: Reactions Using Organic Compounds as the Anion Source 1378
31.23.1.1.5.4 Variation 4: Diazotization Using Nitrosonium Tetrafluoroborate 1379
31.23.1.1.5.5 Variation 5: Diazotization Using Nitric Oxide or Nitric Oxide and Lead(IV) Oxide .................................................. 1380
31.23.1.1.6 Method 6: Synthesis and Isolation of Arenediazonium Salts by Amine Diazotization under Solvent-Free Conditions .................................................. 1381
31.23.1.1.6.1 Variation 1: Diazotization with Nitrogen Dioxide Gas ...................... 1381
31.23.1.1.6.2 Variation 2: Diazotization Using Liquid Nitrogen Dioxide ............. 1382
31.23.1.1.6.3 Variation 3: Diazotization with Nitrosyl Chloride ............................ 1383
31.23.1.1.7 Method 7: Synthesis of Arenediazonium Salts with Simultaneous Modification of Other Substituents .................................................. 1384
31.23.1.1.7.1 Variation 1: With Ester Cleavage ...................................................... 1384
31.23.1.1.7.2 Variation 2: Diazotization and Heterocyclization ............................ 1384
31.23.1.1.8 Method 8: Synthesis from N-Acylarylamines Using Nitrosyl Reagents 1385
31.23.1.1.9 Method 9: Synthesis of Diazonium Salts from Imines, N-Sulfinylamines, Nitrosoarenes, or N,N-Disilylanilines with Nitrosyl Compounds .................................................. 1386
31.23.1.1.9.1 Variation 1: From Benzaldehyde Arylimines and a Nitrosyl Reagent .................................................. 1386
31.23.1.1.9.2 Variation 2: From N-Sulfinylamines and Nitrosonium Perchlorate or Nitrosonium Hexachloroantimonate .................................................. 1387
31.23.1.1.9.3 Variation 3: From Nitrosoarenes and Nitrosyl Halides .......................... 1387
31.23.1.1.9.4 Variation 4: From N,N-Bis(trimethylsilyl)anilines .............................. 1388
31.23.1.1.10 Method 10: Synthesis from 1-Alkyl-2-aryl- or 1,2-Diaryldiazenes .................. 1388
31.23.1.1.11 Method 11: Synthesis from Alkyl(aryl)triazenes .................................. 1389
31.23.12 Method 12: Synthesis from Other Arenediazonium Salts 1390

31.23.2 Product Subclass 2: Arenediazonium Inner Salts 1391

31.23.2.1 Synthesis of Product Subclass 2 1391

31.23.2.1.1 Method 1: Hydration of Halo- or Nitrodiazonium Salts 1391

31.23.2.1.2 Method 2: Diazotization of Aminophenols, Aminonaphthols, Aminobenzenesulfonic Acids, and Aminoarencarboxylic Acids in Acidic Media 1392

31.23.2.1.3 Method 3: Diazotization and Oxidation of Aminoaarenes in Acidic Media 1394

31.23.3 Product Subclass 3: Polymeric and Immobilized Arenediazonium Salts 1394

31.24 Product Class 24: Azoxyarenes (Di- and Monoaryldiazenone Oxides)
K. Rück-Braun and B. Priewisch

31.24.1 Product Subclass 1: Symmetrically Substituted Diaryldiazenone Oxides 1401

31.24.1.1 Synthesis of Product Subclass 1 1402

31.24.1.1.1 Method 1: Reduction of Nitroarenes 1402

31.24.1.1.1.1 Variation 1: Reduction with Glucose 1403

31.24.1.1.1.2 Variation 2: Reduction with Zinc/Aluminum Trichloride 1403

31.24.1.1.1.3 Variation 3: Reduction with Bismuth 1404

31.24.1.1.4 Variation 4: Catalytic Hydrogenation 1405

31.24.1.1.5 Variation 5: Electrochemical Reduction 1406

31.24.1.1.2 Method 2: Condensation of Nitrosoarenes with N-Arylhydroxylamines 1407

31.24.1.1.3 Method 3: Oxidation of Anilines 1408

31.24.1.1.3.1 Variation 1: Oxidation with Peroxy Acids 1408

31.24.1.1.3.2 Variation 2: Catalytic Oxidation with Hydrogen Peroxide 1408

31.24.1.1.4 Method 4: Oxidation of Diaryldiazenes with Peroxy Acids 1409

31.24.2 Product Subclass 2: Unsymmetrically Substituted Diaryldiazenone Oxides 1410

31.24.2.1 Synthesis of Product Subclass 2 1411

31.24.2.1.1 Method 1: Oxidation of Diaryldiazenes 1411

31.24.2.1.2 Method 2: Reaction of Nitroarenes with (Arylimino)dimagnesium Reagents 1412

31.24.2.1.3 Method 3: Reaction of 1-Aryl-2-(tosyloxy)diazenone 1-Oxides and 1-Aryl-2-fluorodiazenone 1-Oxides with Aryl Grignard Reagents 1413

31.24.2.1.4 Method 4: Oxidation of Indazole Oxides 1413

31.24.2.1.5 Method 5: Electrophilic Substitution of Diaryldiazene Oxides 1414

31.24.3 Product Subclass 3: Monoaryldiazenone Oxides 1416

31.24.3.1 Synthesis of Product Subclass 3 1416

31.24.3.1.1 Method 1: Condensation of Nitrosoarenes with N,N-Dihaloalkylamines 1416

31.24.3.1.2 Method 2: Reaction of 1-Aryl-2-(tosyloxy)diazenone 1-Oxides and 1-Aryl-2-fluorodiazenone 1-Oxides with Alkyl Grignard Reagents 1417

31.24.3.1.3 Method 3: Oxidation of Alkyl(aryl)diazenes 1417

31.24.3.1.4 Method 4: Oxidation of Hydrazones 1418
Method 5: Condensation of Nitrosoarenes with N-Alkylhydroxylamines 1419
Method 6: Functional-Group Transformations 1419

Product Class 25: Azoarenes
K. Rück-Braun, S. Dietrich, S. Kempa, and B. Priewisch

Product Subclass 1: Diaryldiazenes
Synthesis of Product Subclass 1 1426
Coupling of Arenediazonium Salts 1426
Method 1: Coupling with Phenols 1427
Method 2: Coupling with Aryl Ethers 1434
Method 3: Coupling with Arylamines 1438
Variation 1: Coupling of (Arylamino)methanesulfonic Acids 1443
Variation 2: Rearrangement of Triazenes 1445
Method 4: Coupling with Arylhydrazine Derivatives 1446
Method 5: Coupling with Nonactivated Arenes and Hetarenes 1447
Method 6: Coupling of Diazonium Salts with Elimination of Nitrogen 1451
Method 7: Synthesis of Polyazo Compounds 1452
Variation 1: Coupling with Azo Compounds 1455
Condensation Reactions 1457
Method 1: Condensation of Nitrosoarenes with Arylamines in Acetic Acid 1457
Method 2: Condensation of Nitrosoarenes with Arylamines in the Presence of a Base 1459
Method 3: Condensation of Nitroarenes with Arylamines in Aqueous Sodium Hydroxide 1461
Variation 1: Condensation of Nitroarenes with Arylamines in the Presence of Powdered Sodium Hydroxide 1462
Method 4: Condensation of Nitroarenes with Acetylated Arylamines 1463
Method 5: Condensation of Arylhydrazines with Quinones 1464
Variation 1: Condensation with Cyclohexadienones 1466
Variation 2: Condensation with Quinone Diacetals 1468
Reduction of Nitroarenes 1468
Method 1: Reduction with Zinc 1469
Method 2: Reduction with Glucose 1470
Method 3: Catalytic Hydrogenation 1471
Variation 1: Catalytic Transfer Hydrogenation 1471
Method 4: Reduction with Lithium Aluminum Hydride 1472
Variation 1: Reduction with Sodium Bis(2-methoxyethoxy)aluminum Hydride 1474
Variation 2: Reduction with Sodium Borohydride 1474
Method 5: Electrochemical Reduction 1475
Reduction of Diaryldiazene Oxides 1476
Method 1: Reduction of Diaryldiazene Oxides 1476
31.25.1.1.5 Oxidation of Arylamines .................................................. 1478
31.25.1.1.5.1 Method 1: Oxidation Using Hypohalites .......................... 1479
31.25.1.1.5.2 Method 2: Oxidation Using Manganese(IV) Oxide ............. 1480
31.25.1.1.5.2.1 Variation 1: Using Manganates or Permanganese ........... 1481
31.25.1.1.5.3 Method 3: Oxidation Using Oxygen ................................. 1482
31.25.1.1.5.4 Method 4: Oxidation Using Sodium Perborate in Acetic Acid 1484
31.25.1.1.5.5 Method 5: Oxidation Using Potassium Hexacyanoferrate(III) 1485
31.25.1.1.6 Oxidation of 1,2-Diarylhydrazines ................................... 1486
31.25.1.1.6.1 Method 1: Oxidation Using Hypohalites .......................... 1486
31.25.1.1.6.2 Method 2: Oxidation Using Oxygen ................................. 1487
31.25.1.1.6.3 Method 3: Oxidation Using Manganese(IV) Oxide ............. 1489
31.25.1.1.7 Oxidation of tert-Butyl 1,2-Diarylhydrazinecarboxylates .......... 1490
31.25.1.1.7.1 Method 1: Oxidation Using N-Bromosuccinimide .......... 1490
31.25.1.1.7.2 Method 2: Oxidation Using Copper(I) Iodide in the Presence of Cesium Carbonate .......................... 1490
31.25.1.1.8 Transformations with Retention of the Functional Group .......... 1493
31.25.1.1.8.1 Method 1: Electrophilic Aromatic Substitution of Hydrogen 1493
31.25.1.1.8.2 Method 2: C–H Bond Activation by Transition Metals .......... 1494
31.25.1.1.8.3 Method 3: Nucleophilic Aromatic Substitution Reactions .... 1495
31.25.1.1.8.3.1 Variation 1: Substitution of Halogens ......................... 1496
31.25.1.1.8.3.2 Variation 2: Substitution of Amino and Hydroxy Groups ...... 1497
31.25.1.1.8.3.3 Variation 3: Displacement of Hydroxy Groups by Phosphoryl Chloride 1497
31.25.1.1.8.4 Method 4: Palladium-Catalyzed Cross-Coupling Reactions .... 1499
31.25.1.1.8.5 Method 5: Transformation of Functional Groups Attached to the Aromatic Ring .......................... 1502
31.25.2 Product Subclass 2: 1-Alkyl-2-aryldiazenes ................................ 1502
31.25.2.1 Synthesis of Product Subclass 2 ........................................... 1502
31.25.2.1.1 Formation of the N=N Bond ............................................ 1503
31.25.2.1.1.1 Method 1: Condensation of Nitrosobenzene with Aliphatic Amines 1503
31.25.2.1.2 Synthesis from Compounds Containing a N–N Bond ............ 1505
31.25.2.1.2.1 Method 1: Condensation of Arenediazonium Salts with CH-Acidic Compounds ........................................ 1505
31.25.2.1.2.2 Method 2: Reaction of Arenediazonium Salts with Organometallic Compounds ........................................ 1509
31.25.2.1.2.3 Method 3: Reductive Alkylation of Arenediazonium Salts .......... 1510
31.25.2.1.2.4 Method 4: Oxidation of Arylhydrazones ........................... 1514
31.25.2.1.2.5 Method 5: Ene-Type Reactions of Arylhydrazones .......... 1518
31.25.2.1.2.6 Method 6: Allylation of Arylhydrazones .......................... 1520
31.25.2.1.2.7 Method 7: Oxidation of 1-Alkyl-2-arylhydrazines ............... 1520
31.25.2.1.2.8 Method 8: Rearrangement of 1-Alkyl-3-arylureas ............... 1523
31.25.2.1.2.9 Method 9: Reduction of 1-Alkyl-2-aryldiazen Oxides ........... 1524

31.28 **Product Class 28: Arylamines**  
U. Scholz and B. Schlummer

31.28 **Synthesis of Product Class 28** .................................. 1565

31.28.1 Method 1: Direct Introduction of Nitrogen Using Bases .......... 1565
31.28.1.1 Variation 1: Using Aluminum Trichloride and Sodium Azide .. 1567
31.28.1.2 Variation 2: Using Aluminum Trichloride and Trichloroamine . 1568
31.28.1.3 Variation 3: Using Aluminum Trichloride and Dichloroamine . 1569
31.28.1.4 Variation 4: Using Dialkylchloroamines and Metal Salts .......... 1569
31.28.1.5 Variation 5: Using Trifluoromethanesulfonic Acid and Azides ... 1570
31.28.1.6 Variation 6: Using Hydroxylamine Derivatives and Acids .......... 1571

31.28.1.7 Method 2: Direct Introduction of Nitrogen Using Acids ........... 1572
31.28.1.8 Variation 1: Using Aluminum Trichloride and Sodium Azide .. 1572
31.28.1.9 Variation 2: Using Aluminum Trichloride and Trichloroamine . 1572
31.28.1.10 Variation 3: Using Aluminum Trichloride and Dichloroamine . 1572
31.28.1.11 Variation 4: Using Dialkylchloroamines and Metal Salts .......... 1572
31.28.1.12 Variation 5: Using Trifluoromethanesulfonic Acid and Azides ... 1572
31.28.1.13 Variation 6: Using Hydroxylamine Derivatives and Acids .......... 1572

31.28.2 Method 3: Catalytic Direct Amination ................................ 1572

31.28.3 Method 4: Direct Amination of Activated Aromatic Systems ........ 1572
31.28.3.1 Variation 1: Using Ammonia–Potassium Amide and Potassium Permanganate ............... 1572
31.28.3.2 Variation 2: Using Cobalt(II) Chloride, Oxygen, and Hydrogen Sulfide ... 1573
31.28.3.3 Variation 3: Using Hydroxylamine ..................................... 1574
31.28.3.4 Method 5: Substitution of Fluoroarenes .............................. 1574
31.28.3.5 Variation 1: Using Ammonia ........................................... 1574
31.28.3.6 Variation 2: Using Primary or Secondary Amines ................ 1576
31.28.3.7 Variation 3: Using Tertiary Amines ..................................... 1577
31.28.3.8 Variation 4: Using Amides, Metal Amides, or Imides ............. 1578
31.28.3.9 Variation 5: Using Ammonium Salts ................................... 1579
31.28.3.10 Method 6: Substitution of Chloroarenes .............................. 1579
31.28.3.11 Variation 1: Using Ammonia ........................................... 1579
31.28.3.12 Variation 2: Using Primary or Secondary Amines ................ 1581
31.28.3.13 Variation 3: Using Tertiary Amines ..................................... 1587
31.28.3.14 Variation 4: Using Amides, Metal Amides, or Imides ............. 1588
31.28.3.15 Variation 5: Using Ammonium Salts ................................... 1589
31.28.3.16 Method 7: Substitution of Bromoarenes .............................. 1589
31.28.3.17 Variation 1: Using Ammonia ........................................... 1589
31.28.3.18 Variation 2: Using Primary or Secondary Amines ................ 1591
31.28.3.19 Variation 3: Using Amides, Metal Amides, or Imides ............. 1595
31.28.3.20 Method 8: Substitution of Iodoarenes .............................. 1597
31.28.3.21 Variation 1: Using Ammonia ........................................... 1597
31.28.3.22 Variation 2: Using Primary or Secondary Amines ................ 1598
31.28.3.23 Variation 3: Using Amides, Metal Amides, or Imides ............. 1601
31.28.3.24 Method 9: Substitution of Phenols ................................... 1601
31.28.3.25 Variation 1: Using Ammonia ........................................... 1601
31.28.3.26 Variation 2: Using Primary or Secondary Amines ................ 1603
31.28.3.27 Variation 3: Using Amides, Metal Amides, or Imides ............. 1605
31.28.3.28 Variation 4: Using Ammonium Salts ................................... 1605
31.28.3.29 Method 10: Substitution of Aryl Ethers and Esters ................. 1606
31.28.3.30 Variation 1: Using Ammonia ........................................... 1606
31.28.3.31 Variation 2: Using Primary or Secondary Amines ................ 1606
Table of Contents

Variation 3: Using Amides, Metal Amides, or Imides ................................... 1609
Variation 4: Using Ammonium Salts ............................................................... 1610
Method 11: Substitution of Aryl Sulfides and Sulfonates ................................. 1611
Method 1: Using Primary or Secondary Amines ............................................. 1611
Variation 2: Using Amides, Metal Amides, or Imides .................................... 1611
Method 12: Substitution of Nitroarenes ........................................................... 1611
Variation 1: Using Ammonia ............................................................................ 1611
Variation 2: Using Primary or Secondary Amines ......................................... 1612
Method 13: Substitution of Other Aryl Derivatives ......................................... 1613
Variation 1: Substitution of Arylplumanes .................................................... 1613
Variation 2: Substitution of Arylbismuthanes ................................................ 1613
Variation 3: Substitution of Arylsiloxanes ....................................................... 1614
Variation 4: Substitution of Arylstannanes .................................................... 1615
Variation 5: Substitution of Arylboronic Acids .............................................. 1615
Variation 6: Substitution of Arylmagnesium Compounds ............................... 1616
Variation 7: Substitution of Arenecarbonitriles ............................................. 1616
Variation 8: Substitution of Arylzincates ....................................................... 1617
Variation 9: Substitution of Arylantimonates ............................................... 1617
Method 14: Reduction of Nitroarenes ............................................................. 1618
Variation 1: Using Transfer Hydrogenation .................................................... 1618
Variation 2: Using Direct Hydrogenation ....................................................... 1619
Variation 3: Using Iron ...................................................................................... 1621
Variation 4: Using Sulfur .................................................................................. 1622
Variation 5: Using Tin ....................................................................................... 1623
Variation 6: Using Hydrazine ......................................................................... 1624
Variation 7: Using Complex Metal Hydrides ................................................... 1625
Variation 8: Using Zinc ..................................................................................... 1625
Variation 9: Using Aluminum ......................................................................... 1626
Variation 10: Using Alkali Metals .................................................................... 1627
Variation 11: Using Electrochemical Methods ............................................... 1627
Method 15: Reduction of Nitrosoarenes .......................................................... 1628
Method 16: Reduction of Arylamine N-Oxides .............................................. 1629
Method 17: Reduction of Azo Compounds ..................................................... 1630
Method 18: Reduction of Azides ...................................................................... 1631
Method 19: Reduction of Isocyanates .............................................................. 1631
Method 20: Reduction of Imines ..................................................................... 1632
Method 21: Reduction of N-Nitrosoanilines .................................................... 1634
Method 22: Reduction of Azoxy Compounds ............................................... 1635
Method 23: Reduction of Hydrazines .............................................................. 1636
Method 24: Reduction of Aminals ................................................................... 1637
Method 25: Reduction of Amides ................................................................... 1637
Method 26: Reduction of Carbamates ............................................................. 1638
Method 27: Reduction of Imidoyl Chlorides .................................................... 1638
Method 28: Partial Reduction of Quinolines .................................................... 1639
Method 29: Alkylation of Benzo-1,4-quinone Derivatives ............................... 1640
Variation 1: Aromatic Alkylation of Benzo-1,4-quinone Diimines .................... 1640
Variation 2: Aromatization of Benzo-1,4-quinone Oximes ............................. 1641
Variation 3: Aromatization of Benzo-1,2-quinones ........................................ 1641

Science of Synthesis Original Edition Volume 31b
© Georg Thieme Verlag KG
Method 30: Synthesis from Cyclic Oximes .................................. 1642
Method 31: Synthesis from Cyclohexanones ............................ 1642
Method 32: Cyclization of Nitriles ........................................ 1644
Method 33: Synthesis by Rearrangement ................................ 1644
Variation 1: Replacement of an Aromatic C—H Bond by a C—S Bond ... 1644
Variation 2: Replacement of an Aromatic C—H Bond by a C—N Bond ... 1645
Variation 3: Replacement of an Aromatic C—H Bond by a C—C Bond ... 1646
Variation 4: Replacement of an Aromatic C—C Bond by a C—N Bond ... 1649
Variation 5: Replacement of an Aromatic C—O Bond by a C—N Bond ... 1652
Variation 6: Replacement of an Aromatic C—S Bond by a C—N Bond ... 1653
Variation 7: Replacement of an Aromatic C—H Bond by a C—O Bond ... 1654
Method 34: Synthesis by Transamination ................................. 1654
Variation 1: Using Primary or Secondary Amines ....................... 1654
Variation 2: Using Ammonium Salts .................................... 1657
Method 35: Reaction of Arylamines with Alkyl Halides or Pseudohalides 1657
Method 36: Reaction of Arysilanamines with Alkyl Halides ............... 1658
Method 37: Reaction of Arylamines with Aliphatic Alcohols ............. 1659
Method 38: Reaction of Arylamines with Aldehydes or Ketones ......... 1659
Method 39: Reaction of Arylamines with Esters ........................ 1660
Variation 1: Using Reactive Esters ...................................... 1660
Variation 2: Using Carboxylic Esters .................................... 1661
Method 40: Reaction of Arylamines with Alkenes ........................ 1662
Variation 1: Hydroamination Reactions .................................. 1662
Variation 2: Michael Addition Reactions .................................. 1663
Method 41: Reaction of Arylamines with Alkynes ........................ 1665
Method 42: Reaction of Arylamines with Epoxides, Cyclic Ethers, 1665
or Aziridines ................................................................. 1666
Variation 1: Using Reactive Esters ...................................... 1666
Variation 2: Using Carboxylic Esters .................................... 1667
Method 43: Reaction of Arylamines with Lactones ....................... 1667
Method 44: Dealkylation Reactions ......................................... 1667

Product Class 29: Arylammonium Salts
B. Schlummer and U. Scholz

Synthesis of Product Class 29 ................................................. 1679
| 31.29.1.4.1 | Variation 1: | Anion Exchange | 1686 |
| 31.29.1.4.2 | Variation 2: | Quaternary Ammonium Hydroxide Formation | 1686 |
| 31.29.1.4.3 | Variation 3: | Halogen Addition | 1688 |
| 31.29.1.4.4 | Variation 4: | Formation of Betaines | 1688 |
| 31.29.2 | Applications of Product Class 29 in Organic Synthesis | 1688 |
| 31.29.2.1 | Method 1: | Formation of Tertiary Amines | 1689 |
| 31.29.2.2 | Method 2: | Quaternary Ammonium Compounds as Alkylating Agents | 1689 |
| 31.29.2.3 | Method 3: | Rearrangements | 1690 |
| 31.29.2.4 | Method 4: | Hofmann Elimination | 1691 |
| 31.29.2.5 | Method 5: | Phase-Transfer Catalysts | 1692 |
| 31.30 | Product Class 30: \(N\)-Silylarylamines | J. L. Chiara |
| 31.30 | Product Class 30: \(N\)-Silylarylamines | 1697 |
| 31.30.1 | Synthesis of Product Class 30 | 1697 |
| 31.30.1.1 | Method 1: | Reaction of Organosilanes with Arylamines | 1697 |
| 31.30.1.1.1 | Variation 1: | Using Cesium Fluoride | 1697 |
| 31.30.1.1.2 | Variation 2: | Using Transition-Metal Catalysts | 1697 |
| 31.30.1.2 | Method 2: | Reaction of Halosilanes with Arylamines | 1698 |
| 31.30.1.2.1 | Variation 1: | Reaction of Chloro[2-[chloro(dimethyl)silyl]ethyl]-dimethylsilane with Primary \(N\)-Arylamines | 1700 |
| 31.30.1.3 | Method 3: | Synthesis Using Silyl Trifluoromethanesulfonates | 1700 |
| 31.30.1.3.1 | Variation 1: | Reaction with Arylamines | 1700 |
| 31.30.1.3.2 | Variation 2: | Reaction with \(N\)-Arylimines | 1701 |
| 31.30.1.4 | Method 4: | Synthesis from Silyl Trichloroacetates and Arylamines | 1701 |
| 31.30.1.5 | Method 5: | Synthesis from \(N,N\)-Dialkylaminosilanes and Arylamines | 1701 |
| 31.30.1.6 | Method 6: | Synthesis from Hexamethyldisilazane and Arylamines | 1702 |
| 31.30.1.7 | Method 7: | Synthesis from Haloarenes and Metal Hexamethyldisilazanides | 1702 |
| 31.30.1.8 | Method 8: | Hydrosilylation of Imines | 1703 |
| 31.30.1.9 | Method 9: | Reductive Silylation of Trifluoromethylamines | 1704 |
| 31.30.1.10 | Method 10: | Reductive Silylation of Azo Compounds | 1705 |
| 31.30.1.11 | Method 11: | Reductive Silylation of Nitroarenes | 1706 |
| 31.30.1.11.1 | Variation 1: | Reduction with Triethylsilane | 1706 |
| 31.30.1.11.2 | Variation 2: | Reduction with Chromium(II)/Manganese(0) | 1707 |
| 31.30.1.12 | Method 12: | Synthesis of Stable \(N\)-Arylsilamides | 1707 |
| 31.30.1.13 | Method 13: | Synthesis of Lithium \(N\)-Arylsilamides | 1707 |
| 31.30.1.14 | Method 14: | Synthesis of \(N,N\)-Neopentyl-1,2-phenylenediaminosilylene | 1708 |
| 31.30.1.15 | Method 15: | Aza-Brook Rearrangement of (\(\alpha\)-Silylallyl)amines to \(N\)-Silylenamines | 1709 |
31.31  Product Class 31: N-Borylarylamines  
J. L. Chiara

31.31  Product Class 31: N-Borylarylamines ........................................... 1711
31.31.1 Synthesis of Product Class 31 .......................................... 1712
31.31.1.1 Method 1: Synthesis from Arylamines ......................... 1712
31.31.1.1.1 Variation 1: By Reaction with Boranes .................... 1713
31.31.1.1.2 Variation 2: By Reaction with Trialkylboranes .......... 1715
31.31.1.1.3 Variation 3: By Reaction with Haloboranes ............... 1715
31.31.1.1.4 Variation 4: By Reaction with Organooxyboranes ...... 1717
31.31.1.1.5 Variation 5: By Reaction with Sulfanylboranes ......... 1718
31.31.1.1.6 Variation 6: By Reaction with Aminoboranes ............. 1719
31.31.1.2 Method 2: Redistribution and Exchange Reactions ........ 1719
31.31.1.3 Method 3: Reductive Alkylation of Azides .................. 1719
31.31.1.4 Method 4: Synthesis from Imines ............................... 1719
31.31.1.4.1 Variation 1: By Hydroboration .............................. 1720
31.31.1.4.2 Variation 2: By Diboration .................................... 1721
31.31.1.5 Method 5: Borylation of Organometallic Reagents ......... 1721

31.32  Product Class 32: N-Haloarylamines  
J. L. Chiara

31.32  Product Class 32: N-Haloarylamines ........................................... 1725
31.32.1 Synthesis of Product Class 32 .......................................... 1727
31.32.1.1 Method 1: Synthesis from Arylamines ......................... 1727
31.32.1.1.1 Variation 1: By Reaction with Halogens .................... 1727
31.32.1.1.2 Variation 2: By Reaction with Inorganic or Organic Hypochlorites .............................. 1729
31.32.1.1.3 Variation 3: By Reaction with Dichlorine Monoxide .......... 1731
31.32.1.1.4 Variation 4: By Reaction with N-Halosuccinimides ....... 1731
31.32.1.1.5 Variation 5: By Reaction with Sulfuryl Chloride .......... 1732
31.32.1.2 Method 2: Synthesis from N-Haloarylamines by Halogen Exchange .............................. 1732
31.32.1.3 Method 3: Synthesis from Imines ................................ 1733
31.32.1.3.1 Variation 1: By Reaction with Halogens .................... 1733
31.32.1.3.2 Variation 2: By Reaction with Hypofluorites .............. 1733
31.32.1.3.3 Variation 3: By Reaction with Cyanogen Bromide ........ 1734
31.32.1.4 Method 4: Synthesis from Orthoamides ....................... 1735

31.33  Product Class 33: N-Arylhydroxylamines  
A. Schmidt

31.33  Product Class 33: N-Arylhydroxylamines ........................................... 1739
31.33.1 Synthesis of Product Class 33 .......................................... 1739
31.33.1.1 Method 1: Substitution of Hydrogen at the the N–H Group of Hydroxylamine and N-Alkylhydroxylamines by Aryl Groups .............................. 1739
31.33.1.1.1 Variation 1: From Aryl and Hetaryl Halides ............... 1739
31.33.1.2 Variation 2: From Hydroxy- or Alkoxy-Substituted Arenes .............. 1744
31.33.1.3 Variation 3: From a Nitrobenzene ............................................. 1744
31.33.1.4 Variation 4: From an Arenesulfonate ............................................. 1745
31.33.1.5 Variation 5: From 4-(Nitroamino)pyrimidines .............................. 1745
31.33.1.2 Method 2: Oxidation of a Dihyroindole To Give an N-Hydroxyindole 1745
31.33.1.3 Method 3: Reaction of an Aniline with N-(Trifluorooracetoxy)succinimide To Give an O-Acyl-N-phenylhydroxylamine ............................ 1746
31.33.1.4 Method 4: Substitution Reaction between N-Benzylhydroxylamine and Hexafluorobenzene To Give N-(Pentafluorophenyl)hydroxylamine ................................................... 1746
31.33.1.5 Method 5: Reduction of Nitro Compounds ..................................... 1747
31.33.1.5.1 Variation 1: By Catalytic Reduction ........................................... 1747
31.33.1.5.2 Variation 2: With Hydrazine ..................................................... 1748
31.33.1.5.3 Variation 3: With Hypophosphites .............................................. 1750
31.33.1.5.4 Variation 4: With Zinc Dust ...................................................... 1750
31.33.1.5.5 Variation 5: With Tin(II) Chloride ............................................. 1752
31.33.1.5.6 Variation 6: With Titanium(III) Chloride .................................... 1753
31.33.1.5.7 Variation 7: With Ammonium(Ill) Chloride ................................ 1754
31.33.1.5.8 Variation 8: By Addition of Grignard Reagents ............................ 1754
31.33.1.5.9 Variation 9: Indium-Mediated Reductive Acylations and Allylations .... 1755
31.33.1.5.10 Variation 10: By Borohydride ............................................... 1756
31.33.1.5.11 Variation 11: Electrochemical Reduction .................................... 1756
31.33.1.5.12 Variation 12: With Baker’s Yeast .......................................... 1756
31.33.1.6 Method 6: Synthesis from Nitroso Compounds .................................. 1756
31.33.1.6.1 Variation 1: Reaction with Grignard and Organolithium Reagents .... 1756
31.33.1.6.2 Variation 2: Addition of Lithium or Tin Enolates to Nitrosobenzene (Nitroso Aldol Synthesis) ........................................ 1757
31.33.1.6.3 Variation 3: O-Selective Nucleophilic Addition of Silyl Enol Ethers Promoted by Lewis Acids ........................................... 1759
31.33.1.6.4 Variation 4: By α-Oxyamination of Aldehydes and Ketones with Proline and Other Asymmetric Organocatalysts ...................... 1760
31.33.1.6.5 Variation 5: By α-Oxyamination of Enamines ................................ 1763
31.33.1.6.6 Variation 6: By Allylboration of Nitrosobenzene ............................ 1764
31.33.1.6.7 Variation 7: Reaction between Nitrosobenzene and 2- and 3-Vinylindoles 1764
31.33.1.7 Method 7: Nucleophilic Addition to Nitrones .................................. 1765
31.33.1.8 Method 8: Rearrangement Reactions ............................................ 1766
31.33.1.9 Method 9: Ring Cleavage of Isoxazoles ....................................... 1768
31.33.1.10 Method 10: N-Hetarylhydroxylamines from 4-Hydroxythiosemicarbazides ................................................... 1768

31.34 Product Class 34: Arylhydrazines
M. Begtrup and L. K. Rasmussen

31.34 Product Class 34: Arylhydrazines ........................................... 1773
31.34.1 Product Subclass 1: Unsubstituted Arylhydrazines ............................. 1774
31.34.1.1 Synthesis of Product Subclass 1 .................................................. 1774
31.34.1.1.1 Method 1: Reduction of Arenediazonium Salts Derived from Arylamines 1774
31.34.1.1.1 Variation 1: Using Sodium Sulfite or Sodium Hydrogen Sulfite 1774
31.34.1.1.2 Variation 2: Using Tin(II) Chloride 1775
31.34.1.1.2 Method 2: Nucleophilic Aromatic Substitution 1776
31.34.1.1.3 Method 3: Transition-Metal-Catalyzed N-Arylation of Hydrazine Derivatives 1777
31.34.1.1.3.1 Variation 1: Palladium-Catalyzed N-Arylation of Benzophenone Hydrazone Followed by Hydrolysis 1777
31.34.1.1.3.2 Variation 2: Copper-Catalyzed N-Arylation of tert-Butyloxycarbonylhydrazine 1778
31.34.1.1.3.3 Variation 3: Copper-Assisted N-Arylation of tert-Butyloxycarbonylhydrazine with a Triarylbumine or a Triarylbumine Diacetate 1779
31.34.1.1.4 Method 4: Electrophilic Hydrazination of Arenes 1780
31.34.1.1.5 Method 5: Electrophilic Hydrazination of Metalated Arenes 1781
31.34.1.1.6 Method 6: Electrophilic N-Amination of Anilines 1782
31.34.1.1.7 Methods 7: Miscellaneous Methods 1782
31.34.2 Product Subclass 2: 1-Alkyl-1-arylhydrazines 1783
31.34.2.1 Synthesis of Product Subclass 2 1783
31.34.2.1.1 Method 1: Nucleophilic Aromatic Substitution 1783
31.34.2.1.2 Method 2: Alkylation of Arylhydrazines 1783
31.34.2.1.3 Method 3: Alkylation of Sodium Hydrazides 1784
31.34.2.1.4 Method 4: Reduction of N-Nitrosoanilines 1784
31.34.2.1.5 Methods 5: Miscellaneous Methods 1785
31.34.3 Product Subclass 3: 1-Alkyl-2-arylhydrazines 1785
31.34.3.1 Synthesis of Product Subclass 3 1785
31.34.3.1.1 Method 1: Alkylation of Arylhydrazines 1785
31.34.3.1.2 Method 2: Alkylation and Arylation of Protected Hydrazine Derivatives 1786
31.34.3.1.3 Method 3: Reduction of Arylhydrazides and Arylhydrazones 1787
31.34.4 Product Subclass 4: 1,2-Dialkyl-1-arylhydrazines 1787
31.34.4.1 Synthesis of Product Subclass 4 1787
31.34.4.1.1 Method 1: Alkylation of (2-Phenylhydrazino)triphenylphosphorane 1788
31.34.4.1.2 Method 2: Reduction of 2-Alkyl-2-arylhydrazones 1788
31.34.4.1.2.1 Variation 1: Using Lithium 1789
31.34.4.1.2.2 Variation 2: Using Lithium Aluminum Hydride 1789
31.34.4.1.3 Method 3: Reduction of 2-Acy1-2-arylhydrazones 1789
31.34.5 Product Subclass 5: 1,1-Dialkyl-2-arylhydrazines 1790
31.34.5.1 Synthesis of Product Subclass 5 1790
31.34.5.1.1 Method 1: N-Arylation 1790
31.34.5.1.1.1 Variation 1: Of 1,1-Disubstituted Hydrazines Using an Activated Arene 1790
31.34.5.1.1.2 Variation 2: Of 1,1-Dialkylhydrazines Using Bromoarenes 1791
31.34.5.1.1.3 Variation 3: Of 1,1-Dialkylhydrazines with Halides or Trifluoromethanesulfonates 1792
31.34.5.1.2 Method 2: Electrophilic Amination of Secondary Amines with N-Aryl-O-(diphenylphosphoryl)hydroxylamine 1792
31.34.5.1.3 Methods 3: Miscellaneous Methods 1793
31.34.6  **Product Subclass 6: 1,1,2-Trialkyl-2-arylhydrazines** ........................................ 1793

31.34.6.1 Synthesis of Product Subclass 6 ......................................................... 1793

31.34.6.1.1 Method 1: Alkylation of 1,1-Dialkyl-2-arylhydrazines ...................... 1793

31.34.7  **Product Subclass 7: 1,1-Diarylhydrazines** ........................................ 1794

31.34.7.1 Synthesis of Product Subclass 7 .......................................................... 1794

31.34.7.1.1 Method 1: Reduction of N-Nitroso Compounds ................................ 1794

31.34.7.1.2 Method 2: Rearrangement Reactions ............................................... 1795

31.34.7.1.3 Methods 3: Miscellaneous Methods ................................................ 1796

31.34.8  **Product Subclass 8: 1-Alkyl-2,2-diarylhydrazines** ................................ 1796

31.34.8.1 Synthesis of Product Subclass 8 .......................................................... 1796

31.34.8.1.1 Method 1: Copper-Catalyzed Ethylation of 1,1-Diarylhydrazines Using Diethylzinc(II) ................................................................. 1796

31.34.8.1.2 Method 2: Alkylation of 1,1-Diarylhydrazines Using Lithium Alkylcyanocuprates ................................................................. 1796

31.34.9  **Product Subclass 9: 1,1-Dialkyl-2,2-diarylhydrazines** ............................ 1797

31.34.9.1 Synthesis of Product Subclass 9 .......................................................... 1797

31.34.10  **Product Subclass 10: 1,2-Diarylhydrazines** ....................................... 1797

31.34.10.1 Synthesis of Product Subclass 10 ....................................................... 1797

31.34.10.1.1 Method 1: Reduction of Nitroarenes ............................................. 1797

31.34.10.1.1.1 Variation 1: Using Zinc ............................................................. 1798

31.34.10.1.1.2 Variation 2: Using Magnesium .................................................. 1798

31.34.10.1.1.3 Variation 3: Using Aluminum ..................................................... 1798

31.34.10.1.2 Method 2: Reduction of Azoxybenzenes ....................................... 1799

31.34.10.1.2.1 Variation 1: Using an Aromatic Secondary Alcohol and Sodium Hydroxide 1799

31.34.10.1.2.2 Variation 2: Using Sodium Dithionite and 1,1′-Dioctyl-4,4′-bipyridinium Dichloride (Dioctyliolgen) as an Electron-Transfer Catalyst 1800

31.34.10.1.2.3 Variation 3: Using Sodium Borohydride and Iodine in Tetrahydrofuran 1800

31.34.10.1.2.4 Variation 4: Electrochemical Reduction of Azoxybenzenes ............. 1800

31.34.10.1.3 Method 3: Reduction of Azoarenes .............................................. 1800

31.34.10.1.3.1 Variation 1: Using Zinc ............................................................. 1801

31.34.10.1.3.2 Variation 2: Using Zinc and Ammonium Formate in an Ionic Liquid .... 1801

31.34.10.1.3.3 Variation 3: Using Sodium Amalgam .......................................... 1802

31.34.10.1.3.4 Variation 4: Using Samarium(II) Iodide .................................... 1802

31.34.10.1.3.5 Variation 5: By Hydrogenation .................................................. 1802

31.34.10.1.3.6 Variation 6: Using Borane in Tetrahydrofuran ............................ 1803

31.34.10.1.3.7 Variation 7: Using Sodium Borohydride–Iodine or Sodium Borohydride–Ammonium Iodide ...................................................... 1804

31.34.10.1.3.8 Variation 8: Using Lithium Aluminum Hydride ............................ 1804

31.34.10.1.3.9 Variation 9: Using Tributyltin Hydride ........................................ 1804

31.34.10.1.3.10 Variation 10: Using Tellurium Reagents ..................................... 1805

31.34.10.1.3.11 Variation 11: Using Hydrazine .................................................. 1805

31.34.10.1.3.12 Variation 12: Using Raney Nickel and Hydrazinium Monoformate 1806

31.34.10.1.3.13 Variation 13: Using Zinc Dust and Hydrazinium Monoformate .... 1807

31.34.10.1.3.14 Variation 14: Using Hydrazine and Hydrated Zirconium(IV) Oxide 1808
Variation 15: Using Sodium Dithionite with Dioctylviologen as an Electron-Transfer Catalyst .................................................. 1808
Variation 16: Using Formamidinesulfinic Acid ................................................. 1809
Method 4: Reduction of Nitrosobenzenes ......................................................... 1809
Method 5: N-Arylation .............................................................................. 1809
Variation 1: Copper(I)-Catalyzed N-Arylation of 1,2-Bis(tert-butoxy-carbonyl)-1-phenylhydrazines .................................................. 1809
Variation 2: Palladium-Catalyzed N-Arylation of 1-Aryl-1-(tert-butoxy-carbonyl)hydrazines .......................................................................... 1810
Variation 3: N-Arylation of Aryl- and Hetarylhdyrazines by Arenes Possessing Activated Leaving Groups ............................................. 1811
Method 6: Electrophilic Amination of Primary Anilines Using N-Aryl-O-(diphenylphosphoryl)hydroxylamines ........................................ 1812
Method 7: Treatment of Phenols with Phenylhydrazine and Sodium Hydrogen Sulfite ................................................................. 1812
Methods 8: Miscellaneous Methods ................................................................ 1813
Product Subclass 11: 1-Alkyl-1,2-diarylhydrazines ........................................... 1813
Synthesis of Product Subclass 11 .................................................................. 1813
Method 1: Addition of Organometallic Reagents to Azobenzenes .......... 1813
Method 2: Arylation of 1-Alkyl-1-arylhydrazines ........................................ 1814
Methods 3: Miscellaneous Methods .............................................................. 1814
Product Subclass 12: 1,2-Dialkyl-1,2-diarylhydrazines ................................... 1815
Synthesis of Product Subclass 12 ................................................................. 1815
Method 1: Addition of Organometallic Reagents to Azobenzenes Followed by Alkylation ................................................................. 1815
Method 2: Alkylation of Azobenzene Metal Adducts .................................... 1815
Methods 3: Miscellaneous Methods .............................................................. 1816
Product Subclass 13: 1,1,2-Triarylhydrazines ................................................... 1816
Synthesis of Product Subclass 13 ................................................................. 1816
Method 1: Addition of Organometallic Reagents to Azobenzenes .......... 1816
Method 2: Arylation of 1,1-Diarylhydrazines ................................................ 1816
Product Subclass 14: 1-Alkyl-1,2,2-triarylhydrazines ..................................... 1816
Synthesis of Product Subclass 14 ................................................................. 1817
Method 1: Addition of Aryllithium Reagents to Azoarenes Followed by Addition of a Primary Alkyl Iodide ........................................ 1817
Product Subclass 15: 1,1,2,2-Tetraarylhydrazines ........................................... 1817
Synthesis of Product Subclass 15 ................................................................. 1817
Method 1: Oxidative Coupling of Diarylamines ............................................ 1817
Variation 1: Copper(II)-Promoted Oxidative Coupling of Secondary Arylamines Using Oxygen ...................................................... 1817
Variation 2: Oxidative Dimerization of Amines Using Potassium Permanganate ................................................................. 1818
Variation 3: Oxidative Dimerization of Amines Using Lead(IV) Oxide ...... 1818
31.35  **Product Class 35: Aryl Azides**  
S. Bräse, D. Keck

31.35  **Product Class 35: Aryl Azides**

31.35.1  Synthesis of Product Class 35

31.35.1.1  Method 1: Synthesis from Aryl Organometallic Compounds

31.35.1.2  Variation 1: From Aryllithium Compounds

31.35.1.3  Variation 2: From Arylthallium Compounds

31.35.1.4  Method 2: Synthesis by Nucleophilic Substitution of Aryl Halides

31.35.1.2.1  Variation 1: From Activated Arenes

31.35.1.2.2  Variation 2: By Copper-Catalyzed Reactions

31.35.1.3  Method 3: Synthesis by Modification of Triazenes

31.35.1.4  Method 4: Synthesis from Tetrazenes

31.35.1.5  Method 5: Synthesis from Arenediazonium Salts

31.35.1.6  Method 6: Synthesis from Hydrazines and Related Compounds

31.35.1.7  Method 7: Synthesis from Anilines and Related Compounds

31.35.1.8  Method 8: Synthesis from Nitrosoarenes

31.35.1.9  Method 9: Synthesis by Rearrangement

31.35.2  Applications of Product Class 35 in Organic Synthesis

31.35.2.1  Method 1: Reactions with All-Carbon Functional Groups

31.35.2.2  Method 2: Reactions with Heteroatom-Containing Groups

31.36  **Product Class 36: Aryltriazenes, Aryltetrazenes, and Related Compounds**  
S. Bräse and T. Muller

31.36  **Product Class 36: Aryltriazenes, Aryltetrazenes, and Related Compounds**

31.36.1  **Product Subclass 1: Aryltetrazenes**

31.36.1.1  Synthesis of Product Subclass 1

31.36.1.1.1  Method 1: Dimerization of Hydrazines and Hydrazones

31.36.1.1.2  Method 2: Reaction between Hydrazides and Hydrazones

31.36.1.3  Method 3: Reaction of Azo Compounds with Hydrazones

31.36.2  **Product Subclass 2: Aryltriazenes**

31.36.2.1  Synthesis of Product Subclass 2

31.36.2.1.1  Method 1: Synthesis from N-Nitrosoureas or Aryl Isocyanates

31.36.2.1.2  Method 2: Synthesis from Aryl Azides

31.36.2.1.3  Method 3: Synthesis from Alkyl or Acyl Azides and Arylating Agents

31.36.2.1.4  Method 4: Synthesis from Arenediazonium Salts

31.36.2.1.5  Method 5: Ring Opening of Cyclic Compounds

31.36.2.1.6  Method 6: Modification of Triazenes by Formation of Complexes with Organometallic Reagents and Triazene Salts

31.36.2.1.7  Method 7: Exchange of the Amine Functional Group in Triazenes

31.36.2.1.8  Method 8: N-Alkylation of Aryltriazenes

31.36.2.1.9  Method 9: N-Acylation of Aryltriazenes
Product Subclass 3: Aryltriazene N-Oxides

Synthesis of Product Subclass 3

Method 1: Synthesis from Diazonium Salts and Hydroxylamines
Method 2: Synthesis from Hydrazines and Nitroso Compounds

Product Subclass 4: Aryltetrazenes

Synthesis of Product Subclass 4

Method 1: Dimerization of Hydrazines
Method 2: Modification of Tetrazenes
Method 3: Reaction of Diazonium Salts with Hydrazines

Product Subclass 5: Arylpentazenes

Synthesis of Product Subclass 5

Method 1: Reaction of Arenediazonium Salts

Product Subclass 6: Arylhexazenes

Synthesis of Product Subclass 6

Method 1: Synthesis from Arenediazonium Salts and Hydrazines
Method 2: Synthesis from 1,3-Diaryltriazenes

Product Class 37: N-Phosphinoarylamines

M. Alajarín, C. López-Leonardo, and J. Berná
Product Class 38: Cyclic Arylamines

P. J. Stevenson

Table of Contents

31.38  Product Class 38: Cyclic Arylamines ....................................... 1885

31.38.1  Product Subclass 1: Cyclic Monoarylamines ............................ 1886

31.38.1.1 Synthesis of Product Subclass 1 ........................................ 1886

31.38.1.1.1 Method 1: Formation of One C(sp3)—N and Two C—C Bonds .... 1886

31.38.1.1.1.1 Variation 1: Condensation of Two Aldehydes with an Arylamine 1886

31.38.1.1.1.1.1 Variation 2: Condensation between an Aldehyde and an Arylamine in the Presence of 1H-Benzotriazole .................. 1886

31.38.1.1.1.1.3 Variation 3: Reaction of an Arylamine with Two Equivalents of a Masked Aldehyde ............................. 1887

31.38.1.1.1.1.4 Variation 4: Intermolecular Condensation of an Arylamine, an Aldehyde, and an Alkene ......................... 1888

31.38.1.1.1.1.5 Variation 5: Intramolecular Condensations between Anilines and Hex-5-enals .................................................. 1889

31.38.1.1.2 Method 2: Formation of One C(sp3)—N and One C—C Bond .. 1890

31.38.1.1.2.1 Variation 1: 1-Alkyl-3-(trifluoromethyl)-2,3-dihydro-1H-indol-3-ols by Reactions of Alkoxyoxiranes with N-Alkylanilines 1890

31.38.1.1.2.2 Variation 2: Tetrahydroquinolines by the Cycloaddition of ortho-Azaxylylenes ........................................... 1891

31.38.1.1.2.3 Variation 3: Tetrahydroquinolines by the Annulation of 2-Iodoanilines 1892

31.38.1.1.3 Method 3: Formation of Two C—C Bonds ........................... 1893

31.38.1.1.3.1 Variation 1: Intramolecular Diels–Alder Reactions of Furan-2-azines and Diazin-2-azines ................................. 1893

31.38.1.1.3.2 Variation 2: Intermolecular Diels–Alder Reactions between Imines and Alkenes .............................................. 1894

31.38.1.1.3.3 Variation 3: Diels–Alder Reactions of N,N-, O,N-, or S,N-Acetals Derived from Arylamines with Alkenes .................. 1895

31.38.1.1.3.4 Variation 4: Reactions of Nitrones with Electron-Deficient Alkenes .. 1896

31.38.1.1.4 Method 4: Noncatalytic Ring Closure via Formation of a C(sp2)—N Bond ......................................................... 1897

31.38.1.1.4.1 Variation 1: Benzyl-2,3-dihydro-1H-indol-3-ols by Aryl Radical Cyclizations onto Imines ............................ 1897

31.38.1.1.4.2 Variation 2: Reactions of Aryllithiums with Electrophilic Nitrogen Compounds ............................................... 1897

31.38.1.1.4.3 Variation 3: Intramolecular Nucleophilic Aromatic Substitution Reactions .................................................. 1898

31.38.1.1.5 Method 5: Catalytic Ring Closure via the Formation of a C(sp3)—N Bond ......................................................... 1899

31.38.1.1.5.1 Variation 1: Palladium-Catalyzed N-Arylation Reactions ........ 1900

31.38.1.1.5.2 Variation 2: Copper-Catalyzed Intramolecular N-Arylation Reactions ................................. 1901

31.38.1.1.5.3 Variation 3: Nickel-Catalyzed Intramolecular N-Arylation Reactions .............................................. 1902

31.38.1.1.6 Method 6: Ring Closure via the Formation of a C(sp3)—N Bond .............................................................................. 1903

31.38.1.1.6.1 Variation 1: Carboamination of Alkenes ................................ 1903

31.38.1.1.6.2 Variation 2: Tandem Reduction of a Nitro Group and Cyclization of the Resulting Amine ................................. 1904

31.38.1.1.6.3 Variation 3: Intramolecular N-Alkylation with Acetamides or Tosylamides .................................................. 1906

31.38.1.1.6.4 Variation 4: Intramolecular N-Alkylation of Alcohols ............ 1907

31.38.1.1.6.5 Variation 5: Intramolecular N-Alkylation of Epoxides ............ 1907
Variation 4: Annulation with Oxirane-2-carbonitriles
Variation 3: Annulations with Oxirane-2-carbonitriles
Variation 2: 1,2,3,4-Tetrahydroquinoxalines by Reactions of Benzene-
Variation 2: Reduction of Acridines
Variation 1: Oxidative Cleavage of C
Variation 4: Palladium-Catalyzed Cyclizations of
Variation 3: Radical Cyclization
Variation 2: Intramolecular Electrophilic Substitution
Variation 1: Asymmetric Lithiation Followed by Trapping with Electrophiles
Variation 4: Palladium-Catalyzed Cyclizations of N-Allyl-2-iodoanilines
Variation 5: Cyclization of N,N-Diallyl-2-bromoanilines
Variation 6: Zirconium-Mediated Cyclizations Involving Arynes
Method 10: Synthesis by Ring Transformation
Method 4: Formation of One C(sp²) Bond
Method 5: Synthesis from Aromatic Heterocycles
Method 8: Ring Closure via the Formation of a C(sp²)−C(sp²) Bond
Method 11: Synthesis by Substituent Modification
Method 1: Formation of Two C(sp²)−C(sp²) Bonds
Method 2: Formation of One C(sp²)−N Bond
Method 3: Formation of One C(sp²)−C(sp²) Bond
Method 4: Formation of One C(sp²)−C(sp²) Bond
Method 5: Synthesis from Aromatic Heterocycles
Method 6: Formation of One C(sp²)−N(sp²) Bonds
Method 7: Formation of Two C(sp²)−C(sp²) Bonds
Method 2: Formation of One C(sp²)−N Bond
Method 3: Formation of One C(sp²)−C(sp²) Bond
Method 4: Formation of One C(sp²)−C(sp²) Bond
Method 5: Synthesis from Aromatic Heterocycles
Method 1: Reactions of Acridines with Nucleophiles
Method 2: Reduction of Acridines
Method 1: Formation of Two C(sp²)−N(sp²) Bonds
Method 2: Formation of One C(sp²)−N Bond
Method 3: Formation of One C(sp²)−C(sp²) Bond
Method 4: Formation of One C(sp²)−C(sp²) Bond
Method 5: Synthesis from Aromatic Heterocycles
Method 1: Reactions of Acridines with Nucleophiles
Method 2: Reduction of Acridines
Method 1: Formation of Two C(sp²)−N(sp²) Bonds
Method 2: Formation of One C(sp²)−N Bond
Method 3: Formation of One C(sp²)−C(sp²) Bond
Method 4: Formation of One C(sp²)−C(sp²) Bond
Method 5: Synthesis from Aromatic Heterocycles
Method 1: Reactions of Acridines with Nucleophiles
Method 2: Reduction of Acridines
Method 1: Formation of Two C(sp²)−N(sp²) Bonds
31.39  **Product Class 39: Arylphosphonic Acids and Derivatives**  
I. B. Gorrell and T. P. Kee

31.39  **Product Class 39: Arylphosphonic Acids and Derivatives**  
1939

31.39.1  Synthesis of Product Class 39  
1939

31.39.1.1  Synthesis via P—C Bond Formation  
1939

31.39.1.1.1  Method 1: Reactions of Nucleophilic Phosphorus  
1939

31.39.1.1.1.1  Variation 1: The Arbuzov Reaction and Related Reactions  
1939

31.39.1.1.1.2  Variation 2: Synthesis from Diazonium Salts  
1944

31.39.1.1.2  Method 2: Reactions of Electrophilic Phosphorus  
1946

31.39.1.1.2.1  Variation 1: Reactions of Phosphorus(V) Compounds with Organometallic Reagents  
1946

31.39.1.1.2.2  Variation 2: Reactions of Phosphorus(III) Compounds with Organometallic Reagents  
1949

31.39.1.1.2.3  Variation 3: Preparation via a Modified Friedel–Crafts Procedure  
1951

31.39.1.1.2.4  Variation 4: The Phospho-Fries Rearrangement  
1953

31.39.1.1.2.5  Variation 5: Direct Phosphonation of Arenes with Phosphorus Pentoxide or Pentasulfide  
1956

31.39.1.1.3  Method 3: Synthesis via Free-Radical Phosphonation  
1958

31.39.1.2  Synthesis via Modification of a Preformed P—C Bond Containing Framework  
1958

31.39.1.2.1  Method 1: Synthesis via Transformations of Existing Arylphosphonic Acids  
1958

31.39.1.2.2  Method 2: Oxidation of Arylphosphinic Acids  
1960

31.40  **Product Class 40: Arylphosphinic Acids and Derivatives**  
H.-J. Cristau and D. Virieux

31.40  **Product Class 40: Arylphosphinic Acids and Derivatives**  
1963

31.40.1  **Product Subclass 1: Arylphosphinic Acids and Derivatives with a P=O Bond**  
1963

31.40.1.1  Synthesis of Product Subclass 1  
1963

31.40.1.1.1  Method 1: Arylphosphinic Halides from Trivalent Arylphosphorus Halides  
1963

31.40.1.1.1.1  Variation 1: Oxidation of Aryl(monochloro)phosphines  
1963

31.40.1.1.1.2  Variation 2: Alkylation of Aryldichlorophosphines  
1964

31.40.1.1.1.3  Variation 3: Addition of Aryldichlorophosphines to Activated C=C Bonds  
1965

31.40.1.1.1.4  Variation 4: $\alpha$-Functional Alkylation of Aryldichlorophosphines  
1966

31.40.1.1.2  Method 2: Arylphosphinic Halides from Tetracoordinated Phosphorus Acids and Their Derivatives  
1968

31.40.1.1.2.1  Variation 1: Arylphosphinic Halides from Phosphonic Dihalides  
1968

31.40.1.1.2.2  Variation 2: Arylphosphinic Halides from Phosphinic Acids and Esters  
1969

31.40.1.1.2.3  Variation 3: Arylphosphinic Halides from Hydrogenophosphine Oxides  
1970

31.40.1.1.3  Method 3: Arylphosphinic Halides from Pentacoordinated Phosphorus Compounds  
1972

31.40.1.1.4  Method 4: Arylphosphinic Acids from Phosphorus(III) Derivatives  
1973
Variation 1: Arylphosphinic Acids from Phosphorus(III) Halides by Reaction with Arenediazonium Salts 1973

Variation 2: Arylphosphinic Acids from Phosphorus(III) Halides by Reaction with Organometallic Compounds 1974

Variation 3: Arylphosphinic Acids from Phosphorus(III) Halides by α-Aminoalkylation 1975

Method 5: Arylphosphinic Acids from Tetracoordinated Phosphorus Derivatives 1978

Variation 1: Arylphosphinic Acids from Tetracoordinated Phosphorus Halides 1978

Variation 2: Arylphosphinic Acids from Tetracoordinated Phosphorus Acids or Their Derivatives 1980

Method 6: Arylphosphinic Esters from Phosphorus(III) Derivatives 1981

Variation 1: Arylphosphinic Esters from Aryldichlorophosphines by Reactions with Enolizable Ketones 1981

Variation 2: Arylphosphinic Esters from Phosphorus(III) Esters by Arbuzov Reaction or Rearrangement 1984

Variation 3: Arylphosphinic Esters from Phosphines and Polyphosphines 1987

Method 7: Arylphosphinic Esters from Tetracoordinated Phosphorus Derivatives 1987

Variation 1: Arylphosphinic Esters from Tetracoordinated Phosphorus Halides by Reaction with Organometallic Compounds 1987

Variation 2: Arylphosphinic Esters by α-Hydroxyalkylation of Aryl(hydrogeno)phosphinates 1988

Variation 3: α-Aminoalkylation of Aryl(hydrogeno)phosphonates 1991

Variation 4: Arylphosphinic Esters by Reaction of Hydrogenophosphinates with Alkenes 1993

Variation 5: Arylphosphinic Esters by Alkylation of Hydrogenophosphonic Esters 1995

Variation 6: Arylphosphinic Esters or Acids by Arylation of Hydrogenophosphinates 1995

Variation 7: Arylphosphinic Esters by Hydrophosphination of Alkynes 1998

Method 8: Arylphosphinic Esters from Phosphinic Acids 1998

Method 9: Symmetrical Arylphosphinic Anhydrides from Tetracoordinated Phosphorus Acids and Their Derivatives 2000

Variation 1: Symmetrical Arylphosphinic Anhydrides from Diarylphosphine Dioxides 2000

Variation 2: Symmetrical Arylphosphinic Anhydrides from Arylphosphinic Acids and Their Derivatives 2000

Method 10: Mixed Arylphosphinic–Carboxylic Anhydrides from Phosphinic Acids and Their Derivatives 2001

Variation 1: Mixed Arylphosphinic–Carboxylic Anhydrides by Oxidation of Arylphosphinous–Carboxylic Anhydrides 2001

Variation 2: Mixed Arylphosphinic–Carboxylic Anhydrides from Phosphinic Acids and Their Derivatives 2001

Method 11: Synthesis of Arylphosphinothioic S-Esters 2002
31.40.1.1.1.1 Variation 1: Synthesis of Arylphosphinothioic S-Esters from Hydrogenophosphine Oxides ................................. 2002

31.40.1.1.1.2 Variation 2: Synthesis of Arylphosphinothioic S-Esters from Arylphosphinic Chlorides ...................................... 2003

31.40.1.1.12 Method 12: \( \text{P-} \) Arylphosphinic Amides and Their Analogues from Phosphorus(III) Derivatives ............................... 2003

31.40.1.1.12.1 Variation 1: \( N \)-Alkylidene-\( \text{P-} \) arylphosphinic Amides from Diaryl(chloro)phosphines and Oximes .......................... 2003

31.40.1.1.12.2 Variation 2: \( \text{P-} \) Arylphosphinic Amides by Reaction of Electrophiles with Dichlorophosphines ......................... 2005

31.40.1.1.12.3 Variation 3: \( \text{P-} \) Arylphosphinic Amides by Reactions of Aminophosphonites .................................................. 2006

31.40.1.1.12.4 Variation 4: \( \text{P-} \) Arylphosphinic Amides by Oxidation of Aminophosphines ...................................................... 2007

31.40.1.1.13.1 Variation 1: \( \text{P-} \) Arylphosphinic Amides and Their Analogues from Phosphinic Chlorides .............................................. 2008

31.40.1.1.13.2 Variation 2: \( \text{P-} \) Arylphosphinic Amides from Phosphonamidic Chlorides ......................................................... 2009

31.40.1.1.14 Method 14: \( \text{P-} \) Arylphosphinic Amides from Pentacoordinated Phosphorus Derivatives .............................................. 2009

31.40.2 Product Subclass 2: Arylphosphinothioic and Arylphosphinoselenoic \( \text{O-} \) Acids and Derivatives .............................................. 2010

31.40.2.1 Synthesis of Product Subclass 2 ...................................................... 2010

31.40.2.1.1 Method 1: Arylphosphinothioic and Arylphosphinoselenoic Halides from Phosphorus Precursors without a Sulfur or Selenium Atom .............................................................................. 2010

31.40.2.1.1.1 Variation 1: Arylphosphinothioic or Arylphosphinoselenoic Halides by Sulfuration or Selenation of Tricoordinated Phosphorus Chlorides ............................................................... 2010

31.40.2.1.1.2 Variation 2: Arylphosphinothioic Halides by a One-Pot Arylation–Sulfuration Reaction .............................................. 2011

31.40.2.1.1.3 Variation 3: Arylphosphinothioic Halides by Thioallylation–Allylic Rearrangement ................................................. 2011

31.40.2.1.1.4 Variation 4: Arylphosphinoselenoic Halides by a One-Pot Selenation–Grignard Reaction from Tricoordinated Phosphorus Compounds ................................................................. 2011

31.40.2.1.1.5 Variation 5: Arylphosphinothioic Halides by Sulfuration of Tetracoordinated Phosphorus Compounds .................. 2012

31.40.2.1.2 Method 2: Arylphosphinothioic or Arylphosphinoselenoic Halides from Phosphorus Precursors Containing a Sulfur or Selenium Atom .............................................................................. 2013

31.40.2.1.2.1 Variation 1: Halogenation of Tetracoordinated Phosphinothioic or Phosphinoselenoic Derivatives ......................... 2013

31.40.2.1.2.2 Variation 2: Oxidation of Hydrogenophosphine Sulfides ...................................................................................... 2014

31.40.2.1.2.3 Variation 3: Oxidation of Diphosphine Disulfides ................................................................................................. 2014

31.40.2.1.3 Method 3: Arylphosphinothioic \( \text{O-} \) Acids from Phosphorus Precursors Lacking Sulfur Atoms ............................................. 2015
Method 4: Arylphosphinothioic or Arylphosphinoselenoic O-Acids from Phosphorus Precursors Containing a Sulfur or Selenium Atom .......................................................... 2016

Method 5: Arylphosphinothioic or Arylphosphinoselenoic O-Esters from Phosphorus Precursors Lacking a Sulfur or Selenium Atom .......................................................... 2016

Variation 1: Sulfitation or Selenation of Tricoordinated Phosphorus Compounds .................................................. 2016

Variation 2: Sulfitation or Selenation of Tetracoordinated Phosphorus Compounds .................................................. 2018

Variation 3: Sulfitation of Dicoordinated Phosphorus Compounds .................................................. 2019

Method 6: Arylphosphinothioic or Arylphosphinoselenoic O-Acids or O-Esters from Phosphorus Precursors with a Sulfur or Selenium Atom .................................................. 2019

Variation 1: Synthesis from Arylphosphinothioic or Arylphosphinoselenoic Chlorides .................................................. 2019

Variation 2: Synthesis of Phosphinothioic O-Esters by Activation of Acids .................................................. 2020

Variation 3: Reaction of Hydrogenophosphinothioates .................................................. 2021

Variation 4: Ring Opening of Cyclic Derivatives .................................................. 2021

Variation 5: α-Alkylation of Phosphinothioates .................................................. 2022

Variation 6: Other Methods Involving Rearrangements .................................................. 2022

Product Class 41: Arylphosphine Oxides

C. A. Ramsden

Method 1: Synthesis from Phosphoryl Chloride .................................................. 2035

Method 2: Synthesis from Phosphonic Acid Esters .................................................. 2035

Variation 1: By Reaction with Organometallic Reagents .................................................. 2035

Variation 2: By Rearrangement .................................................. 2036

Method 3: Synthesis from Phosphinic Chlorides .................................................. 2036

Method 4: Synthesis from Phosphinic Acid Esters .................................................. 2036

Variation 1: By Reaction with Organometallic Reagents .................................................. 2036

Variation 2: By Rearrangement .................................................. 2037

Method 5: Synthesis from Halophosphines (Phosphinous Halides) .................................................. 2037

Method 6: Synthesis from Phosphinous Acids and Esters .................................................. 2037

Variation 1: Michaelis–Arbuzov Reaction of Alkyl Phosphinites .................................................. 2038

Variation 2: By Alkylation of Phosphinite Anions .................................................. 2038

Variation 3: By Metal-Catalyzed Coupling Reactions .................................................. 2039

Variation 4: By 1,2-Hydrophosphination of Unsaturated Compounds .................................................. 2040

Variation 5: By Rearrangement of Allyl Phosphinites .................................................. 2040

Method 7: Synthesis from Phosphonium Salts .................................................. 2040

Method 8: Synthesis from Phosphines .................................................. 2040

Product Subclass 2: Optically Active Arylphosphine Oxides .................................................. 2048

Synthesis of Product Subclass 2 .................................................. 2048

Method 5: Interconversion and Intramolecular Cyclization of Phosphonium Salts

Methods 6: Miscellaneous Methods

Variation 1: Quaternization of Phosphines by Acyl Halides

Variation 2: Quaternization of Phosphides and Chlorophosphines

Variation 3: Conversions from Phosphonium Ylides and Vinylphosphonium Salts

Variation 4: Generation of Specific Counterions

Product Class 44: P-Heteroatom-Substituted Arylphosphines

Synthesis of Product Subclass 1

Method 1: Friedel–Crafts Reaction of Arenes with Phosphorus Trihalides

Method 2: Aryl(halo)phosphines by Reaction of Aryl(dihalo)phosphines with Aliphatic Hydrocarbons

Method 3: Halogenation of Phosphines

Method 4: Nucleophilic Substitution of Halogens with Organometallic Reagents

Method 5: Halogen Exchange of Chlorophosphines

Method 6: Reaction of Aminophosphines and Diaminophosphines with Hydrogen Halides

Method 7: Reduction of Aryl(trihalo)phosphonium Salts

Method 8: Reaction of Arylphosphinous and Arylphosphonous Acids and Their Esters with Halogens and Phosphorus Trihalides

Method 9: Reduction of Halophosphoranes

Method 10: Cleavage of P–C Bonds in Bis(phosphino)methanes

Method 11: Cleavage of the P–P Bond of Diphosphines

Method 12: Addition Reactions of Phosphaalkenes and Related Compounds

Product Subclass 2: Arylphosphinous Esters, Arylphosphonous Esters, and Thio Analogues

Synthesis of Product Subclass 2

Method 1: Reaction of Aryl(halo)phosphines, Aryl(dihalo)phosphines, Alkox(aryl)(halo)phosphines, or (Alkylsulfanyl)(aryl)(halo)-phosphines with Alcohols or Thiols

Method 2: Reaction of Aryl(dihalo)phosphines with Epoxides

Method 3: Reaction of Aryl(dihalo)phosphines with Cyclic Siloxanes and Related Species

Method 4: Reaction of Aryl(halo)phosphines and Aryl(dihalo)-phosphines with Dithiocarbonates

Method 5: Reaction of Primary Arylphosphines with Dialkyl Disulfides

Method 6: Reaction of Chlorophosphates and Dichlorophosphates with Organometallic Reagents
Method 7: Reaction of Phosphites with Organometallic Reagents

Method 8: Alcoholysis of the P—N Bond of Aminophosphines

Method 9: Reduction of Phosphinotioates

Method 10: Transesterification of Arylphosphonous Diesters

Product Subclass 3: Amino(aryl)phosphines and Diamino(aryl)phosphines

Synthesis of Product Subclass 3

Method 1: Reaction of Aryl(halo)phosphines and Aryl(dihalo)phosphines with Amines

Variation 1: With Silylamines

Method 2: Reaction of Diamino(chloro)phosphines with Aryl Grignard or Organolithium Reagents

Method 3: Reaction of Arylphosphonites with Amines

Method 4: Cleavage of the P—P Bond of Diphosphines and Related Compounds

Method 5: Addition of Amines to Aryl(imino)phosphines

Method 6: Amino Interchange of Amino and Diaminophosphines

Product Subclass 4: Alkoxy(aryl)(halo)phosphines and (Alkylsulfanyl)(aryl)(halo)phosphines

Synthesis of Product Subclass 4

Method 1: Friedel–Crafts Reaction

Method 2: Reaction of Aryl(dihalo)phosphines with Alcohols and Thiols

Method 3: Reaction of Aryl(dihalo)phosphines with Epoxides

Method 4: Interchange Reaction between Aryl(dihalo)phosphines and Arylphosphonous Diesters

Method 5: Reaction of Arylphosphonous Diesters with Halogens or Hydrogen Halides

Product Subclass 5: Amino(aryl)(halo)phosphines

Synthesis of Product Subclass 5

Method 1: Friedel–Crafts Reaction

Method 2: Reaction of Aryl(dihalo)phosphines with Amines

Method 3: Reaction of Diamino(aryl)phosphines with Phosphorus Trihalides

Method 4: Halogen Exchange of Chlorophosphines

Method 5: Cleavage of the P—P Bond of Diphosphines

Method 6: Addition of Hydrogen Halides to Aryl(imino)phosphines

Product Subclass 6: Alkoxy(amino)(aryl)phosphines and (Alkylsulfanyl)(amino)(aryl)phosphines

Synthesis of Product Subclass 6

Method 1: Reaction of Alkoxy(aryl)(halo)phosphines with Secondary Amines

Method 2: Reaction of Amino(aryl)(halo)phosphines with Alcohols

Method 3: Partial Alcoholysis of Diamino(aryl)phosphines

Method 4: Addition of Alcohols to Aryl(imino)phosphines

Method 5: Transamidation of Alkoxy(amino)phosphines

Preface ........................................................................................................................... V

Volume Editor’s Preface ............................................................................................... VII

Table of Contents .......................................................................................................... XIII

Introduction
J. Mulzer ....................................................................................................................... 1

32.1 Product Class 1: 1,3-Bis(heteroatom-substituted) Allenes and Analogous Higher Cumulenes
A. S. K. Hashmi ............................................................................................................. 13

32.2 Product Class 2: Monofunctionalized Allenes and Higher Cumulenes
A. S. K. Hashmi ............................................................................................................. 23

32.3 Product Class 3: 1,2-Bis(heteroatom-substituted) Alkenes

32.3.1 Product Subclass 1: 1,2-Dihaloalkenes
U. Nubbemeyer ............................................................................................................ 57

32.3.2 Product Subclass 2: 1-Halo-2-(organooxy)alkenes
U. Nubbemeyer ............................................................................................................ 169

32.3.3 Product Subclass 3: 1-Halo-2-(organochalcogeno)alkenes
U. Nubbemeyer ............................................................................................................ 201

32.3.4 Product Subclass 4: 1-Nitrogen-Functionalized 2-Haloalkenes
U. Nubbemeyer ............................................................................................................ 235

32.3.5 Product Subclass 5: 1-Phosphorus-Functionalized 2-Haloalkenes
U. Nubbemeyer ............................................................................................................ 289

32.3.6 Product Subclass 6: 1,2-Bis(organooxy)alkenes
M. Sainsbury ............................................................................................................... 299

32.3.7 Product Subclass 7: 1-(Organochalcogeno)-2-(organooxy)alkenes
B. List, C. Chandler, R. R. Torres, and A. Erkkilä ......................................................... 335

32.3.8 Product Subclass 8: 1-Nitrogen-Functionalized 2-(Organooxy)alkenes
B. List, C. Chandler, R. R. Torres, and A. Erkkilä ......................................................... 351

32.3.9 Product Subclass 9: 1-Phosphorus-Functionalized 2-(Organooxy)alkenes
B. List, C. Chandler, R. R. Torres, and A. Erkkilä ......................................................... 361
Product Subclass 10: 1,2-Bis(sulfur-functionalized) Alkenes
C. Chandler, R. R. Torres, A. Erkkilä, and B. List .............................. 365

Product Subclass 11: 1-Sulfur-Functionalized 2-(Organochalcogeno)-alkenes
C. Chandler, R. R. Torres, A. Erkkilä, and B. List .............................. 381

Product Subclass 12: 1-Sulfur-Functionalized 2-Nitrogen-Functionalized Alkenes
C. Chandler, R. R. Torres, A. Erkkilä, and B. List .............................. 385

Product Subclass 13: 1-Sulfur-Functionalized 2-Phosphorus-Functionalized Alkenes
C. Chandler, R. R. Torres, A. Erkkilä, and B. List .............................. 399

Product Subclass 14: 1,2-Bis(nitrogen-functionalized) Alkenes
B. List, C. Chandler, R. R. Torres, and A. Erkkilä .............................. 405

Product Subclass 15: 1-Nitrogen-Functionalized 2-Phosphorus-Functionalized Alkenes
B. List, C. Chandler, R. R. Torres, and A. Erkkilä .............................. 421

Product Subclass 16: 1,2-Bis(phosphorus-functionalized) Alkenes
B. List, C. Chandler, R. R. Torres, and A. Erkkilä .............................. 427

Product Class 4: Haloalkenes
A. Pollex .................................................................................. 431

Product Class 5: (Organooxy)alkenes

Product Subclass 1: Enols
D. Trauner ........................................................................... 533

Product Subclass 2: Enolates
D. Trauner ........................................................................... 547

32.2 Product Class 2: Monofunctionalized Allenes and Higher Cumulenes
A. S. K. Hashmi

32.2.1 Product Subclass 1: Haloallenes

32.2.1.1 Synthesis of Product Subclass 1

32.2.1.1.1 Method 1: Fluoroallenes by Fluoride Substitution with Organocuprates

32.2.1.1.2 Method 2: Chloroallenes by Isomerization of Propargylic Chlorides

32.2.1.1.2.1 Variation 1: Using a Copper(I)/Copper(0) Catalyst

32.2.1.1.2.2 Variation 2: Using Only a Copper(I) Catalyst

32.2.1.1.3 Method 3: Chloroallenes from Propargylic Alcohols and Thionyl Chloride

32.2.1.1.4 Method 4: Chloroallenes from Propargylic Alcohols and Hydrogen Chloride

32.2.1.1.5 Method 5: Flash-Vacuum Thermolysis of 1-Chlorocyclopropenes

32.2.1.1.6 Method 6: Chloroallenes from Benzyne and Propargyl Chloride

32.2.1.1.7 Method 7: Chloroallenes from Ketene Silyl Acetals

32.2.1.1.8 Method 8: Chloroallenes from Alkynes and Benzil

32.2.1.1.9 Method 9: Chloroallenes from Propargylic Alcohols and Titanium(IV) Chloride

32.2.1.1.10 Method 10: Bromoallenes by Alkynylogous Ring Opening of Oxiranes

32.2.1.1.11 Method 11: Bromoallenes by Copper-Mediated Nucleophilic Substitution of Propargylic Methanesulfonates

32.2.1.1.12 Method 12: Bromoallenes from Acid Chlorides

32.2.1.1.13 Method 13: Bromoallenes from Phosphonium Bromides

32.2.1.1.14 Method 14: Iodoallenes from Propargylic Alcohols

32.2.1.1.14.1 Variation 1: Activation of the Propargylic Alcohol by a Phosphonium Species

32.2.1.1.14.2 Variation 2: Using a Copper(I)/Copper(0) Catalyst

32.2.1.1.15 Method 15: Iodoallenes from Acid Chlorides

32.2.1.1.16 Method 16: Iodoallenes from Phosphonium Bromides

32.2.1.1.17 Method 17: Iodoallenes from Alkynes and Benzil

32.2.1.1.18 Method 18: Iodoallenes from Propargylic Alcohols and Titanium(IV) Chloride

32.2.1.1.19 Method 19: Iodoallenes from Acid Chlorides

32.2.1.2 Method 2: Chloroallenes by Isomerization of Propargylic Chlorides

32.2.1.2.1 Variation 1: Using a Copper(I)/Copper(0) Catalyst

32.2.1.2.2 Variation 2: Using Only a Copper(I) Catalyst

32.2.1.3 Method 3: Chloroallenes from Propargylic Alcohols and Thionyl Chloride

32.2.1.4 Method 4: Chloroallenes from Propargylic Alcohols and Hydrogen Chloride

32.2.1.5 Method 5: Chloroallenes from Propargylic Alcohols and Titanium(IV) Chloride

32.2.1.6 Method 6: Chloroallenes by Alkynylogous Ring Opening of Oxiranes

32.2.1.7 Method 7: Chloroallenes from Acid Chlorides

32.2.1.8 Method 8: Chloroallenes from Phosphonium Bromides

32.2.1.9 Method 9: Chloroallenes from Alkynes and Benzil

32.2.1.10 Method 10: Chloroallenes from Propargylic Alcohols and Titanium(IV) Chloride

32.2.2 Product Subclass 2: (Organochalcogeno)allenes

32.2.2.1 Synthesis of Product Subclass 2

32.2.2.1.1 Method 1: Isomerization of Propargyl Ethers by Potassium tert-Butoxide/tert-Butyl Alcohol

32.2.2.1.2 Method 2: Isomerization of Propargyl Ethers by Potassium tert-Butoxide/Pentane

32.2.2.1.3 Method 3: Isomerization–Elimination of Propargyl Ethers by Potassium tert-Butoxide/Benzene

32.2.2.1.4 Method 4: Metalation of Alkoxyallenes and Addition to Aldehydes

32.2.2.1.5 Method 5: Alkylation of the Intermediate Obtained from Acylsilanes and Acetylides

32.2.2.1.6 Method 6: Wittig Alkenation of Chromium–Carbene Complexes

32.2.2.1.7 Method 7: Alkylation–Isomerization of Propargyl Sulfides

32.2.2.1.8 Method 8: Allenyl Sulfides and Selenides by the Wittig Route

32.2.2.1.9 Method 9: Allenyl Sulfides by a Three-Component Reaction

32.2.2.1.10 Method 10: Allenyl Sulfides by Palladium-Catalyzed Coupling
32.2.3 Product Subclass 3: Nitrogen-Functionalized Allenes ........................................ 43

32.2.3.1 Synthesis of Product Subclass 3 .................................................................. 43

32.2.3.1.1 Method 1: Allenyl Amides by Base-Catalyzed Rearrangement ............. 43
32.2.3.1.2 Method 2: Morpholinoallenes by Conjugate Addition .......................... 44
32.2.3.1.3 Method 3: 4-Vinylideneoxazolidin-2-ones by Palladium Catalysis ........ 45
32.2.3.1.4 Method 4: Copper-Catalyzed Coupling of Allenyl Halides with Amides, Carbamates, and Ureas ................................................................. 46
32.2.3.1.5 Method 5: Rhodium-Catalyzed Coupling of Propargylic Carbonates and Sulfonamides ................................................................. 48

32.2.4 Product Subclass 4: Phosphorus-Functionalized Allenes ................................ 49

32.2.4.1 Synthesis of Product Subclass 4 .................................................................. 50

32.2.4.1.1 Method 1: Isomerization of Propargylphosphines under Basic Conditions 50

32.2.5 Product Subclass 5: Monofunctionalized Cumulenes ..................................... 50

32.2.5.1 Synthesis of Product Subclass 5 .................................................................. 50

32.2.5.1.1 Method 1: Wittig Route to Bromobutatrienes ....................................... 50
32.2.5.1.2 Method 2: Elimination/Deprotonation/Regioselective Reprotonation .... 52

32.3 Product Class 3: 1,2-Bis(heteroatom-substituted) Alkenes

32.3.1 Product Subclass 1: 1,2-Dihaloalkenes

U. Nubbemeyer

32.3.1.1 Synthesis of Product Subclass 1 ................................................................. 57

32.3.1.1.1 Method 1: Synthesis by Oxidation of Arenes or Hetarenes .................. 58
32.3.1.1.1 Variation 1: Oxidation of 3,4-Dibromo-2,5-bis(phenylsulfanyl)furan .... 58
32.3.1.1.2 Variation 2: Oxidation of Halogenated Azatriquinacenes .................... 58
32.3.1.1.3 Variation 3: Oxidation of Phenols ....................................................... 59
32.3.1.1.4 Variation 4: Oxidation of Aniline ......................................................... 60
32.3.1.1.2 Method 2: Synthesis by Reduction ..................................................... 60
32.3.1.1.2.1 Variation 1: Reductive Defluorination ............................................. 60
32.3.1.1.2.2 Variation 2: Reductive Dechlorination ........................................... 61
32.3.1.1.2.3 Variation 3: Reductive Elimination of Mixed Halogen Atoms .......... 62
32.3.1.1.2.4 Variation 4: Reductive Coupling ..................................................... 64
32.3.1.1.3 Method 3: Synthesis by Substitution .................................................. 68
32.3.1.1.3.1 Variation 1: Substitution of Fluorine ............................................. 68
32.3.1.1.3.2 Variation 2: Substitution of Chlorine or Bromine Atoms ............... 69
32.3.1.1.3.3 Variation 3: Substitution of Halogens by Alkyl or Aryl Groups ......... 79
32.3.1.1.3.4 Variation 4: Substitution of Oxygen ............................................... 83
32.3.1.1.4 Method 4: Synthesis by Elimination ................................................. 88
32.3.1.1.4.1 Variation 1: Dehydrofluorination ............................................... 88
32.3.1.1.4.2 Variation 2: Dehydrochlorination ................................................. 92
32.3.1.1.4.3 Variation 3: Dehydrobromination ............................................... 94
**32.3.1.4.4** Variation 4: Dehydroiodination ........................................ 98
**32.3.1.4.5** Variation 5: Elimination of Sulfur ......................................... 99
**32.3.1.4.6** Variation 6: Elimination with Fragmentation ............................ 100
**32.3.1.1.5** Method 5: Synthesis by Addition ........................................ 101
**32.3.1.1.5.1** Variation 1: Addition of Methyl Hypofluorite to Allenes or Butadienes · 101
**32.3.1.1.5.2** Variation 2: Addition of Chlorine to Alkenes .......................... 102
**32.3.1.1.5.3** Variation 3: Addition of Bromine to Alkenes .......................... 103
**32.3.1.1.5.4** Variation 4: Addition of Iodine to Alkenes ............................ 107
**32.3.1.1.5.5** Variation 5: Addition of Bromine Monofluoride to Alkenes ........... 108
**32.3.1.1.5.6** Variation 6: Addition of an Iodine and a Fluorine Atom to Alkenes .... 109
**32.3.1.1.5.7** Variation 7: Addition of Halogen Chlorides or Halogen Bromides to Alkenes ................................................................. 112
**32.3.1.1.5.8** Variation 8: Addition of Nucleophiles to vic-Dihaloquinones and Related Systems ................................................................. 115
**32.3.1.1.5.9** Variation 9: Carbene Dimerization ........................................ 117
**32.3.1.1.6** Method 6: Synthesis by Cycloaddition ..................................... 118
**32.3.1.1.6.1** Variation 1: Synthesis by [2+2] Cycloaddition ........................ 118
**32.3.1.1.6.2** Variation 2: Synthesis by [2+2+1] Cycloaddition ..................... 121
**32.3.1.1.6.3** Variation 3: Synthesis by [3+2] Cycloaddition ........................ 122
**32.3.1.1.6.4** Variation 4: Synthesis by [4+2] Cycloaddition ........................ 123
**32.3.1.1.6.5** Variation 5: Synthesis by [5+2] Cycloaddition ........................ 132
**32.3.1.1.6.6** Variation 6: Synthesis by [4+3] Cycloaddition ........................ 133
**32.3.1.1.7** Method 7: Synthesis by Rearrangement .................................. 134
**32.3.1.1.7.1** Variation 1: Migration of Fluorine ....................................... 134
**32.3.1.1.7.2** Variation 2: Cyclopropane Isomerization .............................. 135
**32.3.1.1.7.3** Variation 3: Carbon Framework Rearrangements .................... 137
**32.3.1.1.7.4** Variation 4: Sigmatropic Rearrangement .............................. 139
**32.3.1.1.7.5** Variation 5: Electrocyclic Reactions ..................................... 139
**32.3.1.1.7.6** Variation 6: Miscellaneous Rearrangements ........................... 141
**32.3.1.1.8** Method 8: Synthesis from Alkenyl Compounds with Retention of C=C Bond Configuration ......................................................... 143
**32.3.1.1.8.1** Variation 1: Boron Replacement .......................................... 143
**32.3.1.1.8.2** Variation 2: Silane Replacement ........................................ 145
**32.3.1.1.8.3** Variation 3: Silane Replacement with Rearrangement ................ 146
**32.3.1.1.8.4** Variation 4: Stannane Replacement ...................................... 148
**32.3.1.1.8.5** Variation 5: Hydroxyalkylation of (E)- or (Z)-Iodo(pentafluoropropenyl)zinc Intermediates ...................................................... 149
**32.3.1.1.8.6** Variation 6: Zinc Displacement ........................................... 150
**32.3.1.1.8.7** Variation 7: Zinc/Copper Displacement ............................... 152
**32.3.1.2** Applications of Product Subclass 1 in Organic Synthesis .................. 153

**32.3.2** Product Subclass 2: 1-Halo-2-(organooxy)alkenes

U. Nubbemeyer

**32.3.2.2** Product Subclass 2: 1-Halo-2-(organooxy)alkenes ............................ 169
**32.3.2.1** Synthesis of Product Subclass 2 ............................................. 169
32.3.2.1 Method 1: Synthesis by Oxidation and Reduction .......................... 169
32.3.2.1.2 Method 2: Synthesis by Substitution of a Leaving Group .......... 171
32.3.2.1.3 Method 3: Synthesis by Substitution of a Metal .................... 173
32.3.2.1.3.1 Variation 1: Substitution of Tin ...................................... 173
32.3.2.1.3.2 Variation 2: Substitution of Rhodium (via Carbenoid Intermediates) ..... 175
32.3.2.1.4 Method 4: Synthesis by Enolate Alkylation or Acylation ........ 180
32.3.2.1.5 Method 5: Synthesis by Elimination .................................. 180
32.3.2.1.6 Method 6: Synthesis by Addition ..................................... 185
32.3.2.1.6.1 Variation 1: Intermolecular Additions to Alkynes ................ 185
32.3.2.1.6.2 Variation 2: Addition to Alkynes/Halocyclization .............. 186
32.3.2.1.7 Method 7: Synthesis by C—C Bond Formation ....................... 189
32.3.2.1.7.1 Variation 1: Nazarov Cyclization .................................. 189
32.3.2.1.7.2 Variation 2: Cycloadditions ......................................... 191
32.3.2.1.8 Method 8: Synthesis by Rearrangement ............................... 192
32.3.2.1.9 Method 9: Synthesis with Retention of the Functional Group ...... 193

32.3.3 Product Subclass 3: 1-Halo-2-(organochalcogeno)alkenes
U. Nubbemeyer

32.3.3.1 Synthesis of Product Subclass 3 ......................................... 201
32.3.3.1.1 Method 1: Synthesis by Oxidation ................................... 201
32.3.3.1.1.1 Variation 1: Oxidation of Aryl Sulfides or Sulfoxides .......... 201
32.3.3.1.1.2 Variation 2: β-Halogenation of Vinyl Sulfides ................. 203
32.3.3.1.2 Method 2: Synthesis by Reduction ................................... 203
32.3.3.1.3 Method 3: Synthesis by Substitution .................................. 204
32.3.3.1.3.1 Variation 1: Replacement of a Halogen ............................ 204
32.3.3.1.3.2 Variation 2: Replacement of a Metal .............................. 206
32.3.3.1.4 Method 4: Synthesis by Elimination .................................. 208
32.3.3.1.5 Method 5: Synthesis by the Addition of Halogens to Allenes ...... 209
32.3.3.1.5.1 Variation 1: Addition to Allenyl Sulfides or Selenides ........ 210
32.3.3.1.5.2 Variation 2: Addition to Allenyl Sulfoxides with Concomitant Reduction 213
32.3.3.1.5.3 Variation 3: Addition to Allenyl Sulfoxides ..................... 214
32.3.3.1.5.4 Variation 4: Addition to Allenesulfenic Acids and Allenyl Sulfones 217
32.3.3.1.6 Method 6: Synthesis by Addition to Alkynes ....................... 218
32.3.3.1.6.1 Variation 1: Chloroalkylation of Selanylalkynes ................ 218
32.3.3.1.6.2 Variation 2: Addition of Sulfenyl Halides to Alkynes .......... 219
32.3.3.1.6.3 Variation 3: Addition of Selanyl Halides to Alkynes .......... 223
32.3.3.1.6.4 Variation 4: Addition of Tellurium Halides to Alkynes ....... 225
32.3.3.1.6.5 Variation 5: Addition of Sulfonyl Halides to Alkynes .......... 226
32.3.3.1.6.6 Variation 6: Addition of Sulfur(VI) Halopentafluorides to Alkynes 227
32.3.3.1.6.7 Variation 7: Addition of Tellurium(IV) Chlorto Propargyl Alcohols 229
32.3.3.1.7 Method 7: Cycloaddition .............................................. 229
32.3.3.1.8 Method 8: Synthesis by Rearrangement ............................... 230
32.3.3.1.9 Method 9: Synthesis with Retention of the Functional Group ...... 231
32.3.4 Product Subclass 4: 1-Nitrogen-Functionalized 2-Haloalkenes
U. Nubbemeyer

32.3.4.1 Synthesis of Product Subclass 4 ........................................... 235
32.3.4.1.1 Method 1: Synthesis by Oxidation ....................................... 235
32.3.4.1.1.1 Variation 1: β-Halogenation of Enamines ............................. 235
32.3.4.1.1.2 Variation 2: α-Halogenation of Enamino Ketones .................. 236
32.3.4.1.1.3 Variation 3: β-Halogenation of N-Alkenylated Amides .......... 242
32.3.4.1.1.4 Variation 4: β-Halogenation of N-Vinylcarbamates ............... 245
32.3.4.1.1.5 Variation 5: Synthesis of Enamino(phenyl)iodonium Salts ...... 248
32.3.4.1.2 Method 2: Synthesis by Reduction ...................................... 248
32.3.4.1.2.1 Variation 1: Reduction of Chlorides .................................. 248
32.3.4.1.2.2 Variation 2: Reduction of Aromatic Heterocycles .................. 249
32.3.4.1.2.3 Variation 3: Reductive Alkylation ................................... 249
32.3.4.1.3 Method 3: Synthesis by Substitution .................................. 250
32.3.4.1.3.1 Variation 1: Substitution of Chloride .................................. 254
32.3.4.1.3.2 Variation 2: Substitution of a Chlorine Atom Bonded to C3 of a Cyclopentenone .................................................. 254
32.3.4.1.3.3 Variation 3: Substitution of Chlorine or Bromine Atoms Bonded to Heterocycles .................................................. 256
32.3.4.1.3.4 Variation 4: Substitution of Iodine .................................... 259
32.3.4.1.3.5 Variation 5: Substitution of Hydroxy or Alkoxy Groups ........... 261
32.3.4.1.3.6 Variation 6: Substitution of Acyloxy Functions ..................... 263
32.3.4.1.3.7 Variation 7: Synthesis of β-Halo Vinyl Azides ....................... 265
32.3.4.1.3.8 Variation 8: Substitution of Silicon or Tin ........................... 266
32.3.4.1.4 Method 4: Synthesis by Elimination .................................... 267
32.3.4.1.5 Method 5: Synthesis by Addition ......................................... 269
32.3.4.1.5.1 Variation 1: Additions to Allenes ..................................... 269
32.3.4.1.5.2 Variation 2: Intermolecular Additions to Alkynes .................... 269
32.3.4.1.5.3 Variation 3: Chlorocyclization of Alkynes ............................. 271
32.3.4.1.5.4 Variation 4: Bromo- and Iodocyclization of Alkynes .............. 272
32.3.4.1.5.5 Variation 5: Vilsmeier Reactions ...................................... 275
32.3.4.1.5.6 Variation 6: Condensations of α-Halo Ketones ....................... 276
32.3.4.1.6 Method 6: Synthesis by Rearrangement .................................. 277
32.3.4.1.6.1 Variation 1: Thermolyses of Cyclopropanes .......................... 277
32.3.4.1.6.2 Variation 2: Electrocyclic Ring Opening ................................ 277
32.3.4.1.7 Method 7: Synthesis with Retention of the Functional Group ........ 278
32.3.4.1.7.1 Variation 1: Additions to Arenes ...................................... 278
32.3.4.1.7.2 Variation 2: Additions to Hetarenes ................................... 279

32.3.5 Product Subclass 5: 1-Phosphorus-Functionalized 2-Haloalkenes
U. Nubbemeyer

32.3.5.1 Synthesis of Product Subclass 5 ........................................... 289
32.3.1.1 Method 1: Synthesis by Substitution ........................................ 289
32.3.1.1.1 Variation 1: Substitution of a Halogen ................................. 289
32.3.1.1.2 Variation 2: Substitution of a Metal ........................................ 290
32.3.1.2 Method 2: Synthesis by Elimination ........................................ 291
32.3.1.3 Method 3: Synthesis by Addition ........................................... 292
32.3.1.3.1 Variation 1: Intermolecular Additions to Alkynes .................... 292
32.3.1.3.2 Variation 2: Intramolecular Additions to Allenes .................... 293
32.3.1.4 Method 4: Synthesis of 2-Chlorovinyl Dichlorophosphonates and Dichlorothiophosphonates .......................................................... 297

32.3.6 Product Subclass 6: 1,2-Bis(organooxy)alkenes
M. Sainsbury

32.3.6 Product Subclass 6: 1,2-Bis(organooxy)alkenes ................................ 299
32.3.6.1 Synthesis of Product Subclass 6 ............................................ 300
32.3.6.1.1 1,2-Dioxyethenes ................................................................. 300
32.3.6.1.1.1 Method 1: Dehalogenation or Dehydrohalogenation of 1,2-Dialkoxy- or 1,2-Diaryloxy-1,2-dihaloalkanes ........................................ 300
32.3.6.1.1.2 Method 2: Elimination of Alcohols from Acetals or Ortho Esters .... 305
32.3.6.1.1.3 Method 3: Selective Reduction of 1,2-Dialkoxyacetylenes ................ 306
32.3.6.1.1.4 Method 4: Synthesis from 2-Acetoxyvinylmercury(II) Chlorides .......... 306
32.3.6.1.1.5 Method 5: Synthesis from Carbenes and Related Species ............ 307
32.3.6.1.1.6 Method 6: Carbonylation and Sulfanylation of 2,3-Dimethoxybuta- 1,3-diene .......................................................... 310
32.3.6.1.1.7 Method 7: Synthesis of Polycyclic Systems Containing a 1,2-Dialkoxyethene Component .................................................. 310
32.3.6.1.2 1,3-Dioxoles ........................................................................ 311
32.3.6.1.2.1 Method 1: Addition of Diazomethane to α,β-Dicarbonyl Compounds .... 311
32.3.6.1.2.2 Method 2: Synthesis from α-Diazocarbonyl Compounds ................ 312
32.3.6.1.2.3 Method 3: Cathodic Reduction of 1,2-Diarylethanediones in the Presence of N-Arylcarbonimidic Dichlorides ............................ 314
32.3.6.1.2.4 Method 4: Synthesis from α-Hydroxy Ketones ........................ 314
32.3.6.1.2.5 Method 5: Synthesis by the Intermediacy of Carbenes or Their Equivalents .............................................................. 315
32.3.6.1.2.6 Method 6: Retro-Diels–Alder Reactions .................................. 317
32.3.6.1.2.7 Method 7: Synthesis from 1,3-Dioxolanes ................................ 318
32.3.6.1.2.8 Method 8: Modification of Other 1,3-Dioxoles ......................... 320
32.3.6.1.3 2,3-Dihydro-1,4-dioxins ............................................................ 321
32.3.6.1.3.1 Method 1: Synthesis from α,β-Dicarbonyl Compounds ................. 321
32.3.6.1.3.2 Method 2: Cycloannulation .................................................. 321
32.3.6.1.3.3 Method 3: Cyclization of 2-(1,3-Dioxolan-2-yl)ethanols, Bis(2-hydroxyethyl) Ethers, or 2-(Propargyloxy)ethanols ............... 322
32.3.6.1.3.4 Method 4: Fragmentation and Concomitant Recyclization of a 2,2'-Bioxirane .............................................................. 323
32.3.6.1.3.5 Method 5: Synthesis from 1,4-Dioxanes ......................................... 323
32.3.6.1.3.6 Method 6: Synthesis from Other 2,3-Dihydro-1,4-dioxins ................. 325
32.3.6.2 Applications of Product Subclass 6 ................................................ 326
32.3.6.2.1 Method 1: Cycloaddition Reactions ........................................... 326
32.3.6.2.2 Method 2: Reactions of Metal Complexes or Lithium Salts ............... 328
32.3.6.2.3 Method 3: Addition Reactions ..................................................... 329
32.3.6.2.4 Method 4: Polymerization .......................................................... 331

32.3.7 Product Subclass 7: 1-(Organochalcogeno)-2-(organooxy)alkenes
B. List, C. Chandler, R. R. Torres, and A. Erkkilä

32.3.7.1 Synthesis of Product Subclass 7 ..................................................... 335
32.3.7.1.1 Method 1: Synthesis by Substitution ......................................... 335
32.3.7.1.1.1 Variation 1: Substitution of Haloalkenes .................................. 335
32.3.7.1.1.2 Variation 2: Substitution of Sulfonylalkenes ............................ 336
32.3.7.1.3 Variation 3: Synthesis from Alkylsulfonyl Ketones (Perkow-Type Reaction) .... 336
32.3.7.1.4 Variation 4: Synthesis from Bis(dialkylsulfonyl) Salts .................... 337
32.3.7.1.2 Method 2: Synthesis by O-Sulfonylation of Acyl Sulfonium Ylides ....... 337
32.3.7.1.3 Method 3: Synthesis by O-Acylation of α-Alkylsulfonyl Derivatives ...... 337
32.3.7.1.3.1 Variation 1: O-Acylation of α-Sulfonium Enones ....................... 337
32.3.7.1.3.2 Variation 2: Synthesis from α-Sulfonyl Ketones ....................... 338
32.3.7.1.3.3 Variation 3: Synthesis from Dihydrothiopyranones .................. 338
32.3.7.1.3.4 Variation 4: Synthesis from α-Oxosulfonium Aldehydes ............ 338
32.3.7.1.4 Method 4: Synthesis by O-Phosphorylation of α-Sulfanyl Enolates ........ 338
32.3.7.1.5 Method 5: Synthesis from α-Chloro Ketones ................................. 339
32.3.7.1.6 Method 6: Synthesis from Alkynes ............................................. 339
32.3.7.1.6.1 Variation 1: Synthesis by Halotosyloxylation ............................ 339
32.3.7.1.6.2 Variation 2: Addition of Alcohols to Alkynes ............................ 340
32.3.7.1.6.3 Variation 3: Synthesis by Electrophilic Cycloization of Acetylenic Aldehydes 340
32.3.7.1.6.4 Variation 4: Synthesis from Alkynylelenonium Salts .................... 340
32.3.7.1.6.5 Variation 5: Synthesis from Alkynylidonium Salts .................... 341
32.3.7.1.6.6 Variation 6: Synthesis Using Dimethyl Sulfide Ditrifluoromethane- sulfonate ................................................................. 341
32.3.7.1.6.7 Variation 7: Synthesis by Electrophilic–Nucleophilic Addition to Triple Bonds 342
32.3.7.1.6.8 Variation 8: Synthesis by Addition of O-Sulfonyl Arenesulfonates to Alkynes ................................................................. 342
32.3.7.1.7 Method 7: Synthesis from Allenes .............................................. 343
32.3.7.1.7.1 Variation 1: Synthesis by Nucleophilic Addition .......................... 343
32.3.7.1.7.2 Variation 2: Synthesis by Inverse-Electron-Demand Diels–Alder Reaction 343
32.3.7.1.7.3 Variation 3: Synthesis from Thioaldehydes ............................... 343
32.3.7.1.8 Method 8: Synthesis from 1,2-Thiazetidine 1,1-Dioxide ........................ 344
32.3.7.1.9 Method 9: Synthesis from 2-(Methylsulfonyl)benzoxazole ................ 344
32.3.7.1.10 Method 10: Synthesis by Double-Bond Migration ........................ 344
32.3.7.1.11 Method 11: Synthesis by Chain Elongation .................................. 345
32.3.7.1.12 Method 12: Synthesis by Cycloaddition ..................................... 345
32.3.7.13 Method 13: Synthesis from Methyl(dimethylamino)sulfoxonium Methylide and Acyl Chlorides ........................................ 345
32.3.7.14 Method 14: Synthesis from Allenyl Sulfones ........................................ 346
32.3.7.15 Method 15: Synthesis from α-Diazo Ketones ........................................ 346
32.3.7.16 Method 16: Synthesis from α-(Dioxidosulfanylidene) Ketones .......... 346
32.3.7.17 Method 17: Synthesis of 2,3-Dihydro-1,4-oxathiin ........................................ 347
32.3.7.18 Method 18: Synthesis by Thio- and Seleno-Lactonizations of Alkynoic Acids ........................................ 347
32.3.7.19 Method 19: Synthesis from (Phenyltellanyl)acetaldehyde Diethyl Acetal 347

32.3.8 Product Subclass 8: 1-Nitrogen-Functionalized 2-(Organooxy)alkenes
B. List, C. Chandler, R. R. Torres, and A. Erkkilä

32.3.8.1 Synthesis of Product Subclass 8 ........................................ 351
32.3.8.1.1 Method 1: Synthesis by Substitution of Diazonium Salts ............... 351
32.3.8.1.2 Method 2: Synthesis by Reduction of Arenes .............................. 351
32.3.8.1.3 Method 3: Synthesis by Amino Enolate Alkylation ...................... 351
32.3.8.1.4 Method 4: Synthesis by C–O Bond Formation ............................ 352
32.3.8.1.5 Method 5: Synthesis by Rearrangement ..................................... 353
32.3.8.1.6 Method 6: Synthesis by Ring Opening of Oxazoles ..................... 353
32.3.8.1.7 Method 7: Synthesis of Oxazol-2(3H)-ones .................................... 353
32.3.8.1.7.1 Variation 1: Synthesis from α-Amino Ketones ....................... 354
32.3.8.1.7.2 Variation 2: Synthesis from α-Hydroxy Ketones ...................... 354
32.3.8.1.7.3 Variation 3: Synthesis from 2-Oxoalkyl Dialkylcarbamates ........... 354
32.3.8.1.7.4 Variation 4: Synthesis by Intramolecular Cyclization .................. 354
32.3.8.1.7.5 Variation 5: Synthesis by Elimination of Hydrogen Chloride .......... 355
32.3.8.1.7.6 Variation 6: Synthesis by Elimination of Diphenylphosphine Oxide .... 355
32.3.8.1.7.7 Variation 7: Synthesis by Curtius Rearrangement ..................... 356
32.3.8.1.7.8 Variation 8: Synthesis from 2-(Allyloxy)oxazoles .................. 356
32.3.8.1.8 Method 8: Synthesis from Oximes ....................................... 357
32.3.8.1.9 Method 9: Synthesis by Intramolecular Cyclization .................... 357
32.3.8.1.10 Method 10: Synthesis by Elimination ..................................... 358
32.3.8.1.11 Method 11: Synthesis of 3-Hydroxypyridin-4(1H)-ones ............... 358
32.3.8.1.12 Method 12: Synthesis from tert-Butyl Isocyanide .................... 359

32.3.9 Product Subclass 9: 1-Phosphorus-Functionalized 2-(Organooxy)alkenes
B. List, C. Chandler, R. R. Torres, and A. Erkkilä

32.3.9.1 Synthesis of Product Subclass 9 ........................................ 361
32.3.9.1.1 Method 1: Phosphorylation of Alkynyl Ethers ............................ 361
32.3.9.1.2 Method 2: Phosphorylation of Vinyl Ethers ............................... 361
32.3.9.1.3 Method 3: Synthesis by O-Alkylation of α-Oxo Ylides .................. 361
32.3.9.1.4 Method 4: O-Phosphorylation of an α-Oxo Ylide ..................... 362
32.3.9.1.5 Method 5: Cleavage of Cyclic Phosphonium Salts ..................... 362
32.3.9.1.6 Method 6: Synthesis from Enol Ethers ........................................ 362
32.3.9.1.7 Method 7: Synthesis from 1,2-Bis(triorganophosphonio)ethene Dihalides .......................................................... 363
32.3.9.1.8 Method 8: Synthesis from Alkynyl Ethers ........................................ 363
32.3.9.1.8.1 Variation 1: Addition of Alkyl- or Aryldichlorophosphines ............. 363
32.3.9.1.8.2 Variation 2: Addition of Trihalophosphines ................................ 363

32.3.10 Product Subclass 10: 1,2-Bis(sulfur-functionalized) Alkenes
C. Chandler, R. R. Torres, A. Erkkilä, and B. List

32.3.10 Product Subclass 10: 1,2-Bis(sulfur-functionalized) Alkenes ............................................ 365
32.3.10.1 Synthesis of Product Subclass 10 ............................................. 365
32.3.10.1.1 Method 1: Synthesis from Vinyl Sulfides .................................. 365
32.3.10.1.2 Method 2: Synthesis by Reduction .......................................... 365
32.3.10.1.3 Method 3: Synthesis by Substitution of Ammonium Salts ............... 365
32.3.10.1.4 Method 4: Synthesis by Substitution of a Halogen ......................... 366
32.3.10.1.5 Method 5: Synthesis from 3-Oxotetrahydrothiophene-2-carboxylates . 366
32.3.10.1.6 Method 6: Synthesis from Cyclopropanes .................................. 367
32.3.10.1.7 Method 7: Synthesis from Cyclopropenes .................................. 367
32.3.10.1.8 Method 8: Synthesis by Elimination of Hydrogen Bromide ................ 367
32.3.10.1.9 Method 9: Synthesis by Elimination of Water .................................. 368
32.3.10.1.10 Method 10: Synthesis by Elimination of Thiols ............................. 368
32.3.10.1.11 Method 11: Synthesis by Addition to Alkenes .............................. 369
32.3.10.1.12 Method 12: Synthesis by Addition to Alkynes ............................. 370
32.3.10.1.13 Method 13: Synthesis from Alkynes and Carbon Disulfide ............... 371
32.3.10.1.14 Method 14: Synthesis by Carbene Dimerization .......................... 372
32.3.10.1.15 Method 15: Synthesis by Double-Bond Migration ......................... 373
32.3.10.1.16 Method 16: Synthesis by Rearrangement of 1,3-Dithiolane 1-Oxides . 373
32.3.10.1.17 Method 17: Synthesis by Rearrangement of 1,1-Bis(sulfonyl)ethenes . 373
32.3.10.1.18 Method 18: Synthesis from Dithiins .......................................... 374
32.3.10.1.19 Method 19: Synthesis with Retention of the Functional Group .......... 377
32.3.10.1.19.1 Variation 1: S-Alkylation ...................................................... 377
32.3.10.1.19.2 Variation 2: Synthesis by Chain Elongation ............................ 377
32.3.10.1.19.3 Variation 3: Ring Enlargement of Dithioles ............................. 378
32.3.10.1.19.4 Variation 4: Nucleophilic Addition to Dithiolium Salts ................ 378

32.3.11 Product Subclass 11: 1-Sulfur-Functionalized 2-(Organochalcogeno)alkenes
C. Chandler, R. R. Torres, A. Erkkilä, and B. List

32.3.11 Product Subclass 11: 1-Sulfur-Functionalized 2-(Organochalcogeno)alkenes ............................................. 381
32.3.11.1 Synthesis of Product Subclass 11 .............................................. 381
32.3.11.1.1 Method 1: Addition to Alkynyl Sulfoxides .................................. 381
32.3.11.1.2 Method 2: Selenosulfonylation of Alkynes .................................. 382
32.3.11.1.3 Method 3: Synthesis of Cyclic 1-Sulfanyl-2-tellanylenethenes .......... 383

32.3.14 Product Subclass 14: 1,2-Bis(nitrogen-functionalized) Alkenes
B. List, C. Chandler, R. R. Torres, and A. Erkkilä

32.3.14 Product Subclass 14: 1,2-Bis(nitrogen-functionalized) Alkenes

32.3.14.1 Synthesis of Product Subclass 14

32.3.14.1.1 Method 1: Synthesis of 1,2-Dinitroalkenes

32.3.14.1.2 Method 2: Synthesis of 1-Amino-2-nitroalkenes

32.3.14.1.2.1 Variation 1: Synthesis from Ortho Esters and Nitroalkanes

32.3.14.1.2.2 Variation 2: Synthesis from Imines

32.3.14.1.2.3 Variation 3: Synthesis from Carboxylic Acid Derivatives

32.3.14.1.2.4 Variation 4: Synthesis from 4-Nitrocyclobut-1-en-1-amines

32.3.14.1.2.5 Variation 5: Synthesis from Haloalkenes

32.3.14.1.2.6 Variation 6: Synthesis by Rearrangement

32.3.14.1.3 Method 3: Synthesis of 4-Nitro-1,2-dihydro-3H-pyrazol-3-ones

32.3.14.1.4 Method 4: Synthesis of 1,2-Bis(diazenyl)alkenes

32.3.14.1.5 Method 5: Synthesis of 1-Amino-2-diazenylalkenes

32.3.14.1.6 Method 6: Synthesis of Alkene-1,2-diamines

32.3.14.1.6.1 Variation 1: Synthesis from 1-Alkoxymethanediamines

32.3.14.1.6.2 Variation 2: Synthesis by Amine Elimination

32.3.14.1.6.3 Variation 3: Synthesis from α-Halo or α-Dialkylamino Aldehydes

32.3.14.1.6.4 Variation 4: Synthesis from 1-Amino-2-haloalkenes

32.3.14.1.6.5 Variation 5: Synthesis from 1,2-Diols

32.3.14.1.6.6 Variation 6: Synthesis from Cyclopropenium Ion Derivatives

32.3.14.1.7 Method 7: Synthesis of Dihydroimidazoles

32.3.14.1.8 Method 8: Synthesis of 1,4-Dihydropyrazines

32.3.14.1.9 Method 9: Synthesis of Tetrahydropyrazines

32.3.14.1.10 Method 10: Synthesis of 4,5,6,7-Tetrahydro-1H-1,4-diazepines

32.3.14.1.11 Method 11: Synthesis of 1,2,4-Triazines

32.3.14.1.12 Method 12: Synthesis of 1,2-Di azidoalkenes

32.3.15 Product Subclass 15: 1-Nitrogen-Functionalized 2-Phosphorus-Functionalized Alkenes
B. List, C. Chandler, R. R. Torres, and A. Erkkilä

32.3.15 Product Subclass 15: 1-Nitrogen-Functionalized 2-Phosphorus-Functionalized Alkenes

32.3.15.1 Synthesis of Product Subclass 15

32.3.15.1.1 Method 1: Synthesis by Substitution

32.3.15.1.1.1 Variation 1: Substitution of Chloroalkenes

32.3.15.1.1.2 Variation 2: Substitution of Bromoalkenes

32.3.15.1.1.3 Variation 3: Substitution of Alkylphosphonium Salts

32.3.15.1.2 Method 2: Synthesis from Phosphorus Ylides

32.3.15.1.3 Method 3: Condensation of β-Oxo Phosphonium Salts with Amines

32.3.15.1.4 Method 4: Synthesis by Addition to Phosphorus-Functionalized Alkynes

32.3.15.1.5 Method 5: Synthesis of 1-(Isothiocyanato/isocyanato)-2-(difluoro-phosphoryl)alkenes
32.3.16  **Product Subclass 16: 1,2-Bis(phosphorus-functionalized) Alkenes**  
B. List, C. Chandler, R. R. Torres, and A. Erkkilä

32.3.16  **Product Subclass 16: 1,2-Bis(phosphorus-functionalized) Alkenes**  
Synthesis of Product Subclass 16  
Method 1: Substitution of Chloroalkenes  
Method 2: Synthesis from Acyl Halides  
Method 3: Addition to Alkynes  
Method 4: Synthesis from 2,3-Dihydro-1H-1,3,2-diphosphasiloles

32.4  **Product Class 4: Haloalkenes**  
A. Pollex

32.4  **Product Class 4: Haloalkenes**  
Synthesis of Product Subclass 1  
Method 1: Synthesis from Organometallic Compounds  
Variation 1: Fluorodestannylation with Xenon Difluoride  
Variation 2: Fluorodestannylation with Cesium Fluoroxysulfate  
Variation 3: Fluorodestannylation with Selectfluor  
Method 2: Synthesis from Vinylborates  
Method 3: Synthesis from Vinyllithiums  
Method 1: Dehydrohalogenation  
Variation 1: Dehydrofluorination  
Variation 2: Dehydrohalogenation  
Method 2: Reductive Dehalogenation Using Reducing Metals or Hydrogen  
Method 3: Dehalogenation with Phosphites and Phosphines  
Method 4: Thermal syn Elimination  
Method 1: Addition/Elimination Reactions  
Variation 1: Using N-Fluorobis(trifluoromethane)sulfonimide  
Variation 2: Using Trifluoromethyl Hypofluorite  
Variation 3: Using Acetyl Hypofluoride  
Method 2: Dihalocarbene Addition and Subsequent Ring Opening  
Variation 1: Formation of α-Fluoro α,β-Unsaturated Carbonyl Compounds or Acetals  
Variation 2: Formation of Simple Fluoroalkenes  
Variation 3: Formation of Conjugated Fluorodienes  
Synthesis from Aldehydes and Ketones  
Method 1: Alkenation Reactions  
Variation 1: Wittig Alkenation

32.5.1.1 Synthesis of Product Subclass 1 .............................................. 535
32.5.1.1.1 Method 1: Equilibration from the Corresponding Carbonyl Form .. 535
32.5.1.1.2 Method 2: Transition-Metal-Catalyzed Isomerization of Allylic Alcohols 536
32.5.1.1.3 Method 3: Photochemical Cleavage ....................................... 536
32.5.1.1.4 Method 4: Mild Hydrolysis of Enol Ketene Acetals or Enol Ortho Esters 536
32.5.1.1.5 Method 5: Sigmatropic Rearrangements .................................. 537
32.5.1.2 Applications of Product Subclass 1 in Organic Synthesis .......... 537
32.5.1.2.1 Method 1: Deprotonation and Subsequent Reaction as an Enolate ...... 537
32.5.1.2.2 Method 2: O-Alkylation and O-Silylation under Neutral Conditions 538
32.5.1.2.3 Method 3: Hydrogenation ................................................... 539
32.5.1.2.4 Method 4: Reaction with Carbon Electrophiles under Neutral or
Acidic Conditions ........................................................................ 540
32.5.1.2.5 Method 5: Reaction with Nitrogen Electrophiles ..................... 541
32.5.2

**Product Subclass 2: Enolates**
D. Trauner

32.5.2.1

Synthesis of Product Subclass 2

32.5.2.1.1

Method 1: Synthesis by Deprotonation

32.5.2.1.1.1

Variation 1: Kinetic Deprotonation of a Ketone

32.5.2.1.1.2

Variation 2: Deprotonation under Thermodynamic Conditions

32.5.2.1.1.3

Variation 3: Double Deprotonation of a 1,4-Dicarbonyl Compound

32.5.2.1.1.4

Variation 4: Enantioselective Deprotonation of Symmetrical Ketones

32.5.2.1.1.5

Variation 5: Deprotonation with Organozinc Compounds

32.5.2.1.2

Method 2: Synthesis by Cleavage of Enol Esters and Ethers

32.5.2.1.2.1

Variation 1: Cleavage of Enol Esters

32.5.2.1.2.2

Variation 2: Cleavage of Enol Ethers

32.5.2.1.2.3

Variation 3: Cleavage of Silyl Enol Ethers

32.5.2.1.3

Method 3: Synthesis by Reduction of α-Halocarbonyl and Related Compounds

32.5.2.1.4

Method 4: Synthesis by Conjugate Reduction

32.5.2.1.5

Method 5: Synthesis by Conjugate Addition

32.5.2.1.6

Method 6: Synthesis by Nucleophilic Addition to Ketenes

32.5.2.1.7

Method 7: Synthesis by Base-Induced Rearrangement of Epoxides

32.5.2.1.8

Method 8: Synthesis by Anionic Oxy-Cope Rearrangement

32.5.2.1.9

Method 9: Synthesis by Rearrangement of Allylic Alkoxides

32.5.2.2

Applications of Product Subclass 2 in Organic Synthesis

32.5.2.2.1

Method 1: Transmetalation To Form Transition Metal Enolates and Zinc Enolates

32.5.2.2.1.1

Variation 1: Transmetalation with Organotitanium or Organozirconium Complexes

32.5.2.2.1.2

Variation 2: Transmetalation with Nickel(II) or Palladium(II) Complexes

32.5.2.2.1.3

Variation 3: Transmetalation with Magnesium, Titanium, Manganese, or Zinc Salts

32.5.2.2.2

Method 2: Formation of Boron Enolates

32.5.2.2.3

Method 3: O-Alkylation and O-Acylation To Form Enol Ethers and Enol Esters

32.5.2.2.4

Method 4: Formation of Silyl Enol Ethers and Tin Enolates

32.5.2.2.5

Method 5: Reaction with S-Electrophiles: Formation of Enol Trifluoromethanesulfonates

32.5.2.2.6

Method 6: Protonation and Deuteration of Enolates

32.5.2.2.7

Method 7: Reaction on the C-Terminus with C-Electrophiles

32.5.2.2.7.1

Variation 1: Alkylation
Product Subclass 3: Enol Ethers
V. Milata, S. Rádl, and S. Voltrová

Synthesis of Product Subclass 3

Method 1: Alkylation of Carbonyl Compounds

Variation 1: Reactions of Enolates with Alkylating Agents

Variation 2: Reactions of Enolates with Diazooalkanes

Variation 3: Reaction of Ketones with Ethyl Diazoacetate

Method 2: Alkylation of Silyl Ethers

Method 1: Reaction of Vinyl Halides or Activated Vinyl Derivatives with Alcohols or Phenols

Variation 1: Nucleophilic Displacement

Variation 2: Copper-Catalyzed C–O Bond-Forming Reactions

Variation 3: Palladium-Catalyzed C–O Bond-Forming Reactions

Variation 4: Reaction of Perfluorovinyl Fluorides with Alcohols or Phenols

Method 2: Addition to Alkynes

Variation 1: Addition of Alcohols to Alkynes

Variation 2: cis Addition of Alcohols to Alkynones and Alkynoic Acid Derivatives

Variation 3: trans Addition of Alcohols to Alkynones and Alkynoic Acid Derivatives

Variation 4: Addition of Carbonyl Compounds to Alkynones and Alkynoic Acid Derivatives

Variation 5: Addition to Alkynes with Formation of Cyclic Enol Ethers

Method 3: Addition to Allenes or Methyleneyclopropanes

Variation 1: Addition to Sulfonyl-Stabilized Allenes

Variation 2: Reactions Involving Phosphorus-Based Anion-Stabilizing Groups

Variation 3: Photochemically Induced Reactions of Allenes Involving the Addition of an Alcohol

Variation 4: Palladium-Catalyzed Cascade Reaction of 4-(Alkoxy carbonyloxy)but-2-yn-1-ols with Phenols
32.5.3.1.10.1.1 Variation 1: Reaction of Dienophiles with Propenal, Alkylpropenals, or Methyl Vinyl Ketone ........................................ 735
32.5.3.1.10.1.2 Variation 2: Reaction of Dienophiles with Substituted 2-Oxobut-3-enoic Acid Esters ........................................ 737
32.5.3.1.10.1.3 Variation 3: Reaction of Dienophiles with 2-Methylene 1,3-Diketones or 2-Benzoaacrylonitriles ........................................ 739
32.5.3.1.10.1.4 Variation 4: Treatment of Dienophiles with Phosphonoheterodienes .................................................. 741
32.5.3.1.10.1.5 Variation 5: Reaction of Dienophiles with α-Sulfanyl, α-Sulfinyl, or α-Sulfonyl Heterodienes ........................................ 742
32.5.3.1.10.1.6 Variation 6: Reaction of Dienophiles with α-Trifluoromethyl Heterodienes .................................................. 744
32.5.3.1.10.1.7 Method 2: Intramolecular Hetero-Diels–Alder Reactions ........................................ 745
32.5.3.1.11 Miscellaneous Methods .................................................. 746
32.5.3.1.11.1 Method 1: Retro-Nazarov Reaction ........................................ 746

32.5.4 Product Subclass 4: Ene—OX Compounds (X = O, S, Se, Te)
G. Sartori and R. Maggi

32.5.4.1 Synthesis of Product Subclass 4 ........................................ 757
32.5.4.1.1 Method 1: Enolate Tosylation ........................................ 757
32.5.4.1.2 Method 2: Addition to Alkynes ........................................ 758
32.5.4.1.2.1 Variation 1: Halotosyloxylation of Alkynes ........................................ 758
32.5.4.1.2.2 Variation 2: Selenotosyloxylation of Alkynes ........................................ 759
32.5.4.1.3 Method 3: Dehydrofluorination of Polyfluoropropyl 4-Toluenesulfonates ........................................ 760
32.5.4.1.4 Method 4: Substituent Modification of Polyfluoro-1-(tosyloxy)-prop-1-enes ........................................ 760
32.5.4.1.5 Method 5: Enolate Trifluoromethylsulfonylation by Trifluoromethanesulfonic Anhydride ........................................ 761
32.5.4.1.6 Method 6: Enolate Trifluoromethylsulfonylation by N-Aryl Trifluoromethanesulfonylimides ........................................ 766
32.5.4.1.7 Method 7: Enolate Trifluoromethylsulfonylation by N-Phenylbis(trifluoro-methane)sulfonimide ........................................ 771
32.5.4.1.8 Method 8: Enolate Perfluoroalkylsulfonylation ........................................ 774
32.5.4.1.9 Methods 9: Miscellaneous Reactions ........................................ 777

32.5.5 Product Subclass 5: Ene—ON Compounds
G. Sartori and R. Maggi

32.5.5.1 Synthesis of Product Subclass 5 ........................................ 783
32.5.5.1.1 Method 1: Cycloaddition Reactions ........................................ 783
32.5.5.1.1.1 Variation 1: 1,3-Dipolar Cycloaddition of Nitriles to Electron-Deficient Allenes ........................................ 783
32.5.5.1.1.2 Variation 2: Addition of Hydroxylamines to Electron-Deficient Allenes ........................................ 785
32.5.5.1.1.3 Variation 3: Cycloaddition of Nitriles to Acetylenic Compounds ........................................ 787
32.5.1.4 Variation 4: Cyclization of N-Propargylhydroxylamines 789
32.5.1.2 Method 2: Addition of Oximes to Acetylene 790

32.5.6 Product Subclass 6: Ene—OP Compounds
G. Sartori and R. Maggi

32.5.6 Product Subclass 6: Ene—OP Compounds 795
32.5.6.1 Synthesis of Product Subclass 6 795
32.5.6.1.1 Method 1: Enolate Phosphorylation 795
32.5.6.1.1.4 Variation 1: Synthesis from Aldehydes 795
32.5.6.1.1.2 Variation 2: Synthesis from Ketones 797
32.5.6.1.1.3 Variation 3: Synthesis from Imides 802
32.5.6.1.2 Method 2: Addition of Nucleophilic Reagents to Alkynes 803
32.5.6.1.2.1 Variation 1: Addition to Terminal Alkynes 803
32.5.6.1.2.2 Variation 2: Addition to Internal Alkynes 805
32.5.6.1.3 Method 3: Perkow Reaction 807
32.5.6.1.4 Method 4: Skeleton Modification of P-Oxyalkenes 808
32.5.6.1.4.1 Variation 1: Diels–Alder Reactions 808
32.5.6.1.4.2 Variation 2: [2,3]-Sigmatropic Rearrangements 809
32.5.6.1.5 Methods 5: Miscellaneous Reactions 811

Table of Contents .................................................... XIII

Introduction
G. A. Molander ....................................................... 1

33.1 Product Class 1: Alk-1-enyl Sulfur Compounds

33.1.1 Product Subclass 1: Alk-1-enesulfonic Acids and Derivatives
J. C. Carretero and R. G. Arrayás ................................ 13

33.1.2 Product Subclass 2: Alk-1-enyl Sulfones
J. C. Carretero and R. G. Arrayás ................................ 19

33.1.3 Product Subclass 3: 5-Alk-1-enylsulfoximides
J. C. Carretero and R. G. Arrayás ................................. 51

33.1.4 Product Subclass 4: Alk-1-enesulfinic Acids and Derivatives
J. C. Carretero and R. G. Arrayás ................................. 59

33.1.5 Product Subclass 5: Alk-1-enyl Sulfoxides, Sulfinides,
and Related Compounds
J. C. Carretero and R. G. Arrayás ................................ 65

33.1.6 Product Subclass 6: Alk-1-enethiols
J. Drabowicz, P. Kiełbasiński, and M. Mikołajczyk .......... 101

33.1.7 Product Subclass 7: Metal Alk-1-enethiolates
J. Drabowicz, P. Kiełbasiński, and M. Mikołajczyk .......... 109

33.1.8 Product Subclass 8: Alk-1-enyl Sulfides
J. Drabowicz, P. Kiełbasiński, and M. Mikołajczyk .......... 113

33.1.9 Product Subclass 9: Alk-1-enylsulphonium Salts
J. Drabowicz, P. Kiełbasiński, and M. Mikołajczyk .......... 169

33.1.10 Product Subclass 10: Alk-1-enesulfinic Acid Derivatives
J. Drabowicz, P. Kiełbasiński, and M. Mikołajczyk .......... 177

33.1.11 Product Subclass 11: Alk-1-enyl Disulfides
J. Drabowicz, P. Kiełbasiński, and M. Mikołajczyk .......... 183

Introduction
G. A. Molander

Introduction ............................................................... 1

33.1 Product Class 1: Alk-1-enyl Sulfur Compounds

33.1.1 Product Subclass 1: Alk-1-enesulfonic Acids and Derivatives
J. C. Carretero and R. G. Arrayás

33.1.1.1 Method 1: Synthesis from 2-Chloroalkanesulfonic Acid Derivatives 13
33.1.1.2 Method 2: Condensations of the Carbanions of Sulfonic Acid Derivatives with Carbonyl Compounds 14
33.1.1.2.1 Variation 1: Aldol-Type Condensations and Related Processes 14
33.1.1.2.2 Variation 2: Wadsworth–Emmons Alkenation Reactions 15
33.1.1.3 Method 3: Cyclic Alk-1-enesulfonic Esters and Sulfonamides by Metathesis Reactions 16
33.1.1.4 Methods 4: Miscellaneous Syntheses of Alk-1-enesulfonic Acid Derivatives from Other Sulfur Compounds 17

33.1.2 Product Subclass 2: Alk-1-enyl Sulfones
J. C. Carretero and R. G. Arrayás

33.1.2.1 Method 1: Sulfonylation of Nucleophilic Alkenyl Reagents 19
33.1.2.2 Method 2: Condensation of Sulfonyl Carbanions with Carbonyl Compounds 20
33.1.2.2.1 Variation 1: Aldol-Type Condensation and Dehydration 20
33.1.2.2.2 Variation 2: Knoevenagel Condensation of Activated Sulfones 22
33.1.2.2.3 Variation 3: Condensation of Sulfinyl(sulfonyl)methanes with Aldehydes 23
33.1.2.2.4 Variation 4: Horner–Wadsworth–Emmons Alkenation of α-Sulfonyl Phosphonates 24
33.1.2.2.5 Variation 5: Peterson Alkenation of α-Silylalkyl Sulfones 26
33.1.2.3 Method 3: Sulfonylation of Alkenes Followed by Elimination 28
33.1.2.3.1 Variation 1: Chlorosulfenylation of Alkenes, Followed by Sulfur Oxidation and Elimination 28
33.1.2.3.2 Variation 2: Sulfonomercuration of Alkenes Followed by Demercuration 29
33.1.2.3.3 Variation 3: Selenosulfonylation of Alkenes Followed by Selenium Oxidation 30
33.1.2.1.3.4 Variation 4: Iodosulfonylation of Alkenes Followed by Dehydroiodination 31
33.1.2.1.4 Method 4: Sulfonylation of Alkynes ........................................ 33
33.1.2.1.5 Method 5: Functionalization of Alk-1-ynyl Sulfones .................. 34
33.1.2.1.5.1 Variation 1: Addition Reactions ........................................ 35
33.1.2.1.5.2 Variation 2: Cycloaddition Reactions .................................. 37
33.1.2.1.6 Method 6: Oxidation of Alk-1-ynyl Sulfides and Sulfoxides .......... 37
33.1.2.1.7 Method 7: Functionalization of Allyl Sulfones and Derivatives ...... 38
33.1.2.1.8 Method 8: Functionalization of Simple Alk-1-ynyl Sulfones .......... 40
33.1.2.1.8.1 Variation 1: α-Functionalization ....................................... 40
33.1.2.1.8.2 Variation 2: Heck Reaction ............................................ 42
33.1.2.1.8.3 Variation 3: Cross-Metathesis Reactions ............................ 43
33.1.2.1.8.4 Variation 4: Diels–Alder Reactions of Dienyl Sulfones .............. 44
33.1.2.1.8.5 Variation 5: Substitution of β-Functionalized Alk-1-ynyl Sulfones 45
33.1.3 Product Subclass 3: S-Alk-1-enylsulfoximides
J. C. Carretero and R. G. Arrayás

33.1.3.1 Synthesis of Product Subclass 3 ............................................ 51
33.1.3.1.1 Method 1: Condensation of Sulfonimidoyl Carbanions with Carbonyl Compounds .................................................... 51
33.1.3.1.1.1 Variation 1: Aldol-Type Condensations of α-Sulfonimidoyl Carbanions and the Dehydration of the Intermediate β-Hydroxylated Sulfoximides .................................................. 52
33.1.3.1.1.2 Variation 2: Peterson and Wadsworth–Emmons Alkenation Reactions ..... 54
33.1.3.1.2 Method 2: Imination of Alk-1-ynyl Sulfoxides .......................... 55
33.1.3.1.3 Method 3: Functionalization of Simple S-Alk-1-ynyl- and S-Alk-2-enylsulfoximides ................................................... 56

33.1.4 Product Subclass 4: Alk-1-enesulfinic Acids and Derivatives
J. C. Carretero and R. G. Arrayás

33.1.4.1 Synthesis of Product Subclass 4 ............................................ 59
33.1.4.1.1 Method 1: Reaction of Allenes and Alkynes with Sulfur Dioxide .......... 59
33.1.4.1.2 Method 2: Oxidative Fragmentation of Alk-1-ynyl Benzyl Sulfoxides .... 60
33.1.4.1.3 Method 3: S-Oxidation of Isothiazol-3(2H)-ones .......................... 61

33.1.5 Product Subclass 5: Alk-1-ynyl Sulfoxides, Sulfinimides, and Related Compounds
J. C. Carretero and R. G. Arrayás

33.1.5.1 Synthesis of Product Subclass 5 ............................................ 66
Product Subclass 6: Alk-1-enethiols
J. Drabowicz, P. Kiełbasiński, and M. Mikołajczyk

Product Subclass 7: Metal Alk-1-enethiolates
J. Drabowicz, P. Kiełbasiński, and M. Mikołajczyk
33.1.8 Product Subclass 8: Alk-1-enyl Sulfides
J. Drabowicz, P. Kiełbasiński, and M. Mikołajczyk

33.1.8 Synthesis of Product Subclass 8 ........................................ 113
33.1.8.1 Synthesis of Acyclic Alk-1-enyl Sulfides .......................... 113
33.1.8.1.1 Method 1: Alkylation of Alk-1-enethiolates .................. 113
33.1.8.1.2 Method 2: Transformations of 1-Haloalkenes and Their Analogues .... 114
33.1.8.1.2.1 Variation 1: Nucleophilic Substitution by Thiolate Anions and Their Analogues .......................... 114
33.1.8.1.2.2 Variation 2: Reactions of 1-Bromoalkenes with Trialkylstannyl Sulfides ... 115
33.1.8.1.2.3 Variation 3: Reactions with Copper Thiolates ................ 116
33.1.8.1.2.4 Variation 4: Palladium-Catalyzed Reactions with Thiolanes and Their Equivalents .......................... 116
33.1.8.1.2.5 Variation 5: Photochemical Reactions between 1-Bromoalk-1-enes and Sulfides .......................... 119
33.1.8.1.2.6 Variation 6: Using Alk-1-enylmercury(II) Halides ............ 119
33.1.8.1.2.7 Variation 7: Using Alk-1-enyltributylstannanes ............. 120
33.1.8.1.2.8 Variation 8: Using (Trimethylsiloxy)alkenes .................. 121
33.1.8.1.3 Method 3: Syntheses from Alkyl Sulfides .................... 121
33.1.8.1.3.1 Variation 1: Dehydrohalogenation of Haloalkyl Sulfides .... 121
33.1.8.1.3.2 Variation 2: Manganese(IV) Oxide Promoted Reactions of Sulfides with Acetyl Chloride .......................... 125
33.1.8.1.3.3 Variation 3: Peterson Reactions of α-Silyl Derivatives ........ 125
33.1.8.1.3.4 Variation 4: Decarboxylation of 2-(Methylsulfanyl)propanoic Acid .......................... 127
33.1.8.1.4 Method 4: Syntheses from Dithioacetals and Trithioorthoformates .......................... 128
33.1.8.1.4.1 Variation 1: Reactions with Sulfenyl Chlorides ............... 128
33.1.8.1.4.2 Variation 2: Copper- or Lewis Acid Mediated Cleavages of Sulfides .......................... 129
33.1.8.1.4.3 Variation 3: Stereoselective Reduction of Ketene Dithioacetals .......................... 129
33.1.8.1.4.4 Variation 4: Phosphite-Mediated Elimination Reactions .......................... 130
33.1.8.1.4.5 Variation 5: From Trithioorthoformates ........................ 130
33.1.8.1.5 Method 5: Aldol Condensations of Sulfides Bearing an Electron-Withdrawing α-Substituent .......................... 131
33.1.8.1.6 Method 6: Syntheses via Organophosphorus Reagents .......... 131
33.1.8.1.6.1 Variation 1: From Phosphorus Ylides .......................... 131
33.1.8.1.6.2 Variation 2: Wadsworth–Emmons–Horner Reactions ......... 132
33.1.8.1.7 Method 7: Synthesis from Alkyl Sulfoxides ........................ 134
33.1.8.1.7.1 Variation 1: Pummerer-Type Rearrangement of α-Chloroalkyl Sulfoxides .......................... 134
33.1.8.1.7.2 Variation 2: Iodotrimethylsilyl-Induced Elimination–Deoxygenation of Sulfoxides .......................... 135
33.1.8.1.8 Method 8: Deoxygenation of Alk-1-enyl Sulfoxides .......... 135
33.1.8.1.9 Method 9: Synthesis from Alkynyl Sulfoxides ................. 136
33.1.8.1.9.1 Variation 1: Reduction of Alkynyl Sulfides ................. 136
Variation 2: Hydroboration of Alkynyl Sulfides ........................................ 137
Variation 3: Tantalum-Mediated Additions to Alkynyl Sulfides ............... 137
Variation 4: Stereoselective Addition of Grignard Reagents to Alkynyl Sulfides ................................................................. 138
Variation 5: Addition of Organocopper Reagents to Alkynyl Sulfides ...... 138
Method 10: Addition of Thiols or Their Derivatives to Alkynes .......... 139
Variation 1: Free-Radical Additions .......................................................... 139
Variation 2: Addition of Thiolates to Alkynes .......................................... 141
Variation 3: Metal-Catalyzed Addition of Thiols and Their Borabicyclo Derivatives to Alkynes ....................................................... 143
Variation 4: Addition of Sulfeny Halides or Sulfenamides to Alkynes ...... 147
Method 11: Ring Opening of Epoxy Sulfides ........................................ 149
Method 12: Reaction of Benzyne with Thiiranes .................................... 151
Method 13: Reaction of N-Tosylsulfimides with Potassium tert-Butoxide 151
Method 1: Reaction of Chlorotropylium Salts with Thiols .................... 152
Method 2: Alkylation of Cycloalk-1-ene-1-thiolates ................................ 152
Method 3: Dehydrochlorination of Cyclic Sulfides .................................. 152
Variation 1: Chlorosulfenylation–Dehydrochlorination of Cycloalkenes .......... 152
Variation 2: Addition of Thiols to Cycloalk-2- enones, Followed by Chlorination–Dehydrochlorination of the Adducts ............ 153
Method 4: Synthesis from Cycloalkanones and Dithioacetals or Thiols 154
Method 5: Pummerer Reaction of Cyclic Sulfoxides ............................. 155
Method 6: Intramolecular Cyclization of Sulfines Derived from S- Unsaturated Dithioesters ................................................................. 156
Method 7: Intramolecular Trapping Reactions of Enethiols Functionalized by a Silyl Group ................................................................. 157
Method 1: Synthesis of Cyclic Alk-1-enyl Sulfides .................................. 157
Method 2: Addition of Thiols to But-1- en-3-ynes .................................. 162
Method 3: Reduction of (1E)-But-1-en-3-ynyl Ethyl Sulfides .................. 163
Method 4: Base-Catalyzed Ring-Opening Reactions of Sulfur-Containing Heterocycles ................................................................. 163
Method 5: Horner–Wittig Reaction of Alkenyl Phosphine Oxides Functionalized with a Phenylsulfanyl Substituent ................. 165
33.1.9 **Product Subclass 9: Alk-1-enylsulfonium Salts**
J. Drabowicz, P. Kiełbasiński, and M. Mikolażyck

---

33.1.9.1 **Synthesis of Product Subclass 9** ........................................ 169

33.1.9.1.1 Method 1: Dehydrohalogenation of (2-Haloalkyl)sulfonium Salts .... 169

33.1.9.1.2 Method 2: S-Alkylation of Alk-1-enyl Sulfides .......................... 172

33.1.9.1.3 Method 3: Synthesis from Dithioacetals ................................. 173

33.1.9.1.4 Method 4: Synthesis from Alkenes ........................................ 173

33.1.9.1.5 Method 5: Synthesis from Sulfonium Ylides Stabilized by a Phosphoryl Substituent ............................. 174

---

33.1.10 **Product Subclass 10: Alk-1-enesulfenic Acid Derivatives**
J. Drabowicz, P. Kiełbasiński, and M. Mikolażyck

---

33.1.10.1 **Synthesis of Product Subclass 10** ........................................ 177

33.1.10.1.1 Method 1: Alk-1-enesulfenyl Chlorides by Chlorination of Enethiols or Alk-1-enyl Sulfides .............................. 177

33.1.10.1.2 Method 2: Alk-1-enesulfenyl Chlorides from Allenes and Sulfur Dichloride .................................................. 178

33.1.10.1.3 Method 3: Alk-1-enesulfenyl Chlorides from Alkynes and Sulfur Dichloride .................................................. 178

33.1.10.1.4 Method 4: Alkenesulfenamides by Addition of Amidosulfenyl Chlorides to Alkynes ................................. 179

33.1.10.1.5 Method 5: Alk-1-enesulfenamides from Alk-1-enesulfenate Anions .................................................. 180

33.1.10.1.6 Method 6: Alk-1-enesulfenic Acids by the Enethiolization of Sulfines .................................................. 181

---

33.1.11 **Product Subclass 11: Alk-1-enyl Disulfides**
J. Drabowicz, P. Kiełbasiński, and M. Mikolażyck

---

33.1.11.1 **Synthesis of Product Subclass 11** ........................................ 183

33.1.11.1.1 Method 1: Sulfenylation of Alkenethiolate Anions ..................... 183

33.1.11.1.2 Method 2: Addition of Nucleophiles to Sulfines ........................ 185

---

33.1.12 **Product Subclass 12: Thietes and Derivatives**
E. Block

---

33.1.12.1 **Synthesis of Product Subclass 12** ........................................ 188

33.1.12.1.1 **Synthesis by Ring-Closure Reactions** ............................... 188

33.1.12.1.1.1 Method 1: Reaction of Sulfenes and Ynamines or Ketene O,N-Acetals .................................................. 188

33.1.12.1.1.2 Method 2: Photocycloaddition of Thiones to Alkynes ............. 189

33.1.12.1.1.3 Method 3: Reaction of a Perfluorinated Alkene and tert-Butanethiol .................................................. 190
33.1.13.1.6.1 Variation 1: Using Base or Hexacarbonylchromium Catalysis 206
33.1.13.1.6.2 Variation 2: From Halocyclizations 207
33.1.13.1.7 Method 7: Synthesis from 4,4-Dihalobut-3-enethiols 208
33.1.13.1.7.1 Variation 1: From 3-(Difluoromethylene)-2-methyl-6-phenylhexane-1-thiol 208
33.1.13.1.7.2 Variation 2: From 4,4-Dibromo-3-methylbut-3-ene-1-thiol 208
33.1.13.1.8 Method 8: Synthesis from 5-Substituted Pentan-2-ones 208
33.1.13.1.8.1 Variation 1: From 5-Sulfanylated Pentan-2-ones or 5-Bromopentan-2-ones 208
33.1.13.1.8.2 Variation 2: From O-Ethyl S-(4-Oxobutyl) Dithiocarbonates 209
33.1.13.1.9 Method 9: Intramolecular Michael Additions 210
33.1.13.1.10 Method 10: Cyclization of α-Phosphonovinyl Radicals 210
33.1.13.1.11 Method 11: Base-Induced Cyclizations of Alkynyl Benzyl Sulfides 211
33.1.13.1.12 Method 12: Intramolecular Wittig Reactions of Thioesters 212
33.1.13.1.13 Method 13: Intramolecular Titanocene(II)-Promoted Alkenations of Thioesters 212
33.1.13.1.14 Method 14: Photocyclization of Bis(2-phenylvinyl) Sulfide 213
33.1.13.1.2 Synthesis by Ring Transformation 214
33.1.13.1.2.1 Method 1: Formal Exchange of Ring Members with Retention of Ring Size 214
33.1.13.1.2.2 Method 2: Light-Induced Ring Contraction of 1,2-Dithiins 214
33.1.13.1.2.3 Method 3: Electrocyclic Ring Closure of Thionins 215
33.1.13.1.3 Synthesis by the Elimination Reactions of Thiolanes 215
33.1.13.1.3.1 Method 1: Synthesis from 2-Acetoxy- and 2-(Benzoyloxy)tetrahydrothiophenes 215
33.1.13.1.3.2 Method 2: Synthesis from 2- or 3-Hydroxy-, 3-Bromo-, or 2-(Alkylsulfanyl)tetrahydrothiophenes 216
33.1.13.1.3.3 Method 3: Bamford–Stevens Elimination of the Tosylhydrazone of Dihydrothiophen-3(2H)-one 217
33.1.13.1.4 Synthesis by Substituent Modification 218
33.1.13.1.4.1 Substitution of Hydrogen or Metals 218
33.1.13.1.4.1.1 Method 1: Lithiation of 2,3-Dihydrothiophene and Its Reactions with Electrophiles 218
33.1.13.1.4.1.2 Method 2: Replacement of Tin by Hydroxyalkyl Groups 218
33.1.13.1.4.2 Substitution of Heteroatoms 219
33.1.13.1.4.2.1 Method 1: Nucleophilic Substitutions of 3-Bromo-2,3-dihydrothiophene 1,1-Dioxide 219
33.1.13.1.4.2.2 Method 2: Substitution of a Trifluoromethylsulfonyloxy Group by a Metal 220
33.1.13.1.4.3 Addition Reactions 221
33.1.13.1.4.3.1 Method 1: Reduction of Thiophenes 221
33.1.13.1.4.3.1.1 Variation 1: Birch Reduction 221
33.1.13.1.4.3.1.2 Variation 2: Samarium(II) Iodide Mediated Double Electrophilic Reduction 221
33.1.13.1.4.3.2 Method 2: Dimerization of 2,3-Dihydrothiophene and Its 1,1-Dioxide 222
33.1.13.1.4.3.3 Method 3: Addition Reactions Involving Thiophene 1-Oxides 223
33.1.13.1.4.3.3.1 Variation 1: Dihydrodiol Formation or Oxidation/Dimerization 223
33.1.13.1.4.3.4 Method 4: Nucleophilic Additions to Thiophene 1-Oxides or 1,1-Dioxides 224

Method 10: Synthesis from \( \omega \)-Halothioacylsilanes

Method 11: Synthesis from 3-Methyl-6-sulfanylhexan-2-ones

Method 12: Synthesis from a 5,5-Dibromopent-4-enethiol or a 5,5-Dibromopent-4-enyl Sulfide

Method 13: Synthesis from 1-(Arene sulfonyl)-5-iodobut-1-enyl Methyl Sulfides

Method 14: Thermal Rearrangement of Prop-2-ynyl Vinyl Sulfide

Method 15: Cope Rearrangement of Thiocarbonyl Compounds

Method 16: Electrocyclic Ring Closure of (3E,5Z)-1,1,1,7,7,7-Hexafluoro-3,4,5-tris(trifluoromethyl)hepta-3,5-diene-2-thione

Method 17: Cyclization of S-Allyl \( \alpha \)-Phosphonovinyl Radicals

Method 1: Ring Enlargement of Acyldihydrothiophenes

Method 2: Ring Enlargement of 4,5-Dihydrothiophenium and Thiophenium 1-Methylides

Synthesis from Dihydro- and Tetrahydrothiopyrans

Method 1: Rearrangement and/or Elimination Reactions

Substitution of Hydrogen

Method 1: Lithiation of 3,4-Dihydro-2\( H \)-thiopyrans, 2\( H \)-Thiopyrans, and 4\( H \)-Thiopyrans

Method 1: Replacement of Lithium by Organostannyl and Organosilyl Groups

Addition Reactions

Method 1: Dimerization of 3,4-Dihydro-2\( H \)-thiopyran

Method 2: Oxidation of the Sulfur Atom

Method 3: Sulfilimine Formation

Modification of Substituents

Method 1: Enolization of Dihydrothiopyranones

Method 2: Cationic Interconversion of 4\( H \)-Thiopyrans into 2\( H \)-Thiopyrans

Method 3: Base-Induced Conversions of 2\( H \)-Thiopyrans into 4\( H \)-Thiopyrans

Method 4: Photochemical Conversion of a 2\( H \)-Thiopyran into a 4\( H \)-Thiopyran

Applications of Product Subclass 14 in Organic Synthesis

Method 1: Nickel-Catalyzed Replacement of a Vinylic C–S Bond with a C–C Bond

Method 2: Synthesis of Thiopyrylium Salts

Method 3: Synthesis of 4-Methylene-2,6-diphenyl-4\( H \)-thiopyrans

Method 4: Synthesis of Chiral Auxiliaries for Corey–Chaykovsky Epoxidation

Method 5: Protecting Group for Alcohols
Product Subclass 15: 2,3,4,5-Tetrahydrothiepins, Larger Rings, and Derivatives

33.2.4.1 Synthesis of Product Subclass 4 .................................................. 278
33.2.4.1.1 Method 1: Reaction of Metal Complexes with 1,2,3-Selenadiazoles .... 278
33.2.4.1.2 Method 2: Addition of Metal Complexes Containing Selenium Ligands to Alkynes ................................................................. 279
33.2.4.1.3 Method 3: Exchange of Selenolate Ligands in Metal Complexes ......... 279
33.2.4.1.4 Methods 4: Other Methods ...................................................... 280
33.2.5 Product Subclass 5: Alk-1-enyl Selenides ................................................. 280
33.2.5.1 Synthesis of Product Subclass 5 .................................................. 281
33.2.5.1.1 Method 1: Coupling of Organoselenenyl Halides or Diorgano Diselenides with Alk-1-enyl Heteroatom Derivatives .......................... 281
33.2.5.1.1.1 Variation 1: Reaction of Organoselenenyl Halides with Alk-1-enylMagnesium Halides ...................................................... 281
33.2.5.1.1.2 Variation 2: Reaction of Areneselenenyl Halides and Related Compounds with Alk-1-enylzirconocenes ........................................ 282
33.2.5.1.1.3 Variation 3: Reaction of an Areneselenenyl Halide with Vinylboronic Acids and Esters ...................................................... 282
33.2.5.1.1.4 Variation 4: Reaction of Areneselenenyl Halides with Alk-1-enyl(trialkyl)stannanes and Related Reactions .......................... 283
33.2.5.1.1.5 Variation 5: Reaction of Areneselenenyl Halides and Related Compounds with Alk-1-enyllithiums ...................................................... 283
33.2.5.1.2 Method 2: Coupling of Metal Selenides or Metal Alkane- or Areneselenolates with Alk-1-enyl Heteroatom Derivatives and Related Reactions ............... 283
33.2.5.1.3 Method 3: Addition–Elimination of Organoselenium Compounds to Alkenes ................................................... 284
33.2.5.1.3.1 Variation 1: Addition–Elimination of Organoselenenyl Halides and Related Compounds ............................................................ 285
33.2.5.1.3.2 Variation 2: Addition–Elimination of Selenols ............................................................ 285
33.2.5.1.4 Method 4: Wittig, Horner–Wadsworth–Emmons, and Related Reactions of Selenium Precursors with Carbonyl Compounds ........ 286
33.2.5.1.5 Method 5: Addition of Selenium Compounds to Alkynes .......... 287
33.2.5.1.5.1 Variation 1: Addition of Selenols ............................................................ 287
33.2.5.1.5.2 Variation 2: Addition of Arene- or Alkaneselenenyl Halides, Selenosulfonates, and Related Compounds .................. 288
33.2.5.1.5.3 Variation 3: Addition of Diselenides ............................................................ 289
33.2.5.1.5.4 Variation 4: Addition of Other Compounds Containing a Selenium–Heteroatom Bond ............................................................ 290
33.2.5.1.5.5 Variations 5: Other Variations ............................................................ 291
33.2.5.1.6 Method 6: Addition of Selenium Compounds to Allenes ............................................................ 291
33.2.5.1.7 Method 7: Addition to Alk-1-ynylselenium Compounds ............................................................ 291
33.2.5.1.7.1 Variation 1: Addition to Alk-1-ynyl Selenides ............................................................ 291
33.2.5.1.7.2 Variation 2: Addition to Metal Alk-1-yneselenolates ............................................................ 294
33.2.5.1.8 Method 8: Double Bond Shift of Allyl Selenides and Related Reactions ............................................................ 295
33.2.5.1.9 Methods 9: Other Methods ............................................................ 295
33.2.6 Product Subclass 6: Alk-1-enylselenonium Salts ............................................................ 295
33.2.6.1 Synthesis of Product Subclass 6 ............................................................ 295
33.2.6.1.1 Method 1: Alkylation of Alken-1-yl Selenides ............................................................ 295
33.2.6.1.2 Method 2: Addition of Nucleophiles to Alk-1-ynylselenonium Salts ............................................................ 296
33.2.7 Product Subclass 7: Alk-1-enyl Polyeselenides ............................................................ 296
33.2.7.1 Synthesis of Product Subclass 7 ............................................................ 296
33.2.7.1.1 Method 1: Oxidation of Metal Alk-1-eneselenolates ............................................................ 297
33.3 Product Class 3: Alk-1-enyl Tellurium Compounds
D. Avilov and D. Dittmer
33.3 Product Class 3: Alk-1-enyl Tellurium Compounds ............................................................ 303
33.3.1 Product Subclass 1: Alk-1-enyl-º6-tellanes ............................................................ 303
33.3.1.1 Synthesis of Product Subclass 1 ............................................................ 303
33.3.1.1.1 Method 1: Substitution of Pentaaryltellurium Trifluoromethanesulfonates ............................................................ 303
33.3.2 Product Subclass 2: Alk-1-enyl Telluroxides ............................................................ 304
33.3.2.1 Synthesis of Product Subclass 2 ............................................................ 304
33.3.2.1.1 Method 1: Addition of Benzenetellurinyl Trifluoromethanesulfonate to Alkynes ............................................................ 304
33.3.2.1.2 Method 2: Oxidation of Alk-1-enyl Tellurides ............................................................ 304
33.3.3 Product Subclass 3: Alk-1-enyl-º4-tellanes ............................................................ 305
33.3.3.1 Synthesis of Product Subclass 3 .......................................................... 305
33.3.3.1.1 Method 1: Metal–Tellurium Exchange ........................................ 305
33.3.3.1.2 Method 2: Addition of Halogens to Alk-1-enyl Tellurides ............ 305
33.3.3.1.3 Method 3: Addition of Tellurium(IV) Halides or Organotellurium Trihalides to Alkynes .......................................................... 306
33.3.3.1.4 Method 4: Exchange of Groups on Tellurium in Alk-1-enyl-\(\lambda^4\)-tellanes ...... 307
33.3.3.2 Applications of Product Subclass 3 in Organic Synthesis ............... 308
33.3.4 Product Subclass 4: Alk-1-enyl Tellurides ........................................... 308
33.3.4.1 Synthesis of Product Subclass 4 .......................................................... 308
33.3.4.1.1 Method 1: Coupling of Organotellurenyl Halides or Diorganoditellanes with Alk-1-enyl Anions or Radical Equivalents ............................. 308
33.3.4.1.1.1 Variation 1: Reaction of Organotellurenyl Halides with Grignard Reagents .................................................................................. 309
33.3.4.1.1.2 Variation 2: Reaction of Organotellurenyl Halides with Alkynylboranes or Vinylaluminum Compounds ........................................ 309
33.3.4.1.1.3 Variation 3: Reaction of Organotellurenyl Halides with Alk-1-enyl Zirconocenes ........................................................................ 310
33.3.4.1.1.4 Variation 4: Reaction of Organotellurenyl Halides and Derivatives with Alk-1-enyl Cuprates or Alk-1-enyl Mercury Derivatives .... 311
33.3.4.1.1.5 Variation 5: Reaction of 1,2-Bis[(Z)-2-lithiovinyl]benzene Derivatives and [(1Z,3Z)-1-Lithio-4-(2-lithiophenyl)buta-1,3-dienyl]-(trimethyl)silane with Tellurium Tetrachloride ........................................ 312
33.3.4.1.1.6 Variation 6: Intramolecular Baylis–Hillman Reactions of Organotellurenyl Bromides ........................................................................ 313
33.3.4.1.2 Method 2: Alkylation of Alk-1-enyltelluride Anions ....................... 313
33.3.4.1.3 Method 3: Displacement Reactions on Alk-1-enyl Derivatives by Telluride Anions ........................................................ 314
33.3.4.1.4 Method 4: Wittig and Related Reactions ............................................. 315
33.3.4.1.5 Method 5: Addition of Tellurium Compounds to Alkynes or Allenes ................................................................. 316
33.3.4.1.5.1 Variation 1: Addition of Tellurols and Metal Tellurides ................................................................. 316
33.3.4.1.5.2 Variation 2: Addition of Organotellurenyl Halides and Amides ........ 318
33.3.4.1.5.3 Variation 3: Free-Radical Additions of Tellurium Species ............ 319
33.3.4.1.5.4 Variation 4: Addition of Iron–Telluride Complexes ...................... 320
33.3.4.1.6 Method 6: Reductions of Tellurium Compounds ............................ 320
33.3.4.1.6.1 Variation 1: Reduction of Alk-1-enyl Telluroxides ...................... 320
33.3.4.1.6.2 Variation 2: Reduction of Alk-1-enyltellurium Halides ................. 321
33.3.4.1.6.3 Variation 3: Reduction of Alk-1-enylditellanes ............................. 322
33.3.4.1.6.4 Variation 4: Reduction of Alkynyl Tellurides ................................ 322
33.3.4.1.7 Method 7: Additions to Alkynyl Tellurides ..................................... 322
33.3.4.1.8 Method 8: Modifications of Existing Alk-1-enyl Tellurium Species ...... 323
33.3.4.1.8.1 Variation 1: Addition Reactions to the C=C Bond of Alk-1-enyl Tellurides .......... 323
33.3.4.1.8.2 Variation 2: Replacement or Modification of Substituents on the C=C Bond of Alk-1-enyl Tellurides ........................................ 324
33.3.4.1.9 Methods 9: Other Methods ............................................................... 326
33.3.4.2 Applications of Product Subclass 4 in Organic Synthesis .................. 327
33.3.5 Product Subclass 5: Alk-1-enyltelluronium Salts .................................... 328
33.3.5.1 Synthesis of Product Subclass 5 .......................................................... 328
### 33.3.5.1.1 Method 1: Alkylation of Alk-1-enyl Tellurides

33.4.2.1.2 Variation 2: Elimination of Trialkylsilanol from Silyl Nitronates .............. 373
33.4.2.1.3 Method 3: Thermolysis Reactions ............................................. 375
33.4.2.1.4 Method 4: Photolysis Reactions .................................................. 375
33.4.2.1.5 Method 5: Reductions of Nitroalkenes ....................................... 376
33.4.2.1.5.1 Variation 1: Electrochemical Reduction .................................. 376
33.4.2.1.5.2 Variation 2: Reduction with Phosphorus Compounds .................. 376
33.4.2.1.6 Method 6: Oxidation Reactions ................................................. 377
33.4.2.1.7 Method 7: Ring-Opening Reactions ........................................... 377
33.4.2.1.7.1 Variation 1: From Epoxides .................................................... 377
33.4.2.1.7.2 Variation 2: From Isoxazoles .................................................. 378
33.4.2.1.8 Method 8: Isomerization Reactions ........................................... 378
33.4.2.1.9 Method 9: Skeletal Rearrangement Reactions .............................. 379
33.4.2.1.10 Method 10: Alkylation of Oximes ............................................. 379
33.4.2.1.11 Method 11: Derivatization of Stable Nitrosoalkenes ..................... 380
33.4.2.2 Applications of Product Subclass 2 in Organic Synthesis ...................... 381
33.4.2.2.1 Method 1: Reactions with Nucleophiles ...................................... 381
33.4.2.2.2 Method 2: Synthesis of \( \alpha,\beta \)-Unsaturated Oximes ................. 382
33.4.2.2.3 Method 3: \([4 + 2]\) Cycloadditions .............................................. 383
33.4.2.2.4 Method 4: Electrocyclic Ring-Closure Reactions .......................... 385

33.4.3 Product Subclass 3: N-Alk-1-enyliminosulfur Compounds
H.-U. Reissig and R. Zimmer

33.4.3.1 Synthesis of Product Subclass 3 .................................................... 391
33.4.3.1.1 Method 1: Reaction of \( \beta \)-Alkoxy Michael Acceptors with
  Sulfoximides and Sulfodiimines ...................................................... 391
33.4.3.1.1.1 Variation 1: Reactions with Sulfoximides ................................ 391
33.4.3.1.1.2 Variation 2: Reactions with Sulfodiimines ................................ 392
33.4.3.1.2 Method 2: Reaction of Alkynes with Dialkylsulfonium Salts .......... 392
33.4.3.1.3 Method 3: Reaction of Ethyl Bromoacetate with Sulfoximides ...... 393
33.4.3.1.4 Method 4: Reaction of 4-Amino-1,2-dihydropyrazol-3-one with
  Thionyl Chloride ................................................................. 393

33.4.4 Product Subclass 4: Alk-1-enediazonium Salts, Alkeneazoxy,
and Alkeneazo Compounds

33.4.4.1 Product Subclass 4: Alk-1-enediazonium Salts, Alkeneazoxy,
and Alkeneazo Compounds ............................................................ 395
33.4.5 Product Subclass 5: N-Alk-1-enyliminophosphorus Compounds
H.-U. Reissig and R. Zimmer

33.4.5 Product Subclass 5: N-Alk-1-enyliminophosphorus Compounds

33.4.5.1 Method 1: Reactions of β-Alkox Michael Acceptors with Triphenyl-
phosphine Imide

33.4.5.1.2 Method 2: Reactions of Azides with Triarylphosphines and
Triorganyl Phosphites

33.4.5.1.2.1 Variation 1: With Triarylphosphines

33.4.5.1.2.2 Variation 2: With Triorganyl Phosphites

33.4.5.1.3 Method 3: Reactions of Nitriles with Triarylphosphines

33.4.5.1.4 Method 4: Reactions of Heterocycles Bearing β-Acceptor-Substituted
Enamine Moieties with Triarylphosphines

33.4.5.1.5 Method 5: Elimination Reactions of (α-Azidoalkyl)benzotriazoles

33.4.5.2 Applications of Product Subclass 5 in Organic Synthesis

33.4.5.2.1 Method 1: Aza-Wittig Reactions

33.4.5.2.2 Method 2: Synthesis of Heterocycles

33.4.6 Product Subclass 6: Enamines
T. Sammakia, J. A. Abramite, and M. F. Sammons

33.4.6 Product Subclass 6: Enamines

33.4.6.1 Method 1: Condensation of a Ketone or Aldehyde with an Amine

33.4.6.1.1 Variation 1: Via Benzotriazole Aminals

33.4.6.1.2 Variation 2: Using Azeotropic Removal of Water

33.4.6.1.3 Variation 3: By the Action of Protic Acid Catalysis

33.4.6.1.4 Variation 4: By the Action of Molecular Sieves as Catalysts and Desiccants

33.4.6.1.5 Variation 5: By the Action of Calcium Chloride as a Desiccant

33.4.6.1.6 Variation 6: By the Action of Titanium(IV) Chloride as a Promoter

33.4.6.1.7 Variation 7: By the Action of Boron Trifluoride–Diethyl Ether Complex as
a Catalyst

33.4.6.1.2 Method 2: Oxidative Amination

33.4.6.1.3 Method 3: Cross-Coupling Reactions

33.4.6.1.3.1 Variation 1: Of Bromides

33.4.6.1.3.2 Variation 2: Of Chlorides

33.4.6.1.3.3 Variation 3: Of Sulfonates

33.4.6.1.4 Method 4: Substitution and Addition–Elimination Reactions

33.4.6.1.5 Method 5: Elimination of Hydrogen

33.4.6.1.5.1 Variation 1: Dehydrogenation

33.4.6.1.5.2 Variation 2: Transfer Dehydrogenation

33.4.6.1.6 Method 6: Elimination of a Metal Hydroxide

33.4.6.1.7 Method 7: Addition of Hydrogen

33.4.6.1.7.1 Variation 1: Reduction of Enamides
33.4.6.1.7.2 Variation 2: Dissolving Metal Reduction of Aromatic Amines ............... 423
33.4.6.1.8 Method 8: Hydroamination ................................................................. 423
33.4.6.1.9 Method 9: Addition of Organometallic Reagents to Nitriles .................. 426
33.4.6.1.10 Method 10: Hydroaminomethylation ................................................. 428
33.4.6.1.11 Method 11: Isomerization ................................................................. 429
33.4.6.1.12 Method 12: Wittig Reaction of Amides .............................................. 432
33.4.6.1.13 Method 13: Horner–Wittig Reaction of Ketones and Aldehydes .......... 433
33.4.6.1.14 Method 14: Alkylideneation of Carbonyl Groups via Titanium Carbenes 434
33.4.6.1.14.1 Variation 1: Using Dialkyltitanocenes ........................................... 435
33.4.6.1.14.2 Variation 2: Using Tebbe’s Reagent .............................................. 436
33.4.6.1.14.3 Variation 3: Takai Alkylideneation ............................................... 436
33.4.6.1.14.4 Variation 4: Alkylideneation of Amides with Thioacetals Using a Titanium(II) Complex .................................................. 437

33.4.7 Product Subclass 7: Enammonium Salts
T. Sammakia, J. A. Abramite, and M. F. Sammons

33.4.7.1 Synthesis of Product Subclass 7 ............................................................. 443
33.4.7.1.1 Method 1: Alkylation of Enamines ...................................................... 443
33.4.7.1.2 Method 2: Conjugate Addition/Elimination ...................................... 444
33.4.7.1.3 Method 3: Alkylation/Elimination ..................................................... 445
33.4.7.1.4 Method 4: Copper-Catalyzed S$_{N}$2’ Substitution of Propargyl Chlorides 445
33.4.7.1.5 Method 5: Elimination of a Hydrogen Halide or Water .................. 446
33.4.7.1.6 Method 6: Addition of Trialkylammonium Salts to Activated Alkynes ... 447
33.4.7.1.7 Method 7: Cyclopropyliminium Ion Rearrangement ....................... 447

33.4.8 Product Subclass 8: N-Silylenamines
S. J. Collier

33.4.8.1 Synthesis of Product Subclass 8 ............................................................. 451
33.4.8.1.1 Method 1: Synthesis from Imines ..................................................... 451
33.4.8.1.1.1 Variation 1: Direct Silylation of Imines or Enamines ....................... 453
33.4.8.1.1.2 Variation 2: Other Approaches Involving Imines .......................... 458
33.4.8.1.2 Method 2: Synthesis from Nitriles ................................................... 460
33.4.8.1.2.1 Variation 1: Nucleophilic Attack on Nitriles ................................. 460
33.4.8.1.2.2 Variation 2: Other Approaches Involving Nitriles ....................... 466
33.4.8.1.3 Method 3: Isomerization Reactions .................................................. 467
33.4.8.1.4 Methods 4: Miscellaneous Methods ............................................... 469
33.4.9  Product Subclass 9: N-Borylenamines
S. J. Collier

33.4.9  Product Subclass 9: N-Borylenamines ........................................ 475
33.4.9.1 Synthesis of Product Subclass 9 ............................................. 477
33.4.9.1.1 Method 1: Direct Borylation of Imines (or Enamines) ............... 477
33.4.9.1.2 Method 2: Synthesis from 1,2-Azaborolium Salts .................... 480
33.4.9.1.3 Method 3: Synthesis from Other N-Borylenamines ................. 481
33.4.9.1.4 Methods 4: Miscellaneous Procedures ................................. 483

33.4.10 Product Subclass 10: N-Haloenamines
S. J. Collier

33.4.10  Product Subclass 10: N-Haloenamines .................................... 487
33.4.10.1 Synthesis of Product Subclass 10 ......................................... 487
33.4.10.1.1 Method 1: Halogenation of Enamides ................................. 487
33.4.10.1.2 Method 2: N-Halopyridinones and Related Compounds by
Direct Halogenation ................................................................. 488

33.4.11 Product Subclass 11: N-Alk-1-enylhydroxylamines
S. J. Collier

33.4.11  Product Subclass 11: N-Alk-1-enylhydroxylamines ...................... 493
33.4.11.1 Synthesis of Product Subclass 11 .......................................... 494
33.4.11.1.1 Method 1: Conjugate Addition Reactions of Hydroxylamines ...... 494
33.4.11.1.1.1 Variation 1: With Alkenes .............................................. 494
33.4.11.1.1.2 Variation 2: With Alkynes ............................................. 496
33.4.11.1.2 Method 2: Synthesis from Hydroxylamines and Aldehydes or
Ketones 498
33.4.11.1.3 Methods 3: Miscellaneous Methods .................................... 500

33.4.12 Product Subclass 12: N-Alk-1-enylaminosulfur Compounds
S. J. Collier

33.4.12  Product Subclass 12: N-Alk-1-enylaminosulfur Compounds .............. 503
33.4.12.1 Synthesis of Product Subclass 12 .......................................... 504
33.4.12.1.1 Method 1: Synthesis from Imines and Enamines and
Electrophilic Sulfur Agents .......................................................... 504
33.4.12.1.2 Method 2: Synthesis from N-Sulfonylimines and Related
Compounds ................................................................. 505
33.4.12.1.2.1 Variation 1: Through Deprotonation and Quenching of
N-Sulfanyl- and N-Sulfinylimines .............................................. 505
33.4.12.1.2.2 Variation 2: Through Nucleophilic Attack on N-Sulfonylimines . 506
33.4.12.1.3 Method 3: Synthesis from Primary and Secondary Sulfonamides . 509
33.4.12.1.4 Method 4: Synthesis through 1,2-Elimination Reactions of Amines . 511
33.4.12.1.5 Method 5: Synthesis through Cross-Coupling Reactions ........... 512
Product Subclass 13: Alk-1-enylhydrazines
S. J. Collier and M. D. McLaws

Product Subclass 13: Alk-1-enylhydrazines

Synthesis of Product Subclass 13

Method 1: Synthesis from Hydrazines and Carbonyl Compounds
Variation 1: Monosubstituted or N,N-Disubstituted Hydrazines
Variation 2: N,N'-Disubstituted Hydrazines or Trisubstituted Hydrazines
Method 2: Synthesis by Conjugate Addition
Variation 1: Of Hydrazines to Alkynes
Variation 2: Of Hydrazines to β-Substituted Alkenes
Methods 3: Miscellaneous Methods

Product Subclass 14: Alk-1-enyl Azides
S. J. Collier

Product Subclass 14: Alk-1-enyl Azides

Synthesis of Product Subclass 14

Method 1: Condensation of Arylaldehydes with α-Azido-Esters
Method 2: 1,2-Elimination Reactions
Method 3: 1,4-Addition Reactions
Methods 4: Miscellaneous Methods

Product Subclass 15: N-Alk-1-enylaminophosphorus Compounds
S. J. Collier

Product Subclass 15: N-Alk-1-enylaminophosphorus Compounds

Synthesis of Product Subclass 15

Method 1: Synthesis from Imines or Enamines and Phosphorus Electrophiles
Method 2: Synthesis from Phosphamides and Aldehydes
Method 3: Synthesis from N-Allylphosphoric Triamides
Method 4: Synthesis from Nitriles
Methods 5: Miscellaneous Methods

Product Subclass 16: 1,2-Dihydroazetes and Derivatives
P. Jubault, E. Leclerc, and J.-C. Quirion

Product Subclass 16: 1,2-Dihydroazetes and Derivatives

Synthesis of Product Subclass 16

Synthesis by Ring-Closure Reactions
33.4.16.1.1 Method 1: Addition of Amines to a Perfluoroenone ............................ 577
33.4.16.1.2 Method 2: Addition of Amines to Hexafluoropropene Trimers ............... 578
33.4.16.1.3 Method 3: [2 + 2] Cycloaddition between an Imine and a Ketene Aminal 579
33.4.16.1.2 Elimination Reactions from Azetidines ............................................. 579
33.4.16.1.2.1 Method 1: Elimination of a Methanesulfonate Group ....................... 579
33.4.16.1.2.1.1 Variation 1: Synthesis of N-Acyl-1,2-dihydroazetes ....................... 579
33.4.16.1.2.1.2 Variation 2: Synthesis of N-Mesyl- and N-Nitro-1,2-dihydroazetes .... 580
33.4.16.1.2.2 Method 2: 1,2-Photoaromatization Reaction of an Azabicyclohexane-Type Diels–Alder Adduct ................. 580
33.4.16.1.3 Synthesis by Substituent Modification .................................................. 581
33.4.16.1.3.1 Method 1: Addition of Malonate Derivatives to Azetes ..................... 581
33.4.17 Product Subclass 17: 2,3-Dihydro-1H-pyrroles and Derivatives 
P. Jubault, E. Leclerc, and J.-C. Quirion

33.4.17 Product Subclass 17: 2,3-Dihydro-1H-pyrroles and Derivatives ............... 583
33.4.17.1 Synthesis of Product Subclass 17 ............................................................ 583
33.4.17.1.1 Synthesis by Ring-Closure Reactions ................................................... 583
33.4.17.1.1.1 Method 1: Addition/Cyclization of Sulfonamide Anions with Alkynyliodonium Trifluoromethanesulfonates ......................................................... 583
33.4.17.1.1.2 Method 2: Iodocyclization of Alk-3-ynylsulfonamides ....................... 584
33.4.17.1.1.3 Method 3: Palladium-Catalyzed Cyclization of α-Propargyl α-Amino Esters .......................................................... 585
33.4.17.1.1.4 Method 4: Ring-Closing Metathesis of N-Alk-3-ethyl-N-alk-1-ynylsulfonamides ......................................................... 585
33.4.17.1.1.5 Method 5: Ring-Closing Metathesis of N-Alk-3- enylenamines .............. 586
33.4.17.1.2 Elimination Reactions from Pyrrolidines .............................................. 587
33.4.17.1.2.1 Method 1: Reduction of Lactams Followed by Elimination ............... 587
33.4.17.1.2.2 Method 2: Dehydration of Pyrrolidin-3-ols ........................................ 591
33.4.17.1.3 Synthesis by Substituent Modification ................................................... 592
33.4.17.1.3.1 Method 1: Heck Reactions of 2,3-Dihydropyroles ............................ 592
33.4.17.1.3.2 Method 2: Isomerizing Heck Reactions of 2,5-Dihydropyroles ......... 593
33.4.17.1.3.3 Method 3: Coupling Reactions of Lactam-Derived Alkenyl Trifluoromethanesulfonates ......................................................... 595

33.4.18 Product Subclass 18: 1,2-Dihydropyridines, 1,4-Dihydropyridines, and Derivatives 
J.-C. Quirion, E. Leclerc, and P. Jubault

33.4.18 Product Subclass 18: 1,2-Dihydropyridines, 1,4-Dihydropyridines, and Derivatives .......................................................... 601
33.4.18.1 Synthesis of Product Subclass 18 ........................................................... 601
33.4  

### 33.4.18.1.1 Synthesis by Ring-Closure Reactions  .............................................. 601

33.4.18.1.1 Method 1: Three-Component Hantzsch Synthesis .................................. 601
33.4.18.1.1.1 Variation 1: Classical Hantzsch Reaction ......................................... 601
33.4.18.1.1.2 Variation 2: Microwave Activation ..................................................... 602
33.4.18.1.1.3 Variation 3: Miscellaneous Approaches ............................................... 603
33.4.18.1.1.4 Variation 4: Solid-Phase Hantzsch Synthesis ..................................... 604
33.4.18.1.2 Method 2: Addition/Cyclization of Nitrogen Nucleophiles to Dicarbonyl Compounds .......................................................... 605
33.4.18.1.3 Method 3: Aza-Diels–Alder Reaction of 1-Azadienes ............................... 607
33.4.18.1.4 Method 4: Asymmetric Two-Component Hantzsch Reaction .................... 609
33.4.18.1.5 Method 5: 6π-Electrocyclization of 1-Azatrienes ....................................... 610

33.4.18.1.2 Synthesis by Ring Transformation ...................................................... 611
33.4.18.1.2.1 Method 1: Rearrangement of a 3,6,7-Triazatricyclo[3.2.1.0^2,4]octane Derivative ................................................................. 611
33.4.18.1.2.2 Method 2: Radical Deoxygenation of 3-Azatricyclo[2.2.1.0^2,6]-heptan-5-ols ............................................................. 612

33.4.18.1.3 Synthesis by Substituent Modification .................................................. 612
33.4.18.1.3.1 Addition Reactions ............................................................................. 612
33.4.18.1.3.1.1 Method 1: Hydride Reductions ......................................................... 612
33.4.18.1.3.1.2 Method 2: Dissolving-Metal Reductions ........................................... 614
33.4.18.1.3.1.3 Method 3: Dithionite Reductions ..................................................... 615
33.4.18.1.3.1.4 Method 4: Addition of Grignard Reagents ....................................... 615
33.4.18.1.3.1.5 Method 5: Addition of Organotin Reagents ..................................... 617
33.4.18.1.3.1.6 Method 6: Addition of Organocopper and Organocuprate Reagents ... 618
33.4.18.1.3.1.7 Method 7: Addition of Enolates and Enol Ethers .............................. 620
33.4.18.1.3.1.8 Method 8: Addition of Other Carbon Nucleophiles .......................... 621
33.4.18.1.3.1.9 Method 9: Asymmetric Addition of Nucleophiles to Pyridinium Salts ... 622
33.4.18.1.3.1.9.1 Variation 1: Chirality on the Nitrogen Atom .................................. 622
33.4.18.1.3.1.9.2 Variation 2: Addition to Chiral Nicotinic Acid Derivatives ............... 624
33.4.18.1.3.1.9.3 Variation 3: Catalytic Asymmetric Reissert Reaction .................... 625

33.4.19 Product Subclass 19: 1,2,3,4-Tetrahydropyridines and Derivatives  
J.-C. Quirion

33.4.19 Product Subclass 19: 1,2,3,4-Tetrahydropyridines and Derivatives ............... 629
33.4.19.1 Synthesis of Product Subclass 19 ............................................................... 629
33.4.19.1.1 Synthesis by Ring-Closure Reactions ...................................................... 629
33.4.19.1.1.1 Method 1: [4 + 2]-Cycloaddition Reactions of 1-Azabutadienes ............... 630
33.4.19.1.1.1.1 Variation 1: Cyclization of N-Acyl-2-cyano-1-azabutadienes .............. 630
33.4.19.1.1.1.2 Variation 2: Cyclization of N-Phenyl-2-cyano-1-azabutadienes .......... 631
33.4.19.1.1.1.3 Variation 3: Cyclization of 2-Cyano-N-(ethoxycarbonyl)-1-azabutadienes 632
33.4.19.1.2 Method 2: Photochemical Cycloaddition of 3-Aminopropenals and Alkenes ................................................... 632
33.4.19.1.3 Method 3: Cyclization/Isomerization of δ-Chloroimines ............... 633
33.4.19.1.3.1 Variation 1: In Situ Preparation of δ-Chloroimines ................. 633
33.4.19.1.3.2 Variation 2: Cyclization after Isolation of δ-Chloroimines .......... 633
33.4.19.1.3.3 Variation 3: Nucleophile-Induced Cyclization of δ-Chloroimines .... 634
33.4.19.1.4 Method 4: Intramolecular Cyclization of Aminoaldehydes and Derivatives ..................................................... 635
33.4.19.1.4.1 Variation 1: Intramolecular Cyclization of Amino Acetals .......... 635
33.4.19.1.4.2 Variation 2: Intramolecular Cyclization of an Amide and an Aldehyde or Acetal .................................................... 636
33.4.19.1.4.3 Variation 3: Intramolecular Cyclization of Carbamates and Aldehydes .... 637
33.4.19.1.4.4 Variation 4: Intramolecular Condensation of Tosylamines and Acetals .... 638
33.4.19.1.5 Method 5: Palladium-Induced Intramolecular Cyclization of an \( \omega \)-Alkenic Tosylamide ................................................ 639
33.4.19.1.6 Method 6: Transition-Metal-Catalyzed Cyclization ................... 639
33.4.19.1.6.1 Variation 1: Platinium-Mediated Cycloisomerization of Ene-Ynamides .... 639
33.4.19.1.6.2 Variation 2: Ring-Closing Metathesis of Ene-Ynamides ............ 640
33.4.19.1.6.3 Variation 3: Ring-Closing Metathesis of Ene-Enamides .......... 640
33.4.19.1.7 Method 7: Intramolecular Cyclization of Enamino Esters, Ketones, or Sulfones ..................................................... 641
33.4.19.1.7.1 Variation 1: Cyclization Involving a Halogen Leaving Group .... 641
33.4.19.1.2 Synthesis by Transformation of a Cyclic Substrate .................. 643
33.4.19.1.2.1 Method 1: Reduction/Elimination of a Lactam ...................... 643
33.4.19.1.2.1.1 Variation 1: Reduction of Unsatuated Lactams ................... 643
33.4.19.1.2.2 Method 2: Elimination of a Phenylselanyl Group ................. 644
33.4.19.1.2.3 Method 3: Hydrogenation of Pyridine, Pyridinium Salts, and Dihydropyridines ..................................................... 644
33.4.19.1.2.4 Method 4: Hydride Reduction of Pyridines and Dihydropyridines .... 646
33.4.19.1.2.5 Method 5: Addition Reactions to 2,3-Dihydropyridinium Salts .... 647
33.4.19.1.2.5.1 Variation 1: Addition of Organometallic Compounds .......... 648
33.4.19.1.2.5.2 Variation 2: Addition of Alcohols, Thiols, and Amines .......... 649
33.4.19.1.2.5.3 Variation 3: Addition of \( \beta \)-Dicarbonyl Anions .................... 650
33.4.19.1.2.6 Method 6: 2-Carbamoylation of 1,4-Dihydropyridines .......... 650
33.4.19.1.3 Functionalization of 1,2,3,4-Tetrahydropyridines .................. 651
33.4.19.1.3.1 Method 1: Carboxymethylation of Substituted Vinyl Trifluoromethanesulfonates .............................................. 652
33.4.19.1.3.2 Method 2: Suzuki Reactions of Vinyl Trifluoromethanesulfonates .... 653
33.4.19.1.3.3 Method 3: Functionalization of Boronates ................................ 654
33.4.19.1.3.4 Method 4: Coupling Reactions of Vinyl Phosphates ............... 655
33.4.20 Product Subclass 20: 2,3,4,5-Tetrahydro-1H-azepines, Larger Rings, and Derivatives
J.-C. Quirion, E. Leclerc, and P. Jubault

33.4.20 Product Subclass 20: 2,3,4,5-Tetrahydro-1H-azepines, Larger Rings, and Derivatives .......................................................... 659
33.4.20.1 Synthesis of Product Subclass 20 ............................................. 659
33.4.20.1.1 Synthesis by Ring-Closure Reactions ........................................ 659
33.4.20.1.1.1 Method 1: Rhodium-Catalyzed Alkene–Allene Carbocyclization ...... 659
33.4.20.1.2 Elimination Reactions .......................................................... 660
33.4.20.1.2.1 Method 1: Elimination Reactions of 2-Hydroxyazepanes and Derivatives 660
33.4.20.1.3 Synthesis by Substituent Modification ....................................... 660
33.4.20.1.3.1 Method 1: Hydrodesulfurization of a Thiolactam-Derived Enol Ether ..... 660
33.4.20.1.3.2 Method 2: Coupling Reactions of Lactam-Derived Vinyl Trifluoromethanesulfonates ........................................ 661
33.4.20.1.3.3 Method 3: Reduction and Suzuki Coupling Reactions of Lactam-Derived Vinyl Phosphates ........................................ 662

33.5 Product Class 5: Alk-1-enyl Phosphorus Compounds

33.5.1 Product Subclass 1: Alk-1-enylphosphonic Acids and Derivatives
A. C. Gaumont and M. Gulea

33.5.1 Product Subclass 1: Alk-1-enylphosphonic Acids and Derivatives ................ 665
33.5.1.1 Synthesis of Product Subclass 1 .................................................. 665
33.5.1.1.1 Method 1: Hydrophosphorylation of Alkynes .................................. 665
33.5.1.1.1.1 Variation 1: Metal-Catalyzed Hydrophosphorylation ....................... 665
33.5.1.1.1.2 Variation 2: Base-Catalyzed Hydrophosphorylation ....................... 666
33.5.1.1.2 Method 2: P–C Bond Formation from Dialkyl Phosphonates or Trialkyl Phosphites and Vinyl Halides ......................... 667
33.5.1.1.2.1 Variation 1: Michaelis–Arbuzov-Type Reaction ............................. 668
33.5.1.1.2.2 Variation 2: Metal-Catalyzed Reaction of Dialkyl Phosphonates and Vinyl Halides .................................................. 668
33.5.1.1.3 Method 3: Wittig–Horner-Type Alkenation .................................... 669
33.5.1.1.3.1 Variation 1: Deprotonation of Methylenebis(phosphonates) ................. 669
33.5.1.1.3.2 Variation 2: Halogen–Lithium Exchange from (Halomethyl)phosphonates 671
33.5.1.1.3.3 Variation 3: Synthesis from (Dialkoxyphosphoryl)phosphoniomethanides 672
33.5.1.1.4 Method 4: Peterson-Type Alkenylation ....................................... 673
33.5.1.1.4.1 Variation 1: Synthesis from (1-Silylalkyl)phosphonates ................. 673
33.5.1.1.4.2 Variation 2: Synthesis from Alkylphosphonates by In Situ Silylation .... 673
33.5.1.1.4.3 Variation 3: Synthesis from Bis-silylated Methylphosphonates .......... 674
33.5.1.1.5 Method 5: Other Alkenation Reactions ........................................ 675
33.5.1.1.5.1 Variation 1: Synthesis from α-Stannylated Carbanions .................. 675
33.5.1.1.5.2 Variation 2: Synthesis from \(\text{\textalpha-}\text{Sulfinyl Carbanions} \) ........................................ 676

33.5.1.1.6 Method 6: Knoevenagel-Type Reactions ........................................ 677

33.5.1.1.6.1 Variation 1: Using an Aldehyde and a Base–Titanium(IV) Chloride System 677

33.5.1.1.6.2 Variation 2: Using Bis-aminals and \(\text{\textalpha-}\text{Haloacetic Acids} \) ...................... 678

33.5.1.1.6.3 Variation 3: Using Aldehydes and Tributylarsine ............................. 679

33.5.1.1.7 Method 7: Mannich-Type Reaction ........................................ 679

33.5.1.1.8 Method 8: Oxidative Elimination of Sulfanyl or Selanyl Moieties ........ 680

33.5.1.1.9 Method 9: Elimination from \(\beta\)-Heteroatom-Substituted Alkylphosphonates ........................................ 680

33.5.1.1.9.1 Variation 1: Dehydrohalogenation ........................................ 680

33.5.1.1.9.2 Variation 2: Dehydration .................................................. 681

33.5.1.1.9.3 Variation 3: Elimination of Nitrous Acid .................................. 681

33.5.1.1.10 Method 10: Hydrogenation of Alk-1-ynylphosphonates ............... 682

33.5.1.1.11 Method 11: 1,4-Addition of Nucleophiles to Alk-1-ynylphosphonates .... 683

33.5.1.1.12 Method 12: Synthesis from Organometallic Intermediates Generated from Alk-1-ynylphosphonates ........................................ 683

33.5.1.1.12.1 Variation 1: Synthesis from (Borylalk-1- enyl)phosphonates .............. 684

33.5.1.1.12.2 Variation 2: Synthesis from (Phosphorylalk-1- enyl)copper(I) Compounds 685

33.5.1.1.12.3 Variation 3: Synthesis from (Tellanylalk-1- enyl)phosphonates ........... 686

33.5.1.1.12.4 Variation 4: Synthesis from Zirconacyclic and Titanacyclic Phosphonates 686

33.5.1.1.13 Method 13: Modification of the Existing Double Bond in Alk-1- enylphosphonates ........................................ 688

33.5.1.1.13.1 Variation 1: Metal-Catalyzed Cross-Coupling Reactions ................. 689

33.5.1.1.13.2 Variation 2: Alkene Cross Metathesis .................................... 690

33.5.1.1.14 Method 14: Transformation of Alk-1- enylphosphonates into the Corresponding Phosphonic Acids ........................................ 690

33.5.1.1.14.1 Variation 1: Acidic Hydrolysis ........................................ 691

33.5.1.1.14.2 Variation 2: Using Bromotrtrimethylsilane .................................. 691

33.5.2 Product Subclass 2: Alk-1- enylphosphinic Acids and Derivatives
A. C. Gaumont and M. Gulea

33.5.2 Product Subclass 2: Alk-1- enylphosphinic Acids and Derivatives ............ 695

33.5.2.1 Synthesis of Product Subclass 2 .............................................. 695

33.5.2.2 Method 1: Hydrophosphinylation of Alkynes .................................... 695

33.5.2.2.1 Method 1: Hydrophosphinylation of Alkynes .................................... 695

33.5.2.2.2 Method 2: Synthesis from Alkylphosphonochloridates and Vinlyc Organometallic Compounds ........................................ 696

33.5.2.2.1.3 Method 3: Metal-Catalyzed Phosphorus–Carbon Cross-Coupling Reactions ........................................ 697

33.5.2.2.4 Method 4: Alkenylation Reactions ........................................ 698

33.5.2.2.1.5 Method 5: Elimination from \(\beta\)-Heteroatom-Substituted Alkylphosphinic Esters ........................................ 699
33.5.3  Product Subclass 3: Alk-1-enylphosphine Oxides and Derivatives  
A. C. Gaumont and M. Gulea

33.5.3  Product Subclass 3: Alk-1-enylphosphine Oxides and Derivatives  .......... 701

33.5.3.1  Synthesis of Product Subclass 3 ........................................... 701

33.5.3.1.1  Method 1: Hydrophosphinylation of Alkynes ................................ 701

33.5.3.1.2  Method 2: Metal-Catalyzed Phosphorus–Carbon Cross-Coupling Reaction ................................................................. 702

33.5.3.1.3  Method 3: Alkenation Reactions ................................................. 703

33.5.3.1.4  Method 4: Elimination from \( \alpha \)-Oxygenated Alkylphosphine Oxides .......... 704

33.5.3.1.4.1  Variation 1: From \( (1\text{-Hydroxyalkyl}) \)phosphine Oxides ............... 704

33.5.3.1.4.2  Variation 2: From \( (1,2\text{-Epoxyalkyl}) \)phosphine Oxides .................. 704

33.5.3.1.5  Method 5: Elimination from \( \beta \)-Heteroatom-Substituted Alkylphosphine Oxides ........................................................... 705

33.5.3.1.6  Method 6: Nucleophilic 1,4-Addition to Alk-1-ynylphosphine Oxides .......... 705

33.5.3.1.7  Method 7: Synthesis from Organometallic Intermediates Generated from Alk-1-ynylphosphine Oxides ........................................... 706

33.5.3.1.8  Method 8: Modification of an Existing Double Bond ............................ 707

33.5.3.1.9  Method 9: Oxidation of Alk-1-enylphosphines ..................................... 708

33.5.3.1.10  Method 10: Acidic Hydrolysis of \( P \)-Alk-1-enylphosphinous Amides ........... 709

33.5.4  Product Subclass 4: Alk-1-enylphosphines  
A. C. Gaumont and M. Gulea

33.5.4  Product Subclass 4: Alk-1-enylphosphines ........................................... 711

33.5.4.1  Synthesis of Product Subclass 4 .................................................. 711

33.5.4.1.1  Method 1: Hydrophosphination of Alkynes with Primary or Secondary Phosphines ................................................................. 711

33.5.4.1.1.1  Variation 1: Hydrophosphination under Basic Conditions .................... 712

33.5.4.1.1.2  Variation 2: Radical-Catalyzed Hydrophosphination ............................ 713

33.5.4.1.1.3  Variation 3: Thermal Hydrophosphination ........................................... 714

33.5.4.1.1.4  Variation 4: Metal-Catalyzed Hydrophosphination ............................... 714

33.5.4.1.2  Method 2: Metal-Catalyzed Phosphorus–Carbon Cross-Coupling Reactions ................................................................. 716

33.5.4.1.2.1  Variation 1: Palladium-Catalyzed Phosphorus–Carbon Cross-Coupling Reactions ............................................................... 716

33.5.4.1.2.2  Variation 2: Nickel-Catalyzed Phosphorus–Carbon Cross-Coupling Reactions ............................................................... 718

33.5.4.1.3  Method 3: Reaction between Halophosphines and Vinylvic Organometallic Derivatives ............................................................... 719

33.5.4.1.4  Method 4: Reduction of Phosphorus Compounds .................................. 720

33.5.4.1.4.1  Variation 1: Reduction of Phosphonates and Phosphinates ..................... 720

33.5.4.1.4.2  Variation 2: Reduction of Chlorophosphines ....................................... 721

33.5.4.1.5  Methods 5: Miscellaneous Methods ............................................... 722
33.5.5 Product Subclass 5: Alk-1-enylphosphonium Salts
A. C. Gaumont and M. Gulea

33.5.5 Product Subclass 5: Alk-1-enylphosphonium Salts

33.5.5.1 Synthesis of Product Subclass 5

33.5.5.1.1 Method 1: Alkenylation of Tertiary Phosphines

33.5.5.1.1.1 Variation 1: Nucleophilic Addition of Triphenylphosphine to Activated Alkynes

33.5.5.1.2 Variation 2: Metal-Catalyzed Addition of Triphenylphosphine to Alkynes

33.5.5.1.2.1 Method 2: Modification of Phosphoranes or Phosphonium Salts

33.5.5.1.2.2 Variation 1: Addition–Elimination Reactions of Phosphoranes

33.5.5.1.2.2 Variation 2: Elimination–Addition from Vinylidene Bisphosphonium Salts

33.5.5.1.3 Methods 3: Miscellaneous Methods

33.5.6 Product Subclass 6: P-Heteroatom-Substituted Alk-1-enylphosphines
A. C. Gaumont and M. Gulea

33.5.6 Product Subclass 6: P-Heteroatom-Substituted Alk-1-enylphosphines

33.5.6.1 Synthesis of Product Subclass 6

33.5.6.1.1 Method 1: Alk-1-enyl(aminophosphines by Vinylation of Halophosphines

33.5.6.1.1 Variation 1: Synthesis from Amino(chloro)phosphines

33.5.6.1.2 Variation 2: Synthesis from Amino(chloro)phosphines Generated In Situ

33.5.6.1.2 Method 2: Alk-1-enylphosphonous Diamides by Reaction between Enamines, Phosphorus Trihalides, and Amines

33.5.6.1.3 Method 3: Alk-1-enylphosphonous Dihalides by the Reaction of Phosphorus Trihalides and Organometallic Derivatives

33.5.6.1.4 Method 4: Alk-1-enyl(halo)phosphines by the Reaction of Tungsten–Phosphinidene Complexes and Chloroalkenes

33.5.7 Product Subclass 7: 1,2-Dihydrophosphetes and Derivatives
Gy. Keglevich and H. Szélke

33.5.7 Product Subclass 7: 1,2-Dihydrophosphetes and Derivatives

33.5.7.1 Synthesis of Product Subclass 7

33.5.7.1.1 Synthesis by Ring-Closure Reactions

33.5.7.1.1 Method 1: Ring-Fused 1,2-Dihydrophosphetes by Cycloaddition of 1,2-Thiaphospholes and Ynamines

33.5.7.1.1.2 Method 2: A 1-Imino-1,2-dihydro-1\(^5\)-phosphet-1-amine by Cycloaddition of an Imino(methylene)phosphorane and an Acetylene

33.5.7.1.1.3 Method 3: A 1-Imino-1,2-dihydro-1\(^5\)-phosphet-1-amine by Ring Closure of a Phosphabuta-1,3-diene Effected by an Azide

33.5.7.1.1.4 Method 4: Phosphetium Salts of Ring-Fused 1,2-Dihydrophosphetes by Ring Closure of (Arylmethylene)chlorophosphoranes

Science of Synthesis Original Edition Volume 33 © Georg Thieme Verlag KG
Method 5: Synthesis of a 2-Methylene-1,2-dihydrophosphete via a Zirconium-Containing Tricyclic 1,2-Dihydrophosphete

Synthesis by Ring Transformation

Method 1: Ring Expansion of Cycloprop-2-enylidenephosphines with Azides

Method 2: 1,2-Dihydrophosphetes by Titanium-Phosphorus Exchange of a Titanacyclobutene

Method 3: A 1,2-Dihydrophosphete 1-Oxide by Ring Contraction of a 2,3-Dihydro-1,2-thiaphosphole Using Ethanol

Product Subclass 8: 2,3-Dihydro-1H-phospholes and Derivatives

Synthesis of Product Subclass 8

Synthesis by Ring-Closure Reactions

Variation 1: Reaction of Phosphorus Trihalides and Buta-1,3-dienes Followed by Reaction with Alcohols

Variation 2: Reaction of a Dichlorophosphite and a Buta-1,3-diene

Method 2: 1-Chloro-4-methyl-2,3-dihydro-1H-phospholes by Reduction of the Phosphorus Trichloride–Isoprene McCormack Cycloadduct

Method 3: 1-Phenyl-2,3-dihydro-1H-phosphole 1-Oxides by McCormack Reaction of Dichloro(phenyl)phosphine and Buta-1,3-dienes Followed by Hydrolysis

Method 4: 1-Substituted 2,3-Dihydro-1H-phosphole 1-Oxides by Cyclization of Benzylphosphine Oxides and α,β-Unsaturated Ketones

Method 5: 1-Phenyl-2,3-dihydro-1H-phospholes by Intramolecular Cyclization of But-3-enylchloro(phenyl)phosphines

Synthesis by Double-Bond Rearrangement of 2,5-Dihydro-1H-phosphole Derivatives

Method 1: 1-Methyl-2,3-dihydro-1H-phosphate 1-Oxides and Sulfides by Acid- or Base-Catalyzed Isomerization

Method 2: A 5-(Diphenylphosphoryl)-2,3-dihydro-1H-phosphate 1-Oxide by Isomerization with Substitution of a 2,5-Dihydro-1H-phosphole 1-Oxide

Method 3: Annulated 2,3-Dihydro-1H-phospholes by Isomerization with Substitution of 2,5-Dihydro-1H-phospholes Followed by Ring Closure

Method 4: 3-Aryl-2,3-dihydro-1H-phosphate 1-Oxides by Isomerization with Arylation of 2,5-Dihydro-1H-phosphate 1-Oxides
33.5.8.1.2.5 Method 5: 3-Bromo-1-phenyl-2,3-dihydro-1H-phosphole 1-Oxide by Isomerization with Bromination of 1-Phenyl-2,5-dihydro-1H-phosphole 1-Oxide ............................... 751

33.5.8.1.2.6 Method 6: 4-Methoxy-1-methyl-2,3-dihydro-1H-phosphole 1-Oxide by Isomerization with Chloro Substitution of 3-Chloro-1-methyl-2,5-dihydro-1H-phosphole 1-Oxide .................................................. 752

33.5.8.1.3 Synthesis by Elimination Reactions ........................................ 752

33.5.8.1.3.1 Method 1: 2,3-Dihydro-1H-phosphole 1-Oxides by Base-Catalyzed Rearrangement of 6-Oxa-3-phosphabicyclo[3.1.0]hexanes ................................. 752

33.5.8.1.3.2 Method 2: A 3-Substituted 2,3-Dihydro-1H-phosphole 1-Oxide by Reaction of a 6-Oxa-3-phosphabicyclo[3.1.0]hexane with a Malonic Ester Derivative ........................................... 753

33.5.8.1.3.3 Method 3: A 2,3-Dihydro-1H-phosphole 1-Oxide by Dehydration of a 2,3,4,5-Tetrahydro-1H-phosphol-2-ol 1-Oxide .................................................. 753

33.5.8.1.4 Synthesis by Double-Bond Rearrangement of Phosphole Derivatives ........ 754

33.5.8.1.4.1 Method 1: 3-Methylene-2,3-dihydro-1H-phosphole Sulfides by Isomerization of 3-Methyl-1H-phosphole 1-Sulfides .................................................. 754

33.5.8.1.4.2 Method 2: 3-Methylene-2,3-dihydro-1H-phosphole 1-Oxides by Thallium Ethoxide Mediated Conversion of 1-Benzyl-3-methyl-1H-phospholium Salts ............................................. 754

33.5.8.1.5 Synthesis of Fused 2,3-Dihydro-1H-phospholes by Cyclopropanation of 1H-Phospholes .......................................................................................................................... 755

33.5.8.1.5.1 Method 1: 2-Phosphabicyclo[3.1.0]hex-3-ene 2-Oxides by Cyclopropanation of 1H-Phospholes with Diazomethane ............................................. 755

33.5.8.1.5.2 Method 2: A 2-Phosphabicyclo[3.1.0]hex-3-ene 2-Oxide by Intramolecular Cyclopropanation of a 1-(Iodomethyl)phospholium Salt .................................................. 756

33.5.8.1.5.3 Method 3: 2-Phosphabicyclo[3.1.0]hex-3-ene 2-Sulfides by Cyclopropanation of 1H-Phosphole 1-Sulfides with Ethyl Diazoacetate .................................................. 756

33.5.9 Product Subclass 9: 1,2,3,4-Tetrahydrophosphinines and Derivatives

33.5.9.1 Synthesis of Product Subclass 9 ......................................................... 759

33.5.9.1.1 Synthesis by Ring-Closure Reactions ............................................. 759

33.5.9.1.1.1 Method 1: 1,2,3,4-Tetrahydrophosphinines by Cycloaddition of an In Situ Formed Phosphabuta-1,3-diene and Unsaturated Esters .................................................. 759

33.5.9.1.1.2 Method 2: A 1,2,3,4-Tetrahydrophosphinine 1-Oxide by Cyclization of a Diallylphosphine Oxide with Isomerization ............................................. 759

33.5.9.1.2 Synthesis by Double-Bond Rearrangement of Tetrahydrophosphinines ......... 760

33.5.9.1.2.1 Method 1: 1,2,3,4-Tetrahydrophosphinines via Bromination of the Corresponding 1,2,3,6-Tetrahydrophosphinines .................................................. 760
33.5.9.1.3 Synthesis by Selective Saturation .................................................. 761
33.5.9.1.3.1 Method 1: A 1,2,3,4-Tetrahydrophosphinine 1-Oxide by Hydrogenation of a 1,2-Dihydrophosphinine 1-Oxide .......................... 761
33.5.9.1.3.2 Method 2: A 4-(Dichloromethylene)-1,2,3,4-tetrahydrophosphinine 1-Oxide via Hydroboration of the Corresponding 1,4-Dihydrophosphinine 1-Oxide ........................................... 761
33.5.9.1.3.3 Method 3: A 1,2,3,4-Tetrahydrophosphinin-4-one 1-Oxide by Hydrolysis of a λ³-Phosphinine .................................................. 761

33.5.10 Product Subclass 10: 1,4-Dihydrophosphinines and Derivatives
Gy. Keglevich and H. Szelke

33.5.10 Product Subclass 10: 1,4-Dihydrophosphinines and Derivatives ............. 765
33.5.10.1 Synthesis of Product Subclass 10 ....................................................... 765
33.5.10.1.1 Synthesis by Ring-Closure Reactions ............................................. 765
33.5.10.1.1.1 Method 1: 1,4-Dihydrophosphinines by Reaction of 1,4-Dienes with Arylphosphines .................................................. 765
33.5.10.1.1.2 Method 2: 1,4-Dihydrophosphinines by Reaction of Dilithiated Penta-1,4-dienes with Dichlorophosphines ............................ 766
33.5.10.1.2 Synthesis by Ring Transformation .................................................. 766
33.5.10.1.2.1 Method 1: A Biphosphinin-4(1H)-ylidene 1,1'-Dioxide by Photolysis of a 2-Phosphabicyclo[3.1.0]hexane Oxide ................................. 766
33.5.10.1.3 Synthesis from λ⁵-Phosphinines and λ³-Phosphinines ....................... 767
33.5.10.1.3.1 Method 1: 1,4-Dihydrophosphinines 1-Oxides by Isomerization of λ³-Phosphinines .................................................. 767
33.5.10.1.3.2 Method 2: A 1,4-Dihydrophosphinine 1-Oxide via the Chlorination of a λ³-Phosphinine ............................................. 767
33.5.10.1.3.3 Method 3: A 4-Methylene-1,4-dihydrophosphinine 1-Oxide by a Lewis Acid Catalyzed Rearrangement of a 4-Methyl-λ³-phosphinine .................................................. 768
33.5.10.1.3.4 Method 4: 4-Methylene-1,4-dihydrophosphine 1-Oxides via Enolization of a λ³-Phosphinine-4-carbaldehyde .......................... 768
33.5.10.1.3.5 Method 5: A 1',4'-Dihydro-2,4'-biphosphinine by Special Reaction of a λ³-Phosphinine in the Presence of Lithium 2,2,6,6-Tetramethylpiperidide .................................................. 769
33.5.10.1.4 Synthesis by Substituent Modification ............................................ 770
33.5.10.1.4.1 Method 1: A Biphosphinin-4(1H)-ylidene 1,1'-Dioxide by Coupling of Two Units of a Phosphinin-4(1H)-one 1-Oxide .......................... 770

Introduction
J. M. Percy ............................................................. 1

## 34.1 Product Class 1: Fluoroalkanes
J. M. Percy ............................................................. 11

### 34.1.1 Synthesis by Substitution of Hydrogen
G. Sandford ............................................................. 21

### 34.1.2 Synthesis by Substitution of Metals
V. Gouverneur and M. Tredwell .................................. 39

### 34.1.3 Synthesis by Substitution of Carbon Functionalities
M. A. Carroll ............................................................ 49

### 34.1.4 Synthesis by Substitution of Heteroatoms
................................................................. 57

#### 34.1.4.1 Synthesis by Substitution of a Halogen
T. P. Lequeux ............................................................ 57

#### 34.1.4.2 Synthesis by Substitution of Hydroxy Groups in Alcohols
K. Dax ................................................................. 71

#### 34.1.4.3 Synthesis by Substitution of Oxygen and Sulfur Functionalities
T. P. Lequeux ............................................................ 149

### 34.1.5 Synthesis by Addition Reactions to Alkenes
G. Haufe ................................................................. 169

### 34.1.6 Synthesis with Retention of the Functional Group
T. Yamazaki ............................................................ 225

## 34.2 Product Class 2: Fluorocyclopropanes
J. M. Percy ............................................................. 245

## 34.3 Product Class 3: (Fluoromethyl)cyclopropanes
J. M. Percy ............................................................. 267

## 34.4 Product Class 4: Fluorocyclobutanes
J. M. Percy ............................................................. 271

## 34.5 Product Class 5: Propargylic Fluorides
J. A. L. Miles and J. M. Percy ..................................... 277

## Table of Contents

**Introduction**  
J. M. Percy  

34.1  
**Product Class 1: Fluoroalkanes**  
J. M. Percy  

34.1  
**Synthesis by Substitution of Hydrogen**  
G. Sandford  

34.1.1  
**Synthesis by Substitution of Hydrogen**  
21  
34.1.1.1 Method 1:  
Direct Fluorination with Elemental Fluorine  
21  
34.1.1.2 Method 2:  
Reaction with Selectfluor  
29  
34.1.1.3 Method 3:  
Reaction with Xenon Difluoride  
32  
34.1.1.4 Method 4:  
Reaction with Organic Hypofluorites  
33  
34.1.1.5 Method 5:  
Reaction with Cesium Fluoroxyulfate  
35  
34.1.1.6 Method 6:  
Reaction with Hydrogen Fluoride/Pyridine and Nitrosonium Tetrafluoroborate  
37  

34.1.2  
**Synthesis by Substitution of Metals**  
V. Gouverneur and M. Tredwell  

34.1.2  
**Synthesis by Substitution of Metals**  
39  
34.1.2.1 Method 1:  
Synthesis from Organosilanes  
40  
34.1.2.2 Method 2:  
Synthesis from an Organothallium Compound  
42  
34.1.2.3 Method 3:  
Synthesis from Organomercury Compounds  
43  
34.1.2.4 Method 4:  
Synthesis from Organomagnesium Compounds  
44  
34.1.2.5 Method 5:  
Synthesis from Organolithium Compounds  
45  
34.1.2.5.1 Variation 1:  
Using Molecular Fluorine  
45  
34.1.2.5.2 Variation 2:  
Using Perchloryl Fluoride  
46  

34.1.3  
**Synthesis by Substitution of Carbon Functionalities**  
M. A. Carroll  

34.1.3  
**Synthesis by Substitution of Carbon Functionalities**  
49  
34.1.3.1 Method 1:  
Synthesis from Alkanecarboxylates Using Fluorine  
49  
34.1.3.2 Method 2:  
Synthesis from Alkanecarboxylic Acids  
50  
34.1.3.2.1 Variation 1:  
Using Titanium(IV) Oxide/Silver(I) Fluoride  
50  
34.1.3.2.2 Variation 2:  
Using Xenon Difluoride  
51  
34.1.3.2.3 Variation 3:  
Using Bromine Trifluoride  
53  
34.1.3.2.4 Variation 4:  
Using Triethylamine Trihydrofluoride  
54  
34.1.3.3 Method 3:  
Synthesis from Cyclopropanes  
54
34.1.4 Synthesis by Substitution of Heteroatoms

34.1.4.1 Synthesis by Substitution of a Halogen
T. P. Lequeux

34.1.4.1 Synthesis by Substitution of a Halogen .................................. 57
34.1.4.1.1 Method 1: Substitution of Primary Halides .......................... 57
34.1.4.1.1.1 Variation 1: Using Metal Fluorides ................................ 57
34.1.4.1.1.2 Variation 2: Using Hydrogen Fluoride Complexes .......... 60
34.1.4.1.1.3 Variation 3: Using Tetraalkylammonium Fluorides ........ 61
34.1.4.1.1.4 Variation 4: Using Fluorsilicate Derivatives .................. 62
34.1.4.1.2 Method 2: Substitution of Secondary Halides .................... 62
34.1.4.1.2.1 Variation 1: Using Metal Fluorides ................................ 63
34.1.4.1.2.2 Variation 2: Using Hydrogen Fluoride Complexes .......... 65
34.1.4.1.3 Method 3: Substitution of Tertiary Halides .......................... 66
34.1.4.1.3.1 Variation 1: Using Metal Fluorides ............................... 66
34.1.4.1.3.2 Variation 2: Using Base–Hydrogen Fluoride Complexes .... 67
34.1.4.1.3.3 Variation 3: Using Silver(I) Tetrafluoroborate ............... 67
34.1.4.1.3.4 Variation 4: Using Ruthenium Complexes .................... 68

34.1.4.2 Synthesis by Substitution of Hydroxy Groups in Alcohols
K. Dax

34.1.4.2 Synthesis by Substitution of Hydroxy Groups in Alcohols .................. 71
34.1.4.2.1 Method 1: Reaction with Fluoro-\(\lambda^4\)-sulfanes .................... 72
34.1.4.2.1.1 Variation 1: With \(N,N\)-Diethylaminosulfur Trifluoride .......... 76
34.1.4.2.1.2 Variation 2: With \(N,N\)-Bis(2-methoxyethyl)aminosulfur Trifluoride (Deoxo-Flour) .................... 108
34.1.4.2.1.3 Variation 3: With Morpholinosulfur Trifluoride ................ 111
34.1.4.2.1.4 Variation 4: With \(N,N\)-Dimethylaminosulfur Trifluoride ........ 113
34.1.4.2.1.5 Variation 5: With Other Dialkylaminofluoro-\(\lambda^4\)-sulfanes ...... 113
34.1.4.2.1.6 Variation 6: With Sulfur Tetrafluoride ............................ 114
34.1.4.2.1.7 Variation 7: With Alkoxy sulfur Trifluorides .................. 116
34.1.4.2.2 Method 2: Reaction with Selenium Tetrafluoride .................. 117
34.1.4.2.3 Method 3: Reaction with Fluorophosphoranes ..................... 118
34.1.4.2.3.1 Variation 1: With Dipfluoro(triphenyl)phosphorane ............ 119
34.1.4.2.3.2 Variation 2: With Trifluoro(diphenyl)phosphorane .......... 119
34.1.4.2.3.3 Variation 3: With Tetrafluoro(phenyl)phosphorane .......... 119
34.1.4.2.4 Method 4: Reaction with Fluoroalkylamine Reagents .......... 121
34.1.4.2.4.1 Variation 1: With 2-Chloro-\(N,N\)-diethyl-1,1,2-trifluoroethylamine (Yarovenko Reagent) .......................... 122
34.1.4.2.4.2 Variation 2: With \(N,N\)-Diethyl-1,1,2,3,3-hexafluoropropylamine (Ishikawa Reagent) .................. 124
34.1.4.2.4.3 Variation 3: With \(N,N\)-Diethyl(trifluoromethyl)amine .......... 125
34.1.4.2.4.4 Variation 4: With 1,1-Difluoro-\(N,N\)-dimethyl-1-phenylmethanamine .......... 126
34.1.4.2.4.5 Variation 5: With \(N,N\)-Dimethyl(1,1,2,2-tetrafluoroethyl)amine ........ 126
34.1.4.2.4.6 Variation 6: With \(N,N\)-Diethyl-1,1-difluoro-1-(3-toly)methanamine .......... 127
34.1.4.2.4.7 Variation 7: With 2,2-Difluoro-1,3-dimethylimidazolidine .... 129

Science of Synthesis Original Edition Volume 34
© Georg Thieme Verlag KG
Variation 8: With Other Fluoroalkylamine Reagents

Method 5: Reaction with Perfluorocyclobutane Ylides

Method 6: Reaction with Perfluoro(2-methylpent-2-ene)

Method 7: One-Pot Versions of the Sulfonate Displacement Route

Using Alkane- or Arenesulfonyl Fluorides

Method 8: Reaction with Hydrogen Fluoride

Variation 1: In Combination with Organic Bases (Amines or Ethers)

Synthesis by Substitution of Oxygen and Sulfur Functionalities

T. P. Lequeux

Method 1: Substitution of Trifluoromethanesulfonates and Imidazolesulfonates

Variation 1: Using Difluorosilicate Derivatives

Variation 2: Using Tetrabutylammonium Fluoride

Variation 3: Using Base–Hydrogen Fluoride Complexes

Method 2: Substitution of Cyclic Sulfates

Variation 1: Using Ammonium Fluoride

Variation 2: Using Tetrabutylammonium Fluoride for the Substitution of Cyclic Sulfamates

Method 3: Substitution of Carboxylic Esters and Cyclic Carbonates

Variation 1: Using Potassium Fluoride

Variation 2: Using Ammonium Fluorides

Variation 3: Using Reagents Containing Hydrogen Fluoride

Method 4: Substitution of O,S-Dialkyl Dithiocarbonates

Variation 1: Using Potassium Fluoride

Variation 2: Using Ammonium Fluorides

Variation 3: Using Reagents Containing Hydrogen Fluoride

Method 5: Substitution of Primary Sulfonates

Variation 1: Using Potassium Fluoride

Variation 2: Using Ammonium Fluorides

Variation 3: Using Base–Hydrogen Fluoride Complexes

Variation 4: Using Ammonium Fluorides or Hydrogen Difluorides

Variation 5: Using Difluorosilicate Derivatives

Method 6: Substitution of Secondary Sulfonates

Variation 1: Using Potassium Fluoride

Variation 2: Using Ammonium Fluorides

Variation 3: Using Reagents Containing Hydrogen Fluoride

Variation 4: Using Ammonium Fluorides or Hydrogen Difluorides

Variation 5: Using Difluorosilicate Derivatives

Method 7: Substitution of Sulfides

Synthesis by Addition Reactions to Alkenes

G. Haufe

Method 1: Synthesis Using N-Chloro Imides and a Fluoride Source

Variation 1: Using N-Chlorosuccinimide or N-Chlorosaccharin, and Hydrogen Fluoride/Pyridine

Variation 2: Using N-Chlorosuccinimide and Triethylamine Trihydrofluoride

Variation 3: Using Hexachlororomelamine and Anhydrous Hydrogen Fluoride

Method 2: Synthesis Using Chlorine and Silver(I) Fluoride

Method 3: Synthesis Using Alkyl Hypochlorites and Boron Trifluoride
34.1.5.2 Vicinal Bromofluoroalkanes from Alkenes ........................................ 179
34.1.5.2.1 Method 1: Synthesis Using N-Bromo Imides and a Fluoride Source ...... 179
34.1.5.2.1.1 Variation 1: Using N-Bromosuccinimide and Anhydrous Hydrogen Fluoride in Coordinating Solvents ........................................ 179
34.1.5.2.1.2 Variation 2: Using N-Bromosuccinimide or 1,3-Dibromo-5,5-dimethylimidazolidine-2,4-dione, and Hydrogen Fluoride/Pyridine or Polymer-Supported Hydrogen Fluoride/Pyridine .......... 181
34.1.5.2.1.3 Variation 3: Using N-Bromosuccinimide or 1,3-Dibromo-5,5-dimethylimidazolidine-2,4-dione, and Triethylamine Trihydrofluoride or a Related Amine–Hydrogen Fluoride Reagent .......... 184
34.1.5.2.1.4 Variation 4: N-Bromosuccinimide or 1,3-Dibromo-5,5-dimethylimidazolidine-2,4-dione, and Tetrabutylammonium and Tetrabutylphosphonium Hydrogen Fluorides .......... 187
34.1.5.2.1.5 Variation 5: 1,3-Dibromo-5,5-dimethylimidazolidine-2,4-dione and Metal Fluoride–Hydrogen Fluoride Salts ................. 189
34.1.5.2.2 Method 2: Synthesis Using Bromine Monofluoride Prepared In Situ ...... 190
34.1.5.2.2.1 Variation 1: Preparation from Bromine and Fluorine ....................... 190
34.1.5.2.2.2 Variation 2: Preparation from Bromine and Silver(I) Fluoride .......... 192
34.1.5.2.3 Method 3: Synthesis Using Other Fluoride Sources ......................... 193
34.1.5.3 Vicinal Fluoroiodoalkanes from Alkenes ........................................ 194
34.1.5.3.1 Method 1: Reaction with Iodine Monofluoride Prepared In Situ ........... 194
34.1.5.3.1.1 Variation 1: Prepared from Iodine and Fluorine .......................... 194
34.1.5.3.1.2 Variation 2: Prepared from Iodine and Metal Fluorides ................... 196
34.1.5.3.2 Method 2: Reaction with N-Iodosuccinimide and Hydrogen Fluoride .......... 197
34.1.5.3.2.1 Variation 1: In Coordinating Solvents ........................................ 197
34.1.5.3.2.2 Variation 2: In Water with Phase-Transfer Catalysis ....................... 198
34.1.5.3.2.3 Variation 3: Using Hydrogen Fluoride/Pyridine .......................... 200
34.1.5.3.2.4 Variation 4: Using Polymer-Supported Hydrogen Fluoride/Pyridine .......... 200
34.1.5.3.2.5 Variation 5: Using Triethylamine Trihydrofluoride ........................ 201
34.1.5.3.2.6 Variation 6: Using Metal Fluoride–Hydrogen Fluoride Salts .......... 202
34.1.5.3.2.7 Variation 7: Using Ammonium Hydrogen Fluorides ....................... 203
34.1.5.3.2.8 Variation 8: Using Tetrabutylphosphonium Hydrogen Fluorides .......... 204
34.1.5.3.2.9 Variation 9: Using Hexafluoropropene/Diethylamine Complex .......... 205
34.1.5.3.3 Method 3: Reaction with Iodonium Equivalents Other Than Iodine or N-Iodosuccinimide and a Fluoride Source ................. 206
34.1.5.4 Vicinal Fluoro(sulfanyl)alkanes .............................................. 207
34.1.5.4.1 Method 1: Fluorosulfanylation of Alkenes ..................................... 208
34.1.5.4.1.1 Variation 1: Using Dimethyl(methylsulfanyl)sulfonium Tetrafluoroborate and Triethylamine Trihydrofluoride .................. 208
34.1.5.4.1.2 Variation 2: Using Benzenesulfenyl Chloride and Silver(I) Fluoride .......... 210
34.1.5.4.1.3 Variation 3: Using N-(Phenylsulfanyl)phthalimide and Hydrogen Fluoride/Pyridine .......................... 211
34.1.5.4.1.4 Variation 4: Using Trifluoromethanesulfonyl Fluoride ................. 212
34.1.5.5 Vicinal Fluoro(selanyl)alkanes .............................................. 213
34.1.5.5.1 Method 1: Synthesis Using Benzeneselenenyl Bromide or Chloride and Silver(I) Fluoride .......................... 213

Science of Synthesis Original Edition Volume 34
© Georg Thieme Verlag KG
34.1.5.5.2 Method 2: Synthesis Using $N$-(Phenylselenyl)phthalimide and Triethylamine Trihydrofluoride ........................................... 214
34.1.5.5.3 Method 3: Synthesis Using Diphenyl Diselenide and Xenon Difluoride .......................................................... 216
34.1.5.6 Vicinal Nitro- and Nitriminofluoroalkanes .............................................. 218
34.1.5.6.1 Method 1: Nitrofluorination of Alkenes .................................................. 218
34.1.5.6.2 Method 2: Nitriminofluorination of Alkenes ............................................ 219

34.1.6 Synthesis with Retention of the Functional Group
T. Yamazaki

34.1.6 Synthesis with Retention of the Functional Group .................................. 225
34.1.6.1 Method 1: $\alpha$-Functional Group Elimination ........................................ 225
34.1.6.1.1 Variation 1: Free-Radical-Mediated Dehalogenation with Tributyltin Hydride .......................................................... 225
34.1.6.1.2 Variation 2: Ring Expansion with Dehalogenation Mediated by Palladium Oxide or Acid ........................................................ 228
34.1.6.1.3 Variation 3: By Desulfonylation ............................................................. 230
34.1.6.1.4 Variation 4: By Denitration ................................................................. 230
34.1.6.2 Method 2: $\beta$-Functional Group Elimination ........................................ 231
34.1.6.2.1 Variation 1: By Dehalogenation ............................................................ 231
34.1.6.2.2 Variation 2: By Ionic Deoxygenation .................................................. 232
34.1.6.2.3 Variation 3: By Radical Deoxygenation ................................................ 233
34.1.6.2.4 Variation 4: By Deselenation ............................................................... 235
34.1.6.3 Method 3: Hydrogenation of Unsaturated Compounds Containing Fluorine ................................................................. 236
34.1.6.3.1 Variation 1: Hydrogenation of Vinylic Fluorides .................................... 236
34.1.6.3.2 Variation 2: Hydrogenation of Allylic and Propargylic Fluorides .......... 238
34.1.6.3.3 Variation 3: Reduction of Fluorinated Arenes ........................................ 240

34.2 Product Class 2: Fluorocyclopropanes
J. M. Percy

34.2 Product Class 2: Fluorocyclopropanes ....................................................... 245
34.2.1 Synthesis of Product Class 2 ................................................................. 246
34.2.1.1 Method 1: Radical Dechlorination of Chlorofluorocyclopropanes Using Tributyltin Hydride .................................................. 246
34.2.1.2 Method 2: Debromination of Bromofluorocyclopropanes with Zinc Powder ................................................................. 247
34.2.1.3 Method 3: Carbene and Carbenoid Additions to Fluoroalkenes ................ 248
34.2.1.3.1 Variation 1: Simmons–Smith Reaction of Fluoroallylic Alcohols Using a Zinc/Copper Couple ................................ 249
34.2.1.3.2 Variation 2: Diastereoselective Simmons–Smith Reaction Using Diethylzinc(II)/Diiodomethane ........................................ 250
34.2.1.3.3 Variation 3: Addition of Diazoacetic Esters to Fluoroalkenes .............. 251
34.2.1.3.4 Variation 4: Diastereoselective Addition of Diazooacetic Esters to Fluoroalkenes .................................................. 251
34.2.1.3.5 Variation 5: Addition of Diazomethane to Ethyl (2E)-3-Fluoro-2-phenylacrylate with Adduct Photolysis

34.2.1.3.6 Variation 6: Intramolecular Carbenoid Addition to an Ethyl (2Z)-2-Fluoroalk-2-enoate

34.2.1.4 Method 4: Fluorohalocyclopropanes via Fluorohalocarbene Addition to Alkenes

34.2.1.4.1 Variation 1: Phase-Transfer-Catalyzed Formation of Chlorofluorocyclopropanes

34.2.1.4.2 Variation 2: Titanium-Mediated Formation of Chlorofluorocyclopropanes

34.2.1.4.3 Variation 3: Generation of Chlorofluorocyclopropanes from Methyl Dichlorofluoroacetate

34.2.1.4.4 Variation 4: Bromofluorocarbene Addition to Alkenes Using Phase-Transfer Catalysis

34.2.1.5 Method 5: Direct Fluorocarbene Addition to Alkenes

34.2.1.6 Method 6: Intermolecular Addition of Fluoriodoacetate to Alkenes and Subsequent Anionic Cyclization

34.2.1.7 Method 7: Fluorination of Cyclopropanes and Their Conjugate Bases

34.2.1.7.1 Variation 1: Electrophilic Fluorination of Methylene cyclopropane Carboxylate Esters with N-Fluorobis(phenylsulfonyl)amine

34.3 Product Class 3: (Fluoromethyl)cyclopropanes

34.3.1 Synthesis of Product Class 3

34.3.1.1 Method 1: Fluorodehydroxylation of Cyclopropylmethanol with N,N-Diethylaminosulfur Trifluoride

34.3.1.2 Method 2: In Situ Formation and Fluoride Ion Displacement of a Cyclopropylmethyl 4-Toluenesulfonate

34.3.1.3 Method 3: Ring Contraction of Cyclobutanols

34.3.1.4 Method 4: Transannular Epoxide Opening with Trimethylamine Trihydrofluoride

34.4 Product Class 4: Fluorocyclobutanes

34.4.1 Synthesis of Product Class 4

34.4.1.1 Method 1: Fluorodehydroxylation of Cyclobutanols by Reaction with N,N-Diethylaminosulfur Trifluoride

34.4.1.2 Method 2: Reaction of Halocyclobutanes with Fluorinating Agents

34.4.1.2.1 Variation 1: Reaction of Iodocubane with Xenon Difluoride

34.4.1.3 Method 3: Reaction of (Iodomethyl)cyclopropane with Xenon Difluoride

34.4.1.4 Method 4: Addition of Iodine Fluoride to Methylene cyclobutanes
34.5 **Product Class 5: Propargylic Fluorides**
J. A. L. Miles and J. M. Percy

34.5.1 Synthesis of Product Class 5 ................................................................. 277

34.5.1.1 Method 1: Nucleophilic Substitution of Propargylic Alcohols with 1-Flouro-N,N-diisopropyl-2-methylprop-1-en-1-amine ................. 277

34.5.1.2 Method 2: Nucleophilic Substitution of Silyl Ethers with Piperidinosulfur Trifluoride ................................................................. 278

34.5.1.3 Method 3: Reaction of Prop-2-yn-1-ol with 2-Chloro-N,N-diethyl-1,1,2-trifluoroethanamine ................................. 280

34.5.1.4 Method 4: Nucleophilic Substitution with Tetrabutylammonium Fluoride ............. 281

34.5.1.5 Method 5: Ring Opening of Oxetanes Using Silicon Tetrafluoride ...... 282

34.5.1.6 Method 6: Nucleophilic Substitution Using Sulfur Tetrafluoride .......... 282

34.5.1.7 Method 7: Nucleophilic Substitution of Propargylic Alcohols with N,N-Diethylenaminosulfur Trifluoride ...................................... 283

34.5.1.7.1 Variation 1: Inverse Addition of a Propargylic Alcohol Precursor to a Cold Solution of N,N-Diethylenaminosulfur Trifluoride without Low Temperature Quenching ........................................ 284

34.5.1.7.2 Variation 2: Inverse Addition of a Propargylic Alcohol Precursor to a Cold Solution of N,N-Diethylenaminosulfur Trifluoride with Low Temperature Quenching ........................................... 286

34.5.1.7.3 Variation 3: From Propargylic Alcohols by Inverse Addition to a Cooled Solution of N,N-Diethylenaminosulfur Trifluoride ................. 287

34.5.1.7.4 Variation 4: From Hexacarbonyldicobalt-Protected Propargylic Alcohols ... 288

34.5.1.8 Method 8: Synthesis From 3-Substituted 1,1,3-Tribromo-1-fluoropropanes via (Alk-1-ynyl)fluorocarbenes .................... 291

34.6 **Product Class 6: Benzylic Fluorides**
A. Sai Krishna Murthy, R. Tardivel, and R. Grée

34.6.1 Synthesis of Product Class 6 ................................................................. 295

34.6.1.1 Nucleophilic Fluorination ................................................................. 295

34.6.1.1.1 Method 1: Dehydrofluorination ....................................................... 295

34.6.1.1.1.1 Variation 1: Electrochemical Methods .......................................... 295

34.6.1.1.2 Variation 2: Photochemical Methods ............................................. 300

34.6.1.1.2 Method 2: Dehydroxyfluorination .................................................. 300

34.6.1.1.2.1 Variation 1: With N,N-Diethylenaminosulfur Trifluoride and Related Reagents 301

34.6.1.1.2.2 Variation 2: With Nonfluorobutanesulfonyl Fluoride with a Trialkylamine Trihydrofluoride and a Base ........................................ 304

34.6.1.1.2.3 Variation 3: With Fluroalkylamines and Related Reagents ............ 304

34.6.1.1.2.4 Variation 4: Fluorination with Rearrangement ................................ 305

34.6.1.1.3 Method 3: Desulfurative Fluorinations .......................................... 307

34.6.1.1.4 Method 4: Halogen-Exchange Reactions ........................................ 307

34.6.1.1.5 Method 5: Nucleophilic Substitutions ............................................. 311
Electrophilic Fluorination .................................................. 313

Method 1: Fluorination of Alkylbenzenes with Cesium Fluoroxyacetate ........................................... 313

C–C Bond Formation of Fluorinated Compounds .................................................. 314

Method 1: Transition-Metal-Catalyzed Reactions ........................................... 314

Method 2: Cycloadditions to Vinylic Fluorides ........................................... 315

Product Class 7: Allylic Fluorides
R. Roig and J. M. Percy

Product Subclass 1: Allyl Fluorides ........................................... 319

Synthesis of Product Subclass 1 ........................................... 319

Method 1: Deoxofluorination of Allylic Alcohols with $N,N$-Diethylaminosulfur Trifluoride ........................................... 319

Variation 1: Deoxofluorination of Allylic Alcohols with Bis(dialkylamino)sulfur Difluorides ........................................... 322

Method 2: Addition to $\alpha$-Fluoroalkynes ........................................... 323

Method 3: Electrophilic Fluorination of Alkenes ........................................... 325

Variation 1: Electrophilic Fluorination of Alkenes with Acetyl Hypofluorite ........................................... 325

Variation 2: Electrophilic Fluorination of Activated Alkenes with Elemental Fluorine ........................................... 326

Variation 3: Electrophilic Fluorination of Alkenes with $N$-Fluoropyridinium Salts ........................................... 326

Method 4: Nucleophilic Substitution of Allylic Halides ........................................... 328

Variation 1: Nucleophilic Substitution of Allylic Halides with Tetraethylammonium Fluoride ........................................... 328

Variation 2: Heterogeneous Fluorination of Allylic Halides by the Combination of Lead(II) Fluoride and a Sodium Salt ........................................... 329

Variation 3: A Facile Method for the Fluorination of Phenyl Thioethers via Sulfonium Salts Using Cesium Fluoride ........................................... 330

Method 5: Fluoroalkenation of 1,3-Bis(tert-butyldimethylsilyl) Ethers ........................................... 331

Method 6: Oxidative Elimination of $\beta$-Fluoro Selenides ........................................... 332

Methods 7: Additional Methods ........................................... 332

Product Subclass 2: $\alpha$-Fluoroallyl- and 3-Fluoroalk-1-enylphosphonate Esters ........................................... 333

Synthesis of Product Subclass 2 ........................................... 334

Method 1: Deoxofluorination of $\alpha$-Hydroxyallylphosphonate Esters with $N,N$-Diethylaminosulfur Trifluoride ........................................... 334

Method 2: Coupling of $\alpha$-Fluoro Phosphonate Esters with Vinylic Halides ........................................... 334

Method 3: Catalytic Hydrogenation of $\alpha$-Fluoropropargylphosphonate Esters ........................................... 335

Product Subclass 3: $\gamma$-Fluoro $\alpha,\beta$-Unsaturated Esters ........................................... 337

Synthesis of Product Subclass 3 ........................................... 337

Method 1: Horner–Emmons Condensation of $\alpha$-Fluoro Aldehydes and Ketones ........................................... 337
34.8  Product Class 8: Homoallylic Fluorides
J. M. Percy

34.8  Product Class 8: Homoallylic Fluorides .............................................. 341
34.8.1  Synthesis of Product Class 8 ............................................................... 341
34.8.1.1 Method 1: Ring Opening of Cyclopropylmethanols with a Fluoride Ion Source .............................................................. 341

34.9  Product Class 9: β-Fluoro Alcohols
G. Haufe

34.9  Product Class 9: β-Fluoro Alcohols ......................................................... 345
34.9.1  Synthesis of Product Class 9 ............................................................... 345
34.9.1.1 Method 1: Synthesis Using Hydrogen Fluoride .................................. 348
34.9.1.1.1 Variation 1: Aqueous Hydrogen Fluoride ......................................... 348
34.9.1.1.2 Variation 2: Anhydrous Hydrogen Fluoride in Coordinating Solvents ... 349
34.9.1.1.3 Variation 3: Anhydrous Hydrogen Fluoride in the Presence of Lewis Acids 350
34.9.1.2 Method 2: Synthesis Using Metal Fluorides and Metal Hydrogen Fluorides 351
34.9.1.2.1 Variation 1: Alkali Metal Hydrogen Fluorides in Coordinating Solvents ... 351
34.9.1.2.2 Variation 2: Potassium Hydrogen Difluoride or Silver(I) Fluoride in the Presence of a Chiral Lewis Acid ........................................... 355
34.9.1.3 Method 3: Synthesis Using Alkylammonium and Alkylphosphonium Fluorides ............................................................... 357
34.9.1.3.1 Variation 1: Tetrabutylammonium and Tetrabutylphosphonium Fluorides 357
34.9.1.3.2 Variation 2: Tetraethylammonium Fluorides ........................................ 360
34.9.1.4 Method 4: Synthesis Using Amine Polyhydrofluorides ......................... 361
34.9.1.4.1 Variation 1: Hydrogen Fluoride/Pyridine .......................................... 362
34.9.1.4.2 Variation 2: Alkylamine Hydrofluorides ........................................... 367
34.9.1.5 Method 5: Synthesis Using Boron Trifluoride–Diethyl Ether Complex ....... 374

34.10  Product Class 10: β-Fluoroamines
J. M. Percy

34.10  Product Class 10: β-Fluoroamines .......................................................... 379
34.10.1  Synthesis of Product Class 10 ............................................................ 379
34.10.1.1 Method 1: Reduction of β-Fluoro Azides .......................................... 379
34.10.1.2 Method 2: Displacement of β-Fluoro 4-Toluenesulfonates by Amines ..... 380
34.10.1.3 Method 3: Ring Opening of Aziridines with Hydrogen Fluoride Equivalents 381
34.10.1.3.1 Variation 1: Ring Opening of Aziridines by Fluoride Ion .................... 382
34.10.1.3.2 Variation 2: Ring Opening of Azabicyclo[1.1.0]butanes with Hydrogen Fluoride/Pyridine ..................................................... 383
34.10.4 Method 4: Ring Opening of Cyclic Sulfamates with Fluoride Ion ............ 384

Volume 35: Chlorine, Bromine, and Iodine

Preface ................................................................. V

Volume Editor’s Preface ........................................ VII

Table of Contents ................................................ XV

Introduction
E. Schaumann ................................................................. 1

35.1 Product Class 1: One Saturated Carbon—Chlorine Bond

35.1.1 Product Subclass 1: Chloroalkanes
E. Schaumann ................................................................. 15

35.1.1.1 Synthesis by Substitution of Hydrogen
J. Hartung ........................................................................ 19

35.1.1.2 Synthesis by Substitution of Metals
P. Margaretha ................................................................. 47

35.1.1.3 Synthesis by Substitution of Carbon Functionalities
P. Margaretha ................................................................. 49

35.1.1.4 Synthesis by Substitution of Other Halogens
P. Margaretha ................................................................. 59

35.1.1.5 Synthesis by Substitution of Oxygen Functionalities
P. Margaretha ................................................................. 63

35.1.1.6 Synthesis by Substitution of Sulfur, Selenium, or Tellurium Functionalities
P. Margaretha ................................................................. 95

35.1.1.7 Synthesis by Substitution of Nitrogen Functionalities
P. Margaretha ................................................................. 99

35.1.1.8 Synthesis by Addition to \( \pi \)-Type C—C Bonds
K.-M. Roy ................................................................. 103

35.1.1.9 Synthesis from Other Chlorine Compounds
H. Ulrich ................................................................. 117

35.1.2 Product Subclass 2: Propargylic Chlorides
P. Margaretha ................................................................. 133

35.1.3 Product Subclass 3: Benzylic Chlorides

35.1.5 Synthesis by Substitution of Oxygen Functionalities

P. Margaretha

35.1.5 Synthesis by Substitution of Oxygen Functionalities ........................................ 63
35.1.5.1 Method 1: Decarboxylation of Chloroformates ...................................... 63
35.1.5.2 Method 2: Synthesis from Alkanesulfonates and a Source of Chloride Ion .... 64
35.1.5.2.1 Variation 1: Using Lithium Chloride .................................................. 64
35.1.5.2.2 Variation 2: Using Sodium or Potassium Chloride ............................ 65
35.1.5.2.3 Variation 3: Using Calcium Chloride .................................................. 65
35.1.5.2.4 Variation 4: Using Pyridinium Hydrochloride .................................... 66
35.1.5.2.5 Variation 5: Using Tetraalkylammonium Chlorides ............................ 66
35.1.5.3 Method 3: Synthesis from Alkyl Xanthates (O-Alkylidithiocarbonates) or from Thionocarbonates (O,O-Dialkylthiocarbonates) ................................. 67
35.1.5.4 Method 4: Replacement of an Alcoholic Hydroxy Group with Hydrogen Chloride or a Metal Halide ................................................................. 68
35.1.5.4.1 Variation 1: Using Hydrochloric Acid or Hydrogen Chloride ................. 68
35.1.5.4.2 Variation 2: Using Sodium Chloride .................................................... 69
35.1.5.4.3 Variation 3: Using Tin(IV) Chloride .................................................... 70
35.1.5.5 Method 5: Replacement of an Alcoholic Hydroxy Group with Thionyl Chloride ................................................................. 70
35.1.5.5.1 Variation 1: In an Inert Solvent in the Absence of a Base ....................... 71
35.1.5.5.2 Variation 2: In the Absence of a Solvent ............................................ 72
35.1.5.5.3 Variation 3: In the Presence of an Equimolar Amount of Pyridine .......... 72
35.1.5.5.4 Variation 4: In the Presence of an Equimolar Amount of 1H-Benzotriazole .... 73
35.1.5.5.5 Variation 5: In the Presence of Excess Triethylamine .............................. 74
35.1.5.6 Method 6: Replacement of an Alcoholic Hydroxy Group with Selenium Tetrachloride ................................................................. 75
35.1.5.7 Method 7: Replacement of an Alcoholic Hydroxy Group with Chlorides of Phosphoric Acid and Related Compounds ............................................. 76
35.1.5.7.1 Variation 1: Using Phosphorus Pentachloride ..................................... 76
35.1.5.7.2 Variation 2: Using Phosphoryl Chloride ................................---------- 77
35.1.5.8 Method 8: Replacement of an Alcoholic Hydroxy Group via Oxyphosphonium Intermediates ................................................................. 78
35.1.5.8.1 Variation 1: Using Triphenylphosphine and Tetrachloromethane ............ 79
35.1.5.8.2 Variation 2: Using Triphenylphosphine/2,3-Dichloro-5,6-dicyanobenzo-
1,4-quinone and a Quaternary Ammonium Chloride ...................................... 81
35.1.5.8.3 Variation 3: Using Triphenylphosphine and Cyclic N-Chloroimides .......... 82
35.1.5.8.4 Variation 4: Using Triphenylphosphine and Dichloroselenuranes .......... 83
35.1.5.8.5 Variation 5: Using Triphenylphosphine, Diethyl Azodicarboxylate, and Zinc(II) Chloride ................................................................. 84
35.1.5.9 Method 9: Replacement of an Alcoholic Hydroxy Group with Acetyl Chloride ........................................................................................................ 84
35.1.5.10 Method 10: Replacement of an Alcoholic Hydroxy Group with Chloro-
methylenedimethyliminium Chloride and Related Reagents ............................. 85
35.1.5.11 Method 11: Replacement of an Alcoholic Hydroxy Group with tert-Butyl Chloride in an Ionic Liquid ................................................................. 90
35.1.8.8.1 Variation 1: Synthesis with Hydrogen Chloride ........................................ 111
35.1.8.8.2 Variation 2: Synthesis with Metal Chlorides ........................................... 112
35.1.8.9 Method 9: Hydrochlorination of Cyclopropanes ........................................ 112
35.1.8.10 Method 10: Carbochlorination ................................................................. 113

35.1.9 Synthesis from Other Chlorine Compounds
H. Ulrich

35.1.9 Synthesis from Other Chlorine Compounds ................................................. 117
35.1.9.1 Method 1: Synthesis from Chloroalkynes by Hydrogenation ....................... 117
35.1.9.2 Method 2: Synthesis from Chloroalkenes ................................................. 117
35.1.9.2.1 Variation 1: By Hydrogenation .............................................................. 117
35.1.9.2.2 Variation 2: By Polymerization ............................................................ 118
35.1.9.2.3 Variation 3: Coupling Reactions ............................................................ 120
35.1.9.2.4 Variation 4: [2 + 2]-Cycloaddition Reactions ........................................ 120
35.1.9.2.5 Variation 5: [2 + 3]-Cycloaddition Reactions ........................................ 125
35.1.9.2.6 Variation 6: [2 + 4]-Cycloaddition Reactions ........................................ 126
35.1.9.3 Method 3: Synthesis from Chlorocarbenes ............................................... 127
35.1.9.4 Method 4: Synthesis from Chloroalkanes ............................................... 129
35.1.9.4.1 Variation 1: By Insertion of Methylene into C–Cl Bonds ......................... 129
35.1.9.4.2 Variation 2: Chloroalkylation Reactions .............................................. 129
35.1.9.4.3 Variation 3: By Isomerization Reactions .............................................. 130
35.1.9.4.4 Variation 4: Elimination of Benzeneseleninic Acid ................................ 130

35.1.2 Product Subclass 2: Propargylic Chlorides
P. Margaretha

35.1.2 Product Subclass 2: Propargylic Chlorides .................................................... 133
35.1.2.1 Synthesis by Heteroatom Substitution ...................................................... 133
35.1.2.1.1 Synthesis by Deoxidative Halogenation of Ketones ................................ 133
35.1.2.1.1 Method 1: Addition of Chlorodimethylsilane to Ketones ....................... 133
35.1.2.1.2 Synthesis by Substitution of α-Bonded Heteroatoms ................................ 134
35.1.2.1.2 Method 1: Synthesis from Propargylic Alcohols and Hydrochloric Acid 134
35.1.2.1.2.1 Variation 1: Chlorination Using Hydrochloric Acid, Calcium Chloride, Copper(I) Chloride, and Copper Metal .......................... 134
35.1.2.1.2.2 Variation 2: Chlorination Using Gaseous Hydrogen Chloride .......... 135
35.1.2.1.2.2 Method 2: Synthesis from Propargylic Alcohols and Thionyl Chloride 136
35.1.2.1.2.3 Method 3: Synthesis from Propargylic Alcohols and 1-Chloro-N,N,2-trimethylprop-1-en-1-amine ........................................ 136
35.1.3 Product Subclass 3: Benzylic Chlorides

35.1.3.1 Synthesis by Substitution of Hydrogen
W. D. Pfeiffer

35.1.3.1 Synthesis by Substitution of Hydrogen .................................. 139
35.1.3.1 Method 1: Reaction with Chlorine under Irradiation ................. 139
35.1.3.1 Method 2: Reaction with Chlorine and a Catalyst ...................... 141
35.1.3.1 Method 3: Reaction with Liquid Chlorine ................................. 142
35.1.3.1 Method 4: Reaction with Benzytrimethylammonium Tetrachloroiodate 143
35.1.3.1 Method 5: Reaction with tert-Butyl Hypochlorite ........................ 144
35.1.3.1 Method 6: Reaction with Sulfuryl Chloride and a Catalyst ........ 144
35.1.3.1 Method 7: Reaction with Benzenesulfonyl Chloride .................. 146
35.1.3.1 Method 8: Reaction with Trichloromethanesulfonyl Chloride .... 147
35.1.3.1 Method 9: Reaction with N-Chlorosuccinimide ....................... 147
35.1.3.1 Method 10: Reaction with 1,3,5-Trichloro-1,3,5-triazine-2,4,6(1H,3H,5H)-trione (Trichloroisocyanuric Acid) .............................. 149
35.1.3.1 Method 11: Reaction with Ammonium Cerium(IV) Nitrate–Lithium Chloride or Cobalt(III) Acetate–Lithium Chloride ................ 149
35.1.3.1 Method 12: Reaction with Phosphorus Pentachloride ................. 150
35.1.3.1 Method 13: Reaction with Phosphoryl Chloride ........................ 151
35.1.3.1 Method 14: Reaction with Trichloroacetyl Chloride, Chloroacetyl Chloride, Benzyol Chloride, or Ethyl Chloroformate .......... 151
35.1.3.1 Method 15: Reaction with Trichloromethyl Chloroformate or Bis(trichloromethyl) Carbonate ............................................... 152

35.1.3.2 Synthesis by Substitution of Carbonyl Oxygen
W. D. Pfeiffer

35.1.3.2 Synthesis by Substitution of Carbonyl Oxygen .......................... 155
35.1.3.2.1 Method 1: Chloroalkylation with Aldehydes ........................... 155
35.1.3.2.1 Variation 1: Chloromethylation with Paraformaldehyde and Hydrogen Chloride ...................................................... 155
35.1.3.2.1 Variation 2: Chloromethylation with Formaldehyde and Hydrogen Chloride ......................................................... 158
35.1.3.2.1 Variation 3: Chloromethylation with 1,3,5-Trioxide .................. 159
35.1.3.2.1 Variation 4: Chloroalkylation with Acetaldehyde ................... 159
35.1.3.2.2 Method 2: Chloromethylation with Chloromethyl Methyl Ether or Bis(chloromethyl) Ether ............................................. 160
35.1.3.2.3 Method 3: Chloromethylation with Methoxyacetyl Chloride and Aluminum Trichloride ................................................. 161
35.1.3.2.4 Method 4: Chloromethylation with 1-Chloro-4-(chloromethoxy)butane or 1,4-Bis(chloromethoxy)butane .............................. 162
35.1.3.2.5 Method 5: Chloroalkylation of Arenecarbaldehydes Using Alkylboron Dichlorides in the Presence of Oxygen .......................... 162
35.1.3.3 Synthesis by Substitution of $\alpha$-Bonded Heteroatoms
P. Margaretha

35.1.3.3 Synthesis by Substitution of $\alpha$-Bonded Heteroatoms ........................................... 167
35.1.3.3.1 Benzylc Chlorides from Other Benzylc Halides ........................................ 167
35.1.3.3.1.1 Method 1: Benzylc Chlorides from Benzylc Bromides Using Tin(IV) Chloride ........................................ 167
35.1.3.3.2 Benzylc Chlorides from Benzylc Alcohols ........................................ 167
35.1.3.3.2.1 Method 1: Synthesis Using Thionyl Chloride ........................................ 168
35.1.3.3.2.2 Method 2: Synthesis Using 4-Toluenesulfonyl Chloride ........................................ 168
35.1.3.3.2.3 Method 3: Synthesis Using Carbon Tetrachloride ........................................ 169
35.1.3.3.2.4 Method 4: Synthesis Using Silica Chloride ........................................ 169
35.1.3.3.2.5 Method 5: Synthesis Using Chlorotrimethylsilane ........................................ 170
35.1.3.3.2.5.1 Variation 1: With Tellurium Dioxide ........................................ 170
35.1.3.3.2.5.2 Variation 2: With Dimethyl Sulfoxide ........................................ 171
35.1.3.3 Benzylc Chlorides from Benzylc Ethers ........................................ 171
35.1.3.3.1 Method 1: Cleavage with Zinc and Acetyl Chloride ........................................ 171

35.1.4 Product Subclass 4: Allylic Chlorides

35.1.4.1 Synthesis by Substitution of Hydrogen $\alpha$ to a $C=C$ Bond
W. D. Pfeiffer

35.1.4.1 Synthesis by Substitution of Hydrogen $\alpha$ to a $C=C$ Bond ........................................ 173
35.1.4.1.1 Method 1: Reaction with Chlorine ........................................ 173
35.1.4.1.2 Method 2: Reaction with Hypochlorous Acid ........................................ 174
35.1.4.1.3 Method 3: Reaction with Chlorine Monoxide ........................................ 175
35.1.4.1.4 Method 4: Reaction with tert-Butyl Hypochlorite ........................................ 176
35.1.4.1.5 Method 5: Reaction with N-Chloro-N-cyclohexylbenzenesulfonamide ........................................ 177
35.1.4.1.6 Method 6: Reaction with N-Chlorosuccinimide ........................................ 177
35.1.4.1.7 Method 7: Reaction with a Vilsmeier Reagent and Hydrogen Peroxide ........................................ 178
35.1.4.1.8 Method 8: Synthesis by Electrochemical Chlorination ........................................ 179

35.1.4.2 Synthesis by Substitution of $\alpha$-Bonded Heteroatoms
P. Margaretha

35.1.4.2 Synthesis by Substitution of $\alpha$-Bonded Heteroatoms ........................................ 181
35.1.4.2.1 Method 1: Allylic Chlorides from Other Allylic Halides ........................................ 181
35.1.4.2.2 Method 2: Allylic Chlorides from Allylic Alcohols ........................................ 181
35.1.4.2.2.1 Variation 1: With Thionyl Chloride ........................................ 182
35.1.4.2.2.2 Variation 2: With Methanesulfonyl Chloride ........................................ 182
35.1.4.2.2.3 Variation 3: With N-Chlorosuccinimide and Dimethyl Sulfide ........................................ 183
Variation 4: With Carbon Tetrachloride or Hexachloroacetone and Triphenylphosphine ........................................ 183
Variation 5: With 1-Chloro-\textsubscript{N},N,2-trimethylprop-1-enylamine ......................... 185
Variation 6: With Chlorotrimethylsilane in the Presence of Bismuth(III) Chloride ......................... 186
Variation 7: Allylic Chlorides from Allylic Phosphates ............................................. 186
Method 3: Allylic Chlorides from Allyloxybenzenes ............................................. 187

Product Subclass 5: 1-Chloro-\textsubscript{n}-Heteroatom-Functionalized Alkanes (n ≥2) with Both Functions Formed Simultaneously

Synthesis by Addition across C\textsubscript{=}C Bonds
R. Göttlich

Method 1: Chlorination of Arenes ............................................. 189
Method 2: Chlorination of Alkenes ............................................. 192
Variation 1: Using Chlorine ............................................. 192
Variation 2: Using Sulfuryl Chloride ............................................. 198
Variation 3: Using Other Reagents ............................................. 200
Method 3: Bromochlorination of Alkenes ............................................. 203
Method 4: Iodochlorination of Alkenes ............................................. 206
Method 5: Fluorochlorination of Alkenes ............................................. 208
Method 6: Oxychlorination of Alkenes ............................................. 210
Variation 1: Intermolecular Addition ............................................. 210
Variation 2: Intramolecular Cyclization ............................................. 215
Method 7: Sulfochlorination of Alkenes ............................................. 219
Method 8: Selenochlorination of Alkenes ............................................. 223
Method 9: Tellurochlorination of Alkenes ............................................. 227
Method 10: Aminochlorination of Alkenes ............................................. 228
Variation 1: Intermolecular Additions ............................................. 228
Variation 2: Intramolecular Cyclization ............................................. 238
Method 11: Phosphochlorination of Alkenes ............................................. 242

Synthesis by Addition across C\textsubscript{=}O Bonds
K. Rück-Braun and T. Freysoldt

Method 1: Hydrochlorination of Epoxides Using Hydrogen Chloride ............................................. 251
Method 2: Hydrochlorination of Epoxides Using Elemental Chlorine ............................................. 252
Method 3: Hydrochlorination of Epoxides Using Alkali Metal Chlorides ............................................. 253
Method 4: Hydrochlorination of Epoxides Using Chloro(imido)metal Complexes ............................................. 254
Method 5: Hydrochlorination of Epoxides Using Silicon Tetrachloride ............................................. 254
Variation 1: Enantioselective Transformations and Desymmetrization ............................................. 255
35.1.5.2.6 Method 6: Hydrochlorination of Epoxides Using Trialkylchlorosilanes \[\cdots\] 256
35.1.5.2.7 Method 7: Hydrochlorination of Epoxides Using Chloroorganostannanes 258
35.1.5.2.8 Method 8: Hydrochlorination of Epoxides Using Organoaluminum Chlorides \[\cdots\] 259
35.1.5.2.9 Method 9: Hydrochlorination of Epoxides Using Lithium Tetrachlorocuprate(II) \[\cdots\] 260
35.1.5.2.10 Method 10: Hydrochlorination of Epoxides Using Niobium(V) Chloride \[\cdots\] 260
35.1.5.2.11 Method 11: Hydrochlorination of Epoxides Using Titanium(IV) Chloride 261
35.1.5.2.12 Method 12: Hydrochlorination of Epoxides Using Cerium(III) Chloride \[\cdots\] 262
35.1.5.2.13 Method 13: Hydrochlorination of Epoxides Using Tetraalkylammonium Chlorides \[\cdots\] 262
35.1.5.2.14 Method 14: Hydrochlorination of Epoxides Using Phosphorus Chlorides, Phosphonium Chlorides, Thionyl Chloride, and Related Compounds \[\cdots\] 263
35.1.5.2.15 Method 15: Hydrochlorination of Epoxides Using Chlorocarbonylated Compounds \[\cdots\] 265
35.1.5.2.16 Method 16: Hydrochlorination of Tetrahydrofurans and Other Cyclic Ethers \[\cdots\] 266

35.1.5.3 Synthesis by Addition across C–S Bonds
K. Rück-Braun and T. Freysoldt

35.1.5.3 Synthesis by Addition across C–S Bonds \[\cdots\] 271
35.1.5.3.1 Method 1: Hydrochlorination of Thiiranes Using Hydrogen Chloride \[\cdots\] 271
35.1.5.3.2 Method 2: Hydrochlorination of Thiiranes by Reaction of Thiirane 1-Oxides with Chloro(organo)stannanes \[\cdots\] 271
35.1.5.3.3 Method 3: Hydrochlorination of Thiiranes Using Chlorocarbonylated Compounds \[\cdots\] 272
35.1.5.3.4 Method 4: Synthesis by Chlorination of Thiiranes \[\cdots\] 273

35.1.5.4 Synthesis by Addition across C–N Bonds
K. Rück-Braun and T. Freysoldt

35.1.5.4 Synthesis by Addition across C–N Bonds \[\cdots\] 275
35.1.5.4.1 Method 1: Hydrochlorination of Aziridines Using Hydrogen Chloride \[\cdots\] 275
35.1.5.4.2 Method 2: Hydrochlorination of Aziridines Using Alkali Metal Chlorides 276
35.1.5.4.3 Method 3: Hydrochlorination of Aziridines Using Other Metal Chlorides 277
35.1.5.4.4 Method 4: Hydrochlorination of Aziridines Using Chlorotrimethylsilane 278
35.1.5.4.5 Method 5: Hydrochlorination of Aziridines Using Activated Dimethylformamide Complexes \[\cdots\] 278

35.1.5.5 Synthesis by Addition across C–C Bonds
K. Rück-Braun and T. Freysoldt

35.1.5.5 Synthesis by Addition across C–C Bonds \[\cdots\] 281
35.1.5.5.1 Method 1: Chlorination of 1,1-Diacetylcyclopropane \[\cdots\] 281
35.2 Product Class 2: One Saturated Carbon—Bromine Bond

35.2.1 Product Subclass 1: Bromoalkanes
E. Schaumann

35.2.1 Product Subclass 1: Bromoalkanes

35.2.1.1 Synthesis by Substitution of Hydrogen
J. Hartung

35.2.1.1 Synthesis by Substitution of Hydrogen

35.2.1.1.1 Alkanes and Cycloalkanes

35.2.1.1.1 Method 1: Bromination with Bromine

35.2.1.1.1.2 Method 2: Reaction with tert-Butyl Hypobromite

35.2.1.1.1.2 Method 2: Reaction with tert-Butyl Hypobromite

35.2.1.1.1.3 Method 3: Brominating Reagents Containing a C—Br Bond

35.2.1.1.1.3 Method 3: Brominating Reagents Containing a C—Br Bond

35.2.1.1.1.3.1 Variation 1: Carbon Tetrabromide as Bromine-Atom Donor

35.2.1.1.1.3.1 Variation 1: Carbon Tetrabromide as Bromine-Atom Donor

35.2.1.1.1.3.2 Variation 2: Bromotrichloromethane as Bromine-Atom Donor

35.2.1.1.1.3.2 Variation 2: Bromotrichloromethane as Bromine-Atom Donor

35.2.1.1.2 Haloalkanes and Halocycloalkanes

35.2.1.1.2 Haloalkanes and Halocycloalkanes

35.2.1.1.2.1 Method 1: Bromination with Bromine

35.2.1.1.2.1 Method 1: Bromination with Bromine

35.2.1.1.3 Aldehydes and Ketones

35.2.1.1.3 Aldehydes and Ketones

35.2.1.1.3.1 Method 1: Bromination with Bromine

35.2.1.1.3.1 Method 1: Bromination with Bromine

35.2.1.1.3.2 Method 2: Reaction with Bromomalonates

35.2.1.1.3.2 Method 2: Reaction with Bromomalonates

35.2.1.1.4 Carboxylic Acids and Carboxylic Acid Derivatives

35.2.1.1.4 Carboxylic Acids and Carboxylic Acid Derivatives

35.2.1.1.4.1 Method 1: Bromination with Bromine

35.2.1.1.4.1 Method 1: Bromination with Bromine

35.2.1.1.4.2 Method 2: Bromination with N-Bromosuccinimide

35.2.1.1.4.2 Method 2: Bromination with N-Bromosuccinimide

35.2.1.1.5 Isocyanates and Isothiocyanates

35.2.1.1.5 Isocyanates and Isothiocyanates

35.2.1.1.5.1 Method 1: Bromination with N-Bromosuccinimide

35.2.1.1.5.1 Method 1: Bromination with N-Bromosuccinimide

35.2.1.1.6 Alkylboranes and Alkylsilanes

35.2.1.1.6 Alkylboranes and Alkylsilanes

35.2.1.1.6.1 Method 1: Bromination with Bromine

35.2.1.1.6.1 Method 1: Bromination with Bromine

35.2.1.1.6.2 Method 2: Bromination with N-Bromosuccinimide

35.2.1.1.6.2 Method 2: Bromination with N-Bromosuccinimide

35.2.1.1.7 Carbohydrates

35.2.1.1.7 Carbohydrates

35.2.1.1.7.1 Method 1: Bromination with Bromine

35.2.1.1.7.1 Method 1: Bromination with Bromine

35.2.1.1.7.2 Method 2: Bromination with N-Bromosuccinimide

35.2.1.1.7.2 Method 2: Bromination with N-Bromosuccinimide

35.2.1.2 Synthesis by Substitution of Metals
P. Margaretha

35.2.1.2 Synthesis by Substitution of Metals

35.2.1.2.1 Method 1: Bromoalkanes from Organo-Group 15 Derivatives

35.2.1.2.1 Method 1: Bromoalkanes from Organo-Group 15 Derivatives

35.2.1.2.2 Method 2: Bromoalkanes from Trialkylboranes

35.2.1.2.2 Method 2: Bromoalkanes from Trialkylboranes
35.2.1.3 Substitution of Carbon Functionalities
P. Margaretha

35.2.1.3 Substitution of Carbon Functionalities ........................................ 303
35.2.1.3.1 Method 1: Decarbonylation of Acyl Bromides .......................... 303
35.2.1.3.2 Method 2: Bromodecarboxylation of Heavy-Metal Salts of Carboxylic Acids ........................................ 303
35.2.1.3.2.1 Variation 1: Bromodecarboxylation of Silver(I) Carboxylates .......... 303
35.2.1.3.2.2 Variation 2: Bromodecarboxylation of Thallium(I) Carboxylates 304
35.2.1.3.3 Method 3: Bromodecarboxylation of Carboxylic Acids .................. 305
35.2.1.3.3.1 Variation 1: Bromodecarboxylation of Carboxylic Acids in the Presence of Mercury(II) Oxide ............................... 306
35.2.1.3.3.2 Variation 2: Bromodecarboxylation of Carboxylic Acids with (Diacetoxyiodo)benzene and Bromine .......................... 306
35.2.1.3.4 Method 4: Bromodecarboxylation of N-(Acyloxy)pyridine-2(1H)-thiones 307

35.2.1.4 Synthesis by Substitution of Other Halogens
M. Braun

35.2.1.4 Synthesis by Substitution of Other Halogens .................................. 313
35.2.1.4.1 Method 1: Substitution of Fluorine ......................................... 313
35.2.1.4.1.1 Variation 1: Reaction with Aqueous Hydrogen Bromide ............... 313
35.2.1.4.1.2 Variation 2: Reactions with Lewis Acids .................................. 314
35.2.1.4.2 Method 2: Substitution of Chlorine ........................................... 314
35.2.1.4.2.1 Variation 1: Reaction of Chloroalkanes with Aqueous Hydrogen Bromide .................................................. 315
35.2.1.4.2.2 Variation 2: Reactions of Chloroalkanes with Gaseous Hydrogen Bromide in the Presence of Iron(III) Bromide 315
35.2.1.4.2.3 Variation 3: Reactions of Chloroalkanes with Metal Bromides and a Phase-Transfer Catalyst ........................................ 317
35.2.1.4.2.4 Variation 4: Reactions of Chloroalkanes with Bromoalkanes in the Presence of Alkali Metal Bromides ............................. 318
35.2.1.4.3 Method 3: Substitution of Iodine ............................................. 320
35.2.1.4.3.1 Variation 1: Reactions of Iodoalkanes with Bromine .................... 320
35.2.1.4.3.2 Variation 2: Reactions of Iodoalkanes with Hypervalent Iodo Compounds ........................................ 320
35.2.1.4.3.3 Variation 3: Reactions of Iodoalkanes with Bismuth(III) Bromide ........ 321

35.2.1.5 Synthesis by Substitution of Oxygen Functionalities
M. Braun

35.2.1.5 Synthesis by Substitution of Oxygen Functionalities .......................... 323
35.2.1.5.1 Method 1: Substitution of Acyloxy Groups in Carboxylic Esters ............ 323
35.2.1.5.1.1 Variation 1: Reaction of Carboxylic Esters with Hydrogen Bromide .... 323
35.2.1.5.1.2 Variation 2: Reaction of Carboxylic Esters with Bromotrimethylsilane .... 324
35.2.1.5.1.3 Variation 3: Reaction of Carboxylic Esters with Bromine and Phosphorus 325
35.2.1.5.1.4 Variation 4: Reaction of Carboxylic Esters with Triphenylphosphine–Bromine .................................................. 326
35.2.1.5.2 Method 2: Substitution of Alcoholic Hydroxy Groups ............... 326
35.2.1.5.2.1 Variation 1: Reaction of Alcohols with Aqueous Hydrobromic Acid .... 326
35.2.1.5.2.2 Variation 2: Reaction of Alcohols with Hydrobromic Acid/Sulfuric Acid ... 328
35.2.1.5.2.3 Variation 3: Reaction of Alcohols with Gaseous Hydrogen Bromide .......... 328
35.2.1.5.2.4 Variation 4: Reaction of Alcohols with Phosphorus Tribromide .......... 329
35.2.1.5.2.5 Variation 5: Reaction of Alcohols with Polymer-Bound Phosphorus Tribromide ................................................... 330
35.2.1.5.2.6 Variation 6: Reaction of Alcohols with Phosphorus Tribromide and Pyridine 331
35.2.1.5.2.7 Variation 7: Reaction of Alcohols with Triphenylphosphine–Bromine .......... 331
35.2.1.5.2.8 Variation 8: Reaction of Alcohols with Triphenylphosphine–Carbon Tetrabromide and Related Reagents ................................. 333
35.2.1.5.2.9 Variation 9: Reaction of Alcohols with Triphenylphosphine–N-Bromosuccinimide ...................................................... 334
35.2.1.5.2.10 Variation 10: Reaction of Alcohols with Triphenyl Phosphate–Bromine ........ 335
35.2.1.5.2.11 Variation 11: Reaction of Alcohols with Bromotrimethylsilane ............. 335
35.2.1.5.2.12 Variation 12: Preparation of Bromoalkanes from Alcohols by a Modified Mitsunobu Procedure ........................................... 336
35.2.1.5.2.13 Variations 13: Miscellaneous Reactions ........................................ 337
35.2.1.5.3 Method 3: Substitution of Alcohols with Isomerization ..................... 337
35.2.1.5.3.1 Variation 1: Reaction of 1-Cyclopropylalkan-1-ols with Hydrogen Bromide 338
35.2.1.5.3.2 Variation 2: Reaction of 1-Cyclopropylalkan-1-ols with Magnesium Bromide ................................................................. 339
35.2.1.5.3.3 Variation 3: Reaction of 1-Cyclopropylalkan-1-ols with Bromotrimethylsilane–Zinc(II) Bromide ........................................... 340
35.2.1.5.3.4 Variations 4: Miscellaneous Reactions ........................................ 341
35.2.1.5.4 Method 4: Cleavage of Alkyl Ethers .............................................. 341
35.2.1.5.4.1 Variation 1: Reaction of Ethers with Hydrobromic Acid ................... 341
35.2.1.5.4.2 Variation 2: Reaction of Ethers with 9-Bromo-9-borabicyclo[3.3.1]nonane 342
35.2.1.5.5 Method 5: Cleavage of Silyl Ethers ............................................. 343
35.2.1.5.5.1 Variation 1: Reaction of Silyl Ethers with Triphenylphosphine–Bromine 343
35.2.1.5.5.2 Variation 2: Reaction of Silyl Ethers with Triphenylphosphine/2,4,4,6-Tetabromocyclohexa-2,5-dienone ........................................ 344
35.2.1.5.5.3 Variation 3: Reaction of Silyl Ethers with Triphenylphosphine–Carbon Tetrabromide .................................................. 345
35.2.1.5.5.4 Variation 4: Reaction of Silyl Ethers with Boron Tribromide .............. 346
35.2.1.5.6 Method 6: Substitution of Sulfonyloxy Groups ................................ 347
35.2.1.5.6.1 Variation 1: Reaction of Arenesulfonates with Metal Bromides .......... 347
35.2.1.5.6.2 Variation 2: Reaction of Methanesulfonates with Metal Bromides .......... 349
35.2.1.5.6.3 Variations 3: Miscellaneous Reactions ........................................ 350
Synthesis by Substitution of Sulfur, Selenium, or Tellurium Functionalities
M. Braun

Method 1: Preparation from Sulfides and Cyanogen Bromide or from Selenides and Bromine

Synthesis by Substitution of Nitrogen Functionalities
M. Braun

Method 1: Synthesis from Amines by the von Braun Reaction
Method 2: Synthesis from Amines via Diazonium Salts

Synthesis by Addition to \(\pi\)-Type \(\text{C} - \text{C}\) Bonds
K.-M. Roy

Method 1: Hydrobromination of Alkynes or Allenes
Method 2: Hydrobromination of 1,3-Dienes

Variation 1: Using Hydrogen Bromide
Variation 2: Using Phosphorus Tribromide on Silica Gel
Variation 3: Via Hydrozirconation

Method 3: Hydrobromination of Symmetrical Alkenes and Cycloalkenes
Method 4: Hydrobromination of Unsymmetrical Alkenes
(anti-Markovnikov Addition)

Variation 1: Using Hydrogen Bromide
Variation 2: Using Phase-Transfer Conditions
Variation 3: Using an Inorganic Support
Variation 4: Via Hydroalumination
Variation 5: Via Hydrozirconation

Method 5: Hydrobromination of Unsymmetrical Alkenes
(anti-Markovnikov Addition)

Variation 1: Using Hydrogen Bromide and a Radical Source
Variation 2: Using Benzeneselenenyl Bromide and Hydrogen Peroxide
Variation 3: Via Hydroboration
Variation 4: Via Hydroalumination
Variation 5: Via Hydrozirconation

Method 6: Asymmetric Hydrobromination of Functionalized Alkenes

Method 7: Hydrobromination of Methylene cyclopropanes

Variation 1: Using Hydrogen Bromide
Variation 2: Using Titanium(IV) Bromide

Method 8: Hydrobromination of Cyclopropanes

Method 9: Carbobromination

Variation 1: Bromocyclization
35.2.1.9 Synthesis from Other Bromo Compounds
H. Ulrich

35.2.1.9 Synthesis from Other Bromo Compounds ........................................ 379
35.2.1.9.1 Method 1: Synthesis from Bromoalkynes by Hydrogenation ............ 379
35.2.1.9.2 Method 2: Synthesis from Bromoalkenes ....................................... 379
35.2.1.9.2.1 Variation 1: By Hydrogenation .................................................. 379
35.2.1.9.2.2 Variation 2: By Polymerization .................................................. 380
35.2.1.9.2.3 Variation 3: By Cycloaddition Reactions .................................... 380
35.2.1.9.3 Method 3: Synthesis from Bromocarbenes .................................... 383
35.2.1.9.4 Method 4: Synthesis from Bromoalkanes ...................................... 384
35.2.1.9.4.1 Variation 1: By Insertion of Methylene into Carbon—Halogen Bonds .... 384
35.2.1.9.4.2 Variation 2: By Bromoalkylation .............................................. 384
35.2.1.9.4.3 Variation 3: By Isomerization Reactions .................................... 384

35.2.2 Product Subclass 2: Propargylic Bromides
M. Braun

35.2.2 Product Subclass 2: Propargylic Bromides ........................................ 387
35.2.2.1 Synthesis by Heteroatom Substitution ........................................... 387
35.2.2.1.1 Method 1: Substitution of Hydroxy Groups ................................... 387
35.2.2.1.2 Method 2: Substitution of Sulfonyloxy Groups ............................... 389

35.2.3 Product Subclass 3: Benzylic Bromides

35.2.3.1 Synthesis by Substitution of Hydrogen
W. D. Pfeiffer

35.2.3.1 Synthesis by Substitution of Hydrogen ........................................... 391
35.2.3.1.1 Method 1: Reaction with Bromine ................................................ 391
35.2.3.1.1.1 Variation 1: Reaction with Bromine in the Absence of a Catalyst .... 391
35.2.3.1.1.2 Variation 2: Reaction with Bromine in the Presence of a Catalyst .... 393
35.2.3.1.2 Method 2: Reaction with Copper(II) Bromide ............................... 395
35.2.3.1.3 Method 3: Reaction with Sodium Bromide and Hydrogen Peroxide .... 396
35.2.3.1.4 Method 4: Reaction with Ammonium Cerium(IV) Nitrate/Bromide or Cobalt(III) Acetate/Bromide ....................................................... 397
35.2.3.1.5 Method 5: Reaction with N-Bromosuccinimide ................................ 398
35.2.3.1.6 Method 6: Reaction with Ammonium-Type Bromides ....................... 402
35.2.3.1.6.1 Variation 1: Reaction with a Bromine Complex of Poly(styrene-co-4-vinylpyridine) .................................................. 402
35.2.3.1.6.2 Variation 2: Reaction with Pyridinium Tribromide ........................ 403
35.2.3.1.6.3 Variation 3: Reaction with 3-Methylimidazolium Tribromide .......... 404
35.2.3.1.7 Method 7: Reaction with Trichloromethanesulfonyl Bromide ............ 405
35.2.3.1.8 Method 8: Reaction with Bromotrichloromethane ........................... 406
35.2.3.2 Synthesis by Substitution of Carbonyl Oxygen
W. D. Pfeiffer

35.2.3.3 Synthesis by Substitution of α-Bonded Heteroatoms
M. Braun

35.2.4 Product Subclass 4: Allylic Bromides

35.2.4.1 Synthesis by Substitution of Hydrogen α to a C=C Bond
W. D. Pfeiffer
Synthesis by Substitution of \( \alpha \)-Bonded Heteroatoms

M. Braun

Method 1: Substitution of Other Halogens

Method 2: Substitution of Oxygen Functionalities

Product Subclass 5: 1-Bromo-\( n \)-Heteroatom-Functionalized Alkanes (\( n \geq 2 \)) with Both Functions Formed Simultaneously

Synthesis by Addition across C=C Bonds

T. Troll

Method 1: Bromination of Aromatic Compounds

Method 2: Bromination of 1,3-Dienes

Method 3: Bromination of Alkenes

Variation 1: Bromination with Bromine–Amine Complexes

Variation 2: Generation of Electrophilic Bromine by In Situ Oxidation of Bromide

Method 4: Hydroxy- and Alkoxybromination of Alkenes

Method 5: Sulfobromination of Alkenes

Method 6: Aminobromination of Alkenes

Method 7: Azidobromination of Alkenes

Method 8: Phosphobromination of Alkenes

Synthesis by Addition across C=O Bonds

K. Rück-Braun and T. Freysoldt

Method 1: Hydrobromination of Epoxides Using Hydrogen Bromide

Method 2: Hydrobromination of Epoxides Using Elemental Bromine

Method 3: Hydrobromination of Epoxides Using Alkali Metal Bromides

Variation 1: Catalyzed by Lewis Acids

Method 4: Hydrobromination of Epoxides Using Magnesium Bromide

Method 5: Hydrobromination of Epoxides Using Tin(II) Bromide

Method 6: Hydrobromination of Epoxides Using Bromo(imido)metal Complexes

Variation 1: Enantioselective Transformations

Method 7: Enantioselective Hydrobromination of Epoxides Using Azidotrialkyilsilanes and Allyl Bromide

Method 8: Hydrobromination of Epoxides Using Boron Bromides

Variation 1: Enantioselective Transformations

Method 9: Hydrobromination of Epoxides Using Lithium Tetrabromocuprate(II)
Method 10: Hydrobromination of Epoxides Using Lithium Tetrabromonickelate(II) ........................................ 514
Method 11: Hydrobromination of Epoxides Using Ammonium Bromides .................................................. 514
Method 12: Hydrobromination of Epoxides Using Phosphorus Tribromide or Phosphonium Bromides ......................... 515
Method 13: Hydrobromination of Tetrahydrofurans and Oxetanes .......................................................... 518

35.2.5.3 **Synthesis by Addition across C–S Bonds**
K. Rück-Braun and T. Freysoldt

35.2.5.3 Synthesis by Addition across C–S Bonds .................................................. 523
35.2.5.3.1 Method 1: Hydrobromination of Thiiranes Using Methanesulfenyl Bromide ........................................ 523
35.2.5.3.2 Method 2: Hydrobromination of Thiiranes Using Bromo(organo)stannanes ................................. 523
35.2.5.3.3 Method 3: Synthesis by Bromination of Thiiranes .......................................................... 524

35.2.5.4 **Synthesis by Addition across C–N Bonds**
K. Rück-Braun and T. Freysoldt

35.2.5.4 Synthesis by Addition across C–N Bonds .................................................. 527
35.2.5.4.1 Method 1: Hydrobromination of Aziridines Using Hydrogen Bromide ........................................ 527
35.2.5.4.2 Method 2: Hydrobromination of Aziridines Using Alkali Metal Bromides .......................................... 528
35.2.5.4.3 Method 3: Hydrobromination of Aziridines Using Other Metal Bromides .......................................... 529
35.2.5.4.4 Method 4: Hydrobromination of Aziridines Using Tetraalkylammonium Bromides .................................. 531
35.2.5.4.5 Method 5: Hydrobromination of Aziridines with Bromotrimethylsilane ........................................... 532
35.2.5.4.6 Method 6: Hydrobromination of Aziridines Using Activated Dimethylformamide Complexes ................. 532
35.2.5.4.7 Method 7: Hydrobromination of Aziridines Using Benzyl Bromides ............................................ 533

35.2.5.5 **Synthesis by Addition across C–C Bonds**
K. Rück-Braun and T. Freysoldt

35.2.5.5 Synthesis by Addition across C–C Bonds .................................................. 535
35.2.5.5.1 Method 1: Bromination of Pentafluoro(vinyl)cyclopropanes ......................................................... 535

35.3 **Product Class 3: One Saturated Carbon—Iodine Bond**

35.3.1 **Product Subclass 1: Iodoalkanes**
E. Schaumann

35.3.1 Product Subclass 1: Iodoalkanes .......................................................... 537
35.3.1.1 Synthesis by Substitution of Hydrogen
J. Hartung

35.3.1.1 Synthesis by Substitution of Hydrogen ................................. 541
35.3.1.1.1 Method 1: Alkane Functionalization in the Presence of
Polyiodomethanes and Sodium Hydroxide .......................... 542
35.3.1.1.2 Method 2: Alkane Functionalization in the Presence of
Nonafluoro-1-iodobutane ........................................ 543
35.3.1.1.3 Method 3: Alkane Functionalization in the Presence of
tert-Butyl Hypoiodite ............................................. 544
35.3.1.1.4 Method 4: Alkane Functionalization in the Presence of
Iodine and (Diacetoxyiodo)benzene in Alcohols .................... 545
35.3.1.1.5 Method 5: Alkane Functionalization with Iodine in the Presence of
Aluminum Triiodide and Tetrahalomethanes ...................... 546

35.3.1.2 Synthesis by Substitution of Metals
S. Härtinger and M. Härtinger

35.3.1.2 Synthesis by Substitution of Metals ....................................... 549
35.3.1.2.1 Method 1: Synthesis from Compounds of the Alkali or
Alkaline Earth Metals ........................................... 549
35.3.1.2.2 Method 2: Synthesis from Organomercury Compounds .......... 553
35.3.1.2.3 Method 3: Synthesis from Organozinc Reagents ................ 555
35.3.1.2.4 Method 4: Synthesis from Organostannane Compounds .......... 557
35.3.1.2.5 Method 5: Synthesis from Organosilicon Compounds ............ 558
35.3.1.2.6 Method 6: Synthesis from Organoboranes or
Organoaluminum Compounds ...................................... 560

35.3.1.3 Synthesis by Substitution of Carbon Functionalities
S. Härtinger and M. Härtinger

35.3.1.3 Synthesis by Substitution of Carbon Functionalities .................. 565
35.3.1.3.1 Method 1: Synthesis from Aliphatic Acids by Decarboxylation with
Hypervalent Iodine Compounds ................................... 565
35.3.1.3.2 Method 2: Synthesis from Aliphatic Acids by Decarboxylation with
tert-Butyl Hypoiodite .............................................. 567
35.3.1.3.3 Method 3: Synthesis from Aliphatic Acids by Decarboxylation with
Organic Peroxides .................................................... 568
35.3.1.3.4 Method 4: Synthesis from N-(Acyloxy)pyridine-2(1H)-thiones by
Degradation (Hunsdiecker Reaction) ................................ 569
35.3.1.3.5 Method 5: Synthesis from Salts of Aliphatic Acids by Degradation
(Variation 1: Mercury(II) Carboxylates of Aliphatic Acids .......... 571
35.3.1.3.5.1 Variation 1: Synthesis from Mercury(II) Carboxylates of Aliphatic Acids 572
35.3.1.3.5.2 Variation 2: Synthesis from Lead(IV) Salts of Aliphatic Acids .... 573
35.3.1.3.6 Method 6: Synthesis from Aliphatic Esters or Acid Chlorides by
O-Silylation ............................................................ 574
35.3.1.3.7 Method 7: Synthesis from Aliphatic Peroxyacids and Hydroperoxides by Degradation ....................................... 575

35.3.1.4 Synthesis by Substitution of Other Halogens
S. Härtinger and M. Härtinger

35.3.1.4 Synthesis by Substitution of Other Halogens ........................................ 579
35.3.1.4.1 Method 1: Synthesis from Chloro- or Bromoalkanes with Alkali Metal Iodides ........................................... 579
35.3.1.4.2 Method 2: Synthesis from Chloro- and Bromoalkanes under Phase-Transfer Catalysis ..................................... 581
35.3.1.4.3 Method 3: Synthesis from Haloalkanes by Iodide-Catalyzed Exchange Reactions ........................................... 582
35.3.1.4.4 Method 4: Synthesis from Haloalkanes with Hydriodic Acid ............. 583
35.3.1.4.5 Method 5: Synthesis from Haloalkanes with Iodosilanes ............... 584

35.3.1.5 Synthesis by Substitution of Oxygen Functionalities
S. Härtinger

35.3.1.5 Synthesis by Substitution of Oxygen Functionalities ........................................ 589
35.3.1.5.1 Method 1: Synthesis from Aliphatic Carbonyl Compounds or Acetals ........................ 589
35.3.1.5.1.1 Variation 1: Reductive Iodination with an Amine–Borane Complex ........... 590
35.3.1.5.1.2 Variation 2: Reductive Iodination with Diiodosilane ......................... 591
35.3.1.5.1.3 Variation 3: Direct Iodination of the Tetrahydrofuran-2-yl Group ........ 592
35.3.1.5.2 Method 2: Synthesis from Aliphatic Carboxylic Acid Esters .............. 593
35.3.1.5.2.1 Variation 1: Cleavage with Hydriodic Acid ....................................... 594
35.3.1.5.2.2 Variation 2: Metal-Catalyzed Iodinolysis ......................................... 595
35.3.1.5.2.3 Variation 3: Cleavage of an Acyloxy or α-Chloroalkyl Carbonate Group with Metal Iodides ........................................ 596
35.3.1.5.2.4 Variation 4: Cleavage of an Acyloxy, Formyloxy, or Carbamate Group with Iodotrimethylsilane ............................................... 598
35.3.1.5.2.5 Variation 5: Reaction with Iodomethane ......................................... 599
35.3.1.5.2.6 Variation 6: Decarboxylation of a Chloroformate Group .................. 600
35.3.1.5.3 Method 3: Synthesis from Cyclic Alcohols or Ketones, Lactols, or Hydroxymethyl-Substituted Cycloalkanes by Isomerization and Fragmentation .................................................. 601
35.3.1.5.3.1 Variation 1: Alkoxy-Radical-Mediated Reactions ............................. 601
35.3.1.5.3.2 Variation 2: Ring-Expanded Iodides by Wagner–Meerwein Rearrangement 609
35.3.1.5.3.3 Variation 3: Ring Opening and Fragmentation Reactions of Cyclopropyl Alcohols .................................................. 610
35.3.1.5.3.4 Variation 4: Ring-Opening Reactions of Cyclobutanones ................. 612
35.3.1.5.4 Method 4: Synthesis from Ethers ......................................................... 613
35.3.1.5.4.1 Variation 1: Cleavage with Hydriodic Acid ....................................... 613
35.3.1.5.4.2 Variation 2: Cleavage with Alkali Metal Iodides and Acids ............ 615
35.3.1.5.4.3 Variation 3: Iodinolysis with Borohydride Reagents ....................... 616
35.3.1.5.4.4 Variation 4: Cleavage with Iodosilane Reagents ............................. 617
Table of Contents

35.3.1.5.4.5 Variation 5: Cleavage of a Trimethylsiloxy Group 619
35.3.1.5.4.6 Variation 6: Cleavage with Carboxylic Acid Iodides 620
35.3.1.5.4.7 Variation 7: Activation with Metal-Containing Lewis Acids 622
35.3.1.5.5 Method 5: Synthesis from Esters of Sulfur, Nitrogen, or Phosphorus Oxyacids 623
35.3.1.5.5.1 Variation 1: Cleavage of a Sulfonyloxy Group with Metal Iodides 623
35.3.1.5.5.2 Variation 2: Phase-Transfer-Catalyzed Cleavage of a Sulfonyloxy Group 628
35.3.1.5.5.3 Variation 3: Nucleophilic Substitution in Ionic Liquids 631
35.3.1.5.5.4 Variation 4: Cleavage of Ammonioalkanesulfonate Esters 632
35.3.1.5.5.5 Variation 5: Cleavage of Dialkyl Sulfates 633
35.3.1.5.5.6 Variation 6: Cleavage of Esters or Amides of Mononuclear Oxyacids of Phosphorus 633
35.3.1.5.6 Method 6: Synthesis from Alcohols 635
35.3.1.5.6.1 Variation 1: Direct Iodinolysis 635
35.3.1.5.6.2 Variation 2: Iodination with Hydriodic Acid 636
35.3.1.5.6.3 Variation 3: Iodination with Metal Iodides and Acid as a Source of Hydriodic Acid 638
35.3.1.5.6.4 Variation 4: Iodination with Metal Iodides and 70% Hydrogen Fluoride/Pyridine 639
35.3.1.5.6.5 Variation 5: Iodination with Metal Iodides 640
35.3.1.5.6.6 Variation 6: Iodine Transfer from Organic or Organometallic Iodides 642
35.3.1.5.6.7 Variation 7: Activation with Diazolides 643
35.3.1.5.6.8 Variation 8: Activation with O-Alkylisoureas 644
35.3.1.5.6.9 Variation 9: Activation with Alkoxyformamidinium Salts 646
35.3.1.5.6.10 Variation 10: Activation with Onium Salts of 2-Fluoroazaarenes 647
35.3.1.5.6.11 Variation 11: Iodination with Phosphorus and Iodine or with Phosphorus Triiodide 648
35.3.1.5.6.12 Variation 12: Activation with Phosphite Esters or Phosphorus Amides 649
35.3.1.5.6.13 Variation 13: Activation with Phosphine Reagents 652
35.3.1.5.6.14 Variation 14: Iodination with Iodosilane Reagents 656
35.3.1.5.6.15 Variation 15: Iodinolysis with Borane or Boronate Reagents 657
35.3.1.5.6.16 Variation 16: Iodination in Ionic Liquids 659

35.3.1.6 Synthesis by Substitution of Sulfur, Selenium, or Tellurium Functionalities
S. Härtinger and M. Härtinger

35.3.1.6 Synthesis by Substitution of Sulfur, Selenium, or Tellurium Functionalities 673
35.3.1.6.1 Method 1: Reaction of Aliphatic Sulfur or Selenium Compounds with Phosphine Reagents and Iodine 673
35.3.1.6.2 Method 2: Synthesis from Alkyl Sulfides via Formation of Sulfonium Salts 675
35.3.1.7 Synthesis by Substitution of Nitrogen Functionalities
S. Härtinger and M. Härtinger

35.3.1.7 Synthesis by Substitution of Nitrogen Functionalities ........................................ 679
35.3.1.7.1 Method 1: Synthesis from Alkylamines via Formation of Trialkyl ammonium Salts .......................................... 679
35.3.1.7.2 Method 2: Synthesis from Alkylamines via Pyrolysis of 1-Alkylpyridinium Salts .......... 680
35.3.1.7.3 Method 3: Synthesis from Alkylamines via Formation of $N$-Alkyl- $N$, $N$-disulfonylamines .......... 681
35.3.1.7.4 Method 4: Synthesis from Hydrazines by Iodinolysis ........................................ 682
35.3.1.7.5 Method 5: Synthesis from Nitroalkanes by Substitution ........................................ 683

35.3.1.8 Synthesis by Addition to $\pi$-Type C–C Bonds
K.-M. Roy

35.3.1.8 Synthesis by Addition to $\pi$-Type C–C Bonds .................................................. 685
35.3.1.8.1 Method 1: Hydroiodination of 1,3-Dienes ................................................................ 685
35.3.1.8.1.1 Variation 1: Synthesis of 1-Iodo-3-methylbut-2-ene with Phosphorus Triiodide/Silica Gel .................................................. 685
35.3.1.8.2 Method 2: Hydroiodination of Alkenes and Cycloalkenes (Markovnikov Addition) ............................................. 686
35.3.1.8.2.1 Variation 1: Synthesis Using Hydrogen Iodide ................................................. 686
35.3.1.8.2.2 Variation 2: Surface-Mediated Synthesis ......................................................... 687
35.3.1.8.3 Method 3: Hydroiodination of Alkenes and Cycloalkenes (anti-Markovnikov Addition) ........................................................................ 688
35.3.1.8.3.1 Variation 1: Synthesis via Hydroboration ......................................................... 688
35.3.1.8.3.2 Variation 2: Synthesis via Hydroalumination ................................................... 689
35.3.1.8.3.3 Variation 3: Synthesis via Hydrozirconation .................................................... 690
35.3.1.8.4 Method 4: Hydroiodination of Methylene cyclopropanes ........................................ 691
35.3.1.8.5 Method 5: Hydroiodination of Cyclopropanes ..................................................... 691
35.3.1.8.6 Method 6: Carboiodination .................................................................................. 692
35.3.1.8.6.1 Variation 1: Iodocyclization .............................................................................. 693

35.3.1.9 Synthesis from Other Iodo Compounds
H. Ulrich

35.3.1.9 Synthesis from Other Iodo Compounds .................................................. 697
35.3.1.9.1 Method 1: Synthesis from Iodoalkynes .................................................................. 697
35.3.1.9.1.1 Variation 1: By Cycloaddition Reactions ...................................................... 697
35.3.1.9.2 Method 2: Synthesis from Iodoalkenes .................................................................. 697
35.3.1.9.2.1 Variation 1: By Hydrogenation ........................................................................ 697
35.3.1.9.2.2 Variation 2: By Polymerization ....................................................................... 697
35.3.1.9.2.3 Variation 3: By Cycloaddition Reactions ...................................................... 698
35.3.1.9.3 Method 3: Synthesis from Iodocarbenes .......................................................... 698
35.3.1.9.4 Method 4: Synthesis from Iodoalkanes ............................................................. 699
35.3.2 Product Subclass 2: Propargylic Iodides
S. Härtinger

35.3.2 Product Subclass 2: Propargylic Iodides ........................................... 701
35.3.2.1 Synthesis of Product Subclass 2 .................................................. 701
35.3.2.1.1 Method 1: Chemoselective Substitution of Heteroatoms .......... 701
35.3.2.1.2 Method 2: Modification of the Carbon Skeleton ..................... 702

35.3.3 Product Subclass 3: Benzylic Iodides

35.3.3.1 Synthesis by Substitution of Carbonyl Oxygen
W. D. Pfeiffer

35.3.3.1 Synthesis by Substitution of Carbonyl Oxygen .................................. 705
35.3.3.1.1 Method 1: Photochemical Iodination at the Benzylic Position ...... 705
35.3.3.1.2 Method 2: Iodomethylation of an Arene Using Chloromethyl Methyl Ether and Hydrogen Iodide ............................................. 705

35.3.3.2 Substitution of σ-Bonded Heteroatoms
S. Härtinger and M. Härtinger

35.3.3.2 Substitution of σ-Bonded Heteroatoms ........................................... 707
35.3.3.2.1 Method 1: Synthesis by Substitution of σ-Bonded Heteroatoms . 707

35.3.4 Product Subclass 4: Allylic Iodides
S. Härtinger

35.3.4 Product Subclass 4: Allylic Iodides ..................................................... 711
35.3.4.1 Synthesis of Product Subclass 4 ..................................................... 711
35.3.4.1.1 Method 1: Synthesis by Regioselective Substitution of Heteroatoms . 711
35.3.4.1.2 Method 2: Synthesis by Regioselective Addition to the Carbon Skeleton 712
### 35.3.5 Product Subclass 5: 1-Iodo-n-Heteroatom-Functionalized Alkanes (n ≥2) with Both Functions Formed Simultaneously

## Introduction
J. Clayden

Introduction ............................................................... 1

## Product Class 1: Alkanols

### 36.1 Synthesis by Oxidation
M. J. Porter

36.1 Synthesis by Oxidation ........................................... 17

36.1.1 Method 1: Oxidation of Alkanes ............................... 17
36.1.1.1 Variation 1: Oxidation with Molecular Oxygen ............. 17
36.1.1.2 Variation 2: Oxidation with Ozone .......................... 19
36.1.1.3 Variation 3: Oxidation with Dioxiranes ...................... 21
36.1.1.4 Variation 4: Oxidation with Oxaziridines .................... 24
36.1.1.5 Variation 5: Oxidation with Peroxy Acids ................... 25
36.1.1.6 Variation 6: Oxidation with Fluorine ....................... 26
36.1.1.7 Variation 7: Oxidation with Metal Porphyrins ............... 27
36.1.1.8 Variation 8: Oxidation with Ruthenium Compounds .......... 29
36.1.1.9 Variation 9: Oxidation with Chromium Compounds .......... 30
36.1.1.10 Variation 10: Oxidation with Methyltrioxorhenium(VII) ... 32
36.1.1.11 Variation 11: Biocatalytic Oxidation ....................... 33
36.1.2 Method 2: Oxidation of Organosilicon Compounds .......... 35
36.1.2.1 Variation 1: Oxidation of Trichlorosilanes .................. 35
36.1.2.2 Variation 2: Oxidation of Alkoxysilanes with Hydrogen Peroxide 36
36.1.2.3 Variation 3: Oxidation of Alkoxysilanes with Peroxy Acids . 37
36.1.2.4 Variation 4: Oxidation of Alkoxysilanes with Molecular Oxygen 38
36.1.2.5 Variation 5: Oxidation of Dimethyl(phenyl)silanes .......... 38
36.1.3 Method 3: Oxidation of Organoboron Compounds ............ 40
36.1.3.1 Variation 1: Oxidation with Basic Hydrogen Peroxide ....... 40
36.1.3.2 Variation 2: Oxidation with Sodium Perborate and Sodium Percarbonate 41
36.1.3.3 Variation 3: Oxidation with Trimethylamine N-Oxide .......... 42
36.1.4 Method 4: Oxidation of Organomercury Compounds .......... 43
36.1.5 Method 5: Oxidation of Organolithium, Organomagnesium, Organozinc, and Organocopper Compounds .................. 45
36.1.5.1 Variation 1: Oxidation with Molecular Oxygen ............... 45
36.1.5.2 Variation 2: Oxidation with Alkyl Hydroperoxides .......... 46
36.1.5.3 Variation 3: Oxidation with Bis(trimethylsilyl) Peroxide ....... 47
36.1.5.4 Variation 4: Oxidation with Oxaziridines .................... 48
### Synthesis by Reduction

#### L. R. Cox

#### Synthesis of Primary Aliphatic Alkanols

- **Method 1: Reduction of Carboxylic Acids**
- **Variation 1: Using Metal Aluminum Hydrides and Alkoxyaluminum Hydrides**
- **Variation 2: Using Metal Borohydrides and Related Compounds**
- **Variation 3: Using Boranes and Related Compounds**
- **Variation 4: Using Alane and Related Compounds**
- **Variation 5: Using Samarium(II) Iodide**
- **Variation 6: Transition-Metal-Catalyzed Reduction**
- **Variation 7: Electrochemical Reduction**
- **Variation 8: Enzymatic Reduction**
- **Variation 9: By In Situ Derivatization**

- **Method 2: Reduction of Esters**
- **Variation 1: Using Metal Aluminum Hydrides and Related Systems**
- **Variation 2: Using Metal Borohydrides and Related Systems**
- **Variation 3: Using Boranes**
- **Variation 4: Using Alane and Other Neutral Organoaluminum Reagents**
- **Variation 5: Using Silanes and Siloxanes**
- **Variation 6: Using Dissolving Metal Conditions**
- **Variation 7: Using Samarium(II) Iodide**
- **Variation 8: Transition-Metal-Catalyzed Hydrogenation**
- **Variation 9: Electrochemical Reduction**

- **Method 3: Reduction of Amides**
- **Variation 1: Using Aluminum Hydrides and Borohydride Reducing Agents**
- **Variation 2: Using Boranes**
- **Variation 3: Using Dissolving Metals**
- **Variation 4: Using Samarium(II) Iodide**
- **Variation 5: Electrochemical Reduction**
- **Variation 6: Transition-Metal-Catalyzed Hydrogenation**

- **Method 4: Reduction of Acid Halides and Acid Anhydrides**
- **Variation 1: Using Aluminum Hydride and Alkoxyaluminum Hydride Reducing Agents**
- **Variation 2: Using Borohydride Reducing Agents**
- **Variation 3: Using Boranes or Alane and Related Reagents**
- **Variation 4: Miscellaneous Reductions**

- **Method 5: Reduction of Thioesters**
- **Variation 1: Using Aluminum Hydrides**
- **Variation 2: Using Borohydrides**
- **Variation 3: Using Neutral Organoaluminum Reagents**
- **Variation 4: Using Heterogeneous Nickel Catalysts**

- **Method 6: Reduction of Nitriles**
- **Variation 1: Reactions Proceeding via the Intermediate Aldehyde**
- **Variation 2: Reactions Proceeding via the Intermediate Carboxylic Acid or Ester**

### Table of Contents

XII  Table of Contents

36.1.2  Synthesis by Reduction  ................................................... 55

36.1.2.1  Synthesis of Primary Aliphatic Alkanols  .................................. 55

36.1.2.1.1  Method 1: Reduction of Carboxylic Acids ........................................ 55

36.1.2.1.1.1  Variation 1: Using Metal Aluminum Hydrides and Alkoxyaluminum Hydrides  55

36.1.2.1.1.2  Variation 2: Using Metal Borohydrides and Related Compounds .......... 57

36.1.2.1.1.3  Variation 3: Using Boranes and Related Compounds  ......................... 59

36.1.2.1.1.4  Variation 4: Using Alane and Related Compounds .......................... 62

36.1.2.1.1.5  Variation 5: Using Samarium(II) Iodide ................................... 63

36.1.2.1.1.6  Variation 6: Transition-Metal-Catalyzed Reduction  .......................... 63

36.1.2.1.1.7  Variation 7: Electrochemical Reduction ...................................... 64

36.1.2.1.1.8  Variation 8: Enzymatic Reduction ........................................ 64

36.1.2.1.1.9  Variation 9: By In Situ Derivatization ...................................... 64

36.1.2.1.2  Method 2: Reduction of Esters .............................................. 66

36.1.2.1.2.1  Variation 1: Using Metal Aluminum Hydrides and Related Systems  66

36.1.2.1.2.2  Variation 2: Using Metal Borohydrides and Related Systems  67

36.1.2.1.2.3  Variation 3: Using Boranes .................................................. 70

36.1.2.1.2.4  Variation 4: Using Alane and Other Neutral Organoaluminum Reagents 71

36.1.2.1.2.5  Variation 5: Using Silanes and Siloxanes .................................. 72

36.1.2.1.2.6  Variation 6: Using Dissolving Metal Conditions ............................ 75

36.1.2.1.2.7  Variation 7: Using Samarium(II) Iodide ................................... 75

36.1.2.1.2.8  Variation 8: Transition-Metal-Catalyzed Hydrogenation .................. 75

36.1.2.1.2.9  Variation 9: Electrochemical Reduction ...................................... 75

36.1.2.1.3  Method 3: Reduction of Amides .............................................. 76

36.1.2.1.3.1  Variation 1: Using Aluminum Hydrides and Borohydride Reducing Agents 76

36.1.2.1.3.2  Variation 2: Using Boranes .................................................. 78

36.1.2.1.3.3  Variation 3: Using Dissolving Metals ....................................... 78

36.1.2.1.3.4  Variation 4: Using Samarium(II) Iodide ................................... 78

36.1.2.1.3.5  Variation 5: Electrochemical Reduction ...................................... 79

36.1.2.1.3.6  Variation 6: Transition-Metal-Catalyzed Hydrogenation .................. 79

36.1.2.1.4  Method 4: Reduction of Acid Halides and Acid Anhydrides ................. 79

36.1.2.1.4.1  Variation 1: Using Aluminum Hydride and Alkoxyaluminum Hydride Reducing Agents 79

36.1.2.1.4.2  Variation 2: Using Borohydride Reducing Agents .......................... 80

36.1.2.1.4.3  Variation 3: Using Boranes or Alane and Related Reagents .............. 84

36.1.2.1.4.4  Variations 4: Miscellaneous Reductions .................................... 84

36.1.2.1.5  Method 5: Reduction of Thioesters ........................................... 85

36.1.2.1.5.1  Variation 1: Using Aluminum Hydrides ...................................... 85

36.1.2.1.5.2  Variation 2: Using Borohydrides ............................................ 85

36.1.2.1.5.3  Variation 3: Using Neutral Organoaluminum Reagents.................... 86

36.1.2.1.5.4  Variation 4: Using Heterogeneous Nickel Catalysts ........................ 86

36.1.2.1.6  Method 6: Reduction of Nitriles ............................................. 87

36.1.2.1.6.1  Variation 1: Reactions Proceeding via the Intermediate Aldehyde .... 87

36.1.2.1.6.2  Variation 2: Reactions Proceeding via the Intermediate Carboxylic Acid or Ester 88

36.1.2.3.5 Variation 5: Using Single-Electron-Transfer Methods .................................. 143
36.1.2.3.6 Variation 6: Lewis Acid Mediated Silane Reduction of Cyclic Ethers .......... 144
36.1.2.3.7 Variation 7: Nucleophile-Assisted Ring Opening Followed by Radical
Reduction ................................................................................................. 144
36.1.2.4 Method 4: Reduction of Hydroperoxides, Peroxides, and Related Systems 145
36.1.2.3 Synthesis of Acyclic Secondary Alkanols Possessing a Stereogenic Center
Containing No Heteroatoms ..................................................................... 148
36.1.2.3.1 Method 1: Diastereoselective Reduction of Ketones Possessing an
α-Stereogenic Center ............................................................................ 149
36.1.2.3.2 Method 2: Diastereoselective Reduction of Ketones Possessing a
β-Stereogenic Center ........................................................................... 151
36.1.2.3.3 Method 3: Diastereoselective Reduction of Ketones Possessing α- and
β-Stereogenic Centers ......................................................................... 152
36.1.2.4 Synthesis of Tertiary Aliphatic Alkanols ...................................................... 153
36.1.2.4.1 Method 1: Reductive Ring Opening of Cyclic Ethers ............................ 153
36.1.2.4.2 Method 2: Reduction of Hydroperoxides and Peroxides .................... 155
36.1.3 Synthesis by Substitution
A. F. Parsons

36.1.3 Synthesis by Substitution .............................................................................. 177
36.1.3.1 Method 1: Substitution of Halides ......................................................... 177
36.1.3.1.1 Variation 1: In Primary Haloalkanes .................................................. 177
36.1.3.1.2 Variation 2: In Secondary Haloalkanes .............................................. 178
36.1.3.1.3 Variation 3: In Tertiary Haloalkanes .................................................. 179
36.1.3.2 Method 2: Substitution of Sulfonate Anions ........................................... 180
36.1.3.2.1 Variation 1: In Methanesulfonates ....................................................... 180
36.1.3.2.2 Variation 2: In Trifluoromethanesulfonates ........................................ 182
36.1.3.2.3 Variation 3: In 4-Toluenesulfonates ..................................................... 182
36.1.3.3 Method 3: Substitution of Oxygen Functionalities ................................ 183
36.1.3.3.1 Variation 1: In Ethers ..................................................................... 183
36.1.3.3.2 Variation 2: In Acetals .................................................................... 183
36.1.3.3.3 Variation 3: In Esters ..................................................................... 184
36.1.3.4 Method 4: Ring Opening of Epoxides with Carbon Nucleophiles .......... 184
36.1.3.4.1 Variation 1: Using Cyanide Anion .................................................... 184
36.1.3.4.2 Variation 2: Using Organolithium Reagents ...................................... 185
36.1.3.4.3 Variation 3: Using Grignard Reagents .............................................. 186
36.1.3.4.4 Variation 4: Using Organocopper Reagents ...................................... 186
36.1.3.4.5 Variation 5: Using Enolate Ions ....................................................... 187

36.1.4 Synthesis by Addition to Alkynes and Alkenes
A. T. Russell

36.1.4 Synthesis by Addition to Alkynes and Alkenes ........................................... 191
36.1.4.1 Method 1: Oxymercuration Followed by Reduction ............................. 191
36.1.4.1.1 Variation 1: Using Mercury(II) Acetate–Sodium Borohydride ........... 195
36.1.4.1.2 Variation 2: Using Mercury(II) Acetate–Sodium Trithiocarbonate ................. 201
36.1.4.1.3 Variation 3: Using Mercury(II) Acetate–Sodium Amalgam ..................... 202
36.1.4.1.4 Variation 4: Using Mercury(II) Trifluoroacetate–Sodium Borohydride ...... 204
36.1.4.1.5 Variation 5: Using Mercury(II) Salts–Sodium Borohydride .................... 205
36.1.4.2 Method 2: Acid-Catalyzed Addition of Water ........................................ 206
36.1.4.2.1 Variation 1: Photoproduction-Initiated Hydration of Alkenes ................. 213
36.1.4.3 Method 3: Cobalt- or Manganese-Catalyzed Hydration of Alkenes .......... 215
36.1.4.3.1 Variation 1: Using Bis(dipivaloylmethanato)manganese(II), Phenylsilane, and Oxygen ................................................................. 219
36.1.4.4 Method 4: Synthesis by Ozonolysis–Reduction ......................................... 221
36.1.4.4.1 Variation 1: Using Ozone and Then a Borohydride or Borane Reductant .. 223
36.1.4.4.2 Variation 2: Using Ozone and Then an Aluminum Hydride Reductant .... 231
36.1.4.5 Method 5: Synthesis by Alkylative Hydroxylation .................................... 232
36.1.4.5.1 Variation 1: Carboalumination Catalyzed by Bis(cyclopentadienyl)zirconium(IV) Complexes with In Situ Oxygenation ...................... 232
36.1.4.5.2 Variation 2: Ethylmagnesiation Catalyzed by Dichlorobis(cyclopentadienyl)zirconium(IV) followed by In Situ Oxygenation ................. 235
36.1.4.5.3 Variation 3: Radical Cyclization with In Situ Oxygenation .................... 236
36.1.4.6 Method 6: Synthesis by Reductive Hydration of Alkynes .......................... 237

36.1.5 Synthesis by Carbonylation Reactions
G. Ilyashenko, T. Schütz, and A. Whiting

36.1.5 Synthesis by Carbonylation Reactions .......................................................... 245
36.1.5.1 Method 1: Synthesis by Carbonylation of Boranes ................................... 245
36.1.5.1.1 Variation 1: By Treatment with Carbon Monoxide .............................. 245
36.1.5.1.2 Variation 2: By Treatment with Carbon Monoxide in the Presence of Hydrides ................................................................. 247
36.1.5.2 Method 2: Synthesis by Carbonylation of Alkyl Halides .......................... 250
36.1.5.2.1 Variation 1: By Radical Carbonylation .............................................. 250
36.1.5.2.2 Variation 2: Using Tricarbonylcobalt Complexes and Carbon Monoxide/Hydrogen ................................................................. 252
36.1.5.3 Method 3: Synthesis by Homologation of Alcohols Using Carbon Monoxide/Hydrogen ................................................................. 252

36.1.6 Synthesis by Addition of Organometallics to Carbon Dioxide, Carboxylic Acids, and Derivatives
C. Grojean and A. Whiting

36.1.6 Synthesis by Addition of Organometallics to Carbon Dioxide, Carboxylic Acids, and Derivatives ................................................................. 255
36.1.6.1 Method 1: Addition to Carbon Dioxide .................................................... 255
36.1.6.2 Method 2: Addition to Acyl Chlorides ..................................................... 256
36.1.6.2.1 Variation 1: Addition of Organocopper Compounds .......................... 256
36.1.6.2.2 Variation 2: Addition of Organoisopropyl Compounds ....................... 256
36.1.6.2.3 Variation 3: Addition of Organomanganese Compounds .................... 257
36.1.6.2.4 Variation 4: Addition of Organozirconocene Compounds ................... 257

Science of Synthesis Original Edition Volume 36

36.1.6.2.5  Variation 5: Addition of Organolanthanum Compounds  258
36.1.6.2.6  Variation 6: Addition of Organomagnesium Compounds  258
36.1.6.2.7  Variation 7: Addition of Organolithium Compounds  259
36.1.6.3  Method 3: Addition to Carboxylic Acids  260
36.1.6.3.1  Variation 1: Addition of Organomagnesium Compounds  261
36.1.6.3.2  Variation 2: Addition of Organolithium Compounds  261
36.1.6.4  Method 4: Addition to Carboxylic Anhydrides  262
36.1.6.5  Method 5: Addition to Carboxylic Acid Esters  263
36.1.6.5.1  Variation 1: Addition of Organoaluminum Compounds  263
36.1.6.5.2  Variation 2: Addition of Organocerium Compounds  264
36.1.6.5.3  Variation 3: Addition of Organomagnesium Compounds  265
36.1.6.5.4  Variation 4: Addition of Organolithium Compounds  267
36.1.6.6  Method 6: Decarboxylation  268

36.1.7  Synthesis by Addition of Organometallics to Aldehydes and Ketones
C. G. Frost and J. Le Nêtre

36.1.7  Synthesis by Addition of Organometallics to Aldehydes and Ketones  271
36.1.7.1  Method 1: Addition of Organolithium and Organomagnesium Reagents  271
36.1.7.1.1  Variation 1: Direct Addition of Alkyl- and Arylmagnesium Halides  271
36.1.7.1.2  Variation 2: Direct Addition of Alkyl- and Aryllithiums  273
36.1.7.1.3  Variation 3: Direct Addition of Alkenyl- and Alkynylmagnesium Halides  275
36.1.7.1.4  Variation 4: Direct Addition of Alkenyl- and Alkynyllithiums  276
36.1.7.1.5  Variation 5: Direct Addition Using Barbier Conditions  277
36.1.7.1.6  Variation 6: Direct Addition Using Unusual Reaction Conditions  278
36.1.7.1.7  Variation 7: Direct Addition Using Additives  280
36.1.7.1.8  Variation 8: Additions via Transmetalation  286
36.1.7.1.9  Variation 9: Diastereoselective Additions to Acyclic Carbonyl Derivatives  288
36.1.7.1.10 Variation 10: Diastereoselective Additions to Cyclic Carbonyl Derivatives  298
36.1.7.1.11 Variation 11: Enantioselective Additions of Grignard Reagents  299
36.1.7.1.12 Variation 12: Enantioselective Additions of Organolithium Derivatives  301
36.1.7.1.13 Variation 13: Enantioselective Additions of Lithium/Magnesium Binary Reagents  303
36.1.7.2  Method 2: Addition of Organozinc Reagents  304
36.1.7.2.1  Variation 1: Direct Addition of Alkyl- and Arylzinc Reagents  304
36.1.7.2.2  Variation 2: Direct Addition of Allyl- and Propargylzinc Reagents  305
36.1.7.2.3  Variation 3: Addition via Transmetalation  306
36.1.7.2.4  Variation 4: Diastereoselective Additions of Organozinc Reagents  307
36.1.7.2.5  Variation 5: Catalytic, Enantioselective Additions of Organozinc Reagents  308
36.1.7.3  Method 3: Addition of Organoboron, Organotin, Organosilicon, and Organoindium Reagents  320
36.1.7.3.1  Variation 1: Additions via Transmetalation to Rhodium  320
36.1.7.3.2  Variation 2: Enantioselective Additions via Transmetalation to Rhodium  323
36.1.7.3.3  Variation 3: Additions via Transmetalation to Palladium  325
36.1.7.3.4  Variation 4: Addition of Allylic Boron Reagents  325
36.1.7.3.5  Variation 5: Lewis Acid Catalyzed Addition of Allylic Silane and Stannane Reagents  326
36.1.7.3.6  Variation 6: Addition of Allylic Indium Reagents  327
36.1.7.4 Method 4: Addition of Other Organometallics .......................... 328
36.1.7.4.1 Variation 1: Catalytic Addition of In Situ Generated Organochromium Species .......................... 328
36.1.7.4.2 Variation 2: Addition of Allylic Manganese Reagents in Water .......................... 329
36.1.7.4.3 Variation 3: Addition of Organocadmium Reagents .......................... 329
36.1.7.4.4 Variation 4: Direct Addition of Organocopper Reagents .......................... 329
36.1.7.4.5 Variation 5: Enantioselective Addition of Organotitanium Reagents .......................... 330
36.1.7.4.6 Variation 6: Enantioselective Addition of Organoaluminum Reagents .......................... 331

36.1.8 Synthesis by Resolution and Inversion Methods
J. Eames

36.1.8 Synthesis by Resolution and Inversion Methods .......................... 341
36.1.8.1 Method 1: Resolution of 1-Phenylethanol by Enantioselective Oxidation .......................... 342
36.1.8.1.1 Variation 1: Using a (Bicyclo[2.2.1]heptadiene)dichloropalladium(II)/(−)-Sparteine Complex .......................... 342
36.1.8.1.2 Variation 2: Using a (−)-Sparteine–Palladium(II) Complex .......................... 343
36.1.8.1.3 Variation 3: Using a [(4,5-Dihydrooxazolyl)ferrocenyl]phosphine–Ruthenium Complex .......................... 343
36.1.8.1.4 Variation 4: Using a Manganese(III)–salen Complex .......................... 344
36.1.8.1.5 Variation 5: Using Baker’s Yeast .......................... 344
36.1.8.2 Method 2: Resolution of 1-Phenylethanol by Enantioselective Reduction .......................... 345
36.1.8.2.1 Variation 1: Using Bacillus subtilis, Aspergillus niger, and Horseradish Peroxidase .......................... 345
36.1.8.2.2 Variation 2: Using a Chiral Diphosphine .......................... 346
36.1.8.3 Method 3: Synthesis of (R)- and (S)-1-Phenylethanol via Enzymatic Ester Formation .......................... 347
36.1.8.3.1 Variation 1: Using Lipase QL .......................... 347
36.1.8.3.2 Variation 2: Using Porcine Pancreatic Lipase .......................... 348
36.1.8.3.3 Variation 3: Using Amano P Lipase .......................... 348
36.1.8.3.4 Variation 4: Using Candida antarctica Lipase .......................... 349
36.1.8.3.5 Variation 5: Using Candida antarctica Lipase B .......................... 349
36.1.8.4 Method 4: Synthesis of (R)- and (S)-1-Phenylethanol Using Acyl-Transfer Processes .......................... 351
36.1.8.4.1 Variation 1: Using an Asymmetric Mitsunobu Reaction .......................... 351
36.1.8.4.2 Variation 2: Using an Oxazolidinone as a Benzoyl- or Phosphoryl-Transfer Reagent .......................... 352
36.1.8.4.3 Variation 3: Using a Phosphabicyclooctane Acyl-Transfer Catalyst .......................... 353
36.1.8.4.4 Variation 4: Using a Chiral Pyridinium Acyl-Transfer Reagent .......................... 354
36.1.8.4.5 Variation 5: Using a Chiral 2,3-Dihydroimidazol[1,2-a]pyridine .......................... 356
36.1.8.4.6 Variation 6: Using a Planar-Chiral 4-(Dimethylamino)pyridine Complex .......................... 356
36.1.8.4.7 Variation 7: Using a Chiral Atropisomeric 4-(Dimethylamino)pyridine Equivalent .......................... 358
36.1.8.4.8 Variation 8: Using a Ferrocene-Based Chiral 4-(Dimethylamino)pyridine .......................... 358
36.1.8.4.9 Variation 9: Using an Octapeptide Derived from a Split-and-Pool Library .......................... 359
36.1.8.5 Method 5: Synthesis of (R)- and (S)-1-Phenylethanol by Deracemization .......................... 360
36.1.8.5.1 Variation 1: Using a Combination of Pseudomonas fluorescens Lipase and a Rhodium Catalyst .......................... 360

36.1.8.42  Method 42: Resolution of Pentane-1,2-diol .............................................. 392
36.1.8.43  Method 43: Resolution of Hexane-1,2-diol ................................................ 393
36.1.8.44  Method 44: Resolution of trans-2-Azidocyclohexanol .............................. 393
36.1.8.45  Method 45: Resolution of 2-Aminopropan-1-ol ........................................ 394
36.1.8.46  Method 46: Resolution of trans-2-([Methyl(phenyl)amino]cyclohexanol .... 395
36.1.8.47  Method 47: Resolution of trans-2-Pyrrolidin-1-ylcyclohexanol ................. 396
36.1.8.48  Method 48: Resolution of trans-2-(1H-Pyrazol-1-yl)cyclohexanol .......... 397
36.1.8.49  Method 49: Resolution of 2-((tert-Butylamino)-1-(2,2-dimethyl-4H-1,3- benzodioxin-6-yl)ethanol ................................................................. 398
36.1.8.50  Method 50: Resolution of cis-4-(Dimethylamino)-N-(2-hydroxycyclohex yl)benzamide ................................................................. 399
36.1.8.51  Method 51: Resolution of trans-N-(2-Hydroxycyclohexyl)acetamide ............ 401
36.1.8.51.1 Variation 1: Using an Octapeptide ............................................................ 401
36.1.8.51.2 Variation 2: Using a Tripeptide ............................................................... 401
36.1.8.52  Method 52: Resolution of 2-[(tert-Butoxycarbonyl)amino]-3-(hydroxy-methyl)bicyclo[2.2.1]heptane ......................................................... 402
36.1.8.53  Method 53: Resolution of Cyclohex-2-en-1-ol ........................................... 402
36.1.8.53.1 Variation 1: Using a Palladium-Catalyzed Deracemization Reaction ........ 402
36.1.8.53.2 Variation 2: Using a Chiral Dianiline/Ruthenium Mediated Enantioselective Hydrogenation .............................................................. 404
36.1.8.53.3 Variation 3: Using an Ephedrine/Ruthenium Mediated Enantioselective Hydrogenation .............................................................. 405
36.1.8.54  Method 54: Resolution of (Z)-Pent-3-en-2-ol ............................................. 405
36.1.8.55  Method 55: Resolution of 4-Phenylbut-3-en-2-ol ........................................ 406
36.1.8.55.1 Variation 1: Using Candida antarctica Lipase ........................................... 406
36.1.8.55.2 Variation 2: Using a Planar-Chiral 4-(Dimethylamino)pyridine Equivalent Complex ........................................................................... 407
36.1.8.55.3 Variation 3: By Enantioselective Oxidation ............................................. 408
36.1.8.56  Method 56: Resolution of 4-Phenylbut-3-yn-2-ol and 3-Phenylbut-3-en-2-ol ................................................................. 409
36.1.8.56.1 Variation 1: Using Pseudomonas AK ....................................................... 409
36.1.8.56.2 Variation 2: Using an Asymmetric Katsuki–Jacobsen Epoxidation Reaction 409
36.1.8.57  Method 57: Resolution of 3-(Ethoxy carbonyl)but-3-en-2-ol ...................... 410
36.1.8.58  Method 58: Resolution of (E)-1-(Trimethylsilyl)oct-1-en-3-ol .................... 410
36.1.8.59  Method 59: Resolution of (Z)-3-(Trimethylsilyl)oct-3-en-2-ol .................... 411
36.1.8.60  Method 60: Resolution of (E)-1-Cyclohexylbut-2-en-1-ol ......................... 411
36.1.8.61  Method 61: Resolution of 2-Methylpent-1-en-3-ol .................................... 412
36.1.8.62  Method 62: Resolution of 1-(2-Thi enyl)pentan-1-ol ............................... 412
36.1.8.63  Method 63: Resolution of Pent-4-ene-2,3-diol ......................................... 413
36.1.8.64  Method 64: Resolution of 2-Phenylcyclohex-2-en-1-ol ............................ 413
36.1.8.65  Method 65: Resolution of Oct-1-yn-3-ol .................................................. 414
36.1.8.66  Method 66: Resolution of (Z)-Undeca-1,5-dien-3-ol ............................... 414
36.1.8.67  Method 67: Synthesis of 1-Deuterooct-2-yn-1-ol .................................... 415
36.1.9 Synthesis from Other Alcohols by Modification

J. Eames

36.1.9.1 Method 1: C-Alkylation of Alcohols by Oxidation Followed by Addition

36.1.9.2 Method 2: Isomerization of Allylic Alcohols

36.1.9.3 Method 3: Asymmetric C-Alkylation of Alcohols by Deprotonation/Addition

36.1.9.4 Method 4: [1,2]-Acyl and -Allyl Transfer

36.1.9.5 Method 5: Propargylation and Rearrangement of Allylic Alcohols

36.1.9.6 Method 6: Dehydrodimerization of Alcohols

36.1.9.7 Method 7: Hydroxylation of Allylic Alcohols

36.1.9.8 Method 8: Reaction of Allylic Alcohols with Singlet Oxygen

36.1.9.9 Method 9: Dihydroxylation of Allylic Alcohols

36.1.9.10 Method 10: Epoxidation of Allylic Alcohols

36.1.9.10.1 Variation 1: Stereoselective Epoxidation of Allylic Alcohols

36.1.9.11 Method 11: [2 + 2] Cycloadditions of Allylic Alcohols

36.1.9.12 Method 12: Alkylation of the C=C Bond of Allylic Alcohols

36.1.9.13 Method 13: Cyclopropanation of Allylic Alcohols

36.1.9.14 Method 14: Reduction of Allylic Alcohols

36.1.9.14.1 Variation 1: Stereoselective Reduction of Allylic Alcohols

36.1.9.15 Method 15: Palladium-Catalyzed Vinylic Arylation of Allylic Alcohols

36.1.9.16 Method 16: Palladium-Catalyzed C-Alkylation of Allylic Alcohols

36.1.9.17 Method 17: Functionalization of α-Hydroxy Carbonyl Compounds

36.1.9.18 Method 18: C-Alkylation of Allylic Alcohols by Boration

36.2 Product Class 2: Cycloalkanols

P. J. H. Scott and P. G. Steel

36.2.1 Product Class 2: Cycloalkanols

36.2.1.1 Product Subclass 1: Cyclopropanols

36.2.1.1.1 Synthesis of Product Subclass 1

36.2.1.1.1 Method 1: Cyclopropanation of Enol Derivatives

36.2.1.1.1 Variation 1: Of Zinc Enolates

36.2.1.1.2 Variation 2: Of Samarium Enolates

36.2.1.1.2 Method 2: Cyclopropanation of Enol Ether Derivatives

36.2.1.1.3 Method 3: Cyclopropanation of Alkenes with Alkoxycarbenes or Acyloxy carbene

36.2.1.1.3.1 Variation 1: With Carbenes Derived from Chloromethyl Ethers

36.2.1.1.3.2 Variation 2: With Alkoxylated Fischer Carbene Complexes

36.2.1.1.3.3 Variation 3: With Zinc Carbenoids from Other Esters

36.2.1.1.4 Method 4: Cyclopropanation of Esters and Acyl Sulfonamides

(Kulinkovich Reaction)

36.2.1.1.4.1 Variation 1: Titanium(IV)-Mediated Cyclopropanation of Esters

36.2.1.1.4.2 Variation 2: Kulinkovich Reactions with Substituted Alkenes

36.3.1.5.4 Variation 4: Using Silver–Zirconium Reagents ....................... 557
36.3.1.5.5 Variation 5: Using Silicon Reagents .................................... 557
36.3.1.5.6 Variation 6: Using Indium Reagents .................................... 558
36.3.1.5.7 Variation 7: Non-Transition-Metal Methods .......................... 559
36.3.1.6 Method 6: Alkyne Additions to Ketones .................................. 559
36.3.1.6.1 Variation 1: Using Magnesium Reagents ............................. 559
36.3.1.6.2 Variation 2: Using Copper–Zinc Reagents ............................ 560
36.3.1.6.3 Variation 3: Using Zinc Reagents ......................................... 560
36.3.1.6.4 Variation 4: Using Rhodium Reagents .................................. 561
36.3.1.6.5 Variation 5: Nonmetallic Methods ....................................... 562
36.3.1.7 Method 7: Synthesis by Rearrangements ............................... 563
36.3.1.8 Method 8: Synthesis from Other Propargylic Alcohols ............... 564
36.3.1.8.1 Variation 1: By Displacement of Halides .............................. 564
36.3.1.8.2 Variation 2: By Coupling of a Terminal Alkyne ...................... 565
36.3.1.9 Methods 9: Miscellaneous Methods ...................................... 565

36.4 Product Class 4: Benzylic Alcohols
M. J. Porter

36.4.1 Synthesis of Product Class 4 ..................................................... 573
36.4.1.1 Method 1: Oxidation of Benzylic C—H Groups ...................... 573
36.4.1.1.1 Variation 1: Oxidation with 2,3-Dichloro-5,6-Dicyanobenzo-1,4-quinone ................................. 573
36.4.1.1.2 Variation 2: Oxidation with Trimethylamine N-Oxide .............. 574
36.4.1.1.3 Variation 3: Enantioselective Hydroxylation with Vaulted Metalloporphyrin Catalysts ............................... 575
36.4.1.1.4 Variation 4: Enantioselective Hydroxylation with a Ruthenium–Porphyrin Catalyst ............................... 576
36.4.1.1.5 Variation 5: Enantioselective Hydroxylation with Manganese–salen Catalysts ............................... 576
36.4.1.2 Method 2: Wittig Rearrangement ........................................... 578
36.4.1.2.1 Variation 1: [1,2]-Wittig Rearrangement of Benzyl Ethers .......... 578
36.4.1.2.2 Variation 2: Enantioselective [1,2]-Wittig Rearrangement .......... 580
36.4.1.2.3 Variation 3: Anion Translocation/[1,2]-Wittig Rearrangement .... 580
36.4.1.2.4 Variation 4: ortho-[2,3]-Wittig Rearrangement ................. 581

36.5 Product Class 5: Allylic Alcohols
D. M. Hodgson and P. G. Humphreys

36.5.1 Synthesis of Product Class 5 ..................................................... 583
36.5.1.1 Method 1: Oxidation with Selenium Reagents ...................... 585
36.5.1.1.1 Variation 1: With Less Than a Stoichiometric Amount of Selenium Dioxide ................................. 586
36.5.1.1.2 Variation 2: With a Catalytic Amount of Selenium Dioxide ........ 587
| 36.5.1.1.3 | Variation 3: Oxidation of Chiral Allylic Selenides | 587 |
| 36.5.1.2 | Method 2: Dihydroxylation | 588 |
| 36.5.1.2.1 | Variation 1: Asymmetric Dihydroxylation | 588 |
| 36.5.1.2.2 | Variation 2: Directed Dihydroxylation | 589 |
| 36.5.1.2.3 | Variation 3: Enzymatic Dihydroxylation | 590 |
| 36.5.1.3 | Method 3: Allylic Substitution | 590 |
| 36.5.1.3.1 | Variation 1: Substitution of Allylic Halides | 591 |
| 36.5.1.3.2 | Variation 2: Asymmetric Iridium-Catalyzed Substitutions of Allylic Carbonates | 591 |
| 36.5.1.4 | Method 4: Elimination of β-Hydroxy Selenides | 592 |
| 36.5.1.5 | Method 5: Additions of Metalated Selenoxides | 593 |
| 36.5.1.6 | Method 6: Additions to α-Epoxy Hydrazones | 594 |
| 36.5.1.7 | Method 7: Elimination Reactions of Iodo Ketals | 595 |
| 36.5.1.8 | Method 8: Elimination of Allylic Cyclic Carbonates | 596 |
| 36.5.1.8.1 | Variation 1: With Organocuprates | 596 |
| 36.5.1.8.2 | Variation 2: Palladium-Catalyzed Eliminations | 597 |
| 36.5.1.9 | Method 9: Reduction of α-Halo Epoxides | 598 |
| 36.5.1.9.1 | Variation 1: With Transition Metals | 598 |
| 36.5.1.9.2 | Variation 2: With Organometallics | 599 |
| 36.5.1.10 | Method 10: Reduction of 2,3-Epoxy Alcohols | 599 |
| 36.5.1.10.1 | Variation 1: Reduction of Unactivated Epoxy Alcohols | 600 |
| 36.5.1.10.2 | Variation 2: Reduction of Sulfonylated Epoxy Alcohols | 600 |
| 36.5.1.11 | Method 11: Elimination of α-Epoxystannanes | 602 |
| 36.5.1.12 | Method 12: Reduction of Propargylic Alcohols to E-Alk-2-enols | 602 |
| 36.5.1.13 | Method 13: Reduction of Propargylic Alcohols to Z-Alk-2-enols | 604 |
| 36.5.1.14 | Method 14: 1,2-Reduction of α,β-Unsaturated Carbonyl Compounds Using Boron Reagents | 605 |
| 36.5.1.14.1 | Variation 1: Using Nonenantioselective Boron Reagents | 606 |
| 36.5.1.14.2 | Variation 2: Using Chiral Boron Reagents | 607 |
| 36.5.1.15 | Method 15: 1,2-Reduction of α,β-Unsaturated Carbonyl Compounds Using Aluminum Hydride Reagents | 608 |
| 36.5.1.15.1 | Variation 1: Using Nonenantioselective Aluminum Hydride Reagents | 608 |
| 36.5.1.15.2 | Variation 2: Using Chiral Aluminum Reagents | 609 |
| 36.5.1.16 | Method 16: 1,2-Reduction of α,β-Unsaturated Carbonyl Compounds Using Ruthenium Catalysts | 610 |
| 36.5.1.16.1 | Variation 1: Using Nonenantioselective Ruthenium Catalysts | 611 |
| 36.5.1.16.2 | Variation 2: Using Chiral Ruthenium Catalysts | 612 |
| 36.5.1.17 | Method 17: 1,2-Reduction of α,β-Unsaturated Carbonyl Compounds Using Other Reagents | 614 |
| 36.5.1.18 | Method 18: Additions of Organometallic Reagents to α,β-Unsaturated Carbonyl Compounds | 615 |
| 36.5.1.18.1 | Variation 1: Addition of Organozinc Reagents | 615 |
| 36.5.1.18.2 | Variation 2: Addition of Organolithium Reagents | 619 |
| 36.5.1.18.3 | Variation 3: Addition of Grignard Reagents | 620 |
| 36.5.1.18.4 | Variation 4: Addition of Other Organometallic Reagents | 620 |
| 36.5.1.19 | Method 19: Alkenylation of Carbonyl Compounds | 622 |
| 36.5.1.19.1 | Variation 1: Using Organozinc Reagents | 622 |
| 36.5.1.19.2 | Variation 2: Using Organolithium Reagents | 626 |
36.6.1.3.1 Variation 1: With Chiral Allyl Groups or Chiral Lewis Acids ................................. 703
36.6.1.3.2 Variation 2: In Reactions with Chiral Aldehydes .................................................. 705
36.6.1.4 Method 4: Synthesis Using Organochromium Reagents ........................................... 710
36.6.1.4.1 Variation 1: With Chiral Allyl Groups ..................................................................... 714
36.6.1.4.2 Variation 2: In Reactions with Chiral Aldehydes ..................................................... 718
36.6.1.5 Method 5: Synthesis Using Other Organometallic Reagents ........................................ 722
36.6.1.5.1 Variation 1: Using Titanium Reagents .................................................................... 722
36.6.1.5.2 Variation 2: Using Indium Reagents ........................................................................ 724
36.6.1.5.3 Variation 3: Using Zinc Reagents ............................................................................ 726
36.6.1.5.4 Variation 4: Using Zirconium Reagents ................................................................. 727
36.6.1.6 Synthesis by [2,3]-Wittig Rearrangement ................................................................... 728
36.6.1.6.1 Method 1: Rearrangement of α-Allyloxy Enolates ..................................................... 730
36.6.1.6.1.1 Variation 1: Using α-Allyloxylated Ketones ........................................................... 730
36.6.1.6.1.2 Variation 2: Using α-Allyloxylated Carboxylic Acids and Esters ....................... 735
36.6.1.6.1.3 Variation 3: Using α-Allyloxylated Carboxamides .............................................. 740
36.6.1.6.1.4 Variation 4: Using [(Allyloxy)methyl]-4,5-Dihydrooxazoles and [(Allyloxy)methyl]-5,6-Dihydro-1,3-oxazines .............................................................. 741
36.6.1.6.2 Method 2: Rearrangement of Allyl Lithiomethyl Ethers .......................................... 744
36.6.1.6.2.1 Variation 1: Using (Tributylstannyl)methyl Ethers ............................................... 744
36.6.1.6.2.2 Variation 2: Using (Trimethylstannyl)methyl Ethers ............................................ 750

36.7 Product Class 7: 1,n-Diols (n > 1)  
C. Nativi and S. Roelens

36.7.1 Product Subclass 1: 1,2-Diols ......................................................................................... 757
36.7.1.1 Synthesis of Product Subclass 1 .................................................................................. 757
36.7.1.1.1 Method 1: Dihydroxylation of Alkenes ..................................................................... 757
36.7.1.1.1.1 Variation 1: Upjohn Dihydroxylation ................................................................... 758
36.7.1.1.1.2 Variation 2: Using Reusable Osmium(VIII) Oxide on Ion Exchanger ................. 759
36.7.1.1.1.3 Variation 3: Using Osmium(VIII) Oxide Encapsulated in a Polyurea Matrix ....... 760
36.7.1.1.2 Method 2: Sharpless Dihydroxylation ................................................................. 761
36.7.1.1.2.1 Variation 1: Using Standard Conditions ............................................................... 762
36.7.1.1.2.2 Variation 2: Using Ionic Liquids ........................................................................... 762
36.7.1.1.3 Method 3: Rhodium-Catalyzed Enantioselective Diboration of Alkenes .............. 763
36.7.1.1.4 Method 4: Pinacol Couplings .................................................................................... 763
36.7.1.1.4.1 Variation 1: Using Samarium(II) Iodide ............................................................... 764
36.7.1.1.4.2 Variation 2: In Aqueous Media ............................................................................. 765
36.7.1.1.5 Method 5: The Aldol Reaction ............................................................................... 765
36.7.1.1.5.1 Variation 1: Direct Aldol Reactions Using Chiral Organometallic Catalysts .... 766
36.7.1.1.5.2 Variation 2: Direct Aldol Reactions Catalyzed by Proline ................................. 767
36.7.1.1.6 Method 6: Ozonation of Alkenylstannanes ............................................................. 768
36.7.1.1.7 Method 7: Epoxide Ring Opening ............................................................................ 769
36.7.1.1.7.1 Variation 1: Hydrolytic Kinetic Resolution of Terminal Epoxides ...................... 769
36.7.1.1.7.2 Variation 2: Ring Opening of 2,3-Epoxy Alcohols ................................................. 769
36.7.1.1.7.3 Variation 3: Catalyzed by Epoxide Hydrolase ..................................................... 770
36.7.1.7.4 Variation 4: In Aqueous Media .............................................. 770
36.7.1.8 Method 8: Alkylation of Oxazolidinone Derivatives ...................... 772
36.7.1.9 Method 9: Prévost–Woodward Dihydroxylation .......................... 773
36.7.2 Product Subclass 2: 1,3-Diols ..................................................... 774
36.7.2.1 Synthesis of Product Subclass 2 .............................................. 775
36.7.2.1.1 Method 1: Reduction of β-Hydroxy Ketones .............................. 775
36.7.2.1.2 Method 2: Reduction of β-Dicarbonyls ..................................... 776
36.7.2.1.3 Method 3: Ring Opening of Epoxy Alcohols ............................. 778
36.7.2.1.3.1 Variation 1: By Organometallics .......................................... 778
36.7.2.1.3.2 Variation 2: By Rearrangement of 2,3-Epoxy Alcohols ............. 779
36.7.2.1.4 Method 4: Allylation of β-Hydroxy Aldehydes .......................... 779
36.7.2.1.4.1 Variation 1: Chelation-Controlled Addition of Organometallics .... 779
36.7.2.1.4.2 Variation 2: By an Aldol–Reduction Sequence .......................... 780
36.7.2.1.5 Method 5: Oxymercuration of Homoallylic Hemiacetals .............. 781
36.7.2.1.6 Method 6: Ring Opening of β-Hydroxy δ-Lactones ...................... 782
36.7.3 Product Subclass 3: 1,4-Diols ..................................................... 782
36.7.3.1 Synthesis of Product Subclass 3 .............................................. 782
36.7.3.1.1 Method 1: Reduction of Unsaturated 1,4-Diketones .................... 782
36.7.3.1.1.1 Variation 1: By Hydrogenation ........................................... 782
36.7.3.1.1.2 Variation 2: By Hydroboration–Rearrangement of 1,2-Disubstituted Cyclobutenes .......................................................... 783
36.7.3.1.1.3 Variation 3: Hydroboration–Reduction of Allyl Ketones ............ 784
36.7.3.1.2 Method 2: Aldol Reactions of Aldehydes with Hydroxyacetone ...... 785
36.7.3.1.3 Method 3: Deprotection of Chiral Acetals Derived from Ene Acetals ... 785
36.7.3.1.4 Method 4: Michael Addition–Reduction of α,β-Unsaturated Enones .... 786
36.7.4 Product Subclass 4: 1,5-Diols ..................................................... 787
36.7.4.1 Synthesis of Product Subclass 4 .............................................. 787
36.7.4.1.1 Method 1: Coupling of Vinylloxiranes and Ketones .................... 787
36.7.4.1.2 Method 2: Reaction of Lithium Dianions with Carboxy Compounds .... 787
36.7.4.1.3 Method 3: Pentenyl Dianion Synthons for Ene-1,5-Diol Synthesis ...... 788
36.7.4.1.4 Method 4: Double Allylboration Reactions .................................. 788
36.7.4.1.5 Method 5: Reductive Decomplexation of π-Allylicarboxylic Lactone Complexes .......................................................... 789
36.7.4.1.6 Method 6: Boron-Tethered Radical Cyclization .......................... 790
36.7.5 Product Subclass 5: 1,6-Diols ..................................................... 791
36.7.5.1 Synthesis of Product Subclass 5 .............................................. 791
36.7.5.1.1 Method 1: Hex-3-ene-1,6-diols by Reduction of Organozinc Intermediates ................................................................. 791
36.7.5.1.2 Method 2: Hydride Reduction of Substituted 2,4-Diene-1,6-dials ...... 792
36.7.5.1.3 Method 3: Titanium(IV) Chloride Mediated Addition of Octa-2,6-diene to Aldehydes .................................................... 792
36.7.5.1.4 Method 4: Titanium(IV) Isopropoxide Mediated Coupling of Butylmagnesium Chloride with Aldehydes and Ketones .............. 793
36.7.6 **Product Subclass 6: 1,7-Diols** ............................................ 794
36.7.6.1 Synthesis of Product Subclass 6 ........................................ 794
36.7.6.1.1 Method 1: Reductive Decomplexation of π-Allyltricarbonyliron Lactone Complexes ........................................ 794
36.7.6.1.2 Method 2: Reaction of Organolithium Compounds with Epoxides .......... 794

36.8 **Product Class 8: Polyols, Including Carbohydrates**
R. C. D. Brown

36.8.1 Synthesis of Product Class 8 ............................................ 799
36.8.1.1 Method 1: Synthesis from Organosilanes ................................ 800
36.8.1.1.1 Variation 1: From Aryldimethylsilanes ................................ 800
36.8.1.1.2 Variation 2: From Oxasilacycloalkanes ................................ 802
36.8.1.1.3 Variation 3: From Silacyclopentanes .................................. 804
36.8.1.2 Method 2: Synthesis from Alkylboranes ................................ 804
36.8.1.3 Method 3: Criegee Rearrangement of Bis(peroxosulfonates) .......... 805
36.8.1.4 Method 4: Hydrolysis of Alkyl Halides ................................ 807
36.8.1.5 Method 5: Hydrolysis of Epoxides .................................... 808
36.8.1.5.1 Variation 1: Of Epoxy Alcohols ...................................... 808
36.8.1.5.2 Variation 2: Of Bis(epoxides) and Tris(epoxides) .................. 812
36.8.1.6 Method 6: Regioselective Reduction of Diepoxyl Alcohols .......... 814
36.8.1.7 Method 7: Stereoselective Reduction of β-Hydroxy Ketones .......... 814
36.8.1.7.1 Variation 1: anti-Selective Reduction of β-Hydroxy Ketones by Tetramethylammonium Triacetoxyborohydride .......... 815
36.8.1.7.2 Variation 2: syn-Selective Reduction of β-Hydroxy Ketones by Diethyl(methoxy)borane and Sodium Borohydride .......... 817
36.8.1.8 Method 8: Reduction of Endoperoxides ................................ 819
36.8.1.9 Method 9: Dihydroxylation of Hydroxyalkenes ...................... 821
36.8.1.9.1 Variation 1: Of Acyclic Allylic Alcohols by Osmium(VIII) Oxide .... 822
36.8.1.9.2 Variation 2: Of Other Acyclic Hydroxalkenones by Osmium(VIII) Oxide .... 830
36.8.1.9.3 Variation 3: Of Cyclic Hydroxalkenones by Osmium(VIII) Oxide .... 831
36.8.1.10 Method 10: Dihydroxylation of Dienes and Trienes by Osmium(VIII) Oxide 837

36.9 **Product Class 9: β-Hydroxy Carbonyl Compounds**
R. Mahrwald and B. Schetter

36.9.1 Synthesis of Product Class 9 ............................................ 847
36.9.1.1 Method 1: Additions of Aldehydes to Preformed Enolates ............ 847
36.9.1.1.1 Variation 1: Additions to Lithium Enolates ...................... 849
36.9.1.1.2 Variation 2: Additions to Magnesium Enolates ................... 855
36.9.1.1.3 Variation 3: Additions to Boron Enolates .......................... 860
36.9.1.1.4 Variation 4: Additions to Titanium Enolates ........................ 868
36.9.1.2 Method 2: Catalytic Aldol Additions of Silicon Enolates Using Lewis Acids 878
36.9.1.2.1 Variation 1: Using Silver Lewis Acids ................................ 879
Variation 2: Using Palladium Lewis Acids ........................................ 880
Variation 3: Using Platinum Lewis Acids ........................................ 881
Variation 4: Using Copper Lewis Acids .......................................... 883
Variation 5: Using Tin Lewis Acids .................................................. 887
Variation 6: Using Titanium Lewis Acids ......................................... 893
Variation 7: Using Zirconium Lewis Acids ....................................... 898
Variation 8: Using Boron Lewis Acids ............................................ 901
Method 3: Direct Catalytic Aldol Reactions ..................................... 907
Method 4: Amine-Catalyzed Aldol Additions ................................... 918
Method 5: Antibody-Catalyzed Aldol Additions ............................... 927
Method 6: Enzyme-Catalyzed Aldol Additions ................................. 928
Method 7: Lewis Base Catalyzed Aldol Additions ............................ 936
Method 8: Reactions of Aldehydes/Ketones with α-Halo Ketones (Reformatsky Reaction) ........................................ 944
Method 9: Reactions of Dithianes with Epoxides ............................ 947
Method 10: Gold- and Rhodium-Catalyzed Aldol Additions ............. 948
Method 11: Rearrangement of Epoxy Silyl Ethers .......................... 952
Method 12: Reduction of 4,5-Dihydroisoxazoles .......................... 953

Product Class 10: n-Heteroatom-Functionalized Alcohols
(n ≥ 2; Heteroatom ≠ Halogen) .................................................. 971

Product Subclass 1: β-Heteroatom-Functionalized Alcohols ........... 971
Synthesis of Product Subclass 1 .................................................. 971
Method 1: Epoxide Ring Opening with Oxygen Nucleophiles ........... 971
Method 2: Epoxide Ring Opening with Sulfur, Selenium, or Tellurium Nucleophiles .................................................. 979
Method 3: Epoxide Ring Opening with Nitrogen Nucleophiles .......... 983
Method 4: Epoxide Ring Opening with Phosphorus Nucleophiles ...... 989
Method 5: Thiirane Substitution Reactions ................................... 991
Method 6: Aziridine Substitution Reactions .................................. 992
Method 7: Nucleophilic Addition of Sulfur-, Selenium-, or Tellurium-Stabilized Carbanions to Carbonyl Groups .......... 993
Method 8: Nucleophilic Addition of Boronic Acids to Imines (The Petasis Reaction) ........................................ 995
Method 9: Addition of Phosphorus Ylides to Carbonyl Compounds .... 996
Method 10: Thiol–Alkene Co-oxidation ........................................ 998
Method 11: Hydroxysulfonylation Using Electrophilic Sulfur .......... 1000
Method 12: Hydroxyselenation Using Electrophilic Selenium .......... 1003
Method 13: Hydroxytelluration Using Electrophilic Tellurium .......... 1004
Method 14: Synthesis of β-Amino Alcohols by Aminohydroxylation of Alkenes .................................................. 1005
36.10.2 **Product Subclass 2: γ-Heteroatom-Functionalized Alcohols** .......................... 1009

36.10.2.1 Synthesis of Product Subclass 2 .................................................. 1009

36.10.2.1.1 Method 1: Epoxide Ring Opening with Heteroatom-Stabilized Carbanions .......................... 1010

36.10.2.1.2 Method 2: Nucleophilic Ring Opening of Oxetanes .......................... 1013

36.10.2.1.3 Method 3: Reduction of Cyano Esters or Ketones .......................... 1015

36.10.2.1.4 Method 4: Synthesis from α,β-Unsaturated Carbonyl Compounds .... 1016

36.10.2.1.5 Method 5: Hydroboration of Allylic Substrates .......................... 1018

36.10.2.1.5.1 Variation 1: Addition to Allylic Alcohols .......................... 1020

36.10.3 **Product Subclass 3: δ-Heteroatom-Functionalized Alcohols** .......................... 1021

36.10.3.1 Synthesis of Product Subclass 3 .................................................. 1021

36.10.3.1.1 Method 1: Nucleophilic Ring Opening of Oxetanes with Phosphorus-Stabilized Carbanions .......................... 1021

36.10.3.1.2 Method 2: Synthesis from α,β-Unsaturated Carbonyl Compounds .... 1022

36.11 **Product Class 11: Alcohols and Diols by Deprotection**

M. G. Moloney and M. Yaqoob

36.11.1 Synthesis of Product Class 11 .................................................. 1031

36.11.1.1 Method 1: Alcohols by Cleavage of Stannoxanes .......................... 1035

36.11.1.1.1 Variation 1: Reaction with Electrophiles .......................... 1035

36.11.1.1.2 Variation 2: Reaction by Radical Formation .......................... 1038

36.11.1.1.2 Method 2: Alcohols by Cleavage of Siloxanes .......................... 1040

36.11.1.1.2.1 Variation 1: Acidic Hydrolysis .......................... 1044

36.11.1.1.2.2 Variation 2: Basic Hydrolysis .......................... 1047

36.11.1.1.2.3 Variation 3: Fluoride Hydrolysis .......................... 1048

36.11.1.1.2.4 Variation 4: Lewis Acid Mediated Hydrolysis .......................... 1051

36.11.1.1.2.5 Variation 5: Photolytic Cleavage .......................... 1051

36.11.1.1.3 Method 3: Alcohols by Cleavage of Carbonates and Carbamates .... 1052

36.11.1.1.3.1 Variation 1: Acidic Hydrolysis .......................... 1053

36.11.1.1.3.2 Variation 2: Basic Hydrolysis .......................... 1053

36.11.1.1.3.3 Variation 3: Reductive Cleavage .......................... 1055

36.11.1.1.3.4 Variation 4: Cleavage by Metal Catalysis .......................... 1056

36.11.1.1.3.5 Variation 5: Hydrogenolysis .......................... 1058

36.11.1.1.4 Method 4: Alcohols by Cleavage of Esters .......................... 1058

36.11.1.1.4.1 Variation 1: Acidic Hydrolysis .......................... 1059

36.11.1.1.4.2 Variation 2: Basic Hydrolysis .......................... 1060

36.11.1.1.4.3 Variation 3: Reductive Cleavage .......................... 1063

36.11.1.1.4.4 Variation 4: Nucleophilic Cleavage .......................... 1064

36.11.1.1.4.5 Variation 5: Enzymatic Hydrolysis .......................... 1066

36.11.1.1.5 Method 5: Alcohols by Cleavage of Acetals .......................... 1067

36.11.1.1.5.1 Variation 1: Acidic Hydrolysis .......................... 1067

36.11.1.1.5.2 Variation 2: Basic Hydrolysis .......................... 1069

36.11.1.1.5.3 Variation 3: Reductive Cleavage .......................... 1069

36.11.1.1.5.4 Variation 4: Nucleophilic Cleavage .......................... 1069
Variation 5: Cleavage by Lewis Acids ........................................... 1070
Variation 6: Oxidative Cleavage .................................................. 1072
Variation 7: Photolytic Cleavage .................................................. 1073
Method 6: Alcohols by Cleavage of Ethers .................................... 1073
Variation 1: Acidic Hydrolysis ...................................................... 1073
Variation 2: Basic Hydrolysis ....................................................... 1078
Variation 3: Hydrogenolytic Cleavage .......................................... 1079
Variation 4: Reductive Cleavage .................................................. 1080
Variation 5: By Elimination ......................................................... 1082
Variation 6: Cleavage with Transition Metals ................................. 1083
Variation 7: By Oxidation ............................................................ 1084
Method 7: Alcohols by Cleavage of Sulfonates and Sulfenates .............. 1085
Variation 1: Cleavage by Substitution with Iodide ............................. 1085
Variation 2: Cleavage by Reaction with Fluoride ............................... 1087
Variation 3: Reductive Cleavage .................................................. 1087
Variation 4: Photolytic Cleavage .................................................. 1090
Variation 5: Diols by Cleavage of Cyclic Boronates ............................ 1093
Variation 6: Nucleophilic Cleavage .............................................. 1093
Variation 7: Diols by Cleavage of Cyclic Dioxystannanes .................... 1094
Variation 8: Diols by Cleavage of Cyclic Dioxysilanes ....................... 1095
Variation 1: Acidic Hydrolysis ...................................................... 1095
Variation 2: Fluoride-Mediated Cleavage ....................................... 1095
Variation 3: Diols by Cleavage of Cyclic Carbonates .......................... 1096
Variation 4: Basic Hydrolysis ....................................................... 1096
Variation 5: Diols by Cleavage of Cyclic Acetals ............................... 1096
Variation 1: Acidic Hydrolysis ...................................................... 1097
Variation 2: Lewis Acid Hydrolysis .............................................. 1100
Variation 3: Basic Hydrolysis ....................................................... 1101
Variation 4: Reductive Cleavage .................................................. 1101
Variation 5: Oxidative Cleavage .................................................. 1102

Product Class 12: Metal Alcoholates

J. V. Morey and A. E. H. Wheatley

Product Class 12: Metal Alcoholates ........................................... 1107
Product Subclass 1: Group 16 Metal Alcoholates ............................... 1107
Synthesis of Product Subclass 1 .................................................. 1107
Method 1: Synthesis by Deprotonation of an Alkanol ......................... 1107
Method 2: Synthesis by Transmetalation ....................................... 1108
Product Subclass 2: Group 15 Metal Alcoholates ................................ 1108
Synthesis of Product Subclass 2 .................................................. 1108
Method 1: Synthesis by Deprotonation of an Alkanol ......................... 1108
Method 2: Synthesis by Transmetalation ....................................... 1110
36.12.3 Product Subclass 3: Group 14 Alcoholates .................................................. 1110
36.12.3.1 Synthesis of Product Subclass 3 ........................................................... 1110
36.12.3.1.1 Method 1: Synthesis by Deprotonation of an Alkanol ....................... 1110
36.12.3.1.2 Method 2: Synthesis by Nucleophilic Ring Opening ......................... 1114
36.12.4 Product Subclass 4: Group 13 Metal Alcoholates ............................... 1114
36.12.4.1 Synthesis of Product Subclass 4 .......................................................... 1114
36.12.4.1.1 Method 1: Synthesis by Deprotonation of an Alkanol ....................... 1114
36.12.5 Product Subclass 5: Chromium and Molybdenum Alcoholates ............ 1116
36.12.5.1 Synthesis of Product Subclass 5 .......................................................... 1116
36.12.5.1.1 Method 1: Synthesis by Transmetalation of an Alcoholate ............... 1116
36.12.6 Product Subclass 6: Vanadium Alcoholates ............................................. 1118
36.12.6.1 Synthesis of Product Subclass 6 .......................................................... 1118
36.12.6.1.1 Method 1: Synthesis by Nucleophilic Addition .............................. 1118
36.12.7 Product Subclass 7: Titanium and Zirconium Alcoholates .................. 1119
36.12.7.1 Synthesis of Product Subclass 7 .......................................................... 1119
36.12.7.1.1 Method 1: Synthesis by Deprotonation of an Alkanol ....................... 1119
36.12.7.1.2 Method 2: Synthesis by Nucleophilic Addition .............................. 1120
36.12.8 Product Subclass 8: Group 2 Metal Alcoholates ....................................... 1122
36.12.8.1 Synthesis of Product Subclass 8 .......................................................... 1122
36.12.8.1.1 Method 1: Synthesis by Deprotonation of an Alkanol ....................... 1122
36.12.8.1.2 Method 2: Synthesis by Metalation of an Alkanol Equivalent .......... 1126
36.12.8.1.3 Method 3: Synthesis by Nucleophilic Addition .............................. 1127
36.12.9 Product Subclass 9: Lithium Alcoholates ............................................... 1128
36.12.9.1 Synthesis of Product Subclass 9 .......................................................... 1128
36.12.9.1.1 Method 1: Synthesis by Deprotonation of an Alkanol ....................... 1128
36.12.9.1.2 Method 2: Synthesis by Transmetalation ........................................ 1129
36.12.9.1.3 Method 3: Rearrangement of a Carbolithiate ................................... 1129
36.12.9.1.3.1 Variation 1: Retro-Brook Rearrangements .................................... 1130
36.12.9.1.3.2 Variation 2: Phosphate-Based Carbanion Rearrangements ............. 1131
36.12.9.1.3.3 Variation 3: [1,2]-Wittig Rearrangements .................................... 1132
36.12.9.1.3.4 Variation 4: [2,3]-Wittig Rearrangements .................................... 1135
36.12.9.1.3.5 Variation 5: [1,4]-Wittig Rearrangements .................................... 1143
36.12.9.1.3.6 Variation 6: Metallated Epoxide Rearrangements ......................... 1143
36.12.9.1.4 Method 4: Synthesis by Reductive Lithiation of C—O Bonds .......... 1147
36.12.9.1.4.1 Variation 1: Reductive Lithiation of Acyclic Ethers ...................... 1147
36.12.9.1.4.2 Variation 2: Reductive Lithiation of Cyclic Ethers ....................... 1147
36.12.9.1.5 Method 5: Addition across Carbonyl Bonds .................................... 1150
36.12.9.1.5.1 Variation 1: Using Organolithium Reagents ............................... 1150
36.12.9.1.5.2 Variation 2: By Reductive Lithiation ........................................... 1153

Volume 37: Ethers

Preface .......................................................... V
Table of Contents ........................................... IX

Introduction
C. J. Forsyth ...................................................... 1

37.1 Product Class 1: Dialkyl Ethers ................................. 9

37.1.1 Synthesis from Esters, Aldehydes, Ketones, and Acetals by Reduction or Alkylation
L. J. Van Orden, R. Jasti, and S. D. Rychnovsky ....................... 9

37.1.2 Synthesis by Substitution
M. Tsukamoto and M. Kitamura .................................. 47

37.1.3 Synthesis by Addition to Alkenes
D. R. Soenen and C. D. Vanderwal ............................ 99

37.1.4 Synthesis from Other Ethers
F. E. McDonald .................................................. 133

37.2 Product Class 2: Epoxides (Oxiranes) .......................... 227

37.2.1 Synthesis from Alkenes by Metal-Mediated Oxidation
H. Adolfsson ...................................................... 227

37.2.2 Synthesis from Alkenes with Organic Oxidants
D. Goeddel and Y. Shi ............................................ 277

37.2.3 Synthesis by Carbonyl Epoxidation
V. K. Aggarwal, M. Crimmin, and S. Riches ........................ 321

37.2.4 Synthesis by Ring Closure
A. K. Yudin and A. Caiazzo ....................................... 407

37.3 Product Class 3: Oxetanes and Oxetan-3-ones ............... 433

37.4 Product Class 4: Five-Membered and Larger-Ring Oxacyclocalk-3-enes ............................................ 473

37.4.1 Synthesis by Ring-Closure Reactions, Except Ring-Closing Metathesis
K. Ding and Z. Wang ............................................. 473

37.4.2 Synthesis by Ring-Closing Metathesis
S. W. Roberts and J. D. Rainier .................................. 531

Table of Contents

Introduction
C. J. Forsyth

Introduction ............................................................... 1

37.1 Product Class 1: Dialkyl Ethers

37.1.1 Synthesis from Esters, Aldehydes, Ketones, and Acetals by Reduction or Alkylation
L. J. Van Orden, R. Jasti, and S. D. Rychnovsky

37.1.1 Synthesis from Esters, Aldehydes, Ketones, and Acetals by Reduction or Alkylation ................................................ 9
37.1.1.1 Synthesis of Acyclic Ethers by Reduction of Esters ................................. 9
37.1.1.1.1 Method 1: Hydrosilylation ................................................. 9
37.1.1.1.2 Variation 1: Under Free-Radical Conditions ................................. 9
37.1.1.1.3 Variation 2: With Stoichiometric Lewis Acid ............................... 10
37.1.1.1.4 Variation 3: With a Catalytic Manganese Complex ......................... 10
37.1.1.2 Method 2: Sodium Borohydride Reduction ................................. 11
37.1.1.3 Method 3: Two-Step Reduction Utilizing an \(\alpha\)-Acetoxy Ether .......... 13
37.1.1.4 Method 4: Two-Step Reduction Utilizing an S-Alkyl Thioester .......... 14
37.1.1.5 Synthesis of Acyclic Ethers by Alkylation of Esters .......................... 15
37.1.1.6 Method 1: Synthesis by a Two-Step Procedure Utilizing an \(\alpha\)-Acetoxy Ether ................................................. 15
37.1.1.6.1 Variation 1: Organocuprate Addition .................................... 16
37.1.1.6.2 Variation 2: Allylstannane Addition .................................... 16
37.1.1.6.3 Variation 3: Allylsilane, But-2-enylsilane, and Silyl Ketene Acetal Addition .................................................... 16
37.1.1.6.4 Variation 4: Trimethylsilyl Cyanide Addition .............................. 17
37.1.1.6.5 Variation 5: Organozinc Addition .......................................... 18
37.1.1.6.6 Synthesis of Acyclic Ethers by Reduction of Aldehydes or Ketones .......... 18
37.1.1.6.7 Method 1: Hydrosilylation ................................................. 18
37.1.1.6.8 Variation 1: With Iodotrimethylsilane .................................... 18
37.1.1.6.9 Variation 2: With Alkoxyhydrosilanes .................................... 19
37.1.1.6.10 Variation 3: With Brønsted Acid Catalysis ................................ 19
37.1.1.6.11 Method 2: Hydrogenation ................................................. 20
37.1.1.6.12 Method 3: In Situ Formation of Acetals, Followed by Reductive Cleavage .................................................... 20
37.1.1.6.13 Synthesis of Acyclic Ethers by Alkylation of Aldehydes or Ketones .......... 21
37.1.1.6.14 Method 1: Silyl-Modified Sakurai Reaction ................................ 21
37.1.1.6.15 Synthesis of Acyclic Ethers by Reduction of Acetals ........................ 22
37.1.1.5.1 Method 1: Metal Hydride Reduction ........................................... 22
37.1.1.5.1.1 Variation 1: With Diisobutylaluminum Hydride .......................... 22
37.1.1.5.1.2 Variation 2: With Lithium Aluminum Hydride .......................... 23
37.1.1.5.1.3 Variation 3: With Borane–Dimethyl Sulfide Complex .................. 24
37.1.1.5.1.4 Variation 4: With Triethylsilane ......................................... 25
37.1.1.5.1.5 Variation 5: With Zinc(II) Borohydride ................................ 26
37.1.1.5.2 Method 2: Hydrogenation ....................................................... 26
37.1.1.6 Synthesis of Acyclic Ethers by Alkylation of Acetals ......................... 27
37.1.1.6.1 Method 1: Addition of Allylsilane Reagents ................................ 27
37.1.1.6.2 Method 2: Addition of Allylstannane Reagents ............................ 30
37.1.1.6.3 Method 3: Other Alkylation Methods ........................................ 31
37.1.1.6.4 Method 4: Addition of Alka-2,3-dienyl- and Propargylsilanes ........... 32
37.1.1.6.5 Method 5: Addition of Silyl Enol Ethers and Metal Enolates .......... 33
37.1.1.6.6 Method 6: Addition of Trimethylsilyl Cyanide ................................ 37
37.1.1.6.7 Method 7: Addition of Grignard Reagents .................................. 38
37.1.1.6.8 Method 8: Addition of Organocuprate Reagents .......................... 38
37.1.1.6.9 Method 9: Addition of Organoauminum Reagents ........................ 39
37.1.1.6.10 Method 10: Cleavage with Lithium Metal ................................... 40
37.1.1.7 Synthesis of Acyclic Ethers by Alkylation of α-Halo Ethers ................. 40
37.1.1.7.1 Method 1: Lithiation ............................................................... 40
37.1.1.7.2 Method 2: Palladium-Mediated Coupling .................................... 42
37.1.1.7.3 Method 3: Addition of Organometallic Reagents .......................... 43
37.1.1.7.4 Method 4: Synthesis by a Two-Step Procedure from an Acetal ........ 43

37.1.2 Synthesis by Substitution
M. Tsukamoto and M. Kitamura

37.1.2.1 Method 1: Oxidation of C—H Bonds ............................................ 47
37.1.2.2 Method 2: Intramolecular Oxidative Cyclization of Alcohols ............ 48
37.1.2.3 Method 3: Ring Opening of Cyclopropanes .................................. 49
37.1.2.4 Method 4: Williamson-Type Reaction of Alkyl Halides .................... 50
37.1.2.4.1 Variation 1: Using Metal Alkoxides ......................................... 50
37.1.2.4.2 Variation 2: With Alcohols in the Presence of Base ....................... 53
37.1.2.4.3 Variation 3: From Halo Alcohols ............................................. 57
37.1.2.5 Method 5: Synthesis from Sulfonic and Sulfuric Acid Esters ............. 59
37.1.2.5.1 Variation 1: Using Dialkyl Sulfates ......................................... 59
37.1.2.5.2 Variation 2: Using Trifluoromethanesulfonates ........................... 59
37.1.2.5.3 Variation 3: Using 4-Toluenesulfonates .................................... 60
37.1.2.5.4 Variation 4: Using Methanesulfonates ..................................... 61
37.1.2.6 Method 6: Synthesis from Esters of Phosphorus Acids .................... 61
37.1.2.7 Method 7: Synthesis from Carbonates ......................................... 63
37.1.2.8 Method 8: Synthesis from Trichloroacetimidates ............................ 65
37.1.2.9 Method 9: Synthesis from Oxalate Esters .................................... 65
37.1.2.10 Method 10: Synthesis Using Meerwein’s Reagent .......................... 66
37.1.2.11 Method 11: Synthesis from Sulfonium and Selenonium Salts .......... 66
37.1.2.12 Method 12: Synthesis from Ammonium Salts .......................... 67
37.1.2.13 Method 13: Synthesis from Phosphonium Salts ......................... 68
37.1.2.14 Method 14: Synthesis from Diazo Compounds .......................... 68
37.1.2.14.1 Variation 1: From Diazoalkanes ........................................ 68
37.1.2.14.2 Variation 2: From Diazo(trimethylsilyl)methane ...................... 70
37.1.2.14.3 Variation 3: From Diazocarbonyl Compounds ......................... 71
37.1.2.15 Method 15: Synthesis from Alcohols Using Brønsted Acids .......... 72
37.1.2.16 Method 16: Synthesis from Alcohols Using Pentavalent Phosphorus Reagents ................................................ 75
37.1.2.17 Method 17: Synthesis from Alcohols under Mitsunobu Conditions .... 76
37.1.2.18 Method 18: Synthesis from Alcohols Using Carboximides ............ 80
37.1.2.19 Method 19: Synthesis of Ethers from Alcohols by Lewis Acids and Transition-Metal Complexes .......................... 81
37.1.2.20 Method 20: Synthesis from Alcohols Using a Catalytic Amount of Base .................................................. 89
37.1.2.21 Method 21: Reaction of Di-tert-butyl Peroxide with Grignard or Organolithium Reagents .......................... 90
37.1.2.22 Method 22: Reaction of tert-Butyl Peroxybenzoates with Grignard Reagents ........................................... 90

37.1.3 Synthesis by Addition to Alkenes
D. R. Soenen and C. D. Vanderwal

37.1.3.1 Method 1: Electrophilic Haloetherification ................................ 99
37.1.3.1.1 Variation 1: Of Isolated Alkenes ........................................... 99
37.1.3.1.2 Variation 2: Of Allenes ..................................................... 100
37.1.3.1.3 Variation 3: Of Conjugated Alkenes ................................. 101
37.1.3.1.4 Variation 4: Of α,β-Unsaturated Carbonyl Compounds ............... 102
37.1.3.2 Method 2: Electrophilic Alkoxymercuration ............................... 104
37.1.3.3 Method 3: Electrophilic Alkoxyxelanylation ................................ 104
37.1.3.3.1 Variation 1: General Reaction ........................................... 104
37.1.3.3.2 Variation 2: Selenium-Reagent-Catalyzed Tandem Alkoxyxelanylation—Oxidative Deselanylation ...................... 106
37.1.3.3.3 Variation 3: Diastereoselective, Alkene-Controlled Alkoxyxelanylation ................................................................. 106
37.1.3.3.4 Variation 4: Diastereoselective Additions by Selenium Reagent Control ............................................................... 108
37.1.3.4 Method 4: Base-Catalyzed Conjugate Addition of Alcohols to Electron-Deficient Alkenes ........................................ 109
37.1.3.4.1 Variation 1: General Reaction ........................................... 109
37.1.3.4.2 Variation 2: Diastereoselective Reaction Controlled by Resident Stereogenicity of the Alkene ........................................... 112
37.1.3.4.3 Variation 3: Diastereoselective Reaction Controlled by Resident Stereogenicity of the Alcohol ..................................... 113

37.2 Synthesis from Alkenes with Organic Oxidants
D. Goeddel and Y. Shi

37.2.1 Method 1: Synthesis Using Organic Peroxy-Containing Compounds
37.2.1.1 Variation 1: Using 3-Chloroperoxybenzoic Acid
37.2.1.2 Variation 2: Using Other Peracids
37.2.1.3 Variation 3: Using Peroxymidic Acids
37.2.1.4 Variation 4: Using Peroxisoureas
37.2.1.5 Variation 5: Using Peroxycarbonic Acids
37.2.1.6 Variation 6: Using Peroxycarbamic Acids
37.2.1.7 Variation 7: Using Perhydrates/α-Hydroperoxy Compounds
37.2.1.8 Variation 8: Using Selenium-, Phosphorus-, or Sulfur-Containing Oxidants
37.2.1.9 Variation 9: Intermolecular Hydrogen Peroxide Activation
37.2.2 Method 2: Synthesis Using Oxaziridines and Oxaziridinium Salts
37.2.2.1 Variation 1: Using Oxaziridines
37.2.2.2 Variation 2: Using Oxaziridinium Salts
37.2.2.3 Method 3: Synthesis Using Dioxiranes
37.2.2.3.1 Variation 1: Using Dimethyldioxirane
37.2.2.3.2 Variation 2: Using 3-Methyl-3-(trifluoromethyl)dioxirane
37.2.2.3.3 Variation 3: Using Other Achiral Dioxiranes
37.2.2.3.4 Variation 4: Using Oxone and Non-Carbohydrate-Derived Chiral Ketones
37.2.2.3.5 Variation 5: Using Oxone or Hydrogen Peroxide and Fructose-Derived Chiral Ketones
37.2.2.3.6 Variation 6: Using Oxone and Oxazolidinone-Containing Chiral Ketones

37.2.3 Synthesis by Carbonyl Epoxidation
V. K. Aggarwal, M. Crimmin, and S. Riches

37.2.3.1 Method 1: Addition of an Arsonium Ylide
37.2.3.1.1 Variation 1: By Deprotonation of an Arsonium Salt
37.2.3.1.2 Variation 2: Ylide Generation by Addition of an Arsine to a Metal Carbenoid
37.2.3.1.3 Variation 3: Ylide Generation by Transylation of a Phosphonium Ylide
37.2.3.2 Method 2: Addition of a Bismuthonium Ylide
37.2.3.3 Method 3: Addition of a Sulfonium or Sulfoxonium Ylide
37.2.3.3.1 Variation 1: By Reaction of an Ylide Generated by Deprotonation of a Sulfonium Salt
37.2.3.3.2 Variation 2: Ylide Generation by Desilylation of a Sulfonium Salt
Variation 3: Ylide Generation by Decarboxylation of a Sulfonium Salt .......................................................... 347
Variation 4: By Reaction of an Ylide Generated from a Metal Carbenoid and a Sulfide ........................................ 348
Variation 5: By Reaction of an Ylide Generated by Addition of a Nucleophile to a Vinlylsulfonium Salt ................. 353
Variation 6: Ylide Generation by Electrochemical Reduction of a Sulfonium Salt ............................................. 355
Method 4: Addition of a Selenonium Ylide .......................................................... 356
Variation 1: Using Selenonium Ylides Generated by Deprotonation .......................................................... 356
Variation 2: Using Selenonium Ylides Generated by Addition to (Arylethynyl)diphenylselenonium Trifluoromethanesulfonate .......................................................... 357
Variation 3: Using Selenonium Ylides Generated by Conjugate Addition to Vinylsulfonium Salts ......................... 357
Method 5: Addition of a Telluronium Ylide .......................................................... 359
Method 6: Addition of an Ammonium Ylide .......................................................... 363
Method 7: Addition of Heteroatom-Substituted Anions .......................................................... 365
Variation 1: Addition of an α-Alkoxyallyl Anion .......................................................... 365
Variation 2: Addition of an α-Sulfanylmethyl Anion .......................................................... 367
Variation 3: Addition of an α-Sulfimidoylmethyl Anion .......................................................... 368
Variation 4: Addition of an α-Sulfoximidoylmethyl Anion .......................................................... 370
Variation 5: Addition of an α-Selanylmethyl Anion .......................................................... 372
Variation 6: Addition of an α-Selenonylalkyl Anion .......................................................... 372
Variation 7: Addition of an α-Halo Anion .......................................................... 373
Method 8: Addition of a Diao Compound .................................................................................. 396
Variation 1: Transition-Metal-Catalyzed Addition of Diao Compounds .......................................................... 398
Synthesis by Ring Closure
A. K. Yudin and A. Caiazzo

Synthesis from Vicinal Halohydrins .......................................................... 409
Method 1: Synthesis Using Carbonates as Base .......................................................... 410
Method 2: Synthesis Using Hydroxides as Base .......................................................... 410
Method 3: Synthesis Using Alkoxides as Base .......................................................... 411
Method 4: Synthesis Using Silver(I) Oxide as Base .......................................................... 411
Synthesis from Vicinal Diols .......................................................... 412
Method 1: The Sharpless Procedure .......................................................... 412
Method 2: The Mitsunobu Procedure .......................................................... 414
Variation 1: The Abushanab Modification .......................................................... 415
Method 3: In Situ Sulfonylation of a Hydroxy Group .......................................................... 416
Variation 1: Using N-Tosylimidazole .......................................................... 416
Variation 2: Using Silver(I) Oxide .......................................................... 417
Variation 3: Using 4-(Dimethylamino)pyridine .......................................................... 418

37.3.1.1.10 Method 10: Synthesis by Ring Expansion .................................. 460
37.3.1.1.10.1 Variation 1: Rearrangement of Oxiranylalkyl Ethers .................. 460
37.3.1.1.10.2 Variation 2: Rearrangement of (Hydroxyethyl)oxiranes .............. 461
37.3.1.1.10.3 Variation 3: Insertion of Methylene into Oxiranes .................... 462
37.3.1.1.11 Method 11: Synthesis by Modification of Oxetanes at the Periphery .......... 465
37.3.1.1.12 Method 12: Synthesis by Modification of Oxetanes at the Periphery .... 465
37.3.1.2 Applications of Product Subclass 1 in Organic Synthesis .................. 466
37.3.1.2.1 Method 1: Ring Opening of Oxetanes ........................................ 466
37.3.2 Product Subclass 2: Oxetan-3-ones .................................................... 466
37.3.2.1 Synthesis of Product Subclass 2 .................................................. 466
37.3.2.1.1 Method 1: Synthesis from α-Diazo Ketones .................................. 466
37.4 Product Class 4: Five-Membered and Larger-Ring Oxacycloalk-3-enes

37.4.1 Synthesis by Ring-Closure Reactions, Except Ring-Closing Metathesis
K. Ding and Z. Wang

37.4.1 Synthesis by Ring-Closure Reactions, Except Ring-Closing Metathesis
................................................................. 473
37.4.1.1 2,5-Dihydrofurans ................................................................. 473
37.4.1.1.1 Method 1: Cyclization of 2,3-Allenols with Various Electrophiles as Catalysts .......................... 473
37.4.1.1.1.1 Variation 1: Silver(I)-Catalyzed Ring Closure of 2,3-Allenols .......... 473
37.4.1.1.1.2 Variation 2: Silver(I)-Catalyzed Rearrangement–Cyclization of 4-Hydroxypropargyl Esters ........ 476
37.4.1.1.1.3 Variation 3: Intramolecular Cyclization of 2,3-Allenols Using Gold(III) Chloride as Catalyst ........ 477
37.4.1.1.1.4 Variation 4: Rearrangement of Butynediol Monobenzoates Catalyzed by Gold(I) .................. 477
37.4.1.1.1.5 Variation 5: Cyclization of Allenic Hydroxy Esters by Treatment with Hydrogen Chloride in Chloroform ........................................ 479
37.4.1.1.1.6 Variation 6: Synthesis of 3-Allyl-2,5-dihydrofurans by Palladium(II) Chloride Catalyzed Coupling–Cyclization Reaction of 2,3-Allenols with Allylic Halides ........................................ 479
37.4.1.1.1.7 Variation 7: Cyclization of α-Allenic Alcohols Using Benzeneselenenyl Chloride as Electrophile ........................................ 481
37.4.1.1.1.8 Variation 8: Cyclization of 2-(Phenylsulfanyl)buta-2,3-dien-1-ol Derivatives Using Various Electrophiles ........................................ 482

37.4.1.2 Method 2: Dehydrative Cyclization of (Z)-Alk-2-ene-1,4-diols —— 483
37.4.1.3 Method 3: [3 + 2]-Cycloaddition Reactions of Carbonyl Ylides to Alkynes ——— 486
37.4.1.4 Method 4: Synthesis of 3-(Alkoxyethyl)-2,5-Dihydrofurans via Alkylidenecarbene Insertion Reactions ——— 487
37.4.1.5 Method 5: Triphenylphosphine-Induced Ring Contraction of 3,6-Dihydro-1,2-dioxins ——— 488
37.4.1.6 Method 6: Synthesis from α-Hydroxy Ketones and Triphenyl(vinyl)phosphonium Salts ——— 489
37.4.1.7 Method 7: Palladium-Catalyzed Reaction of Cyclic Alkynyl Carbonates with Electron-Deficient Alkenes ——— 491
37.4.1.2 3,6-Dihydro-2H-pyrans ——— 491
37.4.1.2.1 Method 1: Lewis Acid Mediated Prins-Type Reactions ——— 491
37.4.1.2.1.1 Variation 1: Indium(III) Chloride Mediated Tandem Carbonyl Allylation–Prins Cyclization of Tributyl[3-(trimethylsilyl)allyl]stannane with Aldehydes ——— 493
37.4.1.2.1.2 Variation 2: The Silyl-Prins Reaction ——— 493
37.4.1.2.1.3 Variation 3: Synthesis of 2-Alkyl-4-halo-3,6-dihydro-2H-pyrans by Iron(III) Halide Catalyzed Prins-Type Cyclization of Homopropargylic Alcohols and Aldehydes ——— 495
37.4.1.2.1.4 Variation 4: Synthesis of Tetra- and Pentasubstituted 4-Halo-3,6-dihydro-2H-pyrans by Iron(III) Halide Catalyzed Prins Cyclization of Silylated Homopropargylic Alcohols and Aldehydes ——— 496
37.4.1.2.2 Method 2: Acetal-Initiated Cyclizations of Vinylsilanes ——— 497
37.4.1.2.2.1 Variation 1: Vinylsilane-Terminated Cyclizations of Ester-Substituted Oxycarbenium Ion Intermediates ——— 498
37.4.1.2.3 Method 3: Synthesis of Polysubstituted Dihydropyrans via Trimethylsilyl Trifluoromethanesulfonate Mediated Condensation of (Z)-Trimethyl[4-(trimethylsilyl)but-3-enyloxy]silanes with Aldehydes or Acetals ——— 499
37.4.1.2.4 Method 4: Synthesis of 4-Halo-3,6-dihydro-2H-pyrans via Lewis Acid Promoted Cyclization of Acetals of Homopropargylic Alcohols ——— 500
37.4.1.2.5 Method 5: Stereoselective Synthesis of 3,6-Dihydro-2H-pyrans by [4 + 2] Annulation between Allylsilanes and Aldehydes ——— 501
37.4.1.2.5.1 Variation 1: Lewis Acid Promoted [4 + 2] Annulation between Allylsilanes and Aldehydes ——— 503
37.4.1.2.6 Method 6: Lewis Acid Catalyzed Cyclization of 3,4-Allenols ——— 504
37.4.1.2.6.1 Variation 1: Synthesis of 5-Allyl-3,6-dihydro-2H-pyrans via the Palladium-Catalyzed Cyclizative Coupling Reaction of 3,4-Allenols with Allyl Bromide ——— 504
37.4.1.2.7 Method 7: Enantioselective Synthesis of Sulfinyl Dihydropyrans by Base-Promoted Intramolecular Cyclization of 2-Sulfinyl Dienols ——— 505
37.4.1.2.8 Method 8: Synthesis of Aryldihydropyrans by Phenylselanyl etherification–Oxidation 506

37.4.1.3 Larger-Ring Oxacycloalk-3-enes 507

37.4.1.3.1 Method 1: Synthesis of Seven-Membered Oxacycloalk-3-enes 507

37.4.1.3.2 Method 2: Palladium Catalyzed Intramolecular Allylic Alkylation Cyclizations to Eight-, Nine-, and Ten-Membered Oxacycloalk-3-enes 508

37.4.1.4 1,3-Dihydroisobenzofurans 510

37.4.1.4.1 Method 1: Intramolecular Cyclization of 1,2-Bis(halomethyl)benzenes or 1,2-Phenylenedimethanol 510

37.4.1.4.2 Method 2: Transition Metal Complex Catalyzed \([2 + 2 + 2]\) Cyclotrimerization of Alkynes 511

37.4.1.4.2.1 Variation 1: Construction of Tricyclic Fused Benzo-3-oxacycles via Intramolecular \([2 + 2 + 2]\) Cyclotrimerization of Triynes 512

37.4.1.4.3 Method 3: Intramolecular Cyclization of Grignard Reagents Derived from 2-(Chloromethyl)-1-iodobenzenes 513

37.4.1.5 3,4-Dihydro-1H-2-benzopyrans 514

37.4.1.5.1 Method 1: Synthesis by Acid-Promoted Ring Closure of 1-Substituted 2-(Hydroxymethyl)phenylethanols 514

37.4.1.5.2 Method 2: Thermal Cyclization of Methiodides of 2-[2-(Aminomethyl)phenylethanol to 3,4-Dihydro-1H-2-benzopyrans 515

37.4.1.5.3 Method 3: Chloromethylation of 2-Phenylethanols Followed by Cyclization 516

37.4.1.5.4 Method 4: Synthesis of 3,4-Dihydro-1H-2-benzopyrans via Lewis Acid Promoted Cyclization of Acetals of 2-Phenylethanols 517

37.4.1.6 7-Oxabicyclo[2.2.1]hept-2-enes 518

37.4.1.6.1 Method 1: Diels–Alder Cycloaddition of Furan with Highly Reactive Alkene Dienophiles 518

37.4.1.6.1.1 Variation 1: Furan–Maleic Anhydride and Furan–Maleimide Cycloadditions 518

37.4.1.6.1.2 Variation 2: Furan–Phenyl Ethanesulfonate Cycloadditions 520

37.4.1.6.2 Method 2: High-Pressure Diels–Alder Cyclizations of Furans and Activated Alkenes 521

37.4.1.6.3 Method 3: Lewis Acid Mediated Diels–Alder Cyclizations of Furans and Monoactivated Alkenes 523

37.4.2 Synthesis by Ring-Closing Metathesis

S. W. Roberts and J. D. Rainier

37.4.2 Synthesis by Ring-Closing Metathesis 531

37.4.2.1 Enantioselective Desymmetrization 531

37.4.2.1.1 Method 1: Formation of Five-Membered Rings Using Molybdenum Catalysts 534

Introduction
A. Berkessel

Introduction ................................................................. 1

38.1  Product Class 1: Alkyl and Cycloalkyl Hydroperoxides
A. Scarso and G. Strukul

38.1  Product Class 1: Alkyl and Cycloalkyl Hydroperoxides .................. 9
38.1.1  Product Subclass 1: α-Unsubstituted Alkyl Hydroperoxides .......... 9
38.1.1.1  Synthesis of Product Subclass 1 .................................. 10
38.1.1.2  Method 1:  Reactions of Alkanes with Molecular Oxygen .......... 10
38.1.1.3  Method 2:  Hydrolysis of Alkyl Metal and
Alkyl Metalloid Peroxides ............................................ 11
38.1.1.4  Method 3:  Reaction of Oxetanes with Hydrogen Peroxide .......... 12
38.1.1.5  Method 4:  Reaction of Epoxides with Hydrogen Peroxide .......... 14
38.1.1.6  Method 5:  Reaction of Alkyl Halides ................................ 16
38.1.1.7  Method 6:  Reaction of Alcohols with Hydrogen Peroxide .......... 19
38.1.1.8  Method 7:  Reaction of Dialkyl Sulfates with
Hydrogen Peroxide .................................................. 20
38.1.1.9  Method 8:  Reaction of Alkyl Methanesulfonates with
Hydrogen Peroxide .................................................. 21
38.1.1.10 Method 9:  Reaction of Cyclic Homoallylic 4-Bromobenzenesulfonates
with Hydrogen Peroxide .......................................... 23
38.1.1.11 Method 10:  Reaction of 1-Substituted 1-Sulfonylhydrazines with
Molecular Oxygen under Basic Conditions .......................... 23
38.1.1.12 Method 11:  Reaction of 1-Alkyl-2-tosylhydrazines with
Hydrogen Peroxide and Sodium Peroxide .......................... 24

38.6 **Product Class 6: Allylic Peroxides**  
I. N. Lykakis and M. Stratakis

---

38.6.1 **Synthesis of Product Class 6**  
- **Method 1:** Nucleophilic Substitution  
- **Method 2:** Synthesis of Allylic Peroxides via Tritylation and Methoxymethylation of Allylic Stannyl Peroxides  
- **Method 3:** Allylic Peroxyketals via the Acid-Catalyzed Addition of Allylic Hydroperoxides to Enol Ethers  
- **Method 4:** Allylic Peroxidation of Alkenes with tert-Butyl Hydroperoxide  
- **Method 5:** Reaction of Conjugated Dienes and Trienes with Pyridinium Dichromate and tert-Butyl Hydroperoxide  
- **Method 6:** Hexacarbonylmolybdenum(0)-Catalyzed Oxidation of Eneones with tert-Butyl Hydroperoxide To Form Peroxypyranoles  
- **Method 7:** Synthesis of Functionalized Allylic Peroxides from Allylic Peroxy Vinylstannanes  
- **Variation 1:** N-Iodosuccinimide-Mediated Formation of Allylic Peroxy Vinyl iodides

XVIII  Table of Contents

38.6.1.7.2 Variation 2: Palladium-Mediated C—C Bond-Forming Reactions for the Synthesis of Functionalized Allylic Peroxides ........................................ 221
38.6.1.8 Method 8: Synthesis of Allylic Peroxides via the Wittig Alkenation of α-Peroxy-Substituted Aldehydes .................................................. 223
38.6.1.9 Method 9: Formation of 4-(tert-Butylperoxy)cyclohexadienones by Oxidation of Phenols ................................................................. 224
38.6.1.9.1 Variation 1: Metal-Catalyzed Oxidation of Phenols with tert-Butyl Hydroperoxide ................................................................. 224
38.6.1.9.2 Variation 2: Free-Radical Oxidation of Phenols by a Hypervalent (tert-Butylperoxy)iodane and tert-Butyl Hydroperoxide .............. 226
38.6.1.10 Method 10: Formation of Allylic 1,4-Diperoxides from the Chloroperoxidase-Catalyzed Oxidation of Conjugated Dienoic Esters .............. 226

38.7  Product Class 7: Benzyllic Peroxides
M. R. Iesce and M. DellaGreca

38.7  Product Class 7: Benzyllic Peroxides ......................................................... 231
38.7.1 Synthesis of Product Class 7 ................................................................. 231
38.7.1.1 Oxidation with Oxygen .................................................................... 231
38.7.1.1.1 Method 1: Oxidation of Arylalkanes ................................................ 231
38.7.1.1.2 Method 2: Oxidation of Triarylmethyl Chlorides ............................. 232
38.7.1.1.3 Method 3: Oxidation of Arylalkenes via Trapping Reactions .............. 232
38.7.1.1.3.1 Variation 1: Intramolecular Cyclization in the Presence of a Cobalt(II) Complex ................................................................. 232
38.7.1.1.3.2 Variation 2: Intermolecular Cycloaddition with Carbonyl Compounds ................................................................. 233
38.7.1.1.3.3 Variation 3: Intermolecular Cyclization with β-Oxo Carbonyl Compounds in the Presence of Manganese Catalysts .............................. 234
38.7.1.1.3.4 Variation 4: Intermolecular Cyclization with Heterocyclic 1,3-Dicarbonyl Compounds in the Presence of Manganese Catalysts .............. 236
38.7.1.2 Oxidation with Hydroperoxides ......................................................... 238
38.7.1.2.1 Method 1: Oxidation of Arylalkanes under Metal Catalysis .............. 238
38.7.1.2.1.1 Variation 1: Using Chromium ................................................. 238
38.7.1.2.1.2 Variation 2: Using Cobalt ......................................................... 239
38.7.1.2.1.3 Variation 3: Using Copper ......................................................... 240
38.7.1.2.1.4 Variation 4: Using Lead .......................................................... 243
38.7.1.2.2 Method 2: Nucleophilic Substitution Using Hydroperoxides ............ 244
38.7.1.2.2.1 Variation 1: Of Halides .......................................................... 244
38.7.1.2.2.2 Variation 2: Of Alcohols ......................................................... 247
38.7.1.2.2.3 Variation 3: Of Imidates .......................................................... 249
38.7.1.2.2.4 Variation 4: Of Oxiranes .......................................................... 249
38.7.1.2.3 Method 3: Addition Reactions of Hydroperoxides ......................... 250
38.7.1.2.3.1 Variation 1: Acid-Mediated Addition to Alkenes ......................... 250
38.7.1.2.3.2 Variation 2: Base-Mediated Addition to Alkenes ......................... 251
38.7.1.2.3.3 Variation 3: Palladium-Mediated Addition to Alkenes ................. 252
38.7.1.2.3.4 Variation 4: Mercury-Mediated Addition to Alkenes 253
38.7.1.2.3.5 Variation 5: Addition to Cyclopropanes 254
38.7.1.2.3.6 Variation 6: Addition to Carbonyl Compounds 256
38.7.1.3 Photooxygenation 257
38.7.1.3.1 Method 1: Photooxygenation of Arylalkenes 257
38.7.1.3.2 Method 2: Photooxygenation of Three-Membered Heterocycles via Photoinduced Electron Transfer 258
38.7.1.3.3 Method 3: Photooxygenation of Cyclopropanes via Photoinduced Radical Production 260
38.7.1.4 Other Methods 260
38.7.1.4.1 Method 1: Oxidative Fluorodesulfuration 260
38.7.1.4.2 Method 2: Ozonization of Unsaturated Benzylic Hydroperoxides 261
38.7.1.4.3 Method 3: Oxygenation of Aryl Azo Hydroperoxides 262
38.7.1.4.4 Method 4: Acid-Catalyzed Reaction of Peroxyketals with Ketene Silyl Acetals 262
38.7.2 Applications of Product Class 7 in Organic Synthesis 264
38.7.2.1 Method 1: Oxidation to Carbonyl Derivatives 264
38.7.2.2 Method 2: Reduction to Alcohols 265
38.7.2.3 Method 3: Heterolysis of an O—O or C—O Bond 265
38.7.2.3.1 Variation 1: Trapping with Alkenes 267
38.7.2.3.2 Variation 2: Trapping with Carbonyl Compounds 268
38.7.2.3.3 Variation 3: Trapping with Hydrazine Derivatives or Hydroxylamine 269
38.7.2.4 Method 4: Homolysis of the O—O Bond: Radical Production 270

38.8 Product Class 8: Monocyclic Peroxides

38.8.1 Product Subclass 1: Three-Membered Cyclic Peroxides (Dioxiranes)
B. Wang and Y. Shi

38.8.1.1 Synthesis of Product Subclass 1 275
38.8.1.1.1 Method 1: Preparation of Dioxiranes Using Oxone 276
38.8.1.2 Applications of Product Subclass 1 in Organic Synthesis 278
38.8.1.2.1 Method 1: Oxidation of Heteroatoms by Dioxiranes 278
38.8.1.2.1.1 Variation 1: Synthesis of Sulfinic Acids 279
38.8.1.2.1.2 Variation 2: Synthesis of Sulfoxides and Sulfones 279
38.8.1.2.1.3 Variation 3: Synthesis of Sulfoximides 283
38.8.1.2.1.4 Variation 4: Synthesis of N-Oxides and Nitro Compounds 283
38.8.1.2.1.5 Variation 5: Synthesis of Hydroxylamines 287
38.8.1.2.1.6 Variation 6: Synthesis of Nitrones and Nitrooxide Radicals 289
38.8.1.2.1.7 Variation 7: Synthesis of Hydroxamic Acids 292
38.8.1.2.1.8 Variation 8: Cleavage of C=N Bonds 293
38.8.1.2.1.9 Variation 9: Cleavage of C=P Bonds 297

Table of Contents .......................................................................................... XIII

Introduction
N. Kambe ........................................................................................................ 1

39.1 Product Class 1: Alkanesulfonic Acids and Acyclic Derivatives
J. Drabowicz, P. Kielbasiński, P. Łyżwa, A. Zając, and M. Mikołajczyk .......... 17

39.2 Product Class 2: Acyclic Dialkyl Sulfoxides and Derivatives
J. Drabowicz, J. Lewkowski, W. Kudelska, and T. Girek .............................. 123

39.3 Product Class 3: Alkanesulfinic Acids and Acyclic Derivatives
S. Braverman, M. Cherkinsky, and S. Levinger ........................................ 187

39.4 Product Class 4: Acyclic Dialkyl Sulfoxides and Derivatives
J. L. García Ruano, M. B. Cid, A. M. Martín-Castro, and J. Alemán ............ 245

39.5 Product Class 5: Alkanethiols
J. V. Comasseto and A. S. Guarezemini .................................................... 391

39.6 Product Class 6: Acyclic Alkanethiolates

39.6.1 Product Subclass 1: Alkanethiolates of Group 1, 2, and 13–15 Metals
J. V. Comasseto and A. S. Guarezemini .................................................... 413

39.6.2 Product Subclass 2: Alkanethiolates of Group 3–12 Metals
A. Polo and J. Real ....................................................................................... 437

39.7 Product Class 7: Acyclic Dialkyl Sulfoxides
S. Fujiwara and M. Toyofuku ........................................................................ 469

39.8 Product Class 8: Acyclic Trialkyloxosulfonium and Trialkylsulfonium Salts and Derivatives
Y. Tang and X.-L. Sun ................................................................................. 501

39.9 Product Class 9: Alkanesulfenic Acids and Acyclic Derivatives
J. Drabowicz, P. Kielbasiński, P. Łyżwa, and M. Mikołajczyk ..................... 543

39.10 Product Class 10: Acyclic Di- and Polysulfides
R. Sato and T. Kimura ................................................................................. 573

39.11 Product Class 11: Thiiranes and Derivatives
M. Saito and J. Nakayama ............................................................................ 589

39.12 Product Class 12: Thietanes, 1,2-Oxathietanes, and Derivatives
E. Block ....................................................................................................... 659

39.1.4.1.5 Method 5: Synthesis from Diazocompounds and Sulfur Dioxide ............ 53
39.1.4.1.6 Method 6: Synthesis from Sulenes ................................................... 53
39.1.4.1.7 Method 7: Synthesis from Sulfinates and Sulfinic Esters ..................... 53
39.1.4.1.8 Method 8: Rearrangement of Sulfinates ............................................ 54
39.1.4.1.8.1 Variation 1: [2,3]-Sigmatropic Rearrangements of Allyl Sulfinates ........ 54
39.1.4.1.8.2 Variation 2: Rearrangements of Dialkyl Sulfinates .......................... 54
Table of Contents

39.1.4.1.9  Method 9: Synthesis from Alkenes and Sulfur Trioxide or Other Sulfuric Acid Derivatives ............................................ 54
39.1.4.1.10 Method 10: Synthesis from Other Sulfonyl Derivatives ................. 55
39.1.4.1.10.1 Variation 1: From Unsaturated Sulfonylates ................................. 55
39.1.4.1.10.2 Variation 2: By the Decarboxylation of (Alkoxysulfonyl)acetates .......... 56
39.1.4.1.10.3 Variation 3: By the Functionalization of the S-Alkyl Group of Alkanesulfonic Acid Esters ................................. 56
39.1.4.2 Applications of Product Subclass 4 in Organic Synthesis .................. 56
39.1.4.2.1 Method 1: Use as Alkylating Reagents .................................. 56
39.1.4.2.1.1 Variation 1: Reactions with Nitrogen Nucleophiles .......................... 56
39.1.4.2.1.2 Variation 2: Reactions with Oxygen Nucleophiles ........................ 57
39.1.4.2.1.3 Variation 3: Methylation at Sulfur or Selenium .......................... 57
39.1.4.2.1.4 Variation 4: Methylation of Organophosphorus Compounds .............. 57
39.1.5  Product Subclass 5: Alkanesulfonic Anhydrides ............................ 58
39.1.5.1 Synthesis of Product Subclass 5 ............................................. 58
39.1.5.1.1 Method 1: Synthesis of Symmetrical and Unsymmetrical Anhydrides of Alkanesulfonic Acids ............................................ 58
39.1.5.1.2 Method 2: Synthesis of Mixed Anhydrides of Carboxylic and Alkanesulfonic Acids ............................................ 58
39.1.5.1.2.1 Variation 1: Reaction of Carboxylic (Carbonic) Acids or Their Anions with Alkanesulfonyl Chlorides or Related Compounds ............................. 58
39.1.5.1.2.2 Variation 2: Reaction of Carboxylic Acid Chlorides with Alkanesulfonic Acids ............................................ 58
39.1.5.1.2.3 Variation 3: Reaction of Trimethylsilyl Alkanesulfonates with Trifluoroacetic Anhydride ............................................ 60
39.1.5.1.3 Method 3: Synthesis of Mixed Anhydrides of Alkanesulfonic and Organic Acids of Phosphorus ............................................ 61
39.1.5.1.3.1 Variation 1: Reaction of Sulfonyl Derivatives with Trivalent Organophosphorus Compounds ............................................ 61
39.1.5.1.3.2 Variation 2: Reaction of Sulfonyl Derivatives with Pentavalent Organophosphorus Compounds ............................................ 62
39.1.6  Product Subclass 6: Alkanethiosulfonic Acids ............................... 63
39.1.6.1 Synthesis of Product Subclass 6 ............................................. 63
39.1.6.1.1 Method 1: Synthesis from Sulfonyl Halides .................................. 63
39.1.6.1.2 Method 2: Reaction of Sulfur with Alkanesulfinates .......................... 64
39.1.7  Product Subclass 7: S-Alkyl and S-Aryl Alkanethiosulfonates ............. 65
39.1.7.1 Synthesis of Product Subclass 7 ............................................. 65
39.1.7.1.1 Method 1: Synthesis from Sulfonyl Halides .................................. 65
39.1.7.1.1.1 Variation 1: By Reactions with Thiols or Thiolates .......................... 65
39.1.7.1.1.2 Variation 2: Reductive Zinc Coupling .................................... 67
39.1.7.1.2 Method 2: Synthesis from Sulfinyl Chlorides .................................. 68
39.1.7.1.2.1 Variation 1: Coupling Reactions Mediated by Carboxamides ............................. 68
39.1.7.1.2.2 Variation 2: Coupling of Alkanesulfinyl Chlorides with Powdered Zinc .......... 69
39.1.7.1.3 Method 3: Synthesis from Disulfides ............................................ 69
39.1.7.1.3.1 Variation 1: Oxidation with Hydrogen Peroxide .......................... 69

Science of Synthesis Original Edition Volume 39
© Georg Thieme Verlag KG
39.1.7.1.3.2 Variation 2: Oxidation with Peroxy Acids ...................................... 70
39.1.7.1.3.3 Variation 3: Oxidation with Other Oxidizing Reagents ...................... 71
39.1.7.1.3.4 Variation 4: Reactions with Sulfenyl Chlorides Generated In Situ ........... 72
39.1.7.1.3.5 Variation 5: Reactions with Sodium Methanesulfinate .......................... 72
39.1.7.1.4 Method 4: Reaction between Dimethyl Sulfoxide and Chlorotrimethylsilane .......................................................... 73
39.1.7.1.5 Method 5: Alkylation of the Salts of Alkanethiosulfonic Acids ................. 74

39.1.8 **Product Subclass 8: Alkanesulfonamides** ........................................... 76
39.1.8.1 Synthesis of Product Subclass 8 ........................................................... 76
39.1.8.1.1 Method 1: Interconversion of Sulfonyl Derivatives .............................. 76
39.1.8.1.1.1 Variation 1: Reaction of Isolated Sulfonyl Chlorides with Ammonia or Amines .............................. 77
39.1.8.1.1.2 Variation 2: Reaction of In Situ Generated Sulfonyl Halides with Amines .... 81
39.1.8.1.1.3 Variation 3: Reactions between the N-Chloroamine Salts of Alkanesulfonamides and Alkenes .................. 82
39.1.8.1.1.4 Variation 4: Catalytic N-Sulfonylaziridination of Alkanes with Sulfonyl Chlorides in the Presence of a Nitridomanganese Complex .............................. 84
39.1.8.1.1.5 Variation 5: Catalytic N-Sulfonylaziridination of Alkenes with an N-Sulfonylimino(phenyl)-3-iodane .............................. 85
39.1.8.1.1.6 Variation 6: Reaction of Allenes with N-[2-(Trimethylsilyl)ethanesulfon-yny]alkanimines .............................. 87
39.1.8.1.1.7 Variation 7: Reactions between Benzotriazole Sulfonamides and Amines .... 87
39.1.8.1.1.8 Variation 8: Reaction of 1H-Benzotriazol-1-yl Methanesulfonate with Primary Amines .............................. 88
39.1.8.1.1.9 Variation 9: Reduction of Sulfonyl Azides .............................. 88
39.1.8.1.1.10 Variation 10: Reactions between Methylsulfamoyl Chloride and Silyl Enol Ethers .............................. 89
39.1.8.1.1.11 Variation 11: Cyclization of Alkanesulfonamides .............................. 90
39.1.8.1.1.12 Variation 12: Reaction of Sulfonyl Anions with Epoxides ............... 92
39.1.8.1.1.13 Variation 13: Condensation of Alkanesulfonamides with Carboxylic Acids .............................. 93
39.1.8.1.1.14 Variation 14: Reaction of Alkyl α-Disulfones with Amines .............................. 94
39.1.8.1.2 Method 2: Reaction of Sulfinyl Chloride with Hydroxylamines .............................. 94
39.1.8.1.3 Method 3: Reaction of Sulfur Dioxide with Diazo Compounds in the Presence of Amines .............................. 95
39.1.8.1.4 Method 4: Oxidation of Low-Valency Sulfur Derivatives .............................. 95
39.1.8.1.4.1 Variation 1: Oxidation of Sulfenamides .............................. 95
39.1.8.1.4.2 Variation 2: Oxidation of Sulfinamides .............................. 96

39.1.9 **Product Subclass 9: Alkanesulfonohydrazides** ...................................... 97
39.1.9.1 Synthesis of Product Subclass 9 ........................................................... 97
39.1.9.1.1 Method 1: Reaction of Alkanesulfonates with Azodicarboxylates .............................. 97
39.1.9.1.2 Method 2: Reaction of Sulfonyl Chlorides with Hydrazine Derivatives .............................. 98
39.1.9.1.3 Method 3: Oxidative Coupling of N-Substituted Methanesulfonamides .......... 99

39.1.10 **Product Subclass 10: N-Haloalkanesulfonamides and Their Salts** ............... 100
39.1.10.1 Synthesis of Product Subclass 10 ........................................................ 100
39.1.10.1.1 Method 1: Halogenation of Alkanesulfonamides .............................. 100
Variation 1: Chlorination with tert-Butyl Hypochlorite .......................... 100
Variation 2: Chlorination with Sodium Hypochlorite .......................... 101
Variation 3: Synthesis of N-Chloro- and N-Bromoperfluoroalkanesulfonamides .......................................................... 101
Variation 4: Fluorination of N-Substituted Trifluoromethanesulfonamides 102

Product Subclass 11: Alkanesulfonyl N=C=X Derivatives .......................... 102

Method 1: Synthesis of Alkanesulfonyl Isocyanates .......................... 102
Variation 1: From Alkanesulfonamides and Carbonyl Group Precursors .......... 102
Variation 2: From Chlorosulfonyl Isocyanate and Alkenes .......................... 103
Variation 3: By Thermolysis of Trimethylsilylated Alkanesulfonyl Carbamates ................................................. 103
Variation 4: By Reactions between Chlorosulfonyl Isocyanate and Tetraalkylstannanes ............................................. 104

Method 2: Synthesis of Alkanesulfonyl Isothiocyanates ........................ 104

Product Subclass 12: Alkanesulfonyl Azides ............................................. 104

Method 1: Reaction of Alkanesulfonyl Halides with Alkali Metal Azides or Tetramethylguanidinium Azide .......................... 104

Product Subclass 13: Alkanesulfonimidic Acid Derivatives ....................... 106

Method 1: Synthesis of Alkanesulfonimidoyl Halides ................................ 106
Method 2: Synthesis of Alkanesulfonimidic Acid Esters .......................... 109
Method 3: Synthesis of Alkanesulfonimidic Acid Amides .......................... 109

Product Subclass 14: Alkanesulfonodiimidic Acid Derivatives ................. 111

Method 1: Synthesis of N,N',N''-Trialkylalkanesulfonodiimidamides .......... 111

Product Class 2: Acyclic Dialkyl Sulfones and Derivatives
J. Drabowicz, J. Lewkowski, W. Kudelska, and T. Girek

Product Class 2: Acyclic Dialkyl Sulfones and Derivatives ......................... 123

Product Subclass 1: Dialkylsulfur Tetrahalides .................................. 123

Synthesis of Product Subclass 1 .................................................. 124
Method 1: Reaction of Dialkyl Sulfides with Trifluoromethyl Hypofluorite or Elemental Halogens .................................. 124

Product Subclass 2: Dialkyl Sulfones .............................................. 124

Synthesis of Product Subclass 2 ............................................. 125
Method 1: Alkylation of Sulfinic Acid Anions with Cleavage of a C–X or C–H Bond .................................................. 125
Variation 1: Alkylation of Alkali Metal Salts under Homogeneous Conditions .................................. 125

Table of Contents

39.2.1.8.21 Variation 21: Cleavage of a Double Bond by Hydrolysis of Tetrakis(alkylsulfonyl)ethenes .................................................. 151
39.2.1.8.22 Variation 22: Pinacol Coupling by Reduction with a Vanadium(III) Reagent ................................................................. 152
39.2.1.8.23 Variation 23: Base-Catalyzed Cyclopropanation of γ-Chloropropyl Sulfones ................................................................. 152
39.2.2 Applications of Product Subclass 2 in Organic Synthesis ........................................................................................................... 152
39.2.2.21 Method 1: Cyclization of Bis(chloromethyl) Sulfone with Cinnamaldehyde ........................................................................... 152
39.2.2.22 Method 2: Alkene Synthesis by Coupling of Sulfone α,α'-Dicarbanions ................................................................. 153
39.2.3 Product Subclass 3: S,S-Dialkylsulfoximides .......................................................................................................................... 154
39.2.3.1 Synthesis of Product Subclass 3 ........................................................................................................................................... 155
39.2.3.1.1 Method 1: Oxidation of Sulfinimides .......................................................................................................................... 155
39.2.3.1.1.1 Variation 1: Oxidation with Potassium Permanganate ................................................................................................ 155
39.2.3.1.1.2 Variation 2: Oxidation with Peroxy Compounds ..................................................................................................... 155
39.2.3.1.1.3 Variation 3: Oxidation with Halogen-Containing Compounds ................................................................................... 156
39.2.3.1.1.4 Variation 4: Oxidation with Dioxiranes ....................................................................................................................... 156
39.2.3.1.2 Method 2: Imination of Sulfoxides .......................................................................................................................... 157
39.2.3.1.2.1 Variation 1: Reaction with Hydrazoic Acid .................................................................................................................. 157
39.2.3.1.2.2 Variation 2: Reaction with Azides ........................................................................................................................ 158
39.2.3.1.2.3 Variation 3: Reaction with Chloramine-T or Its Analogues ......................................................................................... 159
39.2.3.1.2.4 Variation 4: Reaction with 2-[(Aminooxy)sulfonyl]-1,3,5-trimethylbenzene ............................................................. 159
39.2.3.1.2.5 Variation 5: Imination with Primary Amines in the Presence of tert-Butyl Hypochlorite ......................................................... 159
39.2.3.1.2.6 Variation 6: Imination with Primary Amines in the Presence of Lead(IV) Acetate ............................................................ 160
39.2.3.1.2.7 Variation 7: Rhodium-Catalyzed Imination of Sulfoxides Using (Diacetoxyiodo)benzene .................................................. 160
39.2.3.1.2.8 Variation 8: Electrochemical Imination of Sulfoxides ..................................................................................................... 161
39.2.3.1.2.9 Variation 9: Reaction of Dialkyl Sulfoxides with Quinone Monoimides ................................................................. 162
39.2.3.1.3 Method 3: Cleavage of N-Substituent Groups ................................................................................................................... 162
39.2.3.1.3.1 Variation 1: N-Tosyl Group Cleavage ....................................................................................................................... 162
39.2.3.1.3.2 Variation 2: N-(tert-Butyloxycarbonyl) Group Cleavage ......................................................................................... 163
39.2.3.1.3.3 Variation 3: Optical Resolution of S,S-Dialkylsulfoximides ....................................................................................... 163
39.2.3.1.4 Method 4: Functionalization at the Nitrogen Atom ........................................................................................................ 164
39.2.3.1.4.1 Variation 1: N-Arylation of Sulfoximides ................................................................................................................... 164
39.2.3.1.4.2 Variation 2: N-Acylation and Related Reactions .................................................................................................. 165
39.2.3.1.4.3 Variation 3: Functionalization with Heteroatom-Containing Reagents ................................................................. 166
39.2.3.2 Applications of Product Subclass 3 in Organic Synthesis .................................................................................................. 167
39.2.3.2.1 Method 1: Reactions of α-Anions of S,S-Dialkyl-N-tosylsulfoximides ........................................................................ 167
39.2.3.2.1.1 Variation 1: Addition to Carbonyl Groups .................................................................................................................. 167
39.2.3.2.1.2 Variation 2: Addition to Enones ........................................................................................................................ 167
39.2.3.2.1.3 Variation 3: Addition to Imines To Form β-Aminosulfoximides ................................................................................... 169
39.2.3.2.1.4 Variation 4: Intramolecular Cyclization in the Preparation of 1-Methyl-1,2-thiazine 1-Oxide Derivatives ......................... 170
39.2.3.2.1.5 Variation 5: Synthesis of Diazenes ....................................................................................................................... 172
39.2.4 Product Subclass 4: S,S-Dialkyl sulfonodiimines ..................................................................................................................... 173
39.2.4.1 Synthesis of Product Subclass 4 ........................................................................................................................................... 173
39.2.4.1.1 Method 1: Bisimination of Sulfides ........................................ 173
39.2.4.1.2 Method 2: Imination of Sulfimides ........................................ 173
39.2.4.1.3 Method 3: Functionalization of the Nitrogen Atoms .................. 174
39.2.4.1.3.1 Variation 1: N-Acylation of Sulfonediimines ........................ 174
39.2.4.1.3.2 Variation 2: N-Arylation and Related Reactions of Sulfonediimines ... 174
39.2.4.2 Applications of Product Subclass 4 in Organic Synthesis ............... 175
39.2.4.2.1 Method 1: Synthesis of Aromatic Nitriles ................................. 175
39.2.4.2.2 Method 2: Synthesis of 1,6,2,6-thiadiazines ............................. 176
39.2.4.2.2.1 Variation 1: Reaction of S-Alkyl-S-benzyl Sulfonediimines with Activated Carbonyl Substrates ..................................... 176
39.2.4.2.2.2 Variation 2: Reaction of S,S-Dialkyl Sulfonediimines with Ketene Dithioacetals ................................................................. 177
39.2.4.2.3 Method 3: Synthesis of 1,6,2,4-thiadiazines ................................ 178
39.2.4.2.4 Method 4: Synthesis of 1,6,2,4-thiatriazines .............................. 178
39.2.4.2.4.1 Variation 1: Reaction of S-Alkyl-S-benzyl Sulfonediimines with N-Cyanoimidates ................................................................. 179
39.2.4.2.4.2 Variation 2: Reaction of S,S-Dimethyl Sulfonediimines with Cyanimidocarbonates ................................................................. 179
39.2.4.2.5 Method 5: Synthesis of 1,6,2,5-thiadiazoles ............................... 180

39.2.4.3 Method 3: Synthesis of I1,6,2,6-thiadiazines ................................. 176

39.3 Product Class 3: Alkanesulfinic Acids and Acyclic Derivatives
S. Braverman, M. Cherkinsky, and S. Levinger

39.3.1 Product Subclass 1: Alkylsulfur Trihalides ...................................... 187
39.3.1.1 Synthesis of Product Subclass 1 ................................................. 187
39.3.1.1.1 Method 1: Synthesis of Methylsulfur Trifluoride ........................ 187
39.3.1.1.2 Method 2: Synthesis of Alkylsulfur Trichlorides ........................ 188
39.3.1.1.2.1 Variation 1: Reaction of Symmetrical Disulfides with Chlorine ... 188
39.3.1.1.2.2 Variation 2: Reaction of Thiols with Chlorine ......................... 188
39.3.2 Product Subclass 2: Alkanesulfinyl Halides ................................... 188
39.3.2.1 Synthesis of Product Subclass 2 ................................................. 189
39.3.2.1.1 Method 1: Direct Functionalization of Adamantane .................... 189
39.3.2.1.2 Method 2: Synthesis from Thiols ............................................ 189
39.3.2.1.2.1 Variation 1: Using Sulfonyl Chloride and Acetic Acid ............ 190
39.3.2.1.2.2 Variation 2: Using Sulfonyl Chloride and Trimethylsilyl Acetate ... 190
39.3.2.1.3 Method 3: Synthesis from Sulfinic Acids or Sulfinate Salts ............ 191
39.3.2.1.3.1 Variation 1: Via a Sulfinate Generated In Situ from a Grignard Compound ................................. 191
39.3.2.1.4 Method 4: Synthesis from Symmetrical Disulfides ...................... 192
39.3.2.1.5 Method 5: Synthesis from Sulfenyl Compounds .......................... 194
39.3.2.1.5.1 Variation 1: Halogenolysis of Thiosulfinate Esters ................. 194
39.3.2.1.5.2 Variation 2: Oxidative Halogenolysis of S-Alkyl Thioacetates ... 194
39.3.2.1.5.3 Variation 3: Oxidation of Alkanesulfenyl Chlorides ................. 195
39.3.2.1.6 Method 6: Synthesis from 2-(Trimethylsilyl)ethyl Sulfoxides ........ 196
39.3.3  **Product Subclass 3: Alkanesulfonic Acids and Salts** ........................................ 196

39.3.3.1  Synthesis of Product Subclass 3 ................................................................. 197

39.3.3.1.1  Method 1: Oxidation of Alkanethiols ...................................................... 197

39.3.3.1.2  Method 2: Hydrolysis of Alkanesulfenyl Chlorides and Alkanesulfonic Acid Esters ................................................................. 198

39.3.3.1.3  Method 3: Oxidative Cleavage of Dialkyl Disulfides ..................................... 199

39.3.3.1.4  Method 4: Hydrolysis of Sulfanimides ...................................................... 200

39.3.3.1.5  Method 5: Reduction of Alkanesulfonyl Halides ......................................... 200

39.3.3.1.5.1  Variation 1: From Alkanesulfonyl Chlorides by Reduction with Alkali Metal Sulfites ................................................................. 201

39.3.3.1.5.2  Variation 2: From Alkanesulfonyl Chlorides by Reduction with 4-Toluenethiol ................................................................. 201

39.3.3.1.5.3  Variation 3: Additional Procedures ........................................................ 202

39.3.3.1.6  Method 6: Reductive Cleavage of Alkanethiosulfonates ............................ 203

39.3.3.1.6.1  Variation 1: Cleavage of Acyclic Alkanethiosulfonates ............................ 203

39.3.3.1.6.2  Variation 2: Cleavage of Cyclic Alkanethiosulfonates ............................ 204

39.3.3.1.7  Method 7: Reductive Cleavage of Sulfones ................................................ 204

39.3.3.1.8  Method 8: Base-Induced Cleavage of Activated Sulfones ........................... 205

39.3.3.1.9  Method 9: Ring Opening of Thiirane 1,1-Dioxides and Other Cyclic Sulfones ................................................................. 208

39.3.3.1.10  Method 10: Insertion of Sulfur Dioxide into the Carbon—Metal Bond of Organometallic Reagents ............................................... 209

39.3.3.1.10.1  Variation 1: Reaction with Organolithium and Grignard Reagents ............ 209

39.3.3.1.10.2  Variation 2: Reaction with Organoaluminum Reagents ........................ 210

39.3.3.1.11  Method 11: Addition of Sulfur Dioxide to Alkenes .................................... 210

39.3.3.1.12  Method 12: Synthesis with Retention of the Sulfinate Group (Salt-to-Acid Transformation) .................................................. 211

39.3.4  **Product Subclass 4: Alkanesulfonic Acid Esters** ............................................. 211

39.3.4.1  Synthesis of Product Subclass 4 ................................................................. 212

39.3.4.1.1  Method 1: Esterification of Sulfinic Acids and Sulfinate Anions ................. 212

39.3.4.1.1.1  Variation 1: Using Alcohols ................................................................. 212

39.3.4.1.1.2  Variation 2: Using Hard Alkylating Agents ........................................... 212

39.3.4.1.2  Method 2: Nucleophilic Substitution of Sulfinyl Chlorides ....................... 213

39.3.4.1.2.1  Variation 1: Reaction of Alkanesulfinyl Chlorides with Alcohols ............ 213

39.3.4.1.2.2  Variation 2: Reaction of Alkanesulfinyl Chlorides with Alkoxytrimethylsilanes ................................................................. 215

39.3.4.1.3  Method 3: Oxidation of Alkanesulfenyl Chlorides and Alkanethiols ........... 216

39.3.4.1.4  Method 4: Oxidative Alkylation of Dialkyl Disulfides ............................... 217

39.3.4.1.4.1  Variation 1: Oxidation of Disulfides with N-Bromosuccinimide ................ 217

39.3.4.1.4.2  Variation 2: Via In Situ Formation of Alkanesulfinyl Chlorides from Dialkyl Disulfides ................................................................. 218

39.3.4.1.5  Method 5: Oxidation of Alkanesulfenic Acid Esters .................................... 219

39.3.4.1.6  Method 6: Cleavage of Dialkyl Sulfoxylates ........................................... 220

39.3.4.1.7  Method 7: Cleavage of the S—N Bond of Alkenesulfinamides .................... 222

39.3.4.1.8  Method 8: Reductive Esterification of Alkanesulfonyl Chlorides and Other Alkanesulfonic Acid Derivatives .................................................. 223
Method 9: Cleavage of the S–S Bond of Alkanethiosulfonates and Alkyl Alkysulfinyl Sulfones

Method 10: Substitution of Dialkyl Sulfoxites and Chlorosulfite Esters

Method 11: Synthesis with Retention of the Sulfinic Sulfinate Group (Transesterification)

Product Subclass 5: Alkanesulfonic Anhydrides

Product Subclass 6: Alkylthiosulfino Transition-Metal Complexes

Product Subclass 7: Alkanethiosulfonic Acid Esters

Product Subclass 8: Alkanesulfamicides

Product Class 4: Acyclic Dialkyl Sulfoxides and Derivatives

J. L. García Ruano, M. B. Cid, A. M. Martín-Castro, and J. Alemán
### 39.4.2.1.1 Method 1: Synthesis from Alkanesulfenic Acid Derivatives

#### 39.4.2.1.1.1 Variation 1: Addition of Sulfenic Acids to Alkenes

#### 39.4.2.1.1.2 Variation 2: Rearrangement of Sulfenic Acid Esters

#### 39.4.2.1.1.3 Variation 3: Electrophilic Addition to Sulfenic Acid Salts

### 39.4.2.1.2 Method 2: Synthesis from Sulfinyl Derivatives

#### 39.4.2.1.2.1 Variation 1: From Thionyl Chloride or Related Compounds

#### 39.4.2.1.2.2 Variation 2: From Alkanesulfonic Acid Derivatives

### 39.4.2.1.3 Method 3: Oxidation of Dialkyl Sulfides

#### 39.4.2.1.3.1 Variation 1: Using Oxygen

#### 39.4.2.1.3.2 Variation 2: Using Hydrogen Peroxide

#### 39.4.2.1.3.3 Variation 3: Using Peroxides

#### 39.4.2.1.3.4 Variation 4: Using Peroxy Acids

#### 39.4.2.1.3.5 Variation 5: Using Halogen Derivatives

#### 39.4.2.1.3.6 Variation 6: Using Nitrogen Reagents

#### 39.4.2.1.3.7 Variation 7: Using Other Oxidizing Reagents

### 39.4.2.1.4 Method 4: Synthesis from Other Sulfur Derivatives

#### 39.4.2.1.4.1 Variation 1: From Sulfonium Salts

#### 39.4.2.1.4.2 Variation 2: From Sulfimides

#### 39.4.2.1.4.3 Variation 3: From Organosulfur(VI) Compounds

#### 39.4.2.1.4.4 Variation 4: From Sulfoxonium Ylides

#### 39.4.2.1.4.5 Variation 5: From Thioketone S-Oxides

### 39.4.2.2 Optically Active Dialkyl Sulfoxides

#### 39.4.2.2.1 Method 1: Synthesis from Sulfinyl Derivatives

#### 39.4.2.2.2 Method 2: Oxidation of Dialkyl Sulfides

#### 39.4.2.2.3 Method 3: Resolution of Racemic Mixtures

### 39.4.2.3 Applications of Product Subclass 2 in Organic Synthesis

#### 39.4.2.3.1 Method 1: Oxidation of Alcohols by Dimethyl Sulfoxide and Dicyclohexylcarbodiimide

#### 39.4.2.3.2 Method 2: Oxidation of Alcohols by Dimethyl Sulfoxide and Oxalyl Chloride (Swern Oxidation)

#### 39.4.2.3.3 Method 3: Oxidation by Dimethyl Sulfoxide in the Presence of Other Activating Agents
39.4.2.4 Method 4: Oxidation of Organic Halides and Sulfonates with Dimethyl Sulfoxide .................................................. 348
39.4.2.5 Method 5: The Halogen–Dimethyl Sulfoxide System as an Oxidizing Reagent .................................................... 349
39.4.2.6 Method 6: Oxidation of Other Functional Groups by Dimethyl Sulfoxide ....................................................... 351
39.4.2.7 Method 7: Epoxide Ring-Opening Reactions by Dimethyl Sulfoxide ................................................................. 352
39.4.3 Product Subclass 3: Acyclic S,S-Dialkylsulfimides ............................................................... 352
39.4.3.1 Synthesis of Product Subclass 3 .......................................................... 353
39.4.3.1.1 Optically Inactive S,S-Dialkylsulfimides .................................................. 353
39.4.3.1.1.1 Method 1: Oxidative Amination of Sulfides ......................................... 353
39.4.3.1.1.2 Variation 1: Reaction with N-Halo Compounds ................................ 353
39.4.3.1.1.3 Variation 2: Reaction with Azides .................................................... 359
39.4.3.1.1.4 Variation 3: Reaction with Other Sources of Electrophilic Nitrogen .... 361
39.4.3.1.1.5 Method 2: Amination of Sulfoxides .................................................. 362
39.4.3.1.1.6 Variation 1: Reaction with Compounds Containing an Amino Group .... 362
39.4.3.1.1.7 Variation 2: Reaction with Heterocumulenes .................................... 365
39.4.3.1.1.8 Method 3: Synthesis of N-Substituted S,S-Dialkylsulfimides ............ 365
39.4.3.1.2 Optically Active S,S-Dialkylsulfimides .................................................. 366
39.4.3.2 Applications of Product Subclass 3 in Organic Synthesis .......................................................... 367
39.4.3.2.1 Method 1: Synthesis of Sulfur Derivatives ........................................... 367
39.4.3.2.1.1 Variation 1: Reduction To Form Sulfides and Amines ....................... 367
39.4.3.2.1.2 Variation 2: Synthesis of Sulfoximides ............................................. 369
39.4.3.2.1.3 Variation 3: Synthesis of Other Organosulfur Compounds ............... 369
39.4.3.2.2 Method 2: Synthesis of Heterocycles ............................................... 370
39.4.3.2.2.1 Variation 1: Transformation via Nitrene Intermediates by Photolysis and Thermolysis .................................................. 370
39.4.3.2.2.2 Variation 2: Reactions of Sulfimides with Electrophiles .................... 371
39.4.3.2.2.3 Variation 3: Methylation of Heterocycles via S,S-Dialkylsulfimides .... 374
39.4.3.2.2.4 Variation 4: Conversion of Amines into Nitroso and Nitro Compounds ... 374
39.5 Product Class 5: Alkanethiols
J. V. Comasseto and A. S. Guarezemini
39.5 Product Class 5: Alkanethiols .......................... 391
39.5.1 Synthesis of Product Class 5 .................................................. 391
39.5.1.1 Method 1: Insertion of Elemental Sulfur into an Alkyl Grignard Reagent Followed by Reaction with an Acid ............. 391
39.5.1.2 Method 2: Reaction of an Alkylating Agent with a Nucleophilic Sulfur Species Followed by Hydrolysis or Reduction .... 391
39.5.1.2.1 Variation 1: Reaction of Alkylating Agents with Hydrosulfides or Sodium Thiosulfate Followed by Acidic Hydrolysis .......... 392
39.5.1.2.2 Variation 2: Transformation of Alcohols into Alkanethiols .................. 394
39.5.1.2.3 Variation 3: Thiols from Dithiocarbonates, Thioacetates, or Related Compounds .................................................. 395
39.5.1.2.4 Variation 4: Alkanethiols from Thiononium Salts or Related Compounds ... 398
39.5.1.3 Method 3: Reduction of Alkanesulfonyl Chlorides ........................................ 399
39.5.1.4 Method 4: Alkanethiols from Alkenes .......................................................... 399
39.5.1.4.1 Variation 1: Reaction of Alkenes with Hydrogen Sulfide .................................. 399
39.5.1.4.2 Variation 2: Reaction of Alkenes with Thioacetic Acid or Thiols Followed by Transformation of the Products into Alkanethiols ........................................ 400
39.5.1.4.3 Variation 3: Reaction of Thiocarbonyl Compounds with Alkenes Followed by Cleavage of the Adduct ............................................................. 400
39.5.1.5 Method 5: Reduction of Thiocyanates .............................................................. 401
39.5.1.6 Method 6: Reduction of Disulfides ................................................................. 401
39.5.1.6.1 Variation 1: By Metals .................................................................................. 402
39.5.1.6.2 Variation 2: By Complex Metal Hydrides ...................................................... 402
39.5.1.6.3 Variation 3: By Trisubstituted Phosphines .................................................... 403
39.5.1.7 Method 7: C—S Bond Cleavage .......................................................... 403
39.5.1.7.1 Variation 1: Aminolysis of Thiiranes .............................................................. 403
39.5.1.7.2 Variation 2: Reductive Cleavage of C—S Bonds ............................................ 404
39.5.1.8 Method 8: Alkanethiols from Heterocyclic Compounds ...................................... 405

39.6 Product Class 6: Acyclic Alkanethiolates

39.6.1 Product Subclass 1: Alkanethiolates of Group 1, 2, and 13–15 Metals
J. V. Comasseto and A. S. Guarezemini

39.6.1 Synthesis of Product Subclass 1 ............................................................... 413
39.6.1.1 Arsenic Alkanethiolates ................................................................. 413
39.6.1.1.1 Method 1: Reaction of Arsenic Halides with Alkanethiols or Alkanethiolates ............................................................. 413
39.6.1.1.2 Method 2: Reaction of Arsenoxides with Alkanethiols ...................................... 414
39.6.1.1.3 Method 3: Reaction of Aminoarsines with Alkanethiols .................................... 414
39.6.1.1.4 Method 4: Reaction of Tetraalkyldiarsines with Dialkyl Disulfides .................. 415
39.6.1.1.5 Method 5: Reaction of Arsenic(III) Fluoride with (tert-Butylsulfanyl)trimethylsilane ............................................................. 415
39.6.1.2 Antimony Alkanethiolates ................................................................. 415
39.6.1.2.1 Method 1: Reaction of Antimony(III) Chloride with Alkanethiols or Alkanethiolates ............................................................. 416
39.6.1.2.2 Method 2: Reaction of Antimony(III) Fluoride with (tert-Butylsulfanyl)trimethylsilane ............................................................. 416
39.6.1.2.3 Method 3: Transmetalation Reactions of Zirconocene Metalloccycles and Antimony Halides ............................................................. 416
39.6.1.3 Bismuth Alkanethiolates ................................................................. 417
39.6.1.3.1 Method 1: Reaction of Bismuth Halides, Alkoxides, and Nitrates with Alkanethiols ............................................................. 417
39.6.1.3.2 Method 2: Reaction of Bismuth(III) Fluoride with (tert-Butylsulfanyl)trimethylsilane ............................................................. 417
39.6.1.4 Silicon Alkanethiolates ................................................................. 418
Method 1: Reaction of Chlorosilanes with Alkanethiols or Alkanethiolates 418
Method 2: Alkylation of Lithium Silicon Thiolates 419
Method 3: Cleavage of S—C Bonds of Alkyl Sulfides 419
Method 4: Reaction of a Thiacarbonyl Compound with a Silylene 420
Germanium Alkanethiolates 420
Method 1: Reaction of Germyl Halides and Oxides with Alkanethiolates 420
Method 2: Reaction of Halogermanes with Tetrakis(methanethiolato)aluminate 421
Tin Alkanethiolates 421
Method 1: Reaction of Organotin Halides with Alkanethiols in the Presence of a Base 421
Method 2: Thiolysis of Alkytln Alkoxides 422
Lead Alkanethiolates 422
Method 1: Reaction of Triorganolead Chlorides or Hydroxides with Alkanethiols or Lead(II) Thiolates 422
Method 2: Disproportionation of Diplumbanes with Dialkyl Disulfides 423
Boron Alkanethiolates 423
Method 1: Reaction of Boranes with Alkanethiols 423
Method 2: Reaction of Haloboranes with Alkanethiolates or Alkali Metal Thiolates 424
Aluminum Alkanethiolates 424
Method 1: Reaction of Trialkylaluminums with Alkanethiols 424
Method 2: Reaction of Aluminum Halides and Amides with Alkanethiols or Sodium Alkanethiolates 425
Method 3: Reaction of Piperidinylaluminum Halides with Lithium Alkanethiolates 425
Method 4: Reaction of Aluminum Hydrides with Alkanethiols 426
Gallium Alkanethiolates 427
Method 1: Reaction of Gallium Halides with Metal Thiolates 427
Method 2: Reaction of Triorganogallium Species with Alkanethiols 427
Indium Alkanethiolates 428
Method 1: Reaction of Organoindium Compounds with Alkanethiols 428
Method 2: Reaction of Indium(III) tert-Butyl(trimethylsilyl)amide with Alkanethiols 428
Thallium Alkanethiolates 428
Method 1: Reaction of Thallium Salts with Alkanethiols or Sodium Alkanethiolates 429
Beryllium Alkanethiolates 429
Magnesium Alkanethiolates 429
Calcium Alkanethiolates 430
39.6.1.16 Strontium Alkanethiolates .......................................................... 430
39.6.1.17 Barium Alkanethiolates ............................................................... 430
39.6.1.18 Lithium Alkanethiolates ............................................................... 431
39.6.1.18.1 Method 1: Reaction of Alkanethiols with Butyllithium .......... 431
39.6.1.18.2 Method 2: Reaction of Elemental Sulfur with Alkylithium Compounds .. 431
39.6.1.19 Sodium Alkanethiolates ............................................................... 431
39.6.1.19.1 Method 1: Reaction of Alkanethiols with a Base ..................... 431
39.6.1.19.2 Method 2: Reaction of Alkanethiols with Sodium ................... 432
39.6.1.19.3 Method 3: Reaction of Dialkyl Disulfides with Sodium .......... 432

39.6.2 Product Subclass 2: Alkanethiolates of Group 3–12 Metals
A. Polo and J. Real

39.6.2.1 Synthesis of Product Subclass 2 .................................................. 437
39.6.2.1.1 Terminal Alkanethiolates .......................................................... 437
39.6.2.1.1.1 Method 1: Reaction of Metal Halides with Alkanethiols or Main Group Alkanethiolates .................................................. 437
39.6.2.1.1.1.1 Variation 1: Reaction of a Metal Chloro Complex with an Alkanethiol ..... 437
39.6.2.1.1.1.2 Variation 2: Reactions of a Metal Complex with an Alkanethiol in the Presence of a Base .............................................. 438
39.6.2.1.1.1.3 Variation 3: Reaction of a Metal Complex with a Main Group Alkanethiolate .......................................................... 440
39.6.2.1.1.1.4 Variation 4: Reaction of a Metal Complex with an Alkanethiol and a Reducing Agent ............................................. 444
39.6.2.1.1.2 Method 2: Reaction of an Alkanethiol with a Basic Ligand Complex with Displacement of the Protonated Ligand ............. 444
39.6.2.1.1.3 Method 3: Reaction of Coordinated Sulfides with Electrophiles .... 446
39.6.2.1.1.4 Method 4: Oxidative Addition of a Dialkyl Disulfide to a Metal Center .... 447
39.6.2.1.1.5 Methods 5: Miscellaneous Methods ........................................ 449
39.6.2.1.2 Homometallic μ-Alkanethiolates ............................................... 450
39.6.2.1.2.1 Method 1: Reaction of a Metal Complex with an Alkanethiol or with a Main Group Alkanethiolate ............................................. 450
39.6.2.1.2.1.1 Variation 1: Reaction of a Metal Complex with an Alkanethiol .......... 450
39.6.2.1.2.1.2 Variation 2: Reaction of a Metal Complex with an Alkanethiol and a Base · 451
39.6.2.1.2.1.3 Variation 3: Reaction of a Metal Complex with a Main Group Alkanethiolate ........................................................ 452
39.6.2.1.2.2 Method 2: Reaction of an Alkanethiol with a Basic Ligand Complex with Displacement of the Protonated Ligand .......... 453
39.6.2.1.2.3 Method 3: Reaction of Bridging Coordinated Sulfides with Electrophiles · 453
39.6.2.1.2.4 Method 4: Oxidative Addition of an Alkanethiol or a Dialkyl Disulfide to a Metal Complex ........................................... 454
39.6.2.1.2.4.1 Variation 1: By Oxidative Addition of an Alkanethiol to a Metal Complex · 454
39.6.2.1.2.4.2 Variation 2: Oxidative Addition of a Dialkyl Disulfide to a Metal Complex · 455
Variation 3: Photochemically Assisted Oxidative Addition of an Alkyl Disulfide to a Metal Complex

Method 5: Synthesis of Bridging Alkanethiolates by Ligand Dissociation

Method 6: Reaction of an Alkanethiolate–Metal Complex with a Second Metal Complex

Methods 7: Miscellaneous Methods

Method 1: Reaction of Bridging Coordinated Sulfides with Electrophiles

Method 2: Reaction of an Alkanethiolate–Metal Complex with a Second Metal Complex

Method 1: Reaction of a Metal Complex with an Alkanethiol, a Dialkyl Disulfide, or a Main Group Alkanethiolate

Method 2: Reaction of Bridging Coordinated Sulfides with Electrophiles

Applications of Product Subclass 2 in Organic Synthesis

Method 1: Metal-Catalyzed C—S Bond Formation Reactions

Method 2: Catalytic Propargylic Substitution Reactions

Method 3: Catalytic Carbonylation Reactions with Alkanethiolate Catalyst Precursors

Method 4: Stereoselective [3 + 2] Dipolar Cycloaddition of Nitrones to Electron-Deficient Alkenes

Product Class 7: Acyclic Dialkyl Sulfides

Synthesis of Product Class 7

Method 1: Synthesis from Alkanethiols

Variation 1: By Substitution of Alkyl Halides

Variation 2: By Substitution of Sulfonates

Variation 3: By Substitution of Alcohols and Carbonates

Variation 4: By Ring Opening of Cyclic Ethers

Variation 5: By Addition to Simple Alkenes

Variation 6: By Addition to Electron-Deficient Alkenes

Method 2: Synthesis from Alkanethiolates

Variation 1: By Substitution of Alkyl Halides

Variation 2: By Substitution of Alkyl Sulfonates

Variation 3: By Substitution with Alkyl Carbonates

Variation 4: By Substitution of Alcohols

Variation 5: By Substitution of Cyclic Ethers

Method 3: Synthesis from Disulfides

Variation 1: By Metal–Sulfur Exchange with Alkyl Metals

Variation 2: By Reaction with Alkyl Halides or 4-Toluensulfonates via Thiolates

Variation 3: By Addition to Alkenes
39.7.3.4 Variation 4: By Desulfurization ........................................ 484
39.7.4 Method 4: Synthesis from Thioacetal Derivatives .................. 484
39.7.4.1 Variation 1: By C—S Bond Cleavage of Dithioacetals ........ 484
39.7.4.2 Variation 2: By C—O Bond Cleavage of Siloxy Monothioacetals 486
39.7.5 Method 5: Synthesis from Thioesters ............................ 486
39.7.6 Method 6: Synthesis from Sulfonium Ylides .................... 486
39.7.7 Method 7: Synthesis from Acyclic Sulfoxides .................. 487
39.7.7.1 Variation 1: By Reduction .............................................. 487
39.7.7.2 Variation 2: By Sulfanylation of Alkenes ....................... 488
39.7.8 Method 8: Synthesis from Acyclic Sulfones .................... 488
39.7.9 Methods 9: Miscellaneous Reactions ............................. 488
39.7.2 Applications of Product Class 7 in Organic Synthesis .......... 489
39.7.2.1 Method 1: Use as Reducing Agents ............................. 489
39.7.2.1.1 Variation 1: Reduction of Sulfoxides ....................... 489
39.7.2.1.2 Variation 2: Reduction of Ozonides ......................... 490
39.7.2.2 Method 2: Use as Oxidizing Agents for Alcohols .......... 491
39.7.2.3 Method 3: Use as Dealkylating Agents ....................... 493
39.7.2.4 Method 4: Use as Protecting Groups ......................... 494
39.7.2.5 Method 5: Use as Catalysts ........................................ 495
39.7.2.6 Method 6: Use as Ligands for Transition-Metal Catalysts .... 496
39.8 Product Class 8: Acyclic Trialkyloxosulfonium and Trialkysulfonium Salts and Derivatives
Y. Tang and X.-L. Sun

39.8 Product Class 8: Acyclic Trialkyloxosulfonium and Trialkysulfonium Salts and Derivatives .......................................................... 501
39.8.1 Product Subclass 1: Acyclic Trialkyloxosulfonium Salts .......... 501
39.8.1.1 Synthesis of Product Subclass 1 ..................................... 501
39.8.1.1.1 Method 1: Reaction of Sulfoxides with Alkylating Agents .... 501
39.8.1.1.2 Method 2: Reaction of Oxosulfonium Ylides ................ 502
39.8.1.1.2.1 Variation 1: With Bronsted Acids ........................ 502
39.8.1.1.2.2 Variations 2: Miscellaneous Reactions ................... 503
39.8.1.1.3 Method 3: Oxidation of Sulfoxonium Salts ................... 503
39.8.1.1.4 Method 4: Anion Exchange of Oxosulfonium Salts .......... 504
39.8.2 Product Subclass 2: Acyclic Trialkysulfonium Salts ................ 505
39.8.2.1 Synthesis of Product Subclass 2 ..................................... 505
39.8.2.1.1 Method 1: Reaction of Dialkyl Sulfoxides ................... 505
39.8.2.1.1.1 Variation 1: With Alkylating Agents ..................... 505
39.8.2.1.1.2 Variation 2: With Cyclopropane Derivatives ............. 515
39.8.2.1.1.3 Variation 3: With Heterocyclic Compounds .............. 516
39.8.2.1.1.4 Variation 4: With Alkenes ...................................... 519
39.8.2.1.1.5 Variation 5: With Alcohols .................................... 522
39.8.2.1.1.6 Variation 6: With Ethers ....................................... 523
39.8.2.1.1.7 Variations 7: Miscellaneous Reactions .................... 524
39.8.2.1.2 Method 2: Reaction of Dialkylsulfonium Halides ............................. 525
39.8.2.1.2.1 Variation 1: With Diazo Compounds ........................................ 525
39.8.2.1.2.2 Variation 2: With Alkenes .................................................... 525
39.8.2.1.2.3 Variation 3: With Dialkyl Sulfides ........................................ 526
39.8.2.1.3 Method 3: Reaction of Sulfoxides .............................................. 527
39.8.2.1.3.1 Variation 1: With Grignard Reagents .................................... 527
39.8.2.1.3.2 Variation 2: With Alkenes .................................................... 527
39.8.2.1.4 Method 4: Reaction of Sulfonium Ylides .................................... 529
39.8.2.1.4.1 Variation 1: With Brønsted Acids .......................................... 529
39.8.2.1.4.2 Variations 2: Miscellaneous Reactions .................................. 530
39.8.2.1.5 Method 5: Reaction of Thiols and Thiol Derivatives with Alkylating Agents 531
39.8.2.1.6 Method 6: Reaction of Dialkyl Disulfides .................................. 531
39.8.2.1.7 Method 7: Reaction of Alkanesulfenyl Halides .................................. 532
39.8.2.1.8 Method 8: Transformation of Sulfonium Salts .................................. 533
39.8.2.1.8.1 Variation 1: Anion Exchange .................................................. 533
39.8.2.1.8.2 Variations 2: Miscellaneous Reactions .................................. 535
39.8.2.1.9 Method 9: Reduction of Oxosulfonium Salts .................................. 536
39.8.2.1.10 Method 10: Reaction of Sulfur and Metal Sulfides .......................... 536

39.9 Product Class 9: Alkanesulfenic Acids and Acyclic Derivatives
J. Drabowicz, P. Kielbasiński, P. łyżwa, and M. Mikołajczyk

39.9
39.9.1 Product Subclass 1: Alkanesulfenyl Halides ................................................. 544
39.9.1.1 Synthesis of Product Subclass 1 ..................................................... 544
39.9.1.1.1 Method 1: Halogenation of Divalent Sulfur Precursors .................. 544
39.9.1.1.1.1 Variation 1: Halogenation of Thiols, Thiol Salts, or Disulfides with Halogens 545
39.9.1.1.1.2 Variation 2: Halogenation of Thiols or Disulfides with Other Halogenating Agents 547
39.9.1.1.1.3 Variation 3: Halogenation of Sulfides or Thiocarboxylate S-Esters 547
39.9.1.1.2 Method 2: Reaction of Sulfur Dichloride with Alkenes or Carbon Nucleophiles .......................................................... 549
39.9.1.1.2.1 Variation 1: Addition of Sulfur Dichloride to Alkenes ................. 549
39.9.1.1.2.2 Variation 2: Reaction of Sulfur Dichloride with Carbonyl or Dicarbonyl Compounds .................................................. 549
39.9.1.1.3 Method 3: Halogen Exchange Reactions of Sulfenyl Chlorides ........ 550
39.9.1.1.4 Method 4: Chlorination of Thiocarbonyl Compounds ..................... 550
39.9.2 Product Subclass 2: Alkanesulfenic Acids ................................................. 550
39.9.2.1 Synthesis of Product Subclass 2 ..................................................... 550
39.9.2.1.1 Method 1: Oxidation of Thiols .................................................. 550
39.9.2.1.2 Method 2: Elimination Reactions of Sulfinyl Derivatives ............... 551
39.9.2.1.3 Methods 3: Miscellaneous Procedures ...................................... 556
39.9.3 Product Subclass 3: Alkanesulfenic Acid Esters ...................................... 557
39.9.3.1 Synthesis of Product Subclass 3 ..................................................... 557
39.9.3.1.1 Method 1: Reaction of Sulfenyl Halides with Phenols or Alcohols ........ 557
39.3.1.2 Method 2: Reaction of $N$-(Alkylsulfanyl)phthalimides with Alcohols or Metal Alkoxides ........................................ 559
39.3.1.3 Method 3: Reaction of Thiirane 1-Oxide with Chloromethyl Ethers 560
39.3.1.4 Method 4: Reaction of Sulfenyl Chlorides with Epoxides 560
39.3.1.5 Method 5: Transesterification of Sulfenates .......................... 560
39.3.1.6 Methods 6: Miscellaneous Procedures ................................ 561

39.4 Product Subclass 4: Alkanesulfenamides ................................ 561

39.4.1 Synthesis of Product Subclass 4 ........................................... 561
39.4.1.1 Method 1: Synthesis from Sulfenyl Derivatives .......................... 561
39.4.1.1.1 Variation 1: Reaction of Sulfenyl Halides with Ammonia and Amines 561
39.4.1.1.2 Variation 2: Reaction of Sulfenyl Thiocyanates with Amines 565
39.4.1.1.3 Variation 3: Reaction of S-Alkyl Thiosulfonates with Amines 565
39.4.1.1.4 Variation 4: Reaction of $N$-(Alkylsulfanyl)phthalimides with Amines 566
39.4.1.1.5 Variation 5: Reaction of 1-Alkyl-2-(alkyldisulfanyl)pyridinium Salts with Amines .................................................. 566
39.4.1.2 Method 2: Synthesis from Alkanethiols or Dialkyl Disulfides ........ 567
39.4.1.2.1 Variation 1: Reaction of Thiols with $N$-Chloroamines .......... 567
39.4.1.2.2 Variation 2: Reaction of Thiols with Azides ....................... 568
39.4.1.2.3 Variation 3: Reaction of Dialkyl Disulfides with Amines .......... 568
39.4.1.2.4 Variation 4: Reaction of Dialkyl Disulfides with Lithium Amides 568
39.4.1.3 Method 3: Reaction of a Chloromethyl Sulfoxide with an Amine .. 569
39.4.1.4 Method 4: Transformation of $N$-Alkylidene Sulfenamides ....... 569

39.10 Product Class 10: Acyclic Di- and Polysulfides
R. Sato and T. Kimura

39.10 Product Class 10: Acyclic Di- and Polysulfides .......................... 573

39.10.1 Product Subclass 1: Monoalkyl Disulfides ................................ 573

39.10.1.1 Synthesis of Product Subclass 1 ........................................ 574
39.10.1.1.1 Method 1: Preparation of Hydrodisulfides ...................... 574
39.10.1.1.1.1 Variation 1: Preparation of Alkyl Hydrodisulfides .......... 574
39.10.1.1.1.2 Variation 2: Preparation of Haloalkyl or Hydroxyalkyl Hydrodisulfides 574
39.10.1.1.2 Method 2: Preparation of Halo Disulfides ................. 574

39.10.2 Product Subclass 2: Monoalkyl Polysulfides .......................... 575
39.10.2.1 Synthesis of Product Subclass 2 ........................................ 575
39.10.2.1.1 Method 1: Preparation of Hydropolysulfides ................. 575
39.10.2.1.2 Method 2: Preparation of Chloro Polysulfides .............. 575

39.10.3 Product Subclass 3: Metal Salts of Alkyl Di- and Polysulfides .... 576

39.10.4 Product Subclass 4: Symmetrical Dialkyl Disulfides ................ 576
39.10.4.1 Synthesis of Product Subclass 4 ........................................ 577
39.10.4.1.1 Method 1: Oxidation of Thiols or Thiolate Ions ............... 577
39.10.4.1.1.1 Variation 1: Oxidation with Halogens .................... 577
39.10.4.1.1.2 Variation 2: Oxidation with Peroxides .................... 577
39.10.4.1.3 Variation 3: Oxidation with Diethyl Azodicarboxylate .... 578
39.10.4.1.4 Variation 4: Metal-Ion-Catalyzed Oxidation ....................................................... 578
39.10.4.1.5 Variation 5: Oxidation with Tellurite ...................................................................... 579
39.10.4.1.2 Method 2: Ring Opening and Coupling of Thiiranes ............................................... 580
39.10.5 Product Subclass 5: Unsymmetrical Dialkyl Disulfides ............................................ 581
39.10.5.1 Synthesis of Product Subclass 5 .................................................................................. 581
39.10.5.1.1 Method 1: Thiolysis ................................................................................................. 581
39.10.5.1.1 Variation 1: With Sulfenamides ............................................................................ 581
39.10.5.1.2 Variation 2: With Thiosulfonates ......................................................................... 582
39.10.5.1.3 Variation 3: With Thiosulfinates ............................................................................ 582
39.10.6 Product Subclass 6: Symmetrical Dialkyl Polysulfides .............................................. 583
39.10.6.1 Synthesis of Product Subclass 6 .................................................................................. 583
39.10.6.1.1 Method 1: Reaction of Disulfides with Alkanesulfenyl Chlorides ......................... 583
39.10.6.1.1 Variation 1: Reaction of Thiols with Sulfur Dichloride ........................................... 583
39.10.6.1.2 Variation 2: Reaction of Thiosulfonates with Potassium Sulfide .............................. 584
39.10.7 Product Subclass 7: Unsymmetrical Dialkyl Polysulfides ........................................... 584
39.10.7.1 Synthesis of Product Subclass 7 .................................................................................. 585
39.10.7.1.1 Method 1: Reaction of Thiols with N-(Methyldisulfanyl)phthalimide ....................... 585
39.10.7.1.2 Method 2: Reaction of Alkyl Chloro Trisulfides with Alkenes ................................. 586

39.11 Product Class 11: Thiiranes and Derivatives
M. Saito and J. Nakayama

39.11 Product Class 11: Thiiranes and Derivatives .................................................................. 589
39.11.1 Product Subclass 1: Thiirane 1,1-Dioxides .................................................................. 589
39.11.1.1 Synthesis of Product Subclass 1 .................................................................................. 589
39.11.1.1.1 Method 1: Oxidation of Thiiranes .......................................................................... 589
39.11.1.1.2 Method 2: Base-Promoted Cyclizations of Sulfones ............................................... 590
39.11.1.1.3 Method 3: Synthesis of Symmetrical Thiirane 1,1-Dioxides by the Dimerization of Alkanesulfonfonyl Chlorides .............................................................. 592
39.11.1.1.4 Method 4: Synthesis from Thiocarbonyl Compounds and Diazooalkanes .............. 592
39.11.1.1.5 Method 5: Reduction of Thiirene 1,1-Dioxides ......................................................... 595
39.11.2 Product Subclass 2: Thiirane 1-Oxides ...................................................................... 595
39.11.2.1 Synthesis of Product Subclass 2 .................................................................................. 595
39.11.2.1.1 Method 1: Oxidation of Thiiranes .......................................................................... 595
39.11.2.1.2 Method 2: Metal-Catalyzed Sulfinyl Transfer to Alkenes ........................................ 597
39.11.3 Product Subclass 3: Thiiranes .................................................................................... 598
39.11.3.1 Synthesis of Product Subclass 3 .................................................................................. 598
39.11.3.1.1 Method 1: Synthesis from Alkenes .......................................................................... 598
39.11.3.1.1 Variation 1: Sulforation with Sulfur, Sulfur Dichloride, or Sulfenyl Halides ........... 598
39.11.3.1.2 Variation 2: Sulforation with 1,2,3,4-Thiatriazoles .................................................... 602
39.11.3.1.3 Variation 3: Sulforation with Sulfinates ................................................................. 603
39.11.3.1.4 Variation 4: Sulforation by Metal-Catalyzed Sulfur Transfer ................................. 605
Method 2: Synthesis from Oxiranes

Variation 1: Ammonium Cerium(IV) Nitrate Catalyzed Sulfuration Using Ammonium Thiocyanate

Variation 2: Ruthenium (or Aluminum, Tin, or Manganese) Catalyzed Sulfurations Using Ammonium Thiocyanate

Variation 3: Titanium-Catalyzed Sulfuration Using Ammonium Thiocyanate or Thiourea as the Sulfur Source

Variation 4: Sulfurations Using Ammonium Thiocyanate or Thiourea in Reactions Catalyzed by Other Metal Salts

Variation 5: Sulfuration Using Polymer- or Solid-Supported Reagents or Catalysts

Variation 6: Sulfuration in Water Using Cyclodextrins

Variation 7: Sulfuration Using Potassium Thiocyanate in Ionic Liquids

Variation 8: Sulfuration Using Thiourea Catalyzed by Silica Gel

Variation 9: Sulfuration Using Potassium Thiocyanate in a Low-Hydrated Solid–Liquid Heterogeneous Medium

Variation 10: Sulfuration Using Thiourea without a Solvent

Variation 11: Sulfuration with Phosphine Sulfides

Variation 12: Sulfuration with Dimethylthioformamide

Variation 13: Sulfuration with 3-Methylbenzothiazole-2(3H)-thione

Variation 14: Sulfuration with Elemental Sulfur or Phosphorus Pentasulfide under Microwave Irradiation

Method 3: Synthesis from Thiocarbonyl Compounds

Variation 1: From Thioketones

Variation 2: From Thioaldehydes

Variation 3: From Thioketone S-Oxides

Method 4: Synthesis from Haloalkanes

Method 5: Synthesis from β-Hydroxylated Thiols

Method 6: Synthesis from Sulfides as Thiolate Precursors

Variation 1: From Thiophosphates

Variation 2: From Cyclic Xanthates or Their Equivalents

Variation 3: From 2-(Alkylsulfanyl)-4,4-dimethyl-4,5-dihydrooxazoles or Thiazoles

Variation 4: From Pyridyl Sulfides, Dithiocarbamates, or Dithiocarbonates

Method 7: Synthesis from Heterocyclic Compounds

Applications of Product Subclass 3 in Organic Synthesis

Method 1: Polymerization

Method 2: Alkene Formation

Method 3: Thiranes as Sulfuration Reagents

Method 4: Thiranes as 1,3-Dipoles

Product Subclass 4: Thiranium Salts

Synthesis of Product Subclass 4

Method 1: Synthesis from Thiranes

Method 2: Synthesis from Alkenes
39.12 Product Class 12: Thietanes, 1,2-Oxathietanes, and Derivatives
E. Block

39.12 Product Subclass 1: Thietanes and Derivatives
E. Block

39.12.1 Product Subclass 1: Thietanes and Derivatives

39.12.1.1 Synthesis of Thietanes

39.12.1.1.1 Method 1: Reaction of 1,3-Dihalides or 1,3-Disulfonates with Sulfide Ion

39.12.1.1.1.2 Method 2: Reaction of Dienes with Sulfur Compounds

39.12.1.1.1.2.1 Method 1: Photochemical or Thermal Cycloaddition of Thiocarbonyl Compounds and Alkenes

39.12.1.1.1.2.1.1 Variation 1: Intermolecular Processes

39.12.1.1.1.2.1.2 Variation 2: Intermolecular Processes Involving Metal Complexes of Thioaldehydes

39.12.1.1.1.2.1.3 Variation 3: Intramolecular Processes

39.12.1.1.1.2.2 Method 2: Reaction of Thiones with Quadricyclane

39.12.1.1.1.3 Method 1: Synthesis from 1-Halo-3-sulfanylpropanes, 3-Sulfanylpropanols, and Related Compounds

39.12.1.1.1.3.1 Method 1: Synthesis from 1-Halo-3-sulfanylpropanes, 3-Sulfanylpropanols, and Related Compounds

39.12.1.1.1.3.1.1 Variation 1: From 2-(Chloromethyl)oxirane-Related Systems

39.12.1.1.1.3.1.2 Variation 2: Nucleophile-Induced Cyclization of O,O-Diethyl S-(1,3-Diaryl-3-oxopropyl) Phosphorodithioates

39.12.1.1.1.3.2 Method 2: Intramolecular Sulfenyl Bromide–Alkene Addition

39.12.1.1.2 Synthesis by Ring Transformation

39.12.1.1.2.1 Method 1: Ring Enlargement of Thiiranes and Derivatives

39.12.1.1.2.1.1 Variation 1: From 2-(Chloromethyl)thiirane

39.12.1.1.2.1.2 Variation 2: From Thiirane Alcohols under Mitsunobu Conditions

39.12.1.1.2.1.3 Variation 3: From Thiiranes and 3-Chloroallylt lithium

39.12.1.1.2.2 Method 2: Ring Contraction by Desulfurization of 1,2-Dithiolanes

39.12.1.1.2.3 Method 3: Ring Contraction of Diazothiolanones by Wolff Rearrangement

39.12.1.1.2.4 Method 4: Ring Contraction–Rearrangement of Penams
39.12.1.1.2.5 Method 5: Ring Contraction–Rearrangement of 4-(Iodomethyl)-
4,5-dihydrothiazolium Salts with Base .......................... 679
39.12.1.1.2.6 Method 6: Synthesis from 1,3-Dioxan-2-ones ...................... 680
39.12.1.1.2.7 Method 7: Ring Contraction on Photolysis of 2H-Thiopyran-3(6H)-ones 680
39.12.1.1.3 Synthesis by Substituent Modification .................................. 681
39.12.1.1.3.1 Substitution of Existing Substituents .................................. 681
39.12.1.1.3.1.1 Method 1: Direct Free-Radical Acetoxylation of Thietanes .... 681
39.12.1.1.3.1.1.1 Method 2: Replacement of Hydrogen with Nitrogen Heterocycles ...... 681
39.12.1.1.3.1.2 Of Metals ................................................................... 683
39.12.1.1.3.1.2.1 Method 1: Desilylation with Tetrabutylammonium Fluoride ... 683
39.12.1.1.3.1.3 Of Oxygen .................................................................. 683
39.12.1.1.3.1.3.1 Method 1: Formation of 3-Alkylidenethietanes .............. 683
39.12.1.1.3.1.3.2 Method 2: Formation of Hydrazones and Diazo Compounds .... 683
39.12.1.1.3.1.3.3 Method 3: Reductive Amination via the Leuckart Reaction .... 684
39.12.1.1.3.2 Addition Reactions ........................................................... 684
39.12.1.1.3.2.1 Method 1: Reduction with Lithium Aluminum Hydride or Sodium Borohydride ................................................. 684
39.12.1.1.3.2.2 Method 2: Cycloaddition Reactions ............................... 685
39.12.1.1.3.3 Modification of Substituents ............................................. 685
39.12.1.1.3.3.1 Method 1: Oxidation of Thietan-3-ol to Thietan-3-one ..........685
39.12.1.1.3.3.2 Method 2: Reduction of Thietane 1-Oxide and 1,1-Dioxide to Thietane .......... 685
39.12.1.1.3.4 Applications of Thietanes in Organic Synthesis ..................... 686
39.12.1.1.3.4.1 Method 1: Electrophile-Induced Ring Opening .................. 686
39.12.1.1.3.4.2 Method 2: Regiospecific Carbonylation and Ring Expansion of Thietanes ......... 687
39.12.1.1.3.4.3 Method 3: Synthesis of Isothiazolidines by Reaction of Nitrenes with Thietanes ................................................................. 687
39.12.1.2 Thietane 1-Oxides and Derivatives .............................................. 688
39.12.1.2.1 Synthesis by Ring-Closure Reactions .................................... 688
39.12.1.2.1.1 By Formation of One S—C and One C—C Bond .................. 688
39.12.1.2.1.2 By Formation of One S—C Bond ..................................... 688
39.12.1.2.1.2.1 Method 1: Intramolecular Cycloaddition of Sulfenic Acid to Alkenes .... 688
39.12.1.2.1.2.2 Method 2: Synthesis by Addition Reactions .................... 689
39.12.1.2.1.2.2.1 Addition of Heteroatoms ....................................... 689
39.12.1.2.1.2.2.2 Method 1: S-Oxidation ....................................... 689
39.12.1.2.1.2.2.2.1 Method 2: S-Amidation .................................... 690
39.12.1.2.2 Rearrangement of Substituents .......................................... 690
39.12.1.2.2.1 Method 1: Isomerization of Thietane Sulfoxides .................. 690
39.12.1.3 Thietane 1,1-Dioxides and Derivatives ........................................ 691
39.12.1.3.1 Synthesis by Ring-Closure Reactions .................................... 691
By Formation of Two S—C Bonds ........................................... 691
Method 1: Addition of Sulfur Dioxide to Dienes ........................ 691
By Formation of One S—C and One C—C Bond .......................... 691
Method 1: Addition of Sulfenes to Unsaturated Compounds .......... 691
By Formation of One C—C Bond ............................................ 693
Method 1: Base-Catalyzed Cyclization of Haloalkyl Sulfones .......... 693
Synthesis by Ring Transformation ........................................ 694
Method 1: Photochemical Insertion of Sulfur Dioxide into Cyclopropanes 694
Method 2: Photoinduced Rearrangement of 8-Thia-1-aza-bicyclo[4.2.1]nona-2,4-diene 8,8-Dioxide .............. 695
Synthesis by Substituent Modification ...................................... 695
Substitution of Existing Substituents ....................................... 695
Of Hydrogen ........................................................................ 695
Method 1: Hydrogen–Deuterium Exchange ............................... 695
Method 2: Lithiation of Thietane 1,1-Dioxides .......................... 695
Method 3: Direct Free-Radical Halogenation of Thietane 1,1-Dioxides .......................... 696
Of Metals ............................................................................ 696
Method 1: Replacement of Metals by Carbon and Other Elements 696
Method 2: Replacement of Lithium by Halogen ........................ 697
Of Carbon ........................................................................... 697
Method 1: Replacement of an Acyl Group in \(\alpha\)-Acylthietane 1,1-Dioxides with Bromine or Iodine .......................... 697
Of Oxygen ........................................................................... 698
Method 1: Formation of Thietane-3-thione 1,1-Dioxides, Thietane-3-spirothiirane 1,1-Dioxides, and 3-Alkylidenethietane 1,1-Dioxides .............. 698
Addition Reactions ............................................................ 698
Method 1: Reduction by Catalytic Hydrogenation or with Sodium Borohydride ............................................ 698
Method 2: Addition of Organic Groups .................................... 699
Variation 1: CycloadDITION of 1,3-Dienes ................................. 699
Variation 2: 1,3-Dipolar Cycloaddition of Diazoaalkanes to Thiete 1,1-Dioxides ............................................ 699
Variation 3: Addition of Carbanions ......................................... 700
Method 3: Addition of Heteroatoms ........................................ 701
Variation 1: Addition of Halogens to Thiete 1,1-Dioxides .......... 701
Variation 2: Addition of Oxygen ............................................. 701
Variation 3: Addition of \(\alpha,\omega\)-Dithiols to Thiete 1,1-Dioxides .... 703
Variation 4: Addition of Amines to 2-Methylthietane 1,1-Dioxides 703
Sulfonium and Oxosulfonium Salts and Their Ylides ................. 703
Synthesis by Ring-Closure Reactions ....................................... 703
### Product Subclass 2: 1,2-Oxathietanes and Derivatives

Table of Contents

39.13.4.1 Cyclic Diheteroatom-Substituted $\lambda^4$-Sulfanes ........................................ 757
39.13.4.1.2 Cyclic Sulfoxides ........................................................................ 758
39.13.4.1.2.1 Achiral and Racemic Cyclic Sulfoxides ..................................... 758
39.13.4.1.2.1.1 Method 1: Oxidation with Oxygen .......................................... 759
39.13.4.1.2.1.1.1 Variation 1: Photochemical Oxidation ................................. 759
39.13.4.1.2.1.1.2 Variation 2: Catalyzed by Metals or Organic Compounds .... 760
39.13.4.1.2.1.2 Method 2: Oxidation with Hydrogen Peroxide ..................... 761
39.13.4.1.2.1.3 Method 3: Oxidation with Organic Peroxides ................. 765
39.13.4.1.2.1.4 Method 4: Oxidation with Peroxy Acids ............................. 766
39.13.4.1.2.1.5 Method 5: Oxidation with Halogen Derivatives ................. 768
39.13.4.1.2.1.5.1 Variation 1: Using Molecular Halogens ............................ 768
39.13.4.1.2.1.5.2 Variation 2: Using Periodates ........................................... 769
39.13.4.1.2.1.5.3 Variation 3: Using Periodic Acid ........................................ 770
39.13.4.1.2.1.5.4 Variation 4: Using Hypervalent Iodine(III) Reagents .......... 770
39.13.4.1.2.1.5.5 Variation 5: Using Hypochlorites ........................................ 770
39.13.4.1.2.1.5.6 Variation 6: Using Chlorites, Bromites, and Bromates .... 771
39.13.4.1.2.1.5.7 Variation 7: Using Chloramine-T and Bromamine-T .... 771
39.13.4.1.2.1.6 Method 6: Oxidation with Nitrogen Reagents ................... 771
39.13.4.1.2.1.6.1 Variation 1: Using Nitric Acid ........................................... 771
39.13.4.1.2.1.6.2 Variation 2: Using Nitrates ............................................. 771
39.13.4.1.2.1.6.3 Variation 3: Using Other Nitrogen Derivatives ............... 772
39.13.4.1.2.1.7 Method 7: Oxidation with Metal Compounds .................... 772
39.13.4.1.2.1.8 Method 8: Oxidation with Compounds Having a N–O Bond .... 772
39.13.4.1.2.1.9 Method 9: Oxidation with Dimenthyl Selenoxide ............. 772
39.13.4.1.2.1.10 Method 10: Oxidation with Sulfoxides ............................ 773
39.13.4.1.2.1.11 Method 11: Electrochemical Oxidation ............................ 773
39.13.4.1.2.1.12 Method 12: Cycloaddition Reactions ................................. 774
39.13.4.1.2.1.12.1 Variation 1: From Sulfur Monoxide by [4 + 1] or [6 + 1] Cycloaddition with 1,3-Dienes or 1,3,5-Trienes ........................................... 774
39.13.4.1.2.1.12.2 Variation 2: From Thioketone S-Oxides by [3 + 2] Cycloaddition .................... 774
39.13.4.1.2.1.12.3 Variation 3: From Thioaldehyde and Thioketone S-Oxides by Diels–Alder Reactions ......................................................... 775
39.13.4.1.2.1.12.4 Variation 4: From Thiophene S-Oxides ............................ 777
39.13.4.1.2.1.13 Method 13: Cyclization via Anionic Intermediates .......... 777
39.13.4.1.2.1.13.1 Variation 1: Intramolecular Nucleophilic Addition ........... 777
39.13.4.1.2.1.13.2 Variation 2: Intermolecular Nucleophilic Reactions .......... 778
39.13.4.1.2.1.14 Method 14: Radical Cyclization ......................................... 779
39.13.4.1.2.1.15 Methods 15: Miscellaneous Methods ............................... 779
39.13.4.1.2.2 Optically Active Cyclic Sulfoxides ......................................... 782
39.13.4.1.2.2.1 Method 1: Oxidation with Achiral Reagents ....................... 782
39.13.4.1.2.2.2 Method 2: Oxidation with Alkyl Peroxides and Chiral Metal Catalysts ............ 784
39.13.4.1.2.2.2.1 Variation 1: Monooxidation of 1,3-Dithiolanes and 1,3-Dithianes Using tert-Butyl Hydroperoxide, Titanium(IV) Isopropoxide, and (R,R)-Diethyl Tartrate ........................................... 784
39.13.4.1.2.2.2.2 Variation 2: Dioxidation of 1,3-Dithiolanes and 1,3-Dithianes with Titanium(IV) Isopropoxide and (R,R)-Diethyl Tartrate ........................................... 788
Variations 3: Other Variations ........................................... 789

Method 3: Oxidation Using Other Chiral Reagents ................. 791

Method 4: Biological Oxidations ........................................ 792

Method 5: Resolution of Racemic Mixtures .......................... 795

Cyclic Sulfimides .......................................................... 795

Variation 1: Synthesis of N-Sulfonylsulfimides ...................... 796

Variation 2: Synthesis of N-Alkyl- and N-Arylsulfimides ......... 797

Variation 3: Synthesis of N-Acylsulfimides and Derivatives .... 798

Method 2: Amination of Sulfoxides with Compounds Containing an Amino Group ........................................ 799

Variation 3: Synthesis of N-Unsubstituted Sulfimides ............. 799

Optically Active Cyclic Sulfimides ...................................... 800

Applications of Sulfimides in Organic Synthesis ..................... 800

Method 1: Synthesis of Sulfoximides by Oxidative Amination of Cyclic Sulfimides .................................................... 801

Method 3: Synthesis of Ketene Dithioacetals from Cyclic Sulfimides .... 801

Method 4: Synthesis of Heterocycles via Nitrene Intermediates by Photolysis or Thermolysis of Cyclic Sulfimides ............... 802

Product Subclass 5: Cyclic Alkanethiolates of Group 1, 2, and 13–15 Metals

Synthesis of Product Subclass 5 ........................................... 811

Method 1: Synthesis of Dithiametallacycles ............................ 811

Method 2: Coordination of Dithiaalkanes to Metals ................... 811

Method 3: Dimerization of Metal Thiolates ............................ 812

Method 4: Addition to C=S or Si=S Bonds ............................ 812

Method 5: Transmetalation of Cyclic Metal Alkanethiolates ......... 812

Product Subclass 6: Cyclic Alkanethiolates of Group 3–12 Metals

Synthesis of Product Subclass 6 ........................................... 813

Method 1: Reactions of Metal Halides with an Alkanethiol, with an Alkanethiol and Base, or with a Main Group Alkanethiolate .... 813

Variation 1: Reactions between a Metal Complex and an Alkanethiol .... 813

Variation 2: Reaction of a Metal Complex with an Alkanethiol and a Base ... 815

Variation 3: Reactions of Metal Complexes with Main Group Alkanethiolates .... 816
39.13.6.1.2 Method 2: Reactions between Basic Ligand Complexes and Alkanethiols with the Displacement of a Protonated Ligand 818
39.13.6.1.3 Method 3: Reactions of Alkanethiols with Metal Complexes under Reducing Conditions 819
39.13.6.1.3.1 Variation 1: Reduction of the Metal by an Added Reducing Agent 819
39.13.6.1.3.2 Variation 2: Reduction of the Metal by an Excess of an Alkanethiol or a Phosphinethiol 820
39.13.6.1.4 Method 4: Reaction of Coordinated Sulfides with Electrophiles 821
39.13.6.1.5 Method 5: Oxidative Addition of an Alkanethiol or a Dialkyl Disulfide to a Metal Complex 822
39.13.6.1.5.1 Variation 1: Oxidative Addition of an Alkanethiol to a Metal Complex 822
39.13.6.1.5.2 Variation 2: Oxidative Addition of a Dialkyl Disulfide to a Metal Complex 824
39.13.6.1.6 Method 6: Reaction of an Alkanethiolate–Metal Complex with a Second Metal Complex 824
39.13.6.1.7 Methods 7: Miscellaneous Methods 825
39.13.6.2 Applications of Product Subclass 6 in Organic Synthesis 826
39.13.6.2.1 Method 1: Catalytic Carbonylation Reactions with Cyclic Alkanethiolates as Catalyst Precursors 826
39.13.6.2.2 Method 2: Catalytic Asymmetric Organozinc Additions to Aldehydes 828

39.13.7 Product Subclass 7: Cyclic Dialkyl Sulfides
M. Segi

39.13.7 Product Subclass 7: Cyclic Dialkyl Sulfides 833
39.13.7.1 Synthesis of Product Subclass 7 833
39.13.7.1.1 Method 1: Synthesis from Metal Sulfides or Thiols 833
39.13.7.1.1.1 Variation 1: By Substitution with Dihalides 833
39.13.7.1.1.2 Variation 2: By Substitution with Disulfonates 834
39.13.7.1.1.3 Variation 3: By Substitution with Cyclic Ammonium Salts 836
39.13.7.1.1.4 Variation 4: By Addition to Enones 836
39.13.7.1.1.5 Variation 5: By Reaction with Dioxiranes 837
39.13.7.1.2 Method 2: Synthesis from Acyclic Sulfides 837
39.13.7.1.2.1 Variation 1: By Dieckmann Condensation 837
39.13.7.1.2.2 Variation 2: By Henry Reaction 838
39.13.7.1.3 Method 3: Synthesis from Dialkyl Disulfides 839
39.13.7.1.3.1 Variation 1: By Addition to Alkenes 839
39.13.7.1.3.2 Variation 2: By Radical Cyclization 839
39.13.7.1.3.3 Variation 3: By Desulfurization 840
39.13.7.1.4 Method 4: Synthesis from Sulfur Dichloride by Addition to Dienes 841
39.13.7.1.5 Method 5: Synthesis from Vinylthiranes by Ring Expansion 841
39.13.7.1.6 Method 6: Synthesis from Cyclic Sulfonium Salts 842
39.13.7.1.6.1 Variation 1: By Debenzylation 842
39.13.7.1.6.2 Variation 2: By Ring Expansion via Reductive Bond Cleavage 843
39.13.7.1.6.3 Variation 3: By [2,3]-Sigmatropic Rearrangement via Cyclic Sulfonium Ylides 843
39.13.7.1.7 Method 7: Synthesis from Thioaldehydes or Thioketones by [4 + 2] Cycloaddition 844
Method 8: Synthesis from Thiocarbonyl Ylides by 1,3-Dipolar Cycloaddition ............................................. 845

Applications of Product Subclass 7 in Organic Synthesis ................. 845
Method 1: Use as Organocatalysts ............................................. 845
Variation 1: Asymmetric Synthesis of Epoxides from Aldehydes ........ 845
Variation 2: Asymmetric Synthesis of Aziridines from Imines ............ 846

Product Subclass 8: Cyclic Trialkyloxosulfonium and Trialkylsulfonium Salts and Derivatives
Y. Tang and X.-L. Sun

Synthesis of Product Subclass 8 ............................................. 851
Cyclic Trialkyloxosulfonium Salts ............................................. 851
Method 1: Oxidation ............................................................... 851
Method 2: Anion Exchange ....................................................... 852
Cyclic Trialkylsulfonium Salts ................................................... 852
Method 1: Alkylation of Cyclic Sulfides ...................................... 853
Variation 1: With Halides and Related Reagents ............................. 853
Variation 2: With Alkenes ......................................................... 863
Variation 3: With Alcohols ......................................................... 865
Variation 4: With Ketones ......................................................... 867
Variation 5: With Ethers ............................................................ 867
Variation 6: With Diazocompounds ............................................. 868
Method 2: Ring-Closure Reactions ............................................. 868
Variation 1: From Acyclic Sulfides ............................................. 868
Variation 2: From Thiols ........................................................... 869
Variation 3: From Alkanesulfenyl Halides and Related Compounds ...... 870
Variation 4: From Sulfoxides ....................................................... 871
Method 3: Reaction of Dialkylhalosulfonium Salts ............................ 871
Method 4: Transformation of Cyclic Sulfonium Ylides ....................... 872
Variation 1: With Brønsted Acids ............................................... 872
Variation 2: With Alkylating Agents ........................................... 872
Method 5: Reaction of Cyclic Sulfanyl sulfonium Salts with Alkenes ...... 873
Method 6: Transformation of Cyclic Sulfonium Salts ........................ 874
Variation 1: By Anion Exchange ............................................... 874
Variation 2: By Modification of Remote Functional Groups ................ 875

Product Subclass 9: Cyclic Alkanesulfenic Acid Derivatives
T. Wirth

Synthesis of Product Subclass 9 ............................................... 879
Cyclic Alkanesulfenic Acid Derivatives with a S—O Bond .................... 879
39.13.9.1.1 Method 1: Synthesis of Oxathiolanes ........................................... 879
39.13.9.1.2 Cyclic Alkanesulfenic Acid Derivatives with a S—N Bond .................. 879
39.13.9.1.2.1 Method 1: Synthesis of 3,6-Dihydro-2H-1,2-thiazines and 1,2-Thiazinanones .......................................................... 880
39.13.9.1.2.2 Method 2: Synthesis of 4,5-Dihydroisothiazoles, Dihydrothiadiazoles, and Larger Heterocycles Containing a S—N Bond ..................................................... 880
39.13.9.1.3 Cyclic Alkanesulfenic Acid Derivatives with a S—P Bond .................... 881
39.13.9.1.3.1 Method 1: Synthesis of 1,3,2-Thiazaphospholidines and 1,3,2-Oxathiaphospholanes .......................................................... 881
39.13.10 Product Subclass 10: Cyclic Dialkyl Di- and Polysulfides
R. Sato and T. Kimura

39.13.10 Product Subclass 10: Cyclic Dialkyl Di- and Polysulfides ........................ 885
39.13.10.1 Synthesis of Product Subclass 10 ..................................................... 885
39.13.10.1.1 Cyclic Disulfides .......................................................................... 885
39.13.10.1.1.1 1,2-Dithiolanes ........................................................................ 886
39.13.10.1.1.1.1 Method 1: Preparation from a Diol Using Sodium Tetrasulfide ......... 886
39.13.10.1.1.1.2 Method 2: Oxidation of a Dithiol Using Oxygen ...................... 886
39.13.10.1.1.1.3 Method 3: Oxidation of a Dithiol Using Iodine ......................... 887
39.13.10.1.1.2 1,2-Dithianes .............................................................................. 888
39.13.10.1.1.2.1 Method 1: Oxidation of a Dithiol Using Sulfur in Liquid Ammonia ... 888
39.13.10.1.1.2.2 Method 2: Oxidation of a Thiol Using Bis(1H-benzimidazol-1-yl) Sulfide.... 889
39.13.10.1.1.2.3 Method 3: Oxidation of a Dithiol Using Oxygen ...................... 889
39.13.10.1.1.3 3,6-Dihydro-1,2-dithiins .............................................................. 890
39.13.10.1.1.3.1 Method 1: Reaction of a 1,3-Diene with Sulfur ......................... 890
39.13.10.1.1.3.2 Method 2: Oxidation of a Dithiol Using Iron(III) Chloride .......... 890
39.13.10.1.1.3.3 Method 3: Diels–Alder Reaction of 1,3-Dienes with a 1,2-Dithietane ... 891
39.13.10.1.1.3.4 Method 4: Oxidation of a Dithiol Using Manganese(IV) Oxide ......... 891
39.13.10.1.1.4 Disulfides within Higher Ring Systems .......................................... 893
39.13.10.1.1.4.1 Method 1: Preparation from a Dibromide Using Disodium Disulfide .... 893
39.13.10.1.1.4.2 Method 2: Oxidation of a Dithiol Using Iron(III) Chloride .......... 894
39.13.10.1.1.4.3 Method 3: Preparation from a Bis(diazo) Compound Using Sulfur .... 894
39.13.10.1.2 Cyclic Polysulfides ........................................................................ 895
39.13.10.1.2.1 1,2,3-Trithiolanes ........................................................................ 895
39.13.10.1.2.1.1 Method 1: Sulfurization of a 1,2-Dithiol .................................... 895
39.13.10.1.2.1.2 Method 2: Sulfurization of Tetrafluoroethene .......................... 895
39.13.10.1.2.1.3 Method 3: Sulfurization of Norbornene ..................................... 896
39.13.10.1.2.2 1,2,3-Trithianes ........................................................................... 897
39.13.10.1.2.2.1 Method 1: Sulfurization of Sodium S,S'-Propane-1,3-diyl Bis(thiosulfate) ... 897
39.13.10.1.2.2.2 Method 2: Sulfurization of Diphenylthiiranes .......................... 897
39.13.10.1.2.3 1,2,3-Trithiepane ........................................................................ 898
39.13.10.1.2.3.1 Method 1: Sulfurization of a 3,6-Dihydro-1,2-dithiin .......................... 898
39.13.10.1.2.4 1,2,3,4-Tetrathiepane ........................................................................ 898
39.13.10.1.2.5 1,5-Dihydro-2,3,4-benzotriothiepanes .................................................. 898
39.13.10.1.2.5.1 Method 1: Sulfurization of 1,2-Phenylenedimethanethiol ....................... 898
39.13.10.1.2.6 Higher Cyclic Polysulfides ..................................................................... 899
39.13.10.1.2.6.1 Method 1: Sulfurization of Naphthalene-1,8-diyldimethanethiol ............. 899
39.13.10.1.2.6.2 Method 2: Sulfurization of Ethane-1,2-disulfenyl Dichloride .................... 900

39.14 Product Class 14: Alkaneselenonic Acids and Acyclic Derivatives
J. Drabowicz, P. Kiełbasiński, P. Łyżwa, and M. Mikołajczyk

39.14.1 Product Subclass 1: Alkaneselenonic Acids ..................................................... 904
39.14.1.1 Synthesis of Product Subclass 1 ...................................................................... 904
39.14.1.1.1 Method 1: Oxidation of Alkaneseleninic Acids ........................................... 904
39.14.1.1.2 Method 2: Oxidation of Diselenides ......................................................... 905

39.14.2 Product Subclass 2: Alkaneselenonates ............................................................. 906
39.14.2.1 Synthesis of Product Subclass 2 ...................................................................... 906
39.14.2.1.1 Method 1: Alkylation of the Silver Salts of Perfluoroalkaneselenonic Acids 906

39.14.3 Product Subclass 3: Alkaneselenonamides .......................................................... 906
39.14.3.1 Synthesis of Product Subclass 3 ...................................................................... 906
39.14.3.1.1 Method 1: Reaction of a Selenonate with an Amine ..................................... 906

39.15 Product Class 15: Acyclic Dialkyl Selenones and Derivatives
J. Drabowicz, J. Lewkowski, W. Kudelska, and T. Girek

39.15.1 Product Subclass 1: Dialkyltetrahalo-\(\lambda^6\)-selanes ............................................. 909
39.15.1.1 Synthesis of Product Subclass 1 ...................................................................... 910
39.15.1.1.1 Method 1: Reaction of Bis(trifluoromethyl)selenium Difluoride with Elemental Fluorine ................................................................. 910

39.15.2 Product Subclass 2: Dialkyl Selenones ............................................................... 910
39.15.2.1 Synthesis of Product Subclass 2 ...................................................................... 910
39.15.2.1.1 Method 1: Oxidation of Selenides or Selenoxides ........................................ 911
39.15.2.1.1.1 Variation 1: Oxidation with Peroxy Derivatives ....................................... 911
39.15.2.1.1.2 Variation 2: Oxidation with Sodium Hypochlorite ................................... 912
39.15.2.1.2 Method 2: Addition of Alkoxides to Methyl Styryl Selenone ......................... 913
Product Class 16: Alkaneseleninic Acids and Acyclic Derivatives

S. Braverman, M. Cherkinsky, and S. Levinger

Product Subclass 1: Alkylselenium Trihalides

Synthesis of Product Subclass 1

- Method 1: Synthesis from Diselenides
- Method 2: Synthesis from Seleninic Acids

Product Subclass 2: Alkaneseleninyl Chlorides

Synthesis of Product Subclass 2

- Method 1: Oxidation of Selenenyl Chlorides
  - Variation 1: Ozonization
  - Variation 2: Oxidation with Nitrogen Dioxide

Product Subclass 3: Alkaneseleninic Acids and Their Salts

Synthesis of Product Subclass 3

- Method 1: Oxidation of Alkyl Selenocyanates
- Method 2: Hydrolysis of Alkylselenium Trihalides
- Method 3: Hydrolysis of Seleninic Anhydrides
- Method 4: Hydrolysis of Selenoseleneninates
- Method 5: Oxidative Cleavage of Dialkyl Diselenides
  - Variation 1: Oxidation with Nitric Acid
  - Variation 2: Oxidation with Hydrogen Peroxide
- Method 6: Oxidation of Alkaneselenenic Acids

Applications of Product Subclass 3 in Organic Synthesis

Product Subclass 4: Alkaneseleninic Acid Esters (Seleninates)

Synthesis of Product Subclass 4

- Method 1: Alkylation of Seleninate Salts
- Method 2: Alcoholysis of Alkaneseleninyl Chlorides or Anhydrides

Product Subclass 5: Alkaneseleninic Anhydrides

Synthesis of Product Subclass 5

- Method 1: Oxidation of Diselenides
  - Variation 1: Ozonization
  - Variation 2: With tert-Butyl Hydroperoxide

Product Class 17: Acyclic Dialkyl Selenoxides and Derivatives

T. Shimizu and N. Kamigata

Product Subclass 1: Acyclic Dialkylselenium Dihalides

Synthesis of Product Subclass 1

- Method 1: Halogenation of Selenides
Variation 1: With Molecular Halogens .................................. 930
Variation 2: With Phosphorus Pentachloride or Silver(II) Fluoride .... 931
Method 2: Addition of Selenium Tetrahalides to Alkenes .............. 931
Method 3: Reaction of Ketones with Selenium Oxychloride .......... 932
Method 4: Reaction of Phenacyl Bromides with Selenium Powder... 933
Methods 5: Miscellaneous Methods ..................................... 933

Product Subclass 2: Acyclic Dialkyl Selenoxides ...................... 934

Synthesis of Product Subclass 2 ........................................ 934

Method 1: Oxidation of Dialkyl Selenides ............................. 935
Variation 1: Using Hydrogen Peroxide ................................ 935
Variation 2: Using 3-Chloroperoxybenzoic Acid ..................... 935
Variation 3: Using Sodium Periodate ................................... 936
Variation 4: Using Ozone .................................................. 936
Method 2: Synthesis from Dialkylselenium Dihalides ............... 937
Variation 1: Hydrolysis of Dialkylselenium Dihalides ............... 937
Variation 2: Dehalogenation Oxidation of Dialkylselenium Dibromides with Silver(I) Oxide ................................. 938

Product Class 18: Alkaneselenols
J. V. Comasseto and A. S. Guarezemini

Synthesis of Product Class 18 ............................................ 941

Method 1: Reaction of Alkylating Agents with Alkali Metal Selenides .... 941
Method 2: Reaction of Selenourea with Alkyl Halides Followed by Hydrolysis ............................................... 942
Method 3: Reduction of Dialkyl Diselenides and Alkyl Selenocyanates .... 942
Variation 1: With Hypophosphorous Acid ................................ 943
Variation 2: With Sodium in Liquid Ammonia Followed by Acidification ... 944
Variation 3: With Sodium Borohydride or Lithium Aluminum Hydride Followed by Acidification ........................................ 944
Method 4: Reaction of Elemental Selenium with Alkyl Grignard or Alkyllithium Compounds Followed by Hydrolysis ............... 945

Product Class 19: Acyclic Alkaneselenolates

Product Subclass 1: Alkaneselenolates of Group 1, 2, and 13–15 Metals
J. V. Comasseto and A. S. Guarezemini

Synthesis of Product Subclass 1 ............................................ 947
Arsenic Alkaneselenolates .................................................. 947
Method 1: Reaction of Alkaneselenols or Sodium Alkaneselenolates with Amino- or Haloarsines ................................. 947
Method 2: Reaction of Trimethyl(methylselanyl)silane with Haloarsines 948
Silicon Alkaneselenolates .................................................. 948

Method 1: Reaction of Metal Alkaneselenolates with Halosilanes 949
Method 2: Alkylation of Sodium Trimethylsilaneselenolate .......................... 949

Germanium Alkaneselenolates ............................................. 950

Method 1: Reaction of Lithium Ethaneselenolate with Chlorotrimethylgermane 950

Tin Alkaneselenolates .......................................................... 951

Method 1: Reaction of Lithium Ethaneselenolate with Chlorotrimethylstannane 950
Method 2: Reaction of Dialkyl Diselenides with Hydrazine Hydrate Followed by Chlorotriethylstannane ........................ 951

Lead Alkaneselenolates ......................................................... 951

Method 1: Reaction of Lithium Methaneselenolate with Chlorotrimethylplumbane 951

Boron Alkaneselenolates ....................................................... 952

Aluminum Alkaneselenolates ................................................. 952

Gallium Alkaneselenolates ..................................................... 952

Method 1: Reaction of Ethaneselenol with Bromodisopropylgallium(III) 953
Method 2: Reaction of Ethaneselenol with Diiodo(methylsulfanyl)gallium(III) 953

Indium Alkaneselenolates ...................................................... 954

Method 1: Insertion of Elemental Selenium into C—Mg Bonds 954
Method 1: Insertion of Elemental Selenium into C—Li Bonds ........................ 954
Variation 1: Reaction of Alkylithiums and Elemental Selenium ..................... 955
Variation 2: Reaction of Lithium Enolates and Elemental Selenium .................. 955
Variation 3: Reaction of Alkyl Selenocyanates with Lithium Hydrides .............. 956

Sodium Alkaneselenolates ..................................................... 956

Method 1: Deprotonation of Alkaneselenols .................................. 956
Method 2: Reduction of Dialkyl Diselenides .................................. 957
Variation 1: With Metallic Sodium ............................................. 957
Variation 2: With Sodium Borohydride ....................................... 957
Variation 3: With Sodium Hydride ............................................ 957

Potassium Alkaneselenolates .................................................. 958

Method 1: Deprotonation of Alkaneselenols .................................. 958
Method 2: Reaction of Dialkyl Diselenides and Alkyl Selenocyanates with Potassium Hydride .......................... 958
Product Subclass 2: Alkaneselenolates of Group 3–12 Metals
A. Polo and J. Real

Synthesis of Product Subclass 2

Terminal Alkaneselenolates

Method 1: Reaction of a Metal Complex with a Main Group Alkaneselenolate

Method 2: Alkylation of Coordinated Selenides with Alkyl Halides

Method 3: Alkylation of a Hydroselenide Ligand

Method 4: Reaction of a Dialkyl Diselenide with a Metal Complex

Method 5: Reaction of a Main Group Alkaneselenolate with a Metal Complex

Method 6: Miscellaneous Methods

m₂-Alkaneselenolates

Method 1: Synthesis from Alkaneselenols

Method 2: Synthesis from Alkyl Halides via Selenolates

Applications of Product Subclass 2 in Organic Synthesis

Method 1: Propargylic Substitution Reactions Catalyzed by m₂-Alkaneselenolates

Product Class 20: Acyclic Dialkyl Selenides
M. Segi

Synthesis of Product Class 20

Method 1: Synthesis from Alkaneselenols

Method 2: Synthesis from Alkyl Halides via Selenolates
39.20.1.2.1 Variation 1: Unsymmetrical Selenides by Addition to Alkenes ........ 979
39.20.1.2.2 Variation 2: Symmetrical Selenides by Substitution with Alkyl Halides 979
39.20.1.2.3 Variation 3: Unsymmetrical Selenides by the Substitution of Alkaneselenolates .................................................. 981
39.20.1.2.4 Variation 4: By Substitution with Sulfonates, Sulfonium Salts, or Ammonium Salts ...................................................... 982
39.20.1.2.5 Variation 5: By Reaction with Lactones .................................... 983
39.20.1.2.6 Variation 6: By Reaction with Epoxides ..................................... 984
39.20.1.2.7 Variation 7: By Reaction with 4,5-Dihydrooxazoles .................... 984
39.20.1.2 Method 3: Synthesis from Alkaneselenenyl Halides and Other Selanylating Agents ....................................................... 985
39.20.1.4 Method 4: Synthesis from Acyclic Diselenides ................................ 986
39.20.1.4.1 Variation 1: By Additions to Alkenes ........................................ 986
39.20.1.4.2 Variation 2: By Reactions with Carbon Radicals .......................... 987
39.20.1.5 Method 5: Synthesis from Se,Se-Acetals ........................................ 988
39.20.1.6 Method 6: Synthesis from Acyclic Selenoxides .............................. 989
39.20.1.7 Method 7: Synthesis from Selenonium Ylides .................................. 990
39.20.1.8 Methods 8: Miscellaneous Reactions ............................................ 991
39.20.2 Applications of Product Class 20 in Organic Synthesis ...................... 991
39.20.2.1 Method 1: Asymmetric Syntheses Using Chiral Dialkyl Selenides as Catalysts ................................................................. 991

39.21 Product Class 21: Acyclic Trialkylselenonium Salts and Derivatives
Y. Tang and X.-L. Sun

39.21.1 Product Class 21: Acyclic Trialkylselenonium Salts and Derivatives .... 995
39.21.1.1 Synthesis of Product Class 21 ..................................................... 996
39.21.1.1.1 Method 1: Reaction of Selenides with Alkylating Agents .............. 996
39.21.1.1.2 Method 2: Ring-Opening Reaction of Selenetane Derivatives with Alkyl Halides ................................................................. 998
39.21.1.3 Method 3: Reaction of Dialkyl Diselenides with Alkyl Halides .......... 999
39.21.1.4 Method 4: Reaction of Selenium with Alkyl Halides ..................... 1000
39.21.1.5 Method 5: Reaction of Alkoxy(chloro)-\(\lambda^4\)-selenolanes with Grignard Reagents ....................................................... 1001
39.21.1.6 Method 6: Anion Exchange of Selenonium Salts .......................... 1001

39.22 Product Class 22: Alkaneselenenic Acids and Acyclic Derivatives
T. Wirth

39.22.1 Product Class 22: Alkaneselenenic Acids and Acyclic Derivatives ........ 1005
39.22.1.1 Product Subclass 1: Alkaneseleneny Halides .................................. 1005
39.22.1.1.1 Synthesis of Product Subclass 1 .............................................. 1005
39.22.1.1.1.1 Method 1: Synthesis Using Elemental Bromine ................. 1005
39.22.1.1.2 Method 2: Synthesis Using Sulfuryl Chloride .......................... 1006
Product Subclass 2: Alkaneselenenic Acids and Esters

Synthesis of Product Subclass 2

Product Subclass 3: Alkaneselenenamides

Synthesis of Product Subclass 3

Product Subclass 4: (Alkylselanyl)phosphines

Method 1: Synthesis from Diselenides

Variation 1: Reaction of Dialkyl Diselenides with Tetraorganodiphosphines

Variation 2: Reaction of Dialkyl Diselenides with Diphosphine Dioxides and Diphosphine Disulfides

Method 2: Synthesis with Phosphorus Halides

Variation 1: Reaction of Organometallic Reagents with Phosphinoselenoic Chlorides

Variation 2: Reaction of Methyl Trimethylsilyl Selenide with Chlorophosphines

Method 3: Alkylation of S-Alkyl Phosphinoselenothioates and (Selenoxo)phosphines

Product Class 23: Acyclic Di- and Polyselenides

R. Sato and T. Kimura

Product Subclass 1: Monoalkyl Diselenides and Polyselenides and Their Metal Salts

Synthesis of Product Subclass 1

Method 1: Reaction of Alkyl Halides with Metal Diselenides

Variation 1: Reaction with Dilithium Diselenide

Variation 2: Reaction with Bis(methoxymagnesium) Diselenide

Variation 3: Reaction with Disodium Diselenide

Method 2: Reaction of Selenium with Organolithium Reagents Followed by Oxidation

Method 3: Oxidation of Selenols or Metal Selenolates

Method 4: Hydrolysis of Selenocyanates

Method 5: Synthesis from Se-Alkyl Selenosulfates

Variation 1: Hydrolysis of Selenosulfates

Variation 2: Pyrolysis of (2-Aminoethyl)selenosulfuric Acid

Method 6: Reduction of a Selenenic Acid

Product Subclass 3: Symmetrical Dialkyl Polyselenides

Synthesis of Product Subclass 3

Method 1: Synthesis from an Alkyl Halide and Selenium
Product Class 24: Seleniranes and Derivatives
M. Saito and J. Nakayama

Product Class 24: Seleniranes and Derivatives ........................................ 1023

Product Subclass 1: Seleniranes .............................................................. 1023

Synthesis of Product Subclass 1 .............................................................. 1023

Applications of Product Subclass 1 in Organic Synthesis ......................... 1024

Method 1: Alkene Formation ................................................................. 1024

Method 2: Seleniranes as Selenation Reagents ........................................ 1026

Product Subclass 2: Seleniranium Salts .................................................. 1026

Synthesis of Product Subclass 2 .............................................................. 1026

Applications of Product Subclass 2 in Organic Synthesis ......................... 1028

Method 1: Asymmetric Synthesis ............................................................ 1028

Method 2: Heterocycle Synthesis ........................................................... 1030

Product Class 25: Selenetanes and Derivatives
E. Block

Product Class 25: Selenetanes and Derivatives ........................................ 1033

Product Subclass 1: Selenetanes .............................................................. 1033

Synthesis of Product Subclass 1 .............................................................. 1033

Synthesis by Ring-Closure Reactions ....................................................... 1033

Method 1: Synthesis from 1,3-Dihalides or Related Compounds with Selenide Ions ................................................................. 1033

Method 2: Synthesis from 2-Substituted 2-(Chloromethyl)oxiranones and Selenide .......................................................... 1035

Method 3: Synthesis from Norbornadiene and Selenium Tetrabromide .......... 1036

Method 4: Cycloadition of Selenocarbonyl Compounds and Alkenes ......... 1036

Method 5: Synthesis from 2-[(3-Hydroxyalkyl)selanyl]benzoxazoles .......... 1037

Synthesis by Ring Transformation .......................................................... 1037

Method 1: Ring Transformations of 3-Halomethyl-2,3-dihydro-selenazonium Salts with Base ................................................................. 1037

Method 2: Ring Transformations of 1,3,4-Oxadiselenolanes with Trivalent Phosphorus Reagents ......................................................... 1038

Synthesis by Substituent Modification ..................................................... 1038

Method 1: Esterification and Other Reactions of Selenetan-3-ols ............... 1038

Method 2: Cleavage of a Spirocyclic Ring Bond ........................................ 1039

Method 3: $\lambda^4$-Selenane Formation ...................................................... 1039

Product Subclass 2: 1,2-Oxaselenetanes .................................................. 1040

Synthesis of Product Subclass 2 .............................................................. 1040

Synthesis by Ring-Closure Reactions ....................................................... 1040

Method 1: Synthesis by Treatment with Bromine .................................... 1040
## 39.26.5 Product Subclass 5: Cyclic Alkaneselenolates of Group 1, 2, and 13–15 Metals

Product Class 32: Acyclic Alkanetellurolates

Product Subclass 1: Alkanetellurolates of Group 1, 2, and 13–15 Metals
J. V. Comasseto and A. S. Guarezemini

Synthesis of Product Subclass 1 ........................................... 1139

Arsenic Alkanetellurolates .................................................. 1139

Method 1: Reaction of Tetraalkyldiarsines with Dialkyl Ditellurides ... 1139

Antimony Alkanetellurolates .................................................. 1139

Method 1: Reaction of Lithium Alkanetellurolates with Dialkylbromostibine .................................................. 1139

Silicon Alkanetellurolates .................................................... 1139

Method 1: Reaction of Lithium Alkanetellurolates with Silyl Halides ... 1139

Germanium Alkanetellurolates ............................................. 1140

Tin Alkanetellurolates ...................................................... 1140

Method 1: Reaction of Lithium Alkanetellurolates with Dialkylbromostibine .................................................. 1140

Aluminum Alkanetellurolates ................................................ 1140

Method 1: Reaction of Dibutyl Ditelluride with Diisobutylaluminum Hydride .................................................. 1140

Method 2: Reaction of Trimethylaluminum with Elemental Tellurium ... 1141

Gallium Alkanetellurolates ................................................... 1141

Method 1: Reaction of Triorganogallium and Elemental Tellurium ...... 1141

Indium Alkanetellurolates ................................................... 1142

Method 1: Reaction of Dipropyl Ditelluride with Trimesitylindium ...... 1142

Magnesium Alkanetellurolates ............................................. 1142

Method 1: Reaction of Grignard Reagents with Elemental Tellurium ... 1142

Lithium Alkanetellurolates ................................................... 1142

Method 1: Reaction of Alkylolithiums with Elemental Tellurium ...... 1142

Sodium Alkanetellurolates ................................................... 1143

Method 1: Reduction of Diallyl Ditellurides with Sodium Borohydride .. 1143

Product Subclass 2: Alkanetellurolates of Group 3–12 Metals
A. Polo and J. Real

Synthesis of Product Subclass 2 ........................................... 1145

Terminal Alkanetellurolates .................................................. 1145

Method 1: Reaction of a Metal Complex with a Main Group
Alkanetellurolate ............................................................. 1145

Method 2: Reaction of Telluroxozirconium Complexes with Haloalkanes 1146
39.32.2.1.3 Method 3: Oxidative Addition of Dialkyl Tellurides, Dialkyl Ditellurides, or (Alkyltellanyl)silanes to a Metal ............................................. 1147
39.32.2.1.4 Method 4: Insertion of Tellurium into Metal—Carbon Bonds .......................................... 1148
39.32.2.1.2 \(\mu_2\)-Alkanetellurolates .......................................................... 1149
39.32.2.1.2.1 Method 1: Reaction of a Metal Complex with a Main Group
Alkanetellurolate ................................................................. 1149
39.32.2.1.2.1.1 Variation 1: From Metal Halide Complexes .................................................... 1149
39.32.2.1.2.1.2 Variation 2: From Metal Carbonyl Complexes ............................................. 1150
39.32.2.1.2.2 Method 2: Reaction of Bridging Coordinated Tellurides with Electrophiles ................................................................. 1152
39.32.2.1.2.3 Method 3: Solvothermal Reaction of Disodium Ditelluride with Metal Carbonyl Complexes .............................................. 1155
39.32.2.1.2.4 Method 4: Reaction of Anionic Carbonyl Complexes with Alkanetellurenyl Halides or (Alkyltellanyl)telluronium Compounds ..................................................... 1156
39.32.2.1.2.5 Method 5: Oxidative Addition of a Dialkyl Ditelluride or (Alkyltellanyl)phosphine to a Metal Complex ................................................. 1157
39.32.2.1.2.6 Method 6: Reaction of a Tellurolate—Metal Complex with a Second Metal Complex ......................................................... 1158
39.32.2.1.2.7 Method 7: Insertion of Tellurium into Metal—Carbon Bonds .............................................. 1159
39.32.2.1.3 \(\mu_3\)-Alkanetellurolates .......................................................... 1159
39.32.2.1.3.1 Method 1: Reaction of Bridging, Coordinated Tellurides with an Alkylating Agent ..................................................... 1159
39.32.2.1.3.2 Method 2: Reaction of a Metal Salt with an (Alkyltellanyl)trimethylsilane ................................................................. 1160

39.33 Product Class 33: Acyclic Dialkyl Tellurides
M. Segi

39.33 Product Class 33: Acyclic Dialkyl Tellurides ............................................. 1163
39.33.1 Synthesis of Product Class 33 ......................................................... 1163
39.33.1.1 Method 1: Synthesis from Hydrogen Telluride or Alkanetellurols ........ 1163
39.33.1.2 Method 2: Synthesis from Alkanetellurolates ......................................... 1165
39.33.1.2.1 Variation 1: By Reaction with Alkyl Halides for Symmetrical Telluride Synthesis ......................................................... 1165
39.33.1.2.2 Variation 2: By Reaction with Alkyl Halides for Unsymmetrical Telluride Synthesis ......................................................... 1166
39.33.1.2.3 Variation 3: By Reaction with Sulfonates ................................................ 1168
39.33.1.2.4 Variation 4: By Reaction with Lactones ............................................. 1170
39.33.1.2.5 Variation 5: By Reaction with Epoxides ............................................. 1170
39.33.1.3 Method 3: Reduction of Organotellurium(IV) Trichlorides or Dichlorides 1171
39.33.1.4 Method 4: Reduction of Acyclic Telluroxides or Tellurones ................. 1172
39.33.1.5 Method 5: Alkylation of Tellurium Tetrachloride .................................. 1172
39.33.2 Applications of Product Class 33 in Organic Synthesis ............................ 1173
39.33.2.1 Method 1: Use as Synthetic Equivalents for Organolithium Compounds 1173
39.33.2.2 Method 2: Use as a Catalyst ........................................................ 1174
39.33.2.2.1 Variation 1: Debromination of vic-Dibromides .......................... 1174
39.33.2.2.2 Variation 2: Synthesis of Vinyloxiranes from Aldehydes and Allyl Bromide 1174
39.33.2.3 Method 3: Use as a Reducing Agent ................................. 1175

39.34 Product Class 34: Acyclic Trialkyltelluronium Salts and Derivatives
Y. Tang and X.-L. Sun

39.34.1 Synthesis of Product Class 34 ........................................... 1179
39.34.1.1 Method 1: Reaction of Dialkyl Tellurides .................................. 1180
39.34.1.2 Method 2: Reaction of Dialkyl Ditellurides ................................. 1184
39.34.1.3 Method 3: Reaction of Dialkyltellurium Dihalides .......................... 1184
39.34.1.4 Method 4: Reaction of Halooxatelluranes with Alkyllithium or Grignard Reagents ................................................................. 1185
39.34.1.5 Method 5: Reaction of Tellurium Tetrachloride with Alkylthallium Compounds ................................................................. 1185
39.34.1.6 Method 6: Reaction of Tellurium and Telluroxides ............................ 1186
39.34.1.7 Method 7: Anion Exchange of Telluronium Salts ............................. 1186

39.35 Product Class 35: Alkanetellurenic Acids and Acyclic Derivatives
T. Wirth

39.35.1 Product Class 35: Alkanetellurenic Acids and Acyclic Derivatives .......... 1193
39.35.2 Product Subclass 1: Alkanetellurenic Acids and Esters .......................... 1193
39.35.2.1 Synthesis of Product Subclass 2 ............................................. 1193
39.35.2.1.1 Method 1: Synthesis Using Dibutyl Ditelluride .............................. 1193
39.35.2.1.2 Method 2: Synthesis Using Bis[tris(trimethylsilyl)methyl] Ditelluride 1194
39.35.3 Product Subclass 3: (Alkyltellanyl)phosphines and Related Compounds 1194
39.35.3.1 Synthesis of Product Subclass 3 ............................................. 1194
39.35.3.1.1 Method 1: Synthesis of (Alkyltellanyl)phosphines .......................... 1194
39.35.3.1.2 Method 2: Synthesis of Trialkyl(methyltellanyl)phosphonium Salts 1195
39.35.3.1.3 Method 3: Synthesis of Organo Tellurophosphates .......................... 1195

39.36 Product Class 36: Acyclic Di- and Polytellurides
R. Sato and T. Kimura

39.36.1 Product Class 36: Acyclic Di- and Polytellurides .............................. 1197
39.36.1.1 Product Subclass 1: Symmetrical Dialkyl Ditellurides ......................... 1197
39.36.1.1.1 Synthesis of Product Subclass 1 ............................................ 1197
39.36.1.1.1.1 Method 1: Reaction of Disodium Ditelluride with Alkyl Halides ............. 1197
39.36.1.1.2 Method 2: Electrolysis Followed by Alkylation .............................. 1198
39.36.1.1.3 Method 3: Reaction of Tellurium with Organolithium Reagents ............... 1199

Preface ........................................................................ V
Volume Editors' Preface .................................................. VII
Table of Contents ........................................................ XI

Introduction
E. Schaumann ............................................................... 1

40.1 Product Class 1: Amino Compounds

40.1.1 Product Subclass 1: Alkyl- and Cycloalkylamines

40.1.1.1 Synthesis by Reduction

40.1.1.1.1 Reduction of Carbonic and Carboxylic Acid Derivatives
B. Wünsch and C. Geiger ............................................. 23

40.1.1.1.2 Reductive Amination of Carbonyl Compounds
P. Margaretha ............................................................... 65

40.1.1.1.3 Reaction of Acetals with Organometallic Reagents
G. K. Friestad ............................................................... 91

40.1.1.1.4 Hydroaminomethylation of Alkenes
A. Börner, M. Beller, and B. Wünsch ............................... 111

40.1.1.1.5 Reduction of Nitrogen-Based Functional Groups
P. Margaretha ............................................................... 119

40.1.1.2 Synthesis by Substitution

40.1.1.2.1 Synthesis by Substitution of Hydrogen or Metals
H. Butenschön .............................................................. 157

40.1.1.2.2 Substitution of Carbon Functionalities via Solvolysis
F.-P. Montforts, M. Osmers, and V. A. Azov ......................... 203

40.1.1.2.3 Substitution of Sulfur or Phosphorus Functionalities
F.-P. Montforts and M. Osmers ..................................... 233

40.1.1.3 Synthesis by Addition Reactions

40.1.1.3.1 Hydroamination
S. Doye ........................................................................ 241

40.1.1.3.2 Addition of Carbanions to Azomethines
G. K. Friestad .............................................................. 305
40.1.3.3 Pericyclic Reactions Involving C=N Units
W. Maison .................................................. 343

40.1.4 Synthesis by Rearrangement
R. Purchase and M. Sainsbury .......................... 365

40.1.5 Synthesis from Other Amino Compounds

40.1.5.1 Resolution of Chiral Amines
V. A. Azov .................................................. 419

40.1.5.2 The Mannich Reaction
J. Ipaktschi and M. R. Saidi .............................. 435

40.1.5.3 Modification of Mannich Adducts
J. Ipaktschi and M. R. Saidi .............................. 479

40.1.5.4 Substitution on the Amine Nitrogen
S. A. Lawrence ............................................. 501

40.1.6 Product Subclass 2: Propargylic Amines
J. Q. Feng and C.-J. Li ..................................... 579

40.1.7 Product Subclass 3: Allylic Amines
J. Q. Feng and C.-J. Li ..................................... 587

40.1.8 Product Subclass 4: n-Nitroge-n or n-Phosphorus-Functionalized Alkylamines (n ≥2)
K.-M. Roy .................................................... 615

40.1.9 Product Subclass 5: Aziridines
J. B. Sweeney ................................................ 643

40.1.10 Product Subclass 6: Azetidines
F. Couty ....................................................... 773

40.1.11 Product Subclass 7: Ammonium Compounds and Nitrogen Ylides
E. Kruiswijk and J. A. Deck .............................. 817

40.1.1.2.1.1 Method 1: Direct Reductive Amination by Catalytic Hydrogenation .............. 66
40.1.1.2.1.1.1 Variation 1: Hydrogenation Using Heterogeneous Metal Catalysts .............. 66
40.1.1.2.1.1.2 Variation 2: Hydrogenation Using Homogeneous Metal Complex Catalysts 67
40.1.1.2.1.1.3 Variation 3: Palladium-Catalyzed Transfer Hydrogenation .................. 68
40.1.1.2.1.2 Method 2: Direct Reductive Amination Using Silanes as a Hydrogen Source 69
40.1.1.2.1.2.1 Variation 1: Using Polymethylhydrosiloxane ................................... 69
40.1.1.2.1.2.2 Variation 2: Using Aminohydrosilanes ........................................ 69
40.1.1.2.1.2.3 Variation 3: Using Triethylsilane ............................................. 70
40.1.1.2.1.3 Method 3: Direct Reductive Amination with Borohydride or Borane Reducing Agents ......................................................... 70
40.1.1.2.1.3.1 Variation 1: Using Sodium Cyanoborohydride ............................... 70
40.1.1.2.1.3.2 Variation 2: Using Sodium Borohydride ..................................... 72
40.1.1.2.1.3.3 Variation 3: Using Zirconium(II) or Copper(I) Borohydrides ............. 73
40.1.1.2.1.3.4 Variation 4: Using Sodium Triacyloxyborohydrides ....................... 74
40.1.1.2.1.3.5 Variation 5: Using Aminoboranes ........................................... 74
40.1.1.2.2 Primary Alkylamines from Oximes and O-Alkylloximes ........................... 75
40.1.1.2.2.1 Primary Alkylamines from Oximes ............................................. 76
40.1.1.2.2.1.1 Method 1: Catalytic Hydrogenation ........................................... 76
40.1.1.2.2.1.2 Method 2: Catalytic Transfer Hydrogenation ............................... 77
40.1.1.2.2.1.3 Method 3: Reduction with Metallic Zinc ....................................... 77
40.1.1.2.2.1.3.1 Variation 1: Using Zinc in the Presence of Ammonia .................... 77
40.1.1.2.2.1.3.2 Variation 2: Using Zinc in the Presence of a Carboxylic Acid .......... 78
40.1.1.2.2.1.4 Method 4: Reductions with Borane or Borohydrides ....................... 79
40.1.1.2.2.1.4.1 Variation 1: Reduction with Borane ......................................... 79
40.1.1.2.2.1.4.2 Variation 2: Reduction with Borohydrides ................................ 79
40.1.1.2.2.1.5 Method 5: Reductions with Aluminum Trihydride or Hydroaluminates ... 80
40.1.1.2.2.2 Primary Alkylamines from O-Alkylloximes .................................... 81
40.1.1.2.2.3 Secondary Alkylamines from N-Alkylidenealkylamines by Reduction ........ 82
40.1.1.2.2.3.1 Method 1: Stereorandom Reduction of N-Alkylidenealkylamines to Secondary Alkylamines ......................................................... 82
40.1.1.2.2.3.1.1 Variation 1: Via Transfer Hydrogenation ................................... 82
40.1.1.2.2.3.1.2 Variation 2: By Reduction with Hydrides .................................. 83
40.1.1.2.2.3.2 Method 2: Enantioselective Reduction of N-Alkylidenealkylamines to Secondary Alkylamines ......................................................... 84
40.1.1.2.2.4 Tertiary Alkylamines from Enamines by Reduction ............................ 85
40.1.1.2.2.4.1 Method 1: Amines from Enamines by Catalytic Hydrogenation ........... 85
40.1.1.2.2.4.2 Method 2: Amines from Enamines by Enantioselective (Asymmetric) Catalytic Hydrogenation ............................................................ 86
40.1.1.2.2.4.3 Method 3: Amines from Enamines Using Other Reducing Agents ........ 87

40.1.1.3 Reaction of Acetals with Organometallic Reagents
G. K. Friestad

40.1.1.3.1 Method 1: Additions to N,O-Acetals ............................................. 91
40.1.1.3.1.1 Variation 1: Addition to N,O-Acetals Incorporating a Tertiary Amine Function .................................................. 91
40.1.1.3.1.2 Variation 2: Addition to N,O-Acetals Incorporating a Secondary Amine Function .................................................. 95
40.1.1.3.1.3 Variation 3: Development of Asymmetric Additions to N,O-Acetals ............................................. 98

40.1.1.3.2 Method 2: Additions to N,N-Acetals ................................ 99

40.1.1.3.3 Method 3: Reductive Arylation of N,O-Acetals: The Tscherniac–Einhorn Reaction .................................................. 100

40.1.1.3.3.1 Variation 1: Asymmetric Equivalents of the Tscherniac–Einhorn Reaction ........................................ 105

40.1.1.4 Hydroaminomethylation of Alkenes
A. Börner, M. Beller, and B. Wünsch

40.1.1.4 Hydroaminomethylation of Alkenes ............................................. 111
40.1.1.4.1 Method 1: Hydroaminomethylation ............................................. 111

40.1.1.5 Reduction of Nitrogen-Based Functional Groups
P. Margaretha

40.1.1.5 Reduction of Nitrogen-Based Functional Groups ............................................. 119
40.1.1.5.1 Reduction of Nitroalkanes ............................................. 119
40.1.1.5.1.1 Method 1: Cathodic Reduction ............................................. 120
40.1.1.5.1.2 Method 2: Catalytic Hydrogenation ............................................. 120
40.1.1.5.1.3 Method 3: Transfer Hydrogenation ............................................. 122
40.1.1.5.1.4 Method 4: Reduction Using Borohydrides and an Additional Catalyst ............................................. 124
40.1.1.5.1.4.1 Variation 1: Using Sodium Borohydride ............................................. 124
40.1.1.5.1.4.2 Variation 2: Using Borohydride Exchange Resin ............................................. 125
40.1.1.5.1.4.3 Variation 3: Using Zinc(II) Borohydride–Pyridine ............................................. 125
40.1.1.5.1.5 Method 5: Reduction Using Lithium Aluminum Hydride ............................................. 125
40.1.1.5.1.6 Method 6: Reduction Using Aluminum Amalgam Promoted by Ultrasound ............................................. 127
40.1.1.5.1.7 Method 7: Reduction Using Tin–Hydrochloric Acid ............................................. 128
40.1.1.5.1.8 Method 8: Reduction Using Samarium(II) Iodide ............................................. 128
40.1.1.5.2 Reduction of Mesoionic 2-Alkyl-1,2,3-triazines ............................................. 130
40.1.1.5.3 Reduction of Nitrosoalkanes ............................................. 131
40.1.1.5.4 Reduction of Alkyl Azides ............................................. 131
40.1.1.5.4.1 Method 1: Catalytic Hydrogenation ............................................. 131
40.1.1.5.4.2 Method 2: Transfer Hydrogenation ............................................. 133
40.1.1.5.4.3 Method 3: Reduction Using Boranes or Boronates ............................................. 135
40.1.1.5.4.3.1 Variation 1: Using Dichloroborane–Dimethyl Sulfide ............................................. 135
40.1.1.5.4.3.2 Variation 2: Using Lithium Aminoborohydrides ............................................. 136
40.1.1.5.4.3.3 Variation 3: Using Sodium Borohydride ............................................. 137
40.1.1.5.4.3.4 Variation 4: Using Borohydride Exchange Resin–Nickel(II) Acetate ............................................. 139
40.1.1.5.4.3.5 Variation 5: Using Zinc(II) Borohydride ............................................. 139
40.1.1.5.4.4 Method 4: Reduction Using Lithium Aluminum Hydride ............................................. 140
40.1.1.5.4.5 Method 5: Reduction Using Tributyltin Hydride ............................................. 141
Method 6: Reduction Using Metals ........................................ 141
Method 7: Reduction Using Triphenylphosphine ....................... 143
Method 8: Reduction Using Hydrogen Sulfide .......................... 144
Method 9: Reduction Using Propane-1,3-dithiol ........................ 144
Method 10: Reduction Using Low-Valent Metal Ion Salts ............. 145
Methods 11: Miscellaneous Methods ..................................... 145
Reduction of 1,2-Diazenes .................................................. 145
Reduction of Hydroxylamines .............................................. 146
Reduction of Amine Oxides ................................................ 147
Reduction of N-Nitro and N-Nitroso Compounds ...................... 149
Reduction of Alkylhydrazines .............................................. 149
Reduction of Sulfonamides ................................................ 153

Synthesis by Substitution

Synthesis by Substitution of Hydrogen or Metals
H. Butenschön

Method 1: \(\alpha\)-Amination of Carbonyl Compounds and Analogues .... 157
Variation 1: Amination with Azodicarboxylates ......................... 157
Variation 2: Amination with R\(_2\)NL Compounds (L = Leaving Group) 167
Variation 3: Amination with Azides Followed by Reduction .......... 170
Variation 4: Amination with Oxaziridines .............................. 173
Variation 5: Amination with 1-Chloro-1-nitroso Reagents .......... 175
Variation 6: Amination with Lithium N-(tert-Butoxycarbonyl)-O-tosylhydroxamide ............................................... 176
Variation 7: Amination with Nitridomanganese(V) Complexes ........ 176
Variations 8: Other Variations ........................................... 177
Method 2: Substitution of Hydrogen Other Than the \(\alpha\)-Hydrogen of Carbonyl Compounds ........................................... 177
Variation 1: Amination with Azidotrimethylsilane Followed by Reduction 178
Variation 2: Amination of Unactivated C—H Groups with Haloamines 180
Variation 3: Rhodium(II)-, Ruthenium(II)-, or Manganese(III)-Catalyzed Amination ................................................ 181
Variations 4: Miscellaneous Variations .................................. 184
Method 3: Substitution of Metal Atoms .................................. 185
Variation 1: Substitution of Boron ........................................ 186
Variation 2: Substitution of Zinc .......................................... 187
Variation 3: Substitution of Copper ...................................... 190
Variation 4: Substitution of Magnesium ................................ 191
Variation 5: Substitution of Lithium ..................................... 195
Variation 6: Substitution of Other Metal Atoms ....................... 197
Substitution of Carbon Functionalities via Solvolysis
F.-P. Montforts, M. Osmers, and V. A. Azov

Method 1: Substitution of Carbamates ........................................... 203
  Variation 1: Cleavage by Nucleophilic Substitution .......................... 203
  Variation 2: Cleavage by Protic or Lewis Acids ............................ 206
  Variation 3: Cleavage by Base-Induced β-Elimination ..................... 210
  Variation 4: Cleavage by Remote Attack of Bases or Nucleophiles at the Carbamate Group ........................................... 213

Method 2: Substitution of Carboxylic Acid N-Derivatives .................... 219
  Variation 1: Acyclic Carboxylic Acid N-Derivatives ........................ 219
  Variation 2: Cyclic Carboxylic Acid N-Derivatives (Cyclic Imide Derivatives) 226
  Variation 3: Amidines ............................................................. 229

Substitution of Sulfur or Phosphorus Functionalities
F.-P. Montforts and M. Osmers

Method 1: Cleavage of Sulfonic, Sulfinic, and Sulfenic Acid N-Derivatives 233

Method 2: Cleavage of Phosphoric and Phosphinic Acid Amides ............ 237

Hydroamination
S. Doye

Method 1: Hydroamination of Alkenes .............................................. 241
  Variation 1: Catalysis by Acids .................................................. 241
  Variation 2: Catalysis by Bases .................................................. 243
  Variation 3: Catalysis by Calcium Complexes ................................ 245
  Variation 4: Catalysis by Rare Earth Metal Complexes ..................... 246
  Variation 5: Catalysis by Actinide Complexes ................................ 256
  Variation 6: Catalysis by Group 4 Metal Complexes ......................... 257
  Variation 7: Catalysis by Group 8 Metal Complexes ......................... 259
  Variation 8: Catalysis by Group 9 Metal Complexes ......................... 260
  Variation 9: Catalysis by Group 10 Metal Complexes ...................... 261
  Variation 10: Catalysis by Group 11 Metal Complexes ...................... 263
  Variation 11: Catalysis by Group 12 Metal Complexes ..................... 264

Method 2: Hydroamination of Vinylarenes ........................................ 264
  Variation 1: Catalysis by Acids .................................................. 264
  Variation 2: Catalysis by Bases .................................................. 265
  Variation 3: Catalysis by Rare Earth Metal Complexes ..................... 266
  Variation 4: Catalysis by Hafnium Complexes ................................ 268
  Variation 5: Catalysis by Ruthenium Complexes ................................ 269
  Variation 6: Catalysis by Rhodium Complexes ................................ 270

40.1.1.2 Method 2: [2,3]-Aza-Wittig and Related Sigmatropic Rearrangements ••••••••••• 379
40.1.1.2.1 Variation 1: [2,3]-Aza-Wittig Rearrangements ••••••••••• 379
40.1.1.2.2 Variation 2: Rearrangements Involving Compounds Containing Sulfur or Selenium ••••••••••• 380
40.1.1.3 Method 3: Rearrangements of Phenylhydrazines and Hydrazobenzenes • 382
40.1.1.4 Method 4: Overman Rearrangement (Aza-Oxa-Cope Rearrangement) ••••••••••• 382
40.1.1.5 Method 5: Rearrangements of N-Substituted Amines ••••••••••• 388
40.1.1.5.1 Variation 1: Fischer–Hepp Rearrangement ••••••••••• 388
40.1.1.5.2 Variation 2: Hofmann–Martius Rearrangement ••••••••••• 389
40.1.1.5.3 Variation 3: Reilly–Hickinbottom and Orton Rearrangements ••••••••••• 391
40.1.1.5.4 Variation 4: Bamberger Rearrangement ••••••••••• 391
40.1.1.5.5 Variation 5: Hofmann–Löffler–Freytag Rearrangement ••••••••••• 392
40.1.1.5.6 Rearrangements from Carbon to Nitrogen ••••••••••• 393
40.1.1.5.1 Method 1: Stieglitz Rearrangements ••••••••••• 393
40.1.1.5.2 Method 2: Beckmann Rearrangement ••••••••••• 393
40.1.1.5.3 Method 3: Neber Rearrangement ••••••••••• 394
40.1.1.5.4 Method 4: Hofmann, Curtius, Schmidt, and Lossen Rearrangements ••••••••••• 395
40.1.1.5.4.1 Variation 1: Hofmann Rearrangement ••••••••••• 396
40.1.1.5.4.2 Variation 2: Lossen Rearrangement ••••••••••• 401
40.1.1.5.4.3 Variation 3: Curtius Rearrangement ••••••••••• 404
40.1.1.5.4.4 Variation 4: Schmidt Rearrangement ••••••••••• 411
40.1.1.5.5 Synthesis from Other Amino Compounds

40.1.1.5.1 Resolution of Chiral Amines
V. A. Azov

40.1.1.5.1 Resolution of Chiral Amines ••••••••••• 419
40.1.1.5.1.1 Method 1: Resolution by Diastereomeric Crystallization ••••••••••• 419
40.1.1.5.1.2 Method 2: Kinetic Resolution ••••••••••• 421
40.1.1.5.1.2.1 Variation 1: Enzymatic Kinetic Resolution ••••••••••• 421
40.1.1.5.1.2.2 Variation 2: Dynamic Kinetic Resolution Using Enzymes ••••••••••• 425
40.1.1.5.1.2.3 Variation 3: Nonenzymatic Kinetic Resolution ••••••••••• 427
40.1.1.5.1.3 Method 3: Analytical and Preparative Chromatographic Separation ••••••••••• 428
40.1.1.5.1.4 Method 4: Analysis and Separation of Diastereomeric Amine Derivatives ••••••••••• 429
40.1.1.5.1.4.1 Variation 1: Using Chiral Solvating Agents ••••••••••• 430
40.1.1.5.1.4.2 Variation 2: Using Chiral Derivatizing Agents ••••••••••• 431
40.1.1.5.2 The Mannich Reaction
J. Ipaktschi and M. R. Saidi

40.1.1.5.2 The Mannich Reaction ••••••••••• 435
40.1.1.5.2.1 Direct Organocatalytic Enantioselective Mannich Reaction ••••••••••• 435
40.1.1.5.2.1.1 Method 1: α-Aminoalkylation of Ketones ••••••••••• 436
40.1.1.5.2.1.1.1 Variation 1: Proline-Catalyzed Aminoalkylation of Aliphatic Ketones ••••••••••• 436
40.1.1.5.2.1.1.2 Variation 2: Chiral Brønsted Acid Catalyzed Aminoalkylation of Ketones ••••••••••• 438
Variation 3: Aminoalkylation under High Pressure ........................................ 439

Method 2: α-Aminomethylation of Ketones ............................................. 440

Variation 1: Proline-Catalyzed α-Aminomethylation .......................... 440

Variation 2: α-Aminomethylation of Ketones under Microwave Irradiation 441

Method 3: α-Aminoalkylation of Hydroxy and Protected Amino Ketones 442

Variation 1: Synthesis of syn-1,2-Amino Alcohols .......................... 442

Variation 2: α-Aminomethylation of Ketones under Microwave Irradiation 441

Method 3: α-Aminoalkylation of Hydroxy and Protected Amino Ketones 442

Variation 1: Synthesis of syn-1,2-Amino Alcohols .......................... 442

Variation 2: Synthesis of Protected Amino Sugars by Direct Mannich Reaction ........................................ 443

Variation 3: Synthesis of Protected Amino Sugars by Direct Mannich Reaction ........................................ 443

Variation 4: Synthesis of anti-1,2-Amino Alcohols .......................... 446

Method 4: Asymmetric Cross-Mannich Reaction of Aldehydes .......... 447

Variation 1: Stereoselective Synthesis of β-Amino Alcohols .............. 448

Variation 2: Self-Mannich Reaction of Aliphatic and α-Hydroxy Aldehydes 449

Variation 3: One-Pot Direct Synthesis of β-Formyl-α-amino Acids ........ 449

Variation 4: Synthesis of anti-1,2-Amino Alcohols .......................... 446

Method 5: β-Amino Acids by Indirect Mannich Reaction of Ketene Silyl Acetals with Protected Imines .............. 461

Variation 1: Chiral-Thiourea-Catalyzed Addition of Ketene Silyl Acetals to N-(tert-Butoxycarbonyl)aldimines .......... 461

Variation 2: Chiral Brønsted Acid Catalyzed Reaction of Aldimines with Ketene Silyl Acetals ........................................ 462

Variation 3: Synthesis of Optically Active Quaternary α-Amino Acid Derivatives ........................................ 460

Variation 4: anti-Mannich Reactions of Unmodified Ketones ............ 458

Variation 5: Synthesis of Optically Active Quaternary α-Amino Acid Derivatives ........................................ 460

Variation 6: β-Amino Acids by Indirect Mannich Reaction of Ketene Silyl Acetals with Protected Imines .............. 461

Variation 7: Chiral-Thiourea-Catalyzed Addition of Ketene Silyl Acetals 461

Variation 8: Chiral Brønsted Acid Catalyzed Reaction of Aldimines with Ketene Silyl Acetals ........................................ 462

Variation 9: β-Amino Acids by Addition of CH-Acidic 1,3-Dicarbonyl Compounds to Protected Imines .............. 464
**Modification of Mannich Adducts**

J. Ipaktschi and M. R. Saidi

Modification of Mannich Adducts

- **Modification of the Amino Group**
  - Method 1: Deprotection of the N-(tert-Butoxycarbonyl) Group
  - Method 2: Deprotection of N-(4-Hydroxyphenyl), N-(4-Methoxyphenyl), and N-(2-Methoxyphenyl) Groups
  - Method 3: Deprotection of N-(Diarylphosphoryl) Groups
  - Method 4: Deprotection of N-(Arylsulfonyl) Groups
  - Method 5: Deprotection of the N-[(R)-2-Hydroxy-1-phenylethyl] Group
  - Method 6: Acylation Using Triphosgene
  - Method 7: Guanidinylation and the Synthesis of Capreomycidine
  - Method 8: Synthesis of Enantioenriched Dihydropyrimidinones

- **Modification of the Carbonyl Group**
  - Method 1: Enantioselective Synthesis of β2-Amino Acid Derivatives
  - Method 2: Enantioselective Synthesis of β2,3-Amino Acid Derivatives
  - Method 3: Baeyer–Villiger Oxidation
  - Method 4: Diastereoselective Reduction: Synthesis of (+)-Polyoxamic Acid
  - Method 5: Synthesis of β-Lactams
  - Method 6: Palladium-Catalyzed Carbonylation: Synthesis of (±)-Gelsemine
  - Method 7: Synthesis of Peptides: Synthesis of Azumamide A

- **Reduction of the Carbonyl Group and Imines**
  - Method 1: Enantioselective Synthesis of 1,3-Amino Alcohols: Synthesis of HPA-12
Method 2: Enantioselective Synthesis of 1,3-Amino Alcohols: Synthesis of (-)-Sedamine 495

Method 3: Enantioselective Synthesis of 1,3-Diamines 497

Substitution on the Amine Nitrogen
S. A. Lawrence

Dealkylation Reactions of Amines 501

Method 1: The von Braun Reaction with Cyanogen Bromide 501
Method 2: Dealkylation by Acylation 504
Method 3: Nitrosative Dealkylation Reactions 509
Method 4: Dealkylation by Transamination 509
Method 5: Acid-Mediated Dealkylation 511
Method 6: Photolytic Dealkylation 512
Method 7: Cleavage of the C—N Bond Using Selenols 512
Method 8: Cleavage of the C—N Bond Using Wilkinson’s Catalyst 513
Method 9: Reductive Cleavage of the C—N Bond 514

Dealkylation Reactions of Ammonium Salts 515

Method 1: Thermolytic Dealkylation 515
Method 2: The Hofmann Elimination Reaction 515
Method 3: Dealkylation with Ammonia, Amines, 2-Aminoethanol, or Other Bases 518
Method 4: Dealkylation Reactions with Alkali Metals or Metal Hydrides 519
Method 5: Dealkylation Reactions Using Sulfur Nucleophiles 520
Method 6: Electrolytic Methods of Cleavage 523

Replacement of Halogen Functionalities 523

Method 1: Reaction of Ammonia with Alkyl Halides 523
Method 2: Reactions of Primary, Secondary, or Tertiary Amines with Alkyl Halides 526
Method 3: Reactions of Alkali Metal Amide Salts 531
Method 4: The Gabriel Synthesis and Related Reactions of Carboxylic Acid Derivatives 531
Method 5: Reactions of Nitrogen-Containing Derivatives of Carbonic Acid 534

Method 6: Reactions with Hexamethylenetetramine 536
Method 7: Reaction with Sulfonamides 538
Method 8: Reaction with Amides of Phosphorus Acids 539
Method 9: Reactions of Alkyl Halides with Silylamines and Silylamides 542
Method 10: Intra- and Intermolecular Cyclization Reactions 543
Method 11: Reactions of Haloamines 547

Replacement of Oxygen Functionalities 548

Method 1: Reactions of Ammonia with Alcoholic Hydroxy Groups 548
Method 2: Reactions of Primary or Secondary Amines with Alcoholic Hydroxy Groups 550
40.1.5.4.4.3 Method 3: The Mitsunobu and Related Reactions .......................... 552
40.1.5.4.4.4 Method 4: Intermolecular Schmidt Reaction ............................... 559
40.1.5.4.4.5 Method 5: Reactions of Ammonia and Amines with Ethers .......... 560
40.1.5.4.4.6 Method 6: Alkylation with Sulfates ....................................... 565
40.1.5.4.4.7 Method 7: Alkylation with Sulfonates .................................... 566
40.1.5.4.4.8 Method 8: Alkylation with Nitrates ....................................... 569
40.1.5.4.4.9 Method 9: Reactions with O—P Groups .................................. 569
40.1.5.4.4.10 Method 10: Reactions with O—Si Groups ............................... 569

40.1.2 Product Subclass 2: Propargylic Amines
J. Q. Feng and C.-J. Li

40.1.2.1 Synthesis of Product Subclass 2 ............................................... 579
40.1.2.1.1 Method 1: Ethynylations of Azomethines ................................ 579
40.1.2.1.2 Variation 1: Catalyzed by Iridium(I) Complexes .......................... 579
40.1.2.1.3 Variation 2: Catalyzed by a Copper(I)–pybox Complex ................. 580
40.1.2.2 Method 2: Three-Component Coupling of an Aldehyde, an Alkyne, and an Amine ................................................................. 580
40.1.2.2.1 Variation 1: Catalyzed by Copper(I) Salts ................................. 580
40.1.2.2.2 Variation 2: Catalyzed by Copper(I) Bromide/Ruthenium(III) Chloride 582
40.1.2.2.3 Variation 3: Catalyzed by Gold(III) Bromide ............................. 582
40.1.2.2.4 Variation 4: Catalyzed by Silver(I) Salts .................................. 583
40.1.2.3 Method 3: Copper-Catalyzed Cross-Dehydrogenative Coupling ....... 584

40.1.3 Product Subclass 3: Allylic Amines
J. Q. Feng and C.-J. Li

40.1.3.1 Synthesis of Product Subclass 3 ............................................... 587
40.1.3.1.1 Method 1: Synthesis by Substitution of Hydrogen ....................... 587
40.1.3.1.1.1 Variation 1: By Ene-Type Reaction ....................................... 587
40.1.3.1.1.2 Variation 2: Allylic Amination via the Insertion of Nitrenes ........ 590
40.1.3.1.2 Method 2: Synthesis by the Substitution of a Halogen or a Leaving Group 591
40.1.3.1.2.1 Variation 1: By Palladium-Catalyzed Allylic Substitution ........... 591
40.1.3.1.3 Method 3: Synthesis by Addition ......................................... 594
40.1.3.1.3.1 Variation 1: Of Nitrogen Reagents to Vinylphosphonium Salts .... 594
40.1.3.1.3.2 Variation 2: By Aza-Baylis–Hillman Reaction ......................... 597
40.1.3.1.3.3 Variation 3: By Aza-Diels–Alder Reaction ............................. 601
40.1.3.1.4 Method 4: Synthesis by Rearrangement .................................. 606
40.1.3.1.4.1 Variation 1: Of Aziridines .............................................. 606
40.1.3.1.4.2 Variation 2: By Aza-Oxa-Cope Rearrangement ....................... 606
40.1.3.1.4.3 Variation 3: By [2,3]-Sigmatropic Rearrangement .................... 609
Product Subclass 4: n-Nitrogen- or n-Phosphorus-Functionalized Alkylamines (n ≥ 2)
K.-M. Roy

Synthesis of Product Subclass 4

4.1 Synthesis by Addition across C–C Bonds

4.1.1 Method 1: Amination of 1,3-Dienes

4.1.1.1 Variation 1: 1,2-Diamination

4.1.1.2 Variation 2: 1,4-Diamination

4.1.1.3 Method 2: Amination of Alkenes

4.1.1.4 Variation 1: Direct Addition of Nitrogen Compounds

4.1.1.5 Variation 2: α,α-Diamines by Carbonylative Bis(hydroaminomethylation) of α,α-Dialkenes

4.1.1.6 Variation 3: 1,2-Diamines via 4,5-Dihydroimidazoles

4.1.2 Synthesis by Addition across C–N Bonds

4.1.2.1 Method 1: Ring Opening of Aziridines

4.1.2.1.1 Variation 1: Addition of Amines

4.1.2.1.2 Variation 2: Addition of Azides

4.1.2.2 Method 2: Ring Opening of Azetidines

4.1.2.3 Method 3: Synthesis by Coupling of Nitrogen Compounds

4.1.2.3.1 Variation 1: Coupling of Imines

4.1.2.3.2 Variation 2: Coupling of Amines

4.1.2.3.3 Variation 3: Coupling of Nitriles

4.1.3 Synthesis by Addition across C–C Bonds

4.1.3.1 Method 1: Amine Addition to Epoxides

4.1.4 Synthesis by Rearrangement

4.1.4.1 Method 1: 1,2-Diamines via [2,3]-Sigmatropic Rearrangement

4.1.4.1.1 Variation 1: Rearrangement of Sulfur Imides

4.1.4.1.2 Variation 2: Rearrangement of Selenium Imides

4.1.4.2 Method 2: 1,2-Diamines via [3,3]-Sigmatropic Rearrangement

4.1.5 Synthesis by Reduction of α-Amino Amides

4.1.6 Synthesis of 2-Nitroamines

4.1.6.1 Method 1: Synthesis by Nitro-Mannich Reaction

4.1.6.2 Method 2: Synthesis by Addition of Nitrogen Compounds to Alkenes

4.1.7 Synthesis of (Aminoalkyl)phosphines

4.1.7.1 Method 1: Synthesis by Amination of Unsaturated Phosphines

4.1.7.2 Method 2: Synthesis by Addition of Phosphines to Unsaturated Amines

4.1.8 Applications of Product Subclass 4 in Organic Synthesis
Product Subclass 5: Aziridines

J. B. Sweeney

Synthesis of Product Subclass 5

Method 1: Addition to Alkenes

Variation 1: Addition of Nitrenes

Variation 2: Addition of Metal Nitrenoids

Variation 3: Addition of Azides

Variation 4: Addition of Hydrazine Derivatives

Variation 5: Addition of Hydroxylamine Derivatives

Method 2: Addition to Imines

Variation 1: Addition of Carbenes

Variation 2: Addition of Metal Carbenoids

Variation 3: Via Nucleophilic Attack of Anions of 2-Halo and 2-Pseudohalo Esters

Variation 4: Cyclization of Azomethine Ylides

Variation 5: Addition of Nucleophiles to Azirines

Variation 6: Cycloaddition of Azirines

Method 3: Addition to Aldehydes Using Guanidinium Ylides

Method 4: Cyclization Reactions

Variation 1: Cyclization of 2-Haloalkanamines

Variation 2: Cyclization of 2-Aminoalkanols

Variation 3: Cyclization of 2-Azidoalkanols

Variation 4: Via Cyclic Sulfates

Variation 5: Cyclization of 1-Azido-2-haloalkanes

Variation 6: Cyclization of Alleny1-Substituted Amines

Variation 7: Cyclization of (2-Bromoallyl)amines

Method 5: Ring Contraction of 4,5-Dihydro-1H-1,2,3-triazoles

Method 6: Substituent Modification

Variation 1: Substitution of Existing Substituents

Variation 2: Of Hydrogen: Deprotonation

Applications of Product Subclass 5 in Organic Synthesis

Ring Opening of Saturated Aziridines

Method 1: Ring Opening with Hydrogen

Variation 1: Hydrogenolysis

Variation 2: By Complex Hydrides

Variation 3: By Metal Reducing Agents

Method 2: Ring Opening Using Oxygen Nucleophiles

Variation 1: By Water

Variation 2: By Alcohols

Variation 3: By Carboxylates

Variation 4: Intramolecular Ring Opening by Oxygen Nucleophiles

Method 3: Ring Opening Using Nitrogen Nucleophiles

Variation 1: By Aliphatic Amines

Variation 2: By Aromatic Amines
40.1.5.2.1.3.3 Variation 3: By Azide ................................................................. 726
40.1.5.2.1.3.4 Variation 4: By Hydroxylamine ................................................. 729
40.1.5.2.1.3.5 Variation 5: Intramolecular Ring Opening by Nitrogen Nucleophiles .... 730
40.1.5.2.1.4 Method 4: Ring Opening Using Sulfur Nucleophiles ....................... 730
40.1.5.2.1.5 Method 5: Ring Opening Using Halogen Nucleophiles ...................... 732
40.1.5.2.1.6 Method 6: Ring Opening Using Carbon Nucleophiles ..................... 735
40.1.5.2.1.6.1 Variation 1: By Carbanions ....................................................... 735
40.1.5.2.1.6.2 Variation 2: By Enolates .......................................................... 741
40.1.5.2.1.6.3 Variation 3: By Arenes ............................................................. 742
40.1.5.2.1.6.4 Variation 4: By Cyanide ........................................................... 744
40.1.5.2.1.7 Method 7: Ring Opening by Deprotonation ..................................... 745
40.1.5.2.1.7.1 Variation 1: Elimination Reactions ............................................. 745
40.1.5.2.1.7.2 Variation 2: Rearrangement Reactions ........................................ 746
40.1.5.2.1.8 Method 8: Ring Opening Using Lewis Acids .................................... 747
40.1.5.2.1.9 Method 9: Ring Opening by Thermolysis ....................................... 749
40.1.5.2.1.10 Method 10: Carbonylative Ring Expansion ................................... 750
40.1.5.2.2 Ring Opening of Alkenyl- and Alkynylaziridines .................................. 751
40.1.5.2.2.1 Method 1: Ring Opening by Hydride ............................................. 751
40.1.5.2.2.2 Method 2: Ring Opening by Oxygen Nucleophiles ............................ 752
40.1.5.2.2.2.1 Variation 1: From Amines and 1,3-Dihalo Compounds ................... 752
40.1.5.2.2.2.2 Variation 2: From Amines and 1,3-Diol Derivatives ....................... 753
40.1.5.2.2.2.3 Variation 3: Intramolecular Ring Opening by Oxygen Nucleophiles ... 753
40.1.5.2.2.3 Method 3: Ring Opening Using Amino Nucleophiles .......................... 754
40.1.5.2.2.4 Method 4: Ring Opening Using Halogen Nucleophiles ...................... 755
40.1.5.2.2.5 Method 5: Ring Opening Using Carbon Nucleophiles ..................... 755
40.1.5.2.2.5.1 Variation 1: By Carbanions ....................................................... 755
40.1.5.2.2.5.2 Variation 2: With Palladium Catalysis ........................................ 758
40.1.5.2.2.6 Method 6: Ring Opening via Rearrangement ................................... 759

40.1.6 Product Subclass 6: Azetidines
F. Couty

40.1.6 Product Subclass 6: Azetidines ............................................................. 773
40.1.6.1 Synthesis of Product Subclass 6 .......................................................... 773
40.1.6.1.1 Ring-Closure Reactions ................................................................. 773
40.1.6.1.1.1 Method 1: Ring Closure of Amines and 1,3-Functionalized Hydrocarbons 773
40.1.6.1.1.1.1 Variation 1: From Amines and 1,3-Dihalo Compounds .................... 773
40.1.6.1.1.1.2 Variation 2: From Amines and 1,3-Diol Derivatives ....................... 774
40.1.6.1.1.2 Method 2: Thermal [2+2] Cycloaddition of Imines and Alkenes ........... 775
40.1.6.1.1.3 Method 3: Ring Closure of Acyclic Amines .................................... 776
40.1.6.1.1.3.1 Variation 1: Of γ-Haloamines ................................................... 776
40.1.6.1.1.3.2 Variation 2: Of γ-Amino Alcohols and Derivatives ....................... 777
40.1.6.1.1.3.3 Variation 3: Of Alkenyl- or Allenylamines ................................... 782
40.1.6.1.1.3.4 Variation 4: Of γ,δ-Epoxyamines .............................................. 784
40.1.6.1.1.3.5 Variation 5: Of γ-Azidoamines .................................................. 785
40.1.6.1.1.4 Method 4: Ring Closure of Acyclic Imine Derivatives ...................... 785
Method 5: Ring Closure of Stabilized Carbanions (C—C Bond Formation)

Variation 1: Intramolecular Alkylation of β-Amino Halides

Variation 2: Intramolecular Michael Addition

Method 6: Photochemical Cyclizations

Variation 1: Intermolecular Photochemical Cyclizations

Variation 2: Intramolecular Photochemical Cyclizations

Method 7: Cyclizations through Insertion of Carbenoids into N—H Bonds

Method 8: Cyclizations through Copper-Catalyzed Intramolecular N-Vinylation

Method 9: Cyclization of Amines with Alkenes via Azazirconacyclopentanes

Reduction of Four-Membered Ring Compounds

Method 1: Reduction of Azetidin-2-ones (β-Lactams)

Method 2: Alkenation of Azetidin-2-ones (β-Lactams)

Method 3: Reduction of Azetidinium Ions

Ring-Transformation Reactions

Method 1: Ring Expansion of Three-Membered Rings

Method 2: Ring Contraction of Five- or Six-Membered Rings

Method 3: Ring Transformation of 3-(Chloromethyl)azetidin-2-ones

Product Subclass 7: Ammonium Compounds and Nitrogen Ylides

E. Kruiswijk and J. A. Deck

Method 1: Synthesis of Quaternary Ammonium Compounds from Primary and Secondary Amines

Method 2: Synthesis from Amines and Diazomethane

Variation 1: From Amines and Activated Diazomethane

Variation 2: From Amino Acids

Method 3: Alkylation of Tertiary Amines

Variation 1: With Haloalkanes under Pressure

Variation 2: With Tertiary Oxonium Salts

Variation 3: With Dialkoxycarbenium Salts

Variation 4: With Methyl Trifluoromethanesulfonate

Variation 5: With Methyl Chloroformate

Variation 6: With O-Alkylisoureas

Variation 7: With Dimethyl Sulfate

Variation 8: With Electron-Poor Alkenes and Alkynes

Variation 9: With Alkylideneammonium Halides

Variation 10: Synthesis of Polymer-Bound Ammonium Compounds

Method 4: Synthesis of Compounds Containing Several Quaternary Ammonium Centers

Variation 1: Derivatives of Diamines

Variation 2: Derivatives of Bis(aminomethyl)arenes

Variation 3: Derivatives of N-Alkylated Macrocycles

40.6.1.14 Method 14: Reduction of 5,6-Dihydro-4H-1,2-oxazines ...................... 1097
40.6.1.15 Method 15: Reduction of 4,5-Dihydroisoxazolium Tetrafluoroborates .... 1098
40.6.1.16 Method 16: Boron Trifluoride Assisted Alkylation of 4,5-Dihydroisoxazoles 1098
40.6.1.17 Method 17: Synthesis from 5,6-Dihydro-4H-oxazinium Salts .............. 1099
40.6.1.18 Method 18: Allylation of Isoxazolidin-5-ols ................................... 1100
40.6.1.19 Method 19: Synthesis from Organonitroso Compounds by Cycloaddition 1100
40.6.1.19.1 Variation 1: Synthesis from Perfluoronitrosoalkanes ..................... 1100
40.6.1.19.2 Variation 2: Synthesis from Acylnitroso Compounds ..................... 1101
40.6.1.19.3 Variation 3: Synthesis from α-Chloronitroso Compounds ............... 1105

Science of Synthesis Original Edition Volume 40b
© Georg Thieme Verlag KG
40.6.1.20 Method 20: Rearrangement of Cyclic N-Oxides (Meisenheimer Rearrangement) ........................................ 1107
40.6.1.21 Method 21: Synthesis from Nitrones by 1,3-Dipolar Cycloaddition .......... 1111
40.6.1.21.1 Variation 1: Synthesis from Achiral Nitrones ........................................ 1111
40.6.1.21.2 Variation 2: Synthesis from Chiral Nitrones ........................................ 1119
40.6.1.21.3 Variation 3: Addition of Lithiated Methoxyallene to Chiral Nitrones ...... 1121
40.6.1.21.4 Variation 4: In Situ Conversion of Oximes into Nitrones Followed by 1,3-Cycloaddition ........................................ 1122
40.6.1.21.5 Variation 5: Palladium-Catalyzed Allene Insertion Coupled with Nitrone 1,3-Dipolar Cycloaddition ........................................ 1124
40.6.1.21.6 Variation 6: Synthesis from Nitrones via [3 + 3] Dipolar Cycloaddition with Cyclopropane-1,1-dicarboxylates ........................................ 1124
40.6.1.22 Method 22: Synthesis from Nitrones and α-Lithiated Aryloxiranes ........ 1126
40.6.1.23 Method 23: Synthesis from Nitrones and Lithiated 2-(1-Chloroethyl)-4,5-dihydrooxazoles ........................................ 1127
40.6.1.24 Method 24: Synthesis from Nitrones via [3 + 3] Dipolar Cycloaddition with Cyclopropane-1,1-dicarboxylates .................... 1124

40.7 Product Class 7: Hydrazines and Hydrazinium Salts
P. Rademacher

40.7 Product Class 7: Hydrazines and Hydrazinium Salts .............................. 1133
40.7.1 Product Subclass 1: Acyclic Alkylhydrazines ........................................ 1133
40.7.1.1 Synthesis of Product Subclass 1 ..................................................... 1135
40.7.1.1.1 Method 1: Direct Substitution (Alkylation) of Free Hydrazine and Alkylhydrazines ..................................................... 1135
40.7.1.1.1 Variation 1: Using Alkyl Halides .................................................. 1136
40.7.1.1.2 Variation 2: Using Alcohols ......................................................... 1137
40.7.1.1.3 Variation 3: Using Cyclic Carboxylates (Lactones) ......................... 1137
40.7.1.1.4 Variation 4: Using Alkyl Sulfonates ............................................. 1138
40.7.1.1.5 Variation 5: Using Sultones ......................................................... 1139
40.7.1.1.6 Variation 6: Using Dialkyl Sulfates ............................................... 1139
40.7.1.1.7 Variation 7: Using Oxiranes ......................................................... 1140
40.7.1.1.8 Variation 8: Using Thiiranes ....................................................... 1141
40.7.1.1.9 Variation 9: Using Aziridines ..................................................... 1141
40.7.1.1.10 Variation 10: Using Sulfones ...................................................... 1142
40.7.1.1.11 Variation 11: Using Alkylamines ............................................... 1143
40.7.1.1.12 Variation 12: Using Diazenolates ............................................... 1144
40.7.1.1.12 Method 2: Substitution of Protected Hydrazines ....................... 1144
40.7.1.1.12.1 Variation 1: Alkylation of Hydrazones .................................... 1145
40.7.1.1.12.2 Variation 2: Alkylation of Hydrazides ..................................... 1145
40.7.1.1.12.3 Variation 3: Reductive Alkylation of Hydrazides .................... 1147
40.7.1.1.12.4 Variation 4: Alkylation of Azines .......................................... 1147
40.7.1.1.12.5 Variation 5: Alkylation of tert-Butyl Isopropylidenehydrazinecarboxylate 1148
40.7.1.1.12.6 Variation 6: Alkylation of P,P-Diphenyolphosphinic Hydrazide .... 1150
40.7.1.1.12.7 Variation 7: Alkylation of Di-tert-butyl Hydrazine-1,2-dicarboxylate .. 1151
40.7.1.1.12.8 Variation 8: Alkylation of Tri-tert-butyl Hydrazine-1,1,2-tricarboxylate .... 1153
40.7.1.1.12.9 Variation 9: Alkylation of Orthogonally Triprotected Hydrazines .... 1154

Method 22: 1,2-Dialkylhydrazines by Reduction of Dialkyldiazenes

Method 23: Trialkylhydrazines from 1,1,1-Trialkylhydrazinium Salts

Method 24: Tetraalkylhydrazines by Thermolysis of Tetraaz-2-enes

Method 25: Addition of Organometallic Compounds to Azodicarboxylic Esters (N-Alkylation)

Method 26: Synthesis from Dialkylnitrosamines and Grignard Reagents

Method 27: Synthesis from N-Phthalimidoaziridines

Method 28: Addition to Azodicarboxylic Esters

Method 29: Synthesis from 1-Aminoaziridines

Method 30: Oxidative Coupling of Amines

Applications of Product Subclass 1 in Organic Synthesis

Method 1: Alkylation of Hydrazines and Alkylhydrazines

Variation 1: Using Alkyl Halides

Variation 2: Using Dialkyl Sulfates or Alkyl Sulfonates

Method 2: Amination of Tertiary Amines

Variation 1: Using N-Chloro(alkyl)amines

Variation 2: Using Hydroxylamine-\(O\)-sulfonic Acids

Method 3: Dicationic Hydrazinium Compounds by Protonation of Hydrazinium Compounds

Method 4: Dicationic Hydrazinium Compounds by Alkylation of Hydrazinium Compounds

Method 5: Ammoniumimines by Deprotonation of Hydrazinium Compounds

Method 6: (Ammonium)acylimines from 1,1-Dialkylhydrazines

Variation 1: Using Oxiranes and Carboxylic Acid Esters

Variation 2: Using Acyl Halides and Alkyl Halides

Method 7: (Ammonium)acylimines from 1,1,1-Trialkylhydrazinium Compounds

Variation 1: Using Acyl Halides

Variation 2: Acylation of (Trialkylammonium)imines–Bis(tert-butyloxirane) Adducts

Method 8: (Ammonium)cyanoimines from Trialkylamines

Method 9: Synthesis of Hydrazinium C,N-Betaines

Applications of Product Subclass 2 in Organic Synthesis

Product Class 8: 1,2-Diazacycloalkanes

W. Maison

Synthesis of Product Class 8

Method 1: Alkylation of Hydrazines

Variation 1: Alkylation with Haloalkanes

Variation 2: Alkylation with Alkanesulfonates

Variation 3: Alkylation with Epoxides

Method 6: (Ammonium)acylimines from 1,1-Dialkylhydrazines

Variation 1: Using Oxiranes and Carboxylic Acid Esters

Variation 2: Using Acyl Halides and Alkyl Halides

Method 7: (Ammonium)acylimines from 1,1,1-Trialkylhydrazinium Compounds

Variation 1: Using Acyl Halides

Variation 2: Acylation of (Trialkylammonium)imines–Bis(tert-butyloxirane) Adducts

Method 8: (Ammonium)cyanoimines from Trialkylamines

Method 9: Synthesis of Hydrazinium C,N-Betaines

Applications of Product Subclass 2 in Organic Synthesis
40.8.1.2 Method 2: Cyclization of N-Chloroalkanamines .......................... 1218
40.8.1.3 Method 3: Reduction of N=N Bonds ................................. 1218
40.8.1.4 Method 4: Reduction of C=N and C=O Bonds ................. 1219
40.8.1.4.1 Variation 1: Reduction of Hydrazones and Azines ........... 1219
40.8.1.4.2 Variation 2: Reduction of N-Acylhydrazines and N-Acylhydrazones ...................................................... 1220
40.8.1.4.3 Variation 3: Reductive Amination ................................ 1224
40.8.1.5 Method 5: Reductive Alkylation of Azo Compounds .............. 1224
40.8.1.6 Method 6: Reductive α-Aminoalkylation .............................. 1224
40.8.1.7 Method 7: Reduction of Dialkyl Nitrosamines .................... 1229
40.8.1.8 Method 8: Synthesis by Cycloaddition .............................. 1230
40.8.1.8.1 Variation 1: [4 + 2] Cycloadditions of Azo Compounds .... 1230
40.8.1.8.2 Variation 2: [3 + 2] Cycloadditions ............................... 1234
40.8.1.8.3 Variation 3: Criss-Cross [3 + 2] Cycloadditions .............. 1241
40.8.1.9 Method 9: Addition of Organometallic Reagents to N=N Bonds .... 1243
40.8.1.10 Method 10: Addition of Organometallic Reagents to C=N Bonds ..... 1244
40.8.1.11 Method 11: Addition of Hydrazines to Activated Alkenes .......... 1245
40.8.1.12 Method 12: Diazenium Cyclization ................................ 1245
40.8.1.13 Method 13: Alkene Metathesis ..................................... 1246

40.9 Product Class 9: Triazanes and Tetrazanes
E. Schaumann

40.9.1 Synthesis of Product Class 9 ............................................. 1253
40.9.1.1 Method 1: Synthesis of Triazanes by Addition of Amines to Azo Compounds .......................................................... 1253
40.9.1.2 Method 2: Synthesis of Triazanes by Ring Opening of Oxaziridines with Hydrazines ....................................................... 1254
40.9.1.3 Method 3: Synthesis of Triazidines and Heteroatom Analogues .... 1255
40.9.1.4 Method 4: Synthesis of Tetrazanes .................................. 1256

40.10 Product Class 10: Amido Derivatives of Sulfanediol
S. R. Chemler

40.10.1 Product Subclass 1: Alkylaminesulfenyl Halides ............... 1259
40.10.1.1 Synthesis of Product Subclass 1 ..................................... 1259
40.10.1.1.1 Method 1: Synthesis of Alkylaminesulfenyl Fluorides by Halide Exchange .................................................. 1259
40.10.1.1.2 Method 2: Synthesis of Alkylaminesulfenyl Chlorides .......... 1260
40.10.1.1.2.1 Variation 1: Using Sulfur Dichloride .......................... 1260
40.10.1.1.2.2 Variation 2: By Chlorination of the Corresponding Diamino Disulfides .................................................. 1260
40.10.1.1.3 Method 3: Synthesis of Alkylaminesulfenyl Bromides and Alkylaminesulfenyl Iodides .............................................. 1261
40.10.1.1.3.1 Variation 1: By Bromination of Bis(dialkylamino) Disulfides ..... 1261
40.10.1.1.3.2 Variation 2: By Halide Exchange ............................... 1262
40.10.1.2 Applications of Product Subclass 1 in Organic Synthesis .......... 1262
Method 1: Synthesis via Reaction of Anilines with Disulfur Dichloride

Product Subclass 6: N,N'-Dialkylsulfur Diimides

Synthesis of Product Subclass 6

Method 1: Synthesis of N,N'-Bis(methoxycarbonyl)sulfur Diimide from Sulfur Tetrafluoride

Method 2: Synthesis of N,N'-Dialkylsulfur Diimides from Sulfur Tetrafluoride

Method 3: Synthesis of N,N'-Diarylsulfur Diimides via Amidosulfur Dichlorides

Applications of Product Subclass 6 in Organic Synthesis

Product Class 12: N-Alkylsulfamic Acids and Derivatives

E. S. Sherman and S. R. Chemler

Product Subclass 1: N-Alkylsulfamoyl Halides

Synthesis of Product Subclass 1

Method 1: Synthesis of N-Alkylsulfamoyl Fluorides

Variation 1: From Amines and Sulfuryl Fluoride

Variation 2: From Amines and Sulfuryl Chloride Fluoride

Variation 3: From N-Alkylsulfamoyl Chlorides

Method 2: Synthesis of N-Alkylsulfamoyl Chlorides

Variation 1: From N-Alkylsulfamic Acids and Phosphorus Pentachloride

Variation 2: From Amines and Sulfuryl Chloride

Method 3: Synthesis of N-Alkylsulfamoyl Bromides

Product Subclass 2: N-Alkylsulfamic Acids

Synthesis of Product Subclass 2

Method 1: Synthesis from Amines and Chlorosulfonic Acid

Method 2: Synthesis by Aminolysis of Amine–Sulfur Trioxide Complexes

Method 3: Synthesis from Isocyanates and Sulfuric Acid

Method 4: Synthesis by Hydrolysis of Aryl Sulfamates

Method 5: Synthesis from N-Alkylsulfamoyl Chlorides

Method 6: Synthesis by Hydrolysis of Sulfamoyl Azides

Product Subclass 3: N-Alkylsulfamides

Synthesis of Product Subclass 3

Method 1: Synthesis of Linear Sulfamides

Variation 1: From N-Alkylsulfamoyl Chlorides

Variation 2: From N-Alkylsulfamic Acid Esters

Variation 3: From Chlorosulfonyl Isocyanate

Variation 4: From N-Sulfamoyloxazolidinone Derivatives

Variation 5: From Sulfamide and Amines

Method 2: Synthesis of Cyclic Sulfamides

Variation 1: From Amino Alcohols with Burgess-Type Reagents

Variation 2: From Linear Sulfamides and Alkenes

Variation 3: From N,N-Dimethylsulfamoylaziridines and Amines

Table of Contents
Variation 4: From α-Amino Acid Esters and Sulfamide .......................... 1302

Product Class 13: Ammoniumsulfonates, Thiohydroxylamines, and Aminosulfonium Salts
E. Schaumann

## Introduction

K. Banert

## 41.1 Product Class 1: Nitroalkanes

R. A. Aitken and K. M. Aitken

## 41.2 Product Class 2: Nitrosoalkanes and Nitroso Acetals (N,N-Dialkoxyamines)

H.-U. Reissig, B. Dugović, and R. Zimmer

## 41.3 Product Class 3: N-Nitroamines

U. Jahn

## 41.4 Product Class 4: N-Nitrosoamines

M. M. K. Boysen

## 41.5 Product Class 5: Aliphatic Azoxy Compounds (Aliphatic Diazene Oxides)

M. M. K. Boysen

## 41.6 Product Class 6: Aliphatic Azo Compounds

S. Kempa, L. Wallach, and K. Rück-Braun

## 41.7 Product Class 7: Diazonium Compounds

S. Kubik

## 41.8 Product Class 8: Azidoalkanes

S. Bräse, B. Lesch, and V. Zimmermann

## 41.9 Product Class 9: Alkyltriazenes

N. Jung and S. Bräse

## 41.10 Product Class 10: Alkyltetrazenes

N. Jung and S. Bräse

## 41.11 Product Class 11: N,N-Dihaloamines

S. J. Collier and W. Xiang

41.1.5.32 Method 32: Substitution of Bromine in α-Bromonitroalkanes by a Carbanion Prepared from a Malononitrile .............................. 153
41.1.5.33 Method 33: Substitution of Bromine in α-Bromonitroalkanes by an Organotin(IV) Reagent .................................................. 153
41.1.5.34 Method 34: Substitution of Iodine in α-Iodonitroalkanes by a Carbanion Prepared from a Nitroalkane ........................................ 154
41.1.5.35 Method 35: Substitution of an Arylsulfonyl Group or Arylsulfanyl Group in Nitroalkanes by Carbon Nucleophiles ...................... 154
41.1.5.36 Method 36: Substitution of a Nitro Group in Geminal Dinitroalkanes by Carbon Nucleophiles ................................................. 155
41.1.5.37 Method 37: Dimerization of Nitroalkanes ................................................................. 157
41.1.5.37.1 Variation 1: Starting from Nitroalkanes ...................................................................... 157
41.1.5.37.2 Variation 2: Starting from Halonitroalkanes ............................................................ 158
41.1.5.38 Method 38: Decarboxylation of 2-Nitro Acids ......................................................... 160
41.1.5.39 Method 39: Dehalogenation of α-Halonitroalkanes ................................................ 161
41.1.5.39.1 Variation 1: Using Potassium Hydroxide ............................................................ 161
41.1.5.39.2 Variation 2: Using Sodium Borohydride ............................................................... 162
41.1.5.39.3 Variation 3: Using Catalytic Hydrogenation ........................................................ 162
41.1.5.39.4 Variation 4: Using Tributyltin Hydride ................................................................. 163
41.1.5.40 Method 40: Desulfoninylation of Nitro Sulfones ....................................................... 164
41.1.5.41 Method 41: Catalytic Reduction of Nitroalkenes ..................................................... 164
41.1.5.42 Method 42: Borohydride Reduction of Nitroalkenes .............................................. 166
41.1.5.42.1 Variation 1: Using Sodium Borohydride ............................................................... 166
41.1.5.42.2 Variation 2: Using Lithium Borohydride ............................................................... 167
41.1.5.42.3 Variation 3: Using Zinc Borohydride ...................................................................... 167
41.1.5.42.4 Variation 4: Using Sodium Trimethoxyborohydride .............................................. 168
41.1.5.43 Method 43: Reduction of Nitroalkenes with Lithium Aluminum Hydride ................. 168
41.1.5.44 Method 44: Enantioselective Reduction of Nitroalkenes with Silanes ..................... 169
41.1.5.45 Method 45: Reduction of Nitroalkenes Using Biological and Biomimetic Reducing Agents ................................................... 169
41.1.5.46 Method 46: Hydrocyanation of a Nitroalkene Using Hydrogen Cyanide ............... 170
41.1.5.47 Method 47: Hydrocyanation of a Nitroalkene Using Potassium Cyanide ................ 171
41.1.5.48 Method 48: Addition to a Nitroalkene by Electrophilic Aromatic Substitution ............ 172
41.1.5.49 Method 49: Addition to a Nitroalkene Using a Carbanion Prepared from an Aldehyde ............................................................... 174
41.1.5.50 Method 50: Addition to a Nitroalkene Using a Carbanion Prepared from a Ketone ........ 176
41.1.5.51 Method 51: Addition to a Nitroalkene Using a Carbanion Prepared from an Ester .... 179
41.1.5.52 Method 52: Addition to a Nitroalkene Using a Carbanion Prepared from a Nitrile ....... 181
41.1.5.53 Method 53: Addition to a Nitroalkene Using a Carbanion
Prepared from an Amide ........................................ 182
41.1.5.54 Method 54: Addition to a Nitroalkene Using a Carbanion
Prepared from a 1,3-Diester ........................................ 184
41.1.5.55 Method 55: Addition to a Nitroalkene Using a Carbanion
Prepared from a 1,3-Diketone ...................................... 189
41.1.5.56 Method 56: Addition to a Nitroalkene Using a Carbanion
Prepared from a 3-Oxo Ester ........................................ 191
41.1.5.57 Method 57: Addition to a Nitroalkene Using a Carbanion
Prepared from a 2-Cyano Ester .................................... 194
41.1.5.58 Method 58: Addition to a Nitroalkene Using a Carbanion
Prepared from a Dinitrile ......................................... 195
41.1.5.59 Method 59: Addition to a Nitroalkene Using a Carbanion
Prepared from a Thioester ........................................ 195
41.1.5.60 Method 60: Addition to a Nitroalkene Using a Carbanion
Prepared from a (2,2,6,6-Tetramethylpiperidin-1-yloxycarbonyl)alkane ........................................ 196
41.1.5.61 Method 61: Addition to a Nitroalkene Using a Carbanion
Prepared from a 1,3-Oxazine ...................................... 196
41.1.5.62 Method 62: Addition to a Nitroalkene Using a Silyl Enol Ether ........................................ 197
41.1.5.63 Method 63: Addition to a Nitroalkene Using Enamino Compounds ........................................ 199
41.1.5.63.1 Variation 1: Using Enamines ...................................... 199
41.1.5.63.2 Variation 2: Using Enamino Esters ............................... 201
41.1.5.63.3 Variation 3: Using Enamino Ketones ....................... 202
41.1.5.63.4 Variation 4: Using Enaminonitriles ............................. 203
41.1.5.64 Method 64: Addition to a Nitroalkene Using Organosulfur Reagents ........................................ 203
41.1.5.64.1 Variation 1: Using Sulfones ......................................... 203
41.1.5.64.2 Variation 2: Using 1,3-Dithianes ............................... 204
41.1.5.64.3 Variation 3: Using Sulfur Ylides ............................... 205
41.1.5.65 Method 65: Addition to a Nitroalkene Using a Carbanion
Prepared from an Isocyanide ..................................... 205
41.1.5.66 Method 66: Addition to a Nitroalkene Using a Carbanion
Prepared from a Nitroalkane ..................................... 206
41.1.5.67 Method 67: Addition to a Nitroalkene Using a Carbanion
Prepared from a 2-Nitro Ester ..................................... 207
41.1.5.68 Method 68: Addition to a Nitroalkene Using a Carbanion
Prepared from an α-Cyano-α-nitro Ester .................................. 208
41.1.5.69 Method 69: Addition to a Nitroalkene Using Organophosphorus
Reagents ................................................................. 208
41.1.5.69.1 Variation 1: Using Phosphonoacetate Esters .......................... 208
41.1.5.69.2 Variation 2: Using Phosphorus Ylides .......................... 209
41.1.5.70 Method 70: Addition to a Nitroalkene Using an
Organolithium Reagent ............................................. 210
41.1.5.71 Method 71: Addition to a Nitroalkene Using an
Organomagnesium Reagent ......................................... 211
41.1.5.71.1 Variation 1: Using Alkylmagnesium Chlorides .......................... 211
41.1.5.71.2 Variation 2: Using Alkylmagnesium Bromides .......................... 212
41.1.5.71.3 Variation 3: Using Alkylmagnesium Iodides .......................... 213
Method 72: Addition to a Nitroalkene Using an Alkylsamarium(II) Bromide ........................................ 214
Method 73: Addition to a Nitroalkene Using an Alkylmanganese(II) Chloride .................................. 214
Method 74: Addition to a Nitroalkene Using an Alkylcopper Reagent ............................................... 215
Method 74.1: Variation 1: Using Alkylcoppers .......................................................... 215
Method 74.2: Variation 2: Using Halozinc Alkylcyanocuprates ....................................................... 215
Method 74.3: Variation 3: Using Alkylzinc Alkylcyanocuprates ....................................................... 216
Method 75: Addition to a Nitroalkene Using an Organozinc Reagent ............................................. 217
Method 75.1: Variation 1: Using Alkylzinc Chlorides ............................................................................. 217
Method 75.2: Variation 2: Using Alkylzinc Bromides ............................................................................. 218
Method 75.3: Variation 3: Using Dialkylzincs ....................................................................................... 218
Method 76: Addition to a Nitroalkene Using an Arylboronic Acid ..................................................... 221
Method 77: Addition to a Nitroalkene Using an Alkylaluminum Reagent ........................................... 222
Method 77.1: Variation 1: Using Trialkylaluminums ............................................................................. 222
Method 77.2: Variation 2: Using Tetraalkylaluminates ........................................................................... 224
Method 78: Addition to a Nitroalkene Using a Lithium Tetraalkylgallate ............................................. 225
Method 79: Addition to a Nitroalkene Using Triethoxy(phenyl)silane ................................................. 225
Method 80: Addition to a Nitroalkene Using a Tetraalkylstannane ................................................. 226
Method 81: Addition to a Nitroalkene Using Dialkyl Phosphites ....................................................... 226
Method 82: [2 + 2]-Cycloaddition Reactions of Nitroalkenes ............................................................... 227
Method 82.1: Variation 1: With Another Nitroalkene ............................................................................. 227
Method 82.2: Variation 2: With Enamines ............................................................................................. 228
Method 82.3: Variation 3: With Tetramethoxymethane ........................................................................ 229
Method 83: [3 + 2]-Cycloaddition Reactions of Nitroalkenes ................................................................. 229
Method 83.1: Variation 1: With Diazo Compounds ................................................................................. 229
Method 83.2: Variation 2: With Methylene cyclopropanes ..................................................................... 230
Method 83.3: Variation 3: With Azides ................................................................................................. 231
Method 83.4: Variation 4: With Azomethine Ylides .............................................................................. 231
Method 83.5: Variation 5: With Enamino Ketones .................................................................................. 231
Method 83.6: Variation 6: With Nitrones ............................................................................................... 232
Method 84: [2 + 4]-Cycloaddition Reactions of Nitroalkenes with Dienes ................................................. 232
Method 85: Rearrangements in the Synthesis of Nitroalkanes from Other Nitro Compounds ................. 238
Method 85.1: Variation 1: Baylis–Hillman Reaction .............................................................................. 238
Method 85.2: Variation 2: Disproportionation ....................................................................................... 238
Method 85.3: Variation 3: Thio-Claisen Rearrangement ....................................................................... 239
Method 85.4: Variation 4: Cope Rearrangement .................................................................................... 239
41.2 Product Class 2: Nitrosoalkanes and Nitroso Acetals (N,N-Dialkoxyamines)

H.-U. Reissig, B. Dugović, and R. Zimmer

41.2.1 Synthesis of Product Class 2

41.2.1.1 Method 1: Substitution Reactions

41.2.1.2 Variation 1: Substitution of a Hydrogen Atom in Nonactivated Compounds

41.2.1.3 Variation 2: Substitution of a Hydrogen Atom in Halogenated Compounds

41.2.1.4 Variation 3: Substitution of a Hydrogen Atom in Acceptor-Substituted Compounds

41.2.1.5 Variation 4: Substitution of Other Functional Groups

41.2.1.6 Variation 5: Substitution of Metals

41.2.1.7 Method 2: Addition Reactions

41.2.1.8 Variation 1: Addition to Alkenes

41.2.1.9 Variation 2: Addition to Electron-Rich Aromatic Compounds

41.2.1.10 Method 3: Elimination Reactions and Pyrolysis

41.2.1.11 Method 4: Oxidation Reactions

41.2.1.12 Variation 1: Oxidation of Amines

41.2.1.13 Variation 2: Oxidation of Hydroxylamines

41.2.1.14 Variation 3: Oxidation of Cyclic Nitrogen Compounds

41.2.1.15 Method 5: Reduction of Nitroalkanes

41.2.1.16 Method 6: Photochemical Reactions

41.2.1.17 Method 7: Rearrangements

41.2.1.18 Method 8: Conversions of Oximes

41.2.1.19 Method 9: Derivatization of Stable Nitrosoalkanes

41.2.1.20 Method 10: Synthesis of Metal-Coordinated Nitrosoalkanes

41.2.1.21 Method 11: Synthesis of Nitroso Acetals

41.2.2 Applications of Product Class 2 in Organic Synthesis

41.2.2.1 Method 1: Oxidation to Nitroalkanes

41.2.2.2 Method 2: Reduction to Amines

41.2.2.3 Method 3: Formation of Oximes and Derivatives

41.2.2.4 Method 4: Synthesis of Compounds with an N=X Functionality (X = C, N, P)

41.2.2.5 Method 5: Conversion into Nitrosoalkenes

41.5 Product Class 5: Aliphatic Azoxy Compounds (Aliphatic Diazene Oxides)
M. M. K. Boysen

41.5.1 Synthesis of Product Class 5 .................................................. 450
41.5.1.1 Formation or Cleavage of N−O Bonds ..................................... 450
41.5.1.2 Method 2: Oxidation of Hydrazones ....................................... 451
41.5.1.3 Method 3: Oxidation of Hydrazines ........................................ 452
41.5.1.4 Method 4: Reduction of Dimeric Nitroso Compounds ................. 452
41.5.1.2 Formation of the N=N Bond ................................................ 452
41.5.1.2.1 Method 1: Condensation of Hydroxylamines with Dimeric Nitroso Compounds ................................................ 452
41.5.1.2.2 Method 2: Condensation of N,N-Dihaloamines with Nitroso Compounds ................................................ 454
41.5.1.2.3 Method 3: Oxidation of Hydroxylamines ................................ 455
41.5.1.3 Formation of the C−N Bond ................................................ 455
41.5.1.3.1 Method 1: Alkylation of Diazonolates ................................ 455

41.6 Product Class 6: Aliphatic Azo Compounds
S. Kempa, L. Wallach, and K. Rück-Braun

41.6.1 Synthesis by Formation of the N=N Bond ...................................... 460
41.6.1.1 Method 1: Oxidative Coupling of Primary Amines ..................... 460
41.6.1.2 Method 2: Condensation of Nitrosoalkanes with Alkylamines ......... 462
41.6.1.3 Method 3: Rearrangement of N,N′-Dialkylsulfamides ................. 464
41.6.1.3.1 Variation 1: Rearrangement of N,N′-Dialkylureas ..................... 468
41.6.2 Synthesis from Compounds Containing an N−N Bond ..................... 469
41.6.2.1 Method 1: Oxidation of 1,2-Dialkylhydrazines ........................... 469
41.6.2.1.1 Variation 1: From Corresponding Ketazines ............................ 477
41.6.2.2 Method 2: 1,4-Elimination of α-Substituted Alkylhydrazones ...... 478
41.6.2.3 Method 3: Reduction of Azoxy Compounds .............................. 481
41.6.2.4 Method 4: Oxidation of Alkylhydrazones ................................ 483
41.6.2.4.1 Variation 1: Oxidation with Lead(IV) Acetate ....................... 483
41.6.2.4.2 Variation 2: Oxidation with Peracetic Acid ............................ 484
41.6.2.4.3 Variation 3: Oxidation with (Diacetoxyiodo)benzene ............... 485
41.6.2.4.4 Variation 4: Oxidation of Ketazines with Lead(IV) Acetate ........ 486
41.6.2.5 Method 5: Alkylation of Alkylhydrazones ................................ 487
41.6.2.6 Method 6: Isomerization of Alkylhydrazones ............................ 491
41.6.2.7 Method 7: Hydrogenation of Ketazines ................................... 492
41.6.2.8 Method 8: Chlorination of Ketazines ...................................... 492
Method 9: Ring Opening of Heterocycles ........................................... 497
Method 10: [2,3]-Sigmatropic Rearrangement of 1-Alkyl-1-allyldiazenes and 1-Alkyl-1-propargyldiazenes .......... 500
Method 11: Reactions of 2-Diazo 1,3-Diketones with CH-Acidic Compounds ........................................... 501
Synthesis by Other Methods .................................................................. 502

Product Class 7: Diazonium Compounds
S. Kubik

Product Subclass 1: Alkanediazonium Compounds ........................................... 507
Method 1: Synthesis from Primary Amines ........................................... 509
Variation 1: With Nitrous Acid .................................................. 509
Variation 2: With Disodium Pentacyanonitrosylferrate(III) ................. 510
Variation 3: With Alkyl Nitrites .................................................. 510
Variation 4: With Nitrosyl Chloride ............................................ 511
Variation 5: With Dinitrogen Tetroxide ........................................... 511
Method 2: Synthesis from Triazenes ................................................. 511
Method 3: Synthesis from N-Nitrosoamides ........................................... 512
Variation 1: By Thermolysis .................................................. 512
Variation 2: By Alkali Cleavage .................................................. 513
Method 4: Synthesis from Diazoaalkanes ........................................... 514
Method 5: Miscellaneous Methods .................................................. 514

Product Subclass 2: Alkenediazonium Compounds ........................................... 514
Synthesis of Product Subclass 2 .................................................. 517
Method 1: Synthesis from Diazoaalkanes ........................................... 517
Method 2: Synthesis from 2-Diazocarbonyl Compounds ......................... 517
Variation 1: By O-Alkylation .................................................. 518
Variation 2: By O-Sulfonylation or O-Benzoylation ......................... 520
Method 3: Synthesis from Hydrazones ................................................. 521
Variation 1: From Aldehyde Hydrazones ........................................... 522
Variation 2: From Ketone Hydrazones ................................................. 524
Method 4: Synthesis from Alk-1-enyl Derivatives ........................................... 525
Variation 1: From Enamines .................................................. 525
Variation 2: From Alk-1-enyl Isocyanates ........................................... 527
Variation 3: From Alk-1-enytriazenes ................................................. 528
Variation 4: From 1-(Tosylazo)alk-1-enes ........................................... 529
Method 5: Synthesis from N-Nitrosooxazolidin-2-ones ......................... 529
Method 6: Synthesis from Other Alkenediazonium Compounds ................. 531

Applications of Product Subclass 2 in Organic Synthesis ......................... 534
Method 1: Synthesis of Pyrazoles ................................................. 534
Method 2: Synthesis of 1H-1,2,3-Triazoles ........................................... 535
## Method 3: Synthesis of 6H-1,3,4-Oxadiazines and 1,3,4-Oxadiazoles

536

## Method 4: Synthesis of 2-Diazoimines

536

## Product Class 8: Azidoalkanes

S. Bräse, B. Lesch, and V. Zimmermann

543

### 41.8.1 Synthesis of Product Class 8

543

#### Method 1: Synthesis from Benzyl Ethers or Related Compounds by Radical Substitution (C–H Activation)

543

#### Method 2: Synthesis from Carboxylic Acids by Azidative Decarboxylation

544

#### Method 3: Synthesis from Alkyl Halides by Radical Substitution

545

#### Method 4: Synthesis by Nucleophilic Substitution of Alkyl Halides

545

##### Variation 1: Classical Synthesis

545

##### Variation 2: Asymmetric Synthesis

548

##### Variation 3: 1,3-Substitution in Allyl Halides

550

#### Method 5: Synthesis by Nucleophilic Substitution of Alkyl Esters and Related Compounds

551

##### Variation 1: Classical Synthesis

551

##### Variation 2: Asymmetric Synthesis

554

#### Method 6: Synthesis by Nucleophilic Substitution of Alkanols and Related Compounds

556

##### Variation 1: Classical Synthesis

556

##### Variation 2: Asymmetric Synthesis

560

#### Method 7: Synthesis from Acetals

566

#### Method 8: Synthesis by Ring Opening of Epoxides, Aziridines, and Related Compounds

567

##### Variation 1: Classical Synthesis

567

##### Variation 2: Asymmetric Synthesis

577

#### Method 9: Electrophilic Azidation

578

#### Method 10: Synthesis by Addition to C=C Bonds

580

##### Variation 1: Nucleophilic Hydroazidation of C=C Bonds

580

##### Variation 2: Electrophilic Hydroazidation of C=C Bonds

581

##### Variation 3: Radical Hydroazidation of C=C Bonds

584

##### Variation 4: Carboazidation of C=C Bonds

585

##### Variation 5: Haloazidation of C=C Bonds

585

##### Variation 6: Azidoselanylation of C=C Bonds

590

#### Method 11: Synthesis by Addition to C=X Bonds

590

#### Method 12: Synthesis from Amines by Nitrogen Transfer

591

#### Method 13: Synthesis with Retention of Azide Functionality

594

#### Application of Product Class 8 in Organic Synthesis

594

##### Method 1: Reactions with All-Carbon Functional Groups

594

##### Variation 1: [3 + 2]-Cycloaddition Reactions

594

## 42.1 Product Class 1: Phosphinidenes and Terminal Phosphinidene Complexes

J. C. Slootweg and K. Lammertsma 15

## 42.2 Product Class 2: Oxo-, Thioxo-, Selenoxo-, and Iminophosphines and Diphosphenes

M. Yoshifuji 37

## 42.3 Product Class 3: Phosphenium Salts

M. Yoshifuji 63

## 42.4 Product Class 4: Alkylphosphines

E. Hey-Hawkins and A. A. Karasik 71

## 42.5 Product Class 5: Bis(alkylphosphino)- and Poly(alkylphosphino)alkanes, and Di- and Polyphosphines with a P—P Bond

E. Hey-Hawkins and A. A. Karasik 109

## 42.6 Product Class 6: Cyclic Phosphines

D. Gudat 155

## 42.7 Product Class 7: Dialkylphosphinous Acids and Derivatives

K. M. Pietrusiewicz and M. Stankevič 221

## 42.8 Product Class 8: Alkylphosphonous Acids and Derivatives

K. M. Pietrusiewicz and M. Stankevič 243

## 42.9 Product Class 9: Phosphorous Acid and Derivatives

M. Stankevič and K. M. Pietrusiewicz 275

## 42.10 Applications of Tricoordinated Phosphorus Compounds in Homogeneous Catalysis

### 42.10.1 General Catalytic Methods

M. Toffano 347

### 42.10.2 Enantioselective Catalytic Methods

J.-C. Fiaud and A. Marinetti 391

M. Yoshifuji

42.3 Synthesis of Product Class 3 .............................................. 63
42.3.1 Method 1: Halogen Abstraction of Halophosphines ................. 63
42.3.2 Method 2: Alkylation or Protonation of Diphosphenes ............. 66
42.3.3 Applications of Product Class 3 in Organic Synthesis ............. 67
42.3.3.1 Method 1: Reactions of Phosphenium Cations with Unsaturated Hydrocarbons ............................................. 67

42.4 Product Class 4: Alkylphosphines  
E. Hey-Hawkins and A. A. Karasik

42.4 Synthesis of Product Class 4 .............................................. 71
42.4.1 Method 1: Synthesis from Phosphine, or Primary or Secondary Phosphines, and Alkyl Halides ........................................ 73
42.4.1.1 Variation 1: From Phosphine and Alkyl Halides ................... 73
42.4.1.2 Variation 2: From Primary Phosphines and Alkyl Halides .......... 74
42.4.1.3 Variation 3: From Secondary Phosphines and Alkyl or Acyl Halides .... 75
42.4.1.4 Method 2: Synthesis from Metal Organophosphides and Electrophiles .... 75
42.4.1.4.1 Variation 1: Synthesis from Metal Organophosphides and Alkyl Halides ........ 75
42.4.1.4.2 Variation 2: Synthesis from Metal Organophosphides and Esters ........ 79
42.4.1.4.3 Variation 3: Ring Opening of Tetrahydrofuran ................ 80
42.4.1.4.4 Variation 4: Addition of Phosphines to C—X Multiple Bonds .... 81
42.4.1.4.5 Variation 5: Addition to Alk-1-enes or Cyclic Alkenes .......... 81
42.4.1.4.6 Variation 2: Addition to Carboxyl Groups ..................... 83
42.4.1.4.7 Variation 3: Mannich-Type Reactions of Phosphines, Formaldehyde, and Amines ............................ 83
42.4.1.4.8 Method 4: Synthesis from Halophosphines ...................... 83
42.4.1.4.9 Variation 1: From Phosphorus Trihalides or Trialkyl Phosphites and Organometallic Alkali Metal Compounds or Grignard Reagents ........ 83
42.4.1.4.10 Variation 2: From Alkylhalophosphines and Organometallic Alkali Metal Compounds or Grignard Reagents .................. 86
42.4.1.4.11 Variation 3: From Dialkylhalophosphines and Organometallic Alkali Metal Compounds or Grignard Reagents ................... 87
42.4.1.4.12 Variation 4: From Chlorophosphines and Other Organometallic Reagents .......... 90
42.4.1.4.13 Method 5: Cleavage of Diphosphenes .......................... 90
42.4.1.4.14 Method 6: Synthesis from Elemental Phosphorus and Alkyl Halides, Alcohols, or Alkenes ............................ 91
42.4.1.4.15 Method 7: Reduction of Halophosphines, Phosphinic Acids, Phosphinic Acid Esters or Halides, and Trialkyl- and Dialkylphosphine Oxides ............................ 93
42.4.1.4.16 Method 8: Reduction of Halophosphines with Lithium Aluminum Hydride or Other Metal Hydrides ............................ 93
Variation 2: Reduction of Alkylphosphonates with Lithium Aluminum Hydride

Variation 3: Reduction of Dialkylphosphine Oxides, Dialkylphosphinates, or Alkylphosphonates with Aluminum Derivatives

Variation 4: Reduction of Trialkylphosphine Oxides with Lithium Aluminum Hydride

Variation 5: Reduction of Dialkylphosphine Oxides, Dialkylphosphinates, or Alkylphosphinates with Silanes

Variation 1: With Alkali Metals

Variation 2: With Lithium Aluminum Hydride

Variation 1: Synthesis from Tetrakis(hydroxymethyl)phosphonium Halides

Method 10: Disproportionation of Dialkylphosphine Oxides

Method 11: Addition Reactions of Unsaturated Tertiary Vinylphosphines

Method 12: Enantioselective Cleavage of a P—C Bond in Alkyldimethylphosphine–Borane Complexes

Product Class 5: Bis(alkylphosphino)- and Poly(alkylphosphino)alkanes, and Di- and Polyphosphines with a P—P Bond

E. Hey-Hawkins and A. A. Karasik

Method 1: Synthesis from Metal Dialkylphosphides and Aliphatic Electrophiles

Variation 1: Synthesis from Dialkylphosphides or Dialkylphosphines and Polyhaloalkanes

Variation 2: Synthesis from Dialkylphosphides and Cyclic Sulfates

Variation 3: Synthesis from Dialkylphosphides and (Dialkylphosphino)alkyl Sulfonates

Variation 4: Synthesis from Dialkylphosphines and Polyhaloalkanes, Alkylamines, and Alcohols

Variation 5: Synthesis from Alkylphosphides and Dihaloalkanes

Variation 6: Synthesis from Bis(alkylphosphides) and Alkyl Halides

Method 2: Synthesis from Metal Phosphinomethanides and Electrophiles Containing Phosphino Groups

Method 1: Synthesis from (Dialkylphosphino)methanides and Dialkylhalophosphines

Variation 2: Enantioselective Synthesis from Lithium (Dialkylphosphino)methanide–Borane Complexes and Alkylhalophosphines
Variation 3: Synthesis from Poly(dialkylphosphino)methanides and Dialkylhalophosphines .................................................. 123

Variation 4: Synthesis from [(Dialkylphosphino)methyl]silanes or -stannanes and Dialkylhalophosphines ............................... 124

Variation 5: Oxidative Coupling of (Dialkylphosphino)methanides ................................................................. 125

Variation 6: Synthesis from (Dialkylphosphino)methanides and Polyhaloalkanes or Analogues ........................................... 127

Method 3: Synthesis from Halophosphines and Organometallic Compounds ................................................................. 129

Variation 1: Synthesis from Dialkylhalophosphines and Dimetalated Alkanes, Alkenes, or Alkynes .............................................. 129

Variation 2: Synthesis from Bis(halophosphino)alkanes and Organometallic Compounds ..................................................... 130

Method 4: Reduction of Phosphine Oxides .................................................. 132

Variation 1: Reduction of Bis(dialkylphosphoryl)alkanes with Silanes ................................................................. 132

Variation 2: Reduction of Bis(dialkylphosphoryl)alkanes with Lithium Aluminum Hydride ..................................................... 133

Method 5: Addition to Double Bonds .................................................. 135

Variation 1: Addition of Phosphines to Polyenes and Their Heteroatom Analogues ......................................................... 135

Variation 2: Addition of Dialkylphosphines to Vinyl- or Allylphosphines ................................................................. 137

Variation 3: Addition of Polyphosphinoalkanes to C=C or C=X Bonds ................................................................. 139

Variation 4: Addition of Diphosphines to Alkynes .................................................. 141

Method 6: Decomposition of Phosphonium Salts .................................................. 142

Variation 1: Reductive Cleavage of Quaternary Phosphonium Salts ................................................................. 142

Variation 2: Alcoholysis of Quaternary Phosphonium Salts .................................................. 143

Method 7: Interconversion of Poly(alkylphosphino)alkanes .................................................. 143

Variation 1: From Diphenphosphinomethanides .................................................. 143

Variation 2: Di- and Oligomerization by Interaction of Functional Groups of Phosphines ..................................................... 144

Variation 1: Di- and Oligomerization of Phosphino Alcohols .................................................. 144

2.1.1.2.3

Product Subclass 2: Tetraalkyldiphosphines and Polyalkylpolyphosphines with a P—P Bond .................................................. 145

Synthesis of Product Subclass 2 .................................................. 146

Method 1: Synthesis from Dialkylphosphides or Dialkylphosphines and Dialkylhalophosphines .................................................. 146

Method 2: Coupling of Dialkylphosphine Derivatives .................................................. 147

Variation 1: Oxidative Coupling of Dialkylphosphines by Transition-Metal Complexes ..................................................... 147

Variation 2: Reductive Coupling of Dialkylhalophosphines by Alkali Metals .................................................. 148

Method 3: Interconversion of Alkylpolyphosphines .................................................. 148

Variation 1: Alkylation of Polyphosphide Anions .................................................. 148

Variation 2: Insertion into P—P Bonds .................................................. 149
Variation 1: From Phosphines and \(\alpha,\omega\)-Dihalides or Disulfonates of \(\alpha,\omega\)-Diols ................................................ 181

Variation 2: From Phosphines and Cyclic Sulfates ........................................ 183

Method 2: Alkylation of Dichlorophosphines or Phosphinic Acid

Variation 1: From Dichlorophosphines or Phosphinic Acid \(O,S\)-Diesters and \(\alpha,\omega\)-Di-Grignard or Dilithium Reagents ........................................... 186

Variation 2: From Dichlorophosphines, Alkenes, and Organometallic Reagents .............................. 187

Method 3: Hydrophosphination of Double Bonds ........................................................................ 188

Variation 1: Addition of Phosphines to Alkenes ...................................................... 189

Variation 2: Addition of Phosphine and Primary Phosphines to 1,4-Dien-3-ones .................................................. 190

Variation 3: Addition of Phosphines to Carbonyl Compounds ........................................... 192

Variation 4: Cycloaddition or Metathesis Reactions ..................................................... 192

Variation 1: 2,5-Dihydrophospholes from Dihalophosphines and Dienes via [4 + 1] Cycloaddition and Reduction .................................................. 193

Variation 2: 1,2,5,6-Tetrahydrophosphinines from Phosphaalkenes and 1,3-Dienes via [4 + 2] Cycloaddition .................................................. 195

Variation 3: 7-Phosphanorbornenes from [4 + 2] Cycloaddition of Phosphate Derivatives with Dienophiles ..................... 196

Variation 4: 2,5-Dihydrophospholes from Diallylphosphines via Alkene Metathesis .................................................. 199

Method 5: Transformation of Cyclic Phosphines ..................................................... 200

Variation 1: Transformation of P-Substituents in Five- and Six-Membered Heterocycles .................................................. 200

Variation 2: Lithiation and Electrophilic Substitution at \(\alpha\)-C—H Bonds in Cyclic Phosphate Oxides and Borane Complexes .............................. 201

Methods 6: Miscellaneous Reactions ................................................................. 203

Product Subclass 5: Cyclic Phosphines with Seven-Membered and Larger Rings .................................................. 204

Synthesis of Product Subclass 5 ................................................................. 205

Method 1: P-Alkylation of Phosphines ............................................................. 205

Method 2: P-Alkylation of Dihalophosphines ..................................................... 206

Method 3: P-Alkylation of Tertiary Phosphines or Diphosphines and Reduction .................................................. 207

Method 4: Hydrophosphination of Alkenes and Alkynes .................................................. 210

Methods 5: Miscellaneous Reactions ................................................................. 212

Product Class 7: Dialkylphosphinous Acids and Derivatives

K. M. Pietrusiewicz and M. Stankevič

Product Class 7: Dialkylphosphinous Acids and Derivatives ........................................ 221

Product Subclass 1: Dialkylphosphinous Acid Halides ........................................ 221

Synthesis of Product Subclass 1 ................................................................. 221

Method 1: Synthesis from Phosphorous Halides by P—C Bond Formation 221
42.8.1.1 Method 1: Electrophilic Alkylation of Phosphorus Trihalides ............ 244
42.8.1.2 Method 2: Nucleophilic Alkylation of Phosphorus Trihalides by Organometallic Reagents ................................. 244
42.8.1.3 Method 3: Ligand Exchange Using Alkylphosphines as Substrates .... 245
42.8.1.2 Applications of Product Subclass 1 in Organic Synthesis ............... 246
42.8.2 Product Subclass 2: Alkylphosphonous Acid Monohalides ................ 247
42.8.2.1 Synthesis of Product Subclass 2 ........................................ 247
42.8.2.1.1 Method 1: Partial Hydrolysis of Alkyl(dihalo)phosphines ............ 247
42.8.3 Product Subclass 3: Alkylphosphonous Acid Monoester Monohalides .... 247
42.8.3.1 Synthesis of Product Subclass 3 ............................................ 247
42.8.3.1.1 Method 1: Ligand Exchange in Alkyl(dihalo)phosphines ............. 247
42.8.4 Product Subclass 4: Alkylthiophosphonous Acid Monohalide Monoesters 248
42.8.4.1 Synthesis of Product Subclass 4 ............................................. 248
42.8.4.1.1 Method 1: Ligand Exchange of Alkyl(dihalo)phosphines ............ 248
42.8.5 Product Subclass 5: Alkylphosphonous Acid Monoamide Monohalides .... 249
42.8.5.1 Synthesis of Product Subclass 5 ............................................. 249
42.8.5.1.1 Method 1: Partial Aminolysis of Alkyl(dihalo)phosphines .......... 249
42.8.5.1.2 Method 2: Ligand Exchange in Alkyl(amino)phosphine Derivatives .. 250
42.8.6 Product Subclass 6: Alkylphosphonous Acids .................................. 251
42.8.6.1 Synthesis of Product Subclass 6 ............................................. 251
42.8.6.1.1 Method 1: Hydrolysis of Alkyl(halo)phosphines ..................... 251
42.8.6.1.2 Method 2: Hydrophosphination of Alkenes ............................. 252
42.8.6.2 Applications of Product Subclass 6 in Organic Synthesis ............... 252
42.8.7 Product Subclass 7: Alkylphosphonous Acid Monoesters ................... 253
42.8.7.1 Synthesis of Product Subclass 7 ............................................. 253
42.8.7.1.1 Method 1: Alcoholsysis of Alkylphosphines ............................ 253
42.8.7.1.2 Method 2: Esterification of Monoalkylphosphinic Acids ............. 254
42.8.7.1.3 Method 3: Hydrolysis of Dialkyl Phosphonites and Related Compounds 255
42.8.7.1.4 Method 4: Hydrophosphination of Alkenes ............................. 255
42.8.7.2 Applications of Product Subclass 7 in Organic Synthesis ............... 256
42.8.8 Product Subclass 8: Alkylphosphonous Acid Diesters ........................ 256
42.8.8.1 Synthesis of Product Subclass 8 ............................................. 256
42.8.8.1.1 Method 1: Alcoholsysis of Alkylphosphonites .......................... 256
42.8.8.1.2 Method 2: Synthesis from Halophosphonites ............................ 257
42.8.8.2 Applications of Product Subclass 8 in Organic Synthesis ............... 258
42.8.9 Product Subclass 9: Alkylthiophosphonous Acid S-Monoesters ............. 258
42.8.9.1 Synthesis of Product Subclass 9 ............................................. 258
42.8.9.1.1 Method 1: Hydrolysis of Alkyl(alkylsulfanyl)(halo)phosphines .... 258
42.8.10 Product Subclass 10: Alkylphosphonous Acid Monoamides ................ 259
42.8.10.1 Synthesis of Product Subclass 10 ........................................... 259
42.8.10.1.1 Method 1: Hydrolysis of Alkyl(diamino)phosphines .......... 259
42.8.11 Product Subclass 11: Alkylthiophosphonous Acid O-Monoesters 259
42.8.11.1 Synthesis of Product Subclass 11 ........................................... 260
42.8.11.1.1 Method 1: Synthesis from Alkyl(alkoxy)(halo)phosphines 260
42.8.12 Product Subclass 12: Alkylthiophosphonous Acid Diesters ........ 260
42.8.12.1 Synthesis of Product Subclass 12 ........................................... 260
42.8.12.1.1 Method 1: Alcoholysis of Alkyl(alkylsulfanyl)(halo)phosphines 260
42.8.13 Product Subclass 13: Alkylphosphonous Acid Monoester Monoamides 261
42.8.13.1 Synthesis of Product Subclass 13 ........................................... 261
42.8.13.1.1 Method 1: Alcoholysis of Alkylphosphine Derivatives .......... 261
42.8.13.1.2 Method 2: Aminolysis of Alkylphosphonous Acid Derivatives 262
42.8.13.2 Applications of Product Subclass 13 in Organic Synthesis .... 262
42.8.14 Product Subclass 14: Alkylidithiophosphonous Acid Diesters .... 263
42.8.14.1 Synthesis of Product Subclass 14 ........................................... 263
42.8.14.1.1 Method 1: Synthesis from Primary Alkylphosphines and Disulfides 263
42.8.14.1.2 Method 2: Thioalcoholysis of Alkyl(dihalo)phosphines ....... 263
42.8.15 Product Subclass 15: Alkylthiophosphonous Acid Monoester Monoamides 264
42.8.15.1 Synthesis of Product Subclass 15 ........................................... 264
42.8.15.1.1 Method 1: Thioalcoholysis of Alkyl(diamino)phosphines ....... 264
42.8.16 Product Subclass 16: Alkylidiselenophosphonous Acid Diesters ... 265
42.8.16.1 Synthesis of Product Subclass 16 ........................................... 265
42.8.16.1.1 Method 1: Selenoalcoholysis of Alkyl(dihalo)phosphines .... 265
42.8.17 Product Subclass 17: Alkylphosphonous Acid Diamides ............ 265
42.8.17.1 Synthesis of Product Subclass 17 ........................................... 265
42.8.17.1.1 Method 1: Aminolysis of Substituted Alkylphosphines ...... 265
42.8.17.1.2 Method 2: Synthesis from Diamino(halo)phosphines ....... 266
42.8.17.2 Applications of Product Subclass 17 in Organic Synthesis ...... 266

42.9 Product Class 9: Phosphorous Acid and Derivatives
M. Stankevič and K. M. Pietrusiewicz

42.9 Product Class 9: Phosphorous Acid and Derivatives ............... 275
42.9.1 Product Subclass 1: Phosphorous Acid Monoester Dihalides ....... 275
42.9.1.1 Synthesis of Product Subclass 1 ........................................... 275
42.9.1.1.1 Method 1: Alcoholysis of Phosphorus Trihalides .............. 275
42.9.1.1.2 Method 2: Ligand-Exchange Reactions of Phosphorous Acid Derivatives .... 276
42.9.1.2 Applications of Product Subclass 1 in Organic Synthesis ...... 276
42.9.2 Product Subclass 2: Phosphorothious Acid S-Monoester Dihalides ...... 276
42.9.2.1 Synthesis of Product Subclass 2 ................................................................. 277
42.9.2.1.1 Method 1: Thioalcoholysis of Phosphorus Trihalides ............................... 277
42.9.2.2 Applications of Product Subclass 2 in Organic Synthesis .............................. 277
42.9.3 Product Subclass 3: Phosphorous Acid Monoamide Dihalides ......................... 277
42.9.3.1 Synthesis of Product Subclass 3 ................................................................. 277
42.9.3.1.1 Method 1: Aminolysis of Phosphorus Trihalides ......................................... 277
42.9.3.1.2 Method 2: Ligand-Exchange Reactions of Phosphorous Acid Derivatives .... 278
42.9.3.2 Applications of Product Subclass 3 in Organic Synthesis .............................. 279
42.9.4 Product Subclass 4: Phosphorous Acid Monoester Monohalides ..................... 279
42.9.5 Product Subclass 5: Phosphorous Acid Diester Monohalides ............................ 279
42.9.5.1 Synthesis of Product Subclass 5 ................................................................. 280
42.9.5.1.1 Method 1: Alcoholysis of Phosphorous Acid Derivatives ............................ 280
42.9.5.1.2 Method 2: Ligand-Exchange Reactions of Phosphorous Acid Derivatives .... 280
42.9.5.3 Applications of Product Subclass 5 in Organic Synthesis .............................. 281
42.9.6 Product Subclass 6: Phosphorothious Acid Diester Monohalides ...................... 282
42.9.6.1 Synthesis of Product Subclass 6 ................................................................. 282
42.9.6.1.1 Method 1: Amine–Halogen Exchange in Phosphorothious Acid Diester Monoamides ................................................................. 282
42.9.7 Product Subclass 7: Phosphorous Acid Monoester Monoamide Monohalides .... 282
42.9.7.1 Synthesis of Product Subclass 7 ................................................................. 283
42.9.7.1.1 Method 1: Alcoholysis of Phosphorous Acid Monoamide Dihalides ............ 283
42.9.7.1.2 Method 2: Aminolysis of Phosphorous Acid Monoester Dihalides ............ 283
42.9.7.1.3 Method 3: Consecutive Alcoholysis and Aminolysis of Phosphorus Trihalides ................................................................. 283
42.9.7.1.4 Method 4: Ligand-Exchange Reactions of Phosphorous Acid Derivatives .... 284
42.9.7.2 Applications of Product Subclass 7 in Organic Synthesis .............................. 284
42.9.8 Product Subclass 8: Phosphorodithious Acid Diester Monohalides .................. 285
42.9.8.1 Synthesis of Product Subclass 8 ................................................................. 285
42.9.8.1.1 Method 1: Thioalcoholysis of Phosphorus Trihalides .................................. 285
42.9.8.1.2 Method 2: Ligand-Exchange Reactions of Phosphorous Acid Derivatives .... 285
42.9.9 Product Subclass 9: Phosphorothious Acid Monoester Monoamide Monohalides .... 286
42.9.9.1 Synthesis of Product Subclass 9 ................................................................. 286
42.9.9.1.1 Method 1: Amine–Halogen Exchange in Phosphorothious Acid Diester Monoamides ................................................................. 286
42.9.10 Product Subclass 10: Phosphorous Acid Diamide Monohalides ....................... 287
42.9.10.1 Synthesis of Product Subclass 10 .............................................................. 287
42.9.10.1.1 Method 1: Aminolysis of Phosphorous Acid Derivatives ........................... 287
42.9.10.1.2 Method 2: Ligand-Exchange Reactions of Phosphorous Acid Derivatives .... 288
Applications of Product Subclass 10 in Organic Synthesis ........................................ 288

Product Subclass 11: Phosphorous Acid Monoesters ........................................ 288

Synthesis of Product Subclass 11 ................................................................. 289

Method 1: Hydrolysis of Phosphorous Acid Esters ........................................ 289

Method 2: Synthesis from Other Phosphorous Acid Derivatives .................. 289

Method 3: Esterification of Phosphorous Acid ............................................. 290

Applications of Product Subclass 11 in Organic Synthesis ......................... 291

Product Subclass 12: Phosphorous Acid Diesters (Secondary Phosphites) .... 291

Synthesis of Product Subclass 12 ................................................................. 291

Method 1: Hydrolysis of Phosphorous Acid Derivatives ............................ 291

Method 2: Alcoholysis of Phosphorous Acid Derivatives .......................... 292

Method 3: Other Syntheses from Phosphorous Acid Derivatives ................. 293

Method 4: Esterification of Phosphorous Acid Derivatives ......................... 293

Applications of Product Subclass 12 in Organic Synthesis ......................... 294

Product Subclass 13: Phosphorous Acid Triesters (Tertiary Phosphites) ...... 295

Synthesis of Product Subclass 13 ................................................................. 295

Method 1: Alcoholysis of Phosphorous Acid Derivatives ............................ 295

Method 2: Transesterification of Phosphorous Acid Triesters .................... 297

Applications of Product Subclass 13 in Organic Synthesis ......................... 297

Product Subclass 14: Phosphorothious Acid O-Monoesters ....................... 298

Synthesis of Product Subclass 14 ................................................................. 298

Method 1: Sulfanylation of Phosphorous Acid Diesters ................................ 298

Product Subclass 15: Phosphorothious Acid O,O-Diesters .......................... 299

Synthesis of Product Subclass 15 ................................................................. 299

Method 1: Sulfanylation of Phosphorous Acid Derivatives ........................ 299

Applications of Product Subclass 15 in Organic Synthesis ......................... 300

Product Subclass 16: Phosphorothious Acid Triesters .................................. 300

Synthesis of Product Subclass 16 ................................................................. 300

Method 1: Alcoholysis of Phosphorothious Acid Derivatives ...................... 300

Method 2: Thioalcoholysis of Phosphorous Acid Derivatives ....................... 301

Product Subclass 17: Phosphorodithious Acid S,S-Diesters ......................... 301

Product Subclass 18: Phosphorodithious Acid O-Monoesters ....................... 301

Product Subclass 19: Phosphorodithious Acid Triesters ............................. 302

Synthesis of Product Subclass 19 ................................................................. 302

Method 1: Thioalcoholysis of Phosphorous Acid Derivatives ....................... 302

Product Subclass 20: Phosphoroselenous Acid O,O-Diesters ....................... 303

Synthesis of Product Subclass 20 ................................................................. 303

Method 1: Selanylation of Phosphorous Acid Diester Monohalides ............... 303
42.9.21 Product Subclass 21: Phosphorous Acid Monoester Monoamides .......... 303
42.9.21.1 Synthesis of Product Subclass 21 ........................................ 303
42.9.21.1.1 Method 1: Hydrolysis of Phosphorous Acid Derivatives .......... 303
42.9.22 Product Subclass 22: Phosphorous Acid Diester Monoamides .......... 304
42.9.22.1 Synthesis of Product Subclass 22 ........................................ 304
42.9.22.1.1 Method 1: Alcoholysis of Phosphorous Acid Derivatives .......... 304
42.9.22.1.2 Method 2: Aminolysis of Phosphorous Acid Derivatives .......... 306
42.9.22.2 Applications of Product Subclass 22 in Organic Synthesis .......... 306
42.9.23 Product Subclass 23: Phosphorothious Acid Diester Monoamides .......... 307
42.9.23.1 Synthesis of Product Subclass 23 ........................................ 307
42.9.23.1.1 Method 1: Thioalcoholysis of Phosphorous Acid Derivatives .......... 307
42.9.24 Product Subclass 24: Phosphorous Acid Diamides .......................... 308
42.9.24.1 Synthesis of Product Subclass 24 ........................................ 308
42.9.24.1.1 Method 1: Hydrolysis of Phosphorous Acid Derivatives .......... 308
42.9.25 Product Subclass 25: Phosphorous Acid Monoester Diamides .......... 309
42.9.25.1 Synthesis of Product Subclass 25 ........................................ 309
42.9.25.1.1 Method 1: Alcoholysis of Phosphorous Acid Derivatives .......... 309
42.9.25.1.2 Method 2: Aminolysis of Phosphorous Acid Derivatives .......... 310
42.9.25.2 Applications of Product Subclass 25 in Organic Synthesis .......... 311
42.9.26 Product Subclass 26: Phosphorotrithious Acid Triesters ................. 311
42.9.26.1 Synthesis of Product Subclass 26 ........................................ 311
42.9.26.1.1 Method 1: Thioalcoholysis of Phosphorous Acid Derivatives .......... 311
42.9.27 Product Subclass 27: Phosphorodithious Acid Diester Monoamides .......... 312
42.9.27.1 Synthesis of Product Subclass 27 ........................................ 312
42.9.27.1.1 Method 1: Aminolysis of Phosphorous Acid Derivatives .......... 312
42.9.28 Product Subclass 28: Phosphorothious Acid Monoester Diamides .......... 312
42.9.28.1 Synthesis of Product Subclass 28 ........................................ 313
42.9.28.1.1 Method 1: Thioalcoholysis of Phosphorous Acid Derivatives .......... 313
42.9.29 Product Subclass 29: Phosphorotriselenous Acid Triesters ............... 313
42.9.29.1 Synthesis of Product Subclass 29 ........................................ 313
42.9.29.1.1 Method 1: Reaction of a Diselenide with Elemental Phosphorus .......... 313
42.9.30 Product Subclass 30: Phosphorous Acid Triamides ........................ 313
42.9.30.1 Synthesis of Product Subclass 30 ........................................ 314
42.9.30.1.1 Method 1: Aminolysis of Phosphorous Acid Derivatives .......... 314
42.9.30.2 Applications of Product Subclass 30 in Organic Synthesis .......... 315
42.10 Applications of Tricoordinated Phosphorus Compounds in Homogeneous Catalysis

42.10.1 General Catalytic Methods
M. Toffano

42.10.1.1 General Catalytic Methods

42.10.1.1 Formation of C—C Bonds

42.10.1.1.1 Method 1: Palladium-Promoted Cross-Coupling Reactions

42.10.1.1.2 Method 2: Catalysis with Phosphonium Salts as Ligand Precursors

42.10.1.2 Formation of C—N Bonds

42.10.1.2.1 Method 1: Amination of Aryl and Hetaryl Halides or Trifluoromethanesulfonates

42.10.1.2.2 Method 2: Amination of Alk-1-enyl Halides or Trifluoromethanesulfonates

42.10.1.2.3 Method 3: Intramolecular Amination Reactions

42.10.1.3 Formation of C—O Bonds

42.10.1.3.1 Method 1: Alkyl Aryl Ether Synthesis

42.10.1.3.2 Method 2: Diaryl Ether Synthesis

42.10.1.4 Formation of C—P Bonds

42.10.1.4.1 Method 1: Formation of Alkylphosphorus Compounds

42.10.1.4.2 Method 2: Formation of Alkenylphosphorus Compounds

42.10.1.4.2.1 Variation 1: Hyrophosphination of Alkenes

42.10.1.4.2.2 Variation 2: Coupling Reactions

42.10.1.4.3 Method 3: Formation of Alkynylphosphorus Compounds

42.10.1.4.4 Method 4: Formation of Arylphosphorus Compounds

42.10.1.5 Formation of C—S Bonds

42.10.1.5.1 Method 1: Formation of an Aryl—Sulfur Bond

42.10.1.5.2 Method 2: Formation of an Alkenyl—Sulfur Bond

42.10.1.5.3 Method 3: Formation of an Alkynyl—Sulfur Bond

42.10.1.6 Formation of C—Sn Bonds

42.10.1.7 Synthesis with Catalyst Recycling

42.10.1.7.1 Method 1: Catalysis with Fluorinated Phosphines

42.10.1.7.2 Method 2: Catalysis with Water-Soluble Phosphines

42.10.1.7.2.1 Variation 1: Catalysis with Sulfonated and Carboxylated Phosphines

42.10.1.7.2.2 Variation 2: Catalysis with Phosphines Bearing Ammonium Groups

42.10.1.7.2.3 Variation 3: Catalysis with Carbohydrate-Derived Phosphines

42.10.1.7.2.4 Variation 4: Catalysis with Polyether Phosphines

42.10.1.7.3 Method 3: Catalysis with Polymer-Supported Phosphines

42.10.1.7.3.1 Variation 1: Metal-Promoted Catalysis with Polymer-Supported Phosphines

42.10.1.7.3.2 Variation 2: Catalysis with Polymer-Supported Phosphine Reagents

Product Subclass 2: Hydroxyphosphonium Salts ........................ 509
Method 1: Synthesis of α-Hydroxyphosphonium Salts and Derivatives .................................................. 509
Variation 1: Addition of Phosphines to Aldehydes or Ketones .............................. 509
Variation 2: Alkylation of (α-Hydroxyalkyl)phosphines or Derivatives .............................. 511
Variation 3: Reaction of Phosphines with Acetals, Ketals, or Hemiacetals .............................. 513
Method 2: Synthesis of β-Hydroxyphosphonium Salts and Derivatives .............................. 514
Variation 1: Alkylation of Phosphines with β-Hydroxyalkyl Halides or Derivatives .............................. 514
Variation 2: Alkylation of (β-Hydroxyalkyl)phosphines or Derivatives .............................. 517
Variation 3: Reaction of Phosphines with Epoxides .............................. 520
Variation 4: Reaction of Ylides with Ketones or Aldehydes .............................. 522
Variation 5: Transformation of β-Functionalized Phosphonium Salts .............................. 524
Method 3: Synthesis of γ-Hydroxyphosphonium Salts and Derivatives .............................. 526
Variation 1: Alkylation of Phosphines with γ-Hydroxyalkyl Halides or Derivatives .............................. 526
Variation 2: Alkylation of γ-Hydroxyphosphines and Derivatives with Alkyl Halides .............................. 528
Variation 3: Reaction of Ylides with Epoxides and 3-Oxaalkyl Halides .............................. 529
Variation 4: Transformation of γ-Functionalized Phosphonium Salts .............................. 530
Product Subclass 3: Sulfanyl- and Selanylphosphonium Salts and Derivatives .............................. 531
Method 1: Synthesis of α-Sulfanyl and α-Selanylphosphonium Salts and Derivatives .............................. 531
Variation 1: Alkylation of Phosphines with Sulfur- or Selenium-Substituted Alkyl Halides .............................. 531
Variation 2: Alkylation of Phosphines with Bis(sulfanyl)- or Bis(selanyl) Alkyl Halides, or Cationic Derivatives .............................. 533
Variation 3: Transformation of Phosphonium Salts with Anionic Sulfur Nucleophiles .............................. 535
Variation 4: Reaction of Ylides with Sulfur- or Selenium-Containing Electrophiles .............................. 536
Method 2: Synthesis of β-Sulfanyl- and β-Selanylphosphonium Salts and Derivatives .............................. 537
42.12.3.1.2.1 Variation 1: Alkylation of Phosphines with Sulfur- or Selenium-Containing Alkyl Halides or Sulfonates ........................................... 538
42.12.3.1.2.2 Variation 2: Reaction of Phosphines with 1,1,2-Trimethyldisulfanium or 1-Methyl-1,2-diphenyldisulfanium Salts ................................. 539
42.12.3.1.2.3 Variation 3: Reaction of Vinylphosphonium Salts with Sulfur Dioxide, Thiol, or Associated Anions ........................................ 540
42.12.3.1.2.4 Variation 4: Reaction of Ylides with Miscellaneous Electrophiles .......... 542
42.12.3.1.3 Method 3: Synthesis of γ-Sulfanyl- and γ-Selanylphosphonium Salts and Derivatives ........................................................... 543
42.12.3.1.3.1 Variation 1: Alkylation of Phosphines with Sulfur- or Selenium-Substituted Alkyl Halides or Related Compounds .......................... 543
42.12.3.1.3.2 Variation 2: Transformation of Phosphonium Salts ........................................ 544

42.12.3.1.3.1 Variation 1: Alkylation of Phosphines with Sulfur- or Selenium-Substituted Alkyl Halides or Related Compounds .......................... 543
42.12.3.1.3.2 Variation 2: Transformation of Phosphonium Salts ........................................ 544

42.12.4 Product Subclass 4: Carbonylphosphonium Salts and Derivatives .............. 545
42.12.4.1 Synthesis of Product Subclass 4 ............................................ 545
42.12.4.1.1 Method 1: Synthesis of P-Carbonylphosphonium Salts and Derivatives .... 545
42.12.4.1.1.1 Variation 1: Reaction of Phosphines with Various Carbonyl Electrophiles 546
42.12.4.1.1.2 Variation 2: Alkylation of P-Carbonylphosphines with Alkyl Halides or Sulfonates ...................................................... 548
42.12.4.1.2 Method 2: Synthesis of α-Carbonylphosphonium Salts and Derivatives .... 550
42.12.4.1.2.1 Variation 1: Alkylation of Phosphines with α-(Halomethyl)carbonyl Species 550
42.12.4.1.2.2 Variation 2: Reaction of Ylides with Carbonylated Electrophiles .......... 553
42.12.4.1.2.3 Variation 3: Reaction of Stabilized Ylides with Other Electrophiles ........ 556
42.12.4.1.2.4 Variations 4: Miscellaneous Reactions ........................................ 557
42.12.4.1.3 Method 3: Synthesis of β-Carbonyl-Substituted Phosphonium Salts and Derivatives ........................................................... 558
42.12.4.1.3.1 Variation 1: Alkylation of Phosphines with β-Carbonyl-Substituted Alkyl Halides ...................................................... 559
42.12.4.1.3.2 Variation 2: Reaction of Phosphines with α,β-Unsaturated Carbonyl Species ...................................................... 561
42.12.4.1.3.3 Variation 3: Alkylation of β-Carbonylphosphines with Alkyl Halides .... 565

42.12.5 Product Subclass 5: Polyphosphonium Salts .................................... 565
42.12.5.1 Synthesis of Product Subclass 5 ............................................ 565
42.12.5.1.1 Method 1: Synthesis of Multiphosphonium Salts ........................................ 566
42.12.5.1.1.1 Variation 1: Reaction with Multihalides ........................................ 566
42.12.5.1.1.2 Variation 2: Reaction of Unsaturated Precursors ................................. 566
42.12.5.1.1.3 Variation 3: Recursive Synthesis from a Phosphine ................................. 567
42.12.5.1.2 Method 2: Synthesis of Polymeric Phosphonium Salts .......................... 567
42.12.5.1.2.1 Variation 1: Reaction of Phosphonium Monomers ................................. 567
42.12.5.1.2.2 Variation 2: Functionalization of Polymeric Backbones ....................... 569

42.12.6 Product Subclass 6: Cyclic Phosphonium Salts .................................. 570
42.12.6.1 Synthesis of Product Subclass 6 ............................................ 570
42.12.6.1.1 Method 1: Cyclization onto Phosphorus ........................................ 570
42.12.6.1.1.1 Variation 1: Reaction of Secondary Phosphines or Derivatives with 1,ν-Dielectrophiles ........................................ 570
42.12.6.1.1.2 Variation 2: Intramolecular Cyclization of Tertiary Phosphines ............ 571
42.12.6.1.3 Variation 3: Intermolecular Cyclization of Tertiary Phosphines ............ 572
42.12.6.1.4 Variation 4: Reaction of Halophosphines .................................. 574
42.12.6.1.5 Variation 5: Reaction of Methylenephosphonium Ions .................. 575
42.12.6.1.6 Method 2: Cyclization between Two Phosphorus Substituents ......... 576
42.12.7 Product Subclass 7: Heterophosphonium Salts .......................... 577
42.12.7.1 Synthesis of Product Subclass 7 .................................................. 577
42.12.7.1.1 Method 1: Synthesis from Tricoordinate Phosphorus Compounds .... 577
42.12.7.1.1.1 Variation 1: Alkylation of Tricoordinate Reagents ................. 577
42.12.7.1.1.2 Variation 2: Reaction of Phosphines with Heteroatomic Electrophiles 580
42.12.7.1.2 Method 2: Synthesis from Tetracoordinate Phosphorus Compounds ... 581
42.12.7.1.2.1 Variation 1: Modification of Heterophosphonium Salts .......... 581
42.12.7.1.2.2 Variation 2: Reaction of Electrophiles with Tetracoordinate Phosphorus Derivatives .................................................. 582
42.12.7.1.2.3 Variation 3: Reaction of Secondary Phosphine–Borane Complexes 582

42.13 Product Class 13: Trialkylphosphine Oxides, Sulfides, Selenides, Tellurides, and Imides
N. L. Kilah and S. B. Wild

42.13 Product Class 13: Trialkylphosphine Oxides, Sulfides, Selenides, Tellurides, and Imides .......................................................... 595
42.13.1 Product Subclass 1: Trialkylphosphine Oxides ............................. 595
42.13.1.1 Synthesis of Product Subclass 1 .................................................. 595
42.13.1.1.1 Method 1: Oxidation of Trialkylphosphines ............................ 595
42.13.1.1.1 Variation 1: Oxidation with Hydrogen Peroxide ...................... 595
42.13.1.1.1.2 Variation 2: Oxidation with Sulfur(VI) Oxides ..................... 596
42.13.1.1.1.3 Variation 3: Oxidation by Nitrous Oxide .............................. 597
42.13.1.1.4 Variation 4: Oxidation with an Iodosylaryl Sulfone ..................... 597
42.13.1.1.2 Method 2: Oxidation of Phosphonium Salts ......................... 598
42.13.1.1.3 Method 3: Addition of Dialkylphosphine Oxides to Alkenes ......... 599
42.13.1.1.4 Method 4: Addition of Dialkylphosphine Oxides to Ketones or Aldehydes 600
42.13.1.1.5 Method 5: Reactions of Dialkylphosphine Oxides with Alkyl Halides 602
42.13.1.1.5.1 Variation 1: Base-Induced Ionization ..................................... 602
42.13.1.1.5.2 Variation 2: Lewis Acid Catalysis ...................................... 603
42.13.1.1.5.3 Variation 3: Reduction with Sodium Bis(2-methoxyethoxy)aluminum Hydride ................................................................. 604
42.13.1.1.6 Method 6: Additions of Dialkyl(chloro)phosphines to Enones ........ 605
42.13.1.1.7 Method 7: Reactions of Chlorophosphine Oxides with Grignard Reagents 606
42.13.1.1.8 Method 8: Reactions of Dialkylphosphinates with Alkyl Halides .............................. 607
42.13.1.1.9 Method 9: Isomerization of Dialkylphosphinates ......................... 609
42.13.1.1.10 Method 10: Cycloaddition of Alkyl(dichloro)phosphines with Dienes ................................................................. 610
42.13.1.1.11 Method 11: Addition of Dialkylphosphine Oxides to Imines ........ 612
42.13.1.1.12 Method 12: Hydrogenation of Tertiary Arylphosphine Oxides .... 612
42.13.1.1.13 Method 13: Conversion of Trialkylphosphine Ylides into Trialkylphosphine Oxides ........................................................................ 614
42.13.1.1.14 Method 14: Oxygenation of Trialkylphosphine Imides .............. 615
42.13.1.14.1 Variation 1: By Reaction with a Ketone ........................................ 615
42.13.1.14.2 Variation 2: By Reaction with Methanol .......................... 615
42.13.1.14.3 Variation 3: By Treatment with an Oxidizing Agent ............ 616
42.13.1.15 Method 15: Oxygenation of Trialkylphosphine Sulfides .............................. 616
42.13.1.15.1 Variation 1: Treatment with Phosgene .................................. 616
42.13.1.15.2 Variation 2: Treatment with Dimethyldioxirane ................ 617
42.13.1.15.3 Variation 3: Treatment with Trifluoroacetic Anhydride ........ 617
42.13.1.15.4 Variation 4: Treatment with 7-Oxabicyclo[4.1.0]heptane and Trifluoroacetic Acid ................................................................. 617
42.13.1.16 Method 16: Oxygenation of a Trialkylphosphine Selenide .......... 617

42.13.2 Product Subclass 2: Trialkylphosphine Sulfides .......................... 618
42.13.2.1 Synthesis of Product Subclass 2 ............................................ 618
42.13.2.1.1 Method 1: Addition of Dialkylphosphine Sulfides to Alkenes .... 618
42.13.2.1.1.1 Variation 1: Base-Promoted Addition .................................. 618
42.13.2.1.1.2 Variation 2: Free-Radical-Initiated Addition ...................... 619
42.13.2.1.2 Method 2: Addition of Dialkylphosphine Sulfides to Aldehydes or Ketones .......................................................... 619
42.13.2.1.3 Method 3: Sulfurization of Trialkylphosphines with Elemental Sulfur .......................... 621
42.13.2.1.4 Method 4: Reaction of Dialkyl(vinyl)phosphine Sulfides with Nucleophiles .......................................................... 621
42.13.2.1.5 Method 5: Reaction of Triethylphosphine with a (Phosphonio)(phosphanylidene)methanethiolate .............................. 622
42.13.2.1.6 Method 6: Addition of a 1,3-Diene to an Alkyl(chloro)(methyl-sulfanyl)phosphine .......................... 622
42.13.2.1.7 Method 7: Sulfurization of Trialkylphosphine Oxides .............. 623

42.13.3 Product Subclass 3: Trialkylphosphine Selenides ............................. 623
42.13.3.1 Synthesis of Product Subclass 3 ............................................. 623
42.13.3.1.1 Method 1: Addition of a Dialkylphosphine Selenide to an Aldehyde .... 623
42.13.3.1.2 Method 2: Addition of Potassium Selenocyanate to Trialkylphosphines .... 624
42.13.3.1.3 Method 3: Addition of Elemental Selenium to Trialkylphosphines .... 625
42.13.3.1.4 Method 4: Catalytic Reaction of Diphenyl Diselenide and Tributylphosphine under Microwave Irradiation .............. 625
42.13.3.1.5 Method 5: Reaction of a 1,2,3-Selenadiazole with a Trialkylphosphine ........ 625

42.13.4 Product Subclass 4: Trialkylphosphine Tellurides ........................ 626
42.13.4.1 Synthesis of Product Subclass 4 ........................................... 626
42.13.4.1.1 Method 1: Addition of Elemental Tellurium to Trialkylphosphines .... 626

42.13.5 Product Subclass 5: Trialkylphosphine Imides [Trialkyl(imino)phosphoranes] .............................. 627
42.13.5.1 Synthesis of Product Subclass 5 ............................................ 627
42.13.5.1.1 Method 1: Reaction of an Azide with a Trialkylphosphine (The Staudinger Reaction) ...................................................... 627
42.13.5.1.2 Method 2: Addition of Base to Aminophosphonium Salts ........... 628
42.13.5.1.3 Method 3: Addition of an Iodonium Ylide to Tributylphosphine .... 628
42.14  **Product Class 14: Dialkylphosphinic Acids and Derivatives**
J. Drabowicz, J. Lewkowski, C. V. Stevens, D. Krasowska, and R. Karpowicz

42.14.1  **Product Subclass 1: Dialkyltrihalophosphoranes and Other Heteroatom-Containing Analogues**

42.14.1.1  Method 1: Halogenation of Dialkylhalophosphines

42.14.1.2  Method 2: Electrochemical Fluorination of Secondary Phosphines

42.14.2  **Product Subclass 2: Dialkylphosphinic Halides**

42.14.2.1  Method 1: Halogenation of Tri- and Tetracoordinated Phosphorus-Containing Precursors

42.14.2.1.1  Variation 1: Halogenation of Dialkylphosphinic Acids and Derivatives

42.14.2.1.2  Variation 2: Halogenation of Dialkylphosphine Oxides

42.14.2.1.3  Variation 3: Halogenation of Dialkylphosphines and Dialkylphosphinites

42.14.2.2  Method 2: Oxidation of Dialkylhalophosphines

42.14.2.3  Method 3: Synthesis from Dialkyltrihalophosphoranes

42.14.3  **Product Subclass 3: Dialkylphosphinic Acids**

42.14.3.1  Method 1: Oxidation of Secondary Dialkylphosphines

42.14.3.2  Method 2: Dealkylation of Alkyl Dialkylphosphinates

42.14.3.3  Method 3: Alkylation Reactions of Tri- and Tetracoordinated Phosphorus-Containing Precursors

42.14.3.3.1  Variation 1: Alkylation of Hypophosphorous Acid Salts

42.14.3.3.2  Variation 2: Alkylation of Bis(trimethylsilyl) Phosphonite

42.14.3.3.3  Method 4: Hydrolysis of Tetra- and Pentacoordinated Phosphorus-Containing Precursors

42.14.3.3.4  Variation 1: Hydrolysis of Dialkylphosphinonic Halides

42.14.3.3.5  Variation 2: Hydrolysis of P,P-Dialkylphosphinic Amides

42.14.3.3.6  Variation 3: Hydrolysis of Dialkyltrihalophosphoranes

42.14.3.3.7  Method 5: Oxidative Cleavage of Tetraalkyldiphosphine Disulfides

42.14.3.3.8  Method 6: Reaction of Alkylphosphinic Acids with Alkenes

42.14.4  **Product Subclass 4: Alkyl/Aryl Dialkylphosphinates**

42.14.4.1  Method 1: Oxidation of Alkyl/Aryl Dialkylphosphinites

42.14.4.2  Method 2: Arbuzov Reaction of Dialkyl Alkylphosphonites

42.14.4.3  Method 3: Reaction of Dialkylphosphinonic Halides with Alcohols or Phenols

42.14.4.4  Method 4: Alkylation of Alkyl Alkylphosphinates

42.14.4.5  Method 5: Esterification of Dialkylphosphonic Acids and Transesterification of Alkyl Dialkylphosphinates

42.14.5  **Product Subclass 5: S-Alkyl/Aryl Dialkylphosphinothioates**

42.14.5.1  Synthesis of Product Subclass 5
42.14.5.1.1 Method 1: S-Alkylation of Dialkylphosphinothioic O-Acids .............. 650
42.14.5.1.2 Method 2: Reaction of Dialkylphosphinic Halides with Thiols .......... 651
42.14.5.1.3 Method 3: Reaction of Secondary Phosphine Oxides or Dialkylhalophosphine Derivatives with Disulfides or Thiocarbonyl Derivatives ............... 651

42.14.6 Product Subclass 6: P,P-Dialkylphosphinic Amides .................. 652
42.14.6.1 Synthesis of Product Subclass 6 ........................................ 652
42.14.6.1.1 Method 1: Reaction of Dialkylphosphinic Halides with Amine Derivatives ............. 652
42.14.6.1.2 Method 2: Oxidation of Aminophosphines ........................... 653
42.14.6.1.3 Method 3: Reaction of Dialkylhalophosphines with Hydroxylamine Derivatives ............... 654

42.14.7 Product Subclass 7: Dialkylphosphinothioic Halides ..................... 654
42.14.7.1 Synthesis of Product Subclass 7 ........................................ 654
42.14.7.1.1 Method 1: Halogenation of Pentavalent Phosphinothioic Precursors ..... 654
42.14.7.1.1.1 Variation 1: Halogenation of Dialkylphosphinothioic Acids .......... 654
42.14.7.1.1.2 Variation 2: Halogenation of Tetraalkyldiphosphine Disulfides ........... 655
42.14.7.1.1.3 Variation 3: Halogenation of Se-Alkyl Dialkylphosphinoselenothioates .. 655
42.14.7.1.2 Method 2: Addition of Sulfur to Dialkylhalophosphines ................. 656
42.14.7.1.3 Method 3: Reaction of Phosphonothioic Dihalides with Organometallic Reagents ............... 656
42.14.7.1.4 Method 4: Halogenation of Dialkylphosphinothioic Amides and S-Amino Derivatives of Dialkylphosphinodithioic Acids ........... 657

42.14.8 Product Subclass 8: Dialkylphosphinothioic O-Acids and Their Sulfur and Selenium Analogues ........................................ 658
42.14.8.1 Synthesis of Product Subclass 8 ........................................ 658
42.14.8.1.1 Method 1: Hydrolysis of Dialkylphosphinothioic Halides .................. 658
42.14.8.1.2 Method 2: Preparation of Dialkylphosphinodithioic Acids ................. 658
42.14.8.1.3 Method 3: Preparation of Dialkylphosphinoselenothioic Se-Acids .......... 659

42.14.9 Product Subclass 9: O-Alkyl/Aryl Dialkylphosphinothioates ................. 659
42.14.9.1 Synthesis of Product Subclass 9 ........................................ 659
42.14.9.1.1 Method 1: Reaction of Dialkylphosphinothioic Halides with Alcohols or Phenols .................. 659
42.14.9.1.2 Method 2: Sulfuration of Alkyl Dialkylphosphinites ..................... 660
42.14.9.1.3 Method 3: Alkylation of O-Alkyl Alkylphosphinothioates .................. 661
42.14.9.1.4 Method 4: Reaction of Tetraalkyldiphosphine Disulfides or Phosphine Sulfides ............... 661

42.14.10 Product Subclass 10: Alkyl/Aryl Dialkylphosphinodithioates and Se-Alkyl/Aryl Dialkylphosphinoselenothioates ........................................ 662
42.14.10.1 Synthesis of Product Subclass 10 ...................................... 662
42.14.10.1.1 Method 1: Alkylation of Dialkylphosphinodithioic Acids or Their Salts ............. 662
42.14.10.1.2 Method 2: Arbuzov-Type Alkylation of Alkylphosphonotrithioates .......... 662
42.14.10.1.3 Method 3: Reaction of Tetraalkyldiphosphine Disulfides with Disulfides and Diselenides ............... 663
42.14.11 Product Subclass 11: \emph{P,P}-Dialkylphosphinothioic Amides .................................. 664
42.14.11.1 Synthesis of Product Subclass 11 ................................................................. 664
42.14.11.1.1 Method 1: Reaction of Dialkylphosphinothioic Halides with Amines ............ 664
42.14.11.1.2 Method 2: Sulfuration of Aminophosphines .............................................. 665
42.14.12 Product Subclass 12: Dialkylphosphinoselenoic Halides ........................................ 665
42.14.12.1 Synthesis of Product Subclass 12 ................................................................. 665
42.14.12.1.1 Method 1: Addition of Selenium to Dialkylhalophosphines ......................... 665
42.14.13 Product Subclass 13: Dialkylphosphinoselenoic \emph{O}-Acids and Dialkylphosphinodiselenoic Acids ................................................................. 666
42.14.13.1 Synthesis of Product Subclass 13 ................................................................. 666
42.14.13.1.1 Method 1: Hydrolysis of Dialkylphosphinoselenoic Halides ......................... 666
42.14.13.1.2 Method 2: Acidification of Sodium Dialkylphosphinodiselenoates ................. 667
42.14.14 Product Subclass 14: \emph{O}-Alkyl/Aryl Dialkylphosphinoselenoatoes ......................... 667
42.14.14.1 Synthesis of Product Subclass 14 ................................................................. 667
42.14.14.1.1 Method 1: Addition of Selenium to Dialkylphosphinites ............................ 667
42.14.14.1.2 Method 2: Reaction of Dialkylphosphinoselenoic Halides with Alcohols ........ 668
42.14.15 Product Subclass 15: \emph{S}-Alkyl/Aryl Dialkylphosphinoselenothioates .................... 668
42.14.15.1 Synthesis of Product Subclass 15 ................................................................. 668
42.14.15.1.1 Method 1: Addition of Selenium to Dialkylphosphinothioites ....................... 668
42.14.16 Product Subclass 16: \emph{P,P}-Dialkylphosphinoselenoic Amides .................................. 669
42.14.16.1 Synthesis of Product Subclass 16 ................................................................. 669
42.14.16.1.1 Method 1: Addition of Selenium to Aminophosphines .............................. 669
42.14.16.1.2 Method 2: Reaction of Dialkylphosphinoselenoic Halides with Amines ............ 669
42.14.17 Product Subclass 17: Anhydrides of Dialkylphosphinic Acids and Their Sulfur and Selenium Analogues ................................................................. 670
42.14.17.1 Synthesis of Product Subclass 17 ................................................................. 670
42.14.17.1.1 Method 1: Oxidation of Dialkylphosphine Disulfides ................................. 670
42.14.17.1.2 Method 2: Condensation of Dialkylphosphinic Acid Esters with Dialkylphosphinic Halides and Their Sulfur Analogues ............................... 671
42.14.17.1.3 Method 3: Self-Condensation of Dialkylphosphinic Halides and Their Sulfur Analogues ......................................................... 671
42.14.17.1.4 Method 4: Oxidation or Sulfuration of Dialkylphosphinous Anhydrides .......... 673
42.15 Product Class 15: Alkylphosphonic Acids and Derivatives
J. Drabowicz, P. Kielbasiński, P. Łyżwa, M. Mikołajczyk, and A. Zając
42.15 Product Class 15: Alkylphosphonic Acids and Derivatives ........................................ 679
42.15.1 Product Subclass 1: Alkylphosphonic Dihalides and Their Sulfur and Selenium Derivatives ................................................................. 680
42.15.1.1 Synthesis of Product Subclass 1 ................................................................. 680
42.15.1.1 Method 1: Alkylphosphonic Dihalides from Alkylphosphonic Acids and Their Derivatives ............................................. 680

42.15.1.1.1 Variation 1: Reaction of Phosphonic Acids with Halogenating Reagents ................................................................. 680

42.15.1.1.2 Variation 2: Reaction of Phosphonic Acid Diesters with Halogenating Reagents ........................................................ 681

42.15.1.2 Method 2: Alkylphosphonic Dihalides from Alkyltetrahalophosphoranes ................................................................. 682

42.15.1.3 Method 3: Hydrolytic (or Other) Decompositions of Aluminum Halide Complexes of Alkyltetrahalophosphoranes ................. 682

42.15.1.4 Method 4: Oxidation of Alkyldihalophosphines ............................................................................................................. 683

42.15.1.5 Method 5: Alkylphosphonic Dihalides from Phosphorus Trihalides ................................................................. 684

42.15.1.5.1 Variation 1: Reaction of Phosphorus Trihalides with Aliphatic Hydrocarbons .......................................................... 684

42.15.1.5.2 Variation 2: Other Protocols Based on the Use of Phosphorus Trichloride .............................................................. 684

42.15.1.6 Method 6: Alkylphosphonic Dihalides by Miscellaneous Procedures ................................................................. 684

42.15.1.7 Method 7: Synthesis of Alkylphosphonothioic Dihalides .......................................................................................... 685

42.15.1.7.1 Variation 1: Sulfuration of Alkylphosphonic Dihalides ...................................................................................... 685

42.15.1.7.2 Variation 2: Sulfuration of Alkyldihalophosphines .......................................................................................... 685

42.15.1.7.3 Variation 3: Other Protocols ......................................................................................................................... 685

42.15.1.8 Method 8: Synthesis of Alkylphosphonoselenoic Dihalides .................................................................................. 686

42.15.1.8.1 Variation 1: Addition of Selenium to Alkyldihalophosphines .............................................................................. 686

42.15.2 Product Subclass 2: Alkylphosphonic Acids and Their Sulfur and Selenium Analogues ................................................................. 686

42.15.2.1 Synthesis of Product Subclass 2 ......................................................................................................................... 686

42.15.2.1.1 Method 1: Hydrolysis of Alkyltetrachlorophosphoranes .............................................................................. 686

42.15.2.1.2 Method 2: Hydrolysis of Alkylphosphonic Dihalides ...................................................................................... 687

42.15.2.1.3 Method 3: Alkylphosphonic Acids from Alkylphosphonic Acid Esters .............................................................. 687

42.15.2.1.3.1 Variation 1: Hydrolysis of Alkylphosphonic Acid Esters .............................................................................. 687

42.15.2.1.2.2 Variation 2: Dealkylation of Dialkyl Alkylphosphonates .............................................................................. 688

42.15.2.1.4 Method 4: Hydrolysis of Alkylphosphonic Acid Amides .................................................................................. 689

42.15.2.1.5 Method 5: Disproportionation of Alkylphosphonous Acids .............................................................................. 690

42.15.2.1.6 Method 6: In Situ Oxidation of Alkylphosphonous Acids .................................................................................. 690

42.15.2.1.7 Method 7: Oxidation of Primary Alkylphosphines .......................................................................................... 691

42.15.2.1.8 Method 8: Addition of Phosphorous Acid to Alkenes, Carbonyl Compounds, Imines, and Nitriles ......................... 691

42.15.2.1.9 Method 9: Reaction of Phosphorus Trichloride with Carbonyl Compounds or Carboxylic Acid Derivatives Followed by Hydrolysis .............................................................................................................. 692

42.15.2.1.10 Method 10: Hydrolysis of 1-Aryl-1-[(4-tolylsulfinyl)amino]methylbis(diethylamino)phosphine–Boranes ................................................................. 693

42.15.2.1.11 Method 11: Synthesis of Alkylphosphonothioic Acids .................................................................................. 694

42.15.3 Product Subclass 3: Alkyl/Aryl Alkylphosphonohalidates ................................................................................................. 694

42.15.3.1 Synthesis of Product Subclass 3 .......................................................................................................................... 694

42.15.3.1.1 Method 1: Reaction of Dialkyl Alkylphosphonates with Halogenating Agents .............................................................. 694

42.15.3.1.2 Method 2: Reaction of Aluminum Halide Complexes of Alkyltetrachlorophosphoranes with Alcohols ......................... 695
42.15.3.1.3 Method 3: Reaction of Dialkyl Chlorophosphites with Alkyl Halides ..... 695
42.15.3.1.4 Method 4: Reaction of Alkylphosphonic Dihalides with Alcohols or Phenols .......................................................... 696
42.15.3.1.5 Method 5: Halogenation of Alkylphosphinates .................. 696

42.15.3 Product Subclass 4: 5-Alkyl/Arly Alkylphosphonohalidothioates and Sulfur Derivatives .......................................................... 696
42.15.3.1 Method 1: Reaction of Alkylphosphonic Dihalides with Thiols .. 696
42.15.3.2 Method 2: Reaction of Alkylthiorphosphorochlorides with Sulfenyl Chlorides 697
42.15.3.3 Method 3: Chlorination of O,O-Dialkyl Alkylphosphonothioates 697
42.15.3.4 Method 4: Reaction of Alkylphosphonothioic Dihalides with Alkane-/Arenethiols ................................................ 697

42.15.4 Product Subclass 5: P-Alkylphosphonamidic Halides and Their Sulfur and Selenium Derivatives 698
42.15.4.1 Method 1: Reaction of Alkylphosphonic Dihalides with Amines 698
42.15.4.2 Method 2: Exchange Reactions of Alkylphosphonic Diamides 699
42.15.4.3 Method 3: Rearrangement of Allyl Dialkylphosphoramidochloridites 699
42.15.4.4 Method 4: Oxidative Conversion of Aminochlorophosphines ...... 700
42.15.4.5 Method 5: Ring Opening of 1-Functionalized Aziridines with Alkylphosphonic Dihalides ........................................ 701
42.15.4.6 Method 6: Reaction of Alkylphosphonothioic Dihalides with Amines 702
42.15.4.7 Method 8: Reaction of Aminesulfenamides with Alkylphosphonic Dichlorides ................................................... 703
42.15.4.8 Method 10: Addition of Selenium to Alkyl(chloro)(dialkylamino)phosphines ........................................ 704

42.15.5 Product Subclass 6: Alkyl/Aryl Hydrogen Alkylphosphonates and Their 0-Alkyl/Aryl Sulfur and Selenium Derivatives 704
42.15.6.1 Method 1: Synthesis from Alkylphosphonic Dichlorides .......... 704
42.15.6.2 Method 2: Hydrolysis of Alkyl/Aryl Alkylphosphonochloridates 707
42.15.6.3 Method 3: Hydrolysis of Diesters of Alkylphosphonic Acids 708
42.15.6.4 Method 4: Esterification of Alkylphosphonic Acids .............. 709
42.15.6.5 Method 5: Dealkylation of Dialkyl Alkylphosphonates .......... 710
42.15.6.6 Method 6: Dealkylation of Dialkyl Phosphonates with Sodium Iodide 711
42.15.6.7 Method 7: Dealkylation of Dialkyl Phosphonates with Sodium Azide 711
42.15.6.8 Method 8: Selective Monodebenzylation of Dibenzyl Phosphonates with Tertiary Amines .................................. 712
42.15.6.9 Method 9: Dealkylation of Dialkyl Methylphosphonates with Diphenylguanidine ........................................ 713
42.15.6.10 Method 10: Silylation–Desilylation Procedure ....................... 714
42.15.6.11 Method 11: Alkyl/Aryl Hydrogen Alkylphosphonates by Miscellaneous Methods ............................................. 714
Method 7: Hydrolysis of Dialkyl/Diaryl Alkylphosphonothioates .......... 717
Method 8: Synthesis of O-Alkyl Hydrogen Alkylphosphonothioates from Alkylphosphonothioic Dichlorides .......................... 719
Method 9: Hydrolysis of O-Alkyl Alkylphosphonochloridothioates ........... 719
Method 11: Addition of Sulfur to Alkyl Alkylphosphinates .................. 721
Method 14: Alcoholysis of Monothiophosphonic Anhydrides .................. 724
Method 15: Synthesis of O-Alkyl Hydrogen Alkylphosphoselenoates .......... 725

Product Subclass 7: S-Alkyl/Aryl Hydrogen Alkylphosphonothioates and Their Sulfur and Selenium Derivatives .................................. 725
Method 1: Coupling Reaction of Alkylphosphonic Acids with Thiols .......................... 725
Method 2: Alkylation of Alkylphosphonothioic Acid Anions with Alkyl Halides .......................... 726

Product Subclass 8: P-Alkylphosphonamidic Acids and Their Sulfur and Selenium Derivatives .................................. 726
Method 1: Reaction of Alkyl/Aryl Alkylphosphonohalidates with Tertiary Amines ......... 726
Method 2: Synthesis of P-Ethylphosphonamidothioic Acids .................. 727

Product Subclass 9: O,O-Dialkyl/Diaryl Alkylphosphonates and Their Sulfur and Selenium Derivatives .................................. 728
Method 1: Reaction of Alkylphosphonic Dihalides with Alcohols ................. 728
Method 2: Reaction of Alkyl/Aryl Alkylphosphonohalidates with Alcohols .......... 728
Method 3: Reaction of Phosphites with α-Halo Ketones .......................... 728
Method 4: Michaelis–Becker Reaction ............................................... 728
Method 5: Michaelis–Arbuzov Reaction ............................................... 730
Method 6: Addition of Tricoordinated Organophosphorus Derivatives to Unsaturated Systems .......................... 730
Variation 1: Addition of Dialkyl Phosphites to Alkenes, Allenes, and Alkynes ............................................... 730
Variation 2: Addition of Dialkyl Phosphites to Carbonyl Groups .................. 731
Variation 3: Addition of Dialkyl Phosphite Anions to Imines .................. 733
Method 7: Transesterification Reactions ............................................... 736
Method 8: Reaction of Alkyl/Aryl Hydrogen Phosphonates with Alcohols .......... 737
Method 9: Reaction of O-Alkyl/Aryl Alkylphosphonohalidothioates with Alcohols .......................... 738
Method 10: Reaction of Alkylphosphonothioic Dihalides with Alcoholates ........ 739
Method 11: Sulfurization of Tricoordinated Alkylphosphonous Acid Diesters ................................................... 740

Method 12: Miscellaneous Protocols Leading to O,O-Dialkyl/Diaryl Alkylphosphonothioates ................................... 741

Product Subclass 10: O,S-Dialkyl/Diaryl Alkylphosphonothioates and Their Sulfur and Selenium Derivatives ........................................... 743

Synthesis of Product Subclass 10 ......................................................... 743

Method 1: Reaction of Alkyl/Aryl Alkylphosphonohalidates with Alkali Metal Thiolates ............................................. 743

Method 2: Reaction of Dithiocarboxylic Acids with Dialkyl Chlorophosphites ......................................................... 743

Method 3: Reaction of Alkyl/Aryl Alkylphosphonohalidodithioates with Alcohols ...................................................... 743

Method 4: Reaction of Alkylphosphonic Dihalides with Alcohols and Thiols, or Sulfanyl Alcohols ........................... 743

Method 5: Alkylation of O-Alkyl/Aryl Alkylphosphonothioate Anions 745

Methods 6: Miscellaneous Procedures .................................. 746

Product Subclass 11: S,S-Dialkyl/Diaryl Alkylphosphonodithioates and Their Sulfur and Selenium Derivatives ................. 746

Synthesis of Product Subclass 11 .......................................................... 746

Method 1: Arbuzov Reaction of Trialkyl Trithiophosphites with Alkyl Halides .................................................... 746

Method 2: Preparation of Di- and Trithioesters from Alkylphosphonothioic and Alkylphosphonic Dichlorides ...... 747

Method 3: Addition of Phosphonodithioyl and Phosphonotrithioyl Radicals to Alkenes .............................................. 748

Product Subclass 12: O- and S-Alkyl/Aryl P-Alkylphosphonamidates and Their Sulfur and Selenium Derivatives ................. 749

Synthesis of Product Subclass 12 .......................................................... 749

Method 1: Reaction of Alkyl/Aryl Alkylphosphonohalidates with Amines ...................................................... 749

Method 2: Reaction of Alkylphosphonic Dichlorides with Amino Alcohols or with an Alcohol and an Amine ............. 751

Method 3: Reaction of P-Alkylphosphonamidic Halides with Alcohols ................................................................. 752

Method 4: Reaction of Dialkyl Amidophosphites with Alkyl Halides ................................................................. 753

Method 5: Oxidation of Alkylphosphonamidous Acid Esters ................................................................. 754

Method 6: Aminolysis of Dialkyl Alkylphosphonates ................................................................. 755

Method 7: Perkov-Type Reaction .......................................................... 755

Method 8: Reaction of Alkylphosphonothioic Dihalides with Amino Alcohols ................................................................. 755

Method 9: Reaction of O-Alkyl/Aryl Alkylphosphonohalidothioates with Amines ................................................................. 756

Method 10: Sulfuration or Selenation of Alkylphosphonamidites ................................................................. 757

Product Subclass 13: P-Alkylphosphonic Diamides and Their Sulfur and Selenium Derivatives ........................................... 757
42.15.13.1 Synthesis of Product Subclass 13  ........................................... 757
42.15.13.1.1 Method 1: Reaction of Alkylphosphonic Dihalides with Amines  757
42.15.13.1.2 Method 2: Reaction of O-Alkyl Phosphorous Diamides with Alkyl Halides  758
42.15.13.1.3 Method 3: Reaction of N,N,N',N'-Tetraalkylphosphorodiamicid Chlorides with Organometallic Reagents  758
42.15.13.1.4 Method 4: Transamination of P-Alkylphosphonic Diamides  759
42.15.13.1.5 Method 5: Oxidation of P-Alkylphosphonous Diamides  759
42.15.13.1.6 Method 6: Sulfurization of Bis(dialkylamino)phosphines  760
42.15.13.1.7 Method 7: Reaction of Alkyl Phosphorodiamidothioites with Alkyl Halides  760
42.15.13.1.8 Method 8: Selenation of Bis(dialkylamino)phosphines  761

42.15.14 Product Subclass 14: Anhydrides of Alkylphosphonic Acids and Their Derivatives  .............................................................. 761
42.15.14.1 Synthesis of Product Subclass 14  ........................................... 761
42.15.14.1.1 Method 1: Reaction of Dialkyl Alkylphosphonates with Halides of Oxoacids of Phosphorus  761
42.15.14.1.2 Method 2: Reaction of Alkylphosphonic Acids and Their Sulfur Analogues with Carbodiimides  762
42.15.14.1.2.1 Variation 1: Reaction of Alkylphosphonic Acids with Carbodiimides  762
42.15.14.1.2.2 Variation 2: Reaction of O-Alkyl/Aryl Alkylphosphonothioic Acids with Carbodiimides  762
42.15.14.1.3 Method 3: Reactions of Alkyl/Aryl Alkylphosphonomidic Halides and N,N,P-Trialkylphosphonamidic Halides  763
42.15.14.1.3.1 Variation 1: Reactions of Alkyl/Aryl Alkylphosphonomidic Halides with Nucleophiles  763
42.15.14.1.3.2 Variation 2: Reactions of N,N,P-Trialkylphosphonamidic Halides with Nucleophiles  763
42.15.14.1.4 Method 4: Synthesis of Oligomers of Alkylphosphonic and Alkylphosphonothioic Anhydrides  764
42.15.14.1.5 Methods 5: Miscellaneous Procedures  766

42.16 Product Class 16: Phosphoric Acid and Derivatives
C. E. McKenna, B. A. Kashemirov, and K. M. Blazewska

42.16 Product Class 16: Phosphoric Acid and Derivatives  779
42.16.1 Product Subclass 1: P—O Phosphates  780
42.16.1.1 Synthesis of Product Subclass 1  780
42.16.1.1.1 Mixed Anhydrides of Phosphoric Acid and Esters of Phosphoric Acid with Non-Phosphorus-Containing Acids  780
42.16.1.1.1.1 Method 1: Reaction of Phosphates with Anhydrides of Carboxylic Acids  780
42.16.1.1.1.2 Method 2: Reaction of Phosphate Esters with Anhydrides of Strong Carboxylic Acids  781
42.16.1.1.1.3 Method 3: Reaction of Phosphates or Phosphate Esters with Amino Acids in the Presence of Diisopropylcarbodiimide or Dicyclohexylcarbodiimide  781
42.16.1.1.2 Alkyl Dihydrogen Phosphates  782
Method 1: Phosphorylation of Alcohols with Phosphoryl Chloride ......... 782

Variation 1: Phosphorylation of Unprotected Nucleosides .................. 782
Variation 2: Phosphorylation of Other Alcohols ............................. 783
Method 2: Catalytic Condensation of Phosphoric Acid with Alcohols ...... 784
Method 3: Phosphoramidites as Phosphorylating Agents .................... 784

Method 1: Phosphorylation of Solid-Supported Oligonucleotides by tert-Butyl 2-Cyanoethyl Diisopropylphosphoramidite .......... 785

Variation 2: Solid-Phase Phosphoramidites for Selective Monophosphorylation of Carbohydrates and Nucleosides ........... 786

Method 4: Disodium 2-([2-[Bis(4-methoxyphenyl)(phenyl)methoxy]ethyl]sulfonyl)ethyl Phosphate as a Phosphorylating Agent for Primary and Secondary Alcohol Functions in Nucleosides ...... 788

Method 1: Selective Dealkylation ............................................. 789
Method 2: S-Alkylation of Phosphorothioic Acid .............................. 790

Alkyl Trihydrogen Diphosphates ............................................ 791

Method 1: Phosphorylation by Tris(tetrabutylammonium) Hydrogen Pyrophosphate ................................................................. 791

Variation 1: Phosphorylation of Homoallylic 4-Toluenesulfonates or Allylic Halides ................................................................. 791

Variation 2: Phosphorylation of 5'-Tosyl Nucleosides ...................... 792

Method 2: Phosphorylation of Activated 5'-Nucleoside Monophosphates 793

Variation 1: Activation by Imidazolides ...................................... 793
Variation 2: Activation by Conversion into Phosphorodichloridates ... 795

Method 1: Thiophosphorylation of 4-Toluenesulfonates or Bromides ... 796

Alkyl Tetrahydrogen Triphosphates ........................................... 797

Method 1: The Ludwig One-Pot, Three-Step Procedure ................... 797
Method 2: The Ludwig–Eckstein Procedure .................................. 798
Method 3: Enzymatic Approaches ............................................. 799
Method 4: Synthesis via a Reactive Pyrrolidinium Phosphoramidate Zwitterion Intermediate ......................................................... 801

Method 5: Solid-Phase Synthesis of Nucleoside β-Tripphosphates ........ 802

Anhydrides of Phosphoric Acid: Nucleoside Triphosphate Analogues ..... 804

Method 1: Synthesis of β,γ-Methylene Nucleoside Triphosphate Analogues through Activation by Trihaloacetic Anhydrides and 1-Methylimidazole ...................................................... 804

Method 2: Synthesis of β,γ-Methylene Deoxynucleoside Triphosphate Analogues via Morpholidates .............................................. 806

Method 3: Synthesis of α,β-Methylene Deoxynucleoside Triphosphate Analogues by Enzymatic Phosphorylation of the Corresponding α,β-Methylene Deoxynucleoside Diphosphate Analogues ......................................................... 807

Alkyl/Aryl Phosphorohalidates ................................................... 809

Method 4: Phosphate Esterification Promoted by Silver(I) Oxide 833

Method 1: Synthesis of Phosphorothioates Containing an \( \alpha,\beta \)-Unsaturated Carbonyl Moiety 834

Method 2: Redox Reaction of a Phosphate with Tellurium Tetrachloride 836

Method 3: Solvent-Free S-Alkylation of Phosphites 836

Method 1: Reaction of Potassium \( O_2O \)-Dialkyl Phosphoroselenoates with Alkenyl(phenyl)iodonium Salts 837

Method 2: Selenophosphorylation of Silyl Enol Ethers 838

Tetraalkyl/Tetraaryl Diphosphates 839

Method 1: \( N \)-[Chloro(dimethylamino)methylene]-\( N \)-methylmethaniminium Chloride as the Condensing Reagent 839

Method 2: Synthesis from a Phosphorochloridate 840

Product Subclass 2: \( P=S \) Phosphorothioates 842

Synthesis of Product Subclass 2 842

Method 1: Thiophosphorylation with Thiophosphoryl Chloride 843

Method 2: Sulfurization of Monoalkyl \( H \)-Phosphonates 844

Variation 1: Sulfurization of Monoalkyl \( H \)-Phosphonates with Elemental Sulfur 844

Variation 2: Sulfurization of a Bis(trimethylsilyl) Phosphite Ester 844

Method 3: Synthesis from Sulfidodithiaphospholanes 853

Variation 1: Synthesis of Nucleoside 3\'-O-Phosphorodithioates 853

Variation 2: Synthesis of Nucleoside 5\'-O-Phosphorodithioates 854

Method 1: Phosphorylation of an \( O \)-Alkyl Phosphorothioate 855

Method 2: Synthesis via Imidazolides 855

Method 3: Ring Opening of a 5\'-\( 1 \)-Thiocyclotriphosphate with Ethane-1,2-diamine 856

Method 1: Phosphorylation with 2-Chloro-4\( H \)-1,3,2-benzodioxaphosphinin-4-one and Subsequent Reaction with Pyrophosphate 858
Table of Contents

42.16.2.1.4.2 Method 2: Thio phosphorylation and Subsequent Reaction with
Pyrophosphate .................................................. 859
42.16.2.1.4.2.1 Variation 1: Direct Thiophosphorylation of the Hydroxy Group .......... 860
42.16.2.1.4.2.2 Variation 2: Thiophosphorylation of Tributylstannyl Ethers .......... 861
42.16.2.1.4.2.3 Variation 3: Enzymatic Thiophosphorylation .................................. 861
42.16.2.1.5 O-Alkyl Tetrahydrogen 1,1-Dithiatriphosphates .................................. 862
42.16.2.1.5.1 Method 1: Ring Opening of a 5′-(1-Sulfidocyclotriphosphate) with
Lithium Sulfide .................................................. 862
42.16.2.1.5.2 Method 2: Synthesis via 2-Sulfido-1,3,2-Dithiaphospholanes ........... 863
42.16.2.1.6 Anhydrides of Phosphoric Acid: Nucleoside Triphosphate Analogues .......... 865
42.16.2.1.7 O-Alkyl Tetrahydrogen 1,2,3-Trithiaporphosphates .......................... 866
42.16.2.1.8 O-Alkyl/O-Aryl Phosphorofluoridothioates ........................................ 868
42.16.2.1.8.1 Method 1: Sulfurization of Phosphorofluoridothioates ..................... 868
42.16.2.1.8.2 Method 2: Oxidation and Fluorination of Thio- and Dithiophosphonates .... 871
42.16.2.1.9 O-Alkyl Phosphorodifluoridothioates ............................................. 871
42.16.2.1.9.1 Method 1: Sulfurization of a Difluorophosphite .............................. 871
42.16.2.1.9.2 Method 2: Synthesis from a Bis(1H-imidazol-1-yl)phosphinothioate .... 872
42.16.2.1.10 O,O-Dialkyl/O,O-Diaryl Hydrogen Phosphorothioates ...................... 873
42.16.2.1.10.1 Method 1: Stereocontrolled Synthesis via 2-Sulfido-1,3,2-oxathia-
phospholanes .................................................. 874
42.16.2.1.10.2 Method 2: Stereocontrolled Synthesis via Cyclic N-Acylphosphoramidites .... 876
42.16.2.1.10.3 Method 3: Stereocontrolled Synthesis via 3′-O-Oxazaphospholides ...... 877
42.16.2.1.10.4 Method 4: Sulfurization of Phosphate Triester .............................. 880
42.16.2.1.10.4.1 Variation 1: Sulfurization with 3H-1,2-Benzodithiol-3-one 1,1-Dioxide
(Beaucage’s Reagent) ........................................... 880
42.16.2.1.10.4.2 Variation 2: Sulfurization with Phenylacetyl Disulfide .................... 882
42.16.2.1.10.4.3 Variation 3: Sulfurization with 1,1′,1″,1″″-[Disulfanediylibis(carbono-
thioylnitrilo)]tetraethane ........................................ 882
42.16.2.1.10.4.4 Variation 4: Sulfurization with Lawesson’s Reagent ...................... 882
42.16.2.1.10.5 Method 5: Direct Sulfurization of Dialkyl H-Phosphonates ............. 883
42.16.2.1.10.6 Method 6: Polymerization Catalyzed by Uranyl Ion ...................... 884
42.16.2.1.11 O,O-Dialkyl/O,O-Diaryl Hydrogen Phosphorodithioates .................... 885
42.16.2.1.11.1 Method 1: Sulfurization of Disubstituted Phosphorodithioates ........... 885
42.16.2.1.11.1.1 Variation 1: From Phosphorochloridites .................................. 886
42.16.2.1.11.1.2 Variation 2: Solid-Phase Synthesis of O,O-Dialkyl Phosphorodithioates .... 886
42.16.2.1.11.2 Method 2: The Dithiaphospholane Method .................................... 888
42.16.2.1.11.2.1 Variation 1: From N,N-Diisopropyl-1,3,2-dithiaphospholane-2-amine .... 888
42.16.2.1.11.2.2 Variation 2: From 2-Chloro-1,3,2-dithiaphospholane ..................... 890
42.16.2.1.11.3 Method 3: Dithiophosphorylation of Alcohols and Hydrolysis of the
Triester .......................................................... 891
42.16.2.1.11.4 Method 4: Reduction and Subsequent Sulfurization of O,O-Dialkyl
Phosphorochloridithioates ....................................... 893
42.16.2.1.11.5 Method 5: Solid-Phase Sulfurization of Phosphoramidothioites ........... 893
42.16.2.1.12 O,O-Dialkyl/O,O-Diaryl Phosphorofluoridothioates ....................... 895
42.16.2.1.12.1 Method 1: Sulfurization of Phosphorofluoridites ................................. 895
42.16.2.1.12.2 Method 2: Fluorination of O,O-Dialkyl Phosphonothioates ....................... 896
42.16.2.1.12.3 Method 3: Desulfurization of Phosphorodithioates .............................. 897
42.16.2.1.13 O,O, O-Trialkyl/O,O, O-Triaryl Phosphorothioates .................................. 898
42.16.2.1.13.1 Method 1: Sulfurization of Trivalent Phosphorus Compounds .................. 898
42.16.2.1.13.1.1 Variation 1: Sulfurization with Thiirane ........................................ 899
42.16.2.1.13.1.2 Variation 2: Sulfurization with Dibenzoyl Tetrasulfide ....................... 899
42.16.2.1.13.1.3 Variation 3: Sulfurization with Bis[3-(triethoxysilyl)propyl] Tetrasulfide .... 899
42.16.2.1.13.2 Method 2: Methanolysis of Phosphoramidothioates ............................... 900
42.16.2.1.14 O, O, S-Trialkyl/O, O-S-Triaryl Phosphorodithioates .............................. 901
42.16.2.1.14.1 Method 1: Thiophosphorylation of Silyl Enol Ethers ............................ 901
42.16.2.1.14.2 Method 2: Alkylation of O, O-Dialkyl Phosphorodithioates .................... 902
42.16.2.1.14.3 Method 3: S-Alkynylation of Potassium O, O-Dialkyl Phosphorodithioates .... 902
42.16.2.1.14.4 Method 4: Sulfurization of Phosphorochloridothioates ........................... 903
42.16.3 Product Subclass 3: P=Se Phosphates .......................................................... 903
42.16.3.1 Synthesis of Product Subclass 3 ............................................................... 904
42.16.3.1.1 O, O-Dialkyl Phosphoroselenoates ....................................................... 904
42.16.3.1.1.1 Method 1: Synthesis via Phosphoramidites .................................... 904
42.16.3.1.1.2 Method 2: Synthesis via H-Phosphonates ........................................ 906
42.16.3.1.1.2.1 Variation 1: Oxidation of O, O-Dialkyl Phosphonates with Potassium Selenocyanate ......................................................... 906
42.16.3.1.1.2.2 Variation 2: Oxidation of O, O-Dialkyl H-Phosphonates with Triphenylphosphine Selenide ................................................................. 907
42.16.3.1.1.2.3 Variation 3: Oxidation of O, O-Dialkyl H-Phosphonates with 3H-1,2-Benzothiaselenol-3-one ............................................................. 907
42.16.3.1.1.2.4 Variation 4: Oxidation of O, O-Dialkyl H-Phosphonates with 3-(Phthalimidoselanyl)propanenitrile ................................................................. 909
42.16.3.1.1.3 Method 3: Synthesis via 1,3,2-Oxathiaphospholane 2-Selenides ......... 911
42.16.3.1.2 O, O-Trialkyl Phosphoroselenoates ....................................................... 913
42.16.3.1.2.1 Method 1: The Phosphoramidite Approach .................................... 913
42.17 Product Class 17: Phosphazenes
S. Urgaonkar and J. G. Verkade

42.17 Product Class 17: Phosphazenes ................................................................. 923
42.17.1 Product Subclass 1: Schesthesinger Bases ................................................. 923
42.17.1.1 Synthesis of Product Subclass 1 ............................................................. 924
42.17.1.1.1 Method 1: Synthesis from Phosphonium Salts .................................. 924
42.17.1.2 Applications of Product Subclass 1 in Organic Synthesis ......................... 925
42.17.1.2.1 Method 1: Deprotonation Reactions .................................................. 925
42.17.1.2.2 Method 2: Addition of O- and N-Nucleophiles to Alkynes ..................... 930
42.17.1.2.3 Method 3: Activation of Arene—Silicon Bonds .................................. 930
42.17.1.2.4 Method 4: Halogen–Zinc Exchange Reactions of Aryl Iodides ............ 931
42.17.1.2.5 Method 5: Sigmatropic Rearrangement of Allylic Amines and Alcohols .......... 932
42.17.1.2.6 Method 6: Synthesis of Diaryl Ethers and Sulfides ............................... 933
42.17.1.2.7 Method 7: Michael Addition .............................................................. 934
42.17.2 Product Subclass 2: Proazaphosphatrane Sulfides ..................................... 934
42.17.2.1 Synthesis of Product Subclass 2 ............................................................ 934
42.17.2.1.1 Method 1: Reaction of Proazaphosphatranes with Sulfur ..................... 934
42.17.2.2 Applications of Product Subclass 2 in Organic Synthesis ......................... 935
42.17.2.2.1 Method 1: Baylis–Hillman Reaction ................................................. 935
42.17.3 Product Subclass 3: Proazaphosphatrane Oxides .................................. 935
42.17.3.1 Synthesis of Product Subclass 3 ............................................................ 936
42.17.3.1.1 Method 1: Reaction of Proazaphosphatranes with Bis(trimethylsilyl) Peroxide .................................................. 936
42.17.3.2 Applications of Product Subclass 3 in Organic Synthesis ......................... 936
42.17.3.2.1 Method 1: Silylation of Alcohols ...................................................... 936
42.17.3.2.2 Method 2: Transformation of Isocyanates into Carbodiimides ............... 937
42.17.4 Product Subclass 4: Phosphoramides ..................................................... 937
42.17.4.1 Synthesis of Product Subclass 4 ............................................................ 938
42.17.4.1.1 Method 1: Synthesis by Oxidation ................................................. 938
42.17.4.1.2 Method 2: Synthesis by Nucleophilic Substitution ............................ 938
42.17.4.2 Applications of Product Subclass 4 in Organic Synthesis ......................... 939
42.17.4.2.1 Method 1: Asymmetric Aldol Reactions ........................................... 939
42.17.4.2.2 Method 2: Enantioselective Allylation Reactions ............................. 940
42.17.4.2.3 Method 3: Asymmetric Diels–Alder Reaction ................................... 941
42.17.4.2.4 Method 4: Borane Reduction of Ketones ........................................ 941

42.17.4.2.6 Method 6: Reduction Reactions ..................................................... 942
42.17.4.2.7 Method 7: Conjugate Addition Reactions ...................................... 943
42.17.5 Product Subclass 5: Linear and Cyclic Organophosphazenes ..................... 944
42.17.5.1 Synthesis of Product Subclass 5 ............................................................ 944
42.17.5.1.1 Method 1: Reaction of Phosphorus Pentachloride with Ammonium Chloride or Tris(trimethylsilyl)amine .............................. 944
42.17.5.2 Applications of Product Subclass 5 in Organic Synthesis ......................... 946
42.17.5.2.1 Method 1: Synthesis of Poly(dichlorophosphazene) .......................... 946
42.18 Product Class 18: Pentacoordinated Phosphoranes
T. Kawashima and J. Kobayashi

42.18 Product Class 18: Pentacoordinated Phosphoranes ................................. 953
42.18.1 Synthesis of Product Class 18 ................................................................. 954
42.18.1.1 Method 1: Nucleophilic Substitution on Pentacoordinated Phosphoranes 954
42.18.1.1.1 Variation 1: Addition of Alcohols to Phosphoranes .......................... 954
Variation 2: Addition of Amines to Halophosphoranes

Variation 3: Reaction of Alkoxy- or Aminosilanes with Halophosphoranes

Variation 4: Reaction of Unsaturated Compounds with Halophosphoranes

Method 2: Addition to Tetracoordinated Phosphorus Compounds

Variation 1: Addition of Carbonyl Compounds to Phosphorus Ylides

Variation 2: Addition of 1,3-Dipoles to Phosphorus Ylides

Variation 3: Addition to Phosphonium Salts

Variation 4: Addition to Alkylated Iminophosphoranes

Method 3: Oxidation of Tricoordinated Phosphorus Compounds

Variation 1: Reaction with Dihalogenes

Variation 2: Reactions with Other Halogenating Reagents

Variation 3: Reaction with Peroxides

Variation 4: Reaction with \( \alpha \)-Diketones

Variation 5: Reaction with \( \alpha, \beta \)-Unsaturated Carbonyl Compounds

Method 4: Condensation Reactions

Variation 1: Dehydrative Condensation

Variation 2: Reaction of Carbonyl Compounds with Tricoordinated Phosphorus

Method 5: Insertion Reactions

Variation 1: Insertion of Tricoordinated Phosphorus

Variation 2: Insertion into the P—H Bond of Hydrophosphoranes

Product Class 19: Hexacoordinated Phosphates
D. Linder and J. Lacour

Product Subclass 1: Anionic Hexacoordinated Phosphorus Derivatives with P—O Bonds Only

Synthesis of Product Subclass 1

Method 1: Direct Synthesis from Phosphorus Pentachloride

Method 2: Stepwise Synthesis from Phosphorus(III) Compounds

Variation 1: From Phosphites

Variation 2: From Phosphorous Triamides

Product Subclass 2: Anionic Hexacoordinated Phosphorus Derivatives with P—O and P—C Bonds

Synthesis of Product Subclass 2

Method 1: Stepwise Synthesis from Phosphorus(V) Adducts

Method 2: Direct Oxidation of Phosphorus(III) Adducts

**Introduction**
H. Hopf .......................................................... 1

### 43.1 Product Class 1: Linear Conjugated Diynes, Oligoynes, and Polynes
A. Hirsch and O. Vostrowsky .................................. 37

### 43.2 Product Class 2: Cyclic Conjugated Diynes, Triynes, Tetranyes, and Polynes
F. Diederich, R. R. Tykwinski, and M. B. Nielsen .......... 119

### 43.3 Product Class 3: Arynes
T. L. Gilchrist .................................................. 151

### 43.4 Product Class 4: Linear Enynes
C. Burmester, O. Haß, and R. Faust ........................ 225

### 43.5 Product Class 5: Cyclic Enynes
A. G. Fallis and M. S. Souweha .............................. 289

### 43.6 Product Class 6: Acyclic Arylalkynes
A. G. Griesbeck and A. Soldevilla .......................... 345

### 43.7 Product Class 7: Cyclic Arylalkynes
Y. Tobe and R. Umeda .......................................... 393

### 43.8 Product Class 8: Linear Alkynes

#### 43.8.1 Synthesis by Elimination
S. Sankararaman .............................................. 435

#### 43.8.2 Synthesis by Rearrangement
A. Krueger .................................................... 469

#### 43.8.3 Synthesis from Other Alkynes
R. A. Aitken and K. Aitken .................................. 555

### 43.9 Product Class 9: Cycloalkynes
R. Gleiter and D. B. Werz .................................... 631

43.1.1.13 Method 13: Palladium-Catalyzed Coupling of Alkynylstannanes .......... 70
43.1.1.14 Method 14: Other Transition-Metal-Mediated Alkyne Coupling Processes 70
43.1.1.15 Method 15: Elimination of a Hydrogen Halide from 1,4-Dihalobut-2-ynes 71
43.1.1.16 Method 16: Elimination of a Hydrogen Halide from Haloalkynes .......... 72
43.1.1.16.1 Variation 1: Elimination of a Hydrogen Halide from 1-Haloalk-1-en-3-ynes 72
43.1.1.16.2 Variation 2: Elimination of a Hydrogen Halide from 2-Haloalk-1-en-3-ynes 75
43.1.1.16.3 Variation 3: Elimination of a Hydrogen Halide from 1-Haloalk-3-en-1-ynes 76
43.1.1.17 Method 17: Buta-1,3-diynel Formation from Carbenes and Carbenoids (Fritsch–Buttenberg–Wiechell Rearrangement) .................. 77
43.1.1.18 Method 18: Wittig Synthesis Using Phosphacumulene Ylides .......... 79
43.1.1.18.1 Variation 1: Wittig Synthesis Using Phosphacumulene Ylides .......... 79
43.1.1.18.2 Variation 2: Flash-Vacuum Pyrolysis of 2-Oxoalk-3-ynylidenetriphenylphosphoranes ......................................................... 80
43.1.1.19 Method 19: Base-Catalyzed Triple-Bond Isomerizations (Zipper Reaction) 82
43.1.2 Product Subclass 2: Linear Conjugated Oligoynes and Polyyynes ............ 83
        43.1.2.1 Synthesis of Product Subclass 2 .................................................. 83
        43.1.2.1.1 Method 1: Convergent Synthesis of Polyyynes by Acetylene Coupling Reactions ......................................................... 83
        43.1.2.1.1.1 Variation 1: Glaser Coupling .................................................. 83
        43.1.2.1.1.2 Variation 2: Eglinton Coupling ............................................. 84
        43.1.2.1.1.3 Variation 3: Hay Coupling ................................................. 86
        43.1.2.1.2 Method 2: Cadiot–Chodkiewicz Cross Coupling ......................... 91
        43.1.2.1.3 Method 3: Tetranyenes from Oxidative Homocoupling of Alkadiynyl Grignard Derivatives ................................................. 94
        43.1.2.1.4 Method 4: Homocoupling of Transition-Metal-Bound Buta-1,3-diynes 95
        43.1.2.1.5 Method 5: Iterative Synthesis of Polyyynes Using Acetylene Coupling Reactions ......................................................... 95
        43.1.2.1.6 Method 6: Dehydrohalogenation of Halogenated Polyyne Precursors 98
        43.1.2.1.6.1 Variation 1: Elimination of Hydrogen Chloride from 1,6-Dichlorohexa-2,4-diynes ......................................................... 98
        43.1.2.1.6.2 Variation 2: Convergent Synthesis of Polyyynes by the Alkynylation/ Elimination of 1,1-Dibromoalk-1-en-3-ynes ................................. 99
        43.1.2.1.7 Method 7: Polyyne Formation from Carbenes and Carbenoids (Fritsch–Buttenberg–Wiechell Rearrangement) .................. 100
        43.1.2.1.8 Method 8: Synthesis of Higher Polyyynes by Pyrolysis .................. 104
        43.1.2.1.8.1 Variation 1: Flash-Vacuum Pyrolysis of Ethyl 3-Oxo-7-(4-tolyl)- 2-(triphenylphosphoranylidene)hepta-4,6-diyanoate ......................... 104
        43.1.2.1.8.2 Variation 2: Linear Polyyynes from Solution-Spray Flash-Vacuum Pyrolysis of Cyclobutene-1,2-diones ........................................... 105
43.1.3 Product Subclass 3: Polyyne Fractions with Varying Numbers of Triple Bonds .................................................. 105
        43.1.3.1 Synthesis of Product Subclass 3 .................................................. 105
        43.1.3.1.1 Method 1: Laser Ablation of Carbon Particles in Suspension .......... 105
        43.1.3.1.2 Method 2: Synthesis by Electric Arc Discharge ......................... 106
        43.1.3.1.3 Method 3: Synthesis of Polyyne Fractions from the Hydrolysis of Carbides .................................................. 107
method 4: polydisperse α,ω-dicyanopolyyne fractions from electric arcing

43.2 product class 2: cyclic conjugated diynes, triynes, tetracynes, and polyynes

43.2.1 product subclass 1: cyclic conjugated diynes

43.2.1.1 synthesis of product subclass 1

43.2.1.1.1 oxidative homocoupling

43.2.1.1.1.1 variation 1: synthesis via oligomerization under standard conditions

43.2.1.1.1.2 variation 2: synthesis via oligomerization with addition of copper(i) chloride

43.2.1.1.1.3 variation 3: synthesis via oligomerization under oxygen-free conditions

43.2.1.1.1.4 variation 4: synthesis via oligomerization in acetonitrile

43.2.1.1.1.5 variation 5: stepwise synthesis under standard conditions

43.2.1.1.1.6 variation 6: stepwise synthesis with addition of copper(i) chloride

43.2.1.1.1.7 variation 7: stepwise synthesis under oxygen-free conditions

43.2.1.1.2 method 2: hay conditions with terminal alkynes

43.2.1.1.2.1 variation 1: synthesis via oligomerization

43.2.1.1.2.2 variation 2: stepwise synthesis

43.2.1.1.2.3 variation 3: synthesis via oligomerization under oxygen-free conditions

43.2.1.1.3 oxidative heterocoupling of terminal alkynes and bromoalkynes

43.2.1.1.3.1 method 1: cadiot–chodkiewicz conditions

43.2.1.1.3.2 variation 1: with pyridine as solvent

43.2.1.1.3.3 variation 2: under palladium catalysis

43.2.1.1.3.4 nucleophilic substitution

43.2.1.1.4 cumulene dimerization

43.2.1.1.4.1 method 1: dimerization under copper catalysis

43.2.1.1.4.2 method 2: dimerization without copper catalysis

43.2.1.1.4.3 method 3: 1,6-elimination from 1,6-dibromohexa-2,4-diyn

43.2.1.1.5 iodolactonization

43.2.1.1.6 applications of product subclass 1 in organic synthesis

43.2.1.1.6.1 method 1: reaction with sulfur

43.2.1.1.6.2 method 2: reaction with tetrachlorothiophene 1,1-dioxide

43.2.1.1.6.3 method 3: palladium-catalyzed enyne–diyne cross-benzannulation

43.2.1.1.6.4 method 4: hydrogenation
### Table of Contents

43.2.1.2.5 Method 5: Reduction with a Trialkylborane ........................................ 139
43.2.1.2.6 Method 6: Annulene Formation .......................................................... 139
43.2.1.2.7 Method 7: Radialene Formation .......................................................... 139
43.2.1.2.8 Method 8: Transannular Cyclization .................................................. 140
43.2.1.2.8.1 Variation 1: With Potassium Hydroxide ......................................... 140
43.2.1.2.8.2 Variation 2: With Potassium Hydroxide and Heat ........................... 140
43.2.1.2.8.3 Variation 3: With Sodium Bis(2-methoxyethoxy)aluminum Hydride ..... 141

#### Method 6: Annulene Formation

43.2.1.2.8.4 Method 9: Annulene Formation ...................................................... 141

#### Method 7: Radialene Formation

43.2.1.2.8.5 Method 10: Radialene Formation .................................................... 141

#### Method 8: Transannular Cyclization

43.2.1.2.8.6 Method 11: Transannular Cyclization ............................................. 141

43.2.2 Method 2: Product Subclass 2: Cyclic Conjugated Triynes .......................... 141

43.2.2.2.1 Synthesis of Product Subclass 2 .......................................................... 141

43.2.2.2.1.1 Method 1: Nucleophilic Substitution .............................................. 141

43.2.2.2.2 Method 3: Method 1: Reaction of Sodium Acetylides with Alkyl Bromides 142

43.2.2.3 Method 3: Product Subclass 3: Cyclic Conjugated Tetraynes .................. 142

43.2.2.3.1 Synthesis of Product Subclass 3 .......................................................... 142

43.2.2.3.1.1 Method 1: Oxidative Homocoupling ............................................. 142

43.2.2.3.2 Method 2: Method 1: Glaser–Eglinton Conditions .................................. 142

43.2.2.3.3 Method 4: Method 1: Fritsch–Buttenberg–Wiechell Conditions ............. 143

43.2.4 Method 4: Product Subclass 4: Cyclic Conjugated Polyynes ....................... 144

43.2.4.1 Synthesis of Product Subclass 4 ............................................................ 144

43.2.4.1.1 Method 1: Method 1: Decarbonylation ............................................. 144

43.2.4.1.2 Method 2: Method 2: Retro-Diels–Alder Reactions .............................. 145

43.2.4.1.3 Method 3: Method 3: Retro-[2 + 2] Reactions ...................................... 145

43.2.4.1.4 Method 4: Method 4: [2 + 1]-Cheletropic Fragmentation ....................... 146

43.2.4.2 Applications of Product Subclass 4 in Organic Synthesis ......................... 146

43.2.4.2.1 Method 1: Method 1: Reaction with Furan ......................................... 146

43.2.4.2.2 Method 2: Method 2: Fullerene Formation ......................................... 147

43.3 Method 3: Product Class 3: Arynes

T. L. Gilchrist

43.3.1 Method 3: Product Class 3: Arynes .......................................................... 151

43.3.1.1 Method 3: Product Subclass 1: 1,2-Didehydroarenes and 1,2-Didehydrohetarenes 156

43.3.1.1.1 Synthesis of Product Subclass 1 .......................................................... 156

43.3.1.1.1.1 Method 1: Method 1: Elimination of Hydrogen .................................. 156

43.3.1.1.1.2 Method 2: Method 2: Elimination of a Hydrogen and a Halogen Function 156

43.3.1.1.1.3 Method 3: Method 3: Elimination of a Hydrogen and a Nitrogen Function 162

43.3.1.1.1.4 Method 4: Method 4: Elimination of a Hydrogen and an Oxygen Function 162

43.3.1.1.1.5 Method 5: Method 5: Elimination of a Hydrogen and a Sulfur or Selenium Function 163

43.3.1.1.1.6 Method 6: Method 6: Elimination of a Silicon and a Halogen Function 163

43.3.1.1.1.7 Method 7: Method 7: Elimination of a Silicon and an Oxygen Function 166

43.3.1.1.1.8 Method 8: Method 8: Elimination of Two Carbon Functions ............... 168

43.3.1.1.1.9 Method 9: Method 9: Variation 1: From Benzocyclobutene-1,2-diones ........ 168
43.3.1.8.2 Variation 2: From Phthalic Anhydrides .................................. 170
43.3.1.8.3 Variation 3: From Phthaloyl Peroxide .................................. 173
43.3.1.8.4 Variation 4: From 1H-2,3-Benzoxazin-1-ones .......................... 173
43.3.1.9 Method 9: Elimination of a Carbon and a Halogen Function .......... 174
43.3.1.10 Method 10: Elimination of a Carbon and an Oxygen Function ......... 175
43.3.1.11 Method 11: Elimination of a Carbon and a Nitrogen Function ......... 175
43.3.1.11.1 Variation 1: From ortho-Diazoanilinocarboxylates .................. 175
43.3.1.11.2 Variation 2: From ortho-(3,3-Dimethyltriaz-1-enyl)anilinocarboxylic Acids ..... 177
43.3.1.12 Method 12: Elimination of Two Halogen Functions ..................... 178
43.3.1.12.1 Variation 1: From ortho-Haloarylmagnesium Halides ............... 178
43.3.1.12.2 Variation 2: From ortho-Haloaryllithium Species ..................... 179
43.3.1.13 Method 13: Elimination of a Halogen and an Oxygen Function ....... 181
43.3.1.13.1 Variation 1: From ortho-(Arylsulfonyloxy)arylcarboxylates ......... 181
43.3.1.13.2 Variation 2: From ortho-Sulfonylarylcarboxylic Acids ............... 183
43.3.1.14 Method 14: Elimination of a Halogen and a Sulfur Function .......... 184
43.3.1.15 Method 15: Elimination of a Nitrogen and a Sulfur Function .......... 184
43.3.1.16 Method 16: Elimination of Two Nitrogen Functions .................... 185
43.3.1. Applications of Product Subclass 1 in Organic Synthesis ................. 187
43.3.1.2.1 Method 1: Diels–Alder Reactions ........................................ 188
43.3.1.2.2 Method 2: 1,3-Dipolar Cycloaddition Reactions ....................... 191
43.3.1.2.3 Method 3: [2 + 2]-Cycloaddition Reactions ............................ 194
43.3.1.2.4 Method 4: Ene Reactions .................................................. 196
43.3.1.2.5 Method 5: Reactions with Nucleophiles ................................ 197
43.3.1.2.6 Method 6: Reactions Catalyzed by Palladium .......................... 203
43.3.2 Product Subclass 2: 1,3-Didehydroarenes and 1,3-Didehydrohetarenes 206
43.3.2.1 Synthesis of Product Subclass 2 ........................................... 207
43.3.2.1.1 Method 1: Elimination of Two Carbon Functions ...................... 207
43.3.2.1.1.1 Variation 1: From Diacetyl Isophthaloyl Peroxide .................. 207
43.3.2.1.2 Variation 2: From Cyclophanediones ................................... 208
43.3.2.1.2.2 Method 2: Elimination of Two Halogen Functions ................. 208
43.3.2.1.3 Method 3: Elimination of Two Nitrogen Functions .................... 209
43.3.2.1.4 Method 4: Routes Applicable to Specific meta-Arynes ................ 209
43.3.2.1.4.1 Variation 1: Synthesis of 2-Chloro-1,3-didehydrophenanthrene by Elimination of Hydrogen and Halogen Functions ......................... 209
43.3.2.1.4.2 Variation 2: Synthesis of 2,4-Didehydrophenol by Elimination of a Carbon and a Nitrogen Function ........................................ 210
43.3.2.1.4.3 Variation 3: Synthesis of 2-Phenyl-1,3-didehydrobenzene by Rearrangement .................................................. 210
43.3.2.1.4.4 Variation 4: Synthesis of 1,8-Didehydrophenanthrene by Elimination of Two Nitrogen Functions .......................................... 211
43.3.2.1.4.5 Variation 5: Synthesis of 1,2,3-Tridehydrobenzene by Elimination of One Halogen and Two Carbon Functions .......................... 211
43.3.2.1.4.6 Variation 6: Synthesis of Trifluoro-1,3,5-tridehydrobenzene by Elimination of Three Halogen Functions ................................. 212
43.3.3 Product Subclass 3: 1,4-Didehydroarenes and 1,4-Didehydrohetarenes 212
43.3.3.1 Synthesis of Product Subclass 3 ............................................. 213
43.3.1.1 Method 1: Elimination of Two Carbon Functions ................................ 213
43.3.1.1.1 Variation 1: From Diacyl Terephthaloyl Peroxides ........................ 213
43.3.1.1.2 Variation 2: From Propellanes .................................................. 213
43.3.1.2 Method 2: Elimination of Two Halogen Functions .......................... 214
43.3.1.3 Method 3: Rearrangement Reactions ............................................ 215

43.4 Product Class 4: Linear Enynes
C. Burmester, O. Haß, and R. Faust

43.4.1 Synthesis of Product Class 4 .......................................................... 225
43.4.1.1 Method 1: Palladium-Catalyzed Cross-Coupling Reactions ............ 225
43.4.1.1.1 Variation 1: Using Terminal Alkynes ......................................... 225
43.4.1.1.2 Variation 2: Using Organoboron Compounds ............................ 228
43.4.1.1.3 Variation 3: Using Organomagnesium Compounds .................... 230
43.4.1.1.4 Variation 4: Using Organotin Compounds .................................. 232
43.4.1.1.5 Variation 5: Using Organozinc Compounds .................................. 234
43.4.1.2 Method 2: Copper-Mediated Reactions ........................................ 235
43.4.1.2.1 Variation 1: Copper(I) Catalysis with Terminal Alkynes .............. 236
43.4.1.2.2 Variation 2: Starting from Vinylboranes ...................................... 237
43.4.1.2.3 Variation 3: Starting from Other Vinyl Organometallic Compounds 239
43.4.1.2.4 Variation 4: Starting from Alkynylcopper Species ....................... 240
43.4.1.3 Method 3: Carbene Reactions ...................................................... 241
43.4.1.4 Method 4: Elimination Reactions To Form the Alkene ................. 244
43.4.1.4.1 Variation 1: From Propargylic Systems ...................................... 244
43.4.1.4.2 Variation 2: From Cyclic Carbonates ......................................... 247
43.4.1.4.3 Variation 3: Coupling–Elimination Reactions ............................. 248
43.4.1.4.4 Variation 4: By Carbonyl Alkenation ......................................... 249
43.4.1.4.5 Variation 5: From Silicon or Sulfur Compounds ......................... 252
43.4.1.5 Method 5: Elimination Reactions To Form the Alkyne ................. 254
43.4.1.5.1 Variation 1: From 1,1-Dibromobutadienes .................................. 254
43.4.1.5.2 Variation 2: From Vinyl Sulfones ............................................. 255
43.4.1.6 Method 6: Addition Reactions to Diynes ....................................... 257
43.4.1.6.1 Variation 1: Addition of Complex Aluminum and Boron Hydrides 257
43.4.1.6.2 Variation 2: Hydrosilylation, Hydrostannylation, and Stannylation of Diynes ................................................................. 258
43.4.1.6.3 Variation 3: Hydroaminations, Hydrophosphinylation, and the Addition of Alcohols, Thiols, and Higher Group 16 Analogues .......... 260
43.4.1.6.4 Variation 4: Addition of Carbon Fragments ............................... 263
43.4.1.7 Method 7: Synthesis from Heterocyclic Compounds .................... 266
43.4.1.8 Method 8: Synthesis by Rearrangement ....................................... 268
43.4.1.9 Method 9: Alkyne Dimerizations ............................................... 273
43.4.1.9.1 Variation 1: Base-Induced Dimerizations .................................. 273
43.4.1.9.2 Variation 2: Transition-Metal-Catalyzed Alkyne Dimerizations .... 274
43.4.1.9.3 Variation 3: Rare Earth and Main Group Metal Catalyzed Dimerizations 279

43.5.2.1.1 Method 1: Ring Closure by Alkynylmetal Condensations with Carbonyl Groups and Related Electrophiles ...................... 293
43.5.2.1.2 Method 2: Ring Closure by Condensation of Alkyne–Hexacarbonyldicobalt Complexes (Nicholas Reaction) ......................... 294
43.5.2.1.3 Method 3: Ring-Contraction Reactions ............................. 295
43.5.2.1.3.1 Variation 1: Wittig Rearrangement ............................... 295
43.5.2.1.3.2 Variation 2: Photochemical Sulfur Dioxide Extrusion ........ 295
43.5.2.1.4 Method 4: Alkene Formation Post Ring Closure ................. 296
43.5.2.1.4.1 Variation 1: Elimination Reactions with Base .................. 296
43.5.2.1.4.2 Variation 2: Decomplexation Reactions ......................... 296
43.5.2.1.5 Method 5: Alkyne Formation Post Ring Closure .................. 297
43.5.3 Product Subclass 3: Cyclodecenynes ...................................... 297
43.5.3.1 Synthesis of Product Subclass 3 ........................................ 298
43.5.3.1.1 Method 1: Base-Mediated Ring Closure by Alkynylmetal Condensations with Carbonyl Groups and Related Electrophiles .......... 298
43.5.3.1.1.1 Variation 1: Aldol Condensation Reaction ...................... 301
43.5.3.1.1.2 Variation 2: Carbene Insertion–Elimination Reaction ........ 302
43.5.3.1.1.3 Variation 3: Chromium(II) Chloride/Nickel(II) Chloride Condensation Reactions ......................................................... 302
43.5.3.1.1.4 Variation 4: Alkynyltrimethylsilane Condensations with Fluoride Ion ................................................................. 305
43.5.3.1.1.5 Variation 5: Condensations from Enol Ethers with a Lewis Acid ................................................................. 306
43.5.3.1.2 Method 2: Ring Closure by Condensation of Alkyne–Hexacarbonyldicobalt Complexes (Nicholas Reaction) ..................... 306
43.5.3.1.2.1 Variation 1: With In Situ Enolization ............................. 308
43.5.3.1.3 Method 3: Pinacol Ring-Closure Reactions ....................... 309
43.5.3.1.3.1 Variation 1: Pinacol Ring Closure–Alkene Formation ........ 310
43.5.3.1.4 Method 4: Palladium Coupling Reactions ......................... 311
43.5.3.1.4.1 Variation 1: Double Palladium Coupling Reactions .......... 312
43.5.3.1.5 Method 5: Ring-Contraction Reactions ............................. 313
43.5.3.1.5.1 Variation 1: Sulfur Dioxide Extrusion ............................ 313
43.5.3.1.6 Method 6: Intramolecular Diels–Alder Reactions ................. 314
43.5.3.1.7 Method 7: Alkene Formation Post Ring Closure ................. 315
43.5.3.1.7.1 Variation 1: Thermolysis Reactions .............................. 315
43.5.3.1.7.2 Variation 2: Enzyme-Mediated Reactions ....................... 316
43.5.3.1.7.3 Variation 3: Allylic Rearrangement Reactions ................. 316
Variation 4: Dehydrogenation Reactions ................................. 317
Variation 5: Retro-Diels–Alder Reactions .............................. 317
Method 8: Alkyne Formation Post Ring Closure ...................... 318
Method 9: Ruthenium Coupling Reactions ............................ 318

Product Subclass 4: Cycloundecenynes .................................. 319

Synthesis of Product Subclass 4 ........................................... 319

Method 1: Ring Closure by Alkynylmetal Condensations with Carbonyl Groups and Related Electrophiles .................... 319
Variation 1: Chromium(II) Chloride/Nickel(II) Chloride Condensations ..... 320
Method 2: Ring Closure by Condensation of Alkyne–Hexacarbonyl-dicobalt Complexes (Nicholas Reaction) .................... 320
Method 3: Palladium Coupling Reactions ............................... 321
Method 4: Ring-Contraction Reactions .................................. 321
Variation 1: Sulfur Dioxide Extrusion .................................. 321
Variation 2: Sigmatropic Rearrangements .............................. 322
Method 5: Intramolecular Diels–Alder Reactions ....................... 323
Method 6: Alkene Formation Post Ring Closure ....................... 323
Variation 1: Thermolysis Reactions ..................................... 323

Product Subclass 5: Cyclododecenynes ................................ 324

Synthesis of Product Subclass 5 .......................................... 324

Method 1: Ring Closure by Chromium(II) Chloride/Nickel(II) Chloride Condensations ........................................... 324
Method 2: Copper Coupling Reactions .................................. 325
Method 3: Ruthenium Coupling Reactions .............................. 326
Method 4: Ring-Contraction Reactions .................................. 326
Variation 1: Sulfur Dioxide Extrusion .................................. 326
Method 5: Alkene Formation Post Ring Closure ....................... 327
Variation 1: Thermolysis Reactions ..................................... 327
Method 6: Alkyne Formation Post Ring Closure ....................... 327

Product Subclass 6: Cyclotridecenynes ................................ 328

Synthesis of Product Subclass 6 .......................................... 328

Method 1: Ring-Contraction Reactions .................................. 328
Variation 1: Sulfur Dioxide Extrusion .................................. 328
Variation 2: Sigmatropic Rearrangement Reaction .................... 328

Product Subclass 7: Cyclotetradecenynes .............................. 329

Synthesis of Product Subclass 7 .......................................... 329

Method 1: Ring-Contraction Reactions .................................. 329
Variation 1: Sulfur Dioxide Extrusion .................................. 329
Method 2: Copper Coupling Reactions .................................. 329
Method 3: Ruthenium Coupling Reactions .............................. 330

Product Subclass 8: Cyclopentadecenynes ............................ 330

Synthesis of Product Subclass 8 .......................................... 330

Method 1: Ring-Contraction Reactions .................................. 330
43.5.8.1.1 Variation 1: Sulfur Dioxide Extrusion ........................................ 330
43.5.8.1.2 Method 2: Alkyne Formation Post Ring Closure .......................... 331
43.5.9 Product Subclass 9: Cyclohexadecenynes ........................................... 331
43.5.9.1 Synthesis of Product Subclass 9 .......................................................... 331
43.5.9.1.1 Method 1: Ruthenium Coupling Reactions .................................... 331
43.5.9.1.2 Method 2: Ring-Contraction Reactions ......................................... 332
43.5.10 Product Subclass 10: Cyclophanes and Annulenes with Enyne Bridge Components ................................................................. 332
43.5.10.1 Synthesis of Product Subclass 10 ....................................................... 332
43.5.10.1.1 Method 1: Copper Coupling Reactions ....................................... 332
43.5.10.1.2 Method 2: Palladium Coupling Reactions ................................... 338
43.6 Product Class 6: Acyclic Arylalkynes
A. G. Griesbeck and A. Soldevilla

43.6.1 Product Class 6: Acyclic Arylalkynes .................................................... 345
43.6.1.1 Synthesis of Product Class 6 ............................................................... 347
43.6.1.1.1 Synthesis from Metalated Arenes and Haloalkynes ......................... 347
43.6.1.1.2 Method 1: Cross Coupling of Aryl Cuprates and Haloalkynes ........... 347
43.6.1.1.2 Method 2: Cross Coupling of Aryl Stannanes and Haloalkynes .......... 348
43.6.1.2 Synthesis from Haloarenes and Metal Alkynides ................................ 349
43.6.1.2.1 Method 1: Palladium-Catalyzed Cross Coupling with Tin Alkynides .... 349
43.6.1.2.2 Method 2: Palladium-Catalyzed Cross Coupling with Zinc Alkynides ... 350
43.6.1.2.3 Method 3: Palladium-Catalyzed Cross Coupling with Copper Alkynides (The Stephens–Castro Reaction) ................................................. 351
43.6.1.2.4 Method 4: Palladium-Catalyzed Cross Coupling with Silicon Alkynides 352
43.6.1.2.5 Method 5: Palladium-Catalyzed Cross Coupling with Aluminum Alkynides ................................................................. 353
43.6.1.2.6 Method 6: Palladium-Catalyzed Cross Coupling with Magnesium Alkynides (Kumada–Corriu-Type Coupling) ................................. 355
43.6.1.2.7 Method 7: Palladium-Catalyzed Cross Coupling with Boron Alkynides 355
43.6.1.3 Synthesis from Haloarenes and Terminal Alkynes ............................ 357
43.6.1.3.1 Method 1: Silver/Palladium-Catalyzed Cross Coupling of Haloarenes and Terminal Alkynes .................................................. 357
43.6.1.3.2 Method 2: Indium/Palladium-Catalyzed Cross Coupling of Haloarenes and Terminal Alkynes ................................................. 358
43.6.1.3.3 Method 3: Zinc/Palladium-Catalyzed Cross Coupling of Haloarenes and Terminal Alkynes .................................................. 359
43.6.1.3.4 Method 4: Copper/Palladium-Catalyzed Cross Coupling of Haloarenes and Terminal Alkynes (The Sonogashira–Hagihara Cross-Coupling Reaction) .................................................. 359
43.6.1.3.4.1 Variation 1: Sonogashira Cross-Coupling Reactions for Bromoarenes Using Specially Designed Ligands ........................................ 361
Variation 2: Sonogashira Reaction under Microwave-Irradiation Conditions .................................................. 362
Variation 3: Sonogashira Reaction under Phase-Transfer Conditions .......................... 363
Variation 4: Sonogashira Reactions in Water or Aqueous Mixtures of Solvents ................................................... 364
Variation 5: Palladium-Catalyzed Cross Coupling (Copper-Free Sonogashira Reaction) ........................................... 365
Variation 1: Domino Halogen-Exchange (Halex) and Copper-Free Sonogashira Reaction .................................................. 368
Variation 2: Palladium-Catalyzed Cross Coupling in Water .................................................. 369
Variation 3: Palladium-Catalyzed Cross Coupling in Ionic Liquids .......................... 370
Variation 4: Palladium-Catalyzed Coupling Using Palladium(0) Nanoparticles ................................................... 371
Variation 5: Solvent-Free Palladium-Catalyzed Cross Coupling .................................................. 372
Variation 6: Palladium-Catalyzed Cross Coupling Using Microwave Irradiation ............. 373
Variation 7: Metal-Free Cross Coupling (Metal-Free Sonogashira Reaction) ................. 374
Method 6: Metal-Free Cross Coupling .................................................. 375
Method 1: Elimination of Arylalkanes .................................................. 375
Variation 1: Halogenation Followed by Double Dehydrohalogenation .................................................. 375
Variation 2: Benzylation Followed by Double Dehydrohalogenation .................................................. 376
Method 2: Elimination from Vinylethene .......................... 376
Variation 1: 1,1-Dehydrohalogenation and 1,1-Dehalogenation .................................................. 376
Method 3: Elimination from Cyclopropenones .................................................. 377
Method 4: Elimination of Dinitrogen from Five-Membered Heterocycles .......................... 379
Method 5: Synthesis from Aromatic Aldehydes .................................................. 380
Variation 1: Alkenylation and Subsequent Elimination .................................................. 380
Variation 2: Corey–Fuchs Modification ............................................................................. 381
Variation 3: Seyferth–Gilbert Modification .................................................. 382
Variation 4: Bestmann–Ohira Modification .................................................. 383
Synthesis by Metathesis Reactions .................................................. 385
Variation 1: Alkyne Homodimerization .................................................. 385
Variation 2: Alkyne Cross Metathesis .................................................. 386
Variation 3: Ring-Closure Alkyne Metathesis .................................................. 386
Variation 4: Acyclic Diyne Metathesis .................................................. 387

Product Class 7: Cyclic Arylalkynes
Y. Tobe and R. Umeda

Product Class 7: Cyclic Arylalkynes .................................................. 393
Synthesis of Product Class 7 .................................................. 393
Formation of Triple-Bond-Containing Rings by C–C Bond Formation .................................................. 393
Method 1: Formation of C(sp³)–C(sp³) Bonds by Wurtz-Type Coupling Reactions .................................................. 393
Method 2: Formation of $\text{C}(\text{sp}^3) \rightarrow \text{C}(\text{sp}^3)$ Bonds by Nucleophilic Substitution
Reactions of Metal Acetylides with Haloalkanes

Method 3: Formation of $\text{C}(\text{sp}^2) \rightarrow \text{C}(\text{sp}^2)$ Bonds by Copper(II)-Catalyzed Coupling Reactions of Aryllithiums

Method 4: Formation of $\text{C}(\text{sp}^2) \rightarrow \text{C}(\text{sp})$ Bonds by Transition-Metal-Catalyzed Cross-Coupling Reactions

Method 5: Formation of $\text{C}(\text{sp}) \rightarrow \text{C}(\text{sp})$ Bonds by Transition-Metal-Mediated Oxidative Coupling Reactions

Variation 1: Stephens–Castro Reactions of Copper(I) Acetylides with Aryl and Vinyl Halides

Variation 2: Copper(I)-Catalyzed Coupling of Acetylenes with Aryl Halides

Variation 3: Hagihara–Sonogashira Reactions of Acetylenes with Aryl and Vinyl Halides

Variation 4: Palladium(0)-Catalyzed Cross-Coupling Reactions of Acetylenes with Vinyl Trifluoromethanesulfonates

Variation 5: In Situ Deprotection–Palladium(0)-Catalyzed Cross-Coupling Reactions

Variation 6: Preparation of Macroyclic Arylacetylenes Using Covalently Bound Templates

Variation 7: Palladium(0)-Catalyzed Cross Coupling of Terminal Alkynes with Bromoalkynes

Method 6: Alkyne Metathesis

Method 7: Cycloaddition Reaction of Cumulenic Quinodimethanes

Formation of Triple-Bond-Containing Rings by Elimination Reactions

Method 1: Double Dehydrohalogenation Reactions

Method 2: Double Elimination Reactions of $/C^2\text{S}_2$-Substituted Sulfones

Method 3: Oxidative Fragmentation of Bishydrazones

Formation of Aromatic Rings

Method 1: Metal-Catalyzed Cyclotrimerizations

Method 2: Palladium(0)-Catalyzed Enyne–Diyne [4 + 2] Cross Benzannulation

Method 3: Valence Isomerization
**Product Class 8: Linear Alkynes**

**Synthesis by Elimination**
S. Sankararaman

R. A. Aitken and K. Aitken

43.8.3.1 Conversion into an Alkynylmetal Followed by Reaction with an Electrophile 555
43.8.3.1.1 Method 1: Reaction of an Alkynyllithium with an Alkyl Halide or Equivalent 555
43.8.3.1.1.1 Variation 1: With a Chloroalkane 555
43.8.3.1.1.2 Variation 2: With a Bromoalkane 558
43.8.3.1.1.3 Variation 3: With an Iodoalkane 569
43.8.3.1.1.4 Variation 4: With a Dialkyl Sulfate 577
43.8.3.1.1.5 Variation 5: With an Alkyl Methanesulfonate 578
43.8.3.1.1.6 Variation 6: With an Alkyl Arenesulfonate 579
43.8.3.1.1.7 Variation 7: With an Alkyl Trifluormethanesulfonate 581
43.8.3.1.1.8 Variation 8: With an Alkylation Ester or Carbonate 582
43.8.3.1.1.9 Variation 9: With an Alcohol 583
43.8.3.1.1.10 Variation 10: With a Trialkylborane 583
43.8.3.1.1.11 Variation 11: With an Alkytlzirconium Reagent 585
43.8.3.1.2 Method 2: Reaction of an Alkynylsodium with an Alkyl Halide or Equivalent 586
43.8.3.1.2.1 Variation 1: With a Chloroalkane 586
43.8.3.1.2.2 Variation 2: With a Bromoalkane 586
43.8.3.1.2.3 Variation 3: With an Iodoalkane 589
43.8.3.1.2.4 Variation 4: With a Dialkyl Sulfate 590
43.8.3.1.2.5 Variation 5: With an Alkyl Arenesulfonate 591
43.8.3.1.3 Method 3: Reaction of an Alkynylpotassium with an Alkyl Halide or Equivalent .................................................. 591
43.8.3.1.4 Method 4: Reaction of an Alkynyl Grignard Reagent with an Alkyl Halide or Equivalent ........................................ 591
43.8.3.1.4.1 Variation 1: With a Chloroalkane ........................................... 591
43.8.3.1.4.2 Variation 2: With a Bromoalkane ....................................... 593
43.8.3.1.4.3 Variation 3: With an Iodoalkane ........................................ 594
43.8.3.1.4.4 Variation 4: With a Dialkyl Sulfate ........................................... 595
43.8.3.1.4.5 Variation 5: With an Alkyl Methanesulfonate ......................... 596
43.8.3.1.4.6 Variation 6: With an Alkyl Arenesulfonate ........................... 597
43.8.3.1.4.7 Variation 7: With an Allyl Ester .......................................... 597
43.8.3.1.4.8 Variation 8: With an Alkylzirconium Reagent ......................... 598
43.8.3.1.5 Method 5: Reaction of an Alkynylcalcium with an Alkyl Halide or Equivalent .................................................. 599
43.8.3.1.6 Method 6: Reaction of an Alkynylbarium with an Alkyl Halide or Equivalent .................................................. 599
43.8.3.1.7 Method 7: Palladium/Copper-Catalyzed Reaction of an Alk-1-yne with an Alkyl Halide or Equivalent .................................................. 599
43.8.3.1.7.1 Variation 1: With a Chloroalkane ........................................... 599
43.8.3.1.7.2 Variation 2: With a Bromoalkane ....................................... 601
43.8.3.1.7.3 Variation 3: With an Iodoalkane ........................................ 605
43.8.3.1.7.4 Variation 4: With an Alkyl Methanesulfonate ......................... 605
43.8.3.1.7.5 Variation 5: With an Alkyl Arenesulfonate ........................... 606
43.8.3.1.7.6 Variation 6: With a Trialkylborane ...................................... 606
43.8.3.1.8 Method 8: Reaction of an Alkynylcopper with an Alkyl Halide or Equivalent .................................................. 606
43.8.3.1.8.1 Variation 1: With a Bromoalkane ....................................... 606
43.8.3.1.9 Method 9: Reaction of an Alkynylmercury with an Alkyl Halide or Equivalent .................................................. 607
43.8.3.1.9.1 Variation 1: With a Bromoalkane ....................................... 607
43.8.3.1.9.2 Variation 2: With an Iodoalkane ........................................ 607
43.8.3.1.10 Method 10: Reaction of an Alkynylboron Reagent with an Alkyl Halide or Equivalent .................................................. 607
43.8.3.1.11 Method 11: Reaction of an Alkynylaluminum Reagent with an Alkyl Halide or Equivalent .................................................. 608
43.8.3.1.11.1 Variation 1: With a Chloroalkane ........................................... 608
43.8.3.1.11.2 Variation 2: With a Bromoalkane ....................................... 609
43.8.3.1.11.3 Variation 3: With an Alkyl Methanesulfonate ......................... 609
43.8.3.1.11.4 Variation 4: With an Alkyl Phenyl Sulfone ........................... 609
43.8.3.1.11.5 Variation 5: With a Propiolactone ...................................... 610
43.8.3.1.12 Method 12: Reaction of a (Trialkylsilyl)alkyne with an Alkyl Halide or Equivalent .................................................. 611
43.8.3.1.12.1 Variation 1: With a Chloroalkane ........................................... 611
43.8.3.1.13 Method 13: Reaction of an Alkynyllithium with an Allene or Other Alkene .................................................. 611
43.8.3.1.13.1 Variation 1: With a Bromoallene ....................................... 611
43.8.3.2 Nucleophilic Substitution by an Organometallic Reagent at an Alkyne Derivative .................................................. 612
43.8.3.2.1 Method 1: Reaction of a Chloroalkyne with an Organometallic Reagent .................................................. 612
43.8.3.2.1.1 Variation 1: With a Silyl Enol Ether ........................................ 612
43.8.3.2.1.2 Variation 2: With an Organozirconium Reagent .................. 612
43.8.3.2.2 Method 2: Reaction of a Bromoalkyne with an Organometallic Reagent 613
43.8.3.2.2.1 Variation 1: With a Grignard Reagent .................................. 613
43.8.3.2.2.2 Variation 2: With an Organozinc Reagent ........................... 613
43.8.3.2.2.3 Variation 3: With a Trialkylaluminum Reagent ..................... 616
43.8.3.2.2.4 Variation 4: With an Organozirconium Reagent ................... 617
43.8.3.2.3 Method 3: Reaction of an Iodoalkyne with an Organometallic Reagent 617
43.8.3.2.3.1 Variation 1: With a Grignard Reagent .................................. 617
43.8.3.2.3.2 Variation 2: With an Organozinc Reagent ........................... 618
43.8.3.2.3.3 Variation 3: With an Organocopper Reagent ....................... 618
43.8.3.2.3.4 Variation 4: With an Organozirconium Reagent ................... 619
43.8.3.2.4 Method 4: Reaction of an Alkynyl Aryl Sulfone with an Alkylithium ...... 620
43.8.3.3 Reactions Involving neither Electrophilic nor Nucleophilic Attack ............. 620
43.8.3.3.1 Method 1: Reaction of an Alkynyl Trifluoromethyl Sulfone with an Alkane 620
43.8.3.3.2 Method 2: Reaction of an Alkynyl Phenyl Sulfone with
a β-Alkylcatecholborane .......................................................... 621
43.8.3.3.3 Method 3: Ruthenium-Catalyzed Reaction of an Alkyne with a 1,3-Diene 622
43.8.3.3.4 Method 4: Nickel-Catalyzed Reaction of an Alkyne with an Allyl Ester 622
43.8.3.3.5 Method 5: Palladium-Catalyzed Oxidative Coupling of an Alkynyl-
stannane Reagent with an Alkylzinc Reagent .............................. 623

43.9 Product Class 9: Cycloalkynes
R. Gleiter and D. B. Werz

43.9.1 Synthesis of Product Class 9 ............................................. 631
43.9.1.1 Method 1: Ring-Closure Reactions ...................................... 631
43.9.1.1.1 Variation 1: Using sp-Carbon Nucleophiles .......................... 631
43.9.1.1.2 Variation 2: Using sp3-Carbon Nucleophiles ....................... 634
43.9.1.1.3 Variation 3: Using Chalcogen Nucleophiles ......................... 638
43.9.1.1.4 Variation 4: Using Nitrogen Nucleophiles ............................ 639
43.9.1.1.5 Variation 5: Alkyne Metathesis ........................................ 644
43.9.1.2 Method 2: Elimination and Fragmentation Reactions ................. 648
43.9.1.2.1 Variation 1: 1,2-Elimination Reactions ................................ 648
43.9.1.2.2 Variation 2: Cycloelimination Reactions .............................. 653
43.9.1.2.3 Variation 3: Eschenmoser Fragmentation .............................. 656
43.9.1.3 Method 3: Isomerization Reactions ...................................... 657
43.9.1.3.1 Variation 1: Pericyclic Ring-Opening Reactions ...................... 657
43.9.1.4 Method 4: Ring-Enlargement Reactions ................................... 658
43.9.1.4.1 Variation 1: Fritsch–Buttenberg–Wiechell Rearrangement ........... 658
43.9.1.4.2 Variation 2: Carbene Reactions ........................................ 658
43.9.1.5 Method 5: Decomplexation Reactions .................................... 660
43.9.1.5.1 Variation 1: Cleavage of Hexacarbonyldicobalt Complexes ........... 660
43.9.2 Applications of Product Class 9 in Organic Synthesis ....................... 661
43.9.2.1 Method 1: Reactions of Cyclic Alkynes with Organometallic Reagents 661

| 44.1 | **Product Class 1: Cumulenes**  
M. Ogasawara | 9 |
| 44.1.1 | **Product Subclass 1: [6]- and Higher Cumulenes** | 10 |
| 44.1.1.1 | Synthesis of Product Subclass 1 | 10 |
| 44.1.1.1.1 | Synthesis by Elimination | 10 |
| 44.1.1.1.1.1 | Method 1: Reduction of $\alpha,\omega$-Dihydroxypolynes | 10 |
| 44.1.1.1.1.2 | Method 2: Double Elimination of Methanol from 1,7-Dimethoxyhepta-2,4-diynes | 11 |
| 44.1.1.1.2 | Synthesis Mediated by Carbene Species | 12 |
| 44.1.1.1.1.1 | Method 1: Dimerization of Allenylidene Species | 12 |
| 44.1.1.1.1.2 | Variation 1: Dimerization of Allenylidene Species Generated from Propargylic Precursors | 15 |
| 44.1.1.1.2.1.2 | Variation 2: Dimerization of Allenylidene Species Generated from Bromoallenes | 17 |
| 44.1.1.1.2.1.3 | Variation 3: Dimerization of Allenylidene–Chromium Species | 17 |
| 44.1.1.2 | Synthesis Mediated by Carbene Species | 18 |
| 44.1.1.2.1 | Method 1: Dimerization of Allenylidene Species | 18 |
| 44.1.1.2.2 | Method 2: Trapping of Hexapentaenylidene Species | 18 |
| 44.1.3 | **Product Subclass 3: Pentatetraenes ([4]Cumulenes)** | 18 |
| 44.1.3.1 | Synthesis of Product Subclass 3 | 18 |
| 44.1.3.1.1 | Synthesis by Substitution | 18 |
| 44.1.3.1.1.1 | Method 1: Lithiation and Silylation of Hexa-2,4-diynes | 18 |
| 44.1.3.1.2 | Method 2: $S_N2''$ Substitution on Penta-2,4-diynyl Esters | 19 |
| 44.1.3.1.2 | Synthesis by Elimination | 20 |
| 44.1.3.1.2.1 | Method 1: Double Dehydrobromination of 2,4-Dibromopenta-1,4-diienes | 20 |
| 44.1.3.1.2.2 | Method 2: 1,2- and 1,4-Elimination from 5-Methoxypent-2-yn-1-ols | 20 |
Method 3: Oxidation of Hexapentaenes Followed by Carbon Monoxide Elimination

Method 4: Reductive 1,4-Dechlorination of a 2,5-Dichloropent-1-en-3-yne

Method 5: 1,1-Dehalogenation and Rearrangement of 1,1-Dihalocyclopropanes

Method 6: Sulfur Elimination from Penta-1,2,3,4-tetraene Episulfides

Method 7: Wittig Reaction

Variation 1: Wittig Reaction of Carbon Suboxide with Alkylidenephosphoranes

Variation 2: Wittig Reaction of Alka-2,3-dienoyl Chlorides with Alkylidenephosphoranes

Method 8: Retro-Diels–Alder Reaction

Product Subclass 4: Butatrienes ([3]Cumulenes)

Synthesis of Product Subclass 4

Synthesis by Substitution

Method 1: S<sub>n</sub>2" Substitution on Pent-4-en-2-ynyl Derivatives and Related Reactions

Variation 1: On Pent-4-en-2-ynyl Methanesulfonates with Alkylsilver(I) Reagents

Variation 2: On 2-(But-3-en-1-ynyl)oxiranes with Alkylsilver(I) Reagents

Variation 3: Reduction of Alka-4,5-dien-2-ynols or Related Alcohols by Lithium Aluminum Hydride

Method 2: S<sub>n</sub>2 Substitution on 2-Bromo-1-en-3-ynes

Variation 1: With Alkylcopper Reagents

Variation 2: With Soft Carbon Nucleophiles Catalyzed by a Palladium Complex

Method 3: Synthesis of Phosphinobutatrienes from 2-Vinyl-1H-phosphirenes and Alkylolithium Reagents

Method 4: Pyrolysis of Hexakis(trimethylsilyl)but-2-yne

Method 5: Dehalogenation

Variation 1: 1,4-Dehalogenation of 1,4-Dihaloalk-2-ynes

Variation 2: 1,2-Dehalogenation of 2,3-Dihaloalk-2-ynes
44.1.4.1.2.6 Method 6: 1,1-Dehalogenation and Rearrangement of 2-Alkenylidene-1,1-dihalocyclopropanes ........................................... 40
44.1.4.1.2.7 Method 7: Dehydroxylation of Alk-2-yne-1,4-diols ................... 41
44.1.4.1.2.8 Method 8: 1,4-Elimination from 4-Hydroxybut-2-ynylsilanes or -stannanes .......................... 42
44.1.4.1.2.8.1 Variation 1: From 4-Hydroxybut-2-ynylsilanes ........................... 42
44.1.4.1.2.8.2 Variation 2: From 4-Hydroxybut-2-ynylstannanes ....................... 44
44.1.4.1.2.9 Method 9: Desulfurization of Cyclic Thithiocarbonates .................. 44
44.1.4.1.2.10 Method 10: Sulfur Elimination from Alkylidenecyclopropanethiones ..... 45
44.1.4.1.2.11 Method 11: Wittig and Related Reactions ................................. 46
44.1.4.1.2.11.1 Variation 1: Wittig Reaction of Aldehydes or Ketones with Allenylidene phosphoranes ........................................... 46
44.1.4.1.2.11.2 Variation 2: Double Wittig Reaction of a Phosphorus Diylide with an Aldehyde ................................................................. 47
44.1.4.1.2.11.3 Variation 3: Horner–Emmons-Type Reactions of Aldehydes or Ketones ........ 48
44.1.4.1.2.11.4 Variation 4: Wittig Reaction of a Ketene with a Vinylidene phosphorane .......................... 49
44.1.4.1.2.12 Method 12: Base-Induced Borane Elimination from Bis(1-iodoalkenyl)boranes ........................................... 50
44.1.4.1.2.13 Method 13: Retro-Diels–Alder Reactions ..................................... 50
44.1.4.1.2.14 Method 14: Thermal Decomposition of a Disodium Salt of a Cyclobutane-1,3-dione Bis(tosylhydrazone) ........................................... 51
44.1.4.1.3 Synthesis by Addition ................................................................. 51
44.1.4.1.3.1 Method 1: Electrophilic 1,4-Addition to 1,3-Diynes .......................... 51
44.1.4.1.3.2 Method 2: 1,4-Disilylation of 1,4-Disilyl-1,3-diynes .............. 52
44.1.4.1.3.2.1 Variation 1: 1,4-Disilylation of 1,4-Disilyl-1,3-diynes by a Silylmanganese Reagent .................. 52
44.1.4.1.3.2.2 Variation 2: Palladium-Catalyzed 1,4-Disilylation of 1,4-Disilyl-1,3-diynes .... 53
44.1.4.1.3.3 Method 3: Palladium-Catalyzed Double Arylation of 1,4-Diaryl-1,3-diynes .......................... 54
44.1.4.1.3.4 Method 4: 1,6-Addition of Bromine to 1,5-Dien-3-ynes ................... 54
44.1.4.1.4 Synthesis by Rearrangement ........................................................ 55
44.1.4.1.4.1 Method 1: Base-Promoted Rearrangement of a Conjugated Bisallene to an Alkenylbutatriene ........................................... 55
44.1.4.1.4.2 Method 2: Photorearrangement of Vinylidene cyclopropanes to Butatriene Derivatives ........................................... 55
44.1.4.1.5 Synthesis Mediated by Carbene Species ........................................ 56
44.1.4.1.5.1 Method 1: Dimerization of Vinylidene Species or Vinylidene Equivalents Generated from gem-Dihaloalkenes ........................................... 56
44.1.4.1.5.1.1 Variation 1: Dimerization of Vinylidene Species or Vinylidene Equivalents Generated from gem-Dihaloalkenes ........................................... 56
44.1.4.1.5.1.2 Variation 2: Dimerization of Vinylidene Species or Vinylidene Equivalents Generated from 1-Halo-1-hydroalkenes ........................................... 57
44.1.4.1.5.1.3 Variation 3: Formation of a Butatriene from 2-Nitro-1,1-diphenylethene .......................... 58
44.1.4.1.5.1.4 Variation 4: Dimerization of Allenylidene Species Generated from Dialkenylcuprates ........................................... 59
44.1.4.1.5.1.5 Variation 5: Desulfurization–Dimerization of Dithioacetals with Hexacarbonyltungsten(0) ........................................... 59
44.1.4.1.5.1.6 Variation 6: Dimerization of Vinylidene–Tungsten Species .......................... 59
44.1.4.1.5.2 Method 2: Reactions Involving Allenylidene Species ........................ 60
44.1.4.1.5.2.1 Variation 1: Reactions of Allenylidene Species with Diazoalkanes ........ 60
44.1.4.1.5.2.2 Variation 2: Reactions of Allenylidene–Rhodium Complexes with
Diazomethane .......................................................... 60
44.1.4.1.5.3 Method 3: Reactions of 1,2,3-Trienyldene Species ................................. 61
44.1.4.1.5.3.1 Variation 1: Reactions of 1,2,3-Trienyldene Species with Alkenes ......... 61
44.1.4.1.5.3.2 Variation 2: Reactions of 1,2,3-Trienyldene Species with Group 14 Hydrides ........................................... 61
44.1.4.1.6 Other Methods for the Synthesis of Butatrienes ........................................ 62
44.1.4.1.6.1 Method 1: Dimerization of Terminal Alkynes by Transition-Metal Catalysts ............................................. 62
44.1.4.1.6.2 Method 2: Coupling Reactions between 1,1-Dichloroalkenes and
Terminal Alkenes ............................................................. 64
44.1.4.1.6.3 Method 3: Zirconium-Mediated Coupling Reactions of 1,3-Dienes with
Aldehydes or Ketones .................................................... 64
44.1.4.1.6.3.1 Variation 1: Reactions of Zirconacycles with Aldehydes To Form
Butatrienyl Monoalcohols ............................................. 64
44.1.4.1.6.3.2 Variation 2: Reactions of Zirconacycles with Ketones To Form
Butatrienyl Diols .......................................................... 65

44.2 Product Class 2: Linear Allenes

44.2.1 Synthesis by Substitution
H. Ohno and K. Tomioka

44.2.1 Synthesis by Substitution ....................................................... 71
44.2.1.1 Method 1: Organocopper-Mediated Reactions of Propargylic and
Related Substrates .......................................................... 71
44.2.1.1.1 Variation 1: Reactions of Various Propargylic Substrates ......................... 75
44.2.1.1.2 Variation 2: Reactions Using Various Copper Nucleophiles ...................... 81
44.2.1.1.3 Variation 3: Synthesis of Enantiomerically Enriched Allenes ................. 83
44.2.1.1.4 Variation 4: Ring-Opening Reactions ................................................. 94
44.2.1.1.5 Variation 5: 1,5-Substitution Reactions ................................................. 100
44.2.1.1.6 Variation 6: Halogenation of Propargylic Substrates ............................... 101
44.2.1.1.7 Method 2: Aluminum-Mediated Reactions of Propargylic Substrates ....... 102
44.2.1.1.8 Variation 1: Reactions of Propargylic Halides ....................................... 102
44.2.1.1.9 Variation 2: Reactions of Propargylic Alcohols ..................................... 103
44.2.1.1.10 Variation 3: Reactions of Propargylic Sulfonates ................................. 106
44.2.1.1.11 Variation 4: Reactions of Propargylic Ethers ...................................... 108
44.2.1.1.12 Variation 5: Reactions of Propargylic Amine Derivatives ....................... 110
44.2.1.1.13 Variation 6: Ring-Opening Reactions ................................................ 111
44.2.1.1.14 Variations 7: Miscellaneous Reactions .............................................. 115
44.2.1.1.15 Method 3: Lithium-, Magnesium-, or Zinc-Mediated Reactions of
Propargylic and Related Substrates .................................. 115
44.2.1.1.16 Variation 1: Lithium-Mediated Reactions ........................................... 115
44.2.1.1.17 Variation 2: Magnesium-Mediated Reactions ..................................... 117
44.2.1.1.18 Variation 3: Zinc-Mediated Reactions ................................................. 119
44.2.1.4 Method 4: Borane- or Gallium-Mediated Reactions of Propargylic Substrates ........................................... 120
44.2.1.4.1 Variation 1: Borane-Mediated Reactions ........................................... 120
44.2.1.4.2 Variation 2: Gallium-Mediated Reactions ........................................... 123
44.2.1.5 Method 5: Iron-Catalyzed Reactions of Propargylic Substrates .................. 123
44.2.1.5.1 Variation 1: Ring-Opening Reactions of Epoxides ............................ 125
44.2.1.6 Method 6: Palladium-Catalyzed Reactions of Propargylic Substrates ........ 126
44.2.1.6.1 Variation 1: Reactions with Grignard Reagents ............................... 127
44.2.1.6.2 Variation 2: Reactions with Zinc Reagents ....................................... 127
44.2.1.6.3 Variation 3: Reactions with Borane Reagents ................................... 129
44.2.1.6.4 Variation 4: Reactions with Aluminum or Tin Reagents .................... 131
44.2.1.6.5 Variation 5: Reactions with Copper Acetylenes ................................ 132
44.2.1.6.6 Variation 6: Reactions with Samarium Reagents ............................. 133
44.2.1.6.7 Variation 7: Carbonylation Reactions .............................................. 134
44.2.1.6.8 Variation 8: Reactions with Hydride Reagents ................................. 138
44.2.1.6.9 Variations 9: Miscellaneous Reactions ............................................. 141
44.2.1.7 Methods 7: Miscellaneous Reactions of Propargylic Substrates .......... 145
44.2.1.7.1 Variation 1: Reactions with Nitrogen Nucleophiles ........................... 145
44.2.1.7.2 Variation 2: Reactions with Enol Ethers ........................................ 146
44.2.1.7.3 Variation 3: Chromium-Catalyzed Reactions .................................. 146
44.2.1.7.4 Variation 4: Nickel-Mediated Reactions ......................................... 147
44.2.1.7.5 Variation 5: Reactions with Copper Cyanide ................................... 147
44.2.1.7.6 Variation 6: Zirconocene-Mediated Reactions ................................. 148
44.2.1.7.7 Variation 7: Ruthenium-Catalyzed Reactions .................................. 148
44.2.1.7.8 Variation 8: Samarium-Mediated Reactions ................................... 149
44.2.1.8 Method 8: Substitution of Haloallenes ............................................. 150
44.2.1.8.1 Variation 1: Copper-Mediated Reactions ........................................ 150
44.2.1.8.2 Variation 2: Palladium-Catalyzed Reactions ................................... 155
44.2.1.8.3 Variation 3: Other Reactions with Carbon Nucleophiles .................... 161
44.2.1.8.4 Variation 4: Reactions with Nitrogen Nucleophiles ........................... 163
44.2.1.8.5 Variation 5: Reactions with Oxygen Nucleophiles ............................ 166
44.2.1.8.6 Variation 6: Reactions with Sulfur Nucleophiles .............................. 166
44.2.1.9 Method 9: Substitution of 2-Halobuta-1,3-dienes and Related Compounds ........................................... 166
44.2.1.9.1 Variation 1: Copper-Mediated Reactions ........................................ 166
44.2.1.9.2 Variation 2: Palladium-Catalyzed Reactions ................................... 167

44.2.2 Synthesis by Elimination
V. Gandon and M. Malacria

44.2.2 Synthesis by Elimination ........................................... 175
44.2.2.1 1,3-Elimination from Substituted Vinylic or Allylic Derivatives .............. 176
44.2.2.1.1 Method 1: Dehydrohalogenation of 2-Halopropenes ........................... 176
44.2.2.1.1.1 Variation 1: From Nonactivated Substrates ................................... 176
44.2.2.1.1.2 Variation 2: From α,β-Unsaturated Substrates ............................... 178
44.2.2.1.2 Method 2: Dehydrosilylation of Silyl Enol Ethers ............................ 178
44.2.2.1.3 Method 3: Dehydroalumination of Vinyl Trifluoromethanesulfonates .... 180

Science of Synthesis Original Edition Volume 44
© Georg Thieme Verlag KG
44.2.1.4 Method 4: Dehydration of Allylic Alcohols .......................... 181
44.2.1.5 Method 5: Elimination from Vinyl Sulfoxides and Vinyl Sulfones .... 182
44.2.1.6 Method 6: Elimination from Phenyl Vinyl Selenoxides .......................... 182
44.2.1.6.1 Variation 1: Oxidation with 3-Chloroperoxybenzoic Acid .......... 182
44.2.1.6.2 Variation 2: Asymmetric Elimination Using Sharpless Oxidation .... 183
44.2.1.6.3 Variation 3: Asymmetric Elimination Using Chiral Diferrocenyl Dihydroxybenzoic Acid .... 185
44.2.1.7 Method 7: Elimination from Vinyl- and Allylmetal Intermediates ...... 186
44.2.1.7.1 Variation 1: Vinylcopper and Vinylmagnesium Intermediates from Propargyl Ethers and Organocopper and Organomagnesium Reagents .......... 186
44.2.1.8 Method 8: Elimination from Vinylsilanes and Vinylstannanes ............ 188
44.2.1.9 Method 9: Peterson Reaction ........................................... 190
44.2.1.10 Method 10: Elimination from Vinyl- and Allylmetal Intermediates ...... 192
44.2.1.10.1 Variation 1: Oxidation with 3-Chloroperoxybenzoic Acid .......... 182
44.2.1.10.2 Variation 2: Asymmetric Elimination Using Sharpless Oxidation .... 183
44.2.1.10.3 Variation 3: Asymmetric Elimination Using Chiral Diferrocenyl Dihydroxybenzoic Acid .... 185
44.2.1.11 Method 11: Dehalogenation of 2,3-Dihalopropenes and Deoxyhalogenation of β-Haloalkyl Alcohol Derivatives .... 197
44.2.1.12 Method 12: Debromosulfinylation of 1-(Bromomethyl)vinyl Sulfoxides and Sulfides .......................... 197
44.2.1.12.1 Variation 1: Using Tributyltin Hydride ......................... 198
44.2.1.12.2 Variation 2: Using Tris(trimethylsilyl)silane .......................... 199
44.2.1.13 Method 13: Debromosulfinylation from 1-(Sulfinylalkyl)vinyl Trifluoromethanesulfonates .......................... 200
44.2.1.14 Method 14: Elimination from 1-(Sulfinylalkyl)vinyl Trifluoromethanesulfonates .... 201
44.2.1.14.1 Variation 1: Using Acid Chlorides .......................... 201
44.2.1.14.2 Variation 2: Elimination from 1-(Sulfinylalkyl)vinyl Trifluoromethanesulfonates .... 201
44.2.2 Wittig Alkenations and Related Reactions .......................... 203
44.2.2.1 Method 1: Synthesis Using or via (Hydroxyalkenyl)phosphonate and (Hydroxyalkenyl)phosphine Oxide Intermediates .............. 204
44.2.2.1.1 Variation 1: Baylis–Hillman-Type Reaction of Alkenylphosphorus Compounds with Aldehydes .......................... 204
44.2.2.1.2 Variation 2: Sulfanyl-, Selanyl-, or Carbometalation of Alkynylphosphine Oxides and Reaction with Aldehydes .......................... 205
44.2.2.2 Method 2: Synthesis via β-Hydroxyallylphosphonate Derivatives Prepared from Ketones or Ketene Equivalents .......................... 207
44.2.2.2.1 Variation 1: Using Alcohol Derivatives .......................... 208
44.2.2.2.2 Variation 2: Using Aryl Esters .......................... 209
44.2.2.3 Metal–Vinylidene Routes to Allenes .......................... 211
44.2.2.3.1 Method 1: Synthesis from 1,1-Dimetalloalkenes .......................... 211
44.2.2.3.2 Method 2: Synthesis via Alkenyltitanocene Derivatives .......................... 212
44.2.2.3.3 Method 3: Double Alkenation Using Titanium-Substituted Ylides .... 214
44.2.2.3.4 Method 4: Synthesis via Alkenylidenemagnesium Intermediates .... 215
Elimination from 1,1-Disubstituted Cyclopropane Derivatives

Method 1: Dehalogenation of 1,1-Dihalocyclopropanes through Carbenoid Intermediates

Method 2: Synthesis from 1-Halo-1-(phenylsulfinyl)cyclopropanes via Carbenoid Intermediates

Miscellaneous Methods

Method 1: Nitrogen Elimination by Oxidation of Pyrazol-3-ones Using Lead(IV) Acetate

Method 2: Dehydration of Ketones

Synthesis by Addition
K. K. Wang

Method 1: Reduction of Pent-2-en-4-yn-1-ols with Lithium Aluminum Hydride

Method 2: 1,4-Addition of Hydroboranes to Conjugated Enynes

Method 3: 1,4-Addition of Hydrosilanes to Conjugated Enynes

Method 4: 1,4-Addition of Hydrogen Halides and Halogens to Conjugated Enynes

Method 5: Conjugate Addition of Organometallic Reagents to Acceptor-Substituted Enynes

Variation 1: 1,6-Addition of Organometallic Reagents to Acceptor-Substituted Enynes

Variation 2: 1,8-, 1,10-, and 1,12-Addition of Organometallic Reagents to Acceptor-Substituted Enynes

Method 6: 1,4-Addition of Organometallic Reagents to Conjugated Enynes

Method 7: 1,4-Addition of Carbon Pronucleophiles to Conjugated Enynes

Method 8: Friedel–Crafts Acylation and Alkylation of Conjugated Enynes

Method 9: 1,4-Addition of Nucleophiles to Ynones and Ynoates

Method 10: Condensation of Propargylboranes with Carbonyl and Related Compounds

Method 11: Condensation of Propargylsilanes with Carbonyl and Related Compounds

Method 12: Condensation of Propargylstannanes with Carbonyl and Related Compounds

Method 13: Condensation of Other Propargylic Organometallic Reagents with Carbonyl Compounds

Synthesis by Rearrangement
A. S. K. Hashmi

Method 1: Prototropic Rearrangements

Variation 1: Stoichiometric Deprotonation Followed by Protonation
44.2.4.1.2 Variation 2: Using Catalytic Potassium tert-Butoxide ........................................ 289
44.2.4.1.3 Variation 3: Spontaneous Rearrangement on Chromatographic Workup .......... 290
44.2.4.2 Method 2: [2,3]-Sigmatropic Rearrangements .......................................................... 291
44.2.4.2.1 Variation 1: Via In Situ Formation of Propargyl Sulenates .............................. 291
44.2.4.2.2 Variation 2: Via In Situ Formation of Propargyl Phosphites ............................ 292
44.2.4.2.3 Variation 3: Via In Situ Formation of Propargyl Phosphinites ....................... 293
44.2.4.2.4 Variation 4: Via [2,3]-Wittig Rearrangement ..................................................... 294
44.2.4.3 Method 3: [3,3]-Sigmatropic Rearrangements .......................................................... 295
44.2.4.3.1 Variation 1: Thermal Claisen Rearrangement of Propargyl Vinyl Ethers ........ 295
44.2.4.3.2 Variation 2: In Situ from Ortho Esters and a Propargyl Alcohol ...................... 296
44.2.4.3.3 Variation 3: Flash-Vacuum Pyrolysis of Thiocyanates and Related Compounds .................................................. 296

44.2.5 Synthesis from Other Allenes
H.-U. Reissig and R. Zimmer

44.2.5.1 Method 1: Substitution Reactions of Metalated Allenes ........................................ 301
44.2.5.1.1 Variation 1: Of Nonactivated Allenes ................................................................. 301
44.2.5.1.2 Variation 2: Of Acceptor-Substituted Allenes .................................................... 303
44.2.5.1.3 Variation 3: Of Donor-Substituted Allenes ......................................................... 304
44.2.5.1.4 Variation 4: Of $\alpha$-Functionalized Allenes ...................................................... 307
44.2.5.2 Method 2: Transition-Metal-Catalyzed Cross-Coupling Reactions of Allenes ........ 308
44.2.5.2.1 Variation 1: Alkylations ....................................................................................... 308
44.2.5.2.2 Variation 2: Arylations and Vinylations ............................................................. 310
44.2.5.2.3 Variation 3: Alkynylations .................................................................................. 313
44.2.5.2.4 Variation 4: Reactions with CH-Acidic Compounds .......................................... 313
44.2.5.2.5 Variation 5: Carbonylations ............................................................................... 315
44.2.5.2.6 Variation 6: Amination, Amidation, and Imidation Reactions ......................... 315
44.2.5.3 Method 3: Substitution Reactions of Oxygen- and Halogen-Substituted Allenes .................................................. 316
44.2.5.3.1 Variation 1: Of 1-Halogen-Substituted Allenes .................................................. 316
44.2.5.3.2 Variation 2: Of $\alpha$-Halogen-Substituted Allenes ............................................... 318
44.2.5.3.3 Variation 3: Of 1-Oxygen-Substituted Allenes ................................................... 319
44.2.5.3.4 Variation 4: Of $\alpha$-Oxygen-Substituted Allenes ............................................... 319
44.2.5.4 Method 4: Oxidation Reactions ............................................................................... 320
44.2.5.4.1 Variation 1: Oxidation of $\alpha$-Hydroxy-Substituted Allenes ............................ 320
44.2.5.4.2 Variation 2: Oxidation of Carboxy-Substituted Allenes .................................. 321
44.2.5.4.3 Variation 3: Oxidation of Heteroatom-Substituted Allenes .............................. 322
44.2.5.4.4 Variation 4: Oxidation of Alkynyl-Substituted Allenes ...................................... 324
44.2.5.5 Method 5: Reductions of Allenes .......................................................................... 325
44.2.5.5.1 Variation 1: Reduction of $\alpha$-Carbonyl-Substituted Allenes .......................... 325
44.2.5.5.2 Variation 2: Reduction of Heteroatom-Substituted Allenes .............................. 326
44.2.5.5.3 Variation 3: Reduction of Alkynyl-Substituted Allenes ...................................... 327
44.2.5.5.4 Variation 4: Reduction of Allenes Bearing an Epoxide Moiety ......................... 328
44.2.5.6 Method 6: Addition Reactions .............................................................................. 328
44.2.5.6.1 Variation 1: Additions on α-Carbonyl-Substituted Allenes 328
44.2.5.6.2 Variation 2: Allkenation Reactions 330
44.2.5.6.3 Variation 3: Additions to Heteroatom-Substituted Allenes 333
44.2.5.6.4 Variation 4: [2 + 1] Cycloadditions 333
44.2.5.6.5 Variation 5: [2 + 2] Cycloadditions 335
44.2.5.6.6 Variation 6: [3 + 2] Cycloadditions 336
44.2.5.6.7 Variation 7: [4 + 2] Cycloadditions 337
44.2.5.6.8 Variation 8: Aldol Additions of Allenyl Enolate 337
44.2.5.6.9 Variation 9: Hydrolysis of 1-Cyano-Substituted Allenes 338
44.2.5.7 Method 7: Elimination Reactions, Rearrangements, and Metathesis Reactions 339
44.2.5.7.1 Variation 1: Eliminations 339
44.2.5.7.2 Variation 2: Rearrangements 340
44.2.5.7.3 Variation 3: Metathesis and Cycloisomerization 341

44.2.6 Applications of Allenes in Organic Synthesis
M. A. Tius

44.2.6.1 Method 1: Diels–Alder Reactions of Allenes 353
44.2.6.1.1 Variation 1: Intermolecular Reactions To Form Carbocyclic Products 353
44.2.6.1.2 Variation 2: Intermolecular Reactions To Form Heterocyclic Products 355
44.2.6.1.3 Variation 3: Intramolecular Reactions 356
44.2.6.2 Method 2: [2 + 2]-Cycloaddition Reactions of Allenes 359
44.2.6.2.1 Variation 1: Using Photochemical Methods 359
44.2.6.2.2 Variation 2: Using Thermal Methods 360
44.2.6.3 Method 3: Nazarov Reactions 362
44.2.6.3.1 Variation 1: With Allenes 362
44.2.6.3.2 Variation 2: With Allenyl Ethers and Ketones 363
44.2.6.3.3 Variation 3: With Allenyl Ethers and Nitriles 364
44.2.6.3.4 Variation 4: With Allenyl Ethers and Amides 364
44.2.6.3.5 Variation 5: Oxidative Cyclizations of Enallenes 365
44.2.6.4 Method 4: Pauson–Khand Reactions of Allenes 366
44.2.6.5 Method 5: [3 + 2] Cycloadditions of Allenes 369
44.2.6.6 Method 6: [5 + 2] Cycloadditions of Allenes 374
44.2.6.7 Method 7: Claisen Rearrangement of Allenyl Ethers 375
44.2.6.8 Method 8: Allenes as Precursors 376
44.2.6.8.1 Variation 1: Of Acylsilanes 376
44.2.6.8.2 Variation 2: Of Lactones 378
44.2.6.8.3 Variation 3: Of Spiroketalts 379
44.2.6.8.4 Variation 4: Of Spirobisepoxides 380
44.2.6.8.5 Variation 5: Of Cyclic Ethers, Amines, and Sulfides 382
44.2.6.9 Method 9: Prins Reaction of Allenes 385
44.2.6.9.1 Variation 1: With Aldehydes 385
44.2.6.9.2 Variation 2: With Ketones 387
44.2.6.9.3 Variation 3: With Imines 388
44.2.6.10 Method 10: Ene Reactions 390
Product Class 3: Cyclic Allenes
T. Kawase

Product Subclass 1: Cyclohexa-1,2-dienes

Method 1: Ring Enlargement by the Doering–Moore–Skattebøl Reaction

Variation 1: From 1,1-Dibromocyclopropanes

Variation 2: From 1-Bromo-1-fluorocyclopropanes

Method 2: Dehydrohalogenation of 1-Halocyclohexenes

Variation 1: Base-Promoted Reactions

Variation 2: Photochemical or Thermal Reaction of Intermediate Allyl Anions

Method 3: Dehalogenation of 2,3-Dihalocyclohexenes

Method 4: Elimination from 2-Halo-3-(trimethylsilyl)cyclohexenes

Product Subclass 2: Cyclohexa-1,2,4-trienes

Method 1: [4 + 2]-Cycloaddition Reactions

Variation 1: From Vinylalkynes and Alkynes

Variation 2: From Arylalkynes and Alkynes

Variation 3: From Diarylacetylenes and Alkynes

Variation 4: From Two Arylalkynes

Method 2: Electrocyclization of (Z)-Hexa-1,3-dien-5-ynes

Method 3: Ring Enlargement by the Doering–Moore–Skattebøl Reaction

Method 4: Dehydrohalogenation of 1-Halocyclohexa-1,4-dienes

Product Subclass 3: Bicyclo[4.4.0]deca-1,3,5,7,8-pentaenes

Method 1: [4 + 2]-Cycloaddition Reactions

Variation 1: Intermolecular [4 + 2]-Cycloaddition Reactions

Variation 2: Intramolecular [4 + 2]-Cycloaddition Reactions

Method 2: Ring Enlargement by the Doering–Moore–Skattebøl Reaction

Method 3: Dehydrohalogenation of 3-Bromo-1,2-dihydronaphthalenes

Product Subclass 4: Cyclohepta-1,2-dienes

Method 1: Ring Enlargement by the Doering–Moore–Skattebøl Reaction

Variation 1: From 1,1-Dihalocyclopropanes

Variation 2: From 7-Bromo-7-(trimethylstannyl)bicyclo[4.1.0]heptane

Method 2: Ring Enlargement by Cope Rearrangement from 1,2-Diethynylcyclopropanes

Method 3: Ring Enlargement by Thermolysis of Tricyclo[4.1.0.0^2,4]-hept-5-yliden or 1-Ethynyl-2-vinylcyclopropane

Method 4: Dehydrohalogenation of 1-Halocycloheptenes

Method 5: Dehalogenation of 1,7-Dihalocycloheptenes

Method 6: Synthesis from 2-Halo-3-(trimethylsilyl)cycloheptenes
44.3.5 **Product Subclass 5: Cyclohepta-1,2,4,6-tetraenes** ........................................ 417

44.3.5.1 Synthesis of Product Subclass 5 ........................................................................ 417
44.3.5.1.1 Method 1: Ring Enlargement by the Doering–Moore–Skattebøl Reaction 418
44.3.5.1.2 Method 2: Ring Enlargement by Extrusion of Nitrogen from Phenylidiazomethanes .................................................................................. 419
44.3.5.1.3 Method 3: Ring Enlargement by Extrusion of Nitrogen from 7-Diazobicyclo[2.2.1]hepta-2,5-diene ................................................................. 421
44.3.5.1.4 Method 4: Ring Enlargement by Extrusion of Nitrogen from 2-Diazobicyclo[3.2.0]hepta-3,6-diene and Its Benzo Derivative ...................................................... 422
44.3.5.1.5 Method 5: Dehydrohalogenation of Halocycloheptatrienes .......................... 423
44.3.5.1.6 Method 6: Thermal and Photochemical Decomposition of Sodium Salts of Cyclohepta-2,4,6-trien-1-one Tosylhydrazone ........................................ 424

44.3.6 **Product Subclass 6: Cycloocta-1,2-dienes** ......................................................... 425

44.3.6.1 Synthesis of Product Subclass 6 ........................................................................ 425
44.3.6.1.1 Method 1: Intramolecular Ene Reaction of Oct-1-ene-7-yne ....................... 425
44.3.6.1.2 Method 2: Electrocyclization of Octa-3,5-diene-1,7-diynes .......................... 425
44.3.6.1.3 Method 3: Base-Promoted Cyclization of 1-(3-Chloropropyl)-7-(3-phenylprop-2-ynyl)tricyclo[4.1.0]heptane ........................................ 426
44.3.6.1.4 Method 4: Ring Enlargement by the Doering–Moore–Skattebøl Reaction 427
44.3.6.1.5 Method 5: Ring Enlargement by Cope Rearrangement from 1,2-Diethynylcyclobutane and 1-Ethynyl-2-vinylcyclobutane .................. 428
44.3.6.1.6 Method 6: Ring Enlargement of Bicyclo[5.1.0]octa-3,5-dien-2-one ................ 428
44.3.6.1.7 Method 7: Ring Enlargement of 2-(Diazomethyl)bicyclo[4.4.1]-undeca-1,3,5,7,9-pentaene ........................................................................ 429
44.3.6.1.8 Method 8: Dehydrohalogenation of 1-Halocyclooctenes .......................... 430
44.3.6.1.9 Method 9: Dehydrohalogenation of 3-Bromocyclooct-3-en-1-one .............. 430

44.3.7 **Product Subclass 7: Cyclonona-1,2-dienes** ....................................................... 431

44.3.7.1 Synthesis of Product Subclass 7 ........................................................................ 431
44.3.7.1.1 Method 1: S_N2 Substitution of Organocopper Reagents with a 3-Alkoxyalkyne ................................................................. 431
44.3.7.1.2 Method 2: Ring Enlargement by the Doering–Moore–Skattebøl Reaction 431
44.3.7.1.2.1 Variation 1: From 9,9-Dibromobicyclo[6.1.0]nonane Derivatives ............ 431
44.3.7.1.2.2 Variation 2: From (trans-1-Bicyclo[6.1.0]non-9-yl)-1-nitrosourea 433
44.3.7.1.3 Method 3: Ring Enlargement by Photochemical Rearrangement of 2-Ethynylcycloheptanone ................................................................. 434
44.3.7.1.4 Method 4: Dehydrohalogenation of 1-Halocyclononenes .......................... 434

44.3.8 **Product Subclass 8: Cyclodeca-1,2-dienes** ...................................................... 435

44.3.8.1 Synthesis of Product Subclass 8 ........................................................................ 435
44.3.8.1.1 Method 1: S_N2 Substitution of Organocopper(l) Reagents with a 3-Alkoxyalkyne ................................................................. 435
44.3.8.1.2 Method 2: Ring Enlargement by the Doering–Moore–Skattebøl Reaction 435
44.3.8.1.3 Method 3: Dehydrohalogenation of 1-Halocyclodecenes .......................... 436
Product Subclass 9: Macrocyclic Allenes........................................ 437

Method 1: Ring-Closure Reactions ............................................. 437
Variation 1: Wittig-Type Alkenation from Aromatic Dialdehydes .... 437
Variation 2: Ring-Closing Alkene Metathesis by Using Grubbs’ First-Generation Catalyst ........................................ 438

Method 2: Ring Transformations .............................................. 439
Variation 1: Ring Enlargement by the Doering–Moore–Skattebøl Reaction 439
Variation 2: Extrusion of Nitrogen from an Aryldiazomethane ....... 439

Method 3: Synthesis from 3-Oxo-, 3-Acetoxy-, or 3-Mesyloxy Cyclic Alkynes ......................................................... 440
Variation 1: Base-Promoted Hydrogen Transfer from a Cycloalk-3-ynone 440
Variation 2: SN₂’ Substitution of Organocopper Reagents with 3-Acetoxycycloalkynes ............................................. 441
Variation 3: Palladium(0)-Catalyzed Carbonylation of a Macrocyclic Propargylic Methanesulfonate in the Presence of an Alcohol 441

Method 4: Substituent Modification ......................................... 442
Variation 1: From 1,1,3,3-Tetraalkyll Allenes ............................ 442
Variation 2: From 1,3-Diarylallenenes ................................. 443
Variation 3: From 1,3-Diethynylallenenes ............................... 444

Introduction
J. S. Siegel and Y. Tobe

45.1 Product Class 1: Cyclopropenium Salts, Cyclopropenones and Heteroatom Analogues, and Cyclopropenyl Radicals and Anions
P. Merino

45.1.1 Product Subclass 1: Cyclopropenium Salts

45.1.1.1 Synthesis of Product Subclass 1

45.1.1.1.1 Method 1: Synthesis from Cyclopropenes

45.1.1.1.2 Variation 1: Hydride Abstraction

45.1.1.1.3 Variation 2: Protonation

45.1.1.1.4 Variation 3: Halide Abstraction

45.1.1.2 Method 2: Synthesis from Halocyclopropanes

45.1.1.3 Method 3: Synthesis from Cyclopropenones or Their Heteroatom Analogues

45.1.1.3.1 Variation 1: O-Alkylation and Related Processes

45.1.1.3.2 Variation 2: Protonation

45.1.1.3.3 Variation 3: Formation of Dications

45.1.1.4 Method 4: Transformations of Other Cyclopropenium Salts

45.1.1.4.1 Variation 1: Friedel–Crafts-Type Reactions

45.1.1.4.2 Variation 2: Substitution

45.1.2 Applications of Product Subclass 1 in Organic Synthesis

45.1.2.1 Method 1: Synthesis of Cyclopropenes

45.1.2.2 Method 2: Synthesis of Cyclic Compounds

45.1.2.3 Method 3: Synthesis of Acyclic Compounds

45.1.2 Product Subclass 2: Cyclopropenones and Their Heteroatom Analogues

45.1.2.1 Synthesis of Product Subclass 2

45.1.2.1.1 Method 1: Synthesis from Cyclopropenonium Salts

45.1.2.2 Applications of Product Subclass 2 in Organic Synthesis

45.1.2.2.1 Method 1: Synthesis of Heterocyclic Systems

45.1.2.2.1.1 Variation 1: Nitrogen Heterocycles

45.1.2.2.1.2 Variation 2: Oxygen Heterocycles

45.1.2.2.2 Method 2: Synthesis of Carbocycles

45.1.3 Product Subclass 3: Cyclopropenyl Radicals

45.1.3.1 Synthesis of Product Subclass 3

45.4 **Product Class 4: Benzene and Alkylbenzenes**
E. Zysman-Colman

---

45.4.1 **Product Subclass 1: Benzene**

45.4.1.1 Method 1: Thermal Aromatization of Acetylene

45.4.1.1.1 Variation 1: Metal-Catalyzed Aromatization of Acetylene

45.4.1.1.2 Method 2: Metal-Catalyzed Aromatization of Alkanes

45.4.1.1.3 Method 3: Metal-Catalyzed Aromatization of Cycloalkanes

45.4.1.1.3.1 Variation 1: Aromatization of Cycloalkenes Using Sonication

45.4.2 **Product Subclass 2: Monoalkylbenzenes**

45.4.2.1 Synthesis of Product Subclass 2

45.4.2.1.1 Method 1: Friedel–Crafts Alkylation of Arenes

45.4.2.1.1.1 Variation 1: Lewis Acid Catalyzed Friedel–Crafts Alkylation of Arenes with Alkyl Halides

45.4.2.1.1.2 Variation 2: Brønsted Acid or Base Catalyzed Friedel–Crafts Alkylation of Arenes with Alkyl Halides

45.4.2.1.1.3 Variation 3: Photochemical Friedel–Crafts Alkylation of Arenes with Alkyl Halides

45.4.2.1.1.4 Variation 4: Friedel–Crafts Alkylation of Arenes with Alcohols

45.4.2.1.1.5 Variation 5: Friedel–Crafts Alkylation of Arenes with Alkenes

45.4.2.1.1.6 Variation 6: Via Tandem Lewis Acid Catalyzed Halogenation and Friedel–Crafts Alkylation of Alkenes with Alkyl Methanesulfonates or Trifluoromethanesulfonates

45.4.2.1.1.7 Variation 7: Friedel–Crafts Alkylation of Arenes with Epoxides

45.4.2.1.1.8 Variation 8: Friedel–Crafts Alkylation of Arenes with Aldehydes

45.4.2.1.1.9 Variation 9: Friedel–Crafts Alkylation of Arenes with Alkyl

45.4.2.1.1.10 Variation 10: Lewis Acid Catalyzed Friedel–Crafts Alkylation of Arenes with γ-Alkenyl Silyl Ethers

45.4.2.1.1.11 Variation 11: Lewis Acid Catalyzed Friedel–Crafts Alkylation of Arenes with Allylic Acetates

45.4.2.1.2 Method 2: Alkylation of Arenes via Cross Coupling of Arenes to Benzyl Ethers

45.4.2.1.3 Method 3: Alkylation of Arenes via a Tandem Alkylation–Hydride Reduction Sequence

45.4.2.1.3.1 Variation 1: Via Palladium-Catalyzed C—H Activation of Arenes and Coupling with Alkylstannanes

45.4.2.1.4 Method 4: Alkylation of Arenes via Suzuki Reaction of Alkylboranes and Related Alkylboron Reagents with Aryl Halides

45.4.2.1.4.1 Variation 1: Via Nickel-Catalyzed Cross Coupling

45.4.2.1.4.2 Variation 2: Via Organocuprate Coupling to Aryl Trifluoromethanesulfonates

45.4.2.1.4.3 Variation 3: Via Kumada-Type Cross Coupling
45.4.2.1.4.4 Variation 4: Via Negishi-Type Cross-Coupling Reactions .......................... 180
45.4.2.1.4.5 Variation 5: Via Stille-Type Cross-Coupling Reactions .......................... 181
45.4.2.1.4.6 Variation 6: Via Hiyama-Type Cross-Coupling Reactions .......................... 182
45.4.2.1.5 Method 5: Alkylation of Benzenes through an S_{N}Ar Mechanism ............... 183
45.4.2.1.6 Method 6: Alkylation of Benzyl Bromides Using Organocuprates in the Presence of Trialkylboranes .......................................................... 183
45.4.2.1.7 Method 7: Reduction of Alkyl Aryl Ketones Using Hydrazine and a Base under Wolff–Kishner Conditions ........................................................... 184
45.4.2.1.7.1 Variation 1: Microwave Heating under Classic Wolff–Kishner Conditions .. 185
45.4.2.1.7.2 Variation 2: Wolff–Kishner Reduction of N-(tert-Butyldimethylsilyl)hydrazones .......................................................... 185
45.4.2.1.7.3 Variation 3: Using Tosylhydrazones and Alkylboranes ............................ 187
45.4.2.1.7.4 Variation 4: Reduction Using Zinc–Hydrochloric Acid under Clemmensen Conditions ...................................................................................... 187
45.4.2.1.7.5 Variation 5: Using Phenylphosphines ...................................................... 187
45.4.2.1.7.6 Variation 6: Using Trialkyl Phosphites .................................................. 188
45.4.2.1.7.7 Variation 7: Using Organosilanes ....................................................... 188
45.4.2.1.7.8 Variation 8: Using Metal Aluminum or Boron Hydrides and a Second Co-reductant ...................................................................................... 189
45.4.2.1.7.9 Variation 9: Using Selenium under an Atmosphere of Carbon Monoxide ... 192
45.4.2.1.7.10 Variation 10: Using Hydrogen Gas in the Presence of a Metal Catalyst .... 192
45.4.2.1.7.11 Variation 11: Using Water or Alcohols as Hydrogen Sources for Reduction in the Presence of a Metal Catalyst .................................................. 193
45.4.2.1.7.12 Variation 12: Via Tandem Thioketal Formation and Metal Reduction ...... 194
45.4.2.1.7.13 Variation 13: Using Palladium/Carbon as a Catalyst .............................. 195
45.4.3 Product Subclass 3: Polyalkylbenzenes .......................................................... 195
45.4.3.1 Synthesis of Product Subclass 3 ..................................................................... 195
45.4.3.1.1 Method 1: Polyalkylbenzenes via a Directed Carbopalladation Reaction .... 195
45.4.3.1.2 Method 2: [2 + 2 + 2] Transition-Metal-Catalyzed Cyclotrimerization of Alkynes .......................................................... 195
45.4.3.1.3 Method 3: Nickel-Catalyzed Synthesis of Polyalkylated Phenols .............. 198
45.4.3.1.4 Method 4: [4 + 2] Cyclization of Alkynes with Enynes .................................. 198
45.4.3.1.5 Method 5: Tandem Sonogashira–[4 + 2] Benzannulation Protocol of Alkynes with Vinyl Bromides .......................................................... 203
45.4.3.1.6 Method 6: Alkene Metathesis ..................................................................... 203

45.5 Product Class 5: Styrenes, Stilbenes, and Other Alk-1-enylbenzenes
D. A. Alonso and C. Nájera

45.5.1 Synthesis of Product Class 5 ........................................................................... 209
45.5.1.1 Alkenation of Aldehydes ............................................................................. 209
45.5.1.1.1 Method 1: Wittig-Type Reactions ............................................................. 210
45.5.1.1.1 Variation 1: The Wittig Reaction .............................................................. 210
45.5.1.1.2 Variation 2: The Horner–Wittig Reaction ................................................ 212
45.5.1.1.3 Variation 3: The Horner–Wadsworth–Emmons Reaction .......................... 214
45.5.1.1.2 Method 2: The Peterson Reaction .................................................. 215
45.5.1.1.3 Method 3: The Julia Reaction .......................................................... 216
45.5.1.1.4 Method 4: The Perkin Reaction ...................................................... 217
45.5.1.1.5 Method 5: The Modified Julia Reaction ........................................... 218
45.5.1.1.6 Method 6: The McMurry Reaction .................................................... 220

45.11.1 Synthesis of Product Subclass 1 ................................................................. 484

45.11.1.1 Method 1: [3,3]-Sigmatropic Rearrangements and Electrocyclic Reactions 484
45.11.1.1.1 Variation 1: Thermolysis of Hexa-1,5-dienes ........................................ 484
45.11.1.1.2 Variation 2: Thermolysis of Substituted Diallenes ............................... 485
45.11.1.1.3 Variation 3: Dimerization of Species Generated In Situ from Propenes,
Propadienes, or Propynes ......................................................... 485

45.11.1.2 Method 2: Synthesis from Cyclobutenes .................................................. 487

45.11.1.2.1 Variation 1: By the Formation of exo-Doubles Bonds via Hofmann
Elimination ........................................................................... 487
45.11.1.2.2 Variation 2: By Wittig Reaction .......................................................... 487
45.11.1.2.3 Variation 3: By Dehydrochlorination ................................................ 488
45.11.1.2.4 Variation 4: By Substitution of Carbanionic Species Generated from
1,2-Dimethyl-3,4-dimethylenecyclobutene .................................. 488

45.11.2 Product Subclass 2: Quinodimethanes ......................................................... 489

45.11.2.1 Synthesis of Product Subclass 2 ................................................................. 490

45.11.2.1.1 Method 1: α-Quinodimethanes by Thermal Reactions ......................... 490
45.11.2.1.1.1 Variation 1: Ring Opening of Benzannulated Cyclobutenes .............. 490
45.11.2.1.1.2 Variation 2: Elimination of Sulfur Dioxide from Sulfones .............. 493
45.11.2.1.1.3 Variation 3: Elimination of Sulfur Dioxide from Sultines .............. 494
45.11.2.1.1.4 Variation 4: Elimination of Carbon Dioxide from
5,8-Dihydro-7H-1,3-dioxolo[4,5-g][2]benzopyran-7-one ...... 494

45.11.2.1.1.5 Variation 5: Elimination of Hydrogen Chloride from
1-Methyl-2-(trichloromethyl)benzenes ....................................... 494
45.11.2.1.2 Method 2: α-Quinodimethanes by 1,4-Elimination Reactions of
1,2-Dialkylbenzenes Containing Leaving Groups Bonded to the
Alkyl Substituents ................................................................ 495

45.11.2.1.2.1 Variation 1: Using Metals as Reducing Agents .............................. 495
45.11.2.1.2.2 Variation 2: Anion-Induced 1,4-Eliminations ............................... 496
45.11.2.1.2.3 Variation 3: Hofmann Elimination of
N,N,NTrimethyl(10-methyl-9-phenanthryl)methanaminium
Chloride ........................................................................... 498

45.11.2.1.2.4 Variation 4: Proton-Induced 1,4-Eliminations .............................. 499
45.11.2.1.3 Method 3: α-Quinodimethanes by Addition/Elimination Reactions .... 499
45.11.2.1.4 Method 4: α-Quinodimethanes by Photochemical Reactions .......... 500
45.11.2.1.4.1 Variation 1: Photochemically Induced 1,5-Shifts ......................... 500
45.11.2.1.4.2 Variation 2: Photochemically Induced Eliminations ..................... 501
45.11.2.1.5 Method 5: α-Quinodimethanes by Cathodic Reduction and Anodic
Oxidation of 1,2-Dialkylbenzenes ............................................ 502
45.11.2.1.6 Method 6: α-Quinodimethanes by Palladium(0)/Samarium(II) Iodide
Induced Intramolecular Cyclization ........................................ 503

Volume 45b:
Aromatic Ring Assemblies, Polycyclic Aromatic Hydrocarbons, and Conjugated Polyenes

Preface .................................................................................. V

Table of Contents ............................................................... IX

45.13 Product Class 13: Biaryls
D. A. Black and K. Fagnou ..................................................... 547

45.14 Product Class 14: Arylalkanes
D. A. Black and K. Fagnou ..................................................... 627

45.15 Product Class 15: Poly(phenylene)
M. Abe and T. Yamamoto ..................................................... 653

45.16 Product Class 16: Poly(p-phenylenevinylene)
L. Pu ................................................................................. 677

45.17 Product Class 17: Poly(xylylene)
T. Itoh .................................................................................. 697

45.18 Product Class 18: Polystyrenes
F. Aldabbagh and O. Gibbons ................................................ 723

45.19 Product Class 19: Naphthalenes, Anthracenes, 9H-Fluorenes, and Other Acenes
S. Toyota and T. Iwanaga ..................................................... 745

45.20 Product Class 20: Cyclobutabenzenes, Biphenylenes, and [N]Phenylenes
S. Toyota ............................................................................... 855

45.21 Product Class 21: Phenanthrenes, Helicenes, and Other Angular Acenes
I. G. Stará and I. Starý ............................................................ 885

45.22 Product Class 22: Pyrenes, Circulenes, and Other Condensed Acenes
C.-S. Chang and Y.-T. Wu .................................................... 955

45.23 Product Class 23: Annulated Polycyclic Aromatic Hydrocarbons
W.-C. Lin and Y.-T. Wu ....................................................... 1017

45.24 Product Class 24: Pentalenes, s-Indacenones, os-Indacenones, Azulenes, and Heptalenes, and Their Benzo Derivatives
K. Abou-Hadeed and H.-J. Hansen ........................................ 1043

| 45.29.1.1.27 | Variation 2: By Valence Isomerization of Dewar Benzene Isomers | 1337 |
| 45.29.1.1.28 | Method 6: Modification of the Aromatic Ring | 1338 |
Table of Contents

45.29.1.6.1 Variation 1: By Annulation to the Aromatic Rings .......................... 1338
45.29.1.6.2 Variation 2: By Oxidative Transformation of the Aromatic Rings ....... 1339
45.29.1.7 Method 7: Isomerization by Migration of the Bridge .......................... 1339
45.29 Product Subclass 2: Polynuclear Cyclophanes without Bridging Aliphatic Carbon Groups .......................................................... 1340
45.29.2.1 Synthesis of Product Subclass 2 ..................................................... 1340
45.29.2.1.1 Method 1: Cross Coupling of Aryl Halides ................................ 1340
45.29.2.1.1.1 Variation 1: Oxidative Coupling of Arylene Di-Grignard Reagents .. 1340
45.29.2.1.1.2 Variation 2: Coupling via Lipshutz Cuprates ............................ 1342
45.29.2.1.1.3 Variation 3: Coupling of Arylstannanes Using Copper(II) Nitrate .... 1343
45.29.2.1.2 Method 2: Construction of the Benzene Ring by Elimination .......... 1344

45.30 Product Class 30: Conjugated Polyenes, Including Cyclic Polyenes That Are Not Fully Conjugated

S. Koo

45.30.1 Product Subclass 1: Open-Chain Noncarotenoid Conjugated Polyenes :: 1350
45.30.1.1 Synthesis of Product Subclass 1 .................................................... 1350
45.30.1.1.1 Method 1: Palladium-Catalyzed Coupling Reactions .................... 1351
45.30.1.1.1.1 Variation 1: Stille Coupling .................................................. 1351
45.30.1.1.1.2 Variation 2: Negishi Coupling .............................................. 1355
45.30.1.1.1.3 Variation 3: Suzuki Coupling .............................................. 1356
45.30.1.1.1.4 Variation 4: Sonogashira Coupling ....................................... 1358
45.30.1.1.1.5 Variation 5: Heck Reaction .................................................. 1360
45.30.1.1.1.6 Variation 6: Silicon-Based Coupling ...................................... 1361
45.30.1.1.1.7 Variation 7: Homocoupling .................................................. 1362
45.30.1.1.2 Method 2: Rhodium-Catalyzed Coupling Reactions .................... 1363
45.30.1.1.3 Method 3: Nickel-Catalyzed Coupling Reactions ...................... 1364
45.30.1.1.4 Method 4: Reductive Alkenation of Carbonyl Compounds .......... 1365
45.30.1.1.5 Method 5: Sulfone-Mediated Alkenation .................................. 1365
45.30.1.1.5.1 Variation 1: Julia Alkenation ............................................... 1366
45.30.1.1.5.2 Variation 2: Julia–Kocienski Alkenation ................................ 1368
45.30.1.1.6 Method 6: Wittig and Related Reactions .................................. 1369
45.30.1.1.6.1 Variation 1: Wittig Reaction ............................................... 1370
45.30.1.1.6.2 Variation 2: Horner–Wadsworth–Emmons Modification .......... 1371
45.30.1.1.7 Method 7: Coupling with Vinylc Organolithium Reagents .......... 1372
45.30.1.1.8 Method 8: Lewis Acid Promoted Coupling Reactions ................. 1374
45.30.1.1.9 Method 9: Ramberg–Bäcklund Rearrangement ......................... 1376
45.30.1.1.10 Method 10: Oxidative Ring-Fragmentation Reactions ............... 1377
45.30.1.1.11 Method 11: Cyclopropyl Carbinol Rearrangement .................... 1379
45.30.1.2 Applications of Product Subclass 1 in Organic Synthesis ................ 1379
45.30.1.2.1 Method 1: Lewis Acid Catalyzed Cycloisomerization of Hexatriene .... 1379
45.30.1.2 Method 2: Thermal Electrocyclization of Hexatriene 1380
45.30.2 Product Subclass 2: Carotenoid Compounds 1381
45.30.2.1 Synthesis of Product Subclass 2 1381
45.30.2.1.1 Method 1: Palladium-Catalyzed Coupling Reactions 1382
45.30.2.1.1.1 Variation 1: Stille Coupling 1382
45.30.2.1.1.2 Variation 2: Negishi Coupling 1385
45.30.2.1.1.3 Variation 3: Suzuki Coupling 1386
45.30.2.1.2 Method 2: Reductive Alkenation of Carbonyl Compounds 1388
45.30.2.1.3 Method 3: Sulfone-Mediated Alkenation 1389
45.30.2.1.3.1 Variation 1: Julia Alkenation 1389
45.30.2.1.3.2 Variation 2: Julia–Kocienski Alkenation 1391
45.30.2.1.3.3 Variation 3: Reaction with 3-Sulfolenes 1393
45.30.2.1.3.4 Variation 4: Double Elimination Reaction 1394
45.30.2.1.4 Method 4: Wittig Reaction 1396
45.30.2.1.5 Method 5: Extended Knoevenagel Condensation 1398
45.30.2.1.6 Method 6: Ramberg–Bäcklund Rearrangement 1400
45.30.3 Product Subclass 3: Cycloheptatrienes 1402
45.30.3.1 Synthesis of Product Subclass 3 1402
45.30.3.1.1 Method 1: Transition-Metal-Mediated [3 + 2 + 2]-Cycloaddition Reaction 1402
45.30.3.1.1.1 Variation 1: Palladium-Catalyzed Cycloaddition 1402
45.30.3.1.1.2 Variation 2: Nickel-Mediated Cycloaddition 1403
45.30.3.1.2 Method 2: Rhodium-Catalyzed Addition of Diazo Compounds 1405
45.30.3.1.3 Method 3: Addition to a Tropylium Salt 1406
45.30.3.1.3.1 Variation 1: Using Organolithium Reagents 1406
45.30.3.1.3.2 Variation 2: Using Hetero Nucleophiles 1407
45.30.3.1.3.3 Variation 3: Using Reactive Alkenes 1410
45.30.3.1.3.4 Variation 4: Using Reactive Alkanes 1412
45.30.3.1.4 Method 4: Ring-Expansion Reactions 1413

45.31 Product Class 31: Macromolecular Conjugated Polyenes
T. Masuda, M. Shiotsuki, and F. Sanda

45.31 Product Class 31: Macromolecular Conjugated Polyenes 1421
45.31.1 Product Subclass 1: Polyacetylene 1421
45.31.1.1 Synthesis of Product Subclass 1 1421
45.31.1.1.1 Method 1: Polymerization by the Shirakawa Method 1421
45.31.1.1.2 Method 2: Polymerization by the Naarmann Method 1422
45.31.2 Product Subclass 2: Monosubstituted Aromatic Acetylene Polymers 1423
45.31.2.1 Synthesis of Product Subclass 2 1423
45.31.2.1.1 Method 1: Polymerization Using Rhodium Catalysts 1423
45.31.2.1.2 Method 2: Polymerization Using Tungsten Catalysts 1426
45.31.2.1.3 Method 3: Polymerization Using Molybdenum Catalysts 1428

Preface .......................................................... V
Table of Contents ............................................ IX

Introduction
V. H. Rawal and S. A. Kozmin ........................................ 1

46.1 Synthesis Using the Wittig and Related Phosphorus-, Silicon-, or Sulfur-Based Reactions
A. D. Abell and M. K. Edmonds .................................. 23

46.2 Synthesis by Alkylidenation with Metal–Carbene Complexes and Related Reagents
T. Takeda and A. Tsubouchi ........................................ 63

46.3 Synthesis by Alkene Metathesis
S. T. Diver ......................................................... 97

46.4 Synthesis by Aldol and Related Condensation Reactions
K. P. C. Minbiole .................................................. 147

46.5 Synthesis by Metal-Mediated C—C Bond Forming Reactions of Alkynes, Diynes, and Enynes
V. Gandon, S. Thorimbert, and M. Malacría ...................... 173

46.6 Synthesis by Metal-Mediated Coupling Reactions
E. Negishi and G. Wang ........................................... 239

46.7 Synthesis by Cycloaddition and Electroyclic Reactions
M. Shindo, T. Yoshikawa, and K. Yaji ............................ 353

46.8 Synthesis by Extrusion
R. S. Grainger and P. J. Jervis ..................................... 401

46.9 Synthesis by Elimination
M. P. Schramm .................................................... 445

46.10 Synthesis by Reduction
D. J. Ramón and M. Yus .......................................... 523

46.11 Synthesis by Isomerization of Unconjugated Dienes, Allenes, Alkynes, and Methylene-cyclopropanes
R. E. Taylor, C. R. Diène, and E. M. Daly ....................... 549

### Table of Contents

#### 46.5.1.1
- **Method 1:** Nickel-Catalyzed Aldehyde–Alkyne and Aldehyde–Enyne Coupling
  - 173
- **Variation 1:** Nickel-Catalyzed Aldehyde–Alkyne Coupling
  - 173
- **Variation 2:** Nickel-Catalyzed Aldehyde–Enyne Coupling
  - 174
- **Method 2:** Coupling of Alkynes
  - 175
- **Variation 1:** Titanium-Mediated Carbometalation of Internal Alkynes
  - 176
- **Variation 2:** Zirconium-Mediated Carbometalation of Alkynes
  - 177
- **Variation 3:** Ruthenium-Catalyzed Dimerization of Propargyl Alcohols
  - 180
- **Method 3:** 2:1 Co-oligomerization of Alkynes and Alkenes
  - 181
- **Variation 1:** Cobalt-Mediated C–H Activation
  - 181
- **Variation 2:** Nickel-Mediated C–H Activation
  - 182

#### 46.5.2
- **Endocyclic 1,3-Dienes**
  - 183
- **Method 1:** Synthesis via Zirconacyclopentadienes
  - 183
- **Method 2:** Six-Membered Rings by [2 + 2 + 2] Cycloaddition
  - 185
- **Variation 1:** Titanium-Catalyzed Cycloaddition
  - 186
- **Variation 2:** Zirconium-Mediated Cycloaddition
  - 186
- **Variation 3:** Ruthenium-Catalyzed Cycloaddition
  - 187
- **Variation 4:** Cobalt-Mediated Cycloaddition
  - 190
- **Variation 5:** Rhodium-Catalyzed Cycloaddition
  - 197
- **Variation 6:** Iridium-Catalyzed Cycloaddition
  - 201
- **Variation 7:** Nickel-Catalyzed Cycloaddition
  - 203
- **Method 3:** Six-Membered Rings by Cycloisomerization of 1,5-Enynes
  - 205
- **Method 4:** Seven-Membered Rings by Cycloaddition or Cycloisomerization of Diynes
  - 206
- **Method 5:** Codimerization Reaction between 1,3-Dienes and Alkynes
  - 207
- **Method 6:** Cobalt-Mediated Syntheses of Alkaloids and Steroids
  - 207

#### 46.5.3
- **1,3-Dienes Having Two Exocyclic Double Bonds**
  - 210
- **Method 1:** Cyclization of Diynes
  - 210
- **Variation 1:** Titanium-Promoted Cyclization of Diynes
  - 210
- **Variation 2:** Zirconacene-Derivative-Promoted Cyclization of Diynes
  - 211
- **Variation 3:** Nickel-Catalyzed Cyclization of Diynes
  - 212
- **Method 2:** Cyclization of Enynes
  - 213
- **Variation 1:** Palladium-Catalyzed Cycloisomerization of Enynes
  - 214
- **Variation 2:** Ruthenium-Catalyzed Cycloisomerization of Enynes
  - 215
- **Variation 3:** Iridium(I)-Catalyzed Cycloisomerization of Enynes
  - 216
- **Variation 4:** Cobalt(I)-Mediated Cycloisomerization of 1,6-Enynes
  - 217
- **Method 3:** Cyclization of Allenynes
  - 218

#### 46.5.4
- **Conjugated Vinylic Cycloalkenes**
  - 219
- **Method 1:** Cycloisomerization of 1,6-Enynes
  - 219
- **Variation 1:** Palladium-Catalyzed Cycloisomerization To Give Vinylcyclopentenes
  - 219
- **Variation 2:** Ruthenium-Catalyzed Cycloisomerization To Give Vinylicycloalkenes
  - 220
- **Variation 3:** Platinum- and Gold-Catalyzed Cycloisomerization To Give Vinylcycloalkenes
  - 221
Table of Contents

46.5.4.1.4 Variation 4: Iridium-Catalyzed Cycloisomerization To Give Vinylcycloalkenes .................................................. 223
46.5.4.2 Method 2: Cycloisomerization of Allenynes ............................................. 224
46.5.4.2.1 Variation 1: Platinum-Catalyzed Cycloisomerization To Give Vinylcycloalkenes .................................................. 224
46.5.4.2.2 Variation 2: Gold- and Platinum-Catalyzed Cycloisomerization To Give Cross-Conjugated Trienes .................................................. 225
46.5.4.2.3 Variation 3: Rhodium-Catalyzed Isomerization To Give Cross-Conjugated Trienes .................................................. 225
46.5.4.2.4 Variation 4: Titanium(II)-Mediated Cyclization To Give Cross-Conjugated Trienes .................................................. 226
46.5.4.2.5 Variation 5: Cobalt(I)-Mediated Cyclization To Give Cross-Conjugated Trienes .................................................. 227
46.5.5 1,3-Dienes Having Endocyclic and Exocyclic Double Bonds ..................... 227
46.5.5.1 Method 1: Cycloisomerization of 1,6- and 1,7-Enynes ............................ 228
46.5.5.1.1 Variation 1: Palladium-Catalyzed Cycloisomerization ........................ 228
46.5.5.1.2 Variation 2: Gold-Catalyzed Cycloisomerization ................................ 228
46.5.5.1.3 Variation 3: Rhodium-Catalyzed Cycloisomerization ........................ 230
46.5.5.1.4 Variation 4: Ruthenium-Catalyzed Cycloisomerization ....................... 231
46.5.5.2 Method 2: Cycloisomerization of Allenynes ........................................ 231
46.5.6 s-trans-Heteroannular 1,3-Dienes .......................................................... 232
46.5.6.1 Method 1: Cycloisomerization of Dienynes ........................................... 232
46.5.6.2 Method 2: Cycloisomerization of Allenynes ........................................ 232

46.6 Synthesis by Metal-Mediated Coupling Reactions
E. Negishi and G. Wang

46.6 Synthesis by Metal-Mediated Coupling Reactions ...................................... 239
46.6.1 Method 1: Stoichiometric Synthesis of 1,3-Dienes by Metal-Mediated Coupling Reactions via Migratory Insertion .................. 244
46.6.1.1 Variation 1: 1,4-Disubstituted E,E-1,3-Dienes by [2C + 2C] Alkenyl–Alkenyl Coupling via Organoboron Migratory Insertion Reactions ...... 245
46.6.1.2 Variation 2: 1,4-Disubstituted E,Z-1,3-Dienes by [2C + 2C] Alkynyl–Alkenyl Coupling via Organoboron Migratory Insertion Reactions ...... 246
46.6.1.3 Variation 3: 1,4-Disubstituted Z,Z-1,3-Dienes by [2C + 2C] Alkynyl–Alkynyl Coupling via Boron- or Zirconium-Mediated Migratory Insertion ........................................... 247
46.6.1.4 Variation 4: Other Organozirconium Migratory Insertion Reactions for the Synthesis of 1,3-Dienes ........................................... 248
46.6.2 Method 2: Stoichiometric Synthesis of 1,3-Dienes by Metal-Mediated [2C + 2C] Coupling via Carbometalation .................. 249
46.6.2.1 Variation 1: Synthesis of 1,3-Dienes by Controlled Alkyne Dimerization via syn-Carbometalation ........................................... 251
46.6.2.2 Variation 2: Chelation-Guided anti-Carbometalation with Alkenyl- and Alkynylmetals ........................................... 252

### Peterson Alkenation

**D. J. Ager**

| 47.1.1.2 | Peterson Alkenation | 85 |
| 47.1.1.2.1 | Alkenation by Addition of α-Silyl Carbanions to Carbonyl Compounds | 85 |
47.1.2.1 Method 1: Generation of α-Silyl Carbanions by Direct Deprotonation of Silanes ................................................................. 87
47.1.2.1.2 Method 2: Generation of α-Silyl Carbanions from (Halomethyl)silanes ................................................................. 88
47.1.2.1.2.1 Variation 1: Halogen–Lithium Exchange ........................................ 88
47.1.2.1.2.2 Variation 2: Formation of a Grignard Reagent .................................. 89
47.1.2.1.2.3 Variation 3: Formation of an Organocerium Compound .................. 90
47.1.2.1.2.4 Variation 4: Formation of an Organosamarium Compound ............... 92
47.1.2.1.3 Method 3: Generation of α-Silyl Carbanions by Transmetalation ........ 92
47.1.2.1.3.1 Variation 1: Displacement of a Phenylsulfanyl Group with a Lithium Naphthalenide Species ............................................. 92
47.1.2.1.3.2 Variation 2: Displacement of an Organoselanyl Group ..................... 94
47.1.2.1.3.3 Variation 3: Displacement of a Trialkylstannyl Group .................... 94
47.1.2.1.3.4 Variation 4: Displacement of a Trialkylsilyl Group .......................... 95
47.1.2.1.4 Method 4: Generation of α-Silyl Carbanions by Addition of Alkyllithium Species to Vinylsilanes ................................. 95
47.1.2.2 Alkenation by Reduction of α-Silyl Carbonyl Compounds ................. 96
47.1.2.2.1 Method 1: Addition of Metal Hydride Reagents ............................... 96
47.1.2.2.2 Method 2: Addition of Organometallic Reagents ............................ 97
47.1.2.2.2.1 Variation 1: Addition to α-Silyl Aldehydes ..................................... 98
47.1.2.2.2.2 Variation 2: Addition to α-Silyl Ketones ....................................... 98
47.1.2.2.2.3 Variation 3: Addition to α-Silyl Esters ......................................... 100
47.1.2.2.3 Alkenation Based on Epoxide Ring Opening ................................ 100
47.1.2.2.3.1 Method 1: Addition of Silylmetal Species to Epoxides ..................... 100
47.1.2.2.3.2 Method 2: Addition to Silylated Epoxides ..................................... 101

47.1.3 Julia, Julia–Kocienski, and Related Sulfur-Based Alkenations
I. E. Markó and J. Pospíšil

47.1.3.1 Julia, Julia–Kocienski, and Related Sulfur-Based Alkenations .......... 105
47.1.3.1.1 Julia Alkenation ............................................................................. 105
47.1.3.1.1.1 Method 1: Reaction of α-Sulfonyle Anions with Aldehydes and Ketones ................................................................. 106
47.1.3.1.1.1.1 Variation 1: Route toward Terminal Alkenes ............................. 107
47.1.3.1.1.1.2 Variation 2: Route toward 1,2-Disubstituted Alkenes ................... 109
47.1.3.1.1.1.3 Variation 3: Route toward Trisubstituted Alkenes ...................... 113
47.1.3.1.1.1.4 Variation 4: Route toward Tetrasubstituted Alkenes .................... 114
47.1.3.1.1.1.5 Variation 5: Special Cases ...................................................... 115
47.1.3.1.1.2 Method 2: Reaction of α-Sulfonyle Anions with Esters .................. 120
47.1.3.1.1.3 Method 3: Reaction of α-Sulfonyle Anions with α-Haloorganometal Electrophiles ................................................................. 121
47.1.3.1.1.4 Method 4: Reaction of α-Sulfoxide Anions with Aldehydes and Ketones ................................................................. 123
47.1.3.1.1.5 Method 5: Reaction of Bis-sulfones with Aldehydes and Ketones .... 124
47.1.3.1.1.6 Method 6: Reaction of Sulfoximides with Aldehydes and Ketones .... 125
47.1.1.3.1.2 Reductive Elimination ................................................. 126
47.1.1.3.1.2.1 Method 1: Reaction of β-Hydroxy Sulfones ...................... 127
47.1.1.3.1.2.2 Method 2: Reaction of Sulfones Bearing a β-Leaving Group .......... 132
47.1.1.3.1.2.2.1 Variation 1: By Cleavage of the C—S Bond Followed by the C—O Bond 132
47.1.1.3.1.2.2.2 Variation 2: By Cleavage of the C—O Bond Followed by the C—S Bond 135
47.1.1.3.1.2.3 Method 3: Reaction of β-Mesyloxy and β-Acetoxy Sulfoxides .......... 138
47.1.1.3.1.2.4 Method 4: Reaction of β-Benzoyloxy Sulfoxides ..................... 140
47.1.1.3.1.2.5 Method 5: Reaction of β-Hydroxy Sulfoximides ..................... 142
47.1.1.3.2 Julia–Kocienski and S. Julia Alkenation .................................. 143
47.1.1.3.2.1 Method 1: Addition to Carbonyl Compounds .......................... 152
47.1.1.3.2.1.1 Variation 1: 1,2-Disubstituted Alkenes .................................. 152
47.1.1.3.2.1.2 Variation 2: Trisubstituted Alkenes .................................. 155
47.1.1.3.2.2 Method 2: Addition to Lactones ...................................... 156
47.1.1.4 Alkenation with Metal Carbenes and Related Reactions ........................ 161
47.1.1.4.1 Method 1: Synthesis by Methylenation with (μ-Chloro)bis-(η⁵-cyclopentadienyl)(dimethylaluminum)-(μ-methylene)titanium (The Tebbe Reagent) ............. 162
47.1.1.4.1.1 Variation 1: Methylenation of Aldehydes ............................ 166
47.1.1.4.1.2 Variation 2: Methylenation of Ketones ............................... 168
47.1.1.4.1.3 Variation 3: Methylenation of Esters ................................ 171
47.1.1.4.1.4 Variation 4: Methylenation of Lactones ............................. 174
47.1.1.4.1.5 Variation 5: Methylenation of Miscellaneous Carbonyl Compounds .......... 175
47.1.1.4.2 Method 2: Synthesis by Methylenation with Titanacyclobutanes ............ 176
47.1.1.4.3 Method 3: Synthesis by Methylenation with Bis(η⁵-cyclopentadienyl)-dimethyltitanium(IV) (The Petasis Reagent) ........................................ 177
47.1.1.4.3.1 Variation 1: Methylenation of Aldehydes ............................ 181
47.1.1.4.3.2 Variation 2: Methylenation of Ketones ............................... 183
47.1.1.4.3.3 Variation 3: Methylenation of Esters ................................ 185
47.1.1.4.3.4 Variation 4: Methylenation of Lactones ............................. 188
47.1.1.4.3.5 Variation 5: Methylenation of 1,3-Dioxolan-4-ones and 1,3-Dioxan-4-ones ................................................................. 195
47.1.1.4.3.6 Variation 6: Methylenation of Carbonates ............................ 199
47.1.1.4.3.7 Variation 7: Methylenation of Amides and Lactams .................... 200
47.1.1.4.3.8 Variation 8: Methylenation of Miscellaneous Carbonyl Compounds .......... 202
47.1.1.4.4 Method 4: Synthesis by Methylenation with gem-Dimetallic Reagents ................................................................. 204
47.1.1.4.4.1 Variation 1: Methylenation with the Nysted Reagent .................... 207
47.1.1.4.4.2 Variation 2: Methylenation with Dibromomethane–Zinc–Titanium(IV) Chloride Reagents .......................................................... 208
47.1.1.4.4.3 Variation 3: Methylenation with Diiodomethane–Zinc Reagents .......... 212
47.1.1.4.4.4 Variation 4: Methylenation with Dihalomethane–Magnesium Reagents ................................................................. 214
### Table of Contents

#### 47.1.1.4.5 Method 5: Synthesis by Methylenation with Molybdenum and Tungsten Carbenes

- **Methods**
  - **1.4.5** Method 5: Synthesis by Methylenation with Molybdenum and Tungsten Carbenes
    - Variation 1: Using Dibenzylicis\(\eta^5\)-cyclopentadienyl)titanium(IV) Reagents
    - Variation 2: Using Bis(\(\eta^5\)-cyclopentadienyl)dicyclopropyltitanium(IV) Reagents
    - Variation 3: Using \(\eta^5\)-Cyclopentadienyl[(trimethylsilyl)methyl]-titanium(IV) Reagents

#### 47.1.1.4.6 Method 6: Synthesis by Methylenation with Diazo Compounds under Metal Catalysis

- **Methods**
  - **1.4.6** Method 6: Synthesis by Methylenation with Diazo Compounds under Metal Catalysis

#### 47.1.1.4.7 Method 7: Synthesis by Alkylidenation with Dialkylbis(\(\eta^5\)-cyclopentadienyl)titanium(IV) Reagents (Petasis Alkenation)

- **Methods**
  - **1.4.7** Method 7: Synthesis by Alkylidenation with Dialkylbis(\(\eta^5\)-cyclopentadienyl)titanium(IV) Reagents (Petasis Alkenation)
    - **1.4.7.1** Variation 1: Using Dibenzylbis(\(\eta^5\)-cyclopentadienyl)titanium(IV) Reagents
    - **1.4.7.2** Variation 2: Using Bis(\(\eta^5\)-cyclopentadienyl)dicyclopropyltitanium(IV) Reagents
    - **1.4.7.3** Variation 3: Using \(\eta^5\)-Cyclopentadienyl[(trimethylsilyl)methyl]-titanium(IV) Reagents

#### 47.1.1.4.8 Method 8: Synthesis by Alkylidenation with Low-Valent Titanium Reagents (Takeda Alkenation)

- **Methods**
  - **1.4.8** Method 8: Synthesis by Alkylidenation with Low-Valent Titanium Reagents (Takeda Alkenation)
    - **1.4.8.1** Variation 1: Using Alkyl Halides
    - **1.4.8.2** Variation 2: Using \(\text{gem}\)-Dihalides
    - **1.4.8.3** Variation 3: Using Dithioacetals
    - **1.4.8.4** Variation 4: Intramolecular Carbonyl Alkylidenation

#### 47.1.1.4.9 Method 9: Synthesis by Alkylidenation with \(\text{gem}\)-Dimetallic Reagents

- **Methods**
  - **1.4.9** Method 9: Synthesis by Alkylidenation with \(\text{gem}\)-Dimetallic Reagents
    - **1.4.10** Method 10: Synthesis by Halomethylenation
      - **1.4.10.1** Variation 1: Using Chromium Reagents (Takai Alkenation)
      - **1.4.10.2** Variation 2: Using Titanium Reagents

#### 47.1.1.4.11 Method 11: Synthesis by Allenation with Titanacyclobutanes

- **Methods**
  - **1.5** McMurry Coupling and Related Reductive Dimerization Reactions
    - **1.5.1** Method 1: Self-Coupling Reactions
      - **1.5.1.1** Variation 1: Of Aldehydes
      - **1.5.1.2** Variation 2: Of Ketones
    - **1.5.2** Method 2: Mixed Coupling Reactions
      - **1.5.2.1** Variation 1: Of Aldehydes
      - **1.5.2.2** Variation 2: Of Ketones
      - **1.5.2.3** Variation 3: Of Aldehydes and Ketones
    - **1.5.2.4** Variation 4: Sequential Cyclization Reactions of Dicarbonyl Compounds
    - **1.5.3** Method 3: Intramolecular Coupling Reactions
      - **1.5.3.1** Variation 1: Cyclization of Aliphatic Dialdehydes, Diketones, and Oxoaldehydes
      - **1.5.3.2** Variation 2: Synthesis of \([2.n]\)Cyclophan-1-enes by Cyclization of Two Aromatic Carbonyl Moieties Tethered by an Aliphatic Chain
### Table of Contents

#### 47.1.5.3.3 Variation 3: Synthesis of [2..n]Cyclophan-1-enes by Cyclization of Bis(aromatic aldehydes and ketones) with Tethers Containing Aromatic Rings ........................................ 298

#### 47.1.5.3.4 Variation 4: Synthesis of Ethene-1,2-diyl-Bridged Calix[4]arenes by Intramolecular Cyclization of Formyl-Substituted Calixarenes ................................................................. 301

#### 47.1.5.3.5 Variation 5: Synthesis of Cyclic Phenylenevinylene and Related Polyaromatics by Intramolecular Coupling of Conjugated Diformyl Compounds Linked with Phenylene and/or Vinylene Moieties ................................................................. 303

#### 47.1.5.3.6 Variation 6: Synthesis of Tetrapyrrolic Macrocycles by Intramolecular Coupling of Formyl Groups at the Ends of Acyclic Tetrapyrroles ................................................................. 306

#### 47.1.5.3.7 Variation 7: Synthesis of Ferrocenophanes by Intramolecular Coupling of Ferrocene-Derived Bis(aldehydes) ................................................................. 306

#### 47.1.5.3.8 Variation 8: Synthesis of Condensed Polyaromatics by Intramolecular Coupling of 2,2'-Diformylbiaryls and Related Compounds ................................................................. 308

#### 47.1.5.3.9 Variation 9: Synthesis of Heterocycles by Intramolecular Cyclization of Bis(aldehydes) and Bis(ketones) with a Heteroatom-Containing Tether ................................................................. 311

#### 47.1.5.3.10 Variation 10: Synthesis of Annulenes by Intramolecular Coupling of Conjugated Polylene Dialdehydes and Ketones ......................................................... 314

#### 47.1.5.3.11 Variation 11: Miscellaneous Reactions ................................................................. 317

#### 47.1.5.4 Method 4: Coupling in Polymer Synthesis ................................................................. 318

### 47.1.6 Alkene Metathesis

M. Michalak, Ł. Gulański, and K. Grela

#### 47.1.6 Alkene Metathesis ................................................................. 327

#### 47.1.6.1 Method 1: Cross Metathesis of a Reactive Alkene ........................................ 332

#### 47.1.6.1.1 Variation 1: Reaction with a Fast Homodimerizing Metathesis Partner ................................................................. 333

#### 47.1.6.1.2 Variation 2: Reaction with a Very Slow Homodimerizing Metathesis Partner or a Spectator ................................................................. 340

#### 47.1.6.1.3 Variation 3: Reaction with a Very Slow Homodimerizing Metathesis Partner or a Spectator ................................................................. 354

#### 47.1.6.2 Method 2: Ring-Closing Metathesis ................................................................. 364

#### 47.1.6.2.1 Variation 1: Synthesis of Cycloalkenes with Disubstituted Double Bonds ................................................................. 364

#### 47.1.6.2.2 Variation 2: Synthesis of Cycloalkenes with Trisubstituted Double Bonds ................................................................. 380

#### 47.1.6.2.3 Variation 3: Synthesis of Cycloalkenes with Tetrasubstituted Double Bonds ................................................................. 386

#### 47.1.6.3 Method 3: Ene–Yne Metathesis ................................................................. 391

#### 47.1.6.3.1 Variation 1: Cross Ene–Yne Metathesis ................................................................. 392

#### 47.1.6.3.2 Variation 2: Ring-Closing Ene–Yne Metathesis ................................................................. 402

#### 47.1.6.4 Method 4: Acyclic Diene Metathesis Polymerization ................................................................. 415

#### 47.1.6.5 Method 5: Ring-Opening Metathesis ................................................................. 419

#### 47.1.6.5.1 Variation 1: Ethenolysis ................................................................. 419
### Synthesis by Metal-Mediated Coupling Reactions

1100

#### 47.1.8.3 Method 3: Alkylation of Organometallic Compounds  
---  
1102

##### 47.1.8.3.1 Variation 1: Reactions of Organolithium Compounds  
---  
1103

##### 47.1.8.3.2 Variation 2: Reactions of Organomagnesium Compounds  
---  
1105

##### 47.1.8.3.3 Variation 3: Reactions of Organocopper Compounds  
---  
1107
47.2 Product Class 2: Cyclopropenes
M. S. Baird

47.2.1 Synthesis of Product Class 2

47.2.1.1 Method 1: Synthesis by Ring Closure with Formation of Two C—C Bonds

47.2.1.2 Method 2: Synthesis by Ring Closure with Formation of One C—C Bond

47.2.1.2.1 Variation 1: Dehydrohalogenation of Allylic Halides

47.2.1.2.2 Variation 2: Cyclizing Insertions of Methylene carbenes (Vinylidenes) or Related Species

47.2.1.2.3 Variation 3: 1,3-Elimination from Propenes

47.2.1.2.4 Variation 4: By Formation of the C=C Bond

47.2.1.3 Method 3: Synthesis by Ring Contraction

47.2.1.4 Method 4: Synthesis by 1,2-Elimination

47.2.1.4.1 Variation 1: Dehydrohalogenation

47.2.1.4.2 Variation 2: Dehalogenation

47.2.1.4.3 Variation 3: Dehalosilylation

47.2.1.4.4 Variation 4: Dehydroxysilylation

47.2.1.5 Method 5: Synthesis by Rearrangement of Methylene cyclopropanes

47.2.1.6 Method 6: Synthesis from Other Cyclopropenes

47.2.1.6.1 Variation 1: By Alkylation of a Carbon Nucleophile

47.2.1.6.2 Variation 2: By Alkylation with an Electrophilic Reagent

47.2.1.6.3 Variation 3: By Ene Reactions

47.2.1.7 Method 7: Miscellaneous Methods

47.2.2 Method 6: Synthesis from Other Cyclopropenes

47.2.2.1 Variation 1: By Alkylation of a Carbon Nucleophile

47.2.2.2 Variation 2: By Alkylation with an Electrophilic Reagent

47.2.2.3 Variation 3: By Ene Reactions

47.3 Product Class 3: Nonconjugated Di-, Tri-, and Oligoenes
K.-M. Roy

47.3.1 Synthesis of Product Class 3

47.3.1.1 Synthesis with C—C Bond Formation

47.3.1.1.1 Method 1: Wittig-Type Reactions

47.3.1.1.2 Method 2: Coupling Reactions with Organometallic Compounds

47.3.1.1.2.1 Variation 1: With Organomagnesium Compounds

47.3.1.1.2.2 Variation 2: With Organoboron Compounds

47.3.1.1.2.3 Variation 3: With Organo aluminum and Organo indium Compounds

47.3.1.1.2.4 Variation 4: With Organosilicon and Organotin Compounds

47.3.1.1.2.5 Variation 5: With Other Organometallic Compounds

47.3.1.1.3 Method 3: Dimerization and Oligomerization Reactions

47.3.1.2 Synthesis by Elimination

47.3.1.2.1 Method 1: Synthesis from Cyclopropylcarbinols

47.3.1.2.2 Method 2: Synthesis from Iodohydrin Derivatives

47.3.1.2.3 Method 3: Hydroboration–Elimination of Enamines
Volume 48: Alkanes

Preface ................................................................. V

Table of Contents .................................................... IX

Introduction
H. Hiemstra .......................................................... 1

48.1 Product Class 1: Acyclic Alkanes

48.1.1 Synthesis by Metal Substitution with Retention of the Carbon Framework
E. A. B. Kantchev and M. G. Organ ...................................................... 9

48.1.2 Synthesis by Metal Substitution with Extension of the Carbon Framework
E. A. B. Kantchev and M. G. Organ ...................................................... 29

48.1.3 Synthesis by Reduction without C–C Bond Cleavage

48.1.3.1 Reduction of Carbonic or Carboxylic Acids, Aldehydes, Ketones, or Derivatives
J. Wicha ................................................................. 97

48.1.3.2 Reduction of Haloalkanes
P. Margaretha ............................................................. 149

48.1.3.3 Reduction of Alkanols and Derivatives
J. Wicha ................................................................. 163

48.1.3.4 Reduction of Other Heterofunctionalities
J. Drabowicz, D. Krasowska, and J. Wicha ........................................ 245

48.1.3.5 Reduction of Alkynes
N. Chessum, S. Couty, and K. Jones .................................................. 265

48.1.3.6 Reduction of Alkenes

48.1.3.6.1 Reduction by Heterogeneous Catalysis
N. Chessum, S. Couty, and K. Jones .................................................. 275

48.1.3.6.2 Reduction by Homogeneous Catalysis or Biocatalysis
M. Tsukamoto and M. Kitamura ....................................................... 341

48.1.3.6.3 Reduction by Noncatalytic Methods
M. Zaidlewicz, M. P. Krzemioński, and A. Dzieleńdziak ........................................... 359

# Table of Contents

- **Introduction**
  H. Hiemstra

**48.1 Product Class 1: Acyclic Alkanes**

48.1.1 **Synthesis by Metal Substitution with Retention of the Carbon Framework**
E. A. B. Kantchev and M. G. Organ

48.1.1 Method 1: Synthesis by Protonation of Carbon—Metal Bonds

| Variation 1: Acidolysis of Alkyl Derivatives of Metals from Groups 14 and 15 (Including Boron) | 10 |
| Variation 2: Protonolysis of Alkyl Derivatives of Metals from Groups 5–11 | 14 |
| Variation 3: Protonolysis of Alkyl Derivatives of Metals from Groups 3, 4, 12, and 13 (Including Lanthanides and Actinides, Excluding Boron) | 15 |
| Variation 4: Protonolysis of Alkyl Derivatives of Metals from Groups 1 and 2 | 18 |

48.1.2 Method 2: Synthesis by Hydrogenolysis of Carbon—Metal Bonds

| Variation 1: Hydrogenolysis and Reductive Cleavage of Carbon—Metal Bonds | 23 |
| Variation 2: Reductive Elimination from Alkyl–Transition Metal Hydrido Complexes | 25 |

48.1.2 **Synthesis by Metal Substitution with Extension of the Carbon Framework**
E. A. B. Kantchev and M. G. Organ

48.1.2.1 Method 1: Noncatalyzed Coupling Reactions of Nonactivated Alkyl Electrophiles with Organometallic Reagents

| Variation 1: Using Main-Group Organometallic Reagents | 30 |
| Variation 2: Using Transition-Metal Organometallic Reagents | 32 |

48.1.2.2 Method 2: Catalyzed Coupling Reactions of Nonactivated Alkyl Electrophiles with Organometallic Reagents

| Variation 1: Couplings of Alkyl Grignard Reagents (Kumada–Tamao–Corriu Reaction) Mediated by Copper, Silver, Nickel, Palladium, Iron, and Cobalt | 38 |
| Variation 2: Couplings of Alkylzinc Reagents (Negishi Reaction) Mediated by Nickel and Palladium | 51 |

---

Science of Synthesis Original Edition Volume 48
© Georg Thieme Verlag KG
48.1.2.3 Variation 3: Couplings of Alkyl Boron Compounds (Suzuki–Miyaura Reaction) Mediated by Palladium and Nickel ........................................... 63
48.1.2.4 Variation 4: Couplings of Other Alkyl Organometallic Compounds ................................................................. 76
48.1.2.3 Method 3: Oxidative Coupling of Alkyl Organometallic Reagents ................................................................. 77
48.1.2.3.1 Variation 1: Reductive Elimination from Dialkyl Transition-Metal Complexes .................................................. 83
48.1.2.3.2 Variation 2: Kolbe Electrolysis ......................................................................................................................... 85
48.1.2.4 Method 4: Reductive Coupling of Alkyl Halides ................................................................................................. 87

48.1.3 Synthesis by Reduction without C–C Bond Cleavage

48.1.3.1 Reduction of Carboxylic Acids, Aldehydes, Ketones, or Derivatives
J. Wicha

48.1.3.1 Reduction of Carboxylic Acids, Aldehydes, Ketones, or Derivatives ................................................................. 97
48.1.3.1.1 Method 1: The Clemmensen Reduction (Deoxygenation of Aldehydes or Ketones Using Zinc and Hydrochloric Acid) ........................................ 99
48.1.3.1.1 Variation 1: Reduction with Zinc–Hydrochloric Acid in an Aqueous Solution ................................................................. 100
48.1.3.1.2 Variation 2: Reduction with Zinc–Hydrochloric Acid in the Presence of Water-Miscible Solvents ................................................................. 101
48.1.3.1.3 Variation 3: Reduction with Zinc–Hydrochloric Acid in the Presence of Water-Immiscible Solvents ................................................................. 102
48.1.3.1.4 Variation 4: Reduction with Zinc in Organic Solvents Saturated with Hydrogen Chloride ................................................................. 102
48.1.3.1.5 Variation 5: Ultrasound-Assisted Zinc–Protic Acid Reduction ................................................................. 104
48.1.3.1.6 Variation 6: Miscellaneous Methods .................................................................................................................. 104
48.1.3.1.2 Method 2: Other Direct Deoxygenation Methods ................................................................. 105
48.1.3.1.2.1 Variation 1: Deoxygenation of Aromatic Ketones with Hydrogen Iodide ................................................................. 105
48.1.3.1.2.2 Variation 2: Deoxygenation of Carbonyl Compounds by Catalytic Hydrogenation ................................................................. 105
48.1.3.1.2.3 Variation 3: Deoxygenation of Aromatic Acids, Aldehydes, and Ketones Using the Trichlorosilane–Tripropylamine Couple ................................................................. 106
48.1.3.1.2.4 Variation 4: Deoxygenation of Ketones Using the Triethylsilane–Trifluoroacetic Acid Couple ................................................................. 107
48.1.3.1.2.5 Variation 5: Deoxygenation of Carboxylic Acids, Esters, Aldehydes, and Ketones Using Silanes in the Presence of Lewis Acids .................................................................................................................. 108
48.1.3.1.2.6 Variation 6: Deoxygenation of Aromatic and α,β-Unsaturated Ketones Using the Sodium Borohydride–Trifluoroacetic Acid Couple ................................................................. 110
48.1.3.1.2.7 Variation 7: Miscellaneous Methods .................................................................................................................. 111
48.1.3.1.3 Method 3: The Wolff–Kishner Reduction (Reduction of Aldehydes and Ketones via Hydrazones) ................................................................. 111
48.1.3.1.3.1 Variation 1: The Huang-Minlon Modification .................................................................................................................. 114
48.1.3.1.3.2 Variation 2: The Barton Modification .................................................................................................................. 117
48.1.3.1.3.3 Variation 3: The Cram and the Henbest Modifications .................................................................................................................. 119

### 48.1.3.3.5 Variation 10: Deoxygenation of Alcohols Using Polymer-Bound Stannanes
- Page: 222

### 48.1.3.3.6 Variation 11: Deoxygenation of Alcohols Using Modified Stannanes
- Page: 224

### 48.1.3.3.7 Variation 12: Deoxygenation of Alcohols Using Other Metal Hydrides
- Page: 225

### 48.1.3.3.8 Variation 13: Deoxygenation of Alcohols Using Bis(tributyltin) Oxide–Poly(methylhydrosiloxane)
- Page: 225

### 48.1.3.6 Method 6: The Barton–McCombie Deoxygenation of Alcohols Using Silanes as the Hydrogen-Atom Source

#### Variation 1: Using Triethylsilane
- Page: 227

#### Variation 2: Using Diphenylsilane
- Page: 227

#### Variation 3: Using 5,10-Dimethyl-5,10-dihydrosilaanthracene Derivatives
- Page: 228

#### Variation 4: Using Tetraphenyldisilane
- Page: 229

#### Variation 5: Using Tris(trimethylsilyl)silane
- Page: 229

#### Variation 6: Using Silylated Dienes
- Page: 231

#### Variation 7: Using a Silane–Thiol System
- Page: 231

#### Variation 8: Reduction of Trifluoroacetates by Diphenylsilane
- Page: 232

### 48.1.3.7 Method 7: The Barton–McCombie Deoxygenation of Alcohols Using Phosphorus Compounds and Miscellaneous Hydrogen-Atom Donors

#### Variation 1: Using Phosphinic Acid and Its Salts
- Page: 233

#### Variation 2: Using Dialkyl Phosphites
- Page: 234

#### Variation 3: Using Other Phosphorus Compounds
- Page: 235

#### Variation 4: Using Propan-2-ol
- Page: 235

#### Variation 5: Using Formate Anion
- Page: 236

#### Variation 6: Using Water
- Page: 237

### 48.1.4 Reduction of Other Heterofunctionalities

#### J. Drabowicz, D. Krasowska, and J. Wicha

### 48.1.4.1 Method 1: Desulfurization of Thiols and Sulfides
- Page: 245

#### Variation 1: Using Raney Nickel
- Page: 245

#### Variation 2: Using Dissolving Metals and Amalgams
- Page: 248

#### Variation 3: Using Nickel, Cobalt, Iron, or Copper Compounds and Metal Hydrides
- Page: 248

#### Variation 4: Using Free-Radical Reagents
- Page: 249

#### Variation 5: Using Raney Nickel or Nickel Boride
- Page: 251

#### Variation 6: Using Dissolving Metals and Amalgams
- Page: 251

#### Variation 3: Miscellaneous Reactions
- Page: 252

#### Method 3: Reduction of Selenium Compounds
- Page: 252

#### Variation 1: Using Raney Nickel
- Page: 252

#### Variation 2: Using Dissolving Metals and Amalgams
- Page: 252

#### Variation 3: Using Tributyltin Hydride and Related Reagents
- Page: 253

#### Variation 4: Miscellaneous Reactions
- Page: 253

#### Method 4: Replacement of an Amino Group by Hydrogen (Deamination)
- Page: 254

#### Variation 1: Deamination of Amines via Arylsulfonyl Derivatives
- Page: 254

#### Variation 2: Deamination via Diazocompounds
- Page: 256

Synthesis by Reduction of Alkenes via Intermolecular C–C Bond Formation
P. Eilbracht

Additions of Carbon Electrophiles
48.1.1 Method 1: Hydroalkylation of Alkenes with Haloalkanes and Similar Electrophilic Alkylating Reagents
48.1.1.2 Method 2: Hydroalkylation of Alkenes with Alkyl Chloroformates and Ethylaluminum Sesquichloride
48.1.1.3 Method 3: Hydroalkylation of Alkenes with Alkanes in the Presence of Acids

Additions of Carbon Nucleophiles
48.1.2 Method 1: Carbolithiation and Hydrolysis
48.1.2.1 Method 2: Carbomagnesiation and Hydrolysis
48.1.2.2 Variation 1: Uncatalyzed Carbomagnesiation
48.1.2.2 Variation 2: Catalyzed Carbomagnesiation
48.1.2.2 Variation 3: Stereoselective Carbomagnesiation
48.1.2.3 Method 3: Carbozincation and Hydrolysis
48.1.2.3 Variation 1: Uncatalyzed Carbozincation
48.1.2.3 Variation 2: Catalyzed Carbozincation
48.1.2.4 Method 4: Carbocupration and Hydrolysis
48.1.2.5 Method 5: Carboalumination and Hydrolysis
48.1.2.5 Variation 1: Uncatalyzed Carboalumination
48.1.2.5 Variation 2: Catalyzed Carboalumination
48.1.2.5 Variation 3: Enantioselective Carboalumination
48.1.2.5 Variation 4: Enantioselective Carboalumination in Target-Oriented Natural Product Synthesis
48.1.2.6 Method 6: Carbotitanation and Hydrolysis
48.1.2.7 Method 7: Carbozirconation and Hydrolysis
48.1.2.8 Method 8: Other Carbometalation Processes
48.1.3 Additions of Radicals
48.1.3.1 Method 1: Additions of Alkanes to Alkenes

Synthesis by Reduction with C–C Bond Cleavage
P. Margaretha

Alkanes by Carbon Monoxide Extrusion from Aldehydes
48.1.5.1 Method 1: Decarbonylation in the Presence of Rhodium Complexes
48.1.5.2 Method 2: Decarbonylation in the Presence of Other Group 8–10 Metal Complexes
48.1.5.3 Method 3: Light-Induced Decarbonylation
48.1.5.4 Method 4: Functional Decarbonylation via Homolytically Induced Decomposition of Unsaturated Peroxyacetals 444
48.1.5.2 Alkanes by Base-Induced Cleavage of Ketones 445
48.1.5.2.1 Method 1: Synthesis by the Haller–Bauer Reaction 445
48.1.5.3 Alkanes from Carboxylic Acid Derivatives 446
48.1.5.3.1 Method 1: Synthesis from Acid Chlorides 446
48.1.5.3.2 Method 2: Synthesis from Esters 447
48.1.5.3.3 Method 3: Synthesis from Thioesters 447
48.1.5.3.4 Method 4: Synthesis from Selenoesters 448
48.1.5.4 Alkanes from Carboxylic Acid Derivatives by Decarboxylation 450
48.1.5.4.1 Method 1: Synthesis from Peroxy Esters 450
48.1.5.4.2 Method 2: Synthesis from Acyl Derivatives of Hydroxamic Acids 451
48.1.5.4.3 Method 3: Synthesis from Acyl Derivatives of Thiohydroxamic Acids 452
48.1.5.5 Alkanes from Alkanecarbonitriles 454
48.1.5.5.1 Method 1: Reduction with Lithium or Sodium in Ammonia 454
48.1.5.5.2 Method 2: Reduction with Potassium Metal 455
48.1.5.5.3 Method 3: Reductive Decyanation Using Alkylithium Reagents 456

48.1.6 Synthesis from Other Alkanes

48.1.6.1 Bond Cleavage Reactions
Á. Molnár and P. Margaretha

48.1.6.1 Bond Cleavage Reactions 459
48.1.6.1.1 Method 1: Ring Opening of Small Carbon Rings 459
48.1.6.1.1.1 Variation 1: Catalytic Hydrogenolysis 459
48.1.6.1.1.2 Variation 2: Reductive Cleavage by Alkali Metals 463
48.1.6.1.2 Method 2: Demethylation of Alkanes 465

48.1.6.2 Dehydrodimerization Reactions
Á. Molnár

48.1.6.2 Dehydrodimerization Reactions 469
48.1.6.2.1 Method 1: Dehydrodimerization of Alkanes 469

48.1.6.3 Isomerization Reactions
Á. Molnár

48.1.6.3 Isomerization Reactions 473
48.1.6.3.1 Method 1: Skeletal Isomerization of Alkanes 473
48.2 Product Class 2: Cyclopropanes
A. de Meijere and S. I. Kozhushkov

48.2 Synthesis of Product Class 2: Cyclopropanes

48.2.1 Method 1: Synthesis by Cyclization Reactions

48.2.1.1 Variation 1: Intramolecular β-C–H Insertion of a Carbene

48.2.1.2 Variation 2: Radical Insertion into a C–H Bond

48.2.1.3 Variation 3: Radical Insertion into a C–C Bond

48.2.1.4 Variation 4: 1,5-Addition and Cycloaddition Reactions of Norbornadiene

48.2.1.5 Method 2: Synthesis by Cyclizing Elimination Reactions from a C₃ Building Block

48.2.1.6 Variation 1: 1,3-Elimination of Two Heteroatoms

48.2.1.7 Variation 2: 1,3-Elimination of HX (X = Heteroatom or Heteroatom-Containing Functional Group)

48.2.1.8 Variation 3: γ-Elimination of Group 14 Elements in a Carbocationic Species

48.2.1.9 Method 3: Synthesis by Ring-Contraction Reactions

48.2.1.10 Variation 1: Ring-Contracting Elimination of Nitrogen from 4,5-Dihydro-3H-pyrazoles

48.2.1.11 Variation 2: Ring-Contracting Elimination of One or Two C=O Units from Cyclobutanones or Cyclopentanediones

48.2.1.12 Method 4: Synthesis by Cycloaddition Reactions

48.2.1.13 Variation 1: Cyclopropanation with Photochemically or Thermally Generated Carbenes

48.2.1.14 Variation 2: Cyclopropanation with Catalytically Generated Methylene

48.2.1.15 Variation 3: Cyclopropanation with Methylenoids (Simmons–Smith Cyclopropanation)

48.2.1.16 Variation 4: Cyclopropanation with Dihalocarbenes Followed by Reductive Dehalogenation

48.2.1.17 Variation 5: Cyclopropanation with Arylcarbenes (Arylcarbenoids)

48.2.1.18 Variation 6: Cycloaddition Reactions of Cycloprenes

48.2.1.19 Variation 7: Dimerization and Oligomerization Reactions of Cyclopropenes

48.2.1.20 Method 5: Synthesis by Addition to C=C Bonds of Cyclopropenes with Retention of the Cyclopropane Ring

48.2.1.21 Variation 1: Hydrogenation

48.2.1.22 Variation 2: Addition of Organometallic Species

48.2.1.23 Method 6: Synthesis by Rearrangement of the Carbon Skeleton

48.2.1.24 Variation 1: Homoallyl or Cyclobutyl Rearrangements to a Cyclopropylmethyl Group

48.2.1.25 Variation 2: Rearrangements in Oligoene Systems

48.2.1.26 Variation 3: Miscellaneous Rearrangements

48.2.1.27 Method 7: Synthesis by Transformation of Other Cyclopropanes

48.2.1.28 Variation 1: Reactions without Ring Opening of the Cyclopropane Moieties

48.2.1.29 Variation 2: Reactions with Ring Opening of the Cyclopropane Moieties
48.2 Methods 8: Miscellaneous Reactions

48.2.1 Variation 1: Reductive Cyclopropanation of a Carbonyl Group

48.2.2 Variation 2: Cycloaddition and Insertion Reactions of Carbenoids

48.2.3 Variation 3: Oligo- and Polymerization Reactions

48.2.4 Variation 4: Cyclopropanation with Sulfur Ylides

48.2.2 Applications of Product Class 2 in Organic Synthesis

48.3 Product Class 3: Cyclobutanes

R. Kostikov and M. S. Baird

48.3.1 Synthesis of Product Class 3

48.3.1.1 Method 1: Ring-Opening Reactions

48.3.1.1.1 Variation 1: Opening of the Central Bond in Bicyclo[1.1.0]butanes

48.3.1.1.2 Variation 2: Ring Opening of One Bond in [1.1.n]Propellanes

48.3.1.2 Method 2: 1,4-Cycloelimination of Two Heteroatoms from 1,4-Dihalides or Similar Difunctional Compounds

48.3.1.3 Method 3: Ring-Contraction Reactions

48.3.1.3.1 Variation 1: Elimination of Nitrogen from Six-Membered Heterocycles

48.3.1.3.2 Variation 2: Decarbonylation of Cyclopentanones

48.3.1.3.3 Variation 3: Elimination of a Metal Atom from Metallacyclopentanes

48.3.1.3.4 Variation 4: Rearrangement of Bicyclo[4.1.0]hept-2-ene Derivatives

48.3.1.4 Method 4: [2 + 2]-Cycloaddition Reactions

48.3.1.4.1 Variation 1: Cycloaddition Reactions of Cyclopropenes

48.3.1.4.2 Variation 2: Cycloaddition Reactions of Methylene cyclopropanes

48.3.1.4.3 Variation 3: Cycloaddition Reactions of Cyclobutene

48.3.1.4.4 Variation 4: Miscellaneous Intramolecular Cycloadditions

48.3.1.5 Method 5: Synthesis with Retention of the Cyclobutane Ring

48.3.1.5.1 Variation 1: Hydrogenation of Unsaturated Hydrocarbons

48.3.1.5.2 Variation 2: Hydrogenation of 1-(Organosulfanyl)cyclobutenes

48.3.1.6 Method 6: Rearrangement of the Carbon Framework

48.3.1.6.1 Variation 1: Rearrangement of Cyclopropylmethyl and Homoallyl Derivatives

48.3.1.6.2 Variation 2: Rearrangement of Compounds Containing Hexa-1,5-dienyl or Dicyclopentyl Fragments

48.3.1.7 Method 7: Transformation of Other Cyclobutanes

48.3.2 Applications of Product Class 3 in Organic Synthesis

48.4 Product Class 4: Five-Membered and Larger-Ring Cycloalkanes

M. J. Palframan and A. F. Parsons

48.4.1 Synthesis of Product Class 4

48.4.1.1 Method 1: Synthesis by Reduction without C—C Bond Cleavage

48.4.1.1.1 Variation 1: Of Cycloalkenes
48.4.1.2 Variation 2: Of Cyclodienes ............................................ 650
48.4.1.3 Variation 3: Of Substituted Benzenes .......................... 651
48.4.1.4 Method 2: Synthesis by Radical Cyclization .................... 652
48.4.1.5 Variation 1: Formation of Cyclopentanes and Cyclohexanes 652
48.4.1.6 Variation 2: Formation of Medium-Sized Rings ............... 663
48.4.1.7 Variation 3: Formation of Large-Sized Rings ................. 664
48.4.1.8 Method 3: Synthesis by Polar Cyclization ..................... 665
48.4.1.9 Variation 1: Nucleophilic Substitution ............................. 665
48.4.1.10 Variation 2: Nucleophilic Addition .............................. 668
48.4.1.11 Method 4: Synthesis by Metal-Promoted Cyclization ......... 673
48.4.1.12 Variation 1: Of Dienes ............................................. 673
48.4.1.13 Variation 2: Of Enynes ............................................. 675
48.4.1.14 Variation 3: Of Diynes ............................................. 679
48.4.1.15 Variation 4: Of Trimethylenemethanes ......................... 681
48.4.1.16 Variation 5: Of Unsaturated Diazocompounds ................. 683
48.4.1.17 Method 5: Synthesis by Ring Expansion ....................... 685
48.4.1.18 Method 6: Synthesis by Ring Contraction ..................... 687

48.5 Product Class 5: Hydrocarbon Polymers
W. Kaminsky

48.5.1 Product Subclass 1: Polyethenes ..................................... 696
48.5.1.1 Synthesis of Product Subclass 1 .................................. 696
48.5.1.2 Method 1: Synthesis by Decomposition of Diazomethane ..... 696
48.5.1.3 Method 2: Synthesis by Radical Polymerization .............. 697
48.5.1.4 Method 3: Synthesis by Coordination Catalysis ............... 699
48.5.1.5 Variation 1: Using Early Ziegler–Natta Catalysts: Titanium Halides–Alkylaluminum Complexes ......................... 699
48.5.1.6 Variation 2: Using Third-Generation Supported Ziegler–Natta Catalysts ............................................. 701
48.5.1.7 Variation 3: Using Phillips Catalysts ............................. 701
48.5.1.8 Variation 4: Using Homogeneous (Single-Site) Catalysis with Metalloccenes Activated by Methylaluminoxane ................. 702
48.5.1.9 Variation 5: Using Homogeneous (Single-Site) Catalysis with Metalloccenes Activated by Fluorinated Boranes or Borates 705
48.5.1.10 Variation 6: Using Homogeneous (Single-Site) Catalysis with Late-Transition-Metal Catalysts ......................... 705

48.5.2 Product Subclass 2: Polyethylene Copolymers .................. 708
48.5.2.1 Synthesis of Product Subclass 2 .................................. 708
48.5.2.2 Method 1: Copolymerization of Ethene with Alk-1-enes ........ 708
48.5.2.3 Variation 1: Using Ziegler–Natta Catalysts ...................... 709
48.5.2.4 Variation 2: Of Short- to Medium-Chain Alk-1-enes Using Single-Site Catalysts ............................................. 709
48.5.2.5 Variation 3: Of Medium- to Long-Chain Alk-1-enes Using Single-Site Catalysts ............................................. 711
48.5.2.6 Method 2: Synthesis of Ethene–Propene Rubbers ............ 712
