Volume 1:
Compounds with Transition Metal–Carbon π-Bonds
and Compounds of groups 10–8 (Ni, Pd, Pt, Co, Rh,
Ir, Fe, Ru, Os)

Preface ................................................................. V

Table of Contents ................................................... IX

Introduction
M. Lautens ............................................................ 1

1.1 Product Class 1: Organometallic Complexes of Nickel
J. Montgomery ...................................................... 11

1.2 Product Class 2: Organometallic Complexes of Palladium
1.2.1 Product Subclass 1: Palladium–Diene Complexes
J. M. Takacs, X. Jiang, and S. Vayalakkada ................. 63

1.2.2 Product Subclass 2: Palladium–Allyl Complexes
R. W. Friesen ....................................................... 113

1.2.3 Product Subclass 3: Palladium–Alkene Complexes
J. M. Takacs, S. Vayalakkada, and X. Jiang ................. 265

1.2.4 Product Subclass 4: Palladium–Alkene Complexes
J. M. Takacs and S. Vayalakkada .............................. 319

1.3 Product Class 3: Organometallic Complexes of Platinum
A. Ogawa and T. Hirao ........................................... 389

1.4 Product Class 4: Organometallic Complexes of Cobalt
M. Malacia, C. Aubert, and J.-L. Renaud .................... 439

1.5 Product Class 5: Organometallic Complexes of Rhodium
I. Ojima, A. T. Vu, and D. Bonafoux ....................... 531

1.6 Product Class 6: Organometallic Complexes of Iridium
J. M. O’Connor .................................................... 617

Introduction
M. Lautens

Introduction ........................................................................................................... 1

1.1 Product Class 1: Organometallic Complexes of Nickel
J. Montgomery

1.1 Product Class 1: Organometallic Complexes of Nickel ........................................ 11
1.1.1 Product Subclass 1: Nickel Complexes of 1,3-Dienes ........................................ 12
   Synthesis of Product Subclass 1 ........................................................................... 12
   1.1.1.1 Method 1: Ligand Exchange with Bis(11-cycloocta-1,5-diene)nickel(0) ........ 12
   Applications of Product Subclass 1 in Organic Synthesis .................................... 13
   1.1.1.2 Method 2: Diene–Diene Cycloadditions ................................................... 13
   1.1.1.3 Method 3: Diene–Alkyne Cycloadditions ................................................ 14
   1.1.1.4 Method 4: Diene–Aldehyde Reductive Cyclizations .................................. 15
   1.1.1.5 Variation 1: Triethylsilane-Mediated Reactions ....................................... 15
   1.1.1.6 Variation 2: Triethyborane-Mediated Reactions ...................................... 16
   1.1.1.5 Method 5: 1,4-Dialkylation of Dienes .................................................... 16
   1.1.1.6 Method 6: Hydrocyanation of Dienes .................................................... 17
1.1.2 Product Subclass 2: Nickel–Allyl Complexes .................................................... 17
   Synthesis of Product Subclass 2 ........................................................................... 17
   1.1.2.1 Method 1: Oxidative Addition of Nickel(0) with Allylic Electrophiles ........ 17
   1.1.2.2 Method 2: Addition of Alkylmagnesium Halides to Nickel(II) Salts .......... 18
   1.1.2.3 Method 3: Oxidative Addition of Nickel(0) with Enones in the Presence of Lewis Acids ................................................................. 19
   1.1.2.4 Method 4: Oxidative Cyclization of Nickel(0) Complexes of Conjugated Dienes ................................................................. 20
   Applications of Product Subclass 2 in Organic Synthesis .................................... 21
   1.1.2.5 Method 5: Coupling of Allyl Halide Derived Nickel–Allyl Complexes with Alkyl Halides and Other Electrophiles .................. 21
   1.1.2.6 Method 6: Coupling of Enal-Derived Nickel–Allyl Complexes with Alkyl Halides and Other Electrophiles .................. 22
   1.1.2.7 Method 7: Coupling of Nickel–Allyl Complexes with Main Group Organometallics ................................................................. 24
   1.1.2.7.1 Variation 1: Allylic Ether Derived π-Allyl Complexes ............................ 24
   1.1.2.7.2 Variation 2: Enal-Derived π-Allyl Complexes .................................... 26
   1.1.2.7.3 Variation 3: Allylic Alcohol Derived π-Allyl Complexes .................. 26

Allylic Carboxylates with Diphenylphosphorothioiylthium  .... 218
1.2.54 Method 54: Allyl Arenes from Coupling of Allylic Electrophiles and
Aryl Organometallics  .................................................... 219
1.2.54.1 Variation 1: From Tetrabutylammonium Difluorotriphenylsilicate  .... 220
1.2.54.2 Variation 2: From Arylstannanes  ................................... 221
1.2.54.3 Variation 3: From Sodium Tetraphenylborate  .......................... 222
1.2.54.4 Variation 4: From Arylzincs  ......................................... 223
1.2.54.5 Variation 5: From Aryl Grignard Reagents  ............................ 224
1.2.55 Method 55: 1,3-Dienes from β-Elimination of Allylic Alcohol Derivatives
1.2.55.1 Variation 1: From Tetrabutylammonium Difluorotriphenylsilicate  .... 225
1.2.55.2 Variation 2: From Arylstannanes  ................................... 226
1.2.55.3 Variation 3: From Sodium Tetraphenylborate  .......................... 227
### Table of Contents

#### 1.2.2.56  
**Method 56:** 1,3-Dienes from Reductive Elimination of Dicarbonates of Enediols  

--- 229

#### 1.2.2.57  
**Method 57:** 1,3-Dienes from Decarboxylative Elimination of β-Acetoxy Carboxylic Acids  

--- 229

#### 1.2.2.58  
**Method 58:** 1,4-Dienes from Coupling of Alkenylzirconiums and Allylpalladium Complexes  

--- 230

#### 1.2.2.59  
**Method 59:** 1,4-Dienes from Coupling of Vinyl Organometallics and Allyl Electrophiles  

--- 231

#### 1.2.2.59.1  
**Variation 1:** From Alkenylaluminum Reagents  

--- 231

#### 1.2.2.59.2  
**Variation 2:** From Vinylstannanes  

--- 232

#### 1.2.2.60  
**Method 60:** 1,5-Dienes from Coupling of Allylstannanes and Allyl Electrophiles  

--- 234

#### 1.2.2.61  
**Method 61:** 1,6-Dienes from Dimerization of Butadienes (Telomerization)  

--- 235

#### 1.2.2.62  
**Method 62:** Methylene Cyclopentenones via [3+2]- Cycloaddition Reactions of Trimethylenemethanes  

--- 237

#### 1.2.2.63  
**Method 63:** Vinylcyclopentenones via [3+2]- Cycloaddition Reactions of Vinylcyclopropanes  

--- 240

#### 1.2.2.64  
**Method 64:** Vinylcyclopentenones from Palladium-Catalyzed Intramolecular Ene Reactions  

--- 241

#### 1.2.2.65  
**Method 65:** Alkenes from Reduction of Allylic Heterostituents  

--- 243

#### 1.2.2.66  
**Method 66:** 4-Substituted Alkenes from Alkylation of Stabilized Carbon Nucleophiles with Allyl Electrophiles  

--- 245

---

### 1.2.3  
**Product Subclass 3: Palladium–Alkyne Complexes**  

J. M. Takacs, S. Vyalalakada, and X. Jiang

---

### 1.2.3

#### 1.2.3  
**Product Subclass 3: Palladium–Alkyne Complexes**  

--- 265

#### 1.2.3.1  
**Method 1:** Preparations and Characterizations of Palladium–Alkyne Complexes  

--- 266

#### 1.2.3.2  
**Method 2:** Addition of Oxygen Nucleophiles: Carboxylates  

--- 268

#### 1.2.3.2.1  
**Variation 1:** Intramolecular Addition of Carboxylates Followed by Protonation  

--- 269

#### 1.2.3.2.2  
**Variation 2:** Intramolecular Addition of Carboxylates Followed by Allylation  

--- 272

#### 1.2.3.2.3  
**Variation 3:** Intramolecular Addition of Carboxylates Followed by Arylation or Vinylation  

--- 274

#### 1.2.3.3  
**Method 3:** Addition of Oxygen Nucleophiles: Hydroxy Moieties  

--- 276

#### 1.2.3.3.1  
**Variation 1:** Intramolecular Addition of Alcohols Followed by Protonation  

--- 277

#### 1.2.3.3.2  
**Variation 2:** Intramolecular Addition of Alcohols Followed by Carbon Monoxide Insertion  

--- 280

#### 1.2.3.3.3  
**Variation 3:** Intramolecular Addition of Alcohols Followed by Allylation  

--- 282
XVIII  Table of Contents

1.2.3.4  Variation 4:  Intramolecular Addition of Alcohols Followed by
              Vinylation or Arylation  ........................................ 284
1.2.3.4  Method 4:  Addition of Nitrogen Nucleophiles  ................. 287
1.2.3.4.1  Variation 1:  Intramolecular Addition of Nitrogen Nucleophiles
                    Followed by Protonation  .................................... 288
1.2.3.4.2  Variation 2:  Intramolecular Addition of Nitrogen Nucleophiles
                    Followed by Allylation  ..................................... 291
1.2.3.4.3  Variation 3:  Intramolecular Addition of Nitrogen Nucleophiles
                    Followed by Vinylation or Arylation  ....................... 294
1.2.3.4.4  Variation 4:  Intramolecular Addition of Nitrogen Nucleophiles
                    Followed by Vinylation or Arylation  ....................... 297
1.2.3.5  Method 5:  Addition of Carbon Nucleophiles  .................... 298
1.2.3.5.1  Variation 1:  Intramolecular Addition of Malononitriles to Alkynes
                    under Neutral Conditions  .................................. 299
1.2.3.5.2  Variation 2:  Tandem Michael Addition Followed by Intramolecular
                    Addition of Malonate Derivatives to Alkynes .......... 301
1.2.3.5.3  Variation 3:  Intramolecular Addition of Malonate Derivatives to Alkynes
                    under Strongly Basic Conditions: Four Modes of Reaction 302
1.2.3.6  Method 6:  Addition of Sulfur Nucleophiles  .................... 303
1.2.3.6.1  Variation 1:  Addition of Arenethiols to Alkynes To Form Vinyl Sulfides .. 304
1.2.3.6.2  Variation 2:  Thiocarbonylation of Alkynes with Thiols and
                    Carbon Monoxide  ........................................... 306
1.2.3.6.3  Variation 3:  Addition of Diaryl Disulfides to Alkynes To Form
                    1,2-Disulfanylalkenes  ...................................... 308
1.2.3.6.4  Variation 4:  Thiocarbonylation of Acetylenes with Disulfides ....... 309
1.2.3.6.5  Variation 5:  Palladium-Catalyzed Thioboration of Acetylenes
                    with 9-(Alkylsulfanyl)-9-borabicyclo[3.3.1]nonanes ........ 311
1.2.3.7  Method 7:  Addition of Halides  ................................ 312
1.2.3.7.1  Variation 1:  Palladium-Catalyzed Addition of Halides to Alkynes
                    Followed by Alkene Insertion and Protonolysis .......... 313
1.2.3.7.2  Variation 2:  Palladium-Catalyzed Addition of Halides to Alkynes
                    Followed by Alkene Insertion and β-Elimination ........ 314
1.2.3.7.3  Variation 3:  Palladium-Catalyzed Addition of Halides to Alkynes
                    Followed by Alkene Insertion and Oxidation .............. 315

1.2.4  Product Subclass 4: Palladium–Alkene Complexes
J. M. Takacs and S. Vayalakkada

1.2.4  Product Subclass 4: Palladium–Alkene Complexes  .................. 319
1.2.4  Synthesis of Product Subclass 4  ............................... 320
1.2.4.1  Method 1:  From a Palladium(II) Salt and an Alkene ............ 320
1.2.4.2  Method 2:  From Palladium(0) and an Alkene .................. 321
1.2.4.3  Method 3:  Palladium-Catalyzed Intermolecular Addition
                    of Oxygen Nucleophiles: Water and Alcohols ............ 322

## Table of Contents

### 1.6.1.4.1 Variation 1: From $[\text{Ir}_2(Cp^+)_2(\mu-\text{Cl})_2\text{Cl}_2]$ and Silver(I) Hexafluorophosphate or Tetrafluoroborate .......................... 624

### 1.6.1.4.2 Variation 2: From $[\text{Ir}_2(Cp^+)_2(\mu-\text{Cl})_2\text{Cl}_2]$ and Silver(I) Tetrafluoroborate Using an Acidic Workup .................................. 626

### 1.6.1.4.3 Variation 3: From $[\text{Ir}_2(Cp^+)_2(\mu-\text{Cl})_2\text{Cl}_2]$ and Trifluoroacetic Acid ........................................... 627

### 1.6.1.5 Applications of Product Subclass 1 in Organic Synthesis ................................................................. 628

### 1.6.1.6 Method 5: Dehydration of Cyclohexene ......................................................... 628

#### 1.6.2 Product Subclass 2: Iridium–Dienyl Complexes

Synthesis of Product Subclass 2 ........................................................................ 630

### 1.6.2.1 Method 1: Preparation of Neutral Iridium(I)–Dienyl Complexes by Ligand Substitution .............................................. 630

#### 1.6.2.1.1 Variation 1: From $[\text{Ir}_2(\mu-\text{Cl})_2(\eta^4\text{-cod})_2]$ .................................. 630

#### 1.6.2.1.2 Variation 2: From $[\text{Ir}_2(\mu-\text{Cl})_2(\eta^4\text{-coe})_2]$ .................................. 632

#### 1.6.2.1.3 Variation 3: From $[\text{Ir}_2(\mu-\text{Cl})_2(\eta^4\text{-coe})_4]$ and Phosphines ..................................................... 632

#### 1.6.2.1.4 Variation 4: From $[\text{Ir}_2(\mu-\text{Cl})_2(\eta^4\text{-coe})_4]$ and Ethene ................................................................. 634

#### 1.6.2.1.5 Variation 5: From $[\text{Ir}_2\text{Cl}_4(\text{CO})_8]$ .......................................................... 635

#### 1.6.2.1.6 Variation 6: From $[\text{IrCl}_4\cdot 3\text{H}_2\text{O}]$ ......................................................... 635

### 1.6.2.2 Method 2: Preparation of Cationic Iridium(III)–Dienyl Complexes by Elimination ................................................................. 636

#### 1.6.2.2.1 Variation 1: From $[\text{IrH}_2(\text{OCMe}_2)_2(\text{PPPh}_3)_2][\text{X} (\text{X} = \text{SbF}_5$ or $\text{BF}_4]$ .............................................. 636

#### 1.6.2.2.2 Variation 2: From $[\text{Ir}(\text{Cp}^+)_2(\mu-\text{Cl})_2\text{Cl}_2]$ ......................................................... 637

### 1.6.2.3 Method 3: Preparation of Cationic Iridium(I)–Dienyl Complexes by Rearrangement ................................................................. 638

### 1.6.2.4 Method 4: Preparation of Cationic Iridium(III)–Cyclohexadienyl and Iridium(III)–Cycloheptadienyl Complexes by Elimination ................................................................. 640

#### 1.6.2.4.1 Variation 1: From $[\text{IrH}_2(\text{OCMe}_2)_2(\text{PPPh}_3)_2][\text{BF}_4$ ................................................................. 640

#### 1.6.2.4.2 Variation 2: From $[\text{Ir(\eta^4\text{-cod})_2L}_2][\text{SbF}_5 (L = \text{phospine})$ ................................................................. 641

#### 1.6.2.4.3 Variation 3: Oxo-$\eta^2$-cyclohexadienyl Complexes from $[\text{Ir}_2(Cp^+)_2(\mu-\text{Cl})_2\text{Cl}_2]$ .............................................. 641

#### 1.6.2.4.4 Variation 4: Imino-$\eta^2$-cyclohexadienyl Complexes from $[\text{Ir}_2(Cp^+)_2(\mu-\text{Cl})_2\text{Cl}_2]$ .............................................. 642

### 1.6.2.5 Method 5: Preparation of Cationic Iridium(III)–Cyclohexadienyl Complexes by Addition ................................................................. 644

### 1.6.2.6 Method 6: Preparation of (Dienyl)iridium(III) Complexes with Retention of the Cyclopentadienyl Ligand ................................................................. 645

#### 1.6.2.6.1 Variation 1: Dienyl Hydrides from Borohydride and (Dienyl)iridium Halides ................................................................. 645

#### 1.6.2.6.2 Variation 2: Dienyl Hydrides from Reaction of Dienyl Halides and Zinc/Acetic Acid ................................................................. 646

#### 1.6.2.6.3 Variation 3: Conversion of $[\text{Ir}_2(Cp^+)_2(\mu-\text{Cl})_2(\mu-H)]$ into $[\text{Ir}(\text{Cp}^+)_2(\mu-H)]\text{PF}_5$ ................................................................. 647

#### 1.6.2.6.4 Variation 4: Conversion of $[\text{Ir}_2(Cp^+)_2(\mu-H)]\text{PF}_5$ into $[\text{Ir}(\text{Cp}^+)_2\text{H}_2]$ ................................................................. 648

#### 1.6.2.6.5 Variation 5: Dienyl Hydrides from Protonation at Iridium ................................................................. 649

#### 1.6.2.6.6 Variation 6: Dienyl Fluoride Complexes by Ligand Substitution ................................................................. 650

#### 1.6.2.6.7 Variation 7: Dienyl Alkoxide Complexes by Ligand Substitution ................................................................. 651

#### 1.6.2.6.8 Variation 8: Dienyl Acetate Complexes by Ligand Substitution ................................................................. 652

#### 1.6.2.6.9 Variation 9: Dienyl $\alpha$-Amino Acidate Complexes by Ligand Substitution .......................... 652
| 1.6.2.6.10 | Variation 10: | Dienyl Triflate (Coordinated) Complexes by Substitution | .......................... | 654 |
| 1.6.2.6.11 | Variation 11: | Dienyl Hydroxo Complexes by Ligand Substitution | .......................... | 655 |
| 1.6.2.6.12 | Variation 12: | A Dienyl μ-Oxo Complex by Ligand Substitution | .......................... | 656 |
| 1.6.2.6.13 | Variation 13: | Dienyl Imido Complexes by Ligand Substitution | .......................... | 656 |
| 1.6.2.6.14 | Variation 14: | A Mononuclear (Dienyl)iridium–Nitrosyl Complex by Ligand Substitution | .......................... | 657 |
| 1.6.2.6.15 | Variation 15: | A Mononuclear (Dienyl)iridium–Aryldiazenido Complex by Ligand Substitution | .......................... | 658 |
| 1.6.2.6.16 | Variation 16: | A Mononuclear (Dienyl)iridium–Amido Complex by Ligand Substitution | .......................... | 659 |
| 1.6.2.6.17 | Variation 17: | (Dienyl)iridium–Amine Complexes by Ligand Addition | .......................... | 660 |
| 1.6.2.6.18 | Variation 18: | Cationic (Dienyl)iridium–Amine Complexes by Ligand Addition | .......................... | 661 |
| 1.6.2.6.19 | Variation 19: | Cationic (Dienyl)iridium–Acetonitrile Complexes | .......................... | 662 |
| 1.6.2.6.20 | Variation 20: | (Dienyl)iridium–Alkyl Complexes by Substitution of Alkyl for Halide | .......................... | 663 |
| 1.6.2.6.21 | Variation 21: | (Dienyl)iridium–Alkyl Complexes by Alkylation of a Dienyl Metalate Anion | .......................... | 664 |
| 1.6.2.6.22 | Variation 22: | (Dienyl)iridium–Alkyl Complexes by Oxidative Addition of Alkanes to \([\text{Ir}(\text{Cp}^+)(\text{PM}_{2})]\) | .......................... | 665 |
| 1.6.2.6.23 | Variation 23: | (Dienyl)iridium–Aryl Complexes by Oxidative Addition of Arenes | .......................... | 666 |

| 1.6.2.6.26 | Variation 26: | (Dienyl)iridium–Carbon Monoxide Complexes by Addition | .......................... | 668 |
| 1.6.2.6.27 | Variation 27: | Dienyl Chloride Complexes by Oxidative Addition of Chlorine | .......................... | 669 |
| 1.6.2.6.28 | Variation 28: | Dienyl Bis(Sulfido) Complexes by Substitution | .......................... | 669 |
| 1.6.2.6.29 | Variation 29: | Dienyl Phosphine Complexes by Substitution | .......................... | 671 |
| 1.6.2.6.30 | Variation 30: | \([\text{Ir}(\text{Cp}^+)(\text{POMe}_{2})]_{2}(\text{ClO}_{4})_{2}\) from \([\text{Ir}_{2}(\text{Cp})_{2}(\mu-\text{Cl})_{2}\text{Cl}_{2}]\) | .......................... | 672 |
| 1.6.2.6.31 | Variation 31: | Dienyl Silyle complexes by Silylation of a Dienyl Metalate Anion | .......................... | 673 |
| 1.6.2.6.32 | Variation 32: | Dienyl Bromo Complexes by Substitution | .......................... | 673 |
| 1.6.2.6.33 | Variation 33: | Dienyl Bromo Complexes by Oxidative Addition of Bromine | .......................... | 674 |
| 1.6.2.6.34 | Variation 34: | Dienyl Dicarbonyl Complexes by Oxidative Addition of Diselenides | .......................... | 674 |
| 1.6.2.6.35 | Variation 35: | Dienyl Iodo Complexes by Oxidative Addition of Iodine | .......................... | 675 |
| 1.6.2.7 | Method 7: | Conversion of Alkenes and Hexaborane(10) into Alkenylboranes | .......................... | 675 |
| 1.6.3 | Product Subclass 3: Iridium–Diene Complexes | .......................... | 676 |
| 1.6.3.1 | Method 1: | Iridium–Diene Complexes by Ligand Substitution | .......................... | 677 |
| 1.6.3.1.1 | Variation 1: | Synthesis of \([\text{Ir}(\text{η}^3-\text{C}_8\text{H}_8\text{triphos})]\text{BPH}_4\) | .......................... | 677 |
| 1.6.3.1.2 | Variation 2: | From \([\text{Ir}_2(\mu-\text{Cl})_{2}(\text{η}^3-\text{coe})_{2}]\) | .......................... | 678 |
| 1.6.3.2 | Method 2: | Iridium–Diene Complexes by Ligand Elimination | .......................... | 678 |
Table of Contents

1.6.3.2.1 Variation 1: Synthesis of $[\text{Ir}_2(\mu-\text{Cl})_2(\eta^5\text{-cod})_2]$ ........................................... 679
1.6.3.2.2 Variation 2: Synthesis of $[\text{IrCl}(\eta^5\text{-TFB})_2]$ ......................................................... 680
1.6.3.2.3 Variation 3: Synthesis of $[\text{Ir}(\eta^5\text{-cod})_2]\text{BF}_4$ .................................................. 680
1.6.3.2.4 Variation 4: Synthesis of $[\text{IrCl}(\eta^5\text{-1,3-C_4H_5})(\eta^5\text{-cod})]$ ........................... 681
1.6.3.3 Variation 1: Synthesis of $[\text{Ir}(\eta^5\text{-1,3-C_4H_5})]$ from $[\text{Ir}(\text{Cp}^*)(\eta^5\text{-1,3-C_4H_5})]$ .................................................. 682
1.6.3.3.1 Variation 2: Synthesis of the $\eta^5$-Cyclohexadienone Complex $[\text{Ir}(\text{Cp}^*)(\eta^5\text{-C_4H_5}1\text{OMe})]$ .................................................. 683
1.6.3.4 Method 4: Iridium–Diene Complexes by Rearrangement ................................. 684
1.6.3.5 Method 5: Preparation of Iridium–Diene Complexes with Retention of the Diene Ligand .................................................. 685
1.6.3.5.1 Variation 1: Synthesis of a (Diene)iridium Dihydride Complex: $\text{cis,trans-Ir}_2(\eta^5\text{-cod})(\text{PMePh}_3)_2]PF_6$ .................................................. 685
1.6.3.5.2 Variation 2: Synthesis of (Diene)iridium Hydride Complexes from HX Addition to Iridium .................................................. 686
1.6.3.5.3 Variation 3: Synthesis of $[\text{IrH}(\eta^5\text{-cod})\text{PPh}_3]$ .................................................. 686
1.6.3.5.4 Variation 4: Synthesis of $[\text{Ir}_2(\mu-\text{OMe})_2(\eta^5\text{-cod})_2]$ .................................................. 687
1.6.3.5.5 Variation 5: Synthesis of $[\text{Ir}(\text{fac})(\eta^5\text{-cod})]$ .................................................. 688
1.6.3.5.6 Variation 6: Synthesis of Iridium–Amine Complexes: $[\text{IrCl}(\text{bipy})](\eta^5\text{-TFB})$ .................................................. 688
1.6.3.5.7 Variation 7: Synthesis of $[\text{Ir}(\text{Tp})(\eta^5\text{-cod})]$ .................................................. 689
1.6.3.5.8 Variation 8: Synthesis of $[\text{Ir}(\eta^5\text{-cod})(\text{py})]PF_6$ .................................................. 690
1.6.3.5.9 Variation 9: Synthesis of Iridium–Alkynyl Complexes: $[\text{Ir}(\text{C=CPh})(\eta^5\text{-cod})(\text{PCy}_3)]$ .................................................. 691
1.6.3.5.10 Variation 10: Synthesis of Iridium–Alkyl Complexes: $[\text{Ir}(/\text{Me})(\eta^5\text{-1,3-C_4H_5})_2]$ .................................................. 691
1.6.3.5.11 Variation 11: Synthesis of $[\text{Ir}(\eta^5\text{-cod})(\text{py})\text{PCy_3}]PF_6$ .................................................. 692
1.6.3.5.12 Variation 12: Synthesis of a Phosphinohydroxazole Complex: $[\text{Ir}(\eta^5\text{-cod})(\text{NP})]\text{BARF}$ .................................................. 692
1.6.3.5.13 Variation 13: Synthesis of a Neutral Phosphine Complex: $[\text{IrCl}(\eta^5\text{-cod})(\text{PPh}_3)]$ .................................................. 693
1.6.3.5.14 Variation 14: Synthesis of Neutral Phosphine Complexes with Retention of the Diene Ligand: $[\text{IrCl}(\eta^5\text{-cod})((-)-\text{Chiraphos})]$ .................................................. 694
1.6.3.5.15 Variation 15: Synthesis of $[\text{Ir}(\eta^5\text{-cod})\text{PPh}_3]_{2}\text{BF}_4$ .................................................. 695
1.6.3.5.16 Variation 16: Synthesis of $[\text{Ir}(\eta^5\text{-cod})\text{PMePh}_3]_{2}\text{Cl}$ .................................................. 696
1.6.3.5.17 Variation 17: Synthesis of $[\text{Ir}(\eta^5\text{-cod})((+)-\text{degusph})]\text{BF}_4$ .................................................. 697
Applications of Product Subclass 3 in Organic Synthesis .................................................. 698
1.6.3.6 Method 6: Iridium–Diene Complexes as Catalyst Precursors .................................................. 698
1.6.3.6.1 Variation 1: Hydrogenation of Carbonyl Compounds via Hydrogen Atom Transfer from Propan-2-ol .................................................. 698
1.6.3.6.2 Variation 2: Hydrogenation of Ketones with Hydrogen .................................................. 700
1.6.3.6.3 Variation 3: Asymmetric Hydroislylation of Ketones .................................................. 703
1.6.3.6.4 Variation 4: Asymmetric Hydrogenation of Imines .................................................. 705
1.6.3.6.5 Variation 5: Hydrogenation of Alkenes with $[\text{Ir}(\eta^5\text{-cod})(\text{py})\text{PCy}_3]PF_6$ .................................................. 709
1.6.3.6.6 Variation 6: Asymmetric Hydrogenation of Alkenes .................................................. 710
1.6.3.6.7 Variation 7: Allylic Alkylation .................................................. 711
1.6.3.6.8 Variation 8: Isomerization of Allyl Ethers .......................... 712
1.6.4 **Product Subclass 4: Iridium–Allyl Complexes** .......................... 714
   Synthesis of Product Subclass 4 .................................................. 715
   1.6.4.1 Method 1: Preparation of Iridium–Allyl Complexes by Ligand Substitution 715
   1.6.4.1.1 Variation 1: From iridium Halides and Grignard or Organolithium Reagents 715
   1.6.4.1.2 Variation 2: Synthesis of the Cyclopropenyl Complex [Ir(η²-C₆H₄Bu)(CO)] 716
   1.6.4.2 Method 2: Preparation of Iridium–Allyl Complexes by Addition .................. 717
   1.6.4.2.1 Variation 1: From Iridium(I) Precursors and Allyl Halides ................. 717
   1.6.4.2.2 Variation 2: From [Ir₂(μ-Cl)₂(η²-coe)₂] and Allylbenzene .................. 718
   1.6.4.2.3 Variation 3: From Diene Insertion into Ir=H Bonds ......................... 718
   1.6.4.2.4 Variation 4: From Nucleophilic Attack on a η²-Allenyl Ligand ............. 719
   1.6.4.3 Method 3: Preparation of Iridium–Allyl Complexes by Elimination .......... 720
   1.6.4.3.1 Variation 1: From [Ir₂(Cp*)₂(μ-Cl)₂Cl₂] and Dienes in the Presence of Alcohol and Base .............................................. 720
   1.6.4.3.2 Variation 2: From [Ir₂(Cp*)₂(μ-Cl)₂Cl₂], Silver(I) Salts, and an Alkenone 721
   Applications of Product Subclass 4 in Organic Synthesis .......................... 722
   1.6.4.4 Method 4: Nucleophilic Attack on π-Allyl Intermediates ..................... 722
1.6.5 **Product Subclass 5: Iridium–Alkyne Complexes** .......................... 722
   Synthesis of Product Subclass 5 .................................................. 723
   1.6.5.1 Method 1: Preparation of Iridium–Alkyne Complexes by Ligand Substitution 723
   1.6.5.2 Method 2: Preparation of Iridium–Alkyne Complexes by Addition .......... 724
1.6.6 **Product Subclass 6: Iridium–Alkene Complexes** .......................... 725
   Synthesis of Product Subclass 6 .................................................. 726
   1.6.6.1 Method 1: Preparation of Iridium–Alkene Complexes by Ligand Substitution 726
   1.6.6.2 Method 2: Preparation of Iridium–Alkene Complexes by Addition .......... 727
   1.6.6.3 Method 3: Preparation of Iridium–Alkene Complexes by Elimination ......... 728
   Applications of Product Subclass 6 in Organic Synthesis .......................... 729
   1.6.6.4 Method 4: Iridium–Alkene Complexes in Catalysis .......................... 729
1.6.7 **Product Subclass 7: Iridium–Carbene Complexes** .......................... 729
   Synthesis of Product Subclass 7 .................................................. 730
   1.6.7.1 Method 1: Preparation of Iridium–Carbene Complexes by Ligand Substitution 730
   1.6.7.1.1 Variation 1: From [Ir(R'C≡CR'C≡CR')(NCMe)₂(PPh₃)₂]BF₄ and But-3-yn-1-ol ......................................................... 730
   1.6.7.1.2 Variation 2: A Vinlylidene Complex from [Ir[N(SiMe₃)₂CH₂PPh₂]₂(η²-coe)] and Acetylene ................................................. 731
   1.6.7.1.3 Variation 3: A Vinlylidene Complex from [Ir₂(μ-Cl)₂(η²-coe)₄] and Sodium/1-Chloro-2-methylprop-1-ene ......................................................... 731
   1.6.7.2 Method 2: Preparation of Iridium–Carbene Complexes by Addition .......... 732

# Volume 2: Compounds of Groups 7–3 (Mn⋯, Cr⋯, V⋯, Ti⋯, Sc⋯, La⋯, Ac⋯)

## Preface

Volume Editor’s Preface ................................................... VII  
Table of Contents ........................................................ XI

## Introduction

T. Imamoto ........................................................................ 1

### 2.1 Product Class 1: Organometallic Complexes of Manganese

K. Oshima ........................................................................ 13

### 2.2 Product Class 2: Organometallic Complexes of Technetium

I. D. Gridnev and T. Imamoto ............................................. 91

### 2.3 Product Class 3: Organometallic Complexes of Rhenium

F. E. Kühn, C. C. Romão, and W. A. Herrmann ................. 111

### 2.4 Product Class 4: Arene Organometallic Complexes of Chromium, Molybdenum, and Tungsten

E. P. Kündig and S. H. Pache ........................................... 155

### 2.5 Product Class 5: Organometallic π-Complexes of Chromium, Molybdenum, and Tungsten Excluding Arenes

K. H. Theopold, A. Mommertz, and B. A. Salisbury ............ 229

### 2.6 Product Class 6: Organometallic Complexes of Chromium, Molybdenum, and Tungsten without Carbonyl Ligands

R. Poli and K. M. Smith .................................................. 283

### 2.7 Product Class 7: Carbonyl Complexes of Chromium, Molybdenum, and Tungsten with σ-Bonded Ligands

T. Ito and M. Minato ....................................................... 333

### 2.8 Product Class 8: Organometallic Complexes of Vanadium

T. Imamoto and I. D. Gridnev ........................................... 385

### 2.9 Product Class 9: Organometallic Complexes of Niobium and Tantalum

K. Mashima and A. Nakamura ........................................... 415

### 2.10 Product Class 10: Organometallic Complexes of Titanium

K. Mikami, Y. Matsumoto, and T. Shiono .......................... 457

Introduction
T. Imamoto

Introduction .................................................................................. 1

2.1 Product Class 1: Organometallic Complexes of Manganese
K. Oshima

2.1 Product Class 1: Organometallic Complexes of Manganese ............... 13
2.1.1 Product Subclass 1: Manganese–Cyclopentadienyl Complexes ........... 13
   Synthesis of Product Subclass 1 .................................................. 13
   2.1.1.1 Method 1: By Reaction between Cyclopentadienyl Anions and Manganese Halides .................................................. 13
   2.1.1.1 Variation 1: From Lithium Cyclopentadienide Salts and Manganese(II) Chloride ......................................................... 14
   2.1.1.2 Variation 2: From Cyclopentadienyl Salts and Carbonyl(halo)manganese Complexes .................................................... 15
   2.1.1.2 Method 2: By Reaction between 5-Acetyl-1,2,3,4,5-pentamethylcyclopentadiene and Decacarbonyldimanganese(0) ............ 17
   2.1.1.3 Method 3: By Substitution Reactions on the Manganese-Coordinated Cyclopentadienyl Ring ..................................................... 18
   2.1.1.4 Method 4: By Insertion of 5-Diazocyclopenta-1,3-diene into a Manganese—Halogen Bond .................................................. 18

2.1.2 Product Subclass 2: Manganese–Dienyl and –Diene Complexes ......... 19
   Synthesis of Product Subclass 2 .................................................. 19
   2.1.2.1 Method 1: (η<sup>5</sup>-Pentadienyl)manganese Complexes from Pentadienyl Anions .................................................. 19
   2.1.2.1 Variation 1: A Tetrakis(pentadienyl)trimanganese Complex from Manganese(II) Chloride and 3-Methylpentadienyl Anion ............ 21
   2.1.2.2 Method 2: (η<sup>4</sup>-Butadiene)manganese Complexes from the Butadiene–magnesium–Bis(tetrahydrofuran) Complex and Manganese(II) Chloride .................................................. 22
   2.1.2.3 Method 3: (η<sup>5</sup>-Pentadienyl)manganese Complexes from Potassium Pentadienide Salts .................................................. 22
   2.1.2.4 Method 4: (η<sup>5</sup>-Cyclohexadienyl)manganese Complexes by Reaction between Decacarbonyldimanganese(0) and Cyclohexa-1,3-dienes or by Reduction of Manganese–Arene Complexes ............. 23
2.1.3 **Product Subclass 3: Manganese–η³-Allyl Complexes** ...................................... 24
   Synthesis of Product Subclass 3 ................................................................. 24
   2.1.3.1 Method 1: From Carbonyl(halo)manganese Complexes and Allyl Bromide 24
   2.1.3.2 Method 2: From (η²-Alkene)- or (η²,1,3-Diene)manganese Complexes .... 24
   2.1.3.3 Method 3: From (η¹-Allyl)manganese Complexes by η¹ to η³ Isomerization 25

   Applications of Product Subclass 3 in Organic Synthesis ........................... 26
   2.1.3.4 Method 4: Reaction of (η³-Allyl)manganese Complexes with Nucleophiles 26

2.1.4 **Product Subclass 4: Manganese–Alkyne Complexes** ................................ 27
   Synthesis of Product Subclass 4 ................................................................. 27
   2.1.4.1 Method 1: By Ligand Substitution ..................................................... 27

2.1.5 **Product Subclass 5: Manganese–Alkene Complexes** .................................. 29
   Synthesis of Product Subclass 5 ................................................................. 29
   2.1.5.1 Method 1: By Ligand Substitution ..................................................... 29
   2.1.5.2 Method 2: By Ligand Transformation ................................................ 30

2.1.6 **Product Subclass 6: Manganese–Carbene Complexes** ............................... 30
   Synthesis of Product Subclass 6 ................................................................. 30
   2.1.6.1 Method 1: By Reaction between Alkylmetals and Carbonylmanganese Complexes .................................................. 30
   2.1.6.2 Method 2: Exocyclic Fischer Carbene Complexes by Reaction of Dibromoalkanes, Aziridines, or Oxiranes with Carbonylmanganese Complexes .................................................. 33
   2.1.6.3 Method 3: Manganese–Ethenylidene Complexes from Ethenylidyne Complexes .................................................. 34
   2.1.6.4 Method 4: From Manganese–Acetylene Complexes ................................ 35

   Applications of Product Subclass 6 in Organic Synthesis ............................. 36
   2.1.6.5 Method 5: Reaction with Enynes, α,β-Unsaturated Esters, or Alkynes ...... 36

2.1.7 **Product Subclass 7: Manganese–Carbyne Complexes** ............................... 38
   Synthesis of Product Subclass 7 ................................................................. 38
   2.1.7.1 Method 1: From Manganese–Carbene Complexes ................................ 38

2.1.8 **Product Subclass 8: Manganese–α-Alkyl Complexes** ............................... 39
   Synthesis of Product Subclass 8 ................................................................. 39
   2.1.8.1 Method 1: From Alkyl Halides and Sodium Pentacarbonylmanganate(I) - 39
   2.1.8.2 Method 2: From Alkylmetals and Manganese(II) Halides ...................... 40
   2.1.8.2.1 Variation 1: Preparation of Tetraalkylmanganate(II) Complexes ...... 40
   2.1.8.2.2 Variation 2: Preparation of Mono-, Di-, and Trialkylmanganese(II) Complexes .................................................. 41

   Applications of Product Subclass 8 in Organic Synthesis ............................. 43
   2.1.8.3 Method 3: Use of Organomanganese Reagents .................................... 43
   2.1.8.4 Method 4: Use of Alkylpentacarbonylmanganate(I) Complexes ............ 44
2.1.9  **Product Subclass 9: Manganese–\(\eta^1\)-Allyl Complexes**  
Synthesis of Product Subclass 9  
- Method 1: From Allyl Halides and Metallic Manganese or Low-Valent Manganese Generated by the Reduction of Manganese(II) Halides  
- Method 2: From Allylmagnesium Halides and Manganese(II) Halides  
- Method 3: From Allylic Halides and Tetrabutylmanganate(II)  
- Method 4: From 1,3-Dienes and Pentacarbonylhydridomanganese(I)  
Applications of Product Subclass 9 in Organic Synthesis  
- Method 5: Allylation of Carbonyl and Other Unsaturated Compounds

2.1.10  **Product Subclass 10: Manganese–Aryl, –Alkenyl, and –Alkynyl Complexes**  
Synthesis of Product Subclass 10  
- Method 1: Arylmanganese Complexes from Arylmetals and Manganese(II) Halides  
- Method 2: Arylmanganese Complexes from Acetophenones and Carbonylmanganese Complexes  
- Method 3: Arylmanganese Complexes by Acylation–Decarbonylation  
- Method 4: Alkenylmanganese Complexes from Alkynes and Alkyl(carbonyl)manganese Complexes by Alkyne Insertion  
- Method 5: Alkynyl(carbonyl)manganese Complexes from Alkynes and Carbonyl(halo)manganese Complexes  
Applications of Product Subclass 10 in Organic Synthesis  
- Method 6: Reaction of Alkenyl-, Aryl-, and Alkynylmanganese Halides with Acid Chlorides  
- Method 7: Demetalation of Aryl- and Alkenylmanganese Complexes

2.1.11  **Product Subclass 11: Manganese–Hydrido Complexes**  
Synthesis of Product Subclass 11  
- Method 1: Preparation of Pentacarbonylhydridomanganese(I)  
- Method 2: Preparation of Substituted Carbonylhydridomanganese(I) Complexes  
- Method 3: Preparation of Tetracarbonylmanganate(−III) and Tris[tetracarbonylhydridomanganese(I)] Complexes  
- Method 4: Preparation of (\(\eta^5\)-Arene)dicarbonylhydridomanganese(I) Complexes  
- Method 5: Preparation of (\(\eta^5\)-Cyclopentadienyl)dihydridomanganese(III) Complexes  
- Method 6: Preparation of Hydrido(iodo)manganese(II)  
Applications of Product Subclass 11 in Organic Synthesis  
- Method 7: Reduction of Activated C=C Bonds

2.1.12  **Product Subclass 12: Neutral Dimanganese–Carbonyl Complexes**  
Synthesis of Product Subclass 12  
- Method 1: Homoleptic Dimanganese–Carbonyl Complexes by Reduction under Carbon Monoxide
**2.1.2** Method 2: Dimanganese–Carbonyl Complexes Substituted with Group 15 Ligands .................................................... 62

**2.1.3** Method 3: Nonacarbonyldimanganese(0)–Aldehyde Complexes ........ 62

**2.1.13** **Product Subclass 13: Anionic Manganese–Carbonyl Complexes** .......................... 63

Synthesis of Product Subclass 13 ........................................ 63

**2.1.13.1** Method 1: By Reduction ........................................ 63

**2.1.13.1.1** Variation 1: With Sodium/Mercury Amalgam .................. 63

**2.1.13.1.2** Variation 2: With Trialkyborohydride or Potassium Hydride .......... 66

**2.1.13.1.3** Variation 3: With Sodium Bis(2-methoxyethoxy)aluminum Hydride ...... 67

**2.1.13.1.4** Variation 4: With Lithium/Naphthalene .......................... 68

**2.1.13.1.5** Variation 5: With Lithium/Borohydride .......................... 70

**2.1.13.1.6** Variation 6: With Sodium Hydride ............................. 70

**2.1.13.1.7** Variation 7: With Trialkyborohydride .......................... 71

**2.1.13.2** Method 2: Nonacarbonyldimanganese(0)–Aldehyde Complexes ........ 62

**2.1.14** **Product Subclass 14: Cationic Manganese–Carbonyl Complexes** ........... 69

Synthesis of Product Subclass 14 ........................................ 71

**2.1.14.1** Method 1: From Carbonyl(halo)manganese(I) Complexes by Substitution of a Halide for a Neutral Monohapto Ligand in the Presence of a Halide Acceptor ........................................ 71

**2.1.14.2** Method 2: From Carbonyl(halo)manganese(I) Complexes by Substitution of a Halide for a Neutral Monohapto Ligand in the Absence of a Halide Acceptor ........................................ 71

**2.1.14.3** Method 3: From (Alkoxycarbonyl)manganese Complexes by Treatment with Acid ........................................ 72

**2.1.14.4** Method 4: By Oxidation of Decacarbonyldimanganese(0) by Nitrosium Hexafluorophosphate in the Presence of a Neutral Ligand .......................... 73

**2.1.14.5** Method 5: From Carbonyl(halo)manganese(I) Complexes by Substitution of a Halo for an Arene Ligand To Form Cationic (Arene)tricarbonylmanganese(I) Complexes ........................................ 74

**2.1.14.6** Method 6: From Carbonylhydridomanganese(I) Complexes by Substitution of the Hydrido for a Neutral Ligand ........................................ 75

**2.1.15** **Product Subclass 15: Miscellaneous Complexes** .......................... 77

Synthesis of Product Subclass 15 ........................................ 77

**2.1.15.1** Method 1: Preparation of Carbonylmanganese–Halo Complexes ........ 77

**2.1.15.1.1** Variation 1: Pentacarbonylhalomanganese(I) Complexes from Decacarbonyl- dimanganese(0) ........................................ 77

**2.1.15.1.2** Variation 2: Bis[tetracarbonyl(halo)manganese] Complexes from Bromo- pentacarbonylmanganese(I) ........................................ 77

**2.1.15.1.3** Variation 3: Tricarbonyl(halo)bis(triphenyl phosphite)manganese from Tri- carbonylhidridobis(triphenyl phosphite)manganese ................................ 78

**2.1.15.2** Method 2: Preparation of Carbonylmanganese–Pseudohalo Complexes .... 80

**2.1.15.3** Method 3: Preparation of Nitrosylmanganese Complexes ............ 80

**2.1.15.4** Method 4: Preparation of Isocyanidemanganese Complexes .......... 82

**2.1.15.5** Method 5: Preparation of Acyl(carbonyl)manganese Complexes ....... 82

**2.1.15.6** Method 6: Preparation of Silylmanganese Complexes ............... 83

---

Science of Synthesis Original Edition Volume 2
© Georg Thieme Verlag KG

Method 7: Preparation of (1-Hydroxyalkyl)manganese Complexes  ......... 84
Method 8: Preparation of Tetracarbonyl{octahydrotriborato(1−)}manganese ..................................................... 84

Product Class 2: Organometallic Complexes of Technetium
I. D. Gridnev and T. Imamoto

Product Subclass 1: Technetium–Arene Complexes .......................... 92
Synthesis of Product Subclass 1 .................................................. 92
Method 1: By Interelement Synthesis ........................................... 92
Method 2: From Technetium(IV) Chloride or Sodium Pertechnetate .... 92
Method 3: Synthesis of Mixed Arene–Diene Complexes by Reduction of Bis(arene) Complexes ................................. 93
Method 4: Synthesis of ($h^6$-Benzene)tricarbonyltechnetium Chloride from Sodium Nonacarbonylheptamethoxytritechnetate(1−) .... 93

Product Subclass 2: Technetium–Cyclopentadienyl and Substituted Cyclopentadienyl Complexes ......................................... 94
Synthesis of Product Subclass 2 .................................................. 94
Method 1: By the Reactions of Technetium Halides with Metal Cyclopentadienides ...................................................... 94
Method 2: From Decacarbonylditechnetium ................................... 95
Method 3: From Pentacarbonyltechnetium Iodide ............................ 96
Method 4: From Sodium Nonacarbonylheptamethoxytritechnetate(1−) 96

Product Subclass 3: Technetium–Carbene Complexes ......................... 96
Synthesis of Product Subclass 3 .................................................. 96
Method 1: From Technetium–Carbonyls and Organolithium Compounds ................................................................. 97
Method 2: By the Reactions of Chlorobis[1,2-bis(diphenylphosphino)ethane]technetium with Terminal Alkynes .............. 97
Method 3: Reaction of a Benzoylcarbonyltechnetium Complex with Triethylxonium Tetrafluoroborate ............................... 98
Method 4: From Carbyne Complexes ........................................... 98

Product Subclass 4: Technetium–Carbyne Complexes ............................. 99
Synthesis of Product Subclass 4 .................................................. 99
Method 1: By Protonation of Carbene Complexes ................................ 99
Method 2: By Reaction of Carbene Complexes with Boron Trichloride .... 100

Product Subclass 5: Technetium–$σ$-Alkyl Complexes ............................ 100
Synthesis of Product Subclass 5 .................................................. 100
Method 1: Reaction of Technetium(VII) Oxide with Tetramethylstannane ................................................................. 100
Method 2: Reaction of Technetium–Imido Complexes with Grignard Reagents ................................................................. 101
2.2.6 Product Subclass 6: Technetium–Carbonyl Complexes ........................................ 102
Synthesis of Product Subclass 6 ................................................................. 102
2.2.6.1 Method 1: Synthesis of Decacarbonylditechnetium .................................. 102
2.2.6.2 Method 2: Synthesis of Pentacarbonyltechnetium Halides and Related Complexes ................................................................. 102
2.2.6.3 Method 3: Synthesis of Technetium–Carbonyl Complexes Containing Triphenylphosphine and Other Ligands ............................................. 104
2.2.6.4 Method 4: Synthesis of Technetium–Aquacarbonyl Complexes ............. 104
2.2.7 Product Subclass 7: Technetium–Isocyanide Complexes ............................... 105
Synthesis of Product Subclass 7 ................................................................. 105
2.2.7.1 Method 1: Reduction of Pertechnetate Ion in the Presence of Isocyanide Ligands ......................................................... 105
2.2.7.2 Method 2: By Substitution Reactions ................................................ 106
2.2.8 Product Subclass 8: Miscellaneous Technetium Complexes .......................... 107
Synthesis of Product Subclass 8 ................................................................. 107
2.2.8.1 Method 1: Synthesis of Hydridotechnetium Complexes .......................... 107
2.2.8.2 Method 2: Synthesis of Technetium Dinitrogen Complexes ................. 107

2.3 Product Class 3: Organometallic Complexes of Rhenium
F. E. Kühn, C. C. Romão, and W. A. Herrmann

2.3.1 Product Subclass 1: Rhenium–Arene Complexes ....................................... 111
Synthesis of Product Subclass 1 ................................................................. 112
2.3.1.1 Method 1: Reductive Synthesis from Rhenium Halides ......................... 112
2.3.1.2 Method 2: Synthesis from Low-Oxidation-State Rhenium Precursors ...... 113
2.3.1.2.1 Variation 1: By Metal-Vapor Synthesis ......................................... 113
2.3.1.2.2 Variation 2: By Ligand Substitution from Rhenium–Carbonyl Complexes . 114
2.3.2 Product Subclass 2: Rhenium–Dienyl Complexes ....................................... 114
Synthesis of Product Subclass 2 ................................................................. 116
2.3.2.1 Method 1: Ligand Substitutions ......................................................... 116
2.3.2.1.1 Variation 1: Synthesis from Trioxo(η5-pentamethylcyclopentadienyl)rhenium(VII) and Tetrachloro(η5-pentamethylcyclopentadienyl)rhenium(V) ................................................................. 117
2.3.2.1.2 Variation 2: Synthesis from Rhenium(VII) Oxide .............................. 119
2.3.2.2 Method 2: Oxidation Reactions ......................................................... 119
2.3.2.2.1 Variation 1: Synthesis from Tricarbonyl(η5-pentamethylcyclopentadienyl)rhenium(I) ................................................................. 120
2.3.2.2.2 Variation 2: Synthesis from Bis(η5-cyclopentadienyl)hydridorhenium(III) . 121
### Table of Contents

#### 2.3.3 Product Subclass 3: Rhenium–Alkyne Complexes .......................... 121
  - Synthesis of Product Subclass 3 ........................................ 121
  - Method 1: Reduction of Rhenium(VII) Precursors ........................ 121

#### 2.3.4 Product Subclass 4: Rhenium–Alkene Complexes ........................ 122
  - Synthesis of Product Subclass 4 ........................................ 122
  - Method 1: Nucleophilic Additions .......................................... 122
    - Variation 1: Nucleophilic Addition to \(\eta^5\)-Cyclopentadienyl(nitrosyl)(triphenylphosphine)rhenium(1+) ........................ 122
    - Variation 2: Nucleophilic Addition to Pentacarbonylrhenium(1+) .... 123

#### 2.3.5 Product Subclass 5: Rhenium–Carbene Complexes ....................... 124
  - Synthesis of Product Subclass 5 ........................................ 124
  - Method 1: Photolysis of an Organorhenium(VII) Oxide .................. 124

#### 2.3.6 Product Subclass 6: Rhenium–Carbyne Complexes ........................ 125
  - Synthesis of Product Subclass 6 ........................................ 125
  - Method 1: Ligand Substitution ............................................. 125
  - Applications of Product Subclass 6 in Organic Synthesis ............... 126
  - Method 2: Alkene Metathesis ............................................. 126

#### 2.3.7 Product Subclass 7: Rhenium–Alkyl Complexes ............................ 127
  - Synthesis of Product Subclass 7 ........................................ 127
  - Method 1: By Nucleophilic Reactions of Pentacarbonylrhenate(1–) ..... 127
  - Method 2: Ligand Substitutions .......................................... 128
  - Variation 1: From Rhenium(VII) Oxide ................................. 128
    - Variation 2: From Silver(I) Perrhenate ............................... 129
    - Variation 3: Synthesis of Alkyl(peroxo)rhenium(VII) Complexes ... 130
  - Applications of Product Subclass 7 in Organic Synthesis .............. 130
  - Method 3: Oxidation Catalysis .......................................... 131
    - Variation 1: Alkene Epoxidation .................................... 131
    - Variation 2: Arene Oxidation ........................................ 134
  - Method 4: Alkene Metathesis ............................................. 136
  - Method 5: Alkenation of Aldehydes ..................................... 137

#### 2.3.8 Product Subclass 8: Rhenium–Hydride Complexes ........................ 139
  - Synthesis of Product Subclass 8 ........................................ 140
  - Method 1: Substitution Reactions from Other Rhenium Hydrides ...... 140

#### 2.3.9 Product Subclass 9: Rhenium–Carbonyl Complexes ........................ 142
  - Synthesis of Product Subclass 9 ........................................ 142
  - Method 1: From Decacarbonyldirhenium .................................. 142
    - Variation 1: Substitution Reactions .................................. 143
    - Variation 2: Redox Reactions ......................................... 143
    - Variation 3: Nucleophilic Attack .................................... 144
### Table of Contents

- **2.3.9.1** Variation 4: Homolytic Cleavage ................................................. 144
- **2.3.9.2** Method 2: Nucleophilic Reactions of Pentacarbonylrhenate(1−) ........ 145
- **2.3.9.3** Method 3: Cationic Carbonylrhenium Complexes ......................... 146
- **2.3.9.4** Method 4: Carbonyl(halo)rhenium Complexes Prepared by Oxidative Addition .................................................. 146
- **2.3.9.5** Method 5: Carbonyl(halo)- and Carbonyl(pseudohalo)rhenium Complexes Prepared from Pentacarbonylrhenium(I) Tetrafluoroborate .. 147

**2.4**

#### Product Class 4: Arene Organometallic Complexes of Chromium, Molybdenum, and Tungsten

E. P. Kündig and S. H. Pache

- **2.4** Synthesis of Product Class 4 .......................................................... 155
- **2.4.1** Method 1: Direct Synthesis of Metal–Bis(arene) Complexes via Metal Evaporation ................................................................. 155
- **2.4.2** Method 2: Synthesis of Metal–Bis(arene) Complexes by Reductive Methods ................................................................. 157
- **2.4.3** Method 3: Synthesis of Metal–Bis(arene) Complexes by Arene Exchange, by Arene Transformation Reactions, and by Cyclic Condensation Reactions ................................................................. 158
- **2.4.4** Method 4: Synthesis of Tricarbonylmetal–Arene Complexes from Metal– Carbonyls ................................................................. 159
- **2.4.4.1** Variation 1: From Hexacarbonylmetal Complexes ......................... 159
- **2.4.4.2** Variation 2: From [M(CO)_3L_3] Complexes .................................. 162
- **2.4.4.3** Variation 3: By Arene and Heteroarene Exchange ......................... 163
- **2.4.4.4** Variation 4: From (Carbene)pentacarbonylmetal Complexes ............ 164
- **2.4.5** Method 5: Synthesis of Tricarbonylmetal–Arene Complexes by Arene Modification ................................................................. 165
- **2.4.5.1** Variation 1: Via Lithiation and Reaction with Electrophiles ............ 166
- **2.4.5.2** Variation 2: Via Nucleophilic Substitution .................................. 168
- **2.4.5.3** Variation 3: Via Palladium-Catalyzed Reactions .......................... 170
- **2.4.6** Method 6: Synthesis of Tricarbonylmetal–Arene Complexes by Side-Chain Modification ................................................................. 172
- **2.4.6.1** Variation 1: Via Nucleophile Addition .................................. 172
- **2.4.6.2** Variation 2: Via Benzyl Cations .................................................. 176
- **2.4.6.3** Variation 3: Via Benzyl Anions .................................................. 180
- **2.4.6.4** Variation 4: Via Cycloaddition Reactions .................................. 182
- **2.4.6.5** Variation 5: Via Radical Coupling Reactions .......................... 186
- **2.4.6.6** Variation 6: Via Ring Expansion Rearrangements .................. 187
- **2.4.7** Method 7: Synthesis of Optically Active Arene Complexes ............ 188
- **2.4.7.1** Variation 1: Resolution of Racemates .................................. 188
- **2.4.7.2** Variation 2: Diastereoselective Complexation .......................... 189
2.4.7.3 Variation 3: Diastereo- and Enantioselective Lithiation–Electrophilic Addition Reactions ................................................................. 191
2.4.7.4 Variation 4: Diastereo- or Enantioselective Nucleophile Addition Followed by endo-Hydride Abstraction ........................................ 195
2.4.7.5 Variation 5: Palladium-Catalyzed Reactions .................................................. 196
2.4.7.6 Variation 6: Diastereoselective Benzannulation Reactions ................................. 198
2.4.8 Method 8: Synthesis of \([\text{M(arene)(CO)}_x(L)_{3-x}]\) Complexes .................................................. 199
2.4.9 Method 9: Synthesis of Heteroarene Complexes ............................................. 203

Applications of Product Class 4 in Organic Synthesis ........................................ 207

2.4.10 Method 10: \([\text{Arene}]\text{tricarbonylchromium(0)}\) Complexes as Catalysts .... 207
2.4.11 Method 11: \([\text{Arene}]\text{tricarbonylchromium(0)}\) Complexes as Auxiliaries and Building Blocks ........................................... 209
2.4.11.1 Variation 1: \([\text{Arene}]\text{tricarbonylchromium(0)}\) Complexes as Chiral Ligands 209
2.4.11.2 Variation 2: Arene Decomplexation .................................................. 210
2.4.11.3 Variation 3: Aromatic Substitution via Nucleophile Addition–Oxidation of \([\text{Arene}]\text{tricarbonylchromium(0)}\) Complexes .......................... 214
2.4.11.4 Variation 4: Dearomatization Reactions ........................................ 216

2.5 Product Class 5: Organometallic \(\pi\)-Complexes of Chromium, Molybdenum, and Tungsten Excluding Arenes
K. H. Theopold, A. Mommertz, and B. A. Salisbury

2.5.1 Product Subclass 1: Metal–Triene and –Trienyl Complexes .................................................. 229
Synthesis of Product Subclass 1 ................................................................. 229
2.5.1.1 Method 1: Ligand Substitution Reactions of Hexacarbonylchromium(0) or Hexacarbonylmolybdenum(0) with Trienes .......................... 229
2.5.1.1.1 Variation 1: Substitution of Nitriles with Trienes ........................................ 231
2.5.1.2 Method 2: Synthesis of \(\eta^6\)-Fulvene Complexes by Photochemical Substitution of Arenes in \(\eta^6\)-Arene\text{tricarbonylchromium(0)} 231
2.5.1.3 Method 3: Synthesis of \(\eta^2\)-Cycloheptatrienyl Complexes by Abstraction of Hydride from Coordinated Cycloheptatriene .......................... 232
2.5.1.3.1 Variation 1: Hydride Abstraction with Oxonium Salt .......................... 233
2.5.1.4 Method 4: Reduction of Metal Halides in the Presence of Cycloheptatriene .................................................. 233
2.5.1.5 Method 5: Metal-Vapor Synthesis .................................................. 234
Applications of Product Subclass 1 in Organic Synthesis .................................. 235
2.5.1.6 Method 6: Allylic Alkylation Catalyzed by a Tungsten–Cycloheptatriene Complex .......................... 235

2.5.2 Product Subclass 2: Metal–Dienyl Complexes .................................................. 235
Synthesis of Product Subclass 2 ................................................................. 236
2.5.2.1 Method 1: Ligand Substitution with Alkali Metal–Dienyl Complexes .... 236
| 2.5.2 | Method 2: Ligand Substitution with Dienes | 237 |
| 2.5.2.1 | Variation 1: Ligand Substitution of Metal Oxychlorides with Dienes | 238 |
| 2.5.2.3 | Method 3: Intramolecular Reactions with Allylic Halides | 238 |
| 2.5.2.4 | Method 4: Synthesis of Metal–Cycloadienyl Complexes from Metal–Arene or –Cycloheptatriene Complexes by Nucleophilic Addition | 239 |
| 2.5.2.5 | Method 5: Protonation of Metal–Triene Complexes | 241 |
| 2.5.2.6 | Method 6: Carbonyl Reduction with Molybdenum–Cyclopentadienyl Complexes | 241 |
| 2.5.2.7 | Method 7: Hydrodehalogenation with Molybdenum–Cyclopentadienyl Complexes | 242 |
| 2.5.2.8 | Method 8: Hydrogenation with Molybdenum–Cyclopentadienyl Complexes | 243 |
| 2.5.3 | **Product Subclass 2: Metal–Diene Complexes** | 244 |
| 2.5.3.1 | Method 1: Ligand Metathesis with Dienes | 244 |
| 2.5.3.1.1 | Variation 1: Substitution of Electron-Deficient \( \eta^1 \)-Acetylenes | 245 |
| 2.5.3.1.2 | Variation 2: Substitution of Nitriles | 247 |
| 2.5.3.2 | Method 2: Photolysis in the Presence of Dienes | 247 |
| 2.5.3.3 | Method 3: Nucleophilic Addition to Metal–Cyclopentadienyl Complexes | 249 |
| 2.5.3.4 | Method 4: Addition of Radicals to Metal–Cyclopentadienyl Complexes | 250 |
| 2.5.3.5 | Method 5: Reduction of Metal Halides in the Presence of Dienes | 251 |
| 2.5.3.6 | Method 6: Coupling of Metal-Bound Allyl Groups | 252 |
| 2.5.3.7 | Method 7: [2 + 2] Cycloaddition of Metal-Bound Alkynes | 253 |
| 2.5.3.8 | Method 8: Metal-Vapor Synthesis | 254 |
| 2.5.4 | **Product Subclass 3: Metal–Allyl Complexes** | 255 |
| 2.5.4.1 | Method 1: Substitution by Photolysis in the Presence of Alkynes | 255 |
| 2.5.4.2 | Method 2: Deprotonation of Metal-Bound Dienes | 256 |
| 2.5.4.3 | Method 3: Oxidative Addition of Allylic Compounds | 257 |
| 2.5.4.4 | Method 4: Addition of Allylic Anions to Metal Complexes | 258 |
| 2.5.4.5 | Method 5: Nucleophilic Substitution of Anionic Metal Complexes | 259 |
| 2.5.4.6 | Method 6: Addition of Nucleophiles to Metal-Bound Dienes | 260 |
| 2.5.4.7 | Method 7: Functionalization of Metal-Bound Allyls | 260 |
| 2.5.4.8 | Method 8: Trimerization of Alkynes with Chromium–π-Allyl Compounds | 261 |
| 2.5.5 | **Product Subclass 4: Metal–Alkyne Complexes** | 262 |
| 2.5.5.1 | Method 1: Substitution by Photolysis of a Heteroleptic Metal–Carbonyl Complex in the Presence of Alkynes | 262 |
| 2.5.5.2 | Method 2: Substitution Reactions | 264 |
| 2.5.5.3 | Method 3: Reduction of Metal Halides in the Presence of Alkynes | 265 |
| 2.5.5.3.1 | Variation 1: Reduction with Magnesium | 266 |
Table of Contents

2.5.5.4 Method 4: Coupling of Two Isocyanide Ligands ........................................ 267
2.5.5.5 Method 5: Cycloaddition of Metal-Bound Alkynes with Cyclo-octatetraene ......................................................... 268

2.5.6 Product Subclass 5: Metal–Alkene Complexes ............................................. 269

2.5.6.1 Method 1: Photosubstitutions of Carbonyl Complexes ................................ 270
2.5.6.2 Method 2: Thermal Ligand Substitutions .................................................. 271
2.5.6.2.1 Variation 1: Shifting the Equilibrium in Favor of the Alkene Complexes ........ 273
2.5.6.3 Method 3: β-Hydride Elimination/Abstraction from Metal–Alkyl Complexes ......................................................... 274
2.5.6.4 Method 4: Nucleophilic Attack on Metal–Allyl Complexes ....................... 276
2.5.6.5 Method 5: Reduction of Metal Halides in the Presence of Alkene ................. 276

2.6 Product Class 6: Organometallic Complexes of Chromium, Molybdenum, and
Tungsten without Carbonyl Ligands
R. Poli and K. M. Smith

2.6.1 Product Subclass 1: Metal–Carbene Complexes ......................................... 283

2.6.1.1 Method 1: By α,α'-Hydrogen Elimination from Alkyl Complexes ................ 284
2.6.1.1.1 Variation 1: Alkylation of Chloride Precursors ................................... 284
2.6.1.1.2 Variation 2: Ligand Addition ............................................................ 285
2.6.1.1.3 Variation 3: Replacement of an Oxo or Imido Ligand ......................... 286
2.6.1.1.4 Variation 4: Deprotonation with an External Base .............................. 287
2.6.1.2 Method 2: By Stoichiometric Alkene Metathesis .................................... 287
2.6.1.3 Method 3: By Carbene Transfer ........................................................... 288
2.6.1.4 Method 4: From Carbene Complexes ................................................... 289

2.6.1.5 Method 5: Alkene Metathesis .............................................................. 290
2.6.1.5.1 Variation 1: Ring-Opening Metathesis Polymerization (ROMP) ............. 291
2.6.1.5.2 Variation 2: Alkyne Polymerization ................................................. 291
2.6.1.5.3 Variation 3: Ring-Closing Metathesis .............................................. 292
2.6.1.5.4 Variation 4: Other Selective Metathesis Processes .............................. 294
2.6.1.6 Method 6: Carbonylmethylenation ....................................................... 295

2.6.2 Product Subclass 2: Metal–Carbyne Complexes ......................................... 296

2.6.2.1 Method 1: By α,α'-Hydrogen Elimination from Alkyl Complexes ............... 297
2.6.2.2 Method 2: By Addition of Alkynes to Compounds with Metal–Metal Triple Bonds ......................................................... 298

Table of Contents

2.6.7.3 Method 3: From Complexes Containing Triply Bonded Heteroelement Ligands 320
2.6.7.4 Method 4: By Oxidative Processes 321
Applications of Product Subclass 7 in Organic Synthesis 322
2.6.7.5 Method 5: Catalytic Epoxidation of Alkenes 322
2.6.8 Product Subclass 8: Complexes with Singly Bonded Heteroelement Ligands
Synthesis of Product Subclass 8 323
2.6.8.1 Method 1: By Oxidative Addition of Compounds with Single Bonds between Heteroelements 323
2.6.8.2 Method 2: By Transmetalation 324
2.6.8.3 Method 3: From \( \sigma \)-Alkyl Complexes 324
2.6.8.4 Method 4: From Carbene or Carbyne Complexes 325
2.6.8.5 Method 5: From Complexes Containing Doubly Bonded Heteroelement Ligands 326
2.6.9 Product Subclass 9: Miscellaneous Complexes
Synthesis of Product Subclass 9 326
2.6.9.1 Method 1: Allylidene Complexes from Cyclopropanes 326

2.7 Product Class 7: Carbonyl Complexes of Chromium, Molybdenum, and Tungsten with \( \sigma \)-Bonded Ligands
T. Ito and M. Minato

2.7 Product Class 7: Carbonyl Complexes of Chromium, Molybdenum, and Tungsten with \( \sigma \)-Bonded Ligands 333
2.7.1 Product Subclass 1: Metal–Carbene Complexes 333
Synthesis of Product Subclass 1 333
2.7.1.1 Method 1: Fischer Method 334
2.7.1.1.1 Variation 1: From Anionic Carbene Complexes 336
2.7.1.1.2 Variation 2: From Dianionic Complexes 337
2.7.1.1.3 Variation 3: From Acyloxy carbene Complexes 339
2.7.1.1.4 Variation 4: Synthesis of Miscellaneous Carbene Complexes 340
Application of Product Subclass 1 in Organic Synthesis 341
2.7.1.2 Method 2: Cyclohexadiene and Cyclohexadienone Annulation 341
2.7.2 Product Subclass 2: Metal–Carbyne Complexes 343
Synthesis of Product Subclass 2 343
2.7.2.1 Method 1: From Fischer-Type Carbene Complexes 343
2.7.2.1.1 Variation 1: By Formal Oxygen Abstraction from Acyl Ligands 344
2.7.2.1.2 Variation 2: From Acetylides 345
2.7.2.1.3 Variation 3: Synthesis of Miscellaneous Carbyne Complexes 345
Applications of Product Subclass 2 in Organic Synthesis ........................................ 348

2.7.2 Method 2: Synthesis of Phenol Derivatives ................................................. 348

2.7.3 Product Subclass 3: Metal–Isocyanide Complexes ......................................... 349

Synthesis of Product Subclass 3 ................................................................. 349

2.7.3.1 Method 1: By Substitution of Carbonyl Complexes .................................. 350
2.7.3.1.1 Variation 1: By Catalytic Substitution Using Palladium(II) Oxide .......... 350
2.7.3.1.2 Variation 2: From Cyano Anionic Complexes .................................. 351
2.7.3.1.3 Variation 3: Synthesis of Miscellaneous Isocyanide Complexes ........ 352

Applications of Product Subclass 3 in Organic Synthesis .................................. 353

2.7.3.2 Method 2: Synthesis of Functionalized Isocyanides .................................. 353

2.7.4 Product Subclass 4: Metal–Nitrile Complexes and –Cyanide Complexes .......... 354

Synthesis of Product Subclass 4 ................................................................. 354

2.7.4.1 Method 1: Synthesis of Nitrile Complexes ............................................ 354
2.7.4.1.1 Variation 1: Synthesis of Acrylonitrile–Carbonyl Complexes ............... 355
2.7.4.2 Method 2: Synthesis of Cyanide Complexes ........................................ 355
2.7.4.2.1 Variation 1: By Reaction of Hexacarbonyl Complexes with Sodium Bis(trimethylsilyl)amide ................................................................. 356

2.7.5 Product Subclass 5: Metal–Carbonyl Complexes with Ligands Containing Group 15 Elements ................................................................. 357

Synthesis of Product Subclass 5 ................................................................. 357

2.7.5.1 Method 1: Synthesis of Carbonyl Complexes of Phosphine, Arsine, or Stibine ................................................................. 357
2.7.5.1.1 Variation 1: Synthesis of Phosphine Complexes .................................. 358
2.7.5.1.2 Variation 2: Synthesis of Complexes with Chelating Ligands .............. 358
2.7.5.2 Method 2: Synthesis of Amino Acid Complexes ..................................... 359

Applications of Product Subclass 5 in Organic Synthesis .................................. 360

2.7.5.3 Method 3: Ring-Opening Polymerization ............................................... 360

2.7.6 Product Subclass 6: Metal–Carbonyl Complexes with Ligands Containing Group 16 Elements ................................................................. 360

Synthesis of Product Subclass 6 ................................................................. 360

2.7.6.1 Method 1: Synthesis of Pentacarbonyl(dialkyl sulfide) Complexes ........... 361
2.7.6.2 Method 2: Synthesis of Alkoxide Complexes ......................................... 361
2.7.6.2.1 Variation 1: Synthesis of Hydroxide Complexes ............................... 362
2.7.6.2.2 Variation 2: Synthesis of Aryloxo Complexes .................................... 363
2.7.6.2.3 Variation 3: Synthesis of Catecholato Complexes ............................. 364
2.7.6.2.4 Variation 4: Synthesis of Miscellaneous Complexes ....................... 365

2.7.7 Product Subclass 7: Carbonyl Halides ....................................................... 366

Synthesis of Product Subclass 7 ................................................................. 366

2.7.7.1 Method 1: By Reaction of Metal–Hexacarbonyl Complexes with Chlorine or Bromine ................................................................. 366
2.7.7.1.1 Variation 1: From Metal–Hexacarbonyl Complexes ............................ 367
2.7.1.2  Variation 2: Using a Phase-Transfer Agent  368
2.7.1.3  Variation 3: By Photoreaction in the Presence of Crown Ethers  369
2.7.1.4  Variation 4: Synthesis of Miscellaneous Complexes  370

2.7.8  **Product Subclass 8: Carbonyl Hydrides**  370

- 2.7.8.1  Method 1: By Reduction of Hexacarbonyl Complexes with Sodium Borohydride  370
- 2.7.8.1.1  Variation 1: By Ion-Pair Extraction  371
- 2.7.8.1.2  Variation 2: By Reaction of Hyridochromium Pentacarbonyl Anion with Metal Pentacarbonyl(piperidine) Complexes  372
- 2.7.8.2  Method 2: From Carbonylmctalate Tetraanions  372
- 2.7.8.3  Method 3: Utilizing a Phase-Transfer Agent  373

2.7.9  **Product Subclass 8 in Organic Synthesis**  373

2.7.9.1  Method 1: By Reduction of Hexacarbonyl Complexes with Sodium in Liquid Ammonia  375
- 2.7.9.1.1  Variation 1: By Reduction with Alkali Metal Amalgam  376
- 2.7.9.2  Method 2: By Reduction of Hexacarbonylchromium(0) with Potassium-Graphite  376
- 2.7.9.3  Method 3: From Carbonyl Derivatives  377

2.8  **Product Class 8: Organometallic Complexes of Vanadium**
T. Imamoto and I. D. Gridnev

2.8.1  **Product Subclass 1: Vanadium–Arene Complexes**  385

- 2.8.1.1  Method 1: Reduction of Vanadium Chlorides  386
- 2.8.1.2  Method 2: By Metal-Vapor Deposition  387
- 2.8.1.3  Method 3: By Ring Substitution  388
- 2.8.1.4  Method 4: From Vanadocene  388

2.8.2  **Product Subclass 2: Vanadium–Cyclopentadienyl and Substituted Cyclopentadienyl Complexes**  389

- 2.8.2.1  Method 1: Synthesis of Bis(η^5^-cyclopentadienyl)vanadium(II) (Vanadocene) and Ring-Substituted Derivatives  389
- 2.8.2.2  Method 2: Synthesis of Vanadocene Halides and Ring-Substituted Derivatives  390
- 2.8.2.3  Method 3: Synthesis of Ring-Bridged Vanadocene Dichlorides  390
- 2.8.2.4  Method 4: Synthesis of Tetracarbonyl(η^5^-cyclopentadienyl)vanadium and Ring-Substituted Derivatives  391
2.8.5 Method 5: By the Reaction of Pentafulvenes with Alkylstanny1(carbonyl)-
vanadium Complexes ........................................... 392
2.8.6 Method 6: Synthesis of Mono(η⁵-cyclopentadienyl)vanadium Halides ...... 393
2.8.7 Method 7: Synthesis of Tripledecker (η⁵-Cyclopentadienyl)vanadium
Complexes .......................................................... 394

Applications of Product Subclass 2 in Organic Synthesis ............................ 395

2.8.3 Product Subclass 3: Vanadium–Alkyne Complexes ................................. 395
Synthesis of Product Subclass 3 ........................................... 395
2.8.3.1 Method 1: From Vanadocene .............................................. 395
2.8.3.2 Method 2: Synthesis of Mono(η⁵-cyclopentadienyl)vanadium(I)–Alkyne
Complexes ............................................................... 396

2.8.4 Product Subclass 4: Vanadium–Alkene Complexes ..................................... 396
Synthesis of Product Subclass 4 ........................................... 396
2.8.4.1 Method 1: Reaction of Vanadocene with Electron-Deficient Alkenes ........ 396
2.8.4.2 Method 2: Synthesis of η⁶-Ethene Complexes from a 1,4-Di-Grignard
Species ................................................................. 397

2.8.5 Product Subclass 5: Vanadium–Carbene Complexes ..................................... 398
Synthesis of Product Subclass 5 ........................................... 398
2.8.5.1 Method 1: Synthesis of Fischer-Type Vanadium–Carbene Complexes .... 398
2.8.5.2 Method 2: Synthesis of Schrock-Type Vanadium–Carbene Complexes .... 399

2.8.6 Product Subclass 6: Vanadium–σ-Alkyl and –σ-Aryl Complexes ..................... 400
Synthesis of Product Subclass 6 ........................................... 400
2.8.6.1 Method 1: Synthesis of Homoleptic Complexes .................................... 400
2.8.6.2 Method 2: Synthesis of Non-homoleptic Complexes ............................... 401
2.8.6.2.1 Variation 1: Photochemical Insertion of Alkenes into a V—H Bond .......... 402
2.8.6.2.2 Variation 2: By the Reaction of Vanadocene with Iodomethane or
Bromomethane ......................................................... 402

Applications of Product Subclass 6 in Organic Synthesis ............................... 403
2.8.6.3 Method 3: Reaction of Organovanadium Complexes with Aldehydes ....... 403
2.8.6.4 Method 4: Synthesis of 1H-1,2-Azaphospholes from Imidovanadium(V)
Complexes and Phosphaalkynes ........................................ 403

2.8.7 Product Subclass 7: Vanadium–Carbonyl Complexes without
Cyclopentadienyl and Related Groups ........................................... 404
Synthesis of Product Subclass 7 ........................................... 404
2.8.7.1 Method 1: Synthesis of Hexacarbonylvanadium .................................... 404
2.8.7.2 Method 2: Synthesis of Hexacarbonylvanadate(1–) Complexes ............... 405

2.8.8 Product Subclass 8: Vanadium–Isocyanide Complexes ................................. 406
Synthesis of Product Subclass 8 ........................................... 406
2.8.8.1 Method 1: By Ligand Substitution ............................................. 406
2.8.2 Method 2: Complex Formation Accompanying Oxidation or Reduction of the Central Vanadium Atom

2.8.9 Product Subclass 9: Hydridovanadium Complexes

Synthesis of Product Subclass 9

2.8.9.1 Method 1: Synthesis of Carbonylhydridovanadium Complexes Stabilized by Oligotertiary Phosphines

2.8.9.2 Method 2: Synthesis of Bis(η⁵-pentamethylcyclopentadienyl)hydrido-

2.8.9.3 Method 3: Synthesis of Anionic Hydridovanadium(1−) Complexes

Applications of Product Subclass 9 in Organic Synthesis

2.9 Product Class 9: Organometallic Complexes of Niobium and Tantalum

K. Mashima and A. Nakamura

2.9.1 Product Subclass 1: Metal–Arene Complexes

Synthesis of Product Subclass 1

2.9.1.1 Method 1: By Reduction of Metal Halides

2.9.1.2 Method 2: Via Alkyne Cyclotrimerization

2.9.2 Product Subclass 2: Metal–Triene and Metal–Tetraene Complexes

Synthesis of Product Subclass 2

2.9.2.1 Method 1: Reductive Synthesis from Metal(V) Halides

2.9.2.2 Method 2: Using Dipotassium Cyclooctatetraene

2.9.2.3 Method 3: From Tetrachloro(η⁵-cyclopentadienyl)niobium

2.9.2.4 Method 4: From Niobium Hydride Derivatives

2.9.3 Product Subclass 3: Metal–Cyclopentadienyl and Metal–Tris(pyrazolyl)borate Complexes

Synthesis of Product Subclass 3

2.9.3.1 Method 1: From Metal(V) Halides

2.9.3.2 Method 2: Via Halide–Ligand Exchange

2.9.3.3 Method 3: By Sodium Reduction

2.9.3.4 Method 4: Tris(pyrazolyl)borate Complexes

2.9.4 Product Subclass 4: Metal–Diene Complexes

Synthesis of Product Subclass 4

2.9.4.1 Method 1: By Reaction of Magnesium Butadiene

2.9.4.2 Method 2: Via Halide–Ligand Exchange
2.9.5 **Product Subclass 5: Metal–Allyl Complexes** .............................. 428
Synthesis of Product Subclass 5 ............................................. 429
2.9.5.1 Method 1: From Allyl Grignard Reagents .............................. 429
2.9.5.2 Method 2: From Butadiene ............................................. 429
2.9.6 **Product Subclass 6: Metal–Alkyne Complexes** ......................... 430
Synthesis of Product Subclass 6 ............................................. 430
2.9.6.1 Method 1: Via Ligand Exchange ......................................... 430
2.9.6.2 Method 2: By Reduction ................................................ 433
Applications of Product Subclass 6 in Organic Synthesis ....................... 434
2.9.7 **Product Subclass 7: Metal–Alkene Complexes** ........................ 434
Synthesis of Product Subclass 7 ............................................. 434
2.9.7.1 Method 1: By Alkylation Reactions ...................................... 434
2.9.7.2 Method 2: By Reaction of Ethene and an Alkylidene Complex 436
Applications of Product Subclass 7 in Organic Synthesis ....................... 436
2.9.8 **Product Subclass 8: Metal–Alkylidene Complexes** .................. 436
Synthesis of Product Subclass 8 ............................................. 437
2.9.8.1 Method 1: Via α-Hydrogen Elimination .................................. 437
2.9.8.2 Method 2: By Addition of a Chelating Ligand ......................... 437
2.9.8.3 Method 3: By Proton Abstraction ........................................ 438
2.9.8.4 Method 4: By Alkylation of Tetrachloro(η5-pentamethylcyclopentadienyl)‐tantalum .... 438
2.9.8.5 Method 5: By Ligand Exchange .......................................... 439
2.9.8.6 Method 6: By Sodium Reduction ........................................ 440
2.9.8.7 Method 7: Dialkylation Followed by Alkane Elimination ............. 440
Applications of Product Subclass 8 in Organic Synthesis ....................... 440
2.9.9 **Product Subclass 9: Metal–Alkylidyne Complexes** .................. 441
Synthesis of Product Subclass 9 ............................................. 441
2.9.9.1 Method 1: From Carbene Complex by Addition of Trimethylaluminum 441
2.9.9.1.1 Variation 1: By Addition of Trimethylphosphine ...................... 442
Applications of Product Subclass 9 in Organic Synthesis ....................... 442
2.9.10 **Product Subclass 10: Metal–α-Alkyl Homoleptic Complexes** .... 442
Synthesis of Product Subclass 10 ............................................. 443
2.9.10.1 Method 1: By Alkylation ................................................ 443
2.9.11 **Product Subclass 11: Metal–α-Alkyl Non-homoleptic Complexes** .... 444
Synthesis of Product Subclass 11 ............................................. 445
2.9.11.1 Method 1: By Alkylation ................................................ 445
2.9.11.2 Method 2: By Addition of Cyclopentadienyl Ligands ................ 446
Applications of Product Subclass 11 in Organic Synthesis ....................... 447
# Table of Contents

## 2.9.12 Product Subclass 12: Metal–Hydride Complexes

Synthesis of Product Subclass 12 .......................... 447

Method 1: From Niobium(V) Chloride .......................... 448

Applications of Product Subclass 12 in Organic Synthesis .......................... 448

## 2.9.13 Product Subclass 13: Metal–Carbonyl Complexes

Synthesis of Product Subclass 13 .......................... 449

Method 1: By Reductive Carbonylation .................. 449

## 2.9.14 Product Subclass 14: Metal–Alkoxy Complexes

Synthesis of Product Subclass 14 .......................... 451

Method 1: Via Halide–Ligand Exchange .................. 451

Method 2: By Sodium Reduction .................. 452

## 2.10 Product Class 10: Organometallic Complexes of Titanium

K. Mikami, Y. Matsumoto, and T. Shiono

## 2.10.1 Product Subclass 1: Titanium–Arene Complexes

Synthesis of Product Subclass 1 .......................... 457

Method 1: Titanium(0)–Arene Complexes .................. 458

Method 2: Titanium(II)–Arene Complexes .................. 458

Variation 1: Titanium(II)–Arene Complexes by the Fischer–Hafner Method .......................... 459

Variation 2: Titanium(II)–Arene Complexes by Ligand Exchange of Aluminum–Titanium(II) Halide Complexes with Arenes .................. 459

Variation 3: Titanium(II)–Arene Complexes by Ligand Exchange with Aluminum Reagents .................. 460

Method 3: Titanium(IV)–Arene Complexes by Cationic Complex Formation .................. 460

## 2.10.2 Product Subclass 2: Titanium–Triene, –Trienyl, and –Tetraene Complexes

Synthesis of Product Subclass 2 .......................... 461

Method 1: Titanium–Tetraene Complexes by Reaction of Tetrabutoxytitanium(IV) with Cyclooctatetraene .................. 461

Method 2: Titanium–Tetraene Complexes by Reaction of Trichloro(pentamethylcyclopentadienyl)titanium(IV) with Dipotassium Cyclooctatetraene .................. 461

Method 3: Titanium–Tetraene and –Triene Complexes by Reaction of Trichloro(η²-cyclopentadienyl)titanium(IV) Complexes with Cyclooctatetraene or Cycloheptatriene in the Presence of Magnesium .................. 462
2.10.3 Product Subclass 3: Bis(η^5-cyclopentadienyl)titanium Complexes without Allyl Functionalities or Titanacycles

Synthesis of Product Subclass 3

2.10.3.1 Method 1: Salt Elimination Reactions between Cyclopentadienyllithium Compounds and Titanium(IV) Chloride

2.10.3.1.1 Variation 1: Salt Elimination Reactions between Sodium Cyclopentadienide Compounds and Titanium(III) Chloride

2.10.3.1.2 Variation 2: Salt Elimination Reactions between Titanium(IV)–Chloro Complexes, Potassium, and Cyclopentadienes

2.10.3.1.3 Variation 3: Salt Elimination Reactions between Thallium Cyclopentadienide Compounds and Trichloro(η^5-cyclopentadienyl)titanium(IV) Complexes

2.10.3.1.4 Variation 4: Transmetalation between Tin Cyclopentadienide Complexes and Titanium Complexes

2.10.3.2 Method 2: Transmetalation between Metal Cyclopentadienide Complexes and Titanium(III) Chloride, Followed by Oxidation

2.10.3.2.1 Variation 1: Transmetalation between Magnesium Cyclopentadienide Salts and Titanium(III) Chloride

2.10.3.3 Method 3: Hydrogenation of the Indenyl Ligand in Titanium(IV) Complexes

2.10.3.4 Method 4: Titanium(IV) Complexes by Oxidation of Alkylbis(η^5-cyclopentadienyl)titanium(III) Complexes by Lead(II) Chloride

2.10.3.5 Method 5: Halide Exchange between Titanium(IV)–Halo Complexes and Alkali Metal Halides

2.10.3.5.1 Variation 1: Halide Exchange with Hydrogen Halides

2.10.3.5.2 Variation 2: Halide Exchange with Boron Halides

Applications of Product Subclass 3 in Organic Synthesis

2.10.3.6 Method 6: Bis(η^5-cyclopentadienyl)titanium Complexes as Alkene Polymerization Catalysts

2.10.4 Product Subclass 4: Mono(η^5-cyclopentadienyl)titanium Complexes

Synthesis of Product Subclass 4

2.10.4.1 Method 1: Reaction between Titanium(IV) Chloride and Metal Cyclopentadienide Compounds

2.10.4.1.1 Variation 1: Reaction between Titanium(IV) Chloride and Silyl-Substituted Cyclopentadienyl Reagents

2.10.4.1.2 Variation 2: Reaction between Titanium(III) Chloride and Lithium Cyclopentadienide Compounds, Followed by Oxidation

2.10.4.2 Method 2: Reaction between Titanium(IV) Chloride and Unsaturated Hydrocarbons
2.10.3 Method 3: Trichloro(η^5-cyclopentadienyl)titanium(IV) Complexes by Redistribution Reactions ........................................ 492

2.10.4 Method 4: Trihalo(η^5-cyclopentadienyl)titanium(IV) Complexes by Halogenation of Mono- and Bis(η^5-cyclopentadienyl)titanium(IV) Complexes .................................................. 493

2.10.5 Method 5: Replacement of Alkoxy Ligands in Alkoxy(η^5-cyclopentadienyl)titanium Complexes by Halides .............................................. 494

2.10.6 Method 6: Reaction between Tetraalkoxytitanium(IV) or Tetraamidotitanium(IV) Complexes and Cyclopentadienes .................................. 494

2.10.7 Method 7: Halide Exchange between Cyclopentadienyl(halo)titanium Complexes and Trimethyltin Fluoride or Arsenic Trifluoride ........................................ 494

Applications of Product Subclass 4 in Organic Synthesis ............................................................. 495

2.10.8 Method 8: Mono(η^5-cyclopentadienyl)titanium Complexes as Styrene Polymerization Catalysts ....................................................... 495

2.10.9 Method 9: Mono(η^5-cyclopentadienyl)titanium Complexes as Buta-1,3-diene Polymerization Catalysts ........................................ 498

2.10.10 Method 10: Mono(η^5-cyclopentadienyl)titanium Complexes as Alkene Polymerization Catalysts ..................................................... 499

2.10.5 Product Subclass 5: Trivalent Titanium(III) Complexes Including Bis- and Mono(η^5-cyclopentadienyl)titanium–Hydrido Complexes ............ 499

Synthesis of Product Subclass 5 ............................................................. 500

2.10.5.1 Method 1: Titanium–Hydrido Complexes by Reduction of Titanium(IV)–Methyl Complexes by Hydrogen .................................................. 500

2.10.5.1.1 Variation 1: Hydridotitanium Complexes by Reduction of Alkyltitanium(IV) Complexes by Silanes ....................................................... 501

2.10.5.1.2 Variation 2: Hydridotitanium Complexes by Reduction of Chlorotitanium(IV) Complexes by Potassium or Sodium ...................... 501

2.10.5.2 Method 2: Titanium(III) Complexes by Reduction of Titanium(IV) Complexes by Lithium Nitride ...................................................... 502

2.10.5.2.1 Variation 1: Titanium(III) Complexes by Reduction by Zinc and Magnesium ...................................................... 503

2.10.5.2.2 Variation 2: Titanium(III) Complexes by Reduction by Cobalt(II) Complexes ...................................................... 503

Applications of Product Subclass 5 in Organic Synthesis ............................................................. 503

2.10.5.3 Method 3: Preparation of Alkene Hydrogenation Catalysts by Reduction with Aluminum Hydrides ...................................................... 503

2.10.5.3.1 Variation 1: Preparation of Alkene Hydrogenation Catalysts by Reduction with Alkylolithium Compounds ...................................... 505

2.10.5.3.2 Variation 2: Preparation of Alkene Hydrogenation Catalysts by Reduction with Grignard Reagents ...................................................... 505

2.10.6 Product Subclass 6: Bis- or Mono(η^5-cyclopentadienyl)titanium(II) Complexes ............................................................. 505

Synthesis of Product Subclass 6 ............................................................. 506

2.10.6.1 Method 1: Titanocenes by Reduction of Titanium(IV) Complexes ............................................................. 506
2.10.2 Method 2: Titanocene by Photochemical Reaction of Bis(η^5-cyclopentadienyl)dimethyltitanium(IV) .................................................. 508
2.10.3 Method 3: Dicarbonylbis(η^5-cyclopentadienyl)titanium(II) Complexes from Titanium–Alkyl and –Aryl Complexes ........................................ 509
2.10.4 Method 4: Dicarbonylbis(η^5-cyclopentadienyl)titanium(II) Complexes by Photolysis of Titanium–Alkyl and –Aryl Complexes .......... 510
2.10.5 Method 5: Titanium(II)–Carbonyl Complexes by Reduction of Chlorotitanium(IV) Complexes with Aluminum under Carbon Monoxide .................................................................................................................. 511
2.10.5.1 Variation 1: Reduction with Sodium–Naphthalene ........................................ 513
2.10.5.2 Variation 2: Reduction with Cobaltocene .................................................. 513
2.10.6 Method 6: Dicarbonylbis(η^5-cyclopentadienyl)titanium(II) Complexes by Photolysis of Titanium–Alkyl and –Aryl Complexes ....... 514
2.10.7 Method 7: Titanium(II)–Phosphine Complexes by Photolysis of Dicarbonylbis(η^5-cyclopentadienyl)titanium(II) ........................................ 514

Applications of Product Subclass 6 in Organic Synthesis ........................................ 516
2.10.8 Method 8: Titanium(II)–Carbonyl Complexes as Catalysts in the Pauson–Khand Reaction .......................................................................................... 516
2.10.7 Product Subclass 7: Titanium–Allyl, –Allenyl, and –Propargyl Complexes 518
Synthesis of Product Subclass 7 .................................................................................. 520
2.10.7.1 Method 1: (η^1-Allyl)titanium(III) Complexes by Reaction between Chlorotitanium(III) Complexes and Allyl Grignard Reagents ........................................ 520
2.10.7.2 Method 2: (η^3-Allyl)titanium(III) Complexes by Reaction between Chlorotitanium(IV) Complexes and Allyl Grignard Reagents ............. 520
2.10.7.2.1 Variation 1: (η^3-Allyl)bis(η^5-cyclopentadienyl)titanium(III) Complexes by Reaction of Dichlorobis(η^5-cyclopentadienyl)titanium(IV) with a Grignard Reagent and a Diene .............................................................................. 522
2.10.7.2.2 Variation 2: (η^3-Allyl)bis(η^5-cyclopentadienyl)titanium(III) by Rearrangement of Bis(η^5-cyclopentadienyl)(η^2-ethene)(η^2-vinyl)titanium(III) .................. 523
2.10.7.3 Method 3: (η^1-Allyl)bis(η^5-cyclopentadienyl)halotitanium(IV) Complexes by Reaction of (η^3-Allyl)bis(η^5-cyclopentadienyl)titanium(III) Complexes with 1-Halobut-2-enes ........................................................................................................ 524
2.10.7.4 Method 4: (η^1-Allyl)bis(η^5-cyclopentadienyl)titanium(IV) Complexes by Reaction of Vinyl Halides, Vinyl Esters, or Carboxylic Esters with the Dichlorobis(η^5-cyclopentadienyl)titanium(IV)–Trimethylaluminum Complex .......................................................................................................................... 524
2.10.7.5 Method 5: (η^1-Allyl)bis(isopropoxy)titanium(IV) Complexes by Reaction of Low-Valent Titanium Complexes with Allylic Halides, Acetates, Carbonates, Phosphates, Sulfonates, or Aryl Ethers .................................................................................................................... 525
2.10.7.6 Method 6: Bis(isopropoxy)titanium(IV)–Propargyl or –Allenyl Complexes by Transmetalation of Titanium(IV) Complexes with Propargyl- or Allenyllithium Compounds ......................................................... 526
2.10.7 Method 7: Bis(isopropoxy)titanium(IV)–Propargyl or –Allenyl Complexes by Reaction of Low-Valent Titanium Complexes with Propargyl Halides, Acetates, Carbonates, Phosphates, or Sulfonates
Application of Product Subclass 7 in Organic Synthesis

2.10.8 Method 8: Allylation of Carbonyl Compounds by Allyltri(amide)titanium(IV) Complexes

2.10.9 Method 9: Reactions of Bis(isopropoxy)titanium(IV)–Propargyl or –Allenyl Complexes with Electrophiles

2.10.10 Product Subclass 8: Titanium–Diene and Titanacyclopentene Complexes
Synthesis of Product Subclass 8

2.10.11 Method 1: [Bis(dimethylphosphino)ethane]bis(butadiene)titanium(0) by Reduction of [Bis(dimethylphosphino)ethane]tetrachlorotitanium(IV) by Sodium Amalgam in the Presence of Butadiene

2.10.12 Method 2: Chloro(\(\eta^5\)-pentamethylcyclopentadienyl)titanium(II)–Diene Complexes by Reaction of Trichloro(\(\eta^5\)-pentamethylcyclopentadienyl)titanium(IV) with the Magnesium–Diene Complex

2.10.13 Method 3: Titanium–Buta-1,3-diene Complexes from Titanium–\(\eta^1\)-Methallyl Complexes

2.10.14 Method 4: Titanium–Cyclobutadiene Complexes by Reaction between Titanium–Arene Complexes and Alkynes

2.10.15 Product Subclass 9: Titanacycles
Synthesis of Product Subclass 9

2.10.16 Method 1: Reaction of Bis(\(\eta^5\)-cyclopentadienyl)titanium(II)–Phosphine Complexes with Alkynes or Allenes

2.10.17 Method 2: Reduction of Dichlorobis(\(\eta^5\)-cyclopentadienyl)titanium(IV) Complexes by Grignard Reagents in the Presence of Alkenes or Alkynes

2.10.18 Variation 1: Reactions of Bis(arylxy)dichlorotitanium(IV) Complexes with Butyllithium in the Presence of Dienes

2.10.19 Variation 2: Reduction of Titanium(IV)–Chloro Complexes by Sodium Amalgam in the Presence of Alkenes or Alkynes

2.10.20 Variation 3: Reaction of Dichlorobis(\(\eta^5\)-cyclopentadienyl)titanium(IV) with Lithium Naphthalene in the Presence of an Alkene

2.10.21 Variation 4: Reduction of Dichlorobis(\(\eta^5\)-cyclopentadienyl)titanium(IV) by Magnesium in the Presence of Alkynes

2.10.22 Method 3: Photolysis of Bis(\(\eta^5\)-cyclopentadienyl)dimethyltitanium(IV) in the Presence of an Alkyne

2.10.23 Method 4: Substitution Reaction of Dichlorobis(\(\eta^5\)-cyclopentadienyl)titanium(IV) with an Alkanediylidilithium Reagent

2.10.24 Method 5: Insertion Reactions of Alkenes with Alkyne- or Alkenetitanium(II) Complexes

Table of Contents

2.10.16 Method 1: Amidotitanium Complexes from Chlorotitanium Complexes by Transmetalation with Lithium or Magnesium Amides ............................................. 638
2.10.16.1 Variation 1: Amidotitanium Complexes from Halotitanium Complexes and Silylamines .......................................................... 639
2.10.16.2 Variation 2: Titanium Complexes with Chelating Cyclopentadienyl–Amido Ligands from Titanium(III) or Titanium(IV) Halides by Transmetalation with Metal Amides ........................................ 640
Applications of Product Subclass 16 in Organic Synthesis .................. 644
2.10.16.2 Method 2: Stereoselective Organic Reactions Promoted by Amidotitanium Complexes ..................................................... 644
2.10.16.3 Method 3: Fixation of Atmospheric Nitrogen by Titanium Complexes .......................................................... 646
Applications of Product Subclass 16 in Polymerization ......................... 650
2.10.16.4 Method 4: Diamidotitanium Complexes as Alkene Polymerization Catalysts .......................................................... 650
2.10.16.5 Method 5: Titanium Complexes with Monocyclopentadienyl–Amido Ligands Bridged by Silylene Groups as Alkene Polymerization Catalysts ........................................ 652

2.10.17 Product Subclass 17: Miscellaneous Titanium Complexes .......... 654
Applications of Product Subclass 17 in Organic Synthesis .................... 654
2.10.17.1 Method 1: McMurry Coupling ........................................ 654
2.10.17.2 Method 2: Pinacol Coupling ........................................ 656
2.10.17.3 Method 3: Carbonyl Coupling of Carbamoyl(oxo) Compounds Promoted by Low-Valent Titanium ........................................ 657
2.10.17.4 Method 4: Dimerization of Imines and Iminium Salts Promoted by Low-Valent Titanium Species ........................................ 659
2.10.17.5 Method 5: Reactions of Epoxides Promoted by Titanium Complexes ..................................................... 659
2.10.17.6 Method 6: Addition of Alkyl Halides to Alkenes Promoted by Titanium Complexes .......................................................... 660

2.11 Product Class 11: Organometallic Complexes of Zirconium and Hafnium
E.-i. Negishi and T. Takahashi

2.11 Product Class 11: Organometallic Complexes of Zirconium and Hafnium .......................................................... 681
2.11.1 Product Subclass 1: Metal–η⁸-Arene and –η²-Arene Complexes ........ 683
Synthesis of Product Subclass 1 ......................................................... 683
2.11.1.1 Method 1: By π-Complexation ........................................ 683
2.11.1.2 Method 2: By Transmetalation ........................................ 683
2.11.1.3 Method 3: Miscellaneous Transformations .......................... 685
Applications of Product Subclass 1 in Organic Synthesis ..................... 686
2.11.1.4 Method 4: Reactions of (η⁸-Cyclooctatetraene)zirconium Derivatives .......................................................... 686
2.11 Product Subclass 2: Metal–\(\eta^6\)-Arene Complexes ............................................... 687
Synthesis of Product Subclass 2 ............................................................ 687
2.11.1 Method 1: By \(\pi\)-Complexation .................................................... 687
2.11.1.1 Variation 1: Co-condensation of Metal Vapors with Arenes ................. 687
2.11.1.2 Variation 2: Reduction of Zirconium(IV) and Hafnium(IV) Compounds .......... 688
2.11.1.3 Variation 3: Complexation with Activated Zirconium(IV) and Hafnium(IV) Compounds of Low Electron Count ........................ 689
2.11.2 Method 2: By Transmetalation ..................................................... 689
2.11.3 Method 3: Other Methods .......................................................... 690
Applications of Product Subclass 2 in Organic Synthesis ......................... 691

2.11.2 Product Subclass 3: Metal–Triene Complexes ........................................ 692

2.11.3 Product Subclass 4: Metal–Bis(\(\eta^5\)-cyclopentadienyl) Complexes and Related Derivatives of Oxidation State Four ........................................... 692
Synthesis of Product Subclass 4 ............................................................ 693
2.11.3.1 Bis(\(\eta^5\)-cyclopentadienyl)metal(IV) Complexes Containing Two Electronegative Heteroatom Groups .......................................................... 693
2.11.3.1.1 Method 1: Synthesis of Bis(\(\eta^5\)-cyclopentadienyl)dihalometal(IV) Complexes .......................................................... 693
2.11.3.1.2 Method 2: Synthesis of Bis(\(\eta^5\)-cyclopentadienyl)dihalometal(IV) Complexes and Their Derivatives with Modified Cyclopentadienyl Ligands ........................................... 695
2.11.3.1.3 Method 3: Synthesis of Bis(\(\eta^5\)-cyclopentadienyl)metal(IV) Complexes Containing Monohalo and/or Group 16 or 15 Atom Ligands and Their Derivatives with Modified Cyclopentadienyl Ligands .............. 699
2.11.3.2 Bis(\(\eta^5\)-cyclopentadienyl)hydridometal(IV) Complexes ..................... 701
2.11.3.2.1 Method 1: By Transmetalation ................................................ 703
2.11.3.3 Bis(\(\eta^5\)-cyclopentadienyl)monometallo- and Bis(\(\eta^5\)-cyclopentadienyl)dimetallo-
Zirconium Complexes (Excluding Hydrido Derivatives) ........................................... 703
2.11.3.4 Bis(\(\eta^5\)-cyclopentadienyl)monooorganometal Complexes ....................... 704
2.11.3.4.1 Method 1: By Transmetalation ................................................ 704
2.11.3.4.2 Method 2: By Hydrometalation .............................................. 707
2.11.3.4.3 Method 3: By Carbometalation .............................................. 707
2.11.3.4.4 Method 4: By Oxidative Addition ............................................ 707
2.11.3.4.5 Method 5: Miscellaneous Methods ......................................... 709
2.11.3.5 Bis(\(\eta^5\)-cyclopentadienyl)dioorganometal Complexes ....................... 710
2.11.3.5.1 Method 1: Synthesis of Bis(\(\eta^5\)-cyclopentadienyl)dioorganometal Complexes and Their Derivatives ........................................... 710
2.11.3.6 Applications of Product Subclass 4 in Organic Synthesis ....................... 712
2.11.3.6.1 Bis(\(\eta^5\)-cyclopentadienyl)hydridometal(IV) Complexes ...................... 712
2.11.4.6.1 Method 1: Stoichiometric Reactions of Bis(η⁵-cyclopentadienyl)hydridozirconium(IV) and Bis(η⁵-cyclopentadienyl)dihydridozirconium(IV) Complexes and Related Reagents 712

2.11.4.6.1.1 Variation 1: Hydrozirconation and Hydrogen-Transfer Hydrozirconation 712

2.11.4.6.1.2 Variation 2: Other Stoichiometric Reactions 715

2.11.4.6.1.3 Variation 3: Catalytic Reactions Involving Bis(η⁵-cyclopentadienyl)hydridozirconium Derivatives 716

2.11.4.7 Bis(η⁵-cyclopentadienyl)monoorganometal Complexes 718

2.11.4.7.1 Method 1: Protonolysis, Halogenolysis, Oxidation, and Related Heteroatom—Carbon Bond Formation 719

2.11.4.7.1.1 Variation 1: Protonolysis and Deuterolysis 719

2.11.4.7.1.2 Variation 2: Halogenolysis 720

2.11.4.7.1.3 Variation 3: Oxidation 720

2.11.4.7.2 Method 2: C—C Bond Formation via Polar Reactions of Chlorobis(η⁵-cyclopentadienyl)monoorganozirconium Complexes with Carbon Electrophiles 721

2.11.4.7.2.1 Variation 1: Reactions of Allylbis(η⁵-cyclopentadienyl)zirconium Derivatives with Aldehydes 721

2.11.4.7.3 Method 3: C—C Bond Formation via Carbylation and Other Migratory Insertion Reactions of Bis(η⁵-cyclopentadienyl)monoorganozirconium Complexes 722

2.11.4.7.3.1 Variation 1: Carbylation 723

2.11.4.7.3.2 Variation 2: Isocyanide Insertion 723

2.11.4.7.3.3 Variation 3: Other Migratory Insertion Reactions 725

2.11.4.7.4 Method 4: C—C Bond Formation via Stoichiometric Transmetalation 726

2.11.4.7.5 Method 5: C—C Bond Formation via Metal-Catalyzed Reactions of Bis(η⁵-cyclopentadienyl)monoorganozirconium Complexes with Organic Electrophiles 727

2.11.4.7.5.1 Variation 1: Nickel- or Palladium-Catalyzed Cross Coupling of Alkenylchlorobis(η⁵-cyclopentadienyl)zirconium Complexes 728

2.11.4.7.5.2 Variation 2: Nickel-Catalyzed Conjugate Addition of Alkenylchlorobis(η⁵-cyclopentadienyl)zirconium Complexes 729

2.11.4.7.5.3 Variation 3: Copper-Catalyzed Conjugate Addition of Chlorobis(η⁵-cyclopenta)dienyl)monoorganozirconium Complexes 730

2.11.4.7.6 Method 6: C—C Bond Formation Reactions of Organometals Catalyzed by Bis(η⁵-cyclopentadienyl)monoorganozirconium Complexes 732

2.11.4.7.6.1 Variation 1: Zirconium-Catalyzed Carboalumination of Alkynes 732

2.11.4.7.6.2 Variation 2: Zirconium-Catalyzed Enantioselective Carboalumination of Alkenes 734

2.11.4.7.6.3 Variation 3: Other Zirconium-Catalyzed Carbometalation Reactions of Alkynes and Alkenes 736

2.11.4.8 Bis(η⁵-cyclopentadienyl)diorganometal Complexes 736

2.11.4.8.1 Method 1: By β-Hydrogen Abstraction 736
2.11.5 Product Subclass 5: Five-Membered Metallocycle–Bis(η^5-cyclopentadienyl) Derivatives of Oxidation State Four ........................................ 739

Synthesis of Product Subclass 5 ........................................ 740

2.11.5.1 Method 1: By Transmetalation ........................................ 740

2.11.5.2 Method 2: Carbometalative Ring-Expansion Reactions of Three- Membered Zirconocene and Hafnocene Derivatives ............ 741

2.11.5.2.1 Variation 1: The Erker–Buchwald Protocol ...................... 747

2.11.5.2.2 Variation 2: The Negishi–Takahashi Protocol .................. 750

2.11.5.2.3 Variation 3: Other Protocols for the Synthesis of Five-Membered Zirconacycles and Hafnacycles ......................... 753

Applications of Product Subclass 5 in Organic Synthesis ........ 754

2.11.5.3 Method 3: Reactions of Five-Membered Zirconacycles Leading to the Formation of C—H(D) and C—X Bonds .......... 755

2.11.5.3.1 Variation 1: Protonolysis, Deuterolysis, and Halogenolysis ........ 755

2.11.5.3.2 Variation 2: Synthesis of Five-Membered Heterocycles .... 759

2.11.5.3.3 Variation 3: Reactions with Organometals Containing Electropositive Metals ........................................ 759

2.11.5.4 Method 4: C—C Bond Formation via Polar Reactions of Five-Membered Zirconacycles with Carbon Electrophiles and Related π-Compounds ........................................ 761

2.11.5.4.1 Variation 1: Reactions of Zirconocene–Conjugated Diene Complexes with π-Compounds ................................. 761

2.11.5.4.2 Variation 2: Ring Expansion of Zirconacyclopentenes and Zirconacyclo- pentanes with Aldehydes ........................................... 763

2.11.5.4.3 Variation 3: Reactions of Zirconacyclopentenes with Allyl and Alkenyl Ethers and Halides ........................................ 764

2.11.5.5 Method 5: C—C Bond Formation by the Reactions of Five-Membered Zirconacycles with Carbon Monoxide, Isocyanides, and Related Carbon Nucleophiles ................ 765

2.11.5.5.1 Variation 1: Migratory Insertion Reactions of Zirconacycles with Carbon Monoxide and Isocyanides ........................ 765

2.11.5.6 Method 6: C—C Bond Formation by the Transition-Metal-Catalyzed Reaction of Five-Membered Zirconacycles .................. 769

2.11.5.6.1 Variation 1: Copper-Catalyzed Allylation of Zirconacyclopentadienes ........................................ 769

2.11.5.6.2 Variation 2: Copper-Catalyzed Allylation of Zirconacypentenes ........................................ 770

2.11.5.6.3 Variation 3: Copper-Catalyzed Acylation of Zirconacycles ........................................ 771

2.11.5.6.4 Variation 4: Synthesis of Arenes from Three Different Alkynes by Copper- or Nickel-Mediated Reactions of Alkynes with Zirconacypentadienes ........................................ 772

2.11.5.6.5 Variation 5: Coupling Reaction of Diodobenzene with Zirconacypentadienes ........................................ 773

2.11.5.7 Method 7: Organometallic Reactions Catalyzed by Five-Membered Zirconacycles ........................................ 774
2.11.6 Product Subclass 6: Metal–Bis(η5-cyclopentadienyl) Derivatives Containing Carbene, Nitrene, and Other Doubly Bonded Ligands

Synthesis of Product Subclass 6 ........................................ 774
2.11.6.1 Method 1: By α-Hydrogen Elimination ................................ 774
2.11.6.1.1 Variation 1: Formation of Imido- or Hydrazidozirconium Complexes ........ 775
2.11.6.1.2 Variation 2: Formation of Oxo-, Thioxo-, or Phosphinidenezirconium Complexes ........................................ 776
2.11.6.1.3 Variation 3: Formation of Zirconium–Carbene Complexes ............... 777
2.11.6.2 Method 2: Zirconium–Nitrene Complexes by Cleavage of Metallacycles 778
2.11.6.3 Method 3: Oxo-, Thioxo-, Selenium-, or Telluroxozirconium Complexes by the Oxidative Reaction of a Zirconium(II) Complex .......... 778
2.11.6.4 Method 4: Miscellaneous Reactions ................................ 779
Applications of Product Subclass 6 in Organic Synthesis ..................... 779
2.11.6.5 Method 5: Hydroamination of Internal Alkynes Catalyzed by Zirconium–Nitrene Complexes .................................... 779
2.11.6.6 Method 6: Formation of 1-Phenyl-1H-indole from a Hydrazidozirconium Complex ........................................ 779

2.11.7 Product Subclass 7: Cationic Metal–Bis(η5-cyclopentadienyl) Derivatives of Oxidation State Four .......................................................................................... 780

Synthesis of Product Subclass 7 ........................................ 780
2.11.7.1 Method 1: By Halogen or Alkyl Abstraction from Bis(η5-cyclopentadienyl)-organozirconium Complexes .............................. 780
2.11.7.1.1 Variation 1: Cationic Alkylbis(η5-cyclopentadienyl)zirconium Complexes by Halogen Abstraction from Bis(η5-cyclopentadienyl)halo-(methyl)zirconium ........................................ 780
2.11.7.1.2 Variation 2: One-Electron Oxidation of Bis(η5-cyclopentadienyl)diorgano-zirconium ........................................ 781
2.11.7.1.3 Variation 3: Cationic Alkylbis(η5-cyclopentadienyl)zirconium Complexes by Alkyl Abstraction Using a Lewis Acid .................. 782
2.11.7.2 Method 2: By Ligand Exchange of Cationic Alkylbis(η5-cyclopentadienyl)-zirconium Complexes ........................................ 783
2.11.7.3 Method 3: By Insertion Reactions of Cationic Alkylbis(η5-cyclopenta-dienyl)zirconium Complexes ........................................ 783
Applications of Product Subclass 7 in Organic Synthesis ..................... 783
2.11.7.4 Method 4: Coupling of Propene and 2-Methylpyridine Catalyzed by Cationic Bis(η5-cyclopentadienyl)zirconium Complexes ............ 783
2.11.7.5 Method 5: Catalytic Oligomerization of Terminal Alkynes ............. 784
2.11.7.6 Method 6: Addition of Alkyl(chloro)bis(η5-cyclopentadienyl)zirconium Complexes to Aldehydes ........................................ 784

2.11.8 Product Subclass 8: Metal–Bis(η5-cyclopentadienyl) Derivatives of Oxidation States Two and Three ........................................ 785

Synthesis of Product Subclass 8 ........................................ 785
2.11.8.1 Method 1: By Reduction with Metals ................................ 785
2.11.8.2 Method 2: By β-Hydrogen Abstraction ........................................... 786
2.11.8.2.1 Variation 1: Formation of Bis(η⁵-cyclopentadienyl)zirconium Complexes with Allenes, Silenes, Imines, and Diphenyldiazene Derivatives ........................................... 786
2.11.8.2.2 Variation 2: Formation of Bis(η⁵-cyclopentadienyl)zirconium–Benzyne Complexes ........................................... 787
2.11.8.2.3 Variation 3: Formation of Bis(η⁵-cyclopentadienyl)zirconium–Alkyne Complexes ........................................... 788
2.11.8.2.4 Variation 4: Formation of Bis(η⁵-cyclopentadienyl)zirconium–Alkene Complexes ........................................... 789
2.11.8.3 Method 3: By π-Complexation ........................................... 790
2.11.8.4 Method 4: By Transmetalation ........................................... 791
2.11.8.5 Method 5: By Reductive Elimination or Migration ................................. 792
2.11.8.6 Method 6: By β,γ-C—C Bond Cleavage ........................................... 792
2.11.8.7 Method 7: Formation of Bis(η⁵-cyclopentadienyl)zirconium(III) Complexes ........................................... 793

Applications of Product Subclass 8 in Organic Synthesis ........................................... 794

2.11.8.8 Method 8: Bis(η⁵-cyclopentadienyl)zirconium(II)-Catalyzed C—C Bond Formation ........................................... 794
2.11.8.8.1 Variation 1: Using Grignard or Other Magnesium Reagents ......................... 795
2.11.8.8.2 Variation 2: Using Organoaluminum Reagents ........................................... 801
2.11.8.8.3 Variation 3: Using Organozinc Reagents ........................................... 805
2.11.8.8.9 Method 9: Bis(η⁵-cyclopentadienyl)zirconium(II)-Catalyzed Hydrosilylation of Alkenes ........................................... 806

2.11.9 Product Subclass 9: Metal–Mono(η⁵-cyclopentadienyl) and –Tris(η⁵-cyclopentadienyl) Complexes and Related Derivatives ........................................... 807

Synthesis of Product Subclass 9 ........................................... 807

2.11.9.1 Method 1: By Transmetalation ........................................... 807
2.11.9.1.1 Variation 1: Formation of Trichloromono(η⁵-cyclopentadienyl)metal Derivatives from Metal(IV) Tetrachloride–Bis(dimethyl sulfide) Complexes ........................................... 808
2.11.9.1.2 Variation 2: Formation of Trichloro(η⁵-cyclopentadienyl)zirconium from Thallium(I) Methylcyclopentadienide and Zirconium(IV) Chloride–Bis(tetrahydrofuran) Complex ........................................... 809
2.11.9.1.3 Variation 3: Formation of Zirconium Complexes Containing an Amido-Linked Cyclopentadienyl Ligand ........................................... 809
2.11.9.1.4 Variation 4: Formation of Tris(η⁵-cyclopentadienyl)metal Complexes ........................................... 809
2.11.9.2 Method 2: By Radical Chlorination of Dichlorobis(η⁵-cyclopentadienyl)zirconium ........................................... 810
2.11.9.3 Method 3: By Amine Elimination ........................................... 811

Applications of Product Subclass 9 in Organic Synthesis ........................................... 811

2.11.9.4 Method 4: Aldol-Type Reactions of 1-Naphthol Catalyzed by Trichloro(η⁵-cyclopentadienyl)zirconium Derivatives ........................................... 811
Product Subclass 10: “Ate” Complexes of Metal–Bis(η^5-cyclopentadienyl) and Other Derivatives ................................................... 812

Synthesis of Product Subclass 10 ........................................... 813

2.11.10.1 Method 1: Synthesis of Bis(η^5-cyclopentadienyl)metal(IV) “Ate” Complexes ................................................... 813

2.11.10.1.1 Variation 1: Reactions of Bis(η^5-cyclopentadienyl)zirconium(IV) Derivatives with Alkyl- and Arylmetals Containing Lithium or Magnesium, or with Metal Hydrides .................................. 813

Applications of Product Subclass 10 in Organic Synthesis .................. 815

2.11.10.2 Method 2: “Ate” Complexes of Bis(η^5-cyclopentadienyl)metal(IV) Derivatives ........................................... 815

2.11.10.2.1 Variation 1: Reactions of Bis(η^5-cyclopentadienyl)zirconium(IV) Derivatives with Alkynylmetals Containing Lithium and Magnesium .......... 815

2.11.10.2.2 Variation 2: Reactions of Bis(η^5-cyclopentadienyl)metal(IV) Derivatives with α- and γ-Hetero-Substituted Alkyl- and Alkenyllithiums ........................................ 819

2.11.10.2.3 Variation 3: Zwitterionic Bis(η^5-cyclopentadienyl)zirconium(IV) Derivatives ........................................... 822

2.11.10.3 Method 3: Zirconate Complexes of Bis(η^5-cyclopentadienyl)zirconium(II) Derivatives ........................................... 823

Product Subclass 11: Metal π-Complexes Containing η^5-Ligands Other than η^5-Cyclopentadienyl ................................................ 825

Synthesis of Product Subclass 11 ........................................... 825

2.11.11.1 Method 1: By Transmetalation .................................... 825

2.11.11.2 Method 2: By Protonation with Carborane .................... 827

Product Subclass 12: Metal π-Complexes Containing η^4-, η^3-, and η^2-Ligands ................................................ 827

Synthesis of Product Subclass 12 ........................................... 828

2.11.12.1 Method 1: By π-Complexation .................................... 828

2.11.12.2 Method 2: By Transmetalation .................................... 828

Product Subclass 13: Metal σ-Complexes without π-Ligands of Oxidation State Four ................................................ 829

Synthesis of Product Subclass 13 ........................................... 830

2.11.13.1 Method 1: By Transmetalation .................................... 830

2.11.13.2 Method 2: Miscellaneous Methods ............................. 832

Applications of Product Subclass 13 in Organic Synthesis ................. 833

2.11.13.3 Method 3: Carbonyl Addition and Related Addition Reactions of σ-Organozirconium Complexes ................................ 833

2.11.13.4 Method 4: Migratory Insertion of Isocyanides and Carbon Monoxide ................................................ 834

Product Subclass 14: Metal σ-Complexes of Oxidation States below Four ................................................ 835

2.11.14.1 Method 1: By Reduction ........................................... 835

2.11.14.2 Method 2: By Reductive Carbonylation ....................... 836
2.12 Product Class 12: Organometallic Complexes of Scandium, Yttrium, and the Lanthanides
Z. Hou and Y. Wakatsuki

2.12.1 Product Subclass 1: Complexes in the Zero Oxidation State
Synthesis of Product Subclass 1
Method 1: By Co-condensation of Metal Vapor with a Ligand Compound
Method 2: By Reduction of Lanthanide(II) Species
Applications of Product Subclass 1 in Organic Synthesis
Method 3: Catalytic Conversion of Carbon Dioxide and Epoxides into Dioxolan-2-ones

2.12.2 Product Subclass 2: Lanthanide(II) Complexes with σ-Organo Ligands
Synthesis of Product Subclass 2
Method 1: By Reduction of Appropriate Organic Compounds with Lanthanide Metals
Variation 1: By Reduction of Organic Iodides
Variation 2: By Reduction of Aromatic Ketones, Thioketones, and Imines
Method 2: By Transmetalation
Variation 1: From Lanthanide(II) Iodides
Variation 2: From Lanthanide Metals
Applications of Product Subclass 2 in Organic Synthesis
Method 3: Cross-Coupling Reactions with Organic Electrophiles

2.12.3 Product Subclass 3: Mono- and Bis(cyclopentadienyl)lanthanide(II) Complexes
Synthesis of Product Subclass 3
Method 1: By Transmetalation
Applications of Product Subclass 3 in Organic Synthesis
Method 2: Formation of Nucleophilic Allyl- and Benzylsamarium(III) Species

2.12.4 Product Subclass 4: Mono- and Bis(pentamethylcyclopentadienyl)lanthanide(II) Complexes
Synthesis of Product Subclass 4
Method 1: By Transmetalation
Applications of Product Subclass 4 in Organic Synthesis
Method 2: Reductive Coupling Reactions
Variation 1: Homocoupling Reactions
Variation 2: Cross-Coupling Reactions
Method 3: Acylation of Alcohols and Amines

Science of Synthesis Original Edition Volume 2
© Georg Thieme Verlag KG

2.12.9  Product Subclass 9: Tris(substituted or unsubstituted cyclopentadienyl) Complexes
Synthesis of Product Subclass 9 .......................................................... 891
Method 1: By Transmetalation ......................................................... 891
Applications of Product Subclass 9 in Organic Synthesis ................. 893
Method 2: Coupling Reactions between Pentamethylcyclopentadienide Anion and Electrophilic Substrates .......................... 893

2.12.10 Product Subclass 10: Mono- and Bis(pentamethylcyclopentadienyl) Complexes of Scandium(III), Yttrium(III), and the Lanthanides(III) Bearing α-Organo or Other Anionic Ligands .......................................................... 895
Synthesis of Product Subclass 10 ...................................................... 895
Method 1: By Transmetalation .......................................................... 895
Variation 1: From Rare Earth Trihalides or Tris(aryloxides) .......... 895
Variation 2: From Pentamethylcyclopentadienyl Rare Earth Halides or Aryloxides ................................................................. 897
Method 2: By Hydrogenolysis or Protonation of Rare Earth Metal—Organo or Metal—Amide Bonds ........................................ 898
Method 3: By Oxidation of Bis(pentamethylcyclopentadienyl)lanthanide(II) Complexes ................................................................. 900
Applications of Product Subclass 10 in Organic Synthesis .............. 901
Method 4: Catalytic Dimerization of Alk-1- or Alk-2-yynes ............... 901
Method 5: Catalytic Hydrogenation, Hydrosilylation, and Hydroboration of Alkenes or Alkynes ......................................................... 903
Method 6: Catalytic Cyclization Reactions ........................................ 904
Method 7: Polymerization Reactions ................................................ 906

2.12.11 Product Subclass 11: Other Modified Cyclopentadienyl Complexes in Oxidation State Three ................................................................. 907
Synthesis of Product Subclass 11 ...................................................... 907
Method 1: By Transmetalation .......................................................... 907
Method 2: By Deprotonation ............................................................ 915
Applications of Product Subclass 11 in Organic Synthesis .............. 916
Method 3: Catalytic Cyclization—Silylation of Hindered Dienes and Trienes ................................................................. 917
Method 4: Asymmetric Catalysis ....................................................... 917
Method 5: Dimerization and Polymerization of Alk-1-enes .......... 918

2.12.12 Product Subclass 12: Cyclooctatetraenyl Complexes in Oxidation States Two and Three ................................................................. 919
Synthesis of Product Subclass 12 ...................................................... 919
Method 1: By Transmetalation .......................................................... 919
Method 2: By Oxidation of Low-Valent Lanthanides ........................ 921
2.12.13 Product Subclass 13: Miscellaneous Complexes in Oxidation State Three

Synthesis of Product Subclass 13 .................................................. 922

2.12.13.1 Method 1: By Transmetalation ........................................ 923

2.12.13.2 Method 2: By Oxidation of Low-Valent Lanthanides ................ 925

Applications of Product Subclass 13 in Organic Synthesis ............... 927

2.12.13.3 Method 3: Polymerization of Buta-1,3-diene, Methyl Methacrylate, and Lactones .................................................. 927

2.12.14 Product Subclass 14: Complexes in Oxidation State Four

Synthesis of Product Subclass 14 .................................................. 929

2.12.14.1 Method 1: By Transmetalation ........................................ 929

2.12.14.2 Method 2: By Oxidation of Cerium(III) Compounds ................ 931

2.13 Product Class 13: Organometallic Complexes of the Actinides A. Dormond and D. Barbier-Baudry

2.13.1 Product Subclass 1: Actinide–Cyclooctatetraenyl Complexes

Synthesis of Product Subclass 1 .................................................. 943

2.13.1.1 Method 1: Preparation of Actinide–Cyclooctatetraenyl Complexes by Ligand Substitution ................................. 944

2.13.2 Product Subclass 2: Actinide–Cycloheptatrienyl Complexes

Synthesis of Product Subclass 2 .................................................. 946

2.13.2.1 Method 1: Preparation of Uranium–Cycloheptatrienyl Complexes by Ligand Substitution ................................. 947

2.13.3 Product Subclass 3: Actinide–Arene Complexes

Synthesis of Product Subclass 3 .................................................. 947

2.13.3.1 Method 1: Preparation of Uranium(III) Arene Complexes by Reduction of Uranium(IV) Complexes ................................. 947

2.13.4 Product Subclass 4: Actinide–Cyclopentadienyl and Substituted Cyclopentadienyl Complexes

Synthesis of Product Subclass 4 .................................................. 948

2.13.4.1 Method 1: Preparation of Actinide Cyclopentadienyl Halide and Amide Complexes by Ligand Substitution ................................. 948

2.13.4.2 Method 2: Preparation of Actinide Cyclopentadienyl Alkyl Complexes by Ligand Substitution ................................. 950

2.13.4.3 Method 3: Preparation of Other Actinide Cyclopentadienyl Complexes by Ligand Substitution ................................. 952

2.13.4.4 Method 4: Preparation of (Cyclopentadienyl)actinide(III) Complexes by Reduction ................................. 953
2.13.5 **Product Subclass 5: Actinide–Pentamethylcyclopentadienyl Complexes**

Synthesis of Product Subclass 5 .............................................................. 954

2.13.5.1 Method 1: Preparation of (Pentamethylcyclopentadienyl)actinide(IV) Halide and Alkyl Complexes by Ligand Substitution ........................................... 954

2.13.5.2 Method 2: Preparation of (Pentamethylcyclopentadienyl)uranium(III) Complexes by Reduction ................................................................. 958

2.13.5.3 Method 3: Preparation of (Tetramethylcyclopentadienyl)actinide Adduct Complexes by Ligand Addition ...................................................... 959

Applications of Product Subclass 5 in Organic Synthesis .......................... 959

2.13.5.4 Method 4: Catalytic Synthesis of Imines by Addition ........................ 959

2.13.6 **Product Subclass 6: Actinide–Tetramethylphosphoryl Complexes**

Synthesis of Product Subclass 6 ................................................................. 960

2.13.6.1 Method 1: Preparation of (Tetramethylphosphoryl)uranium Complexes by Ligand Substitution ................................................................. 960

2.13.7 **Product Subclass 7: Actinide–Hexadienyl and –Pentadienyl Complexes**

Synthesis of Product Subclass 7 ................................................................. 961

2.13.7.1 Method 1: Preparation of (Hexadienyl)- and (Pentadienyl)actinide Complexes by Ligand Substitution ...................................................... 961

2.13.8 **Product Subclass 8: Actinide–Allyl Complexes** .............................. 962

Synthesis of Product Subclass 8 ................................................................. 962

2.13.8.1 Method 1: Preparation of Actinide–Allyl Complexes by Ligand Substitution ................................................................. 962

2.13.9 **Product Subclass 9: Actinide–π-Organo Complexes without Anionic π-Ligands** ................................................................. 963

Synthesis of Product Subclass 9 ................................................................. 964

2.13.9.1 Method 1: Preparation of Actinide Alkyl Pyrazolylborate Complexes by Ligand Substitution ................................................................. 964

2.13.9.2 Method 2: Preparation of Actinide Alkyl Aryloxy Complexes by Ligand Substitution ................................................................. 964

2.13.9.3 Method 3: Preparation of Actinide Alkyl Silylamido Complexes by Ligand Substitution ................................................................. 965

2.13.9.4 Method 4: Preparation of Actinide Metallacycles by Elimination Reactions ................................................................. 966

Applications of Product Subclass 9 in Organic Synthesis .......................... 967

2.13.9.5 Method 5: Selective Nucleophilic Addition to Carbonyl Compounds .... 967

2.13.9.6 Method 6: Nucleophilic Addition to Unsaturated Compounds .......... 967

2.13.10 **Product Subclass 10: Miscellaneous Complexes** .......................... 969

Synthesis of Product Subclass 10 ................................................................. 969

2.13.10.1 Method 1: Preparation of Uranium(IV) Borohydride by Ligand Substitution ................................................................. 969

Volume 3:
Compounds of Groups 12 and 11
(Zn, Cd, Hg, Cu, Ag, Au)

Preface .......................................................... V
Table of Contents ............................................. IX

Introduction
I. A. O’Neil .......................................................... 1

3.1 Product Class 1: Organometallic Complexes of Zinc
P. Knochel ..................................................... 5

3.2 Product Class 2: Organometallic Complexes of Cadmium
P. O’Brien and M. A. Malik ................................. 91

3.3 Product Class 3: Organometallic Complexes of Mercury
W. Kitching and M. Glenn ................................. 133

3.4 Product Class 4: Organometallic Complexes of Copper
H. Heaney and S. Christie ................................. 305

3.5 Product Class 5: Organometallic Complexes of Silver
J. P. Fackler and C. W. Liu ................................. 663

3.6 Product Class 6: Organometallic Complexes of Gold
H. Schmidbaur and A. Schier ............................. 691

Keyword Index ................................................. 763
Author Index .................................................. 797
Abbreviations ................................................. 841

| Synthesis of Product Subclass 9 | 74 |
| 3.1.9.1 Method 1: Bis(\(\alpha\)-halomethyl)zincs or Other Zinc Carbenoids from a Dihalomethane and a Diorganozinc | 75 |
| 3.1.9.2 Method 2: Bis(\(\alpha\)-halomethyl)zincs or Other Zinc Carbenoids by Transmetalation of an Organometallic Reagent with a Zinc Halide | 75 |
| 3.1.9.3 Method 3: \(\alpha\)-Halogenated Alkylzinc Halides from a Dihalomethane and an Organozinc Reagent | 76 |
| 3.1.9.4 Method 4: \(\alpha\)-Halogenated Alkylzinc Halides from a Dihalomethane and Zinc Dust | 76 |
| 3.1.9.5 Methods 5: Additional Methods | 77 |
| Applications of Product Subclass 9 in Organic Synthesis | 77 |
| 3.1.9.6 Method 6: Cyclopropanation of Alkenes | 77 |
| 3.1.9.7 Method 7: Homologation of an Organometallic with Iodomethylzinc(II) Iodide | 78 |
| 3.1.10 Product Subclass 10: Triorganozincates | 79 |
| Synthesis of Product Subclass 10 | 79 |
3.1 Method 1: Lithium Triorganozincates from an Organolithium Reagent and a Zinc Halide ........................................... 79
3.1.10 Method 2: Lithium Triorganozincates from a Triorganozincate and an Alkyne .................................................. 80
3.1.10.1 Variation 1: From a 1,1-Dihalide ........................................ 80
3.1.10.2 Variation 2: From an Aryl Iodide ........................................ 81
Applications of Product Subclass 10 in Organic Synthesis .................. 81
3.1.10.3 Method 3: 1,4-Addition of Triorganozincates to \( \alpha,\beta \)-Unsaturated Ketones ........................................... 81

3.2 Product Class 2: Organometallic Complexes of Cadmium
P. O’Brien and M. A. Malik

3.2 Product Class 2: Organometallic Complexes of Cadmium ............. 91
3.2.1 Product Subclass 1: Organocadmium Halides ............................ 92
Synthesis of Product Subclass 1 ........................................... 92
3.2.1.1 Method 1: From Organolithium Compounds ......................... 92
3.2.1.2 Method 2: By Direct Electrochemical Synthesis ..................... 94
3.2.1.3 Method 3: From the Reaction of Active Cadmium Slurries and Alkyl Iodides .............................................. 95
3.2.1.4 Method 4: From the Reaction of Pentafluorohalobenzenes and Cadmium(II) Halides ........................................... 96
Applications of Product Subclass 1 in Organic Synthesis .................... 96
3.2.1.5 Method 5: Ketones from Acid Halides or Ketene .................... 96
3.2.2 Product Subclass 2: Cadmium Compounds of the Type \( \text{R}^1 \text{CdX} \) (\( \text{X} = \text{Heteroatom} \)) .......................... 97
Synthesis of Product Subclass 2 ........................................... 97
3.2.2.1 Method 1: Bis[bis(trimethylsilyl)amino][pentamethylcyclopentadienyl]-cadmium(II) ........................................... 97
3.2.2.2 Method 2: Methylcadmium Alkoxides and Alkyl Methylcadmium Sulfides 97
3.2.2.3 Method 3: Methyl(trimethylsilyloxy)cadmium ............................................. 99
3.2.2.4 Method 4: (tert-Butylperoxy)methylcadmium ........................ 99
3.2.2.5 Method 5: Alkylcadmium Thiocyanates ............................... 100
3.2.2.6 Method 6: Cadmium–Tris(dimethylamino)methylene phosphorane Complex ........................................... 100
3.2.2.7 Method 7: Cadmium–\( \pi \)-Arene Complexes .............................. 101
3.2.2.8 Method 8: Methyl(selanyl)cadmium(II) Compounds ............... 101
3.2.2.9 Method 9: Alkyl\([N,N\text{-diethylthio(or diseleno)carbamato}]\text{cadmium(II) Compounds} ........................................... 102
3.2.2.9.1 Variation 1: From the Reaction of Dimethylcadmium and Diethylamine, Followed by Insertion of Carbon Disulfide or Carbon Diselenide ........................ 102

Applications of Product Subclass 2 in Organic Synthesis

3.3.6 Method 6: Synthesis of Cyclopropanes

3.3 Product Subclass 3: Alk-1-ynyl- and Vinylmercury(II) Compounds

Synthesis of Product Subclass 3

3.3.3.1 Method 1: From Alk-1-ynes and Mercury(II) Halides with Base

3.3.3.2 Method 2: From Vinyl and Alk-1-ynyl Halides and Mercury(II) Cyanide

3.3.3.3 Method 3: From Alkynes and Alkenes with Mercury(II) Halides and Carboxylates under Nonbasic Conditions

Applications of Product Subclass 3 in Organic Synthesis

3.3.3.4 Method 4: Alkylation

3.3.3.5 Method 5: Carbonylation

3.3.3.6 Method 6: Aryl, Alk-1-ynyl, or Vinyl Coupling

3.3.3.7 Method 7: Heck-Type Addition

3.3.3.8 Method 8: Products from Formal Electrophilic Substitution Reactions

3.3.4 Product Subclass 4: Allylmercury(II) Compounds

Synthesis of Product Subclass 4

3.3.4.1 Method 1: Reaction of Allylic Halides with Mercury(0)

3.3.4.2 Method 2: Reaction of η²-Allylmetal Complexes with Mercury(0)

Applications of Product Subclass 4 in Organic Synthesis

3.3.4.3 Method 3: Synthesis of β,γ-Unsaturated Ketones

3.3.4.4 Method 4: Synthesis of Allylic Acetates

3.3.5 Product Subclass 5: β- and γ-Heterosubstituted Alkylmercury(II) Compounds; Oxymercuration

Synthesis of Product Subclass 5

3.3.5.1 Method 1: β-Heteroalkylmercury(II) Compounds from Oxymercuration of Alkynes

3.3.5.2 Method 2: β-Heteroalkylmercury(II) Compounds from Oxymercuration of Allenes

3.3.5.3 Method 3: β-Heteroalkylmercury(II) Compounds from Oxymercuration of 1,3-Dienes

3.3.5.4 Method 4: β-Heteroalkylmercury(II) Compounds from Oxymercuration of Alkenes

3.3.5.5 Method 5: Biomimetic-Type Cyclizations: Oxymercuration of Polyenes

3.3.5.6 Method 6: γ-Heteroalkylmercury(II) Compounds: Oxymercuration of Cyclopropanes

Applications of Product Subclass 5 in Organic Synthesis

3.3.6 Product Subclass 6: Alkylmercury(II) Compounds

Synthesis of Product Subclass 6

3.3.6.1 Method 1: Transmetalation with Organoboron

3.3.6.2 Method 2: Transmetalation with Organomagnesium and Organolithium Reagents
3.3.6.1 Variation 1: Transmetalation with Organomagnesium Reagents .......... 262
3.3.6.2 Variation 2: Transmetalation with Organolithium ................................. 263
3.3.6.3 Method 3: Decarboxylation of Mercury(II) Carboxylates .................... 264
3.3.6.4 Method 4: Symmetrization of an Organomercury(II) Salt to the Corresponding Diorganomercury(II) Compound .......................... 267
3.3.6.4.1 Variation 1: Symmetrization ......................................................... 268
3.3.6.4.2 Variation 2: Reductive Disproportionation ......................................... 270
3.3.6.5 Method 5: Formation of Organomercury(II) Salts ................................. 271

3.4.1.2.1 Method 1: From Aryllithium Reagents Formed by Metalation Reactions 340
3.4.1.2.1 Variation 1: Using an Alkyllithium Reagent ........................................ 340
3.4.1.2.2 Method 2: From Aryllithium Reagents Formed by Halogen–Metal
         Interconversion Reactions Using an Alkyllithium Reagent .......................... 344
3.4.1.2.2.1 Variation 1: Reactions of Arylcopper Reagents with Carbonyl Compounds 344
3.4.1.2.2.2 Variation 2: Biaryl Formation Involving Coupling of sp²-Hybridized
         Carbon Centers ...................................................................................... 345
3.4.1.2.2.3 Variation 3: Substitution Reactions Involving a Leaving Group at
         an sp³-Hybridized Carbon ...................................................................... 348
3.4.1.2.2.4 Variation 4: Conjugate Addition Reactions ........................................ 350
3.4.1.3 From Aryl Halides and Copper(0), Including Rieke Copper .......................... 352
3.4.1.3.1 Method 1: Ullmann Biaryl Syntheses from Aryl Halides and Copper(0) .... 352
3.4.1.3.2 Method 2: Diastereoselective Ullmann Biaryl Syntheses from
         Aryl Halides and Copper(0) ...................................................................... 356
3.4.1.3.3 Method 3: Mechanistic Studies Concerning the Ullmann Reaction .......... 359
3.4.1.3.4 Method 4: Biaryl Syntheses from Aryl Halides and Copper(I) Salts .......... 361
3.4.1.3.5 Method 5: Reactions of Aryl Halides with Active Copper(0)
         (Rieke Copper) ..................................................................................... 364
3.4.1.4 From Arylzinc Reagents Together with a Copper(I) Salt ............................ 370
3.4.1.4.1 Method 1: Substitution Reactions ...................................................... 371
3.4.1.4.1.1 Variation 1: Reactions with Allylic Substrates .................................. 371
3.4.1.4.1.2 Variation 2: Reactions with Propargylic Substrates .......................... 373
3.4.1.4.1.3 Variation 3: Substitution of Haloalkenes by
         Addition–Elimination Reactions .............................................................. 374
3.4.1.4.1.4 Variation 4: Formation of Ketones by Addition–Elimination ............... 374
3.4.1.4.2 Method 2: Conjugate Addition Reactions ............................................ 375
3.4.1.5 From Arylmercury Salts Together with Copper(0) ..................................... 376
3.4.1.6 From Aryllead(IV) Acetates and Copper(I) Salts ...................................... 377
3.4.1.7 From Arylsilanes and Copper(I) Salts .................................................... 377
3.4.2 Product Subclass 2: Monoalkynylcopper(I) Compounds ............................. 378
3.4.2.1 Method 1: From Alkynes and Water-Soluble Copper(I) Salts .................. 378
3.4.2.2 Method 2: Coupling Reactions of Haloaromatic Compounds Leading to
         Disubstituted Alkynes ........................................................................... 380
3.4.2.3 Method 3: Coupling Reactions of Haloaromatic Compounds Leading to
         Heterocyclic Ring Formation .................................................................. 384
3.4.2.3.1 Variation 1: The Synthesis of Benzo[b]furan and Pyridofuran Derivatives . 384
3.4.2.3.2 Variation 2: Synthesis of Indole Derivatives ....................................... 386
3.4.2.3.3 Variation 3: Synthesis of Benzo[b]thiophenes .................................... 388
3.4.2.3.4 Variation 4: Cyclization Reactions of Aromatic Vicinally Related
         Halocarboxylic Acids ............................................................................. 389
3.4.2.3.5 Variation 5: Cyclization Reactions of 2-Iodobenzyl Alcohol and
         2-Iodophenylacetic Acid ........................................................................ 390
3.4.2.4 Method 4: From Alkynes and Copper(I) Salts and Complexes ............... 390
3.4.2.5 Method 5: Oxidative Coupling Reactions of Alkynes Involving Copper(II)
         and Copper(I) Salts and Complexes ....................................................... 393

### 3.5 Product Class 5: Organometallic Complexes of Silver

J. P. Fackler and C. W. Liu

#### 3.5.1 Product Subclass 1: Silver–Tetraene Complexes

Synthesis of Product Subclass 1

<table>
<thead>
<tr>
<th>Method 1</th>
<th>From Silver Trifluoromethanesulfonate and a Tetraene</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>663</td>
</tr>
</tbody>
</table>

#### 3.5.2 Product Subclass 2: Silver–Triene Complexes

Synthesis of Product Subclass 2

<table>
<thead>
<tr>
<th>Method 1</th>
<th>From Silver Trifluoromethanesulfonate and a Cyclophane</th>
</tr>
</thead>
<tbody>
<tr>
<td>Method 2</td>
<td>From Silver Nitrate and a Triene</td>
</tr>
<tr>
<td></td>
<td>664</td>
</tr>
<tr>
<td></td>
<td>665</td>
</tr>
</tbody>
</table>

#### 3.5.3 Product Subclass 3: Silver–Dienyl Complexes

Synthesis of Product Subclass 3

<table>
<thead>
<tr>
<th>Method 1</th>
<th>From Silver Trifluoromethanesulfonate and Cyclopentadienylsodium</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>665</td>
</tr>
</tbody>
</table>

#### 3.5.4 Product Subclass 4: Silver–Alkyne Complexes

Synthesis of Product Subclass 4

<table>
<thead>
<tr>
<th>Method 1</th>
<th>Silver–Bis(alkyne) Complexes from Organosilver Compounds and Bis(alkynyl)titanium Complexes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Method 2</td>
<td>(Hexafluoroacetylacetonato)silver–Alkyne Complexes from Silver(l) Oxide and Alkynes</td>
</tr>
<tr>
<td></td>
<td>667</td>
</tr>
<tr>
<td></td>
<td>668</td>
</tr>
</tbody>
</table>

#### 3.5.5 Product Subclass 5: Silver–Alkene Complexes

Synthesis of Product Subclass 5

<table>
<thead>
<tr>
<th>Method 1</th>
<th>(Hexafluoroacetylacetonato)silver–Alkene Complexes from Silver(l) Oxide and Alkenes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Method 2</td>
<td>Silver–η²-Arene Complexes from Silver Perchlorate or Trifluoromethanesulfonate and Arenes</td>
</tr>
<tr>
<td></td>
<td>669</td>
</tr>
<tr>
<td></td>
<td>669</td>
</tr>
</tbody>
</table>

#### 3.5.6 Product Subclass 6: Silver–Carbene Complexes

Synthesis of Product Subclass 6

<table>
<thead>
<tr>
<th>Method 1</th>
<th>Silver–Carbene Homoleptic Complexes from Imidazol-2-ylidene Derivatives</th>
</tr>
</thead>
<tbody>
<tr>
<td>Variation 1</td>
<td>By Direct Reaction with the Carbene</td>
</tr>
<tr>
<td>Variation 2</td>
<td>By Reaction under Basic Phase-Transfer-Catalysis Conditions</td>
</tr>
<tr>
<td></td>
<td>671</td>
</tr>
<tr>
<td></td>
<td>671</td>
</tr>
</tbody>
</table>

#### 3.5.7 Product Subclass 7: Silver–Aryl Complexes

Synthesis of Product Subclass 7

<table>
<thead>
<tr>
<th>Method 1</th>
<th>Silver–Aryl Complexes from Metalated Reagents</th>
</tr>
</thead>
<tbody>
<tr>
<td>Variation 1</td>
<td>From (Trialkylyphenyl)magnesium Halides</td>
</tr>
<tr>
<td>Variation 2</td>
<td>From Lithiated Reagents</td>
</tr>
<tr>
<td></td>
<td>673</td>
</tr>
<tr>
<td></td>
<td>673</td>
</tr>
<tr>
<td></td>
<td>674</td>
</tr>
</tbody>
</table>
3.5.8  **Product Subclass 8: Silver–α-Alkynyl Complexes** ........................................ 674

Synthesis of Product Subclass 8 .................................................. 675

3.5.8.1  Method 1: Polymeric Silver Acetyldides from a Silver Salt and an Acetylene 675

3.5.8.2  Method 2: Silver–Alkynyl Complexes from Phosphinesilver Complexes and Alkynes ........................................ 675

Applications of Product Subclass 8 in Organic Synthesis .......................... 676

3.5.8.3  Method 3: Perchlorophenylacetylene Using a Silver Acetylide .......... 676

3.5.8.4  Method 4: Aryl(phenylethynyl)diazones from Silver Acetylides and Diazonium Salts ........................................ 677

3.5.9  **Product Subclass 9: Silver–α-Alkenyl Complexes** ........................................ 678

Synthesis of Product Subclass 9 .................................................. 679

3.5.9.1  Method 1: From Silver(I) Fluoride and Perfluoroalkynes ............... 679

3.5.10  **Product Subclass 10: Silver–α-Alkyl Homoleptic Complexes** ............ 679

Synthesis of Product Subclass 10 .................................................. 679

3.5.10.1  Method 1: Synthesis of Dialkylsilver Complexes ....................... 679

3.5.10.1.1  Variation 1: Via Transmetalation .................................... 680

3.5.10.2  Method 2: Synthesis of Perfluoroalkylsilver Compounds ............ 680

3.5.10.3  Method 3: Synthesis of Silver–Ylide Complexes ....................... 681

3.5.10.3.1  Variation 1: From Ylides ............................................... 681

3.5.10.3.2  Variation 2: Via Transyldiation .................................... 682

3.5.10.3.3  Variation 3: From Phosphonium Salts ................................ 683

3.5.11  **Product Subclass 11: Silver–α-Alkyl Non-homoleptic Complexes** ........ 683

Synthesis of Product Subclass 11 .................................................. 683

3.5.11.1  Method 1: Synthesis of Fluoroalkylsilver Compounds ............... 683

3.5.11.2  Method 2: Synthesis of Silver–Ylide Complexes ....................... 684

3.5.11.3  Method 3: Dinuclear Silver Complexes from Lithiated Reagents .... 686

3.5.12  **Product Subclass 12: Miscellaneous Complexes** ............................... 686

Synthesis of Product Subclass 12 .................................................. 686

3.5.12.1  Method 1: Synthesis of Silver–Carbonyl Complexes ............... 686

3.6  **Product Class 6: Organometallic Complexes of Gold**

H. Schmidbaur and A. Schier

3.6  **Product Class 6: Organometallic Complexes of Gold** ............................... 691

3.6.1  **Product Subclass 1: Unsubstituted Alkylgold(I) and Alkylgold(III) Compounds** ............... 691

Synthesis of Product Subclass 1 .................................................. 692

3.6.1.1  Method 1: Synthesis of Alkylgold(I) Complexes from Organolithium or Grignard Reagents .................. 692

3.6.1.1.1  Variation 1: Via Gold(I) Oxonium Salts .......................... 694
3.6.1.2 Method 2: Synthesis of Dialkylgold(I) Complexes from Organolithium Compounds .............................................. 694
3.6.1.3 Method 3: Synthesis of Dialkyl(halo)gold(III) and Related Compounds from Organometallic Reagents ..................... 695
3.6.1.3.1 Variation 1: Via Organotin Compounds ................................................... 696
3.6.1.3.2 Variation 2: Via Organolithium Compounds ........................................ 696
3.6.1.3.3 Variation 3: Via \([\text{Au}_2R_14X_2]\) as Starting Materials ........................................ 696
3.6.1.4 Method 4: Synthesis of Trialkylgold(III) Complexes ................. 699
3.6.1.5 Method 5: Synthesis of Tetraalkylaurates(III) ....................... 700
3.6.2 Product Subclass 2: Organogold Compounds with Substituted Alkyl Ligands .......................................................... 701
3.6.2.1 Method 1: Mononuclear Gold(I) Complexes With Haloalkyl and Pseudohaloalkyl Ligands .......................... 701
3.6.2.1.1 Variation 1: From Alkylgold(I) Complexes and Fluoroalkyl Iodides .......... 702
3.6.2.1.2 Variation 2: Insertion of Perfluoroalkenes .............................................. 703
3.6.2.1.3 Variation 3: With Bis(trifluoromethyl)cadmium .................................... 703
3.6.2.1.4 Variation 4: With Diazomethane ............................................................ 703
3.6.2.2 Method 2: Mononuclear Gold(I) Complexes With Oxo, Ester, Sulfone, Phosphino, Silyl, and Other Functions in the Alkyl Substituent 704
3.6.2.2.1 Variation 1: Auration of Ketones Using Halo(phosphine)gold(I) or Oxonium Salts ......................................................... 705
3.6.2.2.2 Variation 2: Auration of Ketones From Cyclopropyl Silyl Ethers .......... 706
3.6.2.2.3 Variation 3: Auration of Acetylacetone .................................................. 706
3.6.2.2.4 Variation 4: Auration of Esters ................................................................. 706
3.6.2.2.5 Variation 5: Silylalkylgold(I) Compounds from Organometallic Reagents . 706
3.6.2.3 Method 3: Mononuclear Gold(III) Complexes With Substituted Organic Groups ...................................................... 707
3.6.2.3.1 Variation 1: Via Oxidative Addition of Halogen ...................................... 707
3.6.2.3.2 Variation 2: Via Oxidative Addition of Trifluoroiodomethane .................. 707
3.6.2.4 Method 4: Dinuclear Gold(I) Complexes With Substituted Organic Groups ......................................................... 708
3.6.2.4.1 Variation 1: Auration of Malononitrile ..................................................... 709
3.6.2.4.2 Variation 2: Auration of Barbituric Acid ............................................... 709
3.6.3 Product Subclass 3: Organogold Compounds with Ylide Ligands ................................................................. 710
3.6.3.1 Method 1: Mononuclear Complexes of Gold(I) With One Ylide and One Halogen Ligand .............................................. 710
3.6.3.2 Method 2: Mononuclear Complexes of Gold(I) With Two Ylide Ligands ... 713
3.6.3.3 Method 3: Mononuclear Gold(I) Complexes With One Ylide and One Organic Group .................................................... 713
3.6.3.4 Method 4: Mononuclear Gold(III) Complexes With One Ylide Ligand .... 714
3.6.3.5 Method 5: Mononuclear Gold(III) Complexes With Two Ylide Ligands ... 715
3.6.3.6 Method 6: Monocyclic Dinuclear Gold(I) Complexes With Bridging Ylide Ligands .............................................. 715
3.6.3.7 Method 7: Monocyclic Dinuclear Gold(II) Complexes With Bridging Ylide Ligands

3.6.3.7.1 Variation 1: Via Oxidative Addition

3.6.3.7.2 Variation 2: Via Substitution Reactions

3.6.3.8 Method 8: Monocyclic Dinuclear Gold(III) Complexes With Bridging Ylide Ligands

3.6.3.9 Method 9: Bicyclic Dinuclear Gold(III) Complexes With Bridging Ylide Ligands

3.6.3.9.1 Variation 1: Via Oxidative Addition

3.6.3.9.2 Variation 2: Via Substitution Reactions

3.6.4 Product Subclass 4: Organogold Compounds With Alkenyl Ligands

Synthesis of Product Subclass 4

3.6.4.1 Method 1: Mononuclear Gold(I) Complexes With Alkenyl Ligands

3.6.4.2 Method 2: Mononuclear Gold(I) Complexes With Cyclopentadienyl Ligands

3.6.4.3 Method 3: Mononuclear Gold(I) Complexes With Ferrocenyl and Cymantrenyl Ligands

3.6.4.4 Method 4: 1,2-Digoldalkenes

3.6.4.5 Method 5: 1,1-Digold(I)alkenium and 1,1-Digold(I)ferrocenium Salts

3.6.4.6 Method 6: 1,6-Digoldferrocene Complexes

3.6.4.7 Method 7: Auracyclopentadiene Compounds

3.6.5 Product Subclass 5: Organogold Compounds with Alkynyl Ligands

Synthesis of Product Subclass 5

3.6.5.1 Method 1: Ligand-Free Gold(I) Acetylides

3.6.5.2 Method 2: Complexation of Gold(I) Acetylides

3.6.5.3 Method 3: Complex Gold(I) Acetylides by Nucleophilic Substitution

3.6.6 Product Subclass 6: Arylgold Compounds

Synthesis of Product Subclass 6

3.6.6.1 Method 1: Arylgold(I) Compounds

3.6.6.1.1 Variation 1: Donor-Free Arylgold(I) Oligomers

3.6.6.1.2 Variation 2: Complexes via the Organometallic Route

3.6.6.1.3 Variation 3: By Decarboxylation

3.6.6.1.4 Variation 4: Using Tetraphenylborates

3.6.6.1.5 Variation 5: Anionic Species via Double Arylation

3.6.6.2 Method 2: Arylgold(III) Compounds

3.6.6.2.1 Variation 1: Auration of Arenes

3.6.6.2.2 Variation 2: Oxidative Addition of Halogen

3.6.6.2.3 Variation 3: Chlorination Using Thallium(III) Chloride

3.6.6.3 Method 3: Diarylgold(III) Compounds

3.6.6.3.1 Variation 1: Diarylthallium Halides as Reagents

3.6.6.3.2 Variation 2: Oxidative Addition of Halogen

3.6.6.3.3 Variation 3: With Arylmercury Reagents

3.6.6.3.4 Variation 4: The Grignard Method
3.6.4 Method 4: Triarylgold(III) Complexes  ........................................ 743
3.6.5 Method 5: Tetraarylarurate(III) Complexes  ............................. 743
3.6.6.1 Variation 1: With Aryllithium Reagents  ............................. 743
3.6.6.2 Variation 2: With Arylsilver Reagents  ............................. 744

3.6.7 Product Subclass 7: Heterocycles as Ligands for Gold(I) and Gold(III) Complexes  ................................................................. 744
Synthesis of Product Subclass 7  ........................................ 744
3.6.7.1 Method 1: With Organolithium and Organosilyl Reagents  ............................. 744
3.6.7.2 Method 2: Auration of Heterocycles by Tetrachlorauric Acid  .................... 745

3.6.8 Product Subclass 8: Carbene Complexes of Gold  ........................ 745
Synthesis of Product Subclass 8  ........................................ 746
3.6.8.1 Method 1: (Carbene)gold(I) Complexes  ............................. 746
3.6.8.1.1 Variation 1: Via Addition of Alcohols or Amines to Isonitrile Complexes  ........ 746
3.6.8.2 Method 2: (Carbene)gold(III) Complexes  ............................. 746
3.6.8.2.1 Variation 1: Via Oxidative Addition of Halogen to Gold(I) Complexes  ........ 746
3.6.8.2.2 Variation 2: Via Addition of Isonitriles to Azido Complexes  ............................. 747

3.6.9 Product Subclass 9: Alkene and Alkyne π-Complexes of Gold(I)  ................................................................. 747
Synthesis of Product Subclass 9  ........................................ 747
3.6.9.1 Method 1: Addition of Alkenes and Alkynes to Gold(I)  ............................. 747
3.6.9.2 Method 2: Reduction of Tetrachlorauric Acid by Alkenes and Alkynes  ................................................................. 748

3.6.10 Product Subclass 10: Carbon in Gold Clusters  ................................................................. 748
Synthesis of Product Subclass 10  ........................................ 749
3.6.10.1 Method 1: Synthesis Based on Phosphorus Ylides  ............................. 749
3.6.10.2 Method 2: Synthesis Based on Polyborylmethanes  ............................. 750
3.6.10.3 Method 3: Synthesis Based on Trimethylsilyldiazomethane  ............................. 752

Introduction .................................................. 1

4.1 Product Class 1: Arsenic Compounds
M. D. Smith

4.1 Product Class 1: Arsenic Compounds ........................................ 13
4.1.1 Product Subclass 1: Triorganooarsenic(III) and Related Compounds 13
  Synthesis of Product Subclass 1 ........................................... 13
  4.1.1.1 Method 1: Alkylation of Metallic Arsenides ................... 13
  4.1.1.2 Method 2: Transmetalation from Other Organometallic Reagents 14
  4.1.1.2.1 Variation 1: From Grignard Reagents and Arsenic(III) Halides 14
  4.1.1.2.2 Variation 2: From Organolithium Reagents and Arsenic(III) Halides 15
  4.1.1.3 Method 3: Direct Synthesis from Metallic Arsenic ................ 16
  4.1.1.4 Method 4: Reduction of Arsenic(V) Oxides ..................... 16
  4.1.1.5 Method 5: Addition of Arsine to Multiple Bonds ............. 17
  4.1.1.6 Method 6: Cleavage of Tetraorganooarsenic Derivatives .......... 18
  Applications of Product Subclass 1 in Organic Synthesis ........... 18
  4.1.1.7 Method 7: Triorganooarsenic(III) Derivatives as Halogen Equivalents 18
  4.1.1.7.1 Variation 1: Nucleophilic Halovinylolation .................. 19
  4.1.1.7.2 Variation 2: Carbonyl Haloalkenylation ..................... 19
  4.1.2 Product Subclass 2: Diorganooarsenic(III) and Related Compounds 19
  Synthesis of Product Subclass 2 .......................................... 20
  4.1.2.1 Method 1: Transmetalation from Other Organometallic Reagents 20
  4.1.2.1.1 Variation 1: From Grignard Reagents and Arsenic(III) Halides 20
  4.1.2.2 Method 2: Synthesis from Elemental Arsenic .................. 21
  4.1.2.3 Method 3: Thermolysis of Arsenic(V) Derivatives ............. 21
  4.1.2.4 Method 4: Redistribution Reactions ............................ 22
  4.1.3 Product Subclass 3: Monoorganooarsenic(III) and Related Compounds 22
  Synthesis of Product Subclass 3 .......................................... 23
  4.1.3.1 Method 1: Transmetalation from Other Organometallic Reagents 23
  4.1.3.1.1 Variation 1: From Grignard Reagents and Arsenic(III) Derivatives 23
  4.1.3.1.2 Variation 2: From Organolithium Reagents and Arsenic(III) Derivatives 23
  4.1.3.2 Method 2: Reduction of Arsonic Acids ......................... 24
  4.1.3.3 Method 3: Redistribution Reactions ............................ 24

**Variation 4:** To Isocyanides and Azides ............................ 152

**Variation 5:** To Transition Metals ................................. 153

#### 4.4.4

**Product Subclass 4: Silyl Hydrides**

J. Pietruszka

**Synthesis of Product Subclass 4** ........................................ 159

**Method 1:** From Inorganic Silanes ................................... 160

**Method 2:** From Aryl- and Alkylsilyl Hydrides .................... 163

**Method 3:** From Silyl Halides ........................................ 168

**Method 4:** From Silyl Ethers .......................................... 170

**Methods 5:** Additional Methods ..................................... 171

**Applications of Product Subclass 4 in Organic Synthesis** ........... 172

**Method 6:** Hydrosilylation of Alkenes, Alkynes, and Related Compounds .................................................. 172

**Method 7:** Silyl Hydrides as Reducing Reagents .................... 176

#### 4.4.5

**Product Subclass 5: Disilanes**

J. R. Hwu and K. S. Ethiraj

**Synthesis of Product Subclass 5** ........................................ 187

**Method 1:** Via Coupling of Hydrodisilanes .......................... 188

**Variation 1:** By Use of Transition Metal Catalysts ................ 188

**Variation 2:** By Photolysis of Alkylhydrodisilanes in the Presence of Mercury ............................................ 189

**Method 2:** Via Photolysis of Organopolysilanes in the Presence of Hydrodisilanes ........................................... 190

**Method 3:** Via Coupling of (Organosilyl)alkali Metal Salts with Halosilanes .................................................. 190

**Method 4:** Via Coupling of Halosilanes Using Metals or Metal Salts ............................................................ 191

**Variation 1:** By Use of Alkali Metals ................................ 192

**Variation 2:** By Use of Magnesium Metal ............................ 192

**Variation 3:** By Use of Lithium Naphthalenide .................... 193

**Variation 4:** By Use of Samarium(II) Iodide ....................... 194

**Variation 5:** By Use of Potassium–Graphite Laminate (C₆K) ........ 194

**Method 5:** Via Electrochemical Reduction of Halosilanes ......... 195

**Method 6:** Via Photolysis of Organopolysilanes in the Presence of Trapping Agents ........................................... 196

**Variation 1:** In the Presence of Ketones ............................. 196

**Variation 2:** In the Presence of Functionalized Alkenes .......... 197
Table of Contents

4.4.5.7  Method 7: From Halodisilanes and Organometallic Reagents .......... 198
4.4.5.8  Additional Methods .................................................. 198
Applications of Product Subclass 5 in Organic Synthesis .................... 199

4.4.6  Product Subclass 6: Silyltin Reagents
I. Hemeon and R. D. Singer

4.4.6  Product Subclass 6: Silyltin Reagents .................................. 205
Synthesis of Product Subclass 6 .............................................. 205
4.4.6.1 Method 1: Synthesis of Silyltin Reagents ............................ 205
Applications of Product Subclass 6 in Organic Synthesis ................. 207

4.4.7  Product Subclass 7: Silylboron Reagents
I. Hemeon and R. D. Singer

4.4.7  Product Subclass 7: Silylboron Reagents .............................. 211
Synthesis of Product Subclass 7 ........................................... 211
4.4.7.1 Method 1: Synthesis of Silylboron Reagents ......................... 211
4.4.7.1.1 Variation 1: Synthesis of (Dimethylphenylsilyl)(pinacol)borane from Dimethylphenylsilyllithium and Pinacolborane ............... 213
4.4.7.1.2 Variation 2: Synthesis of (Dimethylphenylsilyl)(pinacol)borane from Dimethylphenylsilyllithium and Isopropoxy(pinacol)borane ...... 214
4.4.7.1.3 Variation 3: Synthesis of Lithium Triethyl(dimethylphenylsilyl)borate ...................................................... 214
Applications of Product Subclass 7 in Organic Synthesis ................. 215

4.4.8  Product Subclass 8: Silylaluminum Reagents
I. Hemeon and R. D. Singer

4.4.8  Product Subclass 8: Silylaluminum Reagents .......................... 219
Synthesis of Product Subclass 8 ........................................... 219
4.4.8.1 Method 1: Tris(trimethylsilyl)aluminum from Bis(trimethylsilyl)mercury(II) ................................................. 219
4.4.8.1.1 Variation 1: Tris(trimethylsilyl)aluminum from Chlorotrimethylsilane and Aluminum, Lithium, and Mercury Metals .................. 220
4.4.8.2 Additional Methods ..................................................... 221
Applications of Product Subclass 8 in Organic Synthesis ................. 221
### 4.4.9 Product Subclass 9: Silylzinc Reagents

Phosphorus Pentoxide .......................................................... 297
4.4.14.3 Silyl Carboxylates ................................................................. 298
4.4.14.3.1 Method 1:  Reaction of Hydroxilanes with Carboxylic Acids .... 298
4.4.14.3.2 Method 2:  Reaction of Trialkylchlorosilanes with Carboxylic Acids ... 299
4.4.14.3.2.1 Variation 1:  With Sterically Hindered Trialkylchlorosilanes ..... 300
4.4.14.3.3 Method 3:  Reaction of Carboxylic Acids with
Trialkylsilyl Trifluoromethanesulfonates ............................... 300
4.4.14.3.3.1 Variation 1:  With Trialkylsilyl Trifluoromethanesulfonates Formed In Situ . 301
4.4.14.3.4 Method 4:  Reaction of Carboxylic Acids with N,N'-Bis(trimethylsilyl)urea ... 302
4.4.14.4 Additional Methods .............................................................. 302

4.4.15 Product Subclass 15: Silyl Imidic Esters (Silylimino Ethers)
E. Lukevics and O. Pudova

4.4.15 Product Subclass 15: Silyl Imidic Esters (Silylimino Ethers)  .......... 305
Synthesis of Product Subclass 15 .................................................... 306
4.4.15.1 Method 1:  Silylation of Amide Derivatives .................................... 306
4.4.15.1.1 Variation 1:  With Chlorosilanes ........................................... 306
4.4.15.1.2 Variation 2:  With Silyl Triflates ........................................... 307
4.4.15.1.3 Variation 3:  With Tris(trimethylsilyl)methylamine .................... 308
4.4.15.1.4 Variation 4:  With Hexamethyldisilazane ................................ 308
4.4.15.1.5 Variation 5:  Silylamide-Based Silylation .................................. 309
4.4.15.2 Method 2:  Catalytic Silylation with Trimethyl(pentafluorophenyl)silane . 310
4.4.15.3 Method 3:  Coupling of Alkali Metal Hexamethyldisilazanides with
Acid Derivatives ................................................................. 311
4.4.15.3.1 Variation 1:  With Acyl Chlorides .......................................... 311
4.4.15.3.2 Variation 2:  With Esters .................................................... 312
Product Subclass 16: Silyl Enol Ethers
S. Kobayashi, K. Manabe, H. Ishitani, and J.-I. Matsuo

Method 1: From Carbonyl Compounds, Bases, and Electrophilic Silylating Agents

Variation 1: Synthesis of Silyl Enol Ethers of Aldehydes and Ketones

Variation 2: Synthesis of Silyl Ketene Acetals and Related Compounds

Variation 3: Synthesis of Siloxybutadienes

Variation 4: Chemoselective Synthesis of Silyl Enol Ethers

Variation 5: Enantioselective Synthesis of Silyl Enol Ethers

Variation 6: Synthesis of Polymer-Supported Silyl Enol Ethers

Method 2: From α,β-Unsaturated Carbonyl Compounds by Reductive Silylation

Variation 1: By Metal Reduction and Subsequent Enolate Trapping

Variation 2: By Conjugate Addition of Nucleophiles and Subsequent Enolate Trapping

Variation 3: By Hydrosilylation

Method 3: From Diesters in the Acyloan Condensation

Method 4: From α-Halo Carbonyl Compounds by Reductive Silylation

Method 5: From Alkenes by Hydrosilylation in the Presence of Carbon Monoxide

Method 6: From Acylsilanes by Nucleophilic Addition and Brook Rearrangement

Variation 1: With Alkenyl- or Alkynylmetals

Variation 2: With Nucleophilic Reagents Having an α-Leaving Group

Method 7: From Silyl Esters by Alkylidenation

Method 8: Rearrangements of Silyl Ethers

Variation 1: Via Rearrangement of β-Silyloxy Carbeneoids

Variation 2: Via Isomerization of Allyl and Propargyl Silyl Ethers

Variation 3: Via Rearrangement of Silyl Cyclopropyl Ethers

Method 9: By Oxidation of Vinyllithiums

Method 10: From Ketones by Haloalkylsilyl Trapping of Lithium Enolates

Method 11: Interconversion of Silyl Enol Ethers

Variation 1: Introduction of Nitrogen-Based Functional Groups at the α-Position
4.4.16.11.2 Variation 2: Introduction of Nitrogen-Based Functional Groups at the β-Position ................................ 358
4.4.16.11.3 Variation 3: Ene-like Reactions of Silyl Enol Ethers with Aldehydes 359
4.4.16.11.4 Variation 4: Alkylation and Aroylation of 2-Siloxyallyl Halides .................. 360
4.4.16.11.5 Variation 5: Isomerization of Silyl Enol Ethers ................................. 360
4.4.16.11.6 Variation 6: Conversion of Tritylsilyl Enol Ethers into Trichlorosilyl Enol Ethers ................................. 361
4.4.16.12 Additional Methods ........................................................................ 361

4.4.17 Product Subclass 17: Silyl Ethers
J. D. White and R. G. Carter

4.4.17.1 Trimethylsilyl Ethers ........................................................................ 371
4.4.17.1.1 Formation .................................................................................... 372
4.4.17.1.2 Method 1: Silylation of Alcohols with Chlorotrimethylsilane ......... 372
4.4.17.1.2 Method 2: Silylation of Alcohols with Trimethylsilyl Trifluoromethanesulfonate ................................. 373
4.4.17.1.3 Method 3: Silylation of Alcohols with Trimethylsilyl Cyanide 373
4.4.17.1.4 Method 4: Silylation of Alcohols with N,O-Bis(trimethylsilyl)acetamide 374
4.4.17.1.5 Cleavage ...................................................................................... 375
4.4.17.1.6 Method 5: Cleavage of Trimethylsilyl Ethers with Acidic Reagents 375
4.4.17.1.6 Method 6: Cleavage of Trimethylsilyl Ethers under Basic Conditions 376
4.4.17.2 Triethylsilyl Ethers ........................................................................ 377
4.4.17.2.1 Formation .................................................................................... 377
4.4.17.2.1 Method 1: Silylation of Alcohols with Chlorotriethylsilane .......... 377
4.4.17.2.1 Method 2: Silylation of Alcohols with Triethylsilyl Trifluoromethanesulfonate ................................. 378
4.4.17.2.2 Cleavage ...................................................................................... 379
4.4.17.2.2 Method 1: Silylation of Alcohols with 4-(Dimethylamino)pyridine ................................. 379
4.4.17.2.2 Method 2: Silylation of Alcohols with Triethylsilyl Trifluoromethanesulfonate ................................. 380
4.4.17.2.3 Cleavage ...................................................................................... 380
4.4.17.2.3 Method 1: Cleavage of Triethylsilyl Ethers under Acidic Conditions 380
4.4.17.2.4 Variation 1: In the Presence of 4-Toluensulfonic Acid ................. 381
4.4.17.2.4 Method 2: Cleavage of Triethylsilyl Ethers with Tetrabutylammonium Fluoride ................................. 382
4.4.17.3 tert-Butyldimethylsilyl Ethers ......................................................... 383
4.4.17.3.1 Formation .................................................................................... 383
4.4.17.3.1 Method 1: Silylation of Alcohols with tert-Butyldimethylsilyl Chloride ................................. 383
4.4.17.3.1 Variation 1: In the Presence of 4-(Dimethylamino)pyridine ................................. 384
4.4.17.3.1 Variation 2: In Dichloromethane .................................................. 384
4.4.17.3.2 Method 2: Silylation of Alcohols with tert-Butyldimethylsilyl Trifluoromethanesulfonate .......................... 385
4.4.17.3.2.1 Variation 1: Selective Silylation of Phenols .................................................. 386
4.4.17.3.2.2 Variation 2: Selective Silylation of Alcohols .................................................. 386
4.4.17.3.3 Method 3: Migration of a tert-Butyldimethylsilyl Group from a tert-Butyldimethylsilyl Ether to an Alcohol ......................... 387
   Cleavage ................................................................................. 388
4.4.17.3.4 Method 4: Cleavage of tert-Butyldimethylsilyl Ethers with Tetrabutylammonium Fluoride ........................................ 388
4.4.17.3.5 Method 5: Cleavage of tert-Butyldimethylsilyl Ethers with Tris(dimethylamino)sulfur (Trimethylsilyl)difluoride ............................. 390
4.4.17.3.6 Method 6: Cleavage of tert-Butyldimethylsilyl Ethers under Acidic Conditions ................................................................. 391
4.4.17.3.6.1 Variation 1: With Hydrogen Fluoride–Pyridine Complex ............................................. 391
4.4.17.3.6.2 Variation 2: With Mineral Acid ........................................................................ 392
4.4.17.3.6.3 Variation 3: With Organic Acids ........................................................................ 393
4.4.17.3.6.4 Variation 4: With Lewis Acids ........................................................................ 395
4.4.17.4 Triisopropylsilyl Ethers ......................................................................................... 396
   Formation ................................................................................ 396
4.4.17.4.1 Method 1: Silylation of Alcohols with Triisopropylsilyl Trifluoromethanesulfonate and 2,6-Lutidine .................................. 396
4.4.17.4.1.1 Variation 1: With Triisopropylsilyl Trifluoromethanesulfonate in the Presence of 4-(Dimethylamino)pyridine ............... 397
   Cleavage .................................................................................... 397
4.4.17.4.2 Method 2: Cleavage of Triisopropylsilyl Ethers with Tetrabutylammonium Fluoride ...................................................... 397
4.4.17.4.3 Method 3: Cleavage of Triisopropylsilyl Ethers with Tris(dimethylamino)sulfur (Trimethylsilyl)difluoride ................................. 398
4.4.17.4.4 Method 4: Cleavage of Triisopropylsilyl Ethers with Hydrogen Fluoride–Pyridine Complex ............................................. 399
4.4.17.4.5 Method 5: Cleavage of Triisopropylsilyl Ethers under Acidic Conditions ................................................................. 400
4.4.17.5 tert-Butyldiphenylsilyl Ethers ............................................................................... 401

4.4.37  Product Subclass 37: β-Silyl Alcohols and the Peterson Reaction  
D. J. Ager

4.4.37  Product Subclass 37: β-Silyl Alcohols and the Peterson Reaction  
Synthesis of Product Subclass 37 .............................. 791

4.4.37.1 Method 1:  Direct Deprotonation of a Silane and Addition to 
a Carbonyl Compound ........................................... 791

4.4.37.2 Method 2:  From Silylmethylmagnesium Halides and 
Carbonyl Compounds ............................................. 792

4.4.37.2.1 Variation 1:  Grignard and Organolithium Reagents .................. 792

4.4.37.2.2 Variation 2:  Use of Organocerium Reagents .......................... 793

4.4.37.2.3 Variation 3:  Formation of Vinylithium Reagents ..................... 794

4.4.37.3 Method 3:  Generation of the α-Silyl Carbonion by Transmetalation .... 794

4.4.37.3.1 Variation 1:  Displacement of a Phenylsulfanyl Group by 
Lithium Naphthalenide ............................................. 795

4.4.37.3.2 Variation 2:  Displacement of a Phenylsulfanyl Group by 
Lithium 1-(Dimethylamino)naphthalenide ...................... 795

4.4.37.3.3 Variation 3:  Displacement of a Tin Group ........................... 796

4.4.37.4 Method 4:  Preparation of Vinyl Ethers and Other 
Heteroatom-Substituted Alkenes ................................. 796

4.4.37.4.1 Variation 1:  Preparation of Enol Ethers ............................... 797

4.4.37.4.2 Variation 2:  Preparation of Vinyl Sulfides ........................... 797

4.4.37.4.3 Variation 3:  Preparation of Vinyl Sulfones ........................... 798

4.4.37.4.4 Variation 4:  Preparation of Vinylv phosphonates .................... 798

4.4.37.4.5 Variation 5:  Preparation of Vinylstannanes .......................... 798

4.4.37.4.6 Variation 6:  Preparation of Difunctional Alkenes .................... 799

4.4.37.5 Method 5:  Preparation of α,β-Unsaturated Carbonyl Compounds ....... 799

4.4.37.5.1 Variation 1:  Formation of α,β-Unsaturated Esters .................. 800

4.4.37.5.2 Variation 2:  Formation of α,β-Unsaturated Esters with 
Lithium Dicyclohexylamide as Base ............................ 800

4.4.37.6 Method 6:  Preparation of α,β-Unsaturated Nitriles ................... 800

4.4.37.7 Method 7:  Preparation of Enals Through Imines ....................... 801

4.4.37.8 Method 8:  Reduction of α-Silyl Carbonyl Compounds ................ 801

4.4.37.9 Method 9:  Additions of Organometallic Reagents to 
α-Silyl Carbonyl Compounds ..................................... 802

4.4.37.9.1 Variation 1:  Addition of an Organometallic Reagent to an α-Silyl Ketone 802

4.4.37.9.2 Variation 2:  Addition of an Organometallic Reagent to an α-Silyl Ester 803

4.4.37.10 Method 10:  Addition of a Silymetal to an Epoxide .................. 804

4.4.37.11 Method 11:  Vinysilanes and Alkylolithiums with Carbonyl Compounds .... 804
## Table of Contents

### 4.4.38  Product Subclass 38: Propargylsilanes
J. Pornet

#### 4.4.38.1  Method 1:
From Propargyl Magnesium Halides and
Trialkyl- and Triaryl Silicon Halides

- Variation 1: Generation of the Grignard Reagent In Situ
  (Barbier Procedure)

- Variation 2: Silylation of a Preformed Grignard Reagent

- Method 2: Coupling with Halomethyltrimethylsilane

- Variation 2: Coupling with Trimethylsilylmethyl
  Trifluoromethanesulfonate

#### 4.4.38.2  Method 3:
From Alk-2-yne

#### 4.4.38.3  Method 4:
From 1,3-Dilithiated Alk-1-yne

#### 4.4.38.4  Method 5:
From 1-(Trimethylsilyl)alk-1-yne

#### 4.4.38.5  Method 6:
From 1,3-Bis(trimethylsilyl)alk-1-yne

#### 4.4.38.6  Method 7:
From 1-Bromoalk-1-yne

#### 4.4.38.7  Method 8:
From Benzyl Propargyl Ethers

#### 4.4.38.8  Method 9:
From α-Silylated Aldehydes

#### 4.4.38.9  Method 10:
From β-Silylated Esters

#### 4.4.38.11  Method 11:
Chain Elongation from the Propargylic Carbon
  of Trimethyl(propargyl)silanes

#### 4.4.38.12  Method 12:
Chain Elongation from the Acetylenic Carbon of
  Trimethyl(propargyl)silanes

#### 4.4.38.13  Additional Methods

### 4.4.39  Product Subclass 39: Benzylsilanes
B. Bennetau

#### 4.4.39.1  Method 1:
From Benzylic Hydrides

#### 4.4.39.2  Method 2:
From Benzylic Halogens

#### 4.4.39.21  Variation 1:
Via Benzyllithium Reagents

#### 4.4.39.22  Variation 2:
Via Benzyllithium Reagents

#### 4.4.39.3  Method 3:
By Substitution of Aromatic Hydrides

#### 4.4.39.4  Method 4:
By Substitution of Aromatic Halogens

#### 4.4.39.5  Method 5:
Hydroxylation of Styrene Derivatives

#### 4.4.39.6  Method 6:
By Addition of Silylmethyl Reagents

#### 4.4.39.7  Methods 7:
Additional Methods
Applications of Product Subclass 39 in Organic Synthesis .......................... 832

4.4.39.8 Method 8: Benzylsilanes in Organic Synthesis .............................. 832

4.4.40 Product Subclass 40: Allylsilanes
T. K. Sarkar

4.4.40 Product Subclass 40: Allylsilanes .................................................. 837

Synthesis of Product Subclass 40 ............................................................ 839

4.4.40.1 Method 1: From Allylmagnesium Halides and Trialkylhalosilanes .......... 839

4.4.40.1.1 Variation 1: Silylation of a Preformed Grignard Reagent ................. 840

4.4.40.1.2 Variation 2: Silylation of an In Situ Generated Grignard Reagent ...... 841

4.4.40.2 Method 2: From Allylmagnesium Halides by Transition-Metal-Catalyzed Coupling with Hydrosilanes ......................................................... 841

4.4.40.3 Method 3: From Allyl Chlorides by Zinc-Mediated Silylation ............... 842

4.4.40.4 Method 4: From Allyl Halides by Electroreductive Synthesis ............... 842

4.4.40.5 Method 5: By Silylation of Metalated Alkenes ................................ 843

4.4.40.5.1 Variation 1: From Lithiated Alkenes .......................................... 843

4.4.40.5.2 Variation 2: From Alkenylpotassium Compounds ........................... 844

4.4.40.6 Method 6: From Metalated Allyl Halides and Chlorotrimethylsilane ....... 846

4.4.40.7 Method 7: From α-Heteroalkenes by Transition-Metal-Catalyzed Cross Coupling ................................................................. 846

4.4.40.7.1 Variation 1: From Vinyl Halides With [(Trimethylsilyl)methyl]magnesium Halides and Related Species .............................................. 846

4.4.40.7.2 Variation 2: From Enol Phosphates with [(Trialkysilyl)methyl]magnesium Halides ............................................................. 848

4.4.40.7.3 Variation 3: From Vinyl Trifluoromethanesulfonates with Tris[(trimethylsilyl)methyl]aluminum ...................................................... 848

4.4.40.8 Method 8: From α-Silyl Aldehydes and Alkylidinitriphenylphosphoranes by a Wittig Reaction ......................................................... 849

4.4.40.9 Method 9: From Carbonyl Compounds and Trialkyl[2-(trimethylsilyl)ethylidene]phosphoranes by a Wittig Reaction ......................... 850

4.4.40.9.1 Variation 1: Via a Preformed β-Silylated Phosphonium Salt ............... 850

4.4.40.9.2 Variation 2: Via an In Situ Generated β-Silylated Phosphonium Salt .... 851

4.4.40.10 Method 10: From Carbonyl Compounds and Ethyl 2-(Diethoxophosphoryl)-3-(trimethylsilyl)propanoate by Horner–Wadsworth–Emmons Reaction ............................................. 851

4.4.40.11 Method 11: From Carbonyl Compounds and β-Silyl Thioacetals by Titanium(II)-Promoted Reductive Alkenation ............................... 852

4.4.40.12 Method 12: From Carbonyl Compounds and Trimethyl[2-(phenylsulfonyl)ethyl]silane by the Julia Reaction ....................................... 853

4.4.40.13 Method 13: Formation of Exocyclic Allylsilanes by the Ramberg–Bäcklund Reaction ................................................................. 854

4.4.40.67 Method 67: Palladium(0)-Catalyzed [3 + 2] Cycloaddition .................. 915
4.4.40.69 Method 69: Hydroxycyclopentanes from [3 + 2] Annulation with α-Enones 917
4.4.40.70 Method 70: Tetrahydrofurans by [3 + 2] Annulation with Aldehydes and Ketones .......................... 918
4.4.40.71 Method 71: α-Methylene cyclohexanones from Silicon-Directed Nazarov Cyclization .......................... 918

4.4.41 Product Subclass 41: β-Silyl Carbonyl Compounds
Ian Fleming

4.4.41 Product Subclass 41: β-Silyl Carbonyl Compounds .......................... 927
4.4.41.1 Method 1: Hydroboration of Alkenes and Alkenes .......................... 929
4.4.41.1.1 Variation 1: Hydroboration of Propargyl Alcohols, and Oxidation or Isomerization .......................... 930
4.4.41.1.2 Variation 2: Hydroboration and Dehydrogenation .......................... 930
4.4.41.1.3 Variation 3: Hydroboration—Carbonylation .......................... 931
4.4.41.2 Method 2: Silylation of Alkenes and Alkenes .......................... 932
4.4.41.2.1 Variation 1: Silylation of α,β-Unsaturated Carbonyl Compounds .......................... 932
4.4.41.2.2 Variation 2: Silylation and Acylation of Alkenes .......................... 934
4.4.41.3 Method 3: Electrophilic Silylation of Functionalized Three-Carbon Reagents .......................... 935
4.4.41.3.1 Variation 1: Electrophilic Silylation of Allyllithium Reagents .......................... 935
4.4.41.3.2 Variation 2: Electrophilic Silylation at C3 of Masked α,β-Unsaturated Aldehydes and Ketones .......................... 936
4.4.41.3.3 Variation 3: Reductive Silylation of Anisole and Hydrolysis .......................... 938
4.4.41.4 Method 4: Carbonylation or Carboxylation of Vinyllsilanes .......................... 939
4.4.41.5 Method 5: Trimethylsilylmethylation of Enolates and Enolate Equivalents .......................... 941
4.4.41.6 Method 6: Claisen Rearrangement of Esters of 3-Silylallyl Alcohols .......................... 942
4.4.41.7 Additional Methods .......................................................... 943

4.4.42 Product Subclass 42: γ-Silyl Alkyl Halides, Alcohols, and Esters Thereof
J. P. Michael and C. B. de Koning

4.4.42 Product Subclass 42: γ-Silyl Alkyl Halides, Alcohols, and Esters Thereof .......................... 947
4.4.42.1 Method 1: From Silyl Anions and Functionalized Three-Carbon Electrophiles .......................... 949
4.4.42.2 Method 2: From Silicon Electrophiles and Functionalized Three-Carbon Nucleophiles .......................... 950
4.4.42.2.1 Variation 1: Intermolecular Silylation of C, O-Di anions Derived from Functionalized Alcohols .......................... 950

Volume 5: Compounds of Group 14 (Ge, Sn, Pb)

Preface ........................................................................ V

Table of Contents ................................................................. VII

Introduction
E. J. Thomas and M. G. Moloney ........................................ 1

5.1 Product Class 1: Germanium Compounds
E. J. Thomas ........................................................................ 3

5.1.1 Product Subclass 1: Germanium Hydrides
K. Oshima ........................................................................ 9

5.1.2 Product Subclass 2: Digermenes and Digermanes
N. Takeda, N. Tokitoh, and R. Okazaki ............................... 27

5.1.3 Product Subclass 3: Metalated Germanium Compounds
N. Takeda, N. Tokitoh, and R. Okazaki ............................... 33

5.1.4 Product Subclass 4: Germanium Oxides, Sulfides, Selenides, and Tellurides (Double Bonded)
N. Takeda, N. Tokitoh, and R. Okazaki ............................... 39

5.1.5 Product Subclass 5: Iminogermanes
N. Takeda, N. Tokitoh, and R. Okazaki ............................... 43

5.1.6 Product Subclass 6: Germenes
N. Takeda, N. Tokitoh, and R. Okazaki ............................... 47

5.1.7 Product Subclass 7: Germynes
N. Takeda, N. Tokitoh, and R. Okazaki ............................... 51

5.1.8 Product Subclass 8: Organogermanium Halides
P. Thornton ........................................................................ 55

5.1.9 Product Subclass 9: Germanium Oxides
P. Thornton ........................................................................ 75

5.1.10 Product Subclass 10: Germanium Carboxylates, Phosphates, and Related Compounds
P. Thornton ........................................................................ 85

5.1.11 Product Subclass 11: Germanium Sulfides, Sulfoxides, and Related Compounds
P. Thornton ........................................................................ 89
5.1.12 Product Subclass 12: Germanium Selenides, Tellurides, and Related Compounds
P. Thornton ............................................................... 93

5.1.13 Product Subclass 13: Germylamines
P. Thornton ............................................................... 97

5.1.14 Product Subclass 14: Germanium Phosphines, Arsines, and Stibines
P. Thornton ............................................................... 101

5.1.15 Product Subclass 15: Germanium Cyanides
A. C. Spivey and C. M. Diaper .............................................. 105

5.1.16 Product Subclass 16: Acylermanes
A. C. Spivey and C. M. Diaper .............................................. 109

5.1.17 Product Subclass 17: Imidoylgermanes (α-Iminoalkylgermanes) and α-Diazoalkylermanes
A. C. Spivey and C. M. Diaper .............................................. 115

5.1.18 Product Subclass 18: α-Halo- and α-Alkoxyvinylgermanes
A. C. Spivey and C. M. Diaper .............................................. 121

5.1.19 Product Subclass 19: α-Halo-, α-Hydroxy-, α-Alkoxy-, and α-Aminoalkylermanes
A. C. Spivey and C. M. Diaper .............................................. 127

5.1.20 Product Subclass 20: Alkynylermanes
A. C. Spivey and C. M. Diaper .............................................. 137

5.1.21 Product Subclass 21: Germylketenes and Germylketenimines
A. C. Spivey and C. M. Diaper .............................................. 143

5.1.22 Product Subclass 22: Aryl- and Heteroarylgermanes
A. C. Spivey and C. M. Diaper .............................................. 149

5.1.23 Product Subclass 23: Vinylgermanes
A. C. Spivey and C. M. Diaper .............................................. 159

5.1.24 Product Subclass 24: Propargyl- and Allenylgermanes
A. C. Spivey and C. M. Diaper .............................................. 171

5.1.25 Product Subclass 25: Benzylermanes
A. C. Spivey and C. M. Diaper .............................................. 177

5.1.26 Product Subclass 26: Allylgermanes
A. C. Spivey and C. M. Diaper .............................................. 181

5.1.27 Product Subclass 27: Alkylgermanes
A. C. Spivey and C. M. Diaper .............................................. 189

Introduction
E. J. Thomas and M. G. Moloney

Introduction ........................................................... 1

5.1 Product Class 1: Germanium Compounds
E. J. Thomas

5.1 Product Class 1: Germanium Compounds .......................... 3

5.1.1 Product Subclass 1: Germanium Hydrides
K. Oshima

5.1.1 Product Subclass 1: Germanium Hydrides ........................ 9

Synthesis of Product Subclass 1 .................................... 9

5.1.1.1 Method 1: By Reactions of (Organogermyl)alkali Metal Compounds ........................ 9

5.1.1.2 Variation 1: From Tetraarylgermanes .............................. 9

5.1.1.2 Variation 2: From Digermanium Compounds .................. 10

5.1.1.3 Variation 3: From Trialkyl- and Triarylgermanium Halides .... 12

5.1.1.2 Method 2: Reduction of Germanium Halides .................. 13

5.1.1.2 Method 1: Reduction with Lithium Aluminum Hydride ........ 13

5.1.1.2 Method 2: Reduction with Group 14 Hydrides ................. 16

5.1.1.2 Method 3: Substitution of Halogen with a Carbanion ......... 16

5.1.1.3 Method 3: Substitution of Halo(organo)germanium Hydrides .... 17

5.1.1.3 Variation 1: Halogenation of Alkyl- and Arylgermanium Hydrides (Substitution of Hydrogen by Halogen) .............. 18

5.1.1.3 Variation 2: Substitution of Halogen in Halo(organo)germanium Hydrides .......... 19

Applications of Product Subclass 1 in Organic Synthesis ........... 20

5.1.1.4 Method 4: Reduction of Organic Halides ...................... 21

5.1.1.5 Method 5: Hydrogermylation of Carbon—Carbon Multiple Bonds .......... 22

5.1.1.6 Method 6: Reduction of Carbonyl Compounds ................ 23

5.1.1.7 Method 7: Action of Acids and Bases ......................... 24

5.1.2 Product Subclass 2: Digermenes and Digermanes
N. Takeda, N. Tokitoh, and R. Okazaki

5.1.2 Product Subclass 2: Digermenes and Digermanes .............. 27

Synthesis of Product Subclass 2 .................................... 28

5.1.2.1 Method 1: Digermenes from Germanium(II) Complexes ........ 28

5.1.2.2 Method 2: Digermenes by Photolysis of Trigerminanes or Bis(silyl)germanes ....................... 29

5.1.2.3 Method 3: Digermenes by Reductive Coupling of Dihalogermanes .... 30

5.2.14.4 Method 4:  From Organostannylamines  
406
5.2.14.5 Method 5:  From Organotin Azides by Cycloaddition  
406

Applications of Product Subclass 14 in Organic Synthesis  
407

5.2.14.6 Method 6:  Aromatic Amines by Amination of Aryl Bromides with Organostannylamines  
407

---

5.2.15  **Product Subclass 15: Organostannylphosphines**  
B. Jousseaume

---

5.2.15  **Product Subclass 15: Organostannylphosphines**

Synthesis of Product Subclass 15  
409

5.2.15.1 Method 1:  From Organotin Halides and Phospholylmetals  
410

Applications of Product Subclass 15 in Organic Synthesis  
411

5.2.15.2 Method 2:  Phospholylphosphinines from Stannylphospholes and Phosphininyl Halides  
411

---

5.2.16  **Product Subclass 16: Tin Cyanides and Fulminates**  
P. B. Wyatt

---

5.2.16  **Product Subclass 16: Tin Cyanides and Fulminates**

Synthesis of Product Subclass 16  
413
Method 1: Tin Cyanides from Organotin Hydrides and Isocyanides

Method 2: Tin Cyanides from Tetraorganotin Compounds and Cyanogen Halides

Method 3: Tin Cyanides by Substitution of Tin Halides

Variation 1: Using Trimethylsilyl Cyanide

Variation 2: Using Silver Cyanide

Variation 3: Using Group 1 Metal Cyanides

Method 4: Tin Cyanides from Tin Hydroxides Using Hydrogen Cyanide

Method 5: Tin Cyanides from Tin Alkoxides Using Acyl Cyanides

Method 6: Tin Cyanides from Stannylamines Using Hydrogen Cyanide

Method 7: Tin Fulminates by Substitution of Tin Halides

Applications of Product Subclass 16 in Organic Synthesis

Method 8: Cyanation of Carbonyl Compounds

Method 9: Cyanation of Imines

Method 10: Cyanation of Acyl, Alkenyl, and Aryl Halides

Product Subclass 17: Acylstannanes (Including S, Se, and Te Analogues)
P. B. Wyatt

Synthesis of Product Subclass 17

Method 1: From Organostannyllithium Species and Carbon Dioxide or Carbon Disulfide

Method 2: From Organostannyllithium Species and Isocyanates

Method 3: Acylstannanes and Stannanecarboxamides by Acylation of Organostannyllithium Species

Variation 1: Acylation Using Halocarboxamides

Variation 2: Acylation Using Acyl Halides, Esters, and Thioesters

Method 4: By Reaction of Organostannylnmetal Species and Aldehydes with In Situ Oxidation

Method 5: By Reaction of Organotin Halides with Lithium Carboxamide Species

Applications of Product Subclass 17 in Organic Synthesis

Method 6: Amides by Palladium-Mediated Cross Coupling of Stannanecarboxamides with Aryl and Alkenyl Halides

Method 7: 1,2-Dicarbonyl Compounds by Acylation of Acylstannanes

Method 8: 1-Alkoxyalkylstannanes by Reduction of Acylstannanes Followed by Alkylation

Product Subclass 18: Imidoylstannanes, Diazoalkylstannanes, Tin Isocyanates, and Tin Isothiocyanates
P. B. Wyatt

Product Subclass 20: 1-Halo-, 1-Hydroxy-, 1-Alkoxy-, and 1-Aminoalkylstannanes
I. Coldham and G. P. Vennall

Synthesis of Product Subclass 20

Method 1: From 1-Halo-, 1-Alkoxy-, or 1-Amino Carbanions and Trialkyl(halo)stannanes

Method 2: Substitution of Alkylstannanes with a Leaving Group in the α-Position

Method 3: Functional Group Interconversion of 1-Hydroxy- and 1-Aminoalkylstannanes

Method 4: 1-Hydroxyalkylstannanes by Reduction of Acylstannanes

Method 5: Addition to Trialkylstannane Reagents

Variation 1: Using Carbonyls or Acetals

Variation 2: Using Iminium Ions

Applications of Product Subclass 20 in Organic Synthesis

Method 6: Transmetalation of 1-Heteroalkylstannanes To Give 1-Heteroalkyllithiums

Method 7: Metal-Catalyzed Coupling with Activated Halides and Acyl Derivatives

Product Subclass 21: Alkynylstannanes
G. T. Crisp

Synthesis of Product Subclass 21

Method 1: From Alkynyl Anions by Reaction with Trialkyl- or Triaryl Tin Halides

Variation 1: Using Grignard Reagents

Variation 2: Using Organolithium Reagents

Variation 3: Using Organolithium Reagents Derived from Elimination Reactions

Method 2: From Terminal Alkynes by Reaction with Tin Amides and Oxides

Variation 1: Using Trialkyltin Amides

Variation 2: Using Trialkyltin Oxides or Bis(trialkyltin) Oxides

Method 3: From Silylalkynes by Reaction with Bis(trialkyltin) Oxides and Fluoride Anion

Methods 4: Additional Methods

Applications of Product Subclass 21 in Organic Synthesis

5.2.6 Method 8: From the Hydrostannylation of an Allene .................... 535
5.2.7 Method 9: From the [4+2] Cycloaddition of Alkynylstannanes to Dienes 536
5.2.8 Method 10: From Other Stannanes ......................................... 536
5.2.9 Methods 11: Additional Methods ............................................ 539
5.2.10 Applications of Product Subclass 25 in Organic Synthesis ............. 539
5.2.11 Method 12: Metal–Tin Exchange of Alkenylstannanes .................. 540
5.2.12 Method 13: Electrophilic Substitution of Alkenylstannanes ............. 541
5.2.13 Variation 1: Protiodestannylation ........................................... 541
5.2.14 Variation 2: Halodestannylation ............................................. 542
5.2.15 Variation 3: Using Other Electrophiles ..................................... 544
5.2.16 Method 14: Metal-Catalyzed Couplings of Alkenylstannanes .......... 545

5.2.26 Product Subclass 26: Propargylstannanes
D. Young

5.2.27 Product Subclass 27: Benzylstannanes
R. L. Marshall

5.2.27.4.1 Variation 1: From Cresols, by Formation of the Dianion Followed by Stannylation .............................................. 564
5.2.27.4.2 Variation 2: By Stannylation of Methylquinolines .............................................. 564
5.2.27.4.3 Variation 3: Stannylation of Terpenes .................................. 565
5.2.27.5 Method 5: Synthesis From Tetraalkylammonium Salts ................................. 566
5.2.27.6 Method 6: Via Silicon–Tin Transmetalation ........................................ 567
5.2.27.7 Method 7: Palladium-Catalyzed Hydrostannylation of Alkenes ............. 568

Applications of Product Subclass 27 in Synthesis ........................................ 568

5.2.27.8 Method 8: Preparation of 1-Benzyl-1,2-dihydroisoquinolines .............. 568
5.2.27.9 Method 9: Synthesis of New Non-opioid Analgesics ........................... 569
5.2.27.10 Method 10: Tin–Lithium Exchange Reactions ............................... 569

5.2.28 Product Subclass 28: Allylstannanes
R. L. Marshall

5.2.28 Product Subclass 28: Allylstannanes ............................................. 573

Synthesis of Product Subclass 28 .................................................. 573

5.2.28.1 Method 1: Synthesis via Grignards: Reaction of Organomagnesium Reagents with Trialkylhalostannanes ................................. 574

5.2.28.1.3 Variation 1: Direct Formation of the Allyl Grignard ................. 574
5.2.28.1.2 Variation 2: Via Barbier Reaction ........................................ 575
5.2.28.1.3 Variation 3: Sonication-Promoted Barbier Reactions ................. 576
5.2.28.1.4 Variation 4: Sonication-Promoted Barbier Reactions with Hexabutyldistannoxane [Bis(tributyltin) Oxide] ............. 576

5.2.28.2 Method 2: Allylstannanes via Trialkylstannyllithium Reagents .............. 577
5.2.28.3 Method 3: Synthesis via Deprotonation of Alkenes ........................ 578

5.2.28.3.1 Variation 1: Allylstannanes by Deprotonation/Stannylation of Alkenes ..... 578
5.2.28.3.2 Variation 2: Stannylation of Terpenes ........................................ 579

5.2.28.4 Method 4: From Allylic Sulfur Derivatives (Sulfides, Sulfones, and Thiols) ..................... 579

5.2.28.4.1 Variation 1: From Allylic Sulfides Using Tributylstannane ............. 579
5.2.28.4.2 Variation 2: From Allylic Sulfides Using Tributylstannyllithium ........ 580
5.2.28.4.3 Variation 3: From Allylic Sulfones ........................................ 581
5.2.28.4.4 Variation 4: From Allylic S-Substituted S-Methyl Dithiocarbonates .... 582
5.2.28.5 Method 5: From Allylic Acetates and Phosphates .............................. 583

5.2.28.5.1 Variation 1: Via Palladium(0) Complexes with Diethyl(tributylstannyl)aluminum ............................................. 583

5.2.28.5.2 Variation 2: Via Palladium(0) Complexes, Samarium(II) Iodide, and Trialkylhalostannanes .............................................. 584

5.2.28.6 Method 6: From the Hydrolysis of Boronylallylic Stannanes ................... 585
5.2.28.7 Method 7: α-Substituted Allylstannanes by Selenoxide Elimination .......... 586
5.2.28.8 Method 8: Synthesis via Wittig Reactions ........................................ 586
5.2.28.9 Method 9: Substituted Allylic Stannanes From β-Stannyl Enolate Esters ... 588

5.2.28.10 Method 10: Via Silicon–Tin Transmetalation .................................... 589
5.2.28.11 Method 11: Palladium-Catalyzed Hydrostannylation of Allenes .......... 590
5.2.28.12 Method 12: From Allylic Alcohols ........................................ 591
5.2.28.13 Methods 13: Additional Methods ........................................... 592
Applications of Product Subclass 28 in Synthesis .......................... 592
5.2.28.14 Method 14: Radical Reactions ........................................... 592
5.2.28.15 Method 15: Transmetalations .............................................. 594
5.2.28.16 Method 16: Cross-Coupling Reactions with Alkyl and Allyl Halides ...... 596
5.2.28.17 Method 17: Reactions with Aldehydes, Ketones, and Their Derivatives .... 598
5.2.29 Product Subclass 29: Alkylstannanes
D. Young

5.2.29.1 Method 1: From Trialkylstannyl Anions with Haloalkanes or Tosylates ... 608
5.2.29.2 Method 2: From Tin Metal and Haloalkanes ................................ 610
5.2.29.3 Method 3: From Alkyl Grignard Reagents and Bis(trialkyltin) Oxides ...... 611
5.2.29.4 Method 4: From Alkylmetal Reagents and Alkylchlorostannanes .......... 612
5.2.29.4.1 Variation 1: Using Alkysodium Reagents and Alkylchlorostannanes ...... 612
5.2.29.4.2 Variation 2: Using Alkylithium Reagents and Alkylchlorostannanes ...... 613
5.2.29.4.3 Variation 3: Using Alkylzinc Reagents and Alkylchlorostannanes .......... 613
5.2.29.5 Method 5: From Hydrostannylation of Alkenes ............................ 614
5.2.29.5.1 Variation 1: At Atmospheric Pressure ..................................... 614
5.2.29.5.2 Variation 2: Using Elevated Pressures ...................................... 614
5.2.29.6 Methods 6: Additional Methods .............................................. 615
Applications of Product Subclass 29 in Synthesis .......................... 615
5.2.29.7 Method 7: Transmetalation .................................................. 615
5.2.29.7.1 Variation 1: With Palladium ................................................. 615
5.2.29.7.2 Variation 2: Tin–Lithium Exchange .......................................... 616
5.3 Product Class 3: Lead Compounds ................................................. 619
M. G. Moloney

5.3.1 Product Subclass 1: Lead Hydrides
M. G. Moloney

5.3.1.1 Method 1: From Organolead Halides by Reduction ................. 628
5.3.1.1.1 Variation 1: Using Potassium Borohydride ............................. 628
5.3.1.1.2 Variation 2: Using Diborane .................................................. 629
5.3.1.1.3 Variation 3: Using Lithium Aluminum Hydride ...................... 629
5.3.1.1.4 Variation 4: Using Diisobutylaluminum Hydride ..................... 630
5.3.1.1.5 Variation 5: Using Tributylstannane ....................................... 630
5.3.1.2 Method 2: From Lead Alkoxides and Acetates by Reduction .......... 630
5.3.1.2.1 Variation 1: Using Diborane .................................................. 631
## 5.3.2 Product Subclass 2: Diplumenes and Diplumbanes

N. Takeda, N. Tokitoh, and R. Okazaki

5.3.2.1 Method 1: Diplumenes from Grignard Reagents

5.3.2.2 Method 2: Diplumbanes from Grignard Reagents

## 5.3.3 Product Subclass 3: Metalated Lead Compounds

N. Takeda, N. Tokitoh, and R. Okazaki

5.3.3.1 Method 1: Reactions between Tetravalent Lead Compounds and Metals

5.3.3.2 Method 2: Metathesis

5.3.3.3 Method 3: Oxidative Addition

5.3.3.4 Method 4: From Plumbylenes

## 5.3.4 Product Subclass 4: Organoplumbyl, Sulfides, Selenides, and Tellurides (Double Bonded)

N. Takeda, N. Tokitoh, and R. Okazaki

5.3.4.1 Method 1: From Divalent Lead Compounds

5.3.4.2 Method 2: From Tetravalent Lead Compounds

## 5.3.5 Product Subclass 5: Plumbylenes

N. Takeda, N. Tokitoh, and R. Okazaki

5.3.5.1 Method 1: From Divalent Lead Compounds

5.3.5.2 Method 2: From Tetravalent Lead Compounds
5.3.6 **Product Subclass 6: Halo(organo)plumbanes**  
P. J. Guiry and P. J. McCormack

5.3.6 **Product Subclass 6: Halo(organo)plumbanes**  
Synthesis of Product Subclass 6  

5.3.6.1 Method 1: Reaction of Hexaorganodiplumbanes with Halide Sources  
5.3.6.1.1 Variation 1: Reaction with Halogens  
5.3.6.1.2 Variation 2: Reaction with Other Halide Sources

5.3.6.2 Method 2: Metathesis Reactions of Organoplumbanes with Halides  
5.3.6.2.1 Variation 1: Reaction of Hexaaryldiplumboxanes with Hydrogen Halides  
5.3.6.2.2 Variation 2: Reaction of Bis(acetoxy)diorganoplumbanes with Hydrogen Halides

5.3.6.3 Method 3: Reaction of Tetraorganoplumbanes with Halogens  
5.3.6.3.1 Variation 1: Reaction with Free Halogen To Form Halotriorganoplumbanes  
5.3.6.3.2 Variation 2: Reaction with Free Halogen To Form Dihalodiorganoplumbanes  

5.3.6.4 Method 4: Reaction of Tetraorganoplumbanes with Hydrogen Halides  
5.3.6.4.1 Variation 1: Reaction with Hydrogen Halides To Form Halotriorganoplumbanes  
5.3.6.4.2 Variation 2: Reaction with Hydrogen Halides To Form Dihalodiorganoplumbanes

5.3.6.5 Method 5: Reaction of Tetraorganoplumbanes with Other Halide Sources  
5.3.6.6 Method 6: Other Synthetic Methods

5.3.6.7 Method 7: Chemoselective Carbonyl Allylation of α,β-Epoxy Ketones with Allylic Stannanes

5.3.7 **Product Subclass 7: Organoplumboxanes and Related Compounds**  
P. J. Guiry and P. J. McCormack

5.3.7 **Product Subclass 7: Organoplumboxanes and Related Compounds**  
Synthesis of Product Subclass 7

5.3.7.1 Method 1: Preparation of Organoplumbanols by the Oxidation of Hexaorganodiplumbanes  
5.3.7.2 Method 2: Organoplumbanols, Alkoxy(organo)plumbanes, and Alkylperoxy(organo)plumbanes from Halo(organo)plumbanes

5.3.7.2.1 Variation 1: Reaction of Halo(organo)plumbanes with Wet Silver(I) Oxide  
5.3.7.2.2 Variation 2: Reaction of Halo(organo)plumbanes with Alkal Metal Alkoxides

5.3.7.3 Method 3: Preparation of Alkoxyplumbanes by Transalcoholysis and Dehydration Reactions  
5.3.7.3.1 Variation 1: Reaction of Organoplumbanols with Alcohols or Phenols

[(Triorganoplyl)tellanyl]lithium and Halotriorganoplumbanes ............................................ 704

5.3.11.1 Variation 1: Reaction of Lithium Triorganoplumbyl Selenides or Tellurides with Halotriorganoplumbanes ............................................. 704

5.3.11.1 Variation 2: Organoplumbyl Tellurides from [(Triorganogermyl)tellanyl]-lithium and Halotriorganoplumbanes .......................... 704

5.3.12 Method 2: Organoplumbyl Selenides from Dihalodiphenylplumbanes and Sodium Selenide ............................... 705

5.3.12 Product Subclass 12: Organoplumbyl Selenides and Related Compounds

P. J. Guiry and P. J. McCormack

5.3.12 Product Subclass 12: Organoplumbyl Selenides and Related Compounds 707

Synthesis of Product Subclass 12 ............................................. 707

5.3.12.1 Method 1: Organoplumbyl Selenides from Halo(organo)plumbanes ........................ 707

5.3.12.2 Method 2: Organoplumbyl Selenides from Organoplumbyl Selenides 708

5.3.12.3 Method 3: Organoplumbyl Selenides from Tetraorganoplumbyls and N-Halogenated Organic Compounds 709

5.3.12.4 Additional Methods ............................................... 709

5.3.13 Product Subclass 13: Organoplumbyl Phosphines and Phosphine Oxides

P. J. Guiry and P. J. McCormack

5.3.13 Product Subclass 13: Organoplumbyl Phosphines and Phosphine Oxides 711

Synthesis of Product Subclass 13 ............................................. 711

5.3.13.1 Method 1: Organoplumbyl Phosphines from Halo(organo)plumbanes 711

5.3.14 Product Subclass 14: Triorganolead Cyanides and Triorganolead Cyanates

P. A. C. Eagle

5.3.14 Product Subclass 14: Triorganolead Cyanides and Triorganolead Cyanates 713

Synthesis of Product Subclass 14 ............................................. 713

5.3.14.1 Method 1: Triorganolead Cyanides from Hexaaryldiphenylplumbyl by Disproportionation with Cyanogen Halides .......................... 713

5.3.14.2 Method 2: Triorganolead Cyanides from Triorganolead Derivatives and Potassium Cyanide or Fulminates .......................... 714

5.3.15 Product Subclass 15: Acylplumbyl Phosphines and Phosphine Oxides

P. A. C. Eagle

5.3.15 Product Subclass 15: Acylplumbyl Phosphines and Phosphine Oxides 717

Synthesis of Product Subclass 15 ............................................. 718
5.3.15 Method 1: Acylplumbanes from (Triarylplumbyl)lithiums by Substitution with Acyl Halides or Chloroformates .................................. 718

5.3.15 Method 2: Acylplumbane Thioacetals from Triorganoplumbanes by Reactions with 1,3-Dithian-2-yllithiums or 1,3-Oxathian-2-yllithiums .............................................. 718

5.3.16 Product Subclass 16: Lead Isocyanates, Isothiocyanates, Diazoplumbanes, and Iminoplumbanes

5.3.16 Method 1: Isocyanates and Isothiocyanates from Triorganolead Derivatives by Substitution ................................................................. 721

5.3.16 Method 2: Diazomethyl(trimethyl)plumbanes from N-(Trimethylplumbyl)-N,N-bis(trimethylsilyl)amine by Reactions with Diazomethanes .................................................. 722

5.3.16 Method 3: Plumbylimines from Triarylplumbyllithiums by Reactions with Chloroimines ................................................................. 722

5.3.16 Method 4: Iminoplumbanes from Triorganoplumbanes by Reactions with Phenyl Isocyanide .................................................. 723

5.3.16 Method 5: Pyrazolylplumbanes from Alkynylplumbanes by 1,3-Dipolar Cycloaddition Reactions with Diazomethane ............... 723

5.3.16 Method 6: 5-(Trimethylplumbyl)pyrazoles from Ethyl Diazo(trimethyl)plumbylacetate by 1,3-Dipolar Cycloaddition Reactions with Alkynes and Alkenes ........................................ 724

5.3.17 Product Subclass 17: 1- or 2-Alkoxy- and 1- or 2-(Alkylsulfanyl) and 1- or 2-Aminoalkenyl(triorgano)plumbanes

5.3.17 Method 1: 1-Alkoxy- and 1-(Alkylsulfanyl)alkenyl(triorgano)plumbanes from (Triethylplumbyl)metals by Addition to Alkynyl Ethers and Alkylsulfanylethynes ........................................ 727

5.3.17 Method 2: 1-Alkoxyethyl-1-vinylplumbanes from Trimethyl[1-(tri-methylplumbyl)vinyl]plumbanes .............................................. 727

5.3.17 Method 3: 2-Aminovinylplumbanes from Isocyanates and Alkynyl(trialkyl)plumbanes .............................................. 728
Product Subclass 18: 1-Halo-, 1-Alkoxy-, 1-Hydroxy-, and 1-Aminoalkylplumbanes

P. A. C. Eagle

5.3.18

Synthesis of Product Subclass 18

5.3.18.1 Method 1: Perfluoroalkyltriorganoplumbanes from Triaryl- or Trialkylplumbyl Derivatives by Reactions with Bis(perfluoroalkyl)cadmium Adducts

5.3.18.2 Method 2: Triaryl(trihalomethyl)plumbanes from Triarylplumbyl Derivatives by Reactions with Trihaloacetyl Compounds

5.3.18.3 Method 3: Alkyl(perfluoroalkyl)plumbanes from Tetraalkylplumbanes by Radical Substitutions with Perfluoroalkyl Halides

5.3.18.4 Method 4: Perfluoroalkylplumbanes from Tetraaryl- and Tetraalkylplumbanes by Radical Exchange with Perfluoroalkylmetal Derivatives

5.3.18.4.1 Variation 1: From Tetraalkylplumbanes by Reactions with Perfluoroalkylmercury Compounds

5.3.18.4.2 Variation 2: From Tetraarylplumbanes by Reactions with Perfluoroalkylstannanes

5.3.18.5 Method 5: Triaryl(trihalomethyl)- or Triaryl(halomethyl)plumbanes from Triorganolead Alkoxides and Haloforms

5.3.18.6 Method 6: Triaryl(trichloromethyl)plumbanes and Triaryl(dichloromethyl)plumbanes from (Triarylplumbyl)metals by Reactions with Halomethanes

5.3.18.7 Method 7: Triaryl(1,1-dichloroalkyl)plumbanes from [(Triaryl)(dichloro)plumbyl]methyl]lithiums by Reactions with Electrophiles

5.3.18.8 Method 8: Bromomethyl(triphenyl)plumbane from [[(Triphenylplumbyl)methyl]lithium and 1,2-Dibromoethane

5.3.18.9 Method 9: (1-Haloalkyl)triorganoplumbanes from Triorganolead Halides by Reactions with (1-Haloalkyl)lithiums or the Simmons-Smith Reagent

5.3.18.10 Method 10: (1-Haloalkyl)plumbanes by Miscellaneous Procedures

5.3.18.11 Method 11: (1-Alkoxyalkyl)(trialkyl)plumbanes from (Trialkylplumbyl)lithiums and 1-Chloroalkyl Ethers

5.3.18.12 Method 12: (1-Alkoxyalkyl)triorganoplumbanes from Triorganolead Halides and Phenyl (Triphenylplumbyl)methyl Sulfide from Chlorotriphenylplumbane

5.3.18.13 Method 13: Applications of 1-Alkoxyalkyl(trialkyl)plumbanes in the Diastereoselective Synthesis of 1,2-Diols and Cyclic Ethers

Applications of Product Subclass 18 in Organic Synthesis

6.1 Product Class 1: Boron Compounds

6.1.1 Product Subclass 1: Hydroboranes
D. S. Matteson .................................................................................................. 5

6.1.2 Product Subclass 2: Borohydrides
G. Chen .............................................................................................................. 81

6.1.3 Product Subclass 3: Diborane(4) Compounds
T. B. Marder ..................................................................................................... 117

6.1.4 Product Subclass 4: Metalloboranes
H. Nöth .............................................................................................................. 139

6.1.5 Product Subclass 5: Haloboranes
D. S. Matteson .................................................................................................. 179

6.1.6 Product Subclass 6: Haloborates
B. Schilling and D. E. Kaufmann .................................................................. 247

6.1.7 Product Subclass 7: Hydroxyboranes
N. Miyaura ......................................................................................................... 257

6.1.8 Product Subclass 8: Boroxanes
M. Periasamy, M. Seenivasaperumal, and S. Sivakumar .............................. 301

6.1.9 Product Subclass 9: Acyloxyboranes
M. Periasamy, M. N. Reddy, and N. S. Kumar ................................................ 321

6.1.10 Product Subclass 10: Vinyloxyboranes
C. Gennari, S. Ceccarelli, and U. Piarulli ...................................................... 337

6.1.11 Product Subclass 11: Aryloxy- and Alkoxyboranes
(Including Protecting Groups)
K. Ishihara and H. Yamamoto ......................................................................... 403
6.1.12 Product Subclass 12: Aryloxy- and Alkoxyborates
K. Ishihara and H. Yamamoto ........................................... 423

6.1.13 Product Subclass 13: Peroxyboranes
K. Ishihara and H. Yamamoto ........................................... 437

6.1.14 Product Subclass 14: Sulfanyl- and Selanylboranes
C. Habben and D. E. Kaufmann ........................................ 443

6.1.15 Product Subclass 15: Aminoboranes and Borane–Amine Complexes
B. Carboni and F. Carreaux ............................................ 455

6.1.16 Product Subclass 16: Phosphinoboranes and Borane–Phosphine Complexes
A. C. Gaumont and B. Carboni ........................................ 485

6.1.17 Product Subclass 17: a-Metalloalkylboranes
Bakthan Singaram ........................................................ 513

6.1.18 Product Subclass 18: Cyanoboranes
D. Gabel and M. B. El-Zaria ............................................. 541

6.1.19 Product Subclass 19: Carboxyboranes and Related Derivatives
D. Gabel and M. B. El-Zaria ............................................. 563

6.1.20 Product Subclass 20: a-Haloalkylboronates
D. S. Matteson .............................................................. 585

6.1.21 Product Subclass 21: a-Alkoxalkyl-, a-Sulfanylalkyl-, and a-Aminoalkylboronates
D. S. Matteson .............................................................. 607

6.1.22 Product Subclass 22: a-Phosphinoalkylboranes
D. S. Matteson .............................................................. 623

6.1.23 Product Subclass 23: Alk-1-ynylboranes and Alkyn-1-ylboronates
D. E. Kaufmann and N. Öcal ............................................ 635

6.1.24 Product Subclass 24: Borylketenes
D. Gabel ................................................................. 659

6.1.25 Product Subclass 25: Allenylboranes
D. E. Kaufmann and C. Burmester .................................... 667

6.1.26 Product Subclass 26: Aryl- and Hetarylboranoses
N. Miyaura ................................................................. 677

6.1.27 Product Subclass 27: Dienyloboranes
K. Albrecht and D. E. Kaufmann ...................................... 697

6.1.2.5.1 Variation 1: Preparation of Monoalkylaminoborohydrides .... 89
6.1.2.5.2 Variation 2: Preparation of Bis- and Tris(pyrazolyl)borohydrides .... 90
Applications of Product Subclass 2 in Organic Synthesis .................. 90
6.1.2.6 Method 6: Reductive Cleavage of Carbon—Heteroatom Bonds .......... 91
6.1.2.6.1 Variation 1: Reductive Cleavage of C—O Bonds .............. 91
6.1.2.6.2 Variation 2: Reductive Cleavage of C—S Bonds .............. 93
6.1.2.6.3 Variation 3: Reductive Cleavage of C—N Bonds .............. 93
6.1.2.6.4 Variation 4: Reduction of Halides to Hydrocarbons ............ 94
6.1.2.7 Method 7: Reductions of C=O Bonds .......................... 96
6.1.2.7.1 Variation 1: Reduction of Aldehydes and Ketones to Hydrocarbons 96
6.1.2.7.2 Variation 2: Reduction of Aldehydes and Ketones to Alcohols 97
6.1.2.7.3 Variation 3: Diastereoselective Reduction of Ketones to Alcohols 98
6.1.2.7.4 Variation 4: Enantioselective Reduction of Prochiral Ketones to Chiral Alcohols 100
6.1.2.7.5 Variation 5: Reductions of Carboxylic Acids and Derivatives 101
6.1.2.8 Method 8: Reductions of C=N Bonds 103
6.1.2.8.1 Variation 1: Reduction of Imines and Derivatives 103
6.1.2.8.2 Variation 2: Reductive Amination in Solution Phase 105
6.1.2.8.3 Variation 3: Solid-Phase Reductive Amination 106
6.1.2.9 Method 9: Reduction of Nitriles 107
6.1.2.10 Method 10: Reduction of Azides 108
6.1.2.11 Method 11: Reduction of Nitro Compounds 109

6.1.3 Product Subclass 3: Diborane(4) Compounds

T. B. Marder

6.1.3 Product Subclass 3: Diborane(4) Compounds 117

Synthesis of Product Subclass 3 117
6.1.3.1 Method 1: Reductive Coupling of Bis(dimethylamino)(halo)boranes 117
6.1.3.2 Method 2: Reaction of Tetrakis(dimethylamino)diborane(4) with Alcohols and Thiols 118
6.1.3.2.1 Variation 1: Reaction with Chiral 1,2-Diols 120
6.1.3.2.2 Variation 2: Reaction with Thiols 120

Applications of Product Subclass 3 in Organic Synthesis 121
6.1.3.3 Method 3: Oxidative Addition of the B—B Bond to Metal Centers 121
6.1.3.4 Method 4: Catalyzed Diboration of α,β-Unsaturated Ketones 121
6.1.3.4.1 Variation 1: Using (η²-Ethene)bis(triphenylphosphine)platinum(0) 121
6.1.3.4.2 Variation 2: Using Tetrakis(triphenylphosphine)platinum(0) 122
6.1.3.4.3 Variation 3: Using Bis(phenylimino)acenaphthene(dimethylfumarate)-platinum(0) 123
6.1.3.4.4 Variation 4: Using Copper(I) Trifluoromethanesulfonate/Tributylphosphine 123
6.1.3.4.5 Variation 5: Using Stoichiometric Copper(I) Chloride/Lithium Chloride/Potassium Acetate 124
6.1.3.4.6 Variation 6: Using Chlorotris(triphenylphosphine)rhodium(1) 125
6.1.3.5 Method 5: Platinum-Catalyzed Diboration of Alkynes and Diynes 125
6.1.3.5.1 Variation 1: Diboration of Alkynes Using Tetrakis(triphenylphosphine)-platinum(0) 125
6.1.3.5.2 Variation 2: Diboration of Alkynes and Diynes Using (η²-Ethene)bis(triphenylphosphine)platinum(0) 126
6.1.3.5.3 Variation 3: Diboration of Alkynes Using Tris(norbornene)platinum/Diphenyl(2-tolyl)phosphine 128
6.1.3.6 Method 6: Platinum- or Palladium-catalyzed Diboration of Dienes 129
6.1.3.6.1 Variation 1: Tetrakis(triphenylphosphine)platinum(0)- and Bis(dibenzylideneacetone)platinum-Catalyzed Diboration of 1,3-Dienes 129
6.1.3.6.2 Variation 2: Tetrakis(triphenylphosphine)platinum(0)- and Bis(dibenzylideneacetone)platinum-Catalyzed Diboration of 1,2-Dienes 130
6.1.3.6.3 Variation 3: Catalyzed Diboration of 1,2-Dienes Using Bis(dibenzylideneacetone)palladium in the Presence of Organic Iodides 130
6.1.3.7 Method 7: Catalyzed Diboration of Alkenes 130
6.1.3.7.1 Variation 1: Using Phosphine-Free Platinum(0) 131
6.1.3.7.2 Variation 2: Using Phosphine-Free Platinum(0) and Chiral Diborane(4) 133
6.1.3.7.3 Variation 3: Using a Bis(diphenylphosphino)methane–Rhodium–\(\eta^6\)-Bis(catecholato)borate Catalyst 134
6.1.3.7.4 Variation 4: Rhodium-Catalyzed Asymmetric Diboration of Alkenes 135
6.1.3.7.5 Variation 5: Diboration of Methylene cyclopropanes Using Tetrakis(triphenylphosphine)platinum(0) or Bis(dibenzylideneacetone)platinum 135

6.1.4 Product Subclass 4: Metalloboranes
H. Nöth

6.1.4.1 Method 1: Synthesis of Silylboranes 140
6.1.4.1.1 Variation 1: Substitution Reactions 140
6.1.4.1.2 Variation 2: Insertion Reactions 144
6.1.4.1.3 Variation 3: Co-dehalogenation Reactions 146
6.1.4.1.4 Variation 4: Discharge Reactions 147
6.1.4.2 Method 2: Synthesis of Germylboranes 147
6.1.4.3 Method 3: Synthesis of Stannylboranes 149
6.1.4.4 Method 4: Synthesis of Plumbylboranes 152
6.1.4.5 Method 5: Synthesis of Silyl-, Germyl-, Stannyl-, and Plumbylborates and Related Compounds 152
6.1.4.5.1 Variation 1: By Addition of a Borane to Metal Silanides or Stannanides 153
6.1.4.5.2 Variation 2: Silyl-, Stannyl-, and Germylborates by Substitution Reactions 153
6.1.4.5.3 Variation 3: B–Si Bond Formation via a Li–B Intermediate 155

Applications of Product Subclass 4 in Organic Synthesis 155
6.1.4.6 Method 6: Sila- and Stannaboration with Silyl- and Stannylboranes 156
6.1.4.6.1 Variation 1: Alkenes 156
6.1.4.6.2 Variation 2: Allenes 159
6.1.4.6.3 Variation 3: 1,3-Dienes 161
6.1.4.6.4 Variation 4: Reaction of 1-Boryl-4-silylbut-2-enes with Aldehydes 163
6.1.4.6.5 Variation 5: Silylboration of Alkenes 166
6.1.4.6.6 Variation 6: Stannaboration of Alkynes 170
6.1.4.7 Method 7: Reaction of Alkynes with Silyl- and Stannylborates 171
6.1.4.8 Method 8: Transition Metal Borations 173
6.1.4.9 Method 9: Transition Metal Borides 174
6.1.5 Product Subclass 5: Haloboranes
D. S. Matteson

6.1.5 Product Subclass 5: Haloboranes ........................................ 179
Synthesis of Product Subclass 5 ............................................. 180

6.1.5.1 Boron Trihalides .......................................................... 180
6.1.5.1.1 Method 1: Synthesis of Boron Trifluoride ......................... 180
6.1.5.1.2 Method 2: Synthesis of Boron Trifluoride–Diethyl Ether Complex .... 182
6.1.5.1.3 Method 3: Synthesis of Boron Trichloride .......................... 182
6.1.5.1.4 Method 4: Synthesis of Boron Tribromide .......................... 182
6.1.5.1.5 Method 5: Synthesis of Boron Triiodide ............................ 183

6.1.5.2 Halo(oxy)boranes .......................................................... 183
6.1.5.2.1 Method 1: Synthesis of Halo(dioxy)- and Dihalo(oxy)boranes ........ 183
6.1.5.2.1.1 Variation 1: Synthesis of Alkoxy(chloro)boranes ............... 184
6.1.5.2.2 Method 2: Synthesis of Alkyl- and Aryl(halo)(oxy)boranes ........ 184
6.1.5.2.2.1 Variation 1: From Alkoxy Metals ................................. 184
6.1.5.2.2.2 Variation 2: By Ligand Exchange between Two Boron Components ..... 186

6.1.5.3 Amino(halo)boranes ...................................................... 186
6.1.5.3.1 Method 1: Synthesis of Amino(dihalo)boranes and Diamino(halo)boranes .......................................................... 186
6.1.5.3.1.1 Variation 1: Synthesis of Amino(dihalo)boranes .............. 187
6.1.5.3.1.2 Variation 2: Synthesis of Diamino(halo)boranes ............. 188
6.1.5.3.2 Method 2: Synthesis of Alkyl- and Aryl(amo)(halo)boranes and Related Compounds .................................................. 190
6.1.5.3.2.1 Variation 1: Synthesis of Diamino(chloro)boronium Chlorides ...... 191

6.1.5.4 Alkyl- and Aryl(halo)boranes .............................................. 193
6.1.5.4.1 Method 1: Synthesis of Alkyl- and Aryl(fluoro)boranes ........... 193
6.1.5.4.2 Method 2: Synthesis of Alkyl- and Aryl(chloro)boranes ............ 194
6.1.5.4.2.1 Variation 1: Hydroboration of Alkenes .......................... 195
6.1.5.4.2.2 Variation 2: By Conversion of B—H Bonds into B—Cl Bonds .... 200
6.1.5.4.2.3 Variation 3: By Replacement of B—Cl Bonds by B—C Bonds ........ 201
6.1.5.4.2.4 Variation 4: By Addition to Alkynes ............................. 201
6.1.5.4.2.5 Variation 5: By Metal Replacement ............................... 202
6.1.5.4.2.6 Variation 6: By Conversion of B—O Bonds into B—Cl Bonds ...... 206
6.1.5.4.2.7 Variation 7: By Conversion of B—F Bonds into B—Cl Bonds ...... 207
6.1.5.4.3 Method 3: Synthesis of Alkyl- and Aryl(bromo)boranes and Alkyl- and Aryl(iodo)boranes ........................................ 207
6.1.5.4.3.1 Variation 1: From Alkenes ........................................... 207
6.1.5.4.3.2 Variation 2: From Acetylenes ....................................... 208
6.1.5.4.3.3 Variation 3: Using Organometallic Reagents ..................... 210

Applications of Product Subclass 5 in Organic Synthesis ................. 211

6.1.5.5 Boron Trifluoride .......................................................... 211
6.1.5.5.1 Method 1: Aldol–Grob Reaction ..................................... 212
6.1.5.5.2 Method 2: Friedel–Crafts Reactions ................................. 212

6.1.6.3.1 Variation 1: From Organolithium and Grignard Reagents 248
6.1.6.3.2 Variation 2: From Alkynes 248

Applications of Product Subclass 6 in Organic Synthesis 249

6.1.6.4 Method 4: Cross-Coupling Reactions of Potassium Aryltrifluoroborates 249
6.1.6.4.1 Variation 1: Addition to Aldehydes and Enones 249
6.1.6.4.2 Variation 2: With Arenediazonium Tetrafluoroborates 250
6.1.6.4.3 Variation 3: With Diaryliodonium Salts 251
6.1.6.5 Method 5: Substitution Using Inorganic Tetrahaloborates 251
6.1.6.5.1 Variation 1: Nucleophilic Substitution Reactions 251
6.1.6.5.2 Variation 2: Regioselective Fluorination Using Selectfluor 252
6.1.6.6 Method 6: Release of Difluoro(organo)boranes from Potassium Trifluoro(organo)borates 253
6.1.6.7 Method 7: Addition of Potassium Allyltrifluoroborates to Aldehydes and Ketones 253
6.1.6.8 Method 8: Addition Reactions Using Inorganic Tetrahaloborates (The Balz–Schiemann Reaction) 254

6.1.7 Product Subclass 7: Hydroxyboranes
N. Miyaura

6.1.7.1 Method 1: Direct Borylation of Alkanes and Arenes 257
6.1.7.2 Method 2: Transmetalation 260
6.1.7.2.1 Variation 1: Via Magnesium and Lithium Reagents 263
6.1.7.2.2 Variation 2: Via Other Metal Reagents 266
6.1.7.3 Method 3: Borylation of Aryl, Vinyl, and Allyl Halides 267
6.1.7.3.1 Variation 1: By Palladium-Catalyzed Coupling of Diboranes 268
6.1.7.3.2 Variation 2: By Palladium-Catalyzed Coupling of 1,3,2-Dioxaborolanes 271
6.1.7.4 Method 4: Hydroboration of Alkenes and Alkynes 272
6.1.7.4.1 Variation 1: Uncatalyzed Hydroboration 273
6.1.7.4.2 Variation 2: Catalyzed Hydroboration 275
6.1.7.5 Method 5: Diboration of Alkenes and Alkynes 279
6.1.7.5.1 Variation 1: Uncatalyzed Diboration 279
6.1.7.5.2 Variation 2: Catalyzed Diboration 280
6.1.7.6 Methods 6: Additional Methods 281

Applications of Product Subclass 7 in Organic Synthesis 285

6.1.7.7 Method 7: Formation of Diol Esters 285
6.1.7.7.1 Variation 1: Protection, Chromatographic Separations, and Analysis of Diols 285
6.1.7.7.2 Variation 2: Recognition of Sugar Molecules 286
6.1.7.8 Method 8: Use as Catalysts 287
6.1.7.8.1 Variation 1: For Hydroxyalkylation of Phenols 287
6.1.7.8.2 Variation 2: For Hydroalumination 288
6.1.7.8.3 Variation 3: For the Substitution of Epoxides 289
6.1.7.8.4 Variation 4: For Amidation of Carboxylic Acids 290
6.1.7.9 Method 9: C—C Bond Formation via the Boron-Mannich Reaction 291
6.1.7.10 Method 10: Metal-Catalyzed C—C and Carbon—Heteroatom Bond Formation 292
6.1.7.10.1 Variation 1: Palladium- and Nickel-Catalyzed Cross-Coupling Reactions 292
6.1.7.10.2 Variation 2: Rhodium-Catalyzed Addition Reactions 294
6.1.7.10.3 Variation 3: Copper-Catalyzed C—O, C—S, and C—N Bond Formation 296

6.1.8 Product Subclass 8: Boroxanes
M. Periasamy, M. Seenivasaperumal, and S. Sivakumar

6.1.8.1 Method 1: Boroxin from Diborane 301
6.1.8.2 Method 2: Alkoxyboroxins from Boric Acids 301
6.1.8.3 Method 3: Alkylboroxin from the Corresponding Boron Acid 302
6.1.8.3.1 Variation 1: An Alkylboroxin by Carbonylation of Borane–Dimethyl Sulfide Complex 303
6.1.8.3.2 Variation 2: Alkylboroxins from Organoboranes and Boric Oxide 304
6.1.8.4 Method 4: Arylboroxins from Arylboronic Acids 304
6.1.8.5 Method 5: A Diboroxane from Boric Acid 306
6.1.8.6 Method 6: Diboroxanes from Hydroxyboranes or Derivatives 306
6.1.8.7 Method 7: A Diboroxane from a Borepin 307
6.1.8.8 Method 8: 2,4,6-Trivinylboroxin–Pyridine from Trimethyl Borate 307

Applications of Product Subclass 8 in Organic Synthesis 308
6.1.8.9 Method 9: Oxidation of Alkoxyboroxins 308
6.1.8.10 Method 10: Boroxins in a Suzuki-Type Cross-Coupling Reaction 310
6.1.8.10.1 Variation 1: Preparation of 3,4-Disubstituted Furans 310
6.1.8.10.2 Variation 2: Preparation of Oligomeric Furans 310
6.1.8.10.3 Variation 3: Preparation of Substituted Styrenes 311
6.1.8.11 Method 11: Arylboroxins as Catalysts for Aldol or Michael Reactions 312
6.1.8.12 Method 12: Rhodium-Catalyzed Hydroarylation of Alkenes and Alkynes by Triarylboroxins 313
6.1.8.13 Method 13: Preparation of Chiral Oxazaborolidine Catalysts 314
6.1.8.14 Method 14: Separation of Diols 315
6.1.8.15 Method 15: Boroxin-Containing Polymers 315
6.1.8.16 Method 16: High Performance Polymer Electrolytes 316
6.1.8.17 Method 17: Resolution of 1,1¢-Bi-2-naphthol 318

6.1.9 Product Subclass 9: Acyloxyboranes
M. Periasamy, M. N. Reddy, and N. S. Kumar

6.1.9.1 Method 1: Triacyloxyboranes and Oxybis(diacyloxy)boranes 322
6.1.9.2 Method 2: By the Reaction of 9-Borabicyclo[3.3.1]nonane with Carboxylic Acids ........................................ 323
Applications of Product Subclass 9 in Organic Synthesis ...................... 323

6.1.9.3 Method 3: In Electrophilic Reactions ................................ 323
6.1.9.4 Method 4: Acyloxyborohydrides in Reduction Reactions .......... 324
6.1.9.4.1 Variation 1: Reduction of Carboxylic Acids .................... 324
6.1.9.4.2 Variation 2: Selective Reduction of the Carboxylic Acid Group in an Alkenic Acid ........................................ 325
6.1.9.4.3 Variation 3: Hydroboration of Alkenes .......................... 326
6.1.9.4.4 Variation 4: Selective Hydroboration of Alkenic Acids ........ 326
6.1.9.5 Method 5: Reduction of Carboxylic Acids to Aldehydes .......... 327
6.1.9.6 Method 6: Asymmetric Reactions with Tartaric Acid Based Chiral Acyloxyboranes ........................................ 328
6.1.9.6.1 Variation 1: Asymmetric Reduction .............................. 328
6.1.9.6.2 Variation 2: Diels–Alder Reactions ................................. 328
6.1.9.6.3 Variation 3: Aldol Reactions ........................................ 330
6.1.9.6.4 Variation 4: Asymmetric Allylation ................................ 331
6.1.9.7 Method 7: Asymmetric Reactions with Amino Acid Based Chiral Acyloxyboranes ........................................ 332
6.1.9.7.1 Variation 1: Diels–Alder Reactions ................................. 332
6.1.9.7.2 Variation 2: Aldol Reactions ........................................ 333

6.1.10 Product Subclass 10: Vinyloxyboranes
C. Gennari, S. Ceccarelli, and U. Piarulli

6.1.10 Product Subclass 10: Vinyloxyboranes .................................. 337
Synthesis of Product Subclass 10 ........................................... 339
6.1.10.1 Method 1: From Carbonyl Compounds by Direct Enolization .... 340
6.1.10.1.1 Variation 1: Synthesis of Z(O)-Vinyloxyboranes ................. 348
6.1.10.1.2 Variation 2: Synthesis of E(O)-Vinyloxyboranes ................. 348
6.1.10.1.3 Variation 3: Synthesis of Vinyloxyboranes by Enolization of Aldehydes ................................. 348
6.1.10.2 Method 2: From Silyl Enol Ethers or Lithium Enolates .......... 349
6.1.10.2.1 Variation 1: From Silyl Enol Ethers ................................ 349
6.1.10.2.2 Variation 2: From Lithium Enolates ................................ 350
6.1.10.3 Method 3: By Addition of Trialkyl- and Dialkylboranes to Double Bonds ........................................ 351
6.1.10.3.1 Variation 1: By Addition to α,β-Unsaturated Carbonyl Compounds ........................................ 351
6.1.10.3.2 Variation 2: By Addition to Ketenes ................................ 352
6.1.10.4 Method 4: Synthesis of Dialkyl Vinyl Borates by Oxidation of Dialkyl Vinylboronates ........................................ 353
6.1.10.4.1 Variation 1: From Vinylic Grignard Reagents .................... 353
6.1.10.4.2 Variation 2: By Hydroboration of Alkynes .............................. 354
6.1.10.5 Method 5: By Rearrangement of Boron “Ate” Complexes ....... 355
6.1.10.5.1 Variation 1: From α-Halo-Substituted Enolates ................. 356
6.1.10.5.2 Variation 2: From α-Diazo Carbonyl Compounds ................. 357
6.1.10.5.3 Variation 3: From Stabilized Sulfur Ylides .......................... 358
6.1.10.6 Methods 6: Additional Methods ..................................... 358

Table of Contents XXI
Applications of Product Subclass 10 in Organic Synthesis .......................... 359

6.1.10.7 Method 7: Synthesis of $\alpha$-Halo Carbonyl Compounds by
Halogenation of Vinyloxyboranes ........................................ 359

6.1.10.8 Method 8: Synthesis of syn-$\alpha$-Substituted $\beta$-Hydroxy Carbonyl
Compounds by the Aldol Reaction ........................................ 360

6.1.10.8.1 Variation 1: From Imide-Derived Vinyloxyboranes .................. 367
6.1.10.8.2 Variation 2: From Sultam-Derived Vinyloxyboranes ................. 369
6.1.10.8.3 Variation 3: From Ester-Derived Vinyloxyboranes .................. 370
6.1.10.8.4 Variation 4: From Diisopinocampheyl(vinyloxy)boranes ............ 371
6.1.10.8.5 Variation 5: From Vinyloxydiazaborolidines ......................... 372
6.1.10.8.6 Variation 6: From Dialkyl Vinyl Borates ............................ 373
6.1.10.8.7 Variation 7: From Monohalo- and Dihalo(vinyloxy)boranes ........ 374

6.1.10.9 Method 9: Synthesis of anti-$\alpha$-Substituted $\beta$-Hydroxy Carbonyl
Compounds by the Aldol Reaction ........................................ 375

6.1.10.9.1 Variation 1: From Imide-Derived Vinyloxyboranes with
Excess Dibutyl[[[trifluoromethyl)sulfonyl]oxy]borane ...................... 380
6.1.10.9.2 Variation 2: From Sultam-Derived Vinyloxyboranes in the Presence of
Lewis Acids .................................................................. 381
6.1.10.9.3 Variation 3: From Ester-Derived Vinyloxyboranes .................. 382
6.1.10.9.4 Variation 4: From Vinyloxyboranes Bearing Menthone-Derived
Chiral Ligands .................................................................. 383
6.1.10.9.5 Variation 5: From Vinyloxydiazaborolidines ......................... 385
6.1.10.9.6 Variation 6: Miscellaneous Reactions ............................... 386

6.1.10.10 Method 10: Synthesis of $\alpha$-Unsubstituted $\beta$-Hydroxy Carbonyl
Compounds by the Aldol Reaction ........................................ 386

6.1.10.10.1 Variation 1: From 2,5-Dialkyl-1-(vinyloxy)borolanes ................ 388
6.1.10.10.2 Variation 2: From Vinyloxyboranes Bearing Menthone-Derived
Chiral Ligands .................................................................. 389
6.1.10.10.3 Variation 3: Miscellaneous Reactions ............................... 390
6.1.10.11 Method 11: Synthesis of $\beta$-Amino Carbonyl Compounds by
Reaction with Imines .......................................................... 391

6.1.10.12 Method 12: Alkylation of Vinyloxyboranes
(The Nicholas–Schreiber Reaction) .............................................. 393
6.1.10.13 Method 13: Pericyclic Reactions ........................................... 395

6.1.10.13.1 Variation 1: [3,3]-Sigmatropic Rearrangements ..................... 395
6.1.10.13.2 Variation 2: [2,3]-Sigmatropic Rearrangements ..................... 396

6.1.11

Product Subclass 11: Aryloxy- and Alkoxyboranes
(Including Protecting Groups)
K. Ishihara and H. Yamamoto

6.1.11

Product Subclass 11: Aryloxy- and Alkoxyboranes
(Including Protecting Groups) .................................................. 403

Synthesis of Product Subclass 11 ............................................. 404

6.1.11.1 Method 1: Synthesis by Substitution ..................................... 404

6.1.11.1.1 Variation 1: Of Boric Oxide or Hydroxyboranes with Alcohols .... 404

6.1.16

Product Subclass 16: Phosphinoboranes and Borane–Phosphine Complexes
A. C. Gaumont and B. Carboni

6.1.16

Product Subclass 16: Phosphinoboranes and Borane–Phosphine Complexes ........................................... 485
Synthesis of Product Subclass 16 ........................................... 487
Method 1: Phosphinoboranes by Phosphination 487

Variation 1: From Halo(organo)boranes 487
Variation 2: From Amino(halo)boranes 488

Method 2: Phosphinoboranes by Elimination from Phosphine–Borane Complexes 489

Variation 1: By Dehydrohalogenation 490
Variation 2: By Thermal Dehydrogenation 490
Variation 3: By Elimination of Trimethylsilyl Groups 491
Method 3: By Catalytic Organometallic Dehydrocoupling 492

Method 4: Borane–Phosphine Complexes by Complexation of an Organoborane 493

Variation 1: From Phosphines and Uncomplexed Boranes 493
Variation 2: From Phosphines and Borane Complexes 494
Variation 3: From Chlorophosphines 495
Variation 4: From Borohydrides and Free Phosphines 496
Variation 5: From Phosphine Oxides 497

Method 5: Borane–Phosphine Complexes by Halogenation of Borane Complexes 497

Method 6: Additional Methods for the Synthesis of Borane–Phosphine Complexes 498

Applications of Product Subclass 16 in Organic Synthesis 498

Method 7: Borane as a Phosphorus Protecting Group 499
Method 8: Alkylation of Borane–Phosphine Complexes 500

Variation 1: C-Alkylation Reactions 500
Variation 2: P-Alkylation Reactions 501
Variation 3: Nucleophilic Substitution Reactions 503

Method 9: Hydrophosphination Reactions 504
Method 10: Coupling Reactions 505

Variation 1: Copper-Promoted Oxidative Coupling 505
Variation 2: Palladium-Promoted Cross Coupling 506

Methods 11: Miscellaneous Applications 507

Product Subclass 17: α-Metalloalkylboranes

Method 1: Preparation of α-Borylboranes and α-Borylboronates 514
Method 2: Metallation of Di-, Tri-, and Tetraborylmethanes by Deboronation 517

Variation 1: With Grignard Reagents 518
Variation 2: From gem-Tris- and Tetrakis(dialkoxyboryl) Compounds 519

Method 3: Deprotonation of α-Substituted Boranes and Boronates 519
6.1.17.3.1 Variation 1: Of Bis(dialkoxyboryl)methanes ........................................ 520
6.1.17.3.2 Variation 2: Of α-(Phenylsulfanyl)methylboronates ............................. 521
6.1.17.3.3 Variation 3: Of α-(Trimethylsilyl)methylboronates ............................... 521
6.1.17.3.4 Variation 4: Of Dialkylvinylboranes .................................................. 522
6.1.17.4 Method 4: Metal–Halogen Exchange Reactions of α-Haloalkylboranes and α-Haloalkylboronates ................................................................. 523
6.1.17.4.1 Variation 1: Preparation of α-(Trialkylstannyl)alkylboranes and α-(Trialkylstannyl)alkylboronates .................................................... 523
6.1.17.4.2 Variation 2: Reaction of an α-Haloalkylboronate with tert-Butyllithium .... 523
6.1.17.4.3 Variation 3: Reaction of α-Haloalkylboronates with Zinc Metal and Subsequent Reaction with Copper(I) Cyanide ................................. 524
6.1.17.4.4 Variation 4: Reaction of α-Haloalkylboronates with Chromium(II) Chloride .......................... 524
6.1.17.5 Method 5: Deprotonation of Alkyl(dimesityl)boranes with Lithium Dialkylamides ................................................................. 525
6.1.17.6 Method 6: Deprotonation of Alkyl(dimesityl)boronates with Mesityllithium ................................. 525
6.1.17.7 Method 7: Generation of α-Metalloalkylboranes by Organometallic Addition to Alkenylboranes ................................................................. 526
6.1.17.8 Method 8: Generation of α-Metalloalkenylboranes .................................. 527

Applications of Product Subclass 17 in Organic Synthesis ........................................ 528

6.1.17.9 Method 9: Alkylation of α-Metalloalkylboranes ........................................ 528
6.1.17.10 Method 10: Synthesis of Alkenes ............................................................ 530
6.1.17.10.1 Variation 1: Synthesis of Allenes .......................................................... 532
6.1.17.10.2 Variation 2: Synthesis of Vinylboronates ................................................. 532
6.1.17.11 Method 11: Preparation of Carbonyl Compounds ..................................... 533
6.1.17.12 Method 12: Preparation of 1,2-Diols .......................................................... 534
6.1.17.13 Method 13: Preparation of 1,3-Diols .......................................................... 535
6.1.17.14 Method 14: Synthesis of Alcohols ............................................................ 537
6.1.17.15 Method 15: Preparation of Amino Alcohols ............................................. 538

6.1.18 Product Subclass 18: Cyanoboranes

6.1.18.1 Method 1: Cyanoborane–Amine Complexes by Substitution of Hydrogen in Borane–Amine Complexes ................................................................. 542
6.1.18.2 Method 2: Dicyanoborane–Amine Complexes by Substitution of Hydrogen in Cyanoborane ................................................................. 543
6.1.18.3 Method 3: From Borohydrides and Mercury(II) Cyanide .............................. 544
6.1.18.4 Method 4: Cyanoboranes by Substitution of the Carboxamide Group in Carbamoylboranes ................................................................. 545
6.1.18.5 Method 5: Cyanoboranes by Substitution of Halides in Haloboranes ............ 545
6.1.18.5.1 Variation 1: By Cyanogen Iodide ............................................................ 546
6.1.18.5.2 Variation 2: By Trimethylsilyl Cyanide .................................................... 546
6.1.18.5.3 Variation 3: By Cyanide ................................................................. 546
6.1.18.5.4 Variation 4: By Isocyanoboranes ............................................................ 548
6.1.18.6 Method 6: Trialkylcyanoborates by Complexation of Trialkylboranes with Cyanide .................................................. 549
6.1.18.8 Method 8: Monomeric Cyanoborane–Amine Complexes from Amines and Oligomeric Cyanoborane ......................... 552
6.1.18.9 Variation 1: By Reaction with Amine Hydrochlorides To Give Cyanoborane–Amine Complexes .......................... 553
6.1.18.10 Method 10: Exchange of the Donor Ligands of Cyanoborane–Amine, –Phosphine, –Phosphite, and –Dimethyl Sulfide Complexes . 556

Applications of Product Subclass 18 in Organic Synthesis .................. 558

6.1.19.1 Method 1: From Cyanoboranes ........................................ 564
6.1.19.1.3 Variation 3: Sulfur and Nitrogen Analogues of Carboxy- and Carbamoylboranes from Cyanoboranes ....................... 569
6.1.19.2 Method 2: Carbamoylboranes from Carboxyboranes ............. 570
6.1.19.3 Variation 1: Acid-Catalyzed Esterification of Carboxyboranes ................................................................. 573
6.1.19.3.2 Variation 2: Esterification of Carboxyboranes in the Presence of Activating Agents ............................................. 573
6.1.19.3.3 Variation 3: Esterification of Carboxyboranes under Basic Conditions ......................................................... 574
Applications of Product Subclass 19 in Organic Synthesis ........................... 580

6.1.19.9 Method 9: Alkylboranes by Reduction of Carboxyboranes .................. 580
6.1.19.10 Method 10: Haloboranes from Carboxyboranes .............................. 581

6.1.20

Product Subclass 20: α-Haloalkylboronates
D. S. Matteson

6.1.20

Product Subclass 20: α-Haloalkylboronates ................................. 585
Synthesis of Product Subclass 20 ........................................... 585

6.1.20.1 Method 1: Synthesis via (Dihalomethyl)borate Anions ...................... 585
6.1.20.1.1 Variation 1: Boronates with Preformed (Dichloromethyl)lithium ......... 592
6.1.20.1.2 Variation 2: From (Dihalomethyl)lithiums Generated In Situ ........... 593
6.1.20.1.3 Variation 3: From (Dihalomethyl)boronates and Organometallic Reagents 595
6.1.20.1.4 Variation 4: From Achiral Boronates with an Asymmetric Catalyst .... 596
6.1.20.2 Method 2: From Haloalkyllithiums and Trialkyl Borates .................. 597
6.1.20.3 Method 3: α-Substitution Routes ..................................... 599
6.1.20.3.1 Variation 1: Halogenation of Alkylboronates ............................. 599
6.1.20.3.2 Variation 2: From α-Metalloalkylboronates ............................... 600
6.1.20.3.3 Variation 3: Via Nucleophilic Displacements ............................. 601
6.1.20.4 Method 4: Addition of Halogen Compounds to Alkenylboranes .......... 601
6.1.20.4.1 Variation 1: Addition of Hydrogen Halides ................................ 601
6.1.20.4.2 Variation 2: Radical Additions of Halocarbons ......................... 602
6.1.20.4.3 Variation 3: Halogenations .............................................. 602
6.1.20.5 Methods 5: Additional Methods ....................................... 602

6.1.21

Product Subclass 21: α-Alkoxyalkyl-, α-Sulfanylalkyl-, and α-Aminoalkylboronates
D. S. Matteson

6.1.21

Product Subclass 21: α-Alkoxyalkyl-, α-Sulfanylalkyl-, and α-Aminoalkylboronates 607
Synthesis of Product Subclass 21 ........................................... 608

6.1.21.1 Method 1: Synthesis from α-Haloalkylboronates ............................ 608
6.1.21.1.1 Variation 1: Alkoxide Substitutions ..................................... 609
6.1.21.1.2 Variation 2: Synthesis of α-Aminoalkyl- and α-Amidoalkylboronates .... 615
6.1.21.1.3 Variation 3: Azide Substitution ........................................... 617
6.1.21.1.4 Variation 4: Thiolate Substitution ........................................ 618
6.1.21.2 Method 2: Synthesis from α-Lithio Ethers and Sulfides ................... 619
6.1.21.2.1 Variation 1: From (Diethoxyethyl)lithium and Boronates ............... 619
6.1.21.2.2 Variation 2: From [(Phenylsulfanyl)methyl]lithium and Trimethyl Borate 620
6.1.21.2.3 Variation 3: Alkylation of Lithiated [α-(Phenylsulfanyl)alkyl]boronates 621
6.1.21.3 Methods 3: Additional Methods ....................................... 621
6.1.22  
Product Subclass 22: α-Phosphinoalkylboranes  
D. S. Matteson  

Synthesis of Product Subclass 22 ........................................ 623

6.1.22.1  Method 1:  Addition of Boranes to Alkylidene phosphoranes  ............... 623
6.1.22.1.1 Variation 1:  Addition of Hydroboranes ........................................ 623
6.1.22.1.2 Variation 2:  Addition of Haloboranes ............................................ 625
6.1.22.1.3 Variation 3:  Addition of Triorganoboranes  .................................. 628
6.1.22.2  Method 2:  Reaction of α-Haloalkylboranes with Phosphines ................. 629
6.1.22.3  Methods 3:  Other Methods ............................................................ 631

6.1.23  
Product Subclass 23: Alk-1-ynylboranes and Alkyn-1-ylboronates  
D. E. Kaufmann and N. Öcal  

Synthesis of Product Subclass 23 ............................................ 635

6.1.23.1  Method 1:  From Alk-1-ynylborane–Amine Adducts  ............................. 637
6.1.23.2  Method 2:  By Metal–Boron Exchange Reactions .................................. 638
6.1.23.2.1 Variation 1:  From Alk-1-ynyllithium and Alkoxy(dialkyl)boranes or Diorganohaloboranes ............................................................... 639
6.1.23.2.2 Variation 2:  From Alk-1-ynyllithium, Alk-1-ynylsodium, or Alk-1-ynylmagnesium Compounds and Dialkyl (Organob)oroboranes, Trialkyl Borates, Dialkoxyhaloboranes, and Dialkylamino- or Bis(dialkylamino)haloboranes ........................................... 640
6.1.23.2.3 Variation 3:  From Alk-1-ynyltin Compounds and Boron Halides ......... 643
6.1.23.3  Methods 3:  Additional Methods ....................................................... 643

Applications of Product Subclass 23 in Organic Synthesis ............................ 644

6.1.23.4  Method 4:  Substitution of the Boryl Group ........................................ 644
6.1.23.4.1 Variation 1:  Synthesis of Propargylic Alcohols  ............................. 644
6.1.23.4.2 Variation 2:  Synthesis of Propargylic Amines, Allenes, and α-Alkynylazacycloalkanes ............................................................... 646
6.1.23.4.3 Variation 3:  Synthesis of Homopropargylic Alcohols ....................... 648
6.1.23.4.4 Variation 4:  Synthesis of α- and γ-Alkynyl Ketones  ....................... 648
6.1.23.4.5 Variation 5:  Synthesis of Alkynoylureas ........................................... 651
6.1.23.5  Method 5:  Addition Reactions to the Alkynyl Group  ......................... 652
6.1.23.5.1 Variation 1:  Hydrogenation and Hydrozirconation  ......................... 652
6.1.23.5.2 Variation 2:  Hydrostannation, Hydrophosphination, and Hydrothiolation 652
6.1.23.5.3 Variation 3:  Cycloalkylation Reactions ............................................ 654
6.1.23.6  Method 6:  CycloadDITION Reactions .............................................. 655
6.1.23.6.1 Variation 1:  Diels–Alder Reactions ................................................. 655
6.1.23.6.2 Variation 2:  Catalyzed Cyclotrimerization Reactions ...................... 655
6.1.24  **Product Subclass 24: Borylketenes**
D. Gabel

6.1.24  **Product Subclass 24: Borylketenes** ........................................ 659
Synthesis of Product Subclass 24 ........................................ 659

6.1.24.1  Method 1:  Boryl(silyl)ketenes from Ethoxyacetylenes, Halosilanes, and Bromoboranes ........................................ 659
6.1.24.1.1  Variation 1:  From Ethoxy(silyl)acetylenes and Bromoboranes ............ 660
6.1.24.1.2  Variation 2:  From Boryl(ethoxy)acetylenes and Halosilanes .............. 661
6.1.24.2  Method 2:  Modification of Boryl(silyl)ketenes by Replacement of the Substituents on Boron .......................... 662

Applications of Product Subclass 24 in Organic Synthesis ............. 663

6.1.24.3  Method 3:  Preparation of Substituted Carbonyl Compounds ............ 663

6.1.25  **Product Subclass 25: Allenylboranes**
D. E. Kaufmann and C. Burmester

6.1.25  **Product Subclass 25: Allenylboranes** ...................................... 667
Synthesis of Product Subclass 25 ........................................ 668

6.1.25.1  Method 1:  Borylation of Organometallic Compounds .................... 668
6.1.25.2  Method 2:  From Propargyl Chlorides or Acetates and Trialkylboranes ... 670
6.1.25.3  Method 3:  Hydroboration of Enynes ................................. 670

Applications of Product Subclass 25 in Organic Synthesis ............. 671

6.1.25.4  Method 4:  Reaction with Carbonyl Compounds ....................... 671
6.1.25.5  Method 5:  Reaction with Proti Acids .................................. 673
6.1.25.5.1  Variation 1:  Reaction with Water .................................... 674
6.1.25.5.2  Variation 2:  Deborylation by Acetic Acid ........................... 674

6.1.26  **Product Subclass 26: Aryl- and Hetarylboranes**
N. Miyaura

6.1.26  **Product Subclass 26: Aryl- and Hetarylboranes** ....................... 677
Synthesis of Product Subclass 26 ........................................ 677

6.1.26.1  Method 1:  Transmetalation Reactions .................................. 677
6.1.26.1.1  Variation 1:  Via Magnesium and Lithium Reagents ................... 677
6.1.26.1.2  Variation 2:  Via Tin Reagents ....................................... 684
6.1.26.2  Methods 2:  Additional Methods ....................................... 686

Applications of Product Subclass 26 in Organic Synthesis ............. 688

6.1.26.3  Method 3:  As Catalysts .................................................. 688
6.1.26.3.1  Variation 1:  For Aldol Reactions .................................... 688
6.1.26.3.2  Variation 2:  For Diels–Alder Reactions ............................... 689
6.1.26.3.3  Variation 3:  For the Rearrangement of Epoxides ..................... 690
6.1.26.3.4  Variation 4:  For the Reduction of Carbonyl Compounds ............. 690

6.1.28 Product Subclass 28: Vinylboranes
M. Vaultier and G. Alcaraz

6.1.28 Product Subclass 28: Vinylboranes ................................. 721
Synthesis of Product Subclass 28 ........................................ 721
6.1.28.1 Method 1: Dehydrogenative Boration of Alkenes ............. 721
6.1.28.2 Method 2: By Metal–Boron Exchange .......................... 722
6.1.28.2.1 Variation 1: From Vinysilanes .............................. 722
6.1.28.2.2 Variation 2: From Vinylstannanes .......................... 723
6.1.28.2.3 Variation 3: From Vinylated Transition Metals ............. 726
6.1.28.3 Method 3: By Elimination Reactions ........................... 727
6.1.28.4 Method 4: Boron-Wittig Reaction of Di- or Tri(boryl)methides and Aldehydes .................................................. 727
6.1.28.5 Method 5: By the Peterson Alkenation ........................ 729
6.1.28.6 Method 6: From Aldehydes and 1,1-Dimetalated Methylboronic Esters ......................................................... 730
6.1.28.7 Method 7: Hydroboration of Alkynes and Allenes ............ 731
6.1.28.7.1 Variation 1: With Borane .................................. 731
6.1.28.7.2 Variation 2: With Monosubstituted Boranes ............... 732
6.1.28.7.3 Variation 3: With Disubstituted Boranes .................... 734
6.1.28.7.4 Variation 4: Catalyzed Hydroboration ........................ 745
6.1.28.8 Method 8: Hydrozirconation of Alkynylboranes ............... 762
6.1.28.9 Method 9: Hydrogenation of Alkyn-1-ylboranes ............... 762
6.1.28.10 Method 10: 1,1-Organoboration of Alkynes .................. 763
6.1.28.11 Method 11: Allylboration of Alkynes .......................... 767
6.1.28.12 Method 12: Carbometalation of Alkynylboranes .............. 769
6.1.28.13 Method 13: Haloboration of Alkynes .......................... 770
6.1.28.14 Method 14: Boracyclopropenation of Alkynes ............... 771
6.1.28.15 Method 15: Catalyzed Dimetalation ........................... 772
6.1.28.15.1 Variation 1: Diboration of Alkynes, Allenes, and Methylidenecyclopropanes .................................................. 772
6.1.28.15.2 Variation 2: Sulfanylboration of Alkynes .................... 773
6.1.28.15.3 Variation 3: Silaboration of Alkynes, Allenes, and Alkylidenecyclopropanes .................................................. 780
6.1.28.15.4 Variation 4: Stannaboration and Germaboration of Alkynes and Allenes ..................................................... 789
6.1.28.15.5 Variation 5: Boraruthenation of Alkynes .................... 792
6.1.28.16 Method 16: By Rearrangement of Trialkyl(alkynyl)borates .... 793
6.1.28.17 Method 17: By Diels–Alder Reactions of Dienylboronates and Alkynylboranes .................................................. 795
6.1.28.17.1 Variation 1: From Alkynylboronates and Dienes ............ 795
6.1.28.17.2 Variation 2: From Dienylboronates and Dienophiles ....... 796
6.1.28.18 Method 18: Radical Additions to Alkynylboranes .......... 798
6.1.28.19 Method 19: Photolytic Rearrangement of Alkynylboronates .... 799
6.1.28.20 Method 20: By the Isomerization of Allylboranes .......... 800
Applications of Product Subclass 28 in Organic Synthesis ............ 801
6.1.28.21 Method 21: Formation of a Metal–Carbon Bond ............. 801
6.1.28.22 Method 22: Formation of a Heteroatom–Carbon Bond .... 804
6.1.28.22.1 Variation 1: Halogen–Carbon Bonds ..................... 804
6.1.28.22.2 Variation 2: Chalcogen–Carbon Bonds .................... 813
6.1.28.23 Variation 3: Nitrogen—Carbon and Oxygen—Carbon Bonds

6.1.28.24 Variation 4: Group 14 Metal—Carbon Bonds

6.1.28.23 Method 23: Formation of a C—C Bond

6.1.28.23.1 Variation 1: With α-Boron Substitution

6.1.28.23.2 Variation 2: Carbometalation Reactions

6.1.28.23.3 Variation 3: Radical Addition Reactions

6.1.28.23.4 Variation 4: Cyclopropanation Reactions

6.1.28.23.5 Variation 5: By Alkene Cross-Metathesis

6.1.28.23.6 Variation 6: Homologation Reactions

6.1.28.23.7 Variation 7: By Isomerization

6.1.28.23.8 Variation 8: Pericyclic Reactions

6.1.28.23.9 Variation 9: Cross-Coupling Reactions

6.1.28.23.10 Variation 10: 1,4-Addition Reactions

6.1.28.23.11 Variation 11: Multicomponent Reactions

6.1.28.23.12 Variation 12: Boron-Stabilized Alkenyl Carbanions

6.1.29 Product Subclass 29: α-Boryl Carbonyl Compounds

H. Abu Ali, V. M. Dembitsky, and M. Srebnik

6.1.29 Product Subclass 29: α-Boryl Carbonyl Compounds

6.1.29.1 Method 1: Synthesis of 5-Ethyl-2,3-dimethyl-2,3-dihydro-1,2,3-diaza-

6.1.29.2 Method 2: Synthesis of 5-(Dihydroxyboryl)uracil by

6.1.29.3 Method 3: Formation of α,N-Borylamides by Substitution

6.1.29.4 Method 4: Metal-Exchange Reactions of Diazo Compounds

6.1.29.5 Method 5: Reaction of Bis(methoxycarbonylmethyl)mercury with

6.1.29.6 Method 6: Hydroboration of Functionalized Alkenes

6.1.29.7 Method 7: Hydroboration of Methyl 2-(Acetamino)acrylate

6.1.29.8 Method 8: Hydroboration of Unsaturated Esters

6.1.29.9 Method 9: Hydroboration of Enehydrazones

6.1.29.10 Method 10: Aminoboration of Ketene

6.1.29.11 Method 11: Haloboration of Triple Bonds

6.1.29.12 Method 12: Ozonolysis of (Trifluoromethyl)(trifluorovinyl)boron

6.1.29.13 Method 13: Synthesis of Quinone Boronates

Applications of Product Subclass 29 in Organic Synthesis

6.1.29.14 Method 14: Synthesis of Novel Alkaloids

6.1.29.15 Method 15: α-Alkyl Ketones by the Reaction of Trialkylboranes with

α-Bromo Ketones
6.1.30 Product Subclass 30: β-Haloalkylboranes
H. Abu Ali, V. M. Dembitsky, and M. Srebnik

6.1.30 Product Subclass 30: β-Haloalkylboranes ................................. 867
Synthesis of Product Subclass 30 ............................................. 867
6.1.30.1 Method 1: Hydroboration of Haloalkenes ............................. 867
6.1.30.1.1 Variation 1: (β-Fluoroalkyl)boranes from (Perfluoroalkyl)ethenes 867
6.1.30.1.2 Variation 2: Hydroboration of Vinylic Halides ....................... 868
6.1.30.1.3 Variation 3: Hydroboration of Allylic Chlorides ..................... 869
6.1.30.1.4 Variation 4: Hydroboration of Chloroalkynes ....................... 870
6.1.30.2 Method 2: Addition of Hydrogen Halides to Vinylboronates ........ 871
6.1.30.3 Method 3: Haloboration of Unsaturated Compounds ................. 872
6.1.30.3.1 Variation 1: Haloboration of Alkenes .................................. 872
6.1.30.3.2 Variation 2: Haloboration of Alkynes .................................. 872
6.1.30.4 Method 4: Cycloaddition to Alkenylboranes .......................... 874
6.1.30.4.1 Variation 1: Cyclopropanation of a Vinylboronate ................. 874
6.1.30.4.2 Variation 2: Diels–Alder Reaction of Alkenylboranes and Alkenylboronates 874

Applications of Product Subclass 30 in Organic Synthesis .................... 874
6.1.30.5 Method 5: Halogenation of Unsaturated Boranes ....................... 874
6.1.30.5.1 Variation 1: Addition of Halogens to Alkenylboranes and Alkenylboronates 875
6.1.30.5.2 Variation 2: Zweifel’s Stereocontrolled Alkene Synthesis .......... 875
6.1.30.5.3 Variation 3: Zweifel’s Stereocontrolled Diene Synthesis ............ 877

6.1.31 Product Subclass 31: β-Alkoxyalkyl-, β-Sulfanylalkyl-, and β-Aminoalkylboranes
H. Abu Ali, V. M. Dembitsky, and M. Srebnik

6.1.31 Product Subclass 31: β-Alkoxyalkyl-, β-Sulfanylalkyl-, and β-Aminoalkylboranes ................................. 881
Synthesis of Product Subclass 31 ............................................. 881
6.1.31.1 β-Alkoxyalkylboranes ..................................................... 881
6.1.31.1.1 Method 1: Hydroboration of Enol Ethers .............................. 881
6.1.31.1.2 Method 2: Hydroboration of Allylic Ethers ......................... 883
6.1.31.1.3 Method 3: Catalytic Borylation ........................................ 883
6.1.31.1.4 Method 4: Carbon Chain Extension .................................. 884
6.1.31.2 β-Sulfanylalkylboranes ................................................... 885
6.1.31.2.1 Method 1: Hydroboration of Alkenyl Sulfides ....................... 885
6.1.31.2.2 Method 2: Addition of Thiols to Alkenylboranes ................. 885
6.1.31.2.3 Method 3: Thioboration of Ethoxyacetylene ....................... 886
6.1.31.3 β-Aminoalkylboranes ................................................... 887
6.1.31.3.1 Method 1: Hydroboration of Enamines and Allylic Amines .......... 887
6.1.31.3.2 Method 2: Carbon Chain Extension .................................. 889
Product Subclass 32: β-Silylalkyl- and β-Stannylalkylboranes

P. J. Murphy

Synthesis of Product Subclass 32

Method 1: From Methoxyborinanes and Methoxyborolanes

Method 2: Hydroboration of Alkynes

Method 3: Hydroboration of Vinysilanes

Variation 1: Using Borane Complexes

Variation 2: Using Borane–Dimethyl Sulfide Complex

Variation 3: Using Triisobutylborane

Variation 4: Using Hindered Boranes

Variation 5: Using Bis(pentafluorophenyl)borane

Variation 6: Of Divinylsilanes

Variation 7: Using (−)-Diisopinocampheylborane

Method 4: Heterocycles by Hydroboration

Variation 1: Using tert-Butylborane–Trimethylamine Complex

Variation 2: Using Borane–Dimethyl Sulfide Complex

Variation 3: Using 1,1-Dimethyl-1,4-silaborinane

Method 5: Silylation of Vinylboranes

Method 6: From a Diborirane

Method 7: From Tetrahaldoboranes(4) and Vinysilanes

Method 8: From Tetrachlorodiboranes(4) and Vinylstannanes

Method 9: Addition to Z-2-Boryl-1-stannylalkenes with Rearrangement

Method 10: Alkyl and Aryl Migration

Applications of Product Subclass 32 in Organic Synthesis

Method 11: Synthesis of Methoxyborinanes

Method 12: Synthesis of Methoxyboranes and Methylboronates via Butylsulfanylboranes

Method 13: Synthesis of Methoxyboranes by Boron Exchange

Product Subclass 33: Propargylboranes

D. E. Kaufmann and C. Burmester

Synthesis of Product Subclass 33

Method 1: By Transmetalation Reactions

Variation 1: Borylation of Lithium or Magnesium Compounds

Variation 2: Borylation of Stannanes

Method 2: By Rearrangement of “Ate” Complexes

Variation 1: By One-Carbon Homologation of Boronates

Variation 2: From α-Haloalkylboronates

Applications of Product Subclass 33 in Organic Synthesis

Method 3: Reaction with Carbonyl Compounds

Method 4: Oxidation
6.1.34  Product Subclass 34: Benzylboranes and Benzylboronates  
M. Zaidlewicz and J. Meller

6.1.34  Product Subclass 34: Benzylboranes and Benzylboronates  
Synthesis of Product Subclass 34  
.......................................................... 921

6.1.34.1  Method 1: Transmetalation  
.......................................................... 921
6.1.34.1.1  Variation 1: From Haloboranes and Benzylic Organometallics  
921
6.1.34.1.2  Variation 2: From Alkoxylboranes or Alkylboronates and  
Benzylic Organometallics  
.......................................................... 923
6.1.34.1.3  Variation 3: From Trialkyl- or Triarylboran  
and Benzylic Organometallics  
.......................................................... 924
6.1.34.2  Method 2: Redistribution  
.......................................................... 924
6.1.34.3  Method 3: Hydroboration  
.......................................................... 925
6.1.34.3.1  Variation 1: Hydroboration with Boranes and Hydroborates  
.......................................................... 925
6.1.34.3.2  Variation 2: Catalytic Hydroboration  
.......................................................... 928
6.1.34.4  Method 4: Homologation  
.......................................................... 929
6.1.34.5  Method 5: From Benzylic Halides by a Cross-Coupling Reaction  
.......................................................... 931
6.1.34.6  Method 6: Benzylic C—H Borination  
.......................................................... 932
6.1.34.7  Method 7: From Borane and Ylides  
.......................................................... 933
6.1.34.8  Method 8: From Benzylic Hydroborates  
.......................................................... 933

Applications of Product Subclass 34 in Organic Synthesis  
.......................................................... 934

6.1.34.9  Method 9: Protonolysis  
.......................................................... 934
6.1.34.10  Method 10: Oxidation  
.......................................................... 936
6.1.34.11  Method 11: Amination  
.......................................................... 937
6.1.34.12  Method 12: Haloboration  
.......................................................... 937
6.1.34.13  Method 13: Carbaboration  
.......................................................... 938
6.1.34.14  Method 14: Dichloromethyl Methyl Ether Reaction  
.......................................................... 938
6.1.34.15  Method 15: Cross-Coupling Reaction  
.......................................................... 939
6.1.34.16  Method 16: Formation of Benzylborates  
.......................................................... 940
6.1.34.16.1  Variation 1: Benzylborohydr  
dates  .......................................................... 940
6.1.34.16.2  Variation 2: Alkylarylborylborates and Benzylcyanoborates  
.......................................................... 940
6.1.34.17  Method 17: Transmetalation  
.......................................................... 941

6.1.35  Product Subclass 35: Allylboran  
Y. Bubnov

6.1.35  Product Subclass 35: Allylboran  
Synthesis of Product Subclass 35  
.......................................................... 949

6.1.35.1  Method 1: Transmetalation  
.......................................................... 949
6.1.35.1.1  Variation 1: From Allylic Tin Compounds and Boron Halides  
.......................................................... 949
6.1.35.1.2  Variation 2: From Aluminum Sesquibromides  
.......................................................... 955
6.1.35.1.3  Variation 3: From Allylmagnesium Halides  
.......................................................... 956
6.1.35.1.4  Variation 4: From Alkenes via Lithium and Potassium Derivatives  
.......................................................... 965
6.1.35.1.5  Variation 5: From Lithi  
ation of Penta-1,3- and Penta-1,4-di  
eines, Polynes,  
and Aromatic Compounds  
.......................................................... 972
6.1.35.1.6  Variation 6: From Lithiated Allylic Halides, Ethers, Sul  
ides, and Selenides  
.......................................................... 980
6.1.35.1.7 Variation 7: From Allylsilanes ........................................... 989
6.1.35.2 Method 2: By Hydroboration ........................................... 990
6.1.35.2.1 Variation 1: Via Hydroboration of Propargyl Compounds .......... 990
6.1.35.2.2 Variation 2: Hydroboration of Allenes ................................ 994
6.1.35.2.3 Variation 3: Hydroboration of 1,3-Dienes ............................. 998
6.1.35.2.4 Variation 4: Hydroboration–Cyclization of 1-En-3-ynes .......... 1000
6.1.35.3 Method 3: Haloboration of Allenes .................................... 1001
6.1.35.4 Method 4: Diboration, Silaboration, and Stannaboration of 1,3-Dienes and Allenes ........................................... 1002
6.1.35.4.1 Variation 1: Diboration of 1,3-Dienes and Allenes .................... 1002
6.1.35.4.2 Variation 2: 1,4-Silaboration of 1,3-Dienes ............................ 1006
6.1.35.4.3 Variation 3: 1,4-Stannaboration of 1,3-Dienes and Allenes ........ 1007
6.1.35.5 Method 5: From 1,3-Dienylboranes via Diels–Alder Reaction ........ 1008
6.1.35.6 Method 6: Cross-Coupling Reactions of Diborane Derivatives with Allylic Acetates ........................................... 1011
6.1.35.7 Method 7: From Trialkyl(alkynyl)borates via a 1,2-Anionotropic Rearrangement ........................................... 1012
6.1.35.8 Method 8: From Trialkylboranes and Alkynyl Derivatives of Tin and Silicon ........................................... 1014
6.1.35.9 Method 9: Homologation of Vinlyc Boranes ............................. 1016
6.1.35.10 Method 10: Vinylation of Haloalkylboron Derivatives .................. 1019
6.1.35.11 Method 11: From Triallylboranes ...................................... 1025
6.1.35.11.1 Variation 1: Redistribution Reactions with Boric and Thioboric Esters ...... 1025
6.1.35.11.2 Variation 2: Reactions with Protolytic Reagents ......................... 1026
6.1.35.11.3 Variation 3: Reactions with Carbonyl Compounds, Acids, and Esters .... 1030
6.1.35.11.4 Variation 4: Reactions with Nitriles and Imines ....................... 1031
6.1.35.11.5 Variation 5: Reaction with Cyclopropenes ............................ 1033
6.1.35.12 Method 12: From Triallylic Organoboranes and Alkynes or Allenes ...... 1035
6.1.35.12.1 Variation 1: Diallyl(penta-1,4-dienyl)boranes .......................... 1036
6.1.35.12.2 Variation 2: 1-Allylbordin Derivatives .................................. 1039
6.1.35.12.3 Variation 3: 3-Allyl-3-borabicyclo[3.3.1]non-6-enes .............. 1040
6.1.35.12.4 Variation 4: Reactions of Allylic Boranes with Allenes ............ 1041
6.1.35.13 Method 13: From Aminoboranes via [2 + 4]-Cycloaddition and Ene Reactions ........................................... 1042
6.1.35.14 Method 14: Via Ring Closure and Cross-Metathesis .................... 1043
6.1.35.15 Methods 15: Miscellaneous Methods ................................... 1046

Applications of Product Subclass 35 in Organic Synthesis ........................ 1054
6.1.35.16 Method 16: Complexation ........................................... 1054
6.1.35.17 Method 17: Allylboration of Organic Compounds Containing a Multiple Bond ........................................... 1054
6.1.35.18 Method 18: Reductive Mono- and trans-α,β-Diallylation of Aromatic Nitrogen Heterocycles with Allylic Boranes ...... 1055
6.1.35.19 Methods 19: Miscellaneous Applications ................................ 1056
6.1.36  Product Subclass 36: β-Boryl Carbonyl Compounds
D. S. Matteson

6.1.36 Synthesis of Product Subclass 36 ................................. 1073
6.1.36.1 Method 1: From α-Haloalkylboronates ................. 1073
6.1.36.1.1 Variation 1: From Ester Enolates .................. 1073
6.1.36.1.2 Variation 2: From Oxazolidinone Enolates .......... 1076
6.1.36.1.3 Variation 3: From α-Cyano Carbanions .......... 1077
6.1.36.2 Method 2: Oxidation of γ-Hydroxy Boronates ......... 1079
6.1.36.3 Methods 3: Additional Methods ....................... 1080

6.1.37  Product Subclass 37: γ-Haloalkylboranes
H. Abu Ali, V. M. Dembitsky, and M. Srebnik

6.1.37 Synthesis of Product Subclass 37 ............................ 1083
6.1.37.1 Method 1: Formation of B-(γ-Fluoroalkyl)borazine Derivatives by Substitution 1083
6.1.37.2 Method 2: Hydroboration of Allylic Halides .......... 1085
6.1.37.3 Method 3: Synthesis of 1-Boraadamantane Derivatives via Hydroboration 1087
6.1.37.4 Method 4: Synthesis of Chloronorbornane Derivatives by Hydroboration or Chloroboration 1088
6.1.37.5 Method 5: Diboration of Haloalkenes ................ 1090
6.1.37.6 Method 6: Synthesis of Allyl(halo)borabicyclononanes by Cycloaddition 1090
6.1.37.7 Method 7: Diels–Alder Reactions of Allylboronates .... 1091
6.1.37.8 Method 8: Diels–Alder Reactions of Vinylboranes .... 1091
6.1.37.9 Method 9: α-Halo-γ,γ,γ-trichloropropylborane Derivatives by Additions to Vinylboranes and Vinylboronates .............. 1092

Applications of Product Subclass 37 in Organic Synthesis .......... 1093
6.1.37.10 Method 10: Cyclopropane Ring Formation via Hydroboration of Allylic Halides 1093

6.1.38  Product Subclass 38: Trialkylboranes
M. Zaidlewicz and M. Krzeminski

6.1.38 Synthesis of Product Subclass 38 ............................ 1097
6.1.38.1 Method 1: Hydroboration of Alkenes ................ 1098
6.1.38.1.1 Variation 1: With Borane Complexes .............. 1104
6.1.38.1.2 Variation 2: With Monoalkylboranes ............. 1106
6.1.38.1.3 Variation 3: With Dialkylboranes ................. 1109
6.1.38.2 Method 2: Hydroboration of Dienes ................ 1116

Science of Synthesis Original Edition Volume 6
© Georg Thieme Verlag KG
6.1.38.21.2 Variation 2: Alkylation of $\alpha$-Diazocarbonyl Compounds, and Other Diazo Compounds ............................................. 1169
6.1.38.21.3 Variation 3: Alkylation of $\alpha$-Halogenated and $\alpha,\alpha$-Dihalogenated Nitriles .................................................. 1170
6.1.38.21.4 Variation 4: Alkylation of Other $\alpha$-Heterosubstituted Carbanions ................................................................. 1171
6.1.38.22 Method 22: Reaction of Organoborates with Electrophiles ........................................................... 1173
6.1.38.22.1 Variation 1: Alkenyltrialkylborate Rearrangements ..... 1175
6.1.38.22.2 Variation 2: Trialkyl(alkynyl)borate Rearrangements ............................................................ 1176
6.1.38.23 Method 23: Small Ring Formation .................................................. 1182
6.1.38.24 Method 24: Coupling of Alkyl Groups Attached to Boron .......................................................... 1183
6.1.38.25 Method 25: The Cross-Coupling Reaction .................................................. 1184
6.1.38.25.1 Variation 1: Cross Coupling of Trialkylboranes .................................................. 1185
6.1.38.25.2 Variation 2: Carbonylative Cross Coupling of Trialkylboranes and Acyl–Alkyl Coupling .......................... 1187
6.1.38.26 Method 26: Free-Radical Reactions .................................................. 1188
6.1.38.26.1 Variation 1: Conjugate Addition Reactions .................................................. 1188
6.1.38.26.2 Variation 2: Alkylation of 1,4-Quinones .................................................. 1190
6.1.38.26.3 Variation 3: Trialkylborane-Induced Reactions .................................................. 1191
6.1.38.26.4 Variation 4: Other Free-Radical Reactions .................................................. 1192
6.1.38.27 Method 27: 1,2-Addition to Carbonyl Compounds .................................................. 1193
6.1.38.27.1 Variation 1: Reduction of Carbonyl Compounds .................................................. 1193
6.1.38.27.2 Variation 2: The Boron-Wittig Reaction .................................................. 1195
6.1.38.27.3 Variation 3: Alkylation of Aryl Aldehyde Tosylhydrazones .................................................. 1197
6.1.38.28 Method 28: Formation of Di- and Trialkylborohydrides .................................................. 1198
6.1.38.28.1 Variation 1: Dialkylborohydrides .................................................. 1198
6.1.38.28.2 Variation 2: Trialkylborohydrides .................................................. 1199

6.1.39 Product Subclass 39: Tetraaryl- and Tetraalkylborates and Related Organometallic Compounds
D. E. Kaufmann and M. Köster

6.1.39 Synthesis of Product Subclass 39 .................................................. 1217
6.1.39.1 Method 1: Tetraarylborates and Mixed Alkarylborates from Aryl-lithiums, Grignard Reagents, or Related Compounds and Boranes .................................................. 1217
6.1.39.2 Method 2: Trialkylvinylborates from Organolithium Compounds and Boranes .................................................. 1219
6.1.39.2.1 Variation 1: Vinylation of Trialkylboranes .................................................. 1219
6.1.39.2.2 Variation 2: Alkylation of Vinylboranes .................................................. 1220
6.1.39.3 Method 3: Synthesis of Ethynyltrioorganoborates from Metalated Alkynes and Boranes .................................................. 1220
6.1.39.3.1 Variation 1: From Alkali Acetylides or Acetylenic Grignard Compounds and Boranes .................................................. 1220
6.1.39.3.2 Variation 2: From Hydrotrioorganoborates and Alkynes .................................................. 1221
6.1.39.4 Method 4: Synthesis of Tetraorganoborates from Alkylolithiums and Organoboranes .................................................. 1221

Table of Contents
XLI
6.1.39.5 Method 5: Formation of C—C Bonds ................................. 1222
6.1.39.5.1 Variation 1: Arylations and Alkylations of Halides, Pseudohalides, and Heterocycles .................................................. 1222
6.1.39.5.2 Variation 2: Synthesis of Terminal Allenes ...................... 1224
6.1.39.5.3 Variation 3: Arylations and Alkylations of Acid Halides .... 1225
6.1.39.5.4 Variation 4: Synthesis of Biaryls .............................. 1225
6.1.39.5.5 Variation 5: Synthesis of Alkyl-Substituted Aromatic Heterocycles .............. 1226
6.1.39.5.6 Variation 6: Addition/Rearrangement Reactions of Trialkyl(ethynyl)borates .................................................. 1228

6.1.39.6 Methods 6: Other Applications .................................... 1230

6.1.40 Product Subclass 40: Carboranes and Metallacarboranes
F. Teixidor and C. Viñas

6.1.40 Synthesis of Product Subclass 40 ..................................... 1242
6.1.40.1 Method 1: Synthesis of Monocarboranes ......................... 1242
6.1.40.2 Method 2: Synthesis of Dicarboranes ........................... 1246
6.1.40.3 Method 3: Synthesis of Anionic closo-Metallacarboranes ...... 1247
6.1.40.4 Method 4: Synthesis of Neutral closo-Metallacarboranes with Phosphine Ligands .................................................. 1252
6.1.40.5 Method 5: Synthesis of Forced exo-nido-Metallacarboranes with Sulfanyl- and Phosphine Ligands .................................................. 1254
6.1.40.6 Method 6: Synthesis of Neutral closo-Metallacarboranes with Allyl Ligands .................................................. 1258
6.1.40.7 Method 7: Synthesis of Neutral Charge-Compensated Sulfonium closo-Metallacarboranes .................................................. 1259

6.1.40.8 Method 8: Stabilization of Carbenium Ions ......................... 1260
6.1.40.8.1 Variation 1: Synthesis and Stabilization of the tert-Butyl Cation .................................................. 1261
6.1.40.9 Method 9: Icosahedral Borane Anions for Cation Precipitation ........................................................................ 1262
6.1.40.9.1 Variation 1: Precipitation of Speciality Cations .............. 1262
6.1.40.9.2 Variation 2: Anionic Carborane Clusters as Supramolecular Chemistry Models for Convex Surfaces .............................. 1263
6.1.40.10 Method 10: Hydrogenation of Alkenes ........................... 1263
6.1.40.10.1 Variation 1: Terminal Alkene Hydrogenation Using closo- and exo-nido-Rhodacarborane Clusters .............................. 1263
6.1.40.10.2 Variation 2: Terminal Alkenes Hydrogenation Using Forced exo-nido-Monosulfanyl- and exo-nido-Monophosphinorhodacarbo- ranes ........................................................................ 1264
6.1.40.10.3 Variation 3: Internal Alkenes by Hydrogenation Using closo- and exo-nido-MonosulfanylRhodacarboranes .............................. 1266
6.1.40.11 Method 11: Kharasch Addition to Alkenes ........................... 1267
6.1.41  **Product Subclass 41: Boron-Containing Polymers**  
D. Gabel

Introduction .............................................................. 1

7.1 Product Class 1: Aluminum Compounds

7.1.1 Product Subclass 1: Zerovalent Aluminum and Its Alloys
S. Saito

Product Subclass 1: Zerovalent Aluminum and Its Alloys ................. 5
Synthesis of Product Subclass 1 ......................................... 5

7.1.1.1 Method 1: Aluminum Treated with Mercury(II) Chloride ........ 5
7.1.1.2 Method 2: Aluminum Treated with Potassium Hydroxide in Methanol .... 7
7.1.1.3 Method 3: Aluminum as Reductant for Titanium(IV) Chloride .......... 7
7.1.1.4 Method 4: Aluminum–Lead System ............................. 8
7.1.1.5 Method 5: Aluminum–Vanadium–Chlorosilane Combination .......... 9
7.1.1.6 Method 6: Aluminum–Nickel(II) Chloride System .................... 10
7.1.1.7 Method 7: Aluminum Activated by an Aqueous Fluoride Salt .......... 10
7.1.1.8 Method 8: Aluminum–Cobalt Alloy ................................ 11
7.1.1.9 Method 9: Aluminum–Nickel Alloy ................................ 12
7.1.1.10 Method 10: Activated Aluminum by Reduction of Aluminum Halides ...... 12
7.1.1.11 Method 11: Aluminum–Tin(II) Chloride System ...................... 13

7.1.2 Product Subclass 2: Aluminum Hydrides
S. Saito

Product Subclass 2: Aluminum Hydrides .................................. 15
Synthesis of Product Subclass 2 ........................................ 16

7.1.2.1 Method 1: Lithium Aluminum Hydride from Lithium Hydride and Aluminum Trichloride ........................................ 16
7.1.2.2 Method 2: Magnesium and Calcium Aluminum Hydride from Lithium or Sodium Aluminum Hydride ............................. 17
7.1.2.3 Method 3: Lithium Aluminum Hydride with Copper Salts .......... 18
7.1.2.3.1 Variation 1: Lithium Aluminum Hydride with Copper(II) Chloride for Reductive Fission of Sulfides ............................ 18
7.1.2.3.2 Variation 2: Lithium Aluminum Hydride with Copper(I) Iodide for Conjugate Reduction of \( \alpha,\beta \)-Unsaturated Carbonyl Compounds 18
7.1.2.3.3 Variation 3: Lithium Aluminum Hydride with Copper(I) Cyanide for 1,4- Reduction of an Oxaspirene ................................. 19
7.1.2.4 Method 4: Lithium Aluminum Hydride with Titanium Compounds ...... 20
7.1.2.4.1 Variation 1: Lithium Aluminum Hydride with Titanium(III) Chloride for Reductive Self-Coupling of Carbonyl Compounds ............ 20
7.1.2.4.2 Variation 2: Lithium Aluminum Hydride with Titanium(IV) Iodide for the Preparation of α,α'-Disubstituted Acetic Acids from Ketones 20
7.1.2.4.3 Variation 3: Lithium Aluminum Hydride with Dichlorobis(η⁵-cyclopentadienyl)Titanium(IV) for the Dehydroxylation of Allylic Alcohols 21
7.1.2.4.4 Variation 4: Lithium Aluminum Hydride with Titanium(IV) Chloride for the Deoxygenation of N-Oxides ....................................... 22
7.1.2.4.5 Variation 5: Lithium Aluminum Hydride with Lithium Alkylaluminates from Alkenes ............ 22
7.1.2.5 Method 5: Lithium Aluminum Hydride with Various Metal Chloride Salts for the Catalytic Reduction of Alkynes, Alkenes, and Aryl and Alkyl Chlorides ........................................... 23
7.1.2.6 Method 6: Lithium Aluminum Hydride with Nickel Compounds for Desulfurization Reactions ......................................................... 25
7.1.2.7 Method 7: Lithium Aluminum Hydride with Zirconium Compounds ..... 26
7.1.2.7.1 Variation 1: Lithium Aluminum Hydride with Zirconium(IV) Compounds for Hydroaluminations of Alkenes 26
7.1.2.7.2 Variation 2: Use of Lithium Aluminum Hydride for the Preparation of Bis(η⁵-cyclopentadienyl)(hydrido)zirconium(IV) Complexes 26
7.1.2.8 Method 8: Lithium Aluminum Hydride with Boron Trifluoride ............. 27
7.1.2.9 Method 9: Lithium Aluminum Hydride with Iron Compounds ........... 28
7.1.2.9.1 Variation 1: Lithium Aluminum Hydride and Dodecacarbonyltriiron(0) for the Reductive Dimerization of α,β-Unsaturated Ketones 28
7.1.2.9.2 Variation 2: Lithium Aluminum Hydride and Iron(II) or Iron(III) Chloride for Dehalogenation or Detosylation 29
7.1.2.10 Method 10: Lithium Aluminum Hydride with Manganese(II) Chloride for the Alkylation of Aldehydes or Ketones 29
7.1.2.11 Method 11: Lithium Aluminum Hydride with Silica Gel for the Reduction of Oxo Esters To Give Hydroxy Esters 30
7.1.2.12 Method 12: Lithium Aluminum Hydride with Selenium Reagents 31
7.1.2.12.1 Variation 1: Lithium Aluminum Hydride and Diphenyl Diselenide for Ring Cleavage of Oxetanes and Oxolanes 31
7.1.2.12.2 Variation 2: Lithium Aluminum Hydride and Elemental Selenium 31
7.1.2.13 Method 13: Lithium Aluminum Hydride with Vanadium(III) Chloride for Dehalogenative Homocoupling of Benzylic and Allylic Halides 32
7.1.2.14 Method 14: Lithium Aluminum Hydride with Lithium Iodide for Selective Reduction of β-Alk oxy Ketones 33
7.1.2.15 Method 15: Lithium Aluminum Hydride with Cerium(III) Chloride for Reductive Dehalogeneration and Reduction of Phosphine Oxides to Phosphines 33
7.1.2.16 Method 16: Lithium Aluminum Hydride with Chromium(III) Chloride 34
7.1.2.16.1 Variation 1: Lithium Aluminum Hydride with Chromium(III) Chloride for Dehalogenative Reductions 34
7.1.2.16.2 Variation 2: Lithium Aluminum Hydride with Chromium(III) Chloride in a Grignard-Type Reaction 34
7.1.2.17 Method 17: Lithium Aluminum Hydride with Alkoxides for the Reduction of Oximes to Amines 35
Method 18: Lithium Aluminum Hydride with Phosphorus Reagents

Variation 1: Lithium Aluminum Hydride with Diphosphorus Tetraiodide

Variation 2: Lithium Aluminum Hydride with Hexamethylphosphoric Triamide for the Hydrolysis of Oximes to Ketones

Method 19: Amine– and Amide–Aluminate Complexes Prepared from Lithium Aluminum Hydride and Amines

Variation 1: Preparation of 3-Substituted Pyridines via a Lithium Tetraaminoaluminate Complex Formed from Lithium Aluminum Hydride and Pyridine

Variation 2: Reduction of Carbonyl Compounds by Lithium Tris(diethylamino)hydroaluminate Prepared from Lithium Aluminum Hydride and Diethylamine

Variation 3: Ring-Opening Aminations by Lithium Tetraaminoaluminates Prepared from Lithium Aluminum Hydride and Excess Amine

Variation 4: Lithium Aluminum Hydride–Amine Complexes

Method 20: Partial Reduction of Carboxylic Acids and Acid Chlorides to Aldehydes by Sodium Diethyl(hydro)piperidinoaluminate Prepared from Sodium Diethyldihydroaluminate and Piperidine

Method 21: Lithium Alkoxyaluminum Hydrides Prepared from Lithium Aluminum Hydride and Alcohols

Method 22: Chiral Aluminum Hydrides Formed from Chiral Alcohols or Amines and Lithium or Sodium Aluminum Hydride

Method 23: Sodium Tri-tert-butoxy(hydro)aluminate

Method 24: Lithium Tri-tert-butoxy(hydro)aluminate

Variation 1: Asymmetric Reduction of Oxo Groups by Lithium Tri-tert-butoxy(hydro)aluminate

Variation 2: Use of Lithium Tri-tert-butoxy(hydro)aluminate for the Preparation of Zirconium Complexes

Method 25: Sodium Bis(2-methoxyethoxy)aluminum Hydride

Method 26: Asymmetric Reduction of Oxo Groups to Hydroxy Groups by Alkoxyaluminum Hydrides

Variation 1: Asymmetric Reduction of α-Oxo Esters to α-Hydroxy Esters by Lithium Trialkoxy(hydro)aluminates

Variation 2: Asymmetric Reduction of Ketones to Alcohols by Lithium Trialkoxy(hydro)aluminates

Variation 3: Asymmetric Reduction of Oxo Groups by Dialkoxyaluminum Hydrides

Method 27: Diisobutylaluminum Hydride with Hexamethylphosphoric Triamide

Method 28: Diisobutylaluminum Hydride with Phosphorylacetate

Method 29: Diisobutylaluminum Hydride with Triethylamine

Method 30: Diisobutylaluminum Hydride with Tin(II) Chloride

Method 31: Diisobutylaluminum Hydride with Magnesium(II) Bromide

Method 32: Diisobutylaluminum Hydride with Zinc(II) Chloride

Method 33: Diisobutylaluminum Hydride with Nickel Compounds

Method 34: Diisobutylaluminum Hydride with Boron Trifluoride

Method 35: Diisobutylaluminum Hydride with Titanium Compounds

Method 36: Diisobutylaluminum Hydride with Lithium Azide
Method 37: Diisobutylaluminum Hydride with Alkyllithiums ........................................ 75
Method 38: Other Stereoselective Synthesis with Diisobutylaluminum Hydride ................................................................. 78
Method 39: Trivalent Aluminum Hydride–Amine and –Amide Complexes from Lithium Aluminum Hydride or Aluminum Trihydride and Amines ......................................................................................................................... 79
Method 41: Diaminoaluminum Hydride Complexes from Aluminum(0), Dihydrogen, and Amines ......................................................................................................................................................................................... 84
Method 42: Trivalent Aluminum Hydride Halides from Lithium Aluminum Hydride and Aluminum Trihalides ................................................................. 84
Method 43: Stereospecific Hydroaluminations of C=C and C=C Bonds by Various Aluminum Hydrides ................................................................. 86

Method 1: Aluminum Chloride–Titanium Reagents ................................................................. 96
Method 2: Aluminum Chloride–Zirconium Reagents ................................................................. 101
Method 3: Aminoaluminum Chlorides ......................................................................................... 105
Method 4: Aluminum Trichloride with Chloroamines ................................................................. 107
Method 5: Ethoxy- and Methoxyaluminum Chlorides ................................................................. 107
Method 6: Aluminum Chlorides with Chiral Alkoxide Ligands .................................................. 110
Method 7: Aryloxyaluminum Chlorides ....................................................................................... 111
Method 8: Aluminum Chlorides with Chiral Bialkoxide or Biaryloxide Ligands ......................... 112
Method 9: Aluminum Halides with Thiols or Sulfides ............................................................... 116
Method 10: Aluminum Trichloride with Benzeneseleninyl Chloride ........................................... 118
Method 11: Aluminum Chlorides with Alkylaluminums ............................................................ 118
Method 12: Aluminum Chlorides with Metal Salts .................................................................... 119
Method 13: Aluminum Chloride with an Azidoarene ............................................................... 122
Method 14: Aluminum Trichloride with a Resin ....................................................................... 123
Method 15: Aluminum Trichloride without Additives ............................................................... 123
Method 16: Aluminum Fluorides ............................................................................................... 125
Method 17: Aluminum Triiodide ............................................................................................... 127

Method 1: Reaction of Aluminum with Alcohols .................................................................... 131

Table of Contents
7.1.4.2 Method 2: Treatment of Alkylaluminum Compounds with Alcohols or Phenols ................................................... 132
7.1.4.2.1 Variation 1: Dialkylaluminum Carboxylates and Sulfonates 133
7.1.4.3 Method 3: Treatment of Alkylaluminum Hydrides with Alcohols or Phenols ................................................... 133
7.1.4.4 Method 4: Treatment of Lithium Aluminum Hydride with Alcohols or Phenols ................................................... 134

Applications of Product Subclass 4 in Organic Synthesis .................. 135

7.1.4.5 Method 5: Aluminum Alkoxides in Organic Synthesis .......... 135
7.1.4.5.1 Variation 1: Reduction Reactions .......................... 135
7.1.4.5.2 Variation 2: Oxidation Reactions .......................... 141
7.1.4.5.3 Variation 3: The Tishchenko Reaction .................... 142
7.1.4.5.4 Variation 4: Alkylation ...................................... 143
7.1.4.5.5 Variation 5: The aldol Reaction ............................ 145
7.1.4.5.6 Variation 6: Michael Addition ............................. 146
7.1.4.5.7 Variation 7: Transformation of Epoxides ................. 146
7.1.4.6 Method 6: Aluminum Phenoxides in Organic Synthesis ....... 147
7.1.4.6.1 Variation 1: Carbonyl Addition and Reduction .......... 147
7.1.4.6.2 Variation 2: Conjugate Addition ........................... 156
7.1.4.6.3 Variation 3: The aldol Reaction ............................ 165
7.1.4.6.4 Variation 4: The Ene Reaction ............................. 168
7.1.4.6.5 Variation 5: The Pudovik Reaction ....................... 169
7.1.4.6.6 Variation 6: Oxidative Methylation ....................... 169
7.1.4.6.7 Variation 7: α-Alkylation of Carbonyl Compounds ...... 170
7.1.4.6.8 Variation 8: The Hetero-Diels–Alder Reaction .......... 171
7.1.4.6.9 Variation 9: The Diels–Alder Reaction .................... 172
7.1.4.6.10 Variation 10: Cycloaddition .............................. 176
7.1.4.6.11 Variation 11: Discrimination of Ethers .................. 180
7.1.4.6.12 Variation 12: The Claisen Rearrangement ............... 180
7.1.4.6.13 Variation 13: Epoxide Rearrangement ................. 183
7.1.4.6.14 Variation 14: Acetal Cleavage ........................... 185
7.1.4.6.15 Variation 15: Intramolecular Prenyl Transfer Reaction 185
7.1.4.6.16 Variation 16: Asymmetric Cyclization .................. 186
7.1.4.6.17 Variation 17: Radical Reactions ......................... 187
7.1.4.6.18 Variation 18: Polymerization ............................ 190

7.1.5 Product Subclass 5: Aluminum Thiolates
T. Ooi and K. Maruoka

7.1.5 Product Subclass 5: Aluminum Thiolates ........................ 197

Synthesis of Product Subclass 5 ........................................ 197
7.1.5.1 Method 1: Treatment of Alkylaluminum Compounds with Thiols .......... 197
7.1.5.1.1 Variation 1: Bis(diylaluminum) Sulfides .................. 199
7.1.5.1.2 Variation 2: Bis(diethylaluminum) Sulfate ............... 199
7.1.5.2 Method 2: Treatment of Aluminum Hydrides with Thiols or Disulfides .... 200
Applications of Product Subclass 5 in Organic Synthesis .......................... 200

7.1.5.3 Method 3: Use of Dialkylaluminum Alkanethiolates .......................... 200
7.1.5.3.1 Variation 1: Transformation of Ethers ................................. 200
7.1.5.3.2 Variation 2: Transformation of Epoxides ............................... 201
7.1.5.3.3 Variation 3: Transformation of Acetals ................................ 202
7.1.5.3.4 Variation 4: Transformation of Aldehydes ............................. 203
7.1.5.3.5 Variation 5: Transformation of Esters .................................. 204
7.1.5.3.6 Variation 6: Transformation of α,β-Unsaturated Ketones .......... 206
7.1.5.3.7 Variation 7: Transformation of α,β-Unsaturated Nitriles .......... 207
7.1.5.3.8 Variation 8: Transformation of O-Sulfonyloximes ................. 207
7.1.5.3.9 Variation 9: Transformation of Allyl Phosphate Esters .......... 208
7.1.5.4 Method 4: Use of Bis(dialkylaluminum) Alkanedithiolates .......... 208
7.1.5.5 Method 5: Use of Bis(diethylaluminum) Sulfide ........................ 211
7.1.5.6 Method 6: Use of Bis(diethylaluminum) Sulfate ........................ 211

7.1.6

Product Subclass 6: Aluminum Selenolates

T. Ooi and K. Maruoka

7.1.6.1 Method 1: Treatment of Alkylaluminum Compounds with Selenium Metal 215
7.1.6.2 Method 2: Treatment of Aluminum Hydrides with Selenols or Diselenides 215
7.1.6.3 Method 3: Treatment of Hexamethyldisilaselenane with Dimethylaluminum Chloride or Treatment of Hexabutyldistannaselenane with Trimethylaluminum .............................................. 216

Applications of Product Subclass 6 in Organic Synthesis ............................. 217

7.1.6.4 Method 4: Use of Dimethylaluminum Methaneselenolate ................ 217
7.1.6.5 Method 5: Use of Diisobutylaluminum Benzeneselenolate and Its Derivatives .......................... 218
7.1.6.6 Method 6: Use of Bis(dimethylaluminum) Selenide ........................ 221

7.1.7

Product Subclass 7: Aluminum Amides

T. Ooi and K. Maruoka

7.1.7.1 Method 1: Treatment of Alkylaluminum Compounds with Amines ...... 225
7.1.7.1.1 Variation 1: Dialkylaluminum Hydrazides .............................. 226
7.1.7.2 Method 2: Treatment of Organoaluminum Hydrides with Amines ...... 227
7.1.7.2.1 Variation 1: By Reduction of Nitriles .................................. 228
7.1.7.2.2 Variation 2: By Reduction of Azomethines ............................ 228
7.1.7.2.3 Variation 3: By Addition to Enamines .................................. 229
7.1.7.3 Method 3: Treatment of Aluminum Halides with Metal Amides ...... 229
Applications of Product Subclass 7 in Organic Synthesis .................................. 230

7.1.7.4 Method 4: Transformation of Esters ......................................................... 230
7.1.7.5 Method 5: Transformation of Lactones ..................................................... 232
7.1.7.6 Method 6: Transformation of Nitriles ...................................................... 234
7.1.7.7 Method 7: Transformation of Ketones ...................................................... 235
7.1.7.8 Method 8: Epoxide Cleavage with Aluminum Reagents ............................ 236
7.1.7.9 Method 9: Isomerization of Epoxides to Allylic Alcohols ............................ 238
7.1.7.10 Method 10: 1,3-Diene Synthesis ............................................................. 240
7.1.7.11 Method 11: Transformation of Hydrazones .......................................... 242
7.1.7.12 Method 12: N-Alkylation of Allylic Derivatives ...................................... 243
7.1.7.13 Method 13: Hydrometalation ................................................................. 244
7.1.7.14 Method 14: Polymerization ................................................................. 245

7.1.8 Product Subclass 8: Aluminum Oxide (Alumina)
S. Tsuboi

7.1.8 Synthesis of Product Subclass 8 ..................................................................... 247
7.1.8.1 Method 1: Preparation and Characterization of Aluminum Oxide .......... 247
7.1.8.2 Method 2: Alumina-Promoted Reactions .................................................. 248
7.1.8.2.1 Variation 1: Additions and Cyclizations ............................................... 248
7.1.8.2.2 Variation 2: Oxidation and Reduction .................................................. 248
7.1.8.2.3 Variation 3: Rearrangement and Isomerization ...................................... 252
7.1.8.2.4 Variation 4: Elimination and Addition .................................................. 254
7.1.8.2.5 Variation 5: Ring Closure and Ring Opening ....................................... 254
7.1.8.3 Method 3: Reactions Using Alumina–Potassium Fluoride as a Catalyst .... 255
7.1.8.4 Method 4: Reactions Using Alumina–Potassium Hydroxide as a Catalyst 256
7.1.8.5 Method 5: Synthesis of Halides Using Alumina and a Halogen ............... 256
7.1.8.6 Method 6: Synthesis of Organic Sulfides Using Alumina and Sodium Sulfide .................................................................................................................. 257
7.1.8.7 Method 7: Oxidation Using Alumina and Barium or Potassium Manganate 258

7.1.9 Product Subclass 9: Triorganoaluminum Compounds
M. Oishi

7.1.9 Synthesis of Product Subclass 9 ..................................................................... 261
7.1.9.1 Method 1: By Reactions of Aluminum Metal with Organic Compounds .... 262
7.1.9.1.1 Variation 1: From Alkenes and Hydrogen (Direct Synthesis) ............... 262
7.1.9.1.2 Variation 2: From Alkyl Halides and Subsequent Disproportionation or Reduction ........................................................................................................... 263
7.1.9.2 Method 2: By Reaction of Organoaluminum Compounds with Unsaturated Hydrocarbons ........................................................................................................ 264
7.1.9.2.1 Variation 1: Displacement Reactions ........................................ 264
7.1.9.2.2 Variation 2: Alumination of Carbon Brønsted Acids .................. 265
7.1.9.3 Method 3: By Reaction with Organometallic Precursors ............... 266
7.1.9.3.1 Variation 1: From Triorganoborane Compounds ..................... 266
7.1.9.3.2 Variation 2: From Organomercury Compounds ....................... 268
7.1.9.3.3 Variation 3: From Organotin Compounds .............................. 270
7.1.9.3.4 Variation 4: From Grignard and Organolithium Reagents .......... 270
7.1.9.4 Method 4: From Tetraorganoaluminates .................................. 275
7.1.9.4.1 Variation 1: From Aluminum Halides ................................. 275
7.1.9.4.2 Variation 2: From Active Metals ........................................ 276
7.1.9.5 Method 5: By Homologation with Diazooalkanes ...................... 276

Applications of Product Subclass 9 in Organic Synthesis ...................... 277
7.1.9.6 Method 6: Addition to C—C Multiple Bonds .............................. 277
7.1.9.6.1 Variation 1: Carboalumination of Alkenes and Alkynes .............. 278
7.1.9.6.2 Variation 2: Hydroalumination of Alkenes and Alkynes ............. 287
7.1.9.6.3 Variation 3: Cyclopropanation .......................................... 292
7.1.9.6.4 Variation 4: Conjugate Addition ........................................ 294
7.1.9.7 Method 7: Addition Reactions to Carbon—Heteroatom Multiple Bonds 303
7.1.9.7.1 Variation 1: Reactions with Carbonyl Substrates ..................... 303
7.1.9.7.2 Variation 2: Addition to Imines and Nitriles .......................... 314
7.1.9.8 Method 8: Cleavage and Substitution Reactions of Carbon—Heteroatom Bonds ................................................. 318
7.1.9.8.1 Variation 1: Ring Opening of Epoxides and Aziridines ............... 318
7.1.9.8.2 Variation 2: Cleavage of Acetals and Ketals .......................... 325
7.1.9.8.3 Variation 3: Noncatalyzed Coupling Reactions ....................... 328
7.1.9.8.4 Variation 4: Metal-Catalyzed Coupling Reactions ................... 334
7.1.9.9 Method 9: Rearrangement Reactions ....................................... 341
7.1.9.9.1 Variation 1: Claisen Rearrangement .................................... 341
7.1.9.9.2 Variation 2: 1,3-Rearrangement of Acetals .......................... 346
7.1.9.9.3 Variation 3: 3-Aza-Cope Rearrangement ................................ 348
7.1.9.9.4 Variation 4: Pinacol-Type Rearrangement ............................ 349
7.1.9.9.5 Variation 5: Beckmann-Type Rearrangement .......................... 352
7.1.9.10 Method 10: Polymerization Reactions .................................... 355
7.1.9.10.1 Variation 1: Alkene Polymerization: Chain Transfer, Catalytic, and Cocatalytic Behaviors ....................................... 355
7.1.9.10.2 Variation 2: Ionic Polymerization of Polar Monomers .............. 362
7.1.9.10.3 Variation 3: Radical Polymerization of Polar Monomers ........... 364
7.1.9.10.4 Variation 4: Ring-Opening Polymerization ............................ 365

7.2

Product Class 2: Gallium Compounds
M. Yamaguchi

7.2

Product Class 2: Gallium Compounds .............................................. 387
7.2.1

Product Subclass 1: Organogallium(III) Complexes Containing
Gallium—Gallium Bonds ......................................................... 387

Synthesis of Product Subclass 1 .................................................. 387
7.2.1 Method 1: From Organometallic Compounds and Gallium Halides 387
7.2.2 Method 2: Reductive Coupling of Organogallium(III) Halides 388
7.2.2 Product Subclass 2: Organogallium(III) Complexes Containing a Bond between Gallium and a Transition Metal 389
Synthesis of Product Subclass 2 389
7.2.2.1 Method 1: From Transition Metal Hydrides and Triorganogallium Complexes 390
7.2.2.2 Method 2: From Transition Metal Anions and Organogallium(III) Halides 390
7.2.3 Product Subclass 3: Organogallium(III) Halides 391
Synthesis of Product Subclass 3 391
7.2.3.1 Method 1: From Organometallic Compounds and Gallium(III) Halides 392
7.2.3.2 Method 2: Redistribution Reaction between Triorganogallium Complexes and Gallium(III) Halides 393
7.2.3.3 Method 3: From Alkyl Halides and Gallium(I) Halides 394
Applications of Product Subclass 3 in Organic Synthesis 394
7.2.3.4 Method 4: Reactions Involving Organogallium(III) Halides 394
7.2.4 Product Subclass 4: Organogallium(III) Complexes Containing a Bond between Gallium and a Group 16 Element 395
Synthesis of Product Subclass 4 395
7.2.4.1 Method 1: From Triorganogallium Complexes and Chalcogen Elements 396
7.2.4.2 Method 2: From Organic Acids and Organogallium Complexes 396
7.2.4.3 Method 3: From Metalated Organic Acids and Gallium(III) Halides 397
Applications of Product Subclass 4 in Organic Synthesis 398
7.2.4.4 Method 4: Asymmetric Reactions Employing Gallium Catalysts 398
7.2.5 Product Subclass 5: Organogallium(III) Complexes Containing a Bond between Gallium and a Group 15 Element 399
Synthesis of Product Subclass 5 399
7.2.5.1 Method 1: From Organic Acids and Organogallium Complexes 399
7.2.5.2 Method 2: From Metalated Organic Acids and Gallium(III) Halides 400
7.2.6 Product Subclass 6: Triorganogallium(III) Complexes 402
Synthesis of Product Subclass 6 402
7.2.6.1 Method 1: From Organometallic Compounds and Gallium(III) Halides 402
7.2.6.2 Method 2: Redistribution Reaction between Cyclopentadienylgallium(III) Complexes and Trialkylgallium Complexes 403
Applications of Product Subclass 6 in Organic Synthesis 404
7.2.6.3 Method 3: Reactions Involving Triorganogallium Complexes 404
7.2.7 Product Subclass 7: Organogallium(I) Complexes 404
Synthesis of Product Subclass 7 404
7.2.7.1 Method 1: From Organometallic Reagents and Gallium(I) Halides 405
7.2.7.2 Method 2: From Arenes and Gallium(I) Halides 405
Applications of Product Subclass 7 in Organic Synthesis ........................................ 406
7.2.7.3 Method 3: Reductive Coupling Using Gallium(II) Chloride .......................... 406

7.3 Product Class 3: Indium Compounds
T.-P. Loh

7.3 Product Class 3: Indium Compounds ................................................................. 413
7.3.1 Product Subclass 1: Allylic Indium Complexes ............................................... 413
Synthesis of Product Subclass 1 .............................................................................. 414
7.3.1.1 Method 1: Addition of Indium Metal to Allylic Halides .............................. 414
7.3.1.1.1 Variation 1: In Dimethylformamide ......................................................... 414
7.3.1.1.2 Variation 2: In Aqueous Media .............................................................. 415
7.3.1.1.3 Variation 3: Solvent-Free Conditions .................................................... 415
7.3.1.2 Method 2: Insertion of Indium(I) Iodide into Allyl Iodide ......................... 416
7.3.1.3 Method 3: Transmetalation from Allylic Stannanes to Indium(III) Chloride .. 416
7.3.1.3.1 Variation 1: In Organic Donor Solvents ............................................... 416
7.3.1.3.2 Variation 2: In Aqueous Media .............................................................. 417
7.3.1.4 Method 4: Diastereoselective Allylation of Carbonyl Compounds .............. 418
7.3.1.5 Method 5: Enantioselective Allylation of Aldehydes .................................. 422
7.3.1.6 Method 6: Intramolecular Addition ............................................................ 423
7.3.1.7 Method 7: Carboindation of Alkynes ......................................................... 424
7.3.1.8 Method 8: Allylation of Enamines and Imines .......................................... 426
7.3.1.9 Method 9: Formation of Vinylcyclopropanes from Ketones ....................... 427

7.3.2 Product Subclass 2: Propargylic/Allenylic Indium Complexes ......................... 427
Synthesis of Product Subclass 2 .............................................................................. 428
7.3.2.1 Method 1: Addition of Indium Metal to Alkynyl Bromides ....................... 428
7.3.2.1.1 Variation 1: In Dimethylformamide ......................................................... 428
7.3.2.1.2 Variation 2: In Aqueous Media .............................................................. 428
7.3.2.1.3 Variation 3: Insertion of Indium into Chiral Allenyl Iodides .................. 428
7.3.2.2 Method 2: Tetrakis(triphenylphosphine)palladium(0)-Catalyzed Insertion of Indium(I) Iodide into 2-Ethynylaziridines .................................................. 429

7.3.3 Product Subclass 3: Reformatsky-Type Indium Complexes .................................. 430
Synthesis of Product Subclass 3 ............................................................................. 430
7.3.3.1 Method 1: Insertion of Indium Metal into $\alpha$-Halo Esters and $\alpha$-Halo Ketones .......................................................... 430
7.3.3.1.1 Variation 1: In Organic Solvent .............................................................. 430
7.3.3.1.2 Variation 2: In Aqueous Media .............................................................. 431
7.3.3.2 Method 2: Insertion of Indium(I) Iodide into $\alpha$-Iodo Esters ................... 431
7.3.3.3 Method 3: Enantioselective Aldol-Type Addition ..................................... 432

7.3.4 Product Subclass 4: Indium Carbenoids ......................................................... 433
Synthesis of Product Subclass 4 ............................................................................. 433
7.3.4.1 Method 1: Addition of Indium Metal to Activated Dibromomethane .......... 433
7.3.5 Product Subclass 5: Alkylindium(III) Complexes

Synthesis of Product Subclass 5

7.3.5.1 Method 1: Addition of Grignard Reagents to Indium(III) Chloride

7.3.5.2 Method 2: Insertion of Indium Metal into an Alkyl Iodide

Applications of Product Subclass 5 in Organic Synthesis

7.3.5.3 Method 3: Cross Coupling with 1-Haloalkenes

7.3.5.4 Method 4: Carboindation of Alkynes with Benzylindium Sesquiodide

7.3.6 Product Subclass 6: Tetraorganoindates

Synthesis of Product Subclass 6

7.3.6.1 Method 1: Reaction of Triorganoindium Complexes with Alkali Metals

7.3.6.2 Method 2: Reaction of Triorganoindium Complexes with Organolithium Complexes

7.3.6.3 Method 3: Reaction of Triorganoindium Complexes with Organoarsenic or Organoantimony Complexes

Applications of Product Subclass 6 in Organic Synthesis

7.3.6.4 Method 4: 1,4-Addition to α,β-Unsaturated Carbonyl Compounds

7.3.6.5 Method 5: Allylation of Allylic Bromides

7.3.6.6 Method 6: Addition to Nitriles

7.3.7 Product Subclass 7: Indium(III) Chloride

Synthesis of Product Subclass 7

7.3.7.1 Method 1: From Indium Metal

7.3.7.2 Method 2: From Indium(III) Oxide

Applications of Product Subclass 7 in Organic Synthesis

7.3.7.3 Method 3: Prins-Type Cyclization Reactions

7.3.7.4 Method 4: Michael Addition of Amines

7.3.7.5 Method 5: Direct Aldol Reaction of Glyoxylic Acid

7.3.7.6 Method 6: Mukaiyama Aldol Reaction

7.3.7.7 Method 7: Diels–Alder Reaction

7.3.7.8 Method 8: Imino-Diels–Alder Reaction

7.3.7.9 Method 9: Ionic Diels–Alder Reaction

7.3.7.10 Method 10: One-Pot Mannich-Type Reaction in Water

7.3.7.11 Method 11: Rearrangement of Epoxides

7.3.7.12 Method 12: Epoxide Ring Opening with Aromatic Amines

7.3.7.13 Method 13: Reductive Friedel–Crafts Alkylation

7.3.7.14 Method 14: Deoxygenative Allylation of Aryl Ketones

7.3.7.15 Method 15: Reactions of α-Diazocarbonyl Compounds

7.3.7.16 Method 16: Three-Component Reaction of Alkenes, Glyoxylates, and Amines

7.3.8 Product Subclass 8: Indium(III) Trifluoromethanesulfonate

Applications of Product Subclass 8 in Organic Synthesis

7.3.8.1 Method 1: 2-Oxonia [3,3]-Sigmatropic Rearrangement–Cyclization

7.3.8.2 Method 2: Acylation of Alcohols and Amines
### 7.3.8 Method 3: Hetero-Diels–Alder Reaction of Danishefsky’s Diene and Imines

447

### 7.3.8 Method 4: Reusable Catalyst for Intramolecular Diels–Alder Reactions

448

### 7.3.8 Method 5: [4 + 2] Cycloaddition of Benzopyranone Schiff Bases

448

### 7.4 Product Class 4: Thallium Compounds

I. E. Markó

### 7.4.1 Product Subclass 1: Triorganothallium(III) Complexes

Synthesis of Product Subclass 1

453

#### 7.4.1.1 Method 1: Addition of Organometallic Complexes to Diorganothallium(III) Halides

454

#### 7.4.1.1 Variation 1: Addition of Organolithium Complexes

454

#### 7.4.1.2 Variation 2: Addition of Organomagnesium Compounds

455

#### 7.4.1.2 Method 2: Addition of Organometallic Complexes to Thallium(III) Salts

456

#### 7.4.1.3 Method 3: Disproportionation of Thallium(I) Salts

456

Applications of Product Subclass 1 in Organic Synthesis

457

#### 7.4.1.4 Method 4: Ketone Synthesis

457

#### 7.4.1.5 Method 5: Alkylation Reactions

458

#### 7.4.1.5.1 Variation 1: Stoichiometric Alkylation Reactions

458

#### 7.4.1.5.2 Variation 2: Catalytic Alkylation Reactions

459

### 7.4.2 Product Subclass 2: Tetraorganothallium(III) “Ate” Complexes

Synthesis of Product Subclass 2

460

#### 7.4.2.1 Method 1: Addition of Organolithium Compounds to Triorganothallium(III) Complexes

460

#### 7.4.2.2 Method 2: Addition of Organolithium Compounds to Diorganothallium(III) Complexes

460

Applications of Product Subclass 2 in Organic Synthesis

461

#### 7.4.2.3 Method 3: Addition to Ketones

461

#### 7.4.2.4 Method 4: [1,2] Addition to Enones

461

#### 7.4.2.5 Method 5: [1,4] Addition to Enones

462

#### 7.4.2.6 Method 6: Chemoselective Reactions with Enones

462

### 7.4.3 Product Subclass 3: Diorganothallium(III) Complexes

Synthesis of Product Subclass 3

464

#### 7.4.3.1 Method 1: Addition of Organometallic Complexes to Thallium(III) Salts

464

#### 7.4.3.2 Method 2: Hydrolysis of Triorganothallium(III) Derivatives

465

Applications of Product Subclass 3 in Organic Synthesis

465

#### 7.4.3.3 Method 3: Synthesis of Triorganothallium(III) Derivatives and Their “Ate” Complexes

465

#### 7.4.3.4 Method 4: Synthetic Utility of Diarylthallium(III) Carboxylates

465
7.4.4  **Product Subclass 4: Monoorganothallium(III) Derivatives**  
Synthesis of Product Subclass 4  466
7.4.4.1 Method 1: Addition of Organometallic Complexes to Thallium(III) Salts  466
7.4.4.2 Method 2: Direct Thallation  466

Applications of Product Subclass 4 in Organic Synthesis  467
7.4.4.3 Method 3: Functionalization of Aromatic Complexes  467
7.4.4.3.1 Variation 1: By Direct Thallation–Iodination  467
7.4.4.3.2 Variation 2: By Direct Thallation–Thallium Replacement  469
7.4.4.4 Method 4: Functionalization of Alkenes  471
7.4.4.5 Method 5: Oxidative Rearrangements  471
7.4.4.6 Method 6: Oxidation of Alkynes  472
7.4.4.7 Method 7: α-Hydroxylation of Ketones  472
7.4.4.8 Method 8: Coupling of Arenes  474
7.4.4.9 Method 9: Palladium-Catalyzed Reactions  475

7.4.5  **Product Subclass 5: Organothallium(I) Complexes**  478
Synthesis of Product Subclass 5  478
7.4.5.1 Method 1: Synthesis of Cyclopentadienylthallium(I) by Meister’s Method  478

Applications of Product Subclass 5 in Organic Synthesis  479
7.4.5.2 Method 2: Addition to Aliphatic Halides  479
7.4.5.3 Method 3: Synthesis of Cyclopentadienyl-Containing Organometallic Complexes  480

7.4.6  **Product Subclass 6: Inorganic Thallium(I) Derivatives**  480
Synthesis of Product Subclass 6  480
7.4.6.1 Method 1: Ligand Exchange  480

Applications of Product Subclass 6 in Organic Synthesis  481
7.4.6.2 Method 2: Monoalkylation of β-Dicarbonyl Derivatives  481
7.4.6.3 Method 3: Additives in Palladium-Catalyzed Reactions  482

7.5  **Product Class 5: Beryllium Compounds**  
H. Yasuda

7.5  **Product Class 5: Beryllium Compounds**  487
7.5.1 **Product Subclass 1: Beryllium Hydride Derivatives**  488
Synthesis of Product Subclass 1  488
7.5.1.1 Method 1: Synthesis of Organoberyllium Hydrides  488
7.5.1.2 Method 2: Synthesis of Amino- and Alkoxyberyllium Hydrides  490
7.5.1.3 Method 3: Synthesis of Methylberyllium Borohydride  491
7.5.2 **Product Subclass 2: Beryllium Halide Derivatives**  491
Synthesis of Product Subclass 2  491
7.5.2.1 Method 1: Reaction of an Alkylberyllium with Halides  491
7.5.2.2 Method 2: Reaction of Beryllium with Alkyl Halides  492
7.5.3 Product Subclass 3: Alkoxy(alkyl)beryllium Compounds ............................. 492
Synthesis of Product Subclass 3 ................................................................. 492
7.5.3.1 Method 1: Reaction of an Alkylberyllium Compound with an Alcohol ..... 492
7.5.4 Product Subclass 4: Alkyl(alkylsulfanyl)beryllium Compounds ................ 494
Synthesis of Product Subclass 4 ................................................................. 494
7.5.4.1 Method 1: Alkyl(alkylsulfanyl)beryllium Compounds from Thiols ......... 494
7.5.5 Product Subclass 5: Alkyl(amine)beryllium Compounds .......................... 494
Synthesis of Product Subclass 5 ................................................................. 494
7.5.5.1 Method 1: Reaction of an Alkylberyllium Compound with an Amine ....... 494
7.5.6 Product Subclasses 6: Diarylberyllium Compounds .................................. 496
Synthesis of Product Subclass 6 ................................................................. 496
7.5.6.1 Method 1: Reaction of Beryllium with Diarylmercury(II) Compounds .... 496
7.5.7 Product Subclass 7: Bis(η⁵-cyclopentadienyl)beryllium and Other Unsaturated Derivatives ................................................................. 496
Synthesis of Product Subclass 7 ................................................................. 496
7.5.7.1 Method 1: Reaction of Beryllium Halides with Sodium Cyclopentadienide 496
7.5.7.2 Method 2: Reaction of Beryllium Chloride with Potassium Pentadienide 497
7.5.8 Product Subclass 8: Dialkylberyllium Compounds ..................................... 498
Synthesis of Product Subclass 8 ................................................................. 498
7.5.8.1 Method 1: Reaction of Alkylberyllium Compounds with Diarylmercury(II) Compounds ................................................................. 498
7.5.8.2 Method 2: Alkylation of Beryllium Halides .......................................... 498
7.5.9 Product Subclass 9: Anionic Beryllium Complexes .................................... 499
Synthesis of Product Subclass 9 ................................................................. 499
7.5.9.1 Method 1: Preparation of Halide or Cyanide Complexes ...................... 499
7.5.9.2 Method 2: Preparation of Alkali Metal Alkyl- and Arylberyllate Compounds ................................................................. 500
7.5.9.3 Method 3: Preparation of a Hydride Complex ...................................... 500

7.6 Product Class 6: Magnesium Compounds

7.6.1 Product Subclass 1: Magnesium Metal
J.-H. Zhang, C. C. K. Keh, and C.-J. Li

7.6.1 Product Subclass 1: Magnesium Metal .................................................. 503
Synthesis of Product Subclass 1 ................................................................. 503
7.6.1.1 Method 1: Formation of Rieke Magnesium from Magnesium Halides ..... 503
Applications of Product Subclass 1 in Organic Synthesis ............................. 504

7.6.9.8 Method 8: Addition to Alkenes ...................................................... 565
7.6.9.8.1 Variation 1: Addition to Conjugated Dienes .................................. 568
7.6.10  Product Subclass 10: Alkyl Grignard Reagents  
K. Oshima

7.6.10  Product Subclass 10: Alkyl Grignard Reagents  
Synthesis of Product Subclass 10  
Method 1: Reaction of Simple Alkyl Halides with Magnesium  
Method 2: Reaction of Dihaloalkanes with Magnesium  
Method 3: Reaction of 1-Haloalk-3-enes, 1-Haloalk-4-enes, or Their Cyclopropyl Synthetic Equivalents with Magnesium  
Method 4: Reaction of 1-Haloalk-3-ynes or Their Cyclopropyl Synthetic Equivalents with Magnesium  
Method 5: Reaction of Alkoxyalkyl Halides or Their Analogues with Magnesium  
Method 6: Reaction of (Trimethylsilyl)methyl Halides with Magnesium  
Method 7: Reaction of Alkyllithium Compounds with Magnesium Halides  
Applications of Product Subclass 10 in Organic Synthesis  
Method 8: Addition to Carbonyl Compounds  
Variation 1: Synthesis of Alcohols: Addition of Alkyl Groups to Carbonyl Moieties  
Variation 2: Reduction of Hindered Ketones  
Variation 3: Addition of [(Trimethylsilyl)methyl]magnesium Chloride or [(Isopropoxydimethylsilyl)methyl]magnesium Chloride

7.6.11  Product Subclass 11: Grignard Reagents with Transition Metals  
T. Takahashi and Y. Liu

7.6.11  Product Subclass 11: Grignard Reagents with Transition Metals  
Synthesis of Product Subclass 11  
Method 1: Grignard Reagents with Catalytic Dichlorobis(phosphine)nickel(II)  
Method 2: Coupling Reactions Using Nickel–Phosphine Catalysts  
Variation 1: Nickel-Catalyzed Coupling of Grignard Reagents with Alkyl Compounds  
Variation 2: Nickel-Catalyzed Enantioselective Coupling of Grignard Reagents with Allyl Compounds  
Variation 3: Nickel-Catalyzed Enantioselective Coupling of Grignard Reagents with Allyl Compounds
Variation 4: Nickel-Catalyzed Coupling of Grignard Reagents with Vinyl or Aryl Compounds ........................................ 600
Variation 5: Nickel-Catalyzed Enantioselective Coupling of Grignard Reagents with Aryl Compounds ................................. 602
Method 3: Coupling Reactions Using Catalytic Bis(acetyl-acetonato)nickel(II) or Nickel(II) Chloride ................................. 602
Method 4: Coupling Reactions Using Catalytic Nickel(II) Chloride and Buta-1,3-diene ............................................. 603
Method 5: Grignard Reagents with Catalytic Dichlorobis(phenyl)palladium(II) .................................................. 604
Method 6: Coupling Reactions Using Palladium Catalysts .......................... 604
Variation 1: Palladium-Catalyzed Coupling Reactions of Grignard Reagents with Allyl Compounds ............................ 604
Variation 2: Palladium-Catalyzed Coupling of Grignard Reagents with Vinyl or Aryl Compounds ............................ 604
Variation 3: Palladium-Catalyzed Enantioselective Coupling of Grignard Reagents .............................................................. 605
Method 7: Ethylmagnesium Bromide with Catalytic Titanium(IV) Isopropoxide ............................................. 605
Variation 1: Reaction of Titanacyclopropane .................................. 606
Variation 2: Alkylmagnesium Bromide with Catalytic Titanium(IV) Isopropoxide ............................................. 607
Method 8: Titanacyclopropane and Titanacyclopropene Formation by π-Ligand Exchange ........................................ 608
Method 9: Isopropylmagnesium Bromide (or Isobutylmagnesium Bromide) with Catalytic Dichlorobis(η⁵-cyclopentadienyl)titanium(IV) ............................................. 609
Method 10: Butylmagnesium Chloride with Catalytic Dichlorobis(η⁵-cyclopentadienyl)titanium(IV) ............................................. 609
Method 11: Cyclopropanation .................................................. 610
Variation 1: Enantioselective Formation of Cyclopropanol .................... 610
Variation 2: Intramolecular Formation of a Cyclopropanol ................... 611
Variation 3: Formation of Cyclopropylamine .................................. 611
Method 12: Reduction .................................................. 612
Variation 1: Reduction of Carbon—Heteroatom Double Bonds .................. 613
Variation 2: Reduction of Aryl and Vinyl Halides .......................... 613
Method 13: Hydromagnesiation of Unsaturated C—C Bonds .................. 613
Method 14: Carbomagnesiation .................................................. 614
Method 15: Ethylmagnesium Halide with Catalytic Dichlorobis(η⁵-cyclopentadienyl)zirconium(IV) ............................................. 615
Variation 1: Formation of a Zirconium–Ethene Complex .................... 615
Variation 2: Catalytic Reactions of the Zirconium–Ethene Complex ........ 616
Method 16: Butylmagnesium Halides with Catalytic Dichlorobis(η⁵-cyclopentadienyl)zirconium(IV) ............................................. 617
Method 17: Catalytic Reactions Using the Zirconium–Ethene Complex ................................................................. 617
Variation 1: Ethylmagnesiation of Alkenes (Dzhemilev Reaction) ........ 617
Variation 2: Enantioselective Ethylmagnesiation of Alkenes ................ 618
Variation 3: Ethylmagnesiation of Alkynes .................................. 618
7.6.11.17.4 Variation 4: Ethylation of Allylic Ethers ........................................ 619
7.6.11.17.5 Variation 5: Enantioselective Ethylation of Allylic Ethers ................. 620
7.6.11.17.6 Variation 6: Cyclobutene Formation .............................................. 620
7.6.11.18 Method 18: Reaction of the Zirconium–Butene Complex .................... 621
7.6.11.18.1 Variation 1: Cyclomagnesiation of Dienes .................................... 621
7.6.11.18.2 Variation 2: Enantioselective Cyclomagnesiation of Dienes .............. 622
7.6.11.18.3 Variation 3: Cycloallylation .......................................................... 622
7.6.11.18.4 Variation 4: Alkylation of Styrene ................................................... 622
7.6.11.19 Method 19: Grignard Reagents with Iron Compounds ....................... 623
7.6.11.20 Method 20: Grignard Reagents with Manganese Compounds ............... 624

7.6.12 Product Subclass 12: Magnesium Halides
M. Shimizu

7.6.12 Synthesis of Product Subclass 12 ......................................................... 629
7.6.12.1 Method 1: Synthesis of Magnesium Fluoride ..................................... 629
7.6.12.2 Method 2: Synthesis of Magnesium Chloride .................................... 630
7.6.12.3 Method 3: Synthesis of Magnesium Bromide–Diethyl Ether Complex .... 630
7.6.12.4 Method 4: Synthesis of Magnesium Bromide–Tetrahydrofuran Complex 631
7.6.12.5 Method 5: Synthesis of Magnesium Iodide–Diethyl Ether Complex and Magnesium Iodide ................................................................. 632

Applications of Product Subclass 12 in Organic Synthesis ............................ 633
7.6.12.6 Method 6: Reactions Involving Magnesium Fluoride ......................... 633
7.6.12.7 Method 7: Reactions Involving Magnesium Chloride ......................... 633
7.6.12.8 Method 8: Reactions Involving Magnesium Chloride–Sodium Iodide .... 634
7.6.12.9 Method 9: Reactions Involving Magnesium Bromide as a Lewis Acid ... 635
7.6.12.9.1 Variation 1: Magnesium Bromide Promoted Addition to Aldehydes .... 635
7.6.12.9.2 Variation 2: Rearrangement of Epoxides Using Magnesium Bromide .... 636
7.6.12.10 Method 10: Bromination Reactions Involving Magnesium Bromide .... 637
7.6.12.11 Method 11: Reactions Promoted by Magnesium Iodide .................... 638
7.6.12.11.1 Variation 1: Rearrangement of Epoxides with Magnesium Iodide ...... 638
7.6.12.11.2 Variation 2: Other Regioselective Reactions Promoted by Magnesium Iodide ................................................................. 639
7.6.12.12 Method 12: Iodination Reactions Involving Magnesium Iodide ............ 640

7.6.13 Product Subclass 13: Magnesium Oxide, Alkoxides, and Carboxylates
M. Shimizu

7.6.13 Synthesis of Product Subclass 13 ......................................................... 645
7.6.13.1 Method 1: Synthesis of Magnesium Oxide ..................................... 645
7.6.13.2 Method 2: Synthesis of Magnesium Methoxide ............................ 645
7.6.13.3 Method 3: Synthesis of Magnesium 2-Ethoxyethoxide .................... 646
7.6.13.4 Method 4: Synthesis of Diethyl (Ethoxymagnesio)malonate 646
7.6.13.5 Method 5: Synthesis of Methylmagnesium Carbonate 647
7.6.13.6 Method 6: Synthesis of Magnesium Ethyl Malonate 647
7.6.13.7 Method 7: Synthesis of Magnesium Monoperoxypthalate Hexahydrate 648
7.6.13.8 Method 8: Synthesis of Other Magnesium Carboxylates 648

Applications of Product Subclass 13 in Organic Synthesis 649
7.6.13.9 Method 9: Reactions Involving Magnesium Oxide 649
7.6.13.10 Method 10: Reactions Involving Magnesium Methoxide 650
7.6.13.11 Method 11: Reactions Involving Magnesium 2-Ethoxyethoxide 651
7.6.13.12 Method 12: Reactions Involving Diethyl (Ethoxymagnesio)malonate 652
7.6.13.13 Method 13: Reactions Involving Methylmagnesium Carbonate 653
7.6.13.14 Method 14: Reactions Involving Magnesium Ethyl Malonate 655
7.6.13.15 Method 15: Oxidations by Magnesium Monoperoxypthalate Hexahydrate 656
7.6.13.16 Method 16: Reactions Involving Other Magnesium Carboxylates 656

7.6.14 Product Subclass 14: Magnesium Amides
M. Shimizu

7.6.14 Product Subclass 14: Magnesium Amides 661
Synthesis of Product Subclass 14 661
7.6.14.2 Method 2: Synthesis of Magnesium Bis(diisopropylamide) 661
7.6.14.3 Method 3: Synthesis of Magnesium Bis(2,2,6,6-tetramethylpiperidide) 662
7.6.14.4 Method 4: Synthesis of Other Magnesium Bis(dialkylamides) 662

Applications of Product Subclass 14 in Organic Synthesis 663
7.6.14.5 Method 5: Reactions Involving Methylmagnesium N-Cyclohexyl-N-iso-propylamide 663
7.6.14.6 Method 6: Reactions Involving Magnesium Bis(diisopropylamide) 664
7.6.14.7 Method 7: Reactions Involving Magnesium Bis(2,2,6,6-tetramethylpiperidide) 664
7.6.14.8 Method 8: Reactions Involving Magnesium Bis(dialkylamides) 666

7.6.15 Product Subclass 15: Dialkyl- and Diarylmagnesiums
J.-H. Zhang, C. C. K. Keh, and C.-J. Li

7.6.15 Product Subclass 15: Dialkyl- and Diarylmagnesiums 669
Synthesis of Product Subclass 15 669
7.6.15.1 Method 1: Preparation from Grignard Reagents 669
7.6.15.1.1 Variation 1: Reaction of Grignard Reagents with Organolithium Compounds 669
7.6.15.2 Method 2: Reaction of Diorganomercury(II) Compounds with Magnesium 670

7.8.3 **Product Subclass 3: Metallocyclic Compounds of Strontium** .......... 691

Synthesis of Product Subclass 3 .................................................. 691

7.8.3.1 Method 1: From 1,3-Dienes and Activated Strontium .................. 691

Applications of Product Subclass 3 in Organic Synthesis .................... 691

7.8.3.2 Method 2: Reaction of Dichloroalkanes with Metallocyclic Compounds of Strontium ......................................................... 691

7.8.4 **Product Subclass 4: Strontium Metallocenes and Related Compounds** .... 692

Synthesis of Product Subclass 4 .................................................. 692

7.8.4.1 Method 1: From Cyclopentadiene and Strontium Metal or Strontium Halide ................................................................. 692

7.8.5 **Product Subclass 5: Miscellaneous Compounds of Strontium** ........ 692

Synthesis of Product Subclass 5 .................................................. 692

7.8.5.1 Method 1: Synthesis in Ammonia-Saturated Ethereal Solvents ........ 692

7.9 **Product Class 9: Barium Compounds**

A. Yanagisawa

7.9 **Product Class 9: Barium Compounds** ......................................... 695

7.9.1 **Product Subclass 1: Barium** .................................................. 695

Synthesis of Product Subclass 1 .................................................. 696

7.9.1.1 Method 1: Activated Barium from Barium Iodide and Lithium Biphenyldide ................................................................. 696

Applications of Product Subclass 1 in Organic Synthesis .................... 696

7.9.1.2 Method 2: Homocoupling of Allylic Halides .............................. 696

7.9.1.2.1 Variation 1: Cross Coupling of Allylic Halides with Allylic Phosphates ........................ 698

7.9.1.3 Method 3: Reactions of Conjugated Dienes with Dichloroalkanes .... 698

7.9.2 **Product Subclass 2: Barium–Metal Reagents** ............................ 699

Synthesis of Product Subclass 2 .................................................. 700

7.9.2.1 Method 1: Barium Ferrate(VI) Monohydrate from Sodium Ferrate and Barium Nitrate ................................................................. 700

7.9.2.2 Method 2: Barium Dihydroxytrioxoruthenate(VI) from Ruthenium(III) Chloride and Barium Nitrate ................................................................. 700

7.9.2.3 Method 3: Barium Manganate from Potassium Permanganate or Potassium Manganate and Barium Chloride ................................................................. 701

Applications of Product Subclass 2 in Organic Synthesis .................... 701

7.9.2.4 Method 4: Oxidation of Alcohols to Aldehydes and Ketones ........... 701

7.9.2.4.1 Variation 1: Oxidation of Aromatic Aldehydes to Aromatic Acids ................................................................. 702

7.9.2.5 Method 5: Oxidation of Diols to Lactones .................................. 703

7.9.2.6 Method 6: Oxidative Coupling of Thiols to Disulfides ................. 704

7.9.2.7 Method 7: Azo Compounds by Oxidative Coupling of Aromatic Amines ................................................................. 705

7.9.2.8 Method 8: Oxidation of Alkanes to Carbonyl Compounds ............ 705

7.9.2.9 Method 9: Dehydrogenation of 4,5-Dihydroimidazoles ............... 706
7.9.3 Product Subclass 3: Barium Hydroxide ........................................ 707

Applications of Product Subclass 3 in Organic Synthesis .................. 707

7.9.3.1 Method 1: Partial Hydrolysis of Diesters .......................... 707
7.9.3.2 Method 2: Decarboxylations of Dicarboxylic Acid Derivatives ... 708
7.9.3.2.1 Variation 1: Deacylation of β-Oxo Carbonyl Compounds .... 709
7.9.3.3 Method 3: Favorskii-Type Ring Contraction of α-Chloro-δ-lactams ...... 710
7.9.3.4 Method 4: Horner–Wadsworth–Emmons Reactions ............... 711
7.9.3.5 Method 5: Suzuki Coupling of Sterically Hindered Arylboronic Acids with Aryl Halides ..................................................... 712

7.9.4 Product Subclass 4: Allylic Barium Reagents ................................. 713

Synthesis of Product Subclass 4 ................................................... 714

7.9.4.1 Method 1: From Allyllithiums and Barium Iodide .................. 714
7.9.4.2 Method 2: From Allylic Halides and Activated Barium ........... 715

Applications of Product Subclass 4 in Organic Synthesis .................. 716

7.9.4.3 Method 3: Cross-Coupling Reactions with Allylic Halides ......... 716
7.9.4.3.1 Variation 1: With Allylic Phosphates .......................... 719
7.9.4.3.2 Variation 2: Silylation of Allylic Barium Reagents .......... 720
7.9.4.3.3 Variation 3: Reactions of Siloxyallylbarium Reagents with Alkyl Halides ............................................................... 720
7.9.4.4 Method 4: Additions to Carbonyl Compounds ..................... 722
7.9.4.4.1 Variation 1: Additions to Carbonyl Compounds in the Presence of Crown Ethers ...................................................... 723
7.9.4.4.2 Variation 2: Addition to a Carbonyl Compound in the Presence of a Borane ............................................................... 724
7.9.4.4.3 Variation 3: Addition to Carbon Dioxide ....................... 725
7.9.4.4.4 Variation 4: Additions of Siloxyallylbarium Reagents to Carbonyl Compounds ............................................................. 726
7.9.4.5 Method 5: Conjugate Additions to Enones ............................. 727
7.9.4.6 Method 6: Ring Opening of Epoxides ................................. 728
7.9.4.7 Method 7: Additions to Imines ........................................... 729

**Introduction**  
M. Majewski and V. Snieckus

## 8.1 Product Class 1: Lithium Compounds

M. Majewski and V. Snieckus

### 8.1.1 Product Subclass 1: Lithium Metal

R. K. Dieter

#### 8.1.1.1 Method 1: Synthesis of C–Li or Si–Li Groups and Their Reactions with Carbon Electrophiles

- Variation 1: Reductive Halogen–Metal Exchange  
  - 44
- Variation 2: Reductive Metalation of Carbon–Chalcogen and C–N Bonds  
  - 55
  - 65

#### 8.1.1.2 Method 2: Synthesis of the C–Li Bond Followed by Protonation, Coupling, or Elimination

- Variation 1: From Carbon–Heteroatom and Selected C–C Bonds  
  - 67
- Variation 2: Birch Reductions  
  - 83
- Variation 3: Heteroaromatic Birch Reductions  
  - 96
- Variation 4: Styrenes, 1,3-Dienes, and Alkynes  
  - 101

#### 8.1.1.3 Method 3: Synthesis of X–Li Bonds (X = O, N, S, P)

- Variation 1: Reductive Metalation of Alcohols, Amines, Thiols, Phosphines, and X–X Bonds  
  - 107
- Variation 2: Reduction of C=O and C=N Bonds  
  - 109
- Variation 3: Reduction of π-, Strained C–C, or C–X Bonds α to a Carbonyl Group  
  - 113
8.1.2 Product Subclass 2: Lithium Hydride
U. Wietelmann

Applications of Product Subclass 2 in Organic Synthesis

8.1.2.1 Method 1: Reactions as a Base
8.1.2.2 Method 2: Superactive Lithium Hydride
8.1.2.3 Method 3: Other Lithium Hydride Activation Methods

8.1.3 Product Subclass 3: Lithium Halides, Lithium Cyanide, and Related Salts
U. Wietelmann

Applications of Product Subclass 3 in Organic Synthesis

8.1.3.1 Method 1: Organic Salt Solutions as Reaction Media
8.1.3.2 Method 2: Effects on Main Group Organometallic Chemistry
8.1.3.2.1 Variation 1: Salt Effects in Enolate and Similar Chemistry
8.1.3.2.2 Variation 2: Protonation of Enolates
8.1.3.2.3 Variation 3: Lithium Salt Effects in Grignard Chemistry
8.1.3.3 Method 3: Effects on Transition-Metal Chemistry
8.1.3.3.1 Variation 1: Palladium-Catalyzed Reactions
8.1.3.3.2 Variation 2: Organocopper Reactions
8.1.3.3.3 Variation 3: Reactions of Other Transition Metals
8.1.3.4 Method 4: Addition Reactions
8.1.3.4.1 Variation 1: Cycloaddition Reactions
8.1.3.4.2 Variation 2: Addition to Carbonyl Compounds
8.1.3.4.3 Variation 3: Miscellaneous Additions
8.1.3.5 Method 5: Single-Bond Cleavage Reactions
8.1.3.6 Method 6: Condensation Reactions
8.1.3.7 Method 7: Elimination Reactions
8.1.3.8 Method 8: Hydride Reductions
8.1.3.9 Method 9: Lithium Salts as Sources for Halogens or Cyanide

8.1.4 Product Subclass 4: Lithium–Oxygen Compounds
U. Wietelmann

Applications of Product Subclass 4 in Organic Synthesis

8.1.4.1 Method 1: Reactions Using Lithium Hydroxide
8.1.4.2 Method 2: Reactions Using Lithium Carbonate
8.1.4.3 Method 3: Use of Lithium Hydroperoxide and Related Reagents
8.1.4.4 Method 4: Reactions Using Lithium Acetate
8.1.4.5 Method 5: Reactions Using Lithium Alkoxides
8.1.4.5.1 Variation 1: Elimination and Condensation Reactions
8.1.4.5.2 Variation 2: Oxidation Reactions with Copper(II) Bromide–Lithium tert-Butoxide
8.1.5 Product Subclass 5: Lithium–Sulfur, –Selenium, and –Tellurium Compounds
U. Wietelmann

8.1.5 Applications of Product Subclass 5 in Organic Synthesis

8.1.6 Product Subclass 6: Lithium Amides
J. Eames

8.1.6 Synthesis of Product Subclass 6

8.1.6.1 Method 1: Lithium Amide

8.1.6.2 Method 2: Lithium Ethylamide

8.1.6.3 Method 3: Lithium Pyrrolidine

8.1.6.4 Method 4: Lithium Diethylamide

8.1.6.5 Method 5: Lithium Dicyclohexylamide

8.1.6.6 Method 6: Lithium Diisopropylamide

8.1.6.6.1 Variation 1: By Deprotonation of Diisopropylamine by Butyllithium

8.1.6.6.2 Variation 2: By Reaction of Diisopropylamine with Lithium

8.1.6.7 Method 7: Lithium 2,2,6,6-Tetramethylpiperidide

8.1.6.8 Method 8: Lithium Isopropylcyclohexylamide

8.1.6.9 Method 9: Lithium 3-Aminopropylamide

8.1.6.10 Method 10: Lithium Hexamethyldisilazanide

8.1.6.11 Method 11: Lithium Benzyl(trimethylsilyl)amide

8.1.6.12 Method 12: Tetradentate Chiral Lithium Amides

8.1.6.13 Method 13: Lithium (R)-(1-Phenylethyl)(2,2,2-trifluoroethyl)amide

8.1.6.14 Method 14: Lithium [(3S)-3-(1-Piperidylmethyl)-1,2,3,4-tetrahydroisoquinolin-2-ide

8.1.6.15 Method 15: Lithium (S)-Benzyl(1-phenylethyl)amide

8.1.6.16 Method 16: The Dilithium Salt of 1-(Methylamino)-1-phenylpropan-2-ol

8.1.6.17 Method 17: Lithium [(1R,2S)-1-phenyl-2-pyrroloidin-1-ylpropyl]amide

8.1.6.18 Method 18: Lithium [(1S,2S)-1,2-Diphenyl-N,N'-bis[(1R)-1-phenylethyl]-ethane-1,2-diamide

8.1.6.19 Method 19: Lithium Bis[(S)-1-phenylethyl]amide

8.1.6.20 Method 20: Lithium (S)-2-(Pyrrolidin-1-ylmethyl)pyrrolidine

8.1.6.21 Method 21: Lithium [(2S,3aS,7aS)-2-(Pyrrolidin-1-ylmethyl)octahydro-1H-indol-1-ide

8.1.6.22 Method 22: Lithium (1R,2R)-N,N'-Bis(2-methoxyethyl)cyclohexane-1,2-diamide

8.1.6.23 Method 23: The Lithium Salt of (1S,3R,4R)-3-(Pyrrolidin-1-ylmethyl)-2-azabicyclo[2.2.1]heptane

8.1.6.24 Method 24: Lithium (S)-Benzyl[2-(4-methylpiperazin-1-yl)-1-phenylethyl]amide
8.1.6.25 Method 25: Lithium (S)-(Diphenylmethyl)(1-benzylpyrrolidin-3-yl)amide 203

Applications of Product Subclass 6 in Organic Synthesis .......................... 204

8.1.6.26 Method 26: Deprotonation of Carbonyl Compounds To Give Lithium Enolates .......................... 204

8.1.6.27 Method 27: Enantioselective Deprotonation of Ketones by Chiral Lithium Amides .......................... 208

8.1.6.28 Method 28: Deprotonation of Ketones by Lithium Hexamethyldisilazanide in the Synthesis of Diazot Ketones .......................... 214

8.1.6.29 Method 29: Deprotonation of Terminal Alkynes by Lithium Amide ........................................ 215

8.1.6.30 Method 30: Deprotonation of an Epoxide by Lithium Diethylamide ........................................ 216

8.1.6.31 Method 31: Desymmetrization of meso-Epoxides by Deprotonation by Lithium Amides .................. 217

8.1.6.32 Method 32: Kinetic Resolution of Racemic Epoxides by Deprotonation by Lithium Amides .................. 221

8.1.6.33 Method 33: Isomerization of an Epoxide to an Allylic Alcohol by Deprotonation by Lithium Diethylamide ........................................ 221

8.1.6.34 Method 34: Deprotonation of a Nitrile by Lithium Diisopropylamide ........................................ 222

8.1.6.35 Method 35: Carbene Formation by Deprotonation Reactions of Lithium Amides ........................ 223

8.1.6.36 Method 36: Desymmetrization of an Amide by Deprotonation Using Lithium Amides ............. 224

8.1.6.37 Method 37: Desymmetrization of a meso-Phospholane Oxide by Deprotonation by a Lithium Amide ........................................ 225

8.1.6.38 Method 38: Nucleophilic Addition Involving Lithium Amides ........................................ 227

8.1.6.38.1 Variation 1: Nucleophilic Addition Involving Lithium Diisopropylamide .......................... 227

8.1.6.38.2 Variation 2: Diastereoselective Conjugate Addition with Lithium Benzyl(1-phenylethyl)amide .......... 228

8.1.6.39 Method 39: Hydride Transfer Involving Lithium Amides ........................................ 230

8.1.6.39.1 Variation 1: Hydride Transfer by Lithium Diisopropylamide ........................................ 230

8.1.6.39.2 Variation 2: Hydride Transfer by Lithium (S)-Benzy1[2-(4-methyl-piperazin-1-yl)-1-phenylethyl]amide ........................................ 231

8.1.6.40 Method 40: Additional Applications of Chiral Lithium Amides ........................................ 231

8.1.6.40.1 Variation 1: Enantioselective Addition of Butyllithium Mediated by a Chiral Lithium Amide .......... 231

8.1.6.40.2 Variation 2: Enantioselective Protonation of a Prostereogenic Enolate ........................................ 232

8.1.7 Product Subclass 7: Alkyl lithium and Cycloalkyllithium Compounds

L. Brandsma and J. W. Zwikker

8.1.7 Product Subclass 7: Alkyl lithium and Cycloalkyllithium Compounds ........................................ 243

Synthesis of Product Subclass 7 ........................................ 244

8.1.7.1 Method 1: Reaction of Halogenides with Lithium ........................................ 244

8.1.7.2 Method 2: Halogen–Lithium Exchange ........................................ 246

8.1.7.3 Method 3: Deprotonation ........................................ 246

8.1.7.4 Methods 4: Additional Methods ........................................ 247
Applications of Product Subclass 7 in Organic Synthesis ........................................ 247

8.1.7.5 Method 5: Replacement of Lithium by Other Metals ..................................... 247
8.1.7.6 Method 6: Addition of Alkyllithium to Unsaturated Carbon Compounds
(Carbolithiation) .............................................................................................................. 248
8.1.7.6.1 Variation 1: Cyclization of Unsaturated Lithium Compounds
(Cyclocarbolithiation) ................................................................................................. 249

8.1.8 Product Subclass 8: Alkenyllithium Compounds
L. Brandsma and J. W. Zwikker

8.1.8 Product Subclass 8: Alkenyllithium Compounds .............................................. 253
Synthesis of Product Subclass 8 ...................................................................................... 253
8.1.8.1 Method 1: Deprotonation ................................................................................ 253
8.1.8.1.1 Variation 1: Deprotonation with Alkyllithium Reagents .............................. 254
8.1.8.1.2 Variation 2: Deprotonation with Superbasic Reagents ............................... 256
8.1.8.1.3 Variation 3: Deprotonation with Lithium Dialkylamides ........................... 257
8.1.8.2 Method 2: Halogen–Metal Exchange Using Alkyllithium Reagents ............ 259
8.1.8.3 Method 3: Reaction of Alkenyl Halides with Lithium .................................. 261
8.1.8.4 Method 4: Tin–Lithium Exchange .................................................................. 262
8.1.8.5 Method 5: Reaction of (Arylsulfonyl)hydrazone with Alkyllithium
Reagents (Shapiro Reaction) .................................................................................. 263
8.1.8.6 Methods 6: Additional Methods .................................................................... 264
Applications of Product Subclass 8 in Organic Synthesis ......................................... 265
8.1.8.7 Method 7: Replacement of Lithium by Other Metals .................................... 265
8.1.8.8 Method 8: Formation of C–C Bonds .............................................................. 266
8.1.8.8.1 Variation 1: Reaction with Heterocumulenes .......................................... 266
8.1.8.8.2 Variation 2: Acylation Reactions ............................................................... 266
8.1.8.8.3 Variation 3: Alkylation and Related Reactions .......................................... 267
8.1.8.8.4 Variations 4: Additional Reactions ............................................................ 268

8.1.9 Product Subclass 9: Allenyllithium Compounds
L. Brandsma and J. W. Zwikker

8.1.9 Product Subclass 9: Allenyllithium Compounds .............................................. 271
Synthesis of Product Subclass 9 ...................................................................................... 272
8.1.9.1 Method 1: Deprotonation of Allenes with Butyllithium ................................. 272
8.1.9.1.1 Variation 1: Deprotonation of Allenes with Lithium Amides ..................... 273
8.1.9.2 Method 2: Metalation of Alkynes with Butyllithium .................................... 274
8.1.9.3 Method 3: Metalation of Alkynes with Butyllithium–N,N,N',N'–
Tetramethylethylendiamine ...................................................................................... 276
8.1.9.4 Method 4: Metalation of Alkynes with Butyllithium–Potassium tert-Butoxide
Followed by Addition of Lithium Bromide ............................................................... 277
8.1.9.5 Method 5: 1,4-Addition of Lithium Compounds to Enynes .......................... 278
Applications of Product Subclass 9 in Organic Synthesis ......................................... 278

8.1.9.6 Method 6: Replacement of Lithium by Other Metals ........................ 278
8.1.9.7 Method 7: Formation of C—C Bonds ........................................ 279
8.1.9.7.1 Variation 1: Reactions with Heterocumulenes .......................... 279
8.1.9.7.2 Variation 2: Reactions with Acylating Agents .......................... 279
8.1.9.7.3 Variation 3: Reactions with Aldehydes and Ketones ................... 280
8.1.9.7.4 Variation 4: Reaction with Alkylating Agents .......................... 280
8.1.9.8 Methods 8: Additional Methods .............................................. 281

8.1.10 Product Subclass 10: Lithium Acetylides
L. Brandsma and J. W. Zwikker

8.1.10 Synthesis of Product Subclass 10 .............................................. 285
8.1.10.1 Method 1: Metalation with Lithium in Liquid Ammonia ................. 287
8.1.10.2 Method 2: Metalation with Lithium Amide in Liquid Ammonia ........ 287
8.1.10.2.1 Variation 1: Dehydrohalogenation with Lithium Amide .............. 288
8.1.10.3 Method 3: Metalation with Lithium Dialkylamides ...................... 288
8.1.10.3.1 Variation 1: Elimination Reactions with Lithium Dialkylamides ... 289
8.1.10.4 Method 4: Metalation with Alkylithium Reagents ....................... 289
8.1.10.5 Method 5: Dehalogenation with Alkylithium Reagents .................. 290
8.1.10.6 Method 6: Rearrangement of Terminally Lithiated Allenes ............. 291
8.1.10.7 Methods 7: Additional Methods .............................................. 291
8.1.10.8 Applications of Product Subclass 10 in Organic Synthesis ............. 292
8.1.10.9 Method 8: Replacement of Lithium by Other Metals ..................... 292
8.1.10.10 Method 9: Formation of C—C Bonds ....................................... 292
8.1.10.10.1 Variation 1: Reactions with Heterocumulenes ....................... 292
8.1.10.10.2 Variation 2: Acylation Reactions ........................................ 294
8.1.10.10.3 Variation 3: Reactions with Aldehydes and Ketones ................ 296
8.1.10.10.4 Variation 4: Reaction with Cyanogen Chloride ....................... 297
8.1.10.10.5 Variation 5: Reactions with Alkylating Agents ....................... 297
8.1.10.10.6 Method 10: Formation of Carbon—Heteroatom Bonds ............... 299
8.1.10.10.7 Variation 1: Reaction with Halogenating Agents ..................... 299
8.1.10.10.8 Variation 2: Sulfonylation, Sulfinylation, and Related Reactions .... 301
8.1.10.10.9 Variation 3: Silylation and Stannylation ............................ 302

8.1.11 Product Subclass 11: Lithium Alkynolates, Alkynethiolates, and Alkyneselenolates
L. Brandsma and J. W. Zwikker

8.1.11 Synthesis of Product Subclass 11 .............................................. 305
8.1.11.1 Method 1: Insertion of Elements ........................................... 305
8.1.11.2 Method 2: Lithium Alkynolates by Cyclofragmentation of Heterocycles 306
8.1.11.3 Method 3: Lithium Alkynolates from 1,2,3-Thiadiazoles ................ 307

8.1. Variation 1: By Direct Deprotonation ........................................ 387
8.1.14.2. Variation 3: By Directed ortho-Lithiation ......................... 391
8.1.14.15. Method 15: Diazinylolithium, Benzodiazinylolithium, and Other Azinylolithium Compounds ...
8.1.14.15.1. Method 1: Pyrazinylolithium Compounds ........................ 399
8.1.14.15.2. Method 2: Pyrimidinylolithium Compounds ................... 400
8.1.14.15.5. Method 5: Other Azinylolithium Compounds .................. 402
8.1.14.15.6. Method 16: Other Azolylolithium Compounds .................. 403
8.1.14.15.7. Method 17: Dibenzo-Fused Hetaryllithium Compounds ...... 403

8.1.15. Product Subclass 15: α-Lithiocarboxylic Acids and Related Lithium Compounds (Including Enolates)

J. R. Green

8.1.15.1. Method 1: Enolate Generation by Direct Deprotonation of Alkanoic Acid Derivatives ........................................ 427
8.1.15.2. Method 2: Enolate Generation by Nucleophilic Attack on Ketene Acetals ........................................ 427
8.1.15.3. Method 3: Enolate Generation by Conjugate Addition or Reduction ........................................ 427
8.1.15.4. Method 4: Enolate Generation by Reduction or Metal–Halogen Exchange of α-Substituted Derivatives ................. 430

Applications of Product Subclass 15 in Organic Synthesis .......................... 434
8.1.5 Method 5: Electrophile Incorporation: Protonation (C–Li → C–H) ...... 434
8.1.6 Method 6: Electrophile Incorporation: Alkylation (C–Li → C–C) ...... 436
8.1.6.1 Variation 1: Arylation and Vinylation .......................................... 441
8.1.7 Method 7: Electrophile Incorporation: Heteroatom Incorporation
(C–Li → C–X) ................................................................................. 444
8.1.7.1 Variation 1: Silylation ..................................................................... 444
8.1.7.2 Variation 2: Hydroxylation ........................................................... 446
8.1.7.3 Variation 3: Amination ................................................................. 448
8.1.7.4 Variation 4: Halogenation .............................................................. 450
8.1.8 Method 8: Electrophile Incorporation: Reaction with Carbonyl
Compounds and Imines (C–Li → C–C=X) .............................................. 452
8.1.9 Method 9: Electrophile Incorporation: Epoxides and Aziridines
(C–Li → C–C–C=X) .............................................................................. 458
8.1.10 Method 10: Electrophile Incorporation: Coupling Reactions;
Enolate Dimerization (C–Li → C–C–C=X) .............................................. 461
8.1.11 Method 11: Electrophile Incorporation: Reaction with Carboxy
Compounds (C–Li → C–C=C=X) ............................................................ 463
8.1.12 Method 12: Electrophile Incorporation: Michael Addition
(C–Li → C–C–C=C=X) ........................................................................... 468
8.1.13 Method 13: Enolate Rearrangements: Claisen and
Related Rearrangements .......................................................................... 473
8.1.14 Method 14: Enolate Rearrangements: [2,3]-Wittig Rearrangements of
Dienolates ............................................................................................. 477
8.1.15 Method 15: Enolate Rearrangements: Reactions with Nucleophiles:
Formation of Ketones ............................................................................. 477

8.1.16 Product Subclass 16: β-Lithiocarboxylic Acids and Related Lithium
Compounds
D. Caine

8.1.16 Product Subclass 16: β-Lithiocarboxylic Acids and Related Lithium
Compounds ................................................................. 487
Synthesis of Product Subclass 16 .......................................................... 487
8.1.16.1 Method 1: Arene-Catalyzed Reductive Lithiations of
β-Halogenated Carboxylates and 3-Arylpropenoates ......................... 487
8.1.16.2 Method 2: Tin–Lithium Exchange of β-Stannyl Carboxamides ...... 490
8.1.16.3 Method 3: Hydrogen–Lithium Exchange of Carboxylates and
Carboxamides Containing Carbanion-Stabilizing Groups at
the β-Position ...................................................................................... 491
8.1.16.3.1 Variation 1: Hydrogen–Lithium Exchange of β-Phenylsulfonylated
Ortho Esters ........................................................................................ 495
8.1.16.4 Method 4: Addition of Alkyl lithium Reagents to Lithiated
Cinnamic Acids and Cinnamyl Amides ............................................. 496
8.1.17 **Product Subclass 17: α-Lithio Aldehydes, α-Lithio Ketones, and Related Compounds**
D. Caine

8.1.17 **Product Subclass 17: α-Lithio Aldehydes, α-Lithio Ketones, and Related Compounds** ................................................ 499
8.1.17.1 Synthesis of Product Subclass 17  ........................................ 502
8.1.17.1.1 Preformed Lithium Enolates of Carbonyl Compounds ................. 502
8.1.17.1.1 Method 1: Deprotonation of Carbonyl Compounds with Lithium Dialkylamides and Other Strong Bases .......... 502
8.1.17.1.1.1 Variation 1: Regioselective Synthesis of Kinetic (Less Substituted) Enolates of α-Substituted Unsymmetrical Saturated Ketones .......... 504
8.1.17.1.1.2 Variation 2: Regioselective Synthesis of Thermodynamic Enolates of α-Substituted Unsymmetrical Saturated Ketones .......... 509
8.1.17.1.1.3 Variation 3: Kinetic and Thermodynamic Lithium Enolates of Unsymmetrical α- and α′-Dimethylene Ketones .......... 510
8.1.17.1.1.4 Variation 4: Stereoselective Synthesis of E- or Z-Isomers of Acyclic Ketone Lithium Enolates  ........................................ 512
8.1.17.1.1.5 Variation 5: Enantioselective Synthesis of Lithium Enolates by Deprotonation of Prochiral Ketones with Chiral, Nonracemic Lithium Amide Bases .......... 516
8.1.17.1.2 Variation 6: Kinetic Deprotonation of α,β-Unsaturated Ketones .......... 519
8.1.17.1.2 Method 2: Regio- and Stereoselective Formation of Lithium Enolates by Indirect Methods  ........................................ 522
8.1.17.1.2.1 Variation 1: Lithium/Liquid Ammonia Reduction of α,β-Unsaturated Ketones ........................................ 522
8.1.17.1.2.2 Variation 2: Lithium/Liquid Ammonia Reduction of Ketones with Leaving Groups at the α-Position ........................................ 524
8.1.17.1.2.3 Variation 3: Conjugate Addition of Lithium Dialkylcuprate Reagents to α,β-Unsaturated Ketones ........................................ 525
8.1.17.1.2.4 Variation 4: Generation of Lithium Enolates from Enol Derivatives of Carbonyl Compounds ........................................ 526
8.1.17.1.2.5 Variation 5: Generation of Lithium Enolates by Miscellaneous Methods ........................................ 527
8.1.17.1.3 Variation 6: Generation of Lithium Enolates by Miscellaneous Methods ........................................ 527
8.1.17.1.3 Method 3: Alkylations of Preformed Lithium Enolates ................. 527
8.1.17.1.3.1 Variation 1: Intermolecular Alkylations ........................................ 529
8.1.17.1.3.2 Variation 2: Stereochemistry of Intermolecular Alkylation of Lithium Enolates ........................................ 532
8.1.17.1.3.3 Variation 3: Intramolecular Alkylations ........................................ 537
8.1.17.1.4 Variation 4: Directed Aldol Reactions of Preformed Lithium Enolates ........................................ 538
8.1.17.1.4.1 Variation 1: Aldol Reactions of Lithium Z-Enolates ........................ 540
8.1.17.1.4.2 Variation 2: Diastereofacial Selectivity of Aldol Reactions of Chiral, Nonracemic Lithium Z-Enolates ........................................ 541
8.1.17.1.4.3 Variation 3: Aldol Reactions of Lithium E-Enolates ........................................ 542
8.1.17.1.4.4 Variation 4: Aldol Reactions of Lithium Enolates with Chiral Aldehydes ........................................ 543
8.1.17.1.4.5 Variation 5: Asymmetric Aldol Reactions Using Chiral Lithium Amide Bases ........................................ 546
8.1.17.1.4.6 Variation 6: Reactions of Preformed Lithium Enolates with Preformed Iminium Salts ........................................ 548

8.1.18 Product Subclass 18: β-Lithio Aldehydes, β-Lithio Ketones, and Related Compounds
D. Caine

8.1.18 Product Subclass 18: β-Lithio Aldehydes, β-Lithio Ketones, and Related Compounds

Synthesis of Product Subclass 18

8.1.18.1 Method 1: Halogen–Lithium Exchange

8.1.18.2 Method 2: Reductive Lithiation of Halides and Phenyl Sulfides with Lithium Arene Radical Anions

8.1.18.3 Method 3: Lithium Homoenolate Equivalents by Tellurium–Lithium Exchange

8.1.18.4 Method 4: α'- or α'-Enolate-Protected Lithium Homoenolates: Dianionic Reagents

8.1.18.4.1 Variation 1: Preparation of β-Lithio Lithium α'-Enolates

8.1.18.4.2 Variation 2: Preparation of β-Lithio Lithium α'-Enolates

8.1.18.5 Method 5: Carbolithiation of Protected α,β- Unsaturated Aldehydes

8.1.18.6 Method 6: Hydrogen–Lithium Exchange of Acetals and Ketals Containing Carbanion-Stabilizing Groups at the β-Position

8.1.19 Product Subclass 19: sp³-Hybridized α-Lithio Ethers and O-Carbamates
S. MacNeil

8.1.19 Product Subclass 19: sp³-Hybridized α-Lithio Ethers and O-Carbamates

Synthesis of Product Subclass 19

8.1.19.1 Method 1: Substitution of Hydrogen

8.1.19.1.1 Variation 1: Stereospecific Deprotonation at Chiral, Nonracemic Centers

8.1.19.1.2 Variation 2: Diastereoselective Deprotonation by Substrate Control

8.1.19.1.3 Variation 3: Enantioselective Deprotonation/Kinetic Resolution Induced by Chiral Ligands

8.1.19.1.4 Variation 4: Chiral Base Induced Deprotonation

8.1.19.2 Method 2: Substitution of Tin

8.1.19.3 Method 3: Reductive Lithiation

8.1.19.3.1 Variation 1: Reductive Lithiation of Cl—C Bonds

8.1.19.3.2 Variation 2: Reductive Lithiation of S—C Bonds

8.1.19.3.3 Variation 3: Reductive Lithiation of C—C Bonds

8.1.19.4 Method 4: Carbolithiation

8.1.19.5 Method 5: Electrophilic Quench of α-Lithio Oxygen Compounds

8.1.19.5.1 Variation 1: α-Lithio Oxygen Compounds as Homoenolate Equivalents

8.1.19.6 Method 6: Rearrangements of α-Lithio Oxygen Compounds

8.1.19.6.1 Variation 1: [1,2]-Wittig Rearrangements

8.1.19.6.2 Variation 2: [2,3]-Wittig Rearrangements

8.1.19.6.3 Variation 3: Rearrangements of α-Lithio Epoxides
8.1.20  
**Product Subclass 20: α-Lithio Sulfoxides**

R. E. Gawley, S. O’Connor, and R. Klein  

8.1.21  
**Product Subclass 21: α-Lithioamines** ...................................... 677  
Synthesis and Applications of Product Subclass 21 .......................... 682  
8.1.21.1 Synthesis and Applications of Unstabilized α-Lithioamines ......... 682  
8.1.21.1.1 Method 1: Deprotonation and Electrophilic Substitution ............. 683  
8.1.21.1.2 Method 2: Transmetalation and Electrophilic Substitution .......... 684  
8.1.21.1.2.1 Variation 1: Synthesis of a Horner–Wittig Reagent ............... 684  
8.1.21.1.2.2 Variation 2: Addition of 2-Lithio-3-methyl-1-tritylaziridine to Benzaldehyde ................................................................. 685  
8.1.21.1.2.3 Variation 3: Electrophilic Substitutions of 2-Lithio-1-methylpyrrolidine and 2-Lithio-1-methylpiperidine (Racemic) ..................... 685  
8.1.21.1.2.4 Variation 4: Electrophilic Substitution of 2-Lithiopyrrolidine and 2-Lithiopiperidine (Scalemic) ........................................... 687  
8.1.21.1.2.5 Variation 5: Transmetalation and Electrophilic Substitution of a 1-Alllyl-2-lithiopyrrolidine ............................................. 688  
8.1.21.1.2.6 Variation 6: Transmetalation and Enantioselective Electrophilic Substitution by Dynamic Thermodynamic Resolution ............. 689  
8.1.21.1.3 Method 3: Transmetalation and Sigmatropic Rearrangement ........ 690  
8.1.21.1.4 Method 4: Transmetalation and Anionic Cyclization ............... 692  
8.1.21.1.4.1 Variation 1: Synthesis of Pyrrolidines and Bicyclic Amines .......... 692  
8.1.21.1.4.2 Variation 2: Synthesis of (+)-Pseudoheliotridane via a Scalemic Organolithium ................................................................. 693  
8.1.21.1.4.3 Variation 3: Tandem Cyclization/Ring Opening .................... 694  
8.1.21.1.4.4 Variation 4: Cyclizations onto Naphthyl Dihydroxazoles .......... 694  
8.1.21.1.4.5 Variation 5: Intramolecular Michael Addition onto an Indole Ester .... 695  
8.1.21.1.5 Method 5: Reductive Lithiation ....................................... 696  
8.1.21.1.5.1 Variation 1: Reduction and Electrophilic Substitution of α-Sulfanyl Aziridines ................................................................. 696  
8.1.21.1.5.2 Variation 2: Sulfide Reduction and Anionic Cyclization .......... 697  
8.1.21.2 Synthesis and Applications of Dipole-Stabilized α-Lithioamines ..... 697
**8.1.21.2.1 Method 1:** Deprotonation and Electrophilic Substitution .......................... 699

**8.1.21.2.1.1 Variation 1:** Deprotonation of a Piperidine tert-Butylformamidine, Transmetalation to Copper, and Electrophilic Substitution .......................... 699

**8.1.21.2.1.2 Variation 2:** Deprotonation of N-tert-Butoxycarbonylpyrrolidine and Electrophilic Substitution with Tributyltin Chloride ..................................................... 700

**8.1.21.2.1.3 Variation 3:** Deprotonation of N-tert-Butoxycarbonyl-N-methylisobutylamine and Addition to Benzaldehyde ................................................................. 701

**8.1.21.2.1.4 Variation 4:** Preferential Deprotonation of N-tert-Butoxycarbonyl-N-ethylcyclopropanamine at the Cyclopropyl Methine over the Ethyl Group ..................................................... 701

**8.1.21.2.1.5 Variation 5:** Ring Contraction of 1-tert-Butoxycarbonyl-4-chloro-2-lithiopiperidine to a Cyclopropyl Intermediate, Followed by Deprotonation and Electrophilic Substitution .......................... 702

**8.1.21.2.1.6 Variation 6:** Deprotonation and Palladium-Catalyzed Arylation ........................................ 703

**8.1.21.2.1.7 Variation 7:** Asymmetric Deprotonation Using a Chiral Base, and Addition to Benzophenone ................................................................. 704

**8.1.21.2.1.8 Variation 8:** Asymmetric Deprotonation Using a Chiral Base: Transmetalation with Copper, and Vinlylation ................................................................. 705

**8.1.21.2.1.9 Variation 9:** Regio- and Stereoselective Deprotonation and Electrophilic Substitution of Imidazolidines ................................................................. 706

**8.1.21.2.2 Method 2:** Transmetalation and Electrophilic Substitution ........................................ 706

**8.1.21.2.2.1 Variation 1:** Transmetalation from Tin to Lithium and then Copper, with 1,4-Addition ................................................................. 706

**8.1.21.2.2.2 Variation 2:** Transmetalation from Tin to Lithium: Lithiation at Sites Not Available by Deprotonation ................................................................. 707

**8.1.21.2.2.3 Variation 3:** Transmetalation of Organostannanes and Asymmetric Transformation of the First Kind: Synthesis of 11C-Enriched L-Amino Acids ................................................................. 708

**8.1.21.2.2.4 Variation 4:** Transmetalation of α-Stannylcarbamates and Addition to Aldehydes; Synthon of a Primary α-Lithioamine ................................................................. 710

**8.1.21.2.3 Method 3:** Transmetalation of Stannyl Ureas with 1,2-Acyl Migration .......................... 711

**8.1.21.2.4 Method 4:** Reductive Lithiation of Aminonitriles to Tertiary α-Lithioamines and Electrophilic Substitution ................................................................. 711

**8.1.21.3 Synthesis and Applications of Mesomerically Stabilized α-Lithioamines ................................................................. 712

**8.1.21.3.1 Method 1:** Deprotonation of a Chiral Allylic Amine Followed by Stereoselective Alkylation and Hydrolysis (Aldehyde Homoenolate Synthon) .......................... 713

**8.1.21.3.2 Method 2:** Transmetalation of a Chiral Allylic Amine Followed by Stereoselective Alkylation and Hydrolysis (Ketone Homoenolate Synthon) ................................................................. 714

**8.1.21.3.3 Method 3:** Transmetalation of N-(Tributylstannyl)methanimines Followed by Cycloaddition ................................................................. 715

**8.1.21.4 Synthesis and Applications of Dipole- and Mesomerically Stabilized α-Lithioamines ................................................................. 716

**8.1.21.4.1 Method 1:** Deprotonation of Achiral Substrates with an Achiral Base .......................... 717

**8.1.21.4.1.1 Variation 1:** Preferential Deprotonation of Benzylic Protons with Spontaneous Intramolecular Cyclization ................................................................. 717
8.1.21.4.1.2 Variation 2: Dilithiation of N-tert-Butoxycarbonylbenzylamine and 1,2-Addition to Acrolein .......................................................... 717
8.1.21.4.1.3 Variation 3: Dilithiation of tert-Butyl Allylcarbamate, Transmetalation to Zinc, and Addition to Aldehydes and Ketones .................. 718
8.1.21.4.1.4 Variation 4: Deprotonation of Tetrahydroisoquinoline Pivalamides, Transmetalation to Magnesium, and Addition to Aldehyde .. 719
8.1.21.4.1.5 Variation 5: Deprotonation of N-Benzyl-N-(tert-butoxycarbonyl)-4-methoxylaniline, Addition to Imines and Spontaneous Cyclization to Imidazolidinones ........................................ 720
8.1.21.4.1.6 Variation 6: Regioselective Deprotonation and Aza-[2,3]-Wittig Rearrangement ............................................................. 721
8.1.21.4.2 Method 2: Deprotonation of Chiral Substrates .................................................. 721
8.1.21.4.2.1 Variation 1: Deprotonation and Alkylation of N-Benzylloxazolidinones .... 721
8.1.21.4.2.2 Variation 2: Deprotonation of Chiral Tetrahydroisoquinolinyl Formamidine: Asymmetric Synthesis of Isoquinoline Alkaloids 722
8.1.21.4.2.3 Variation 3: Deprotonation of Hexahydropyrrolo[3,4-b]indole Formamidines: Asymmetric Synthesis of Indole Alkaloids ⋯ ⋯ 724
8.1.21.4.2.4 Variation 4: Deprotonation of Dihydrooxazole-Substituted Tetrahydroisoquinolines: Asymmetric Synthesis of Isoquinolines and Morphinan .......................................................... 725
8.1.21.4.2.5 Variation 5: Deprotonation of Chiral Tetrahydroisoquinolines, Transmetalation to Magnesium, and Addition to Aldehydes: Asymmetric Synthesis of Phthalideisoquinoline Alkaloids ⋯ 727
8.1.21.4.2.6 Variation 6: α,α′-Dialkylation of Dihydroisoindole ........................................ 728
8.1.21.4.2.7 Variation 7: C2-Symmetric Dialkylation of Chiral Formamidinyl Binaphthoazepines ....................................................... 729
8.1.21.4.3 Method 3: Deprotonation of Achiral Substrates with Chiral Base ............... 729
8.1.21.4.3.1 Variation 1: Asymmetric Regioselective Deprotonation of Allylic and Benzyllic Positions over Alkyl Positions in tert-Butyl Carbamates ........................................................................ 730
8.1.21.4.3.2 Variation 2: Asymmetric Deprotonation of N-Benzyl-N-tert-butoxycarbonyl-4-methoxyaniline ............................................. 731
8.1.21.4.3.3 Variation 3: Asymmetric Deprotonation of N-Benzyl-N-tert-butoxycarbonyl-4-methoxyaniline and 1,4-Addition to Enones ......... 732
8.1.21.4.3.4 Variation 4: Deprotonation of N-tert-Butyloxycarbonyl-4-methoxy-N-[2E]-3-phenylprop-2-enyl]aniline and Electrophilic Substitution: Synthesis of Either R- or S-Homoenolate Synthons .................. 733
8.1.21.4.3.5 Variation 5: Electrophilic Substitution of Aldehyde Homoenolate Synthons ........................................................................... 734
8.1.21.4.3.6 Variation 6: Asymmetric Deprotonation, Transmetalation to Aluminum or Titanium, and Addition to Aldehydes .............. 735
8.1.21.4.3.7 Variation 7: Asymmetric Deprotonation and Reverse Aza-Brook Rearrangement ....................................................... 737
8.1.21.4.3.8 Variation 8: Asymmetric Deprotonation and Dearomatizing Cyclization of α-Lithio Amides ...................................................... 737
8.1.21.4.3.9 Variation 9: Asymmetric Deprotonation and Alkylation of a Tricarbonylchromium–Benzyl Imine Complex ............................ 738
8.1.21.5 Synthesis and Applications of Dipole- and Heteroatom-Stabilized α-Lithioamines ........................................................... 739
8.1.21.5.1 Method 1: Oxygen- and tert-Butoxycarbonyl-Stabilized α-Lithioamines 739
8.1.21.5.2 Method 2: Sulfur- and Dipole-Stabilized α-Lithioamines 740
8.1.21.5.2.1 Variation 1: Asymmetric Corey–Seebach Synthesis of α-Hydroxyaldehydes Using a Diphenylvalinol-Derived Oxazolidinone 740
8.1.21.5.2.2 Variation 2: Asymmetric Corey–Seebach Synthesis of α-Hydroxyaldehydes Using a Camphor-Derived Oxazolidinone 741
8.1.21.5.3 Method 3: Nitrogen- and tert-Butoxycarbonyl-Stabilized α-Lithioamines 742
8.1.21.6 Synthesis and Applications of Non-Enolate Nitrogen Ylides .................. 743
8.1.21.6.1 Method 1: Lewis Acid Activation of an Amine ............................ 743
8.1.21.6.1.1 Variation 1: Activation of an α-Aminoorganostannane with Boron Trifluoride ........................................ 744
8.1.21.6.1.2 Variation 2: Activation of a Cyclic Amine with Boron Trifluoride, Deprotonation, Double Transmetalation, and Alkylation 744
8.1.21.6.1.3 Variation 3: Activation of an Aziridine with Borane, Deprotonation and Alkylation ................................. 745
8.1.21.6.1.4 Variation 4: Activation of a Benzylc Amine or Tetrahydroisoquinoline with Borane, Deprotonation and Alkylation 746
8.1.21.6.1.5 Variation 5: Activation of Dihydrosindole with Borane: Group-Selective Deprotonation with a Chiral Base, and Electrophilic Substitution ............................................. 748
8.1.21.6.2 Method 2: Sigmatropic Rearrangements ..................................... 750
8.1.21.6.2.1 Variation 1: Transmetalation of a 2-Tributylstannylammonium Ion and [2,3]-Rearrangement 750
8.1.21.6.2.2 Variation 2: Activation and [2,3]-Rearrangement of N-Allyltetrahydroisoquinoline .......................... 751

8.1.22 Product Subclass 22: Lithium Nitronates
N. Ono

8.1.22 Product Subclass 22: Lithium Nitronates ........................................ 759
Synthesis of Product Subclass 22 ..................................................... 759
8.1.22.1 Method 1: Deprotonation of Nitroalkanes ................................. 759
8.1.22.2 Method 2: Double Deprotonation of Nitroalkanes ...................... 760
8.1.22.3 Method 3: Addition of Nucleophiles to Nitroalkenes ................. 760
Applications of Product Subclass 22 in Organic Synthesis ................. 762
8.1.22.4 Method 4: Nitroaldol Reaction ............................................ 762
8.1.22.4.1 Variation 1: Nitro-Mannich Reaction .................................. 762
8.1.22.4.2 Variation 2: Michael Addition ........................................ 765
8.1.22.5 Method 5: Acylation of Nitroalkanes .................................... 765
8.1.22.6 Method 6: Alkylation of Nitroalkanes .................................. 766
8.1.22.6.1 Variation 1: Alkylation via Radicals .................................. 767
8.1.22.6.2 Variation 2: Transition-Metal-Catalyzed Alkylation of Nitroalkanes .......................... 769
8.1.22.6.3 Variation 3: Arylation of Nitro Compounds ......................... 770
8.1.22.7 Method 7: Introduction of Heteroatoms into Nitroalkanes ......... 771
8.1.23 Product Subclass 23: \(\gamma\)-Lithio Ethers and Related Compounds
D. Caine

8.1.24 Product Subclass 24: Carbamoyllithium and Trihalomethylolithium Compounds
C. Metallinos

8.1.23 Synthesis of Product Subclass 23 ........................................ 775
8.1.23.1 Method 1: Reductive Lithiation of Halide and Phenyl Sulfide Derivatives Containing Neutral (Uncharged) Alkoxy and Other Substituents at the \(\gamma\)-Position .................................................... 776
8.1.23.1.1 Variation 1: Reductive Lithiation with Lithium Metal .............. 776
8.1.23.1.2 Variation 2: Reductive Lithiations with Lithium Arene Radical Anions ................. 777
8.1.23.2 Method 2: Reductive Lithiation of \(\gamma\)-Oxido and Related \(\gamma\)-Amido Halides and Phenyl Sulfides ........................................ 779
8.1.23.2.1 Variation 1: Reductive Lithiation with Lithium Metal .......... 780
8.1.23.2.2 Variation 2: Reductive Lithiation with Lithium Arene Radical Anions ................. 781
8.1.23.3 Method 3: Halogen–Lithium Exchange .................................. 783
8.1.23.4 Method 4: Metal–Lithium Exchange ...................................... 784
8.1.23.4.1 Variation 1: Selenium–Lithium Exchange .............................. 784
8.1.23.4.2 Variation 2: Tin–Lithium Exchange ...................................... 785
8.1.23.5 Method 5: Hydrogen–Lithium Exchange .................................. 787
8.1.23.6 Method 6: Reductive Cleavage of Four-Membered Heterocycles by Lithium Arene Radical Anions ........................................ 788
8.1.23.7 Method 7: Addition of Organolithium Reagents to Allylic Systems .......... 790

8.1.24 Synthesis of Product Subclass 24 ........................................ 795
8.1.24.1 Carbamoyllithium Compounds ............................................ 795
8.1.24.1.1 Method 1: Deprotonation of Formyl Hydrogen in Formamides .......... 796
8.1.24.1.1.1 Variation 1: Using Lithium Diisopropylamide ...................... 796
8.1.24.1.2 Variation 2: Using tert-Butyllithium ..................................... 796
8.1.24.1.2.1 Method 2: Reaction of Lithium Amide Bases and Carbon Monoxide ................. 797
8.1.24.1.2.2 Variation 1: Using Lithium Amide Bases and Carbon Monoxide ................. 797
8.1.24.1.2.2 Variation 2: Using Lithium Bis(carbamoyl)cuprates and Carbon Monoxide ......... 798
8.1.24.1.3 Method 3: Transmetalation of Carbamoylm mercury and Carbamo yltellurium Reagents ........................................... 799
8.1.24.1.3.1 Variation 1: Using Bis(N,N-dialkylcarbamoyl)mercury Reagents .......... 799
8.1.24.1.3.2 Variation 2: Using N,N-Dialkylcarbamoyltellurium Reagents .......... 800
8.1.24.2 Trihalomethylolithium Compounds ....................................... 800
8.1.24.2.1 Method 1: Deprotonation of Chloroform ................................ 801
8.1.25  Product Subclass 25: Tris(organosulfanyl)- and Tris(organoselanyl)-methyllithium Compounds
C. Nájera and M. Yus

8.1.25  Product Subclass 25: Tris(organosulfanyl)- and Tris(organoselanyl)-methyllithium Compounds .............................................. 805
Synthesis and Applications of Product Subclass 25 ........................ 805

8.1.25.1  Method 1: Alkylation Reactions of Tris(methylsulfanyl)- and Tris(phenylsulfanyl)methyllithium ................................. 805
8.1.25.1.1  Variation 1: Reaction with Carbonyl Compounds ......................... 807
8.1.25.1.2  Variation 2: Michael-Type Reactions ................................ 808
8.1.25.2  Method 2: Synthesis of Other Sulfur-Containing Triheterosubstituted Methyllithium Compounds ................................. 810
8.1.25.3  Method 3: Synthesis of Tris(methylselanyl)- and Tris(phenylselanyl)methyllithium ........................................... 810

8.1.26  Product Subclass 26: Bis(organosulfanyl)- and Bis(organoselanyl)methyllithium Compounds
C. Nájera and M. Yus

8.1.26  Product Subclass 26: Bis(organosulfanyl)- and Bis(organoselanyl)methyllithium Compounds .............................................. 813
Synthesis and Applications of Product Subclass 26 ........................ 813

8.1.26.1  Method 1: Synthesis of Bis(methylsulfanyl)methyllithium ............................................................. 813
8.1.26.2  Method 2: Synthesis of 1,3-Dithian-2-yllithium and Reaction with Alkyl Halides ............................................. 814
8.1.26.2.1  Variation 1: Reaction with Epoxides ........................................ 815
8.1.26.2.2  Variation 2: Reaction with Carbonyl Compounds ..................... 817
8.1.26.2.3  Variation 3: Michael-Type Reactions ................................... 818
8.1.26.2.4  Variation 4: Acylation Reactions ........................................ 819
8.1.26.3  Method 3: Synthesis and Alkylation Reactions of Bis(phenylsulfanyl)-methyllithium ........................................ 819
8.1.26.3.1  Variation 1: Reaction with Carbonyl Compounds and Their \( \alpha,\beta \)-Unsaturated Derivatives ....................................... 820
8.1.26.4  Method 4: Synthesis of Other Cyclic 2-Lithio Dithioacetals ........ 821
8.1.26.5  Method 5: Synthesis of \( \alpha \)-Lithio \( \alpha \)-Organo sulfanyl Ethers ........... 822
8.1.26.5.1  Variation 1: Methoxy(phenylsulfanyl)methyllithium ................ 822
8.1.26.5.2  Variation 2: 1,3-Oxathian-2-yllithium ................................... 823
8.1.26.6  Method 6: Synthesis of \( \alpha \)-Lithio \( \alpha \)-Arylsulfonyl Ethers ............. 825
8.1.26.6.1  Variation 1: 2-(Arylsulfonyl)oxiran-2-yllithium .................. 826
8.1.26.6.2  Variation 2: 2-(Arylsulfonyl)tetrahydropyran-2-yllithium ....... 827
8.1.26.7  Method 7: Synthesis and Alkylation Reactions of \( \alpha \)-Lithio \( \alpha \)-Organo sulfanyl and \( \alpha \)-Lithio \( \alpha \)-Organo sulfanyl Sulfoxides .......................... 828
8.1.26.7.1  Variation 1: Reaction with Carbonyl Compounds and Their \( \alpha,\beta \)-Unsaturated Derivatives ....................................... 830
8.1.26.8  Method 8: Synthesis and Reactions of \( \alpha \)-Lithio \( \alpha \)-Organo sulfanyl Sulfoxides .......................... 831
8.1.26.9  Method 9: Synthesis and Reactions of \( \alpha \)-Lithio Selenoacetals .......................... 833
### 8.1.27 Product Subclass 27: α-Lithio Vinyl Ethers

Preface ........................................................................ V

Table of Contents .......................................................... XV

Introduction
M. Majewski and V. Snieckus ................................................... 863

8.2 Product Class 2: Sodium Compounds
A. Mordini and M. Valacchi ................................................... 879

8.2.1 Product Subclass 1: Sodium Metal and Sodium–Potassium Alloy
P. Venturello and M. Barbero .................................................. 881

8.2.2 Product Subclass 2: Sodium Hydride
P. Venturello and M. Barbero .................................................. 895

8.2.3 Product Subclass 3: Sodium Halides and Sodium Cyanide
A. Paul Krapcho ................................................................. 925

8.2.4 Product Subclass 4: Sodium–Oxygen Compounds
A. Jończyk and A. Kowalkowska ........................................... 1011

8.2.5 Product Subclass 5: Sodium–Nitrogen Compounds
A. Jończyk and A. Kowalkowska ........................................... 1141

8.2.6 Product Subclass 6: Alkylsodium Compounds
A. Mordini and M. Valacchi ................................................... 1197

8.2.7 Product Subclass 7: Alkenylsodium Compounds
A. Mordini and M. Valacchi ................................................... 1205

8.2.8 Product Subclass 8: Sodium Acetylides
A. Mordini and M. Valacchi ................................................... 1209

8.2.9 Product Subclass 9: Allylsodium Compounds
A. Mordini and M. Valacchi ................................................... 1215

8.2.10 Product Subclass 10: Arylsodium Compounds and
Sodium Cyclopentadienide
A. Mordini and M. Valacchi ................................................... 1221

8.2.11 Product Subclass 11: Benzylsodium Compounds
A. Mordini and M. Valacchi ................................................... 1227
8.2.12 Product Subclass 12: 1,1-Disubstituted Organosodium Compounds
R. Łaźny ................................................................. 1231

8.2.13 Product Subclass 13: 1-Monosubstituted Organosodium Compounds
R. Łaźny ................................................................. 1241

8.2.14 Product Subclass 14: α-Sodiocarboxylic Acids and Related Sodium Compounds
E. Juaristi, O. Muñoz-Muñiz, and R. Melgar-Fernández ........................................... 1259

8.2.15 Product Subclass 15: α-Sodio Aldehydes, α-Sodio Ketones, and Related Compounds
E. Juaristi and R. Melgar-Fernández ................................................................. 1285

8.3 Product Class 3: Potassium Compounds
M. J. White ........................................................................... 1297

8.3.1 Product Subclass 1: Potassium Metal
P. Venturello and M. Barbero ...................................................... 1299

8.3.2 Product Subclass 2: Potassium Hydride
P. Venturello and M. Barbero ...................................................... 1315

8.3.3 Product Subclass 3: Potassium Halides, Potassium Cyanide, and Potassium Carbonate
J. V. Comasseto, R. L. O. R. Cunha, and C. C. Silveira ........................................... 1345

8.3.4 Product Subclass 4: Potassium Hydroxide and Potassium Alkoxides
P. Venturello and M. Barbero ...................................................... 1361

8.3.5 Product Subclass 5: Potassium–Sulfur, –Selenium, and –Tellurium Compounds
J. V. Comasseto, R. L. O. R. Cunha, and C. C. Silveira ........................................... 1387

8.3.6 Product Subclass 6: Potassium Amides and Phosphides
P. Venturello and M. Barbero ...................................................... 1399

8.3.7 Product Subclass 7: Organometallic Compounds of Potassium
A. Mordini and M. Valacchi ....................................................... 1437

8.4 Product Class 4: Rubidium and Cesium Compounds
A. Streitwieser ...................................................................... 1475

8.4.1 Product Subclass 1: Rubidium and Cesium Metals
A. Streitwieser and F. Hasanayn .................................................. 1477

8.4.2 Product Subclass 2: Rubidium and Cesium Halides
R. M. Kellogg ...................................................................... 1485

Introduction
G. Maas

Introduction .............................................. 1

9.1 Product Class 1: Oxirenes
K.-P. Zeller

9.1 Product Class 1: Oxirenes .................................. 19
9.1.1 Synthesis by Ring-Closure Reactions ......................... 21
9.1.1.1 By Formation of Two O—C Bonds .......................... 21
9.1.1.1.1 Fragments C—C and O .................................. 21
9.1.1.1.1.1 Method 1: Oxidation of Alkynes .................... 21
9.1.1.1.1.1.1 Variation 1: With Peroxy Acids ................. 21
9.1.1.1.1.1.2 Variation 2: With Dioxiranes .................. 23
9.1.1.1.1.3 Variation 3: With Atomic and Molecular Oxygen .. 25
9.1.1.1.1.4 Variation 4: Enzymatic Oxidation .................. 26
9.1.1.2 By Formation of One O—C Bond .......................... 27
9.1.1.2.1 Fragment O—C—C ....................................... 27
9.1.1.2.1.1 Method 1: Isomerization of α-Oxo Carbenes .... 27
9.1.1.2.1.2 Method 2: Isomerization of Ketene ................ 34
9.1.2 Synthesis by Ring Transformation .......................... 35
9.1.2.1 Method 1: From Larger Heterocycles by Extrusion Reactions 35
9.1.3 Aromatization .............................................. 36
9.1.3.1 Method 1: Isomerization of Oxiranylidenes ............ 36
9.1.3.2 Method 2: β-Elimination Reactions of Oxiranes .......... 37
9.1.3.3 Method 3: Cycloreversion Reactions of Fused Oxiranes .. 38

9.2 Product Class 2: Thiirenes and Their Derivatives
N. Tokitoh and W. Ando

9.2 Product Class 2: Thiirenes and Their Derivatives ................. 43
9.2.1 Product Subclass 1: Thiirenes .............................. 44
9.2.1.1 Synthesis by Ring Transformation ........................ 46
9.2.1.1.1 Method 1: From 1,2,3-Thiadiazoles .................. 46
9.2.1.1.1.1 Variation 1: Photochemical Decomposition in Matrixes 46
9.2.1.1.1.2 Variation 2: Photochemical Decomposition in Solution 47
Product Subclass 2: Thiirene 1,1-Dioxides

Synthesis by Ring-Closure Reactions

Method 1: From α,α'-Dihalo-Substituted Sulfones

Aromatization

Method 1: Dehydrohalogenation of 2-Halothiiranes

Product Subclass 3: Thiirene 1-Oxides

Synthesis by Ring-Closure Reactions

Method 1: From α,α'-Dihalo-Substituted Sulfoxides

Aromatization

Method 1: Fused Thiirene 1-Oxides from Diels–Alder Reactions of 2,3-Bis(alkylidene)thiirane 1-Oxides

Product Subclass 4: Thiirenium Ions

Synthesis by Ring-Closure Reactions

Method 1: Addition of a Sulfonium Ion to Alkynes

Method 2: From 1-Halo-2-sulfanylethenes

Product Class 3: Selenirenes

N. Tokitoh and W. Ando

Synthesis by Ring Transformation

Method 1: From 1,2,3-Selenadiazoles

Variation 1: Photochemical Decomposition in a Matrix

Variation 2: Photochemical Decomposition in Solution

Product Class 4: Tellurirenes

N. Tokitoh and W. Ando

Product Class 5: 1H-Azirines

K.-P. Zeller

Synthesis by Ring-Closure Reactions

By Formation of Two N–C Bonds

Fragments C–C and N

Method 1: Reactions of Alkynes with Nitrenes or Nitrene Equivalents

Variation 1: Generation of Nitrene (NH) from Hydrazoic Acid

Variation 2: Generation of Nitrenes from Organic Azides

Variation 3: Oxidation of N-Aminophthalimides in the Presence of Alkynes
9.5.1.2 By Formation of One N—C Bond .................................................... 70

9.5.1.2.1 Fragment N—C ................................................................. 70

9.5.1.2.1.1 Method 1: Cyclization of α-Imino Carbenes .......................... 70

9.5.1.2.1.1.1 Variation 1: Generation of α-Imino Carbenes from 1H-1,2,3-Triazoles ...... 71

9.5.1.2.1.1.2 Variation 2: Generation of α-Imino Carbenes from α-Diazo Imines .......... 74

9.5.1.2.1.1.3 Variation 3: Generation of Cyclic α-Imino Carbenes from 1H-1,2,3-
Benzotriazoles (Formation of 1H-Benzol[b]azirines) ............................. 75

9.5.1.2.1.1.4 Variation 4: Generation of Cyclic α-Imino Carbenes from Isatin and Its
Derivatives (Formation of 1H-Benzol[b]azirines) .................................... 75

9.5.1.2.1.2 Method 2: Cyclization of Vinylnitriles ................................... 77

9.5.1.3 By Formation of One C—C Bond ................................................. 79

9.5.1.3.1 Fragment C—N—C ............................................................. 79

9.5.2 Aromatization ................................................................. 80

9.5.3 Method 1: Extrusion Reactions of Larger Heterocycles ......................... 79

9.5.3.1 Method 1: Isomerization of Cyclic Isomers .................................. 80

9.5.3.2 Method 2: β-Elimination from Aziridines .................................... 80

9.5.3.3 Method 3: Cycloreversion Reactions of Fused Aziridines ....................... 81

9.6 Product Class 6: Phosphirenes

H. Heydt

9.6.1 Product Class 6: Phosphirenes ...................................................... 85

9.6.1.1 Product Subclass 1: λ3-1H-Phosphirenes .................................... 85

9.6.1.1.1 Synthesis by Substituent Modification ...................................... 86

9.6.1.1.1.1 Method 1: Reaction of λ3-1H-Phosphirenes with Benzo-1,2-quinones ... 86

9.6.1.1.1.2 Method 2: Reaction of λ3-1H-Phosphirenes with Azodicarboxylates ......... 87

9.6.1.1.1.3 Method 3: Modification of an Existing λ5-1H-Phosphirene .................. 87

9.6.1.2 Product Subclass 2: λ3-1H-Phosphirene Imides, Oxides, and Homologues

87

9.6.1.2.1 Synthesis by Ring-Closure Reactions ...................................... 88

9.6.1.2.1.1 By Formation of Two P—C Bonds .................................... 88

9.6.1.2.1.1.1 Method 1: Cycloaddition of Iminophosphines to Alkynes ................. 88

9.6.1.2.1.2 Synthesis by Substituent Modification ................................... 89

9.6.1.2.1.2.1 Method 1: Oxidative Addition to λ3-1H-Phosphirenes .................... 89

9.6.1.3 Product Subclass 3: λ3-1H-Phosphirenium Salts ............................. 90

9.6.1.3.1 Synthesis by Ring-Closure Reactions ...................................... 91

9.6.1.3.1.1 By Formation of Two P—C Bonds .................................... 91

9.6.1.3.1.1.1 Method 1: Cycloaddition of Electrophilic Phosphorus Compounds
to Alkynes .................................................................................. 91

9.6.1.3.1.1.1.1 Variation 1: Cycloaddition with Phosphenium Cations ............... 91

9.6.1.3.1.1.2 Variation 2: Cycloaddition with Halophosphines ....................... 92

9.8.3 Product Subclass 3: Λ³-Phosphetes ...................................................... 139
9.8.3.1 Synthesis by Ring-Closure Reactions ............................................. 139
9.8.3.1.1 By Formation of One P—C and One C—C Bond ..................... 139
9.8.3.1.1.1 Method 1: From Phosphaalkynes and Alkynes in the Coordination Sphere of Transition Metals .................................................. 139

9.8.4 Product Subclass 4: 1,2-Dithietes ......................................................... 140
9.8.4.1 Synthesis by Ring-Closure Reactions ............................................. 141
9.8.4.1.1 By Formation of Two S—C Bonds ........................................... 141
9.8.4.1.1.1 Method 1: From Alkynes and Sulfur .................................. 141
9.8.4.1.1.1.1 Variation 1: From Alkynes and Molten Sulfur .................. 142
9.8.4.1.1.1.2 Variation 2: From Alkynes and Sulfur in Solution ............ 142
9.8.4.1.2 By Formation of One S—S Bond .............................................. 143
9.8.4.1.2.1 Method 1: From an α-Thioxo Ketone and Lawesson’s Reagent 143
9.8.4.2 Synthesis by Ring Transformation ............................................... 143
9.8.4.2.1 Synthesis by Ring Contraction ............................................... 143
9.8.4.2.1.1 Method 1: From 1,3-Dithiol-2-ones .................................. 143
9.8.4.2.1.2 Method 2: Dimethyl 1,2-Dithiete-3,4-dicarboxylate by Oxidative Ring Contraction of a 2-Titana-1,3-dithiole ................................. 144

9.8.5 Product Subclass 5: 1,2-Diselenetes ..................................................... 144
9.8.5.1 Synthesis by Ring Transformation ............................................... 145
9.8.5.1.1 Synthesis by Ring Contraction ............................................... 145
9.8.5.1.1.1 Method 1: From a 1,3,2-Diselenazolylium Salt .................... 145

9.8.6 Product Subclass 6: 1,2,5-Azaphosphetes ........................................... 145
9.8.6.1 Synthesis by Ring Transformation ............................................... 146
9.8.6.1.1 Synthesis by Ring Contraction .............................................. 146
9.8.6.1.1.1 Method 1: From 1,2,3,4,5-Triazaphosphinines .................. 146
9.8.6.1.2 Synthesis by Ring Enlargement .......................................... 147
9.8.6.1.2.1 Method 1: From 2-[Bis(dialkylamino)phosphino]-2H-azirines 147
9.8.7 Product Subclass 7: 1\(\lambda^2\),3\(\lambda^3\)-Diphosphetes ....................... 149
9.8.7.1 Synthesis by Ring-Closure Reactions ..................................... 150
9.8.7.1.1 By Formation of Two P—C Bonds ........................................ 150
9.8.7.1.1.1 Method 1: From Alkylidenephosphoranes .............................. 150
9.8.7.1.1.2 Variation 1: From [Chloro(phosphino)methylene]phosphoranes 150
9.8.7.1.1.2 Variation 2: From (Alkylidene)fluorophosphoranes ............... 151
9.8.7.1.1.3 Method 2: From Diazo(phosphino)(phosphoryl)methanes ........ 152
9.8.7.1.1.4 Method 3: From Diazo(phosphino)(trimethylsilyl)methanes ..... 152
9.8.7.1.1.4 Method 4: From [Bis(trimethylsilyl)methyl]dichlorophosphine 153
9.8.7.2 Synthesis by Substituent Modification .................................... 154
9.8.7.2.1 Method 1: From 1,1,3,3-Tetrakis(dimethylamino)-1\(\lambda^2\),3\(\lambda^3\)-diphosphete by Substitution at Ring Carbon Atoms 154
9.8.7.3 Product Subclass 8: 1\(\lambda^3\),2\(\lambda^2\)-Diphosphetes ............................. 156
9.8.8 Product Subclass 9: 1\(\lambda^3\),2\(\lambda^2\)-Diphosphetes ............................. 157
9.8.8.1 Synthesis by Ring Transformation .......................................... 157
9.8.8.1.1 Synthesis by Ring Enlargement .......................................... 157
9.8.8.1.1.1 Method 1: From a 2-Phosphino-2\(\lambda\)-phosphirene ................. 157
9.8.8.2 Aromatization ................................................................. 158
9.8.8.2.1 Method 1: From a 1,2-Dichloro-1,2-dihydro-1,2-diphosphete–Diiron Complex ................................................................. 159
9.8.9 Product Subclass 10: 1\(\lambda^3\),3\(\lambda^2\)-Diphosphetes ............................. 160
9.8.10 Product Subclass 11: 1,3,2\(\lambda^5\)-Diazaphosphetes .......................... 167
9.8.10.1 Synthesis by Ring-Closure Reactions ..................................... 160
9.8.10.1.1 By Formation of Two P—C Bonds ........................................ 160
9.8.10.1.1.1 Method 1: From Phosphaalkynes in the Coordination Sphere of Transition Metals .................................................. 160
9.8.10.1.1.1 Variation 1: From Phosphaalkynes and Transition-Metal–Alkene Complexes .................................................. 161
9.8.10.1.1.2 Variation 2: From Phosphaalkynes and Transition-Metal Carbonyls .................................................. 163
9.8.10.1.1.3 Variation 3: From Phosphaalkynes and Transition-Metal–Arene Complexes .................................................. 164
9.8.10.1.1.4 Variation 4: From Phosphaalkynes and Metal Vapor ............... 165
9.8.10.1.1.5 Additional Variations ..................................................... 166
9.8.11 Product Subclass 11: 1,3,2\(\lambda^5\)-Diazaphosphetes .......................... 167
9.8.11.1 Synthesis by Ring-Closure Reactions ..................................... 167
9.8.11.1 By Formation of Two N—P Bonds ........................................ 167
9.8.11.1.1 Method 1: From 3-Bromo-3-phenyl-3H-diazirine and a Stannylphosphine 167

Product Subclass 12: 1\(^{1}\),2\(^{1}\),3\(^{1}\),3-Triphosphetes ........................................ 168

9.8.12 Synthesis by Ring-Closure Reactions ........................................ 168
9.8.12.1 By Formation of Two P—P Bonds ........................................ 168
9.8.12.1.1 Method 1: From Lithium Bis(diphenylphosphino)(trimethylsilyl)methanide and Phosphorus Trichloride ........................................ 168

Product Subclass 13: 1\(^{3}\),2\(^{3}\),3\(^{3}\)-Triphosphetes ................................. 169

9.8.13 Synthesis by Ring Transformation ........................................ 169
9.8.13.1 By Ring Contraction ........................................ 169
9.8.13.1.1 Method 1: From a (\(\eta^8\)-Cyclooctatetraene)(1,4-dihydro-1,2,4-triphosphinine-1,4-diyl)hafnium Complex ........................................ 169

Product Subclass 14: 1,3,2\(^{5}\),4\(^{5}\)-Diazadiphosphetes .............................. 170

9.8.14 Synthesis by Ring-Closure Reactions ........................................ 171
9.8.14.1 By Formation of Two N—P Bonds ........................................ 171
9.8.14.1.1 Method 1: From Azidobis(diisopropylamino)phosphine ............... 171
9.8.14.1.2 Method 2: From N-[Bis(diisopropylamino)phosphino]-C-
[bis(diisopropylamino)thiophosphoryl]nitrilimine ........................................ 171

Product Subclass 15: 1\(^{1}\),3\(^{1}\),2\(^{1}\),4\(^{1}\)-Tetraphosphetes .............................. 172

9.8.15 Synthesis by Ring-Closure Reactions ........................................ 172
9.8.15.1 By Formation of Four P—P Bonds ........................................ 172
9.8.15.1.1 Method 1: From Cyclic Bis(amine)chlorophosphines .................. 172

Product Subclass 16: 1,2,3,4-Tetraphosphetes ........................................ 173

9.8.16 Synthesis by Ring-Closure Reactions ........................................ 174
9.8.16.1 By Formation of Four P—P Bonds ........................................ 174
9.8.16.1.1 Method 1: From White Phosphorus in the Coordination Sphere of Transition Metals ........................................ 174

Product Class 9: Furans
B. König

9.9 Synthesis by Ring-Closure Reactions ........................................ 183
9.9.1 By Formation of One O—C and One C—C Bond ........................................ 187
9.9.1.1 Fragments O—C and C—C ........................................ 187
9.9.1.1.1 From \(\alpha\)-Heterofunctionalized Ketones ........................................ 187
9.9.1.1.1.1 Method 1: Transition-Metal-Catalyzed Reaction of \(\alpha\)-Diazoalkanones with Alkynes ........................................ 187
Method 2: From \( \alpha \)-Halo Ketones and 3-Oxoalkanoates (Feist–Benary Reaction) ........................................ 188

Method 3: From 1,1-Dialkoxy-2-bromoalkanes and Dicarbonyl Compounds or 1-(Trimethylsiloxy)alk-1-enes ................. 189

Method 4: From \( \alpha \)-Hydroxy Ketones and Dialkyl But-2-yne-1,4-dioate .................................................... 190

Method 5: From \( \alpha \)-Hydroxy Ketones and Dicarbonyl Compounds and Derivatives ........................................ 191

Method 6: From \( \alpha \)-Haloalkanones and \( \alpha \)-Trimethylstannyl Ketones .................................................. 192

Method 1: From 1,3-Dicarbonyl Compounds and 3-Bromoalkynes ............................................................. 192

Method 2: Palladium-Catalyzed Reaction of Alkyl 3-Oxoalkanoates with 2-(Alk-1-ynyl)oxiranes ......................... 193

Method 3: Manganese-Mediated Reaction of Alkyl 3-Oxoalkanoates with Enol Ethers .................................... 194

Method 4: Knoevenagel Condensation of 1,3-Dicarbonyl Compounds and Aldehydes Followed by Bromination and Cyclization .................................................................................................... 194

Method 5: From 1,3-Dicarbonyl Compounds and 1-Nitroalk-1-enes ............................................................ 195

Method 6: Palladium-Catalyzed Reaction of 1,3-Dicarbonyl Compounds with Prop-2-ynyl Carbonate .................... 196

Method 1: From 1-Haloalk-1-enes and Methylene Ketones ............................................................................. 196

Method 2: From Alk-2-ynylsulfonium Salts and Carbonyl Compounds ............................................................ 197

Method 3: From 1-Aminoalk-1-ynes and Sulfonylalk-1-ynes ........................................................................... 197

Method 1: From 3-Bromopropenal Acetals and Alkanals .................................................................................. 198

Method 2: From Silylallenes and Acid Chlorides .............................................................................................. 199

Method 1: From \( \alpha,\beta \)-Unsaturated Carbonyl Compounds and Sulfonium Ylides ....................................................... 200

Method 2: From 1-Aryl-3-chloroalkan-1-ones and Potassium Cyanide ............................................................ 200

Method 3: From Selectively Protected 1,3-Dicarbonyl Compounds ............................................................... 201

Method 4: 2,3-Disubstituted Furans from 1-(Benzyloxy)-3-tosylalkenes and Aldehydes ........................................... 202

Method 1: From Dialkyl Oxalate and Bis(alkoxy carbonylmethyl) Ethers ........................................................... 203

Method 1: By Cyclization of 1,4-Diheterofunctional \( \mathrm{C}_4 \) Compounds .............................................................. 203

Method 1: Cyclization of 4-Oxobutanimides or 4-Oxobutanenitriles to Furan-2-amines .................................... 203

Method 2: Cyclization of 4-Hydroxybut-2-enenitriles ......................................................................................... 204

Method 3: Reductive Cyclization of Alkene-1,4-diones and Cyclization of 4-Hydroxyalk-2-en-1-ones .................... 205
Method 4: Cyclization of 4-Diazooalk-2-en-1-ones

Method 5: Cyclization of 4,4-Dialkoxyalkan-1-ones

Method 6: Cyclization of Alkane-1,4-diones (The Paal–Knorr Synthesis)

Method 7: Cyclization of γ-Hydroxy Ketone or Their Derivatives

Method 8: Cyclization of 1,4-Dihydroxyalk-2-yynes

Method 9: Oxidative Cyclization of 1,4-Dihydroxyalk-2-enes

By Cyclization of Monofunctionalized C₄ Compounds

Method 1: Palladium-Catalyzed Cyclization of Alk-1(2)-yn-4-ones

Method 2: Cyclization of Alka-1,2-dien-4-ones

Method 3: Cyclization of α-Substituted β,γ-Unsaturated Ketones with Diphenyl Diselenide

Method 4: Cyclization of 5-Hydroxyalk-3-en-1-yynes

Method 5: Base-Assisted Cyclization of 1-(4-Hydroxyalk-2-ylnyl)benzotriazoles

Method 6: Cyclization of Alkynyloxiranes

Method 7: Cyclization of 4-Hydroxyalk-1-yynes and Substituted 4-Hydroxyalk-1-enes

By Formation of One C₄C Bond

Fragment C—O—C—C

Method 1: McMurry-type Cyclization of 1-Acyloxyalk-1-en-3-ones

Fragment C—O—C—C

Method 1: Cyclization of 1-(Alk-2-ynyloxy)-2-bromo-1-(organooxy)alkanes via a Radical Mechanism

Synthesis by Ring Transformation

Ring Enlargement

From Epoxides

From Five-Membered Heterocycles

Method 1: Cycloaddition of Alkynes to Furans Followed by Retro-Diels–Alder Reaction

Method 2: Cycloaddition of Alkynes to Oxazoles Followed by Retro-Diels–Alder Reaction

Method 3: Cycloaddition of Alkynes to Mesoionic Heterocycles Followed by Retro-Diels–Alder Reaction

Method 4: Decomposition of 4-(Benzoyloxy)-1,3-dioxolanes

Method 5: Reduction and Rearrangement of 4,5-Dihydroisoxazoles

Ring Contraction

Method 1: Synthesis from 2H-Pyrone

Method 2: Synthesis from 2H-Pyrans and Pyrylium Salts

Method 3: Synthesis from 3,6-Dihydro-1,2-dioxins

Method 4: Synthesis from Sugar Derivatives

Aromatization

Method 1: Reduction and Elimination of Water from Furan-2(5H)-ones
Method 2: Oxidation of Dihydro- and Tetrahydrofurans

Synthesis by Substituent Modification

Substitution of Hydrogen

Replacement by Deuterium

Metalation

Variation 1: Replacement of Hydrogen by Lithium

Variation 2: Replacement of a Halogen by Lithium

Introduction of Formyl Groups

Introduction of Acyl Groups

Introduction of Chloromethyl and Hydroxymethyl Groups

Introduction of Aminoalkyl Groups (Mannich Reaction)

Introduction of Allyl Groups

Introduction of Alk-1-enyl Groups

Introduction of Aryl Groups

Introduction of Alkyl Groups by Reaction with Alkyl Halides (Friedel-Crafts Reaction)

Introduction of Alkyl Groups by Reaction with Unsaturated Carbonyl Compounds

Introduction of Alkyl Groups by Reaction with α,β-Unsaturated Carboxyl Compounds

Introduction of Halogen Substituents

Replacement of Lithium by an Alkylsulfanyl or Arylsulfanyl Group

Substitution of Metals

Decarboxylation of Furoic Acids

Substitution of Heteroatoms

Substitution of a Halogen by Hydrogen

Reaction of Halo- or Nitrofurans with Carbon Nucleophiles
9.4.4.3 Method 3: Metal-Catalyzed Cross Coupling of Halofurans with Alkenes, Arenes, and Alkynes .................................................. 265
9.4.4.4 Method 4: Reaction of Halo- or Nitrofurans with Hetero Nucleophiles .................................................. 267
9.4.5 Modification of α-Substituents .................................................. 269
9.4.5.1 Method 1: Enolization of Furan-2(5H)-ones and Dihydrofuran-2,5-diones .................................................. 269
9.4.5.2 Method 2: Ene Reaction of 3-Methylene-2,3-dihydrofurans .................................................. 269
9.4.5.3 Method 3: Wittig Rearrangement of Alkyl 3-Furylmethyl Ether .................................................. 270
9.4.5.4 Method 4: Anionic Oxy-Cope Reaction of a 2-But-3-enylfuran .................................................. 271

9.10 Product Class 10: Thiophenes, Thiophene 1,1-Dioxides, and Thiophene 1-Oxides
J. Schatz

9.10 Product Class 10: Thiophenes, Thiophene 1,1-Dioxides, and Thiophene 1-Oxides .................................................. 287
9.10.1 Product Subclass 1: Thiophenes .................................................. 287
9.10.1.1 Synthesis by Ring-Closure Reactions .................................................. 291
9.10.1.1.1 By Formation of Two S—C Bonds and One C—C Bond .................................................. 291
9.10.1.1.1.1 Fragment S and Two C—C Fragments .................................................. 291
9.10.1.1.1.2 Method 1: Oxidative Coupling of Aryl Methyl and Related Ketones and a Source of Sulfur .................................................. 291
9.10.1.1.1.2.1 Variation 1: Reaction of Alkenes or Alkynes with a Source of Sulfur .................................................. 292
9.10.1.1.1.2.2 Variation 2: Reaction of Alkenes or Alkynes with a Source of Sulfur .................................................. 293
9.10.1.1.1.3 Method 3: Thionation of N-(Phenylacetyl)thiobenzamides .................................................. 293
9.10.1.1.1.2 By Formation of Two S—C Bonds .................................................. 294
9.10.1.1.2 Fragments C—C—C and S .................................................. 294
9.10.1.1.2.1 Method 1: Reaction of Buta-1,3-diynes with Sulfuration Reagents .................................................. 294
9.10.1.1.2.1.1 Variation 1: Reaction of Buta-1,3-diynes with Sulfides .................................................. 294
9.10.1.1.2.1.2 Variation 2: Reaction of Buta-1,3-diynes with Sulfur Dichloride .................................................. 295
9.10.1.1.2.2 Method 2: Reaction of Buta-1,3-diienes with a Source of Sulfur .................................................. 296
9.10.1.1.2.3 Method 3: Reaction of But-2-enes or Butanes with Sulfur .................................................. 296
9.10.1.1.2.1.4 Method 4: Cyclization of Sulfinylalkenes .................................................. 297
9.10.1.1.2.1.4.1 Variation 1: Reaction of Buta-1,2-diienes with Sulfur Dioxide .................................................. 297
9.10.1.1.2.1.4.2 Variation 2: Reaction of 1-Siloxy-penta-1,4-diienes with Thionyl Chloride .................................................. 298
9.10.1.1.2.1.5 Method 5: Reaction of 1,4-Diketones with Sulfur Reagents and Cyclization (The Paal Synthesis) .................................................. 298
9.10.1.1.2.1.6 Method 6: Reaction of α,β-Unsaturated Nitriles with Sulfur (The Gewald Synthesis) .................................................. 300
9.10.1.1.3 By Formation of One S—C and One C—C Bond .................................................. 301
9.10.1.1.3.1 Fragments S—C—C and C .................................................. 301
9.10.1.3.1.1 Method 1: S-Alkylation of β-Thioxo Carbonyl Compounds or β-Thioxonitriles Followed by Ring Closure .................................................. 301
Variation 1: S-Alkylation of Enolizable β-Thioxo Carbonyl Compounds or β-Thiononitriles

Variation 2: Reaction of β-Oxo Dithioesters and β-Oxothioamides with a 4-Bromobut-2-enoate

Variation 3: Reaction of Active Methylene Compounds with Carbon Disulfide Followed by S-Alkylation and Ring Closure

Method 2: Carbene Addition to α-Oxoketene Dithioacetals and α-Oxoketene Monothioacetals

Variation 1: Reaction of α-Sulfanyl Ketones with 2-(Diethoxyphosphoryl)-Substituted Alk-2-enoates

Variation 2: From α-Sulfanyl Ketones and Cyanoacetates

Method 2: Reaction of α-Alkylsulfanyl Ketones with Grignard Reagents

Method 3: From Vinyl Sulfides and Alkynes

Method 4: From 1,2,3-Thiadiazoles and Alkynes

Variation 1: Reaction of Thioglycolates with β-Dihalo or α,β-Dihalo Carbonyl Compounds

Variation 2: Reaction of Thioglycolates with β-Chlorovinyl Carbonyl Compounds and Equivalents (The Fiessemann Synthesis)

Variation 3: Reaction of Thioglycolates with β-Chloro-Substituted Cinnamionitriles

Variation 4: Reaction of Thioglycolates with α-Oxoalkynes

Variation 5: Reaction of Thioglycolates or α-Sulfanyl Ketones with Acetylenic Esters

Variation 6: Reaction of Thioglycolic Acid or Esters with β-Oxo Esters

Method 4: Reaction of Benzyl Thiols with Butadiynes

Method 5: Reaction of Thioacryloyl Acids with a Cyclopropyl(triphenyl)phosphonium Salt

Method 6: Reaction of Dithiocarbonates or Equivalents and Cyclopropenylium Salts

By Formation of Two C—C Bonds

Fragments C—S—C and C

Method 1: S-Alkylation of Thioamides and Reaction with a Chloromethaniminium Salt

Fragments C—S—C and C

Method 1: Reaction of 3-Thia-1,5-dicarbonyl Compounds or Equivalents with 1,2-Dicarbonyl Compounds (The Hinsberg Synthesis)
Method 2: 1,3-Dipolar Cycloaddition of Thiocarbonyl Ylides with Alkynes 326

Variation 1: Reaction of 1,3-Dithiolylium-4-olates with Alkynes 326

Variation 2: Reaction of Bis[(trimethylsilyl)methyl] Sulfoxides with Alkynes 327

Method 3: From 1,3-Thiazoles and Alkynes 327

By Formation of One S—C Bond 329

Fragment S—C—C—C—C 329

Method 1: From α-Sulfanyl Carbonyl Compounds by Ring Closure 329

Variation 1: Cyclization of Aroylketene S,N-Acetals 330

Variation 2: Oxidative Cyclization of 2-Sulfanylpenta-2,4-dienoic Acids 330

Method 2: Cyclization of 3-Sulfanylprop-1-ynyl Ketones 331

Method 3: From γ,δ-Unsaturated Thioamides 332

By Formation of One C—C Bond 334

Fragment C—S—C—C—C 334

Method 1: Cyclization of Aroylketene S,N-Acetals 334

Method 1: From β,β'-Dioxo Sulfides by Reductive Coupling 334

Synthesis by Ring Transformation 336

From Five-Membered Heterocycles 336

Method 1: From Zirconocenes and Disulfur Dichloride 336

Method 2: From 1,2-Thiazolium Salts 336

Method 3: From 1,3-Oxathiolium Salts 338

Method 5: From Furans 340

Ring Contraction 340

Method 1: From 1,2- or 1,4-Dithiins 340

Variation 1: From 1,2-Dithiins by Thermal or Photochemical Ring Contraction, or by Use of Thiophilic Phosphorus Reagents 340

Variation 2: From 1,4-Dithiins by Thermal Ring Contraction 341

Variation 3: From 1,4-Dithiins via their S-Oxides 342

Method 2: From 4H-Thiopyrans and Thiopyrylium Salts 343

Ring Expansion 344

Method 1: From Thiiranes 344

Variation 1: From 2-(1-Hydroxyalk-2-ynyl)thiiranes by Electrophile-Induced Ring Expansion 344

Variation 2: From 2-(2-Oxoalkyl)thiiranes 345

Variation 3: From 2-(2-Oxoalkyl)oxiranes 346

Aromatization 347

Method 1: From Dihydro- and Tetrahydrothiophenes 347

Synthesis by Substituent Modification 349

Substitution of Hydrogen 349

Method 1: Hydrogen–Deuterium Exchange 349
9.10.1.4.1.2 Method 2: Metalation ............................................. 349
9.10.1.4.1.2.1 Variation 1: Generation of Organometallic Compounds by Hydrogen–Lithium Exchange ............................................. 349
9.10.1.4.1.3 Method 3: Introduction of Formyl Groups ....................... 351
9.10.1.4.1.4 Method 4: Introduction of Acyl Groups .......................... 352
9.10.1.4.1.5 Method 5: Introduction of Chloromethyl and Hydroxymethyl Groups ............................................. 354
9.10.1.4.1.6 Method 6: Introduction of Alkylamino Groups (The Mannich Reaction) ............................................. 355
9.10.1.4.1.7 Method 7: Introduction of Allyl, Alk-1-enyl, or Alk-1-ynyl Groups ............................................. 356
9.10.1.4.1.8 Method 8: Halogenation .............................................. 357
9.10.1.4.1.9 Method 9: Introduction of Alkyl Groups ......................... 360
9.10.1.4.1.10 Method 10: Halogenation ........................................... 362
9.10.1.4.1.11 Method 11: Sulfonation .............................................. 366
9.10.1.4.1.12 Method 12: Nitration ............................................... 367
9.10.1.4.2 Substitution of Metals .................................................. 369
9.10.1.4.2.1 Method 1: Substitution Reactions Involving Organostannanes (The Stille Reaction) ............................................. 370
9.10.1.4.2.2 Method 2: Substitution Reactions Involving Organocopper or Organozinc Derivatives .............................. 371
9.10.1.4.2.3 Method 3: Substitution Reactions Involving Organoboron Derivatives (The Suzuki Reaction) ............................................. 373
9.10.1.4.2.4 Method 4: Substitution Reactions Involving Organolithium Derivatives ............................................. 374
9.10.1.4.2.4.1 Variation 1: Replacement of Lithium by Hydrogen or Deuterium ............................................. 374
9.10.1.4.2.4.2 Variation 2: Replacement of Lithium by a Silyl Group ............. 375
9.10.1.4.2.4.3 Variation 3: Replacement of Lithium by a Carboxy Group ........ 376
9.10.1.4.2.4.4 Variation 4: Replacement of Lithium by a Formyl or Acyl Group ............................................. 376
9.10.1.4.2.4.5 Variation 5: Replacement of Lithium by a Hydroxymethyl or an Aminomethyl Group .......................... 378
9.10.1.4.2.4.6 Variation 6: Replacement of Lithium by an Alkyl, Alkenyl, Alkynyl, or Aryl Group ............................................. 380
9.10.1.4.2.4.7 Variation 7: Replacement of Lithium by a Halogen .................. 381
9.10.1.4.2.4.8 Variation 8: Replacement of Lithium by a Sulfanyl or Sulfonyl Group ............................................. 382
9.10.1.4.3 Substitution of Carbon Functionalities ................................ 383
9.10.1.4.3.1 Method 1: Decarboxylation ........................................... 383
9.10.1.4.4 Substitution of Heteroatoms ............................................ 384
9.10.1.4.4.1 Method 1: Substitution of Halogen by Hydrogen .................. 384
9.10.1.4.4.2 Method 2: Substitution of Halogen by Lithium .................... 385
9.10.1.4.4.3 Method 3: Substitution of Halogen by Alkoxo or Sulfanyl Groups ............................................. 386
9.10.1.4.4.4 Method 4: Metal-Assisted Cross Coupling of Halothiophenes with Alkenes, Arenes, and Alkynes ............................................. 387
9.10.1.4.4.4.1 Variation 1: Manganese-Assisted Coupling Reactions .................. 387
9.10.1.4.4.4.2 Variation 2: Zinc-Assisted Coupling Reactions ...................... 388
9.10.1.4.4.4.3 Variation 3: Palladium-Assisted Coupling Reactions ................ 388
9.10.1.4.5 Modification of α-Substituents ........................................ 389
9.10.1.4.5.1 Method 1: Enolization of Dihydrothiophene-2,5-diones .................. 390
9.10.1.4.5.2 Method 2: Aromatization of Dihydrothiophen-3(2H)-ones .................. 391
Method 3: Side-Chain Bromination of Alkylthiophenes

**Product Subclass 2: Thiophene 1,1-Dioxides**

Synthesis by Ring Transformation

Oxidation of Thiophenes

Method 1: Oxidation of Thiophenes

Aromatization

Method 1: From Dihydro- or Tetrahydrothiophene 1,1-Dioxides by Elimination

Variation 1: From Dihydro- or Tetrahydrothiophene 1,1-Dioxides by Hydrogen Halide Elimination

Variation 2: From Dihydro- or Tetrahydrothiophene 1,1-Dioxides by Nitrous Acid Elimination

**Product Subclass 3: Thiophene 1-Oxides**

Synthesis by Ring Transformation

Formal Exchange of Ring Members

Method 1: From Zirconocenes

**Product Class 11: Selenophenes**

J. Schatz

Synthesis by Ring-Closure Reactions

By Formation of Two Se—C Bonds

Fragments C—C—C and Se

Method 1: Reaction of C$_4$ Building Blocks with Sources of Selenium

Variation 1: Reaction of 1,4-Dilithio- or 1,4-Diiodobutadienes with a Selenium Source

Variation 2: Reaction of Butadiynes with Selenides

Variation 3: Reaction of 1-Alkynyl-2-bromobenzenes with Elemental Selenium

Variation 4: Reaction of Chloroalkynols or Alkynyloxiranes with Selenides

By Formation of Two C—C Bonds

Fragments C—Se—C and C—C

Method 1: From 1,2-Diketones and a Selenodiacetate (Hinsberg Synthesis)

By Formation of One C—C Bond

Fragment C—C—Se—C—C

Method 1: Reductive Cyclization of Diphenacyl Selenides
9.11 Synthesis by Formal Exchange of Ring Members

9.11.2 Method 1: Exchange of Zirconium by Selenium

9.11.3 Synthesis by Substituent Modification

9.12 Product Class 12: Tellurophenes

J. Schatz

9.12.1 Synthesis by Ring-Closure Reactions

9.12.1.1 By Formation of Two Te—C Bonds

9.12.1.1.1 Method 1: Reaction of C₄ Building Blocks with Sources of Tellurium

9.12.1.1.2 Variation 1: Reaction of 1,4-Dilithio- or 1,4-Diodobutadienes with a Tellurium Source

9.12.1.1.3 Variation 2: Reaction of Butadiynes with Tellurides

9.12.1.1.4 Variation 3: Reaction of 1-Alkynyl-2-bromobenzenes or But-1-en-3-ynes with Elemental Tellurium

9.12.1.1.5 Variation 4: Reaction of Chloroalkynols with Tellurides

9.12.1.2 By Formation of One C—C Bond

9.12.1.2.1 Fragment C—Te—C—C

9.12.1.2.2 Method 1: Cyclization of 3-(Alkyltellanyl)propenals

9.12.1.2.3 Method 2: Reaction of Trimethylsilyl Cyanide with Alkynes, Catalyzed by Palladium(II) or Nickel(II) Chloride

9.12.1.2.4 Method 2: Reaction of Zirconium and Titanium Complexes with Alkynes and Carbonyl Compounds

9.13 Product Class 13: 1H-Pyrroles

D. St.C. Black

9.13.1 Synthesis by Ring-Closure Reactions

9.13.1.1 By Formation of Two N—C Bonds and One C—C Bond

9.13.1.1.1 Method 1: Condensation Reaction of β-Dicarbonyl Compounds, α-Halo Carbonyl Compounds and Amines (The Hantzsch Synthesis)

9.13.1.1.2 Method 2: Condensation Reaction of Benzyl Ketones, Benzoin, and Ammonia

9.13.1.1.3 Method 3: Condensation Reaction of Aliphatic Aldehydes or Ketones and Hydrazines (The Piloty Synthesis)

9.13.1.1.4 Method 4: Reaction of Trimethylsilyl Cyanide with Alkynes, Catalyzed by Palladium(II) or Nickel(II) Chloride

9.13.1.1.5 Method 5: Reaction of Zirconium and Titanium Complexes with Alkynes and Carbonyl Compounds

9.13.1.2 By Formation of One N—C Bond and Two C—C Bonds

9.13.1.2.1 Fragments N—C, C—C, and C

9.13.1.2.2 Method 1: Reaction of Trimethylsilyl Cyanide with Alkynes, Catalyzed by Palladium(II) or Nickel(II) Chloride

9.13.1.2.3 Method 2: Reaction of Zirconium and Titanium Complexes with Alkynes and Carbonyl Compounds
9.13.1.2.1 Variation 1: Reaction of Zirconocene Derivatives of Alkylamines with Alkynes and Carbon Monoxide .................................................. 450
9.13.1.2.2 Variation 2: Reaction of Zirconocene Derivatives of C-Silyl Imine Compounds with Alkynes and Acyl Chlorides .............................................. 451
9.13.1.2.3 Variation 3: Reaction of Titanium Alkyne Complexes with Imines and Carbon Monoxide ................................................................. 452
9.13.1.2.4 Method 3: Reaction of Terminal Alkynes with Imines and Tungsten±Carbene Complexes ................................................................. 452
9.13.1.3 Method 4: Reaction of Imines with α-Haloacetals and 1-Benzylbenzotriazoles ................................................................. 453
9.13.1.3 By Formation of Three C—C Bonds ................................................................. 454
9.13.1.3.1 Fragment C—N—C and Two C Fragments .................................................. 454
9.13.1.3.1 Method 1: Reaction of Alkyl Isocyanoacetates with Aldehydes ............... 454
9.13.1.4 By Formation of Two N—C Bonds ................................................................. 455
9.13.1.4.1 Fragments C—C—C and N ................................................................. 455
9.13.1.4.1 Method 1: Condensation Reactions of 1,4-Dicarbonyl Compounds or Equivalents with Amines (The Paal±Knorr Synthesis) .............. 455
9.13.1.4.1.2 Method 2: Reaction of 4-Substituted Carbonyl Compounds or Equivalents with Amines ................................................................. 458
9.13.1.4.1.3 Method 3: Reaction of Alk-2-ethyl Carbonyl Compounds or Equivalents with Amines ................................................................. 459
9.13.1.4.1.4 Method 4: Reaction of Alk-3-ynyl Carbonyl Compounds with Amines .... 461
9.13.1.4.1.5 Method 5: Reaction of Buta-1,3-dienes and Related Compounds with Amines ................................................................. 461
9.13.1.4.1.6 Method 6: Reaction of Buta-1,3-diynes with Amines .................................. 462
9.13.1.4.1.7 Method 7: Pyrrol-2-amines from the Reaction of Functionalized Nitriles with Amines ................................................................. 463
9.13.1.4.1.8 Method 8: 2-(Benzotriazolylmethyl)pyrroles from the Reaction of Alkynylloxiranes with Amines ................................................................. 464
9.13.1.5 By Formation of One N—C and One C—C Bond .................................................. 465
9.13.1.5.1 Fragments N—C—C and C ................................................................. 465
9.13.1.5.1 Method 1: Reaction of α,β-Unsaturated Imines with Esters and Niobium(III) Chloride ................................................................. 465
9.13.1.5.1.2 Method 2: Reaction of α,β-Unsaturated Imine Iron±Tricarbonyl Complexes with Methyllithium ................................................................. 466
9.13.1.5.1.3 Method 3: Hydroformylation and a Related Reaction of Propargylamines 466
9.13.1.5.1.4 Method 4: Reaction of β-Amino Ketones with Diazo(trimethylsilyl)methane ................................................................. 467
9.13.1.5.1.5 Method 5: 3-Aminopyrrole-2,4-dicarbonitriles from the Reaction of Alkylidenemalononitriles with Aminoacetonitriles ................................................................. 468
9.13.1.5.2 Fragments N—C and C—C ................................................................. 469
9.13.1.5.2.1 Method 1: Condensation Reaction of α-Amino Ketones with Methylene-Active Carbonyl Compounds (The Knorr Pyrrole Synthesis) .... 469
9.13.1.5.2.2 Method 2: Condensation Reaction of Enamino Esters with α-Electrophilic Carbonyl Compounds and their Synthetic Equivalents ....... 472
Method 3: Reaction of Enamino Esters with α-Diazo Ketones .......................... 474
Method 4: Reaction of Oximes (and Hydrazones) with Alkynes ......................... 474
Method 5: Reaction of Azolalkenes with Methylene Ketones .......................... 475
Method 6: Combination of α-Amino Carbonyl Compounds and Enolates via Aldol Reactions .......................................................... 476
Method 7: Reaction of α-Metalated Imines with α-Halo Ketones or α-Diketones .... 478

Fragments N—C and C—C—C .............................................................................. 481
Method 1: Reaction of α-Aminoacetyl or α-Iminoacyl Compounds with 1,3-Diketones or Equivalents .................................................. 481
Method 2: Reaction of Benzotriazole Enamines with Imines .......................... 486
Method 3: Reaction of Allenes with Tosylimines ........................................... 486

By Formation of Two C—C Bonds ................................................................. 487
Fragments C—N—C—C and C ............................................................................. 487
Method 1: Reaction of 2-Arylvinyl Isocyanides with Carbon Nucleophiles .... 487
Method 2: Reaction of Benzotriazole Enamines with Imines .......................... 488
Method 3: Reaction of Allenes with Tosylimines ........................................... 488

By Formation of One N—C Bond .................................................................... 498
Fragment N—C—C—C—C .................................................................................. 498
Method 1: Cyclizative Condensations ............................................................ 498
Method 2: Cyclization of Alk-4-yn-1-amines ................................................. 500
Method 3: Cyclization of Dienyl Azides .......................................................... 501

By Formation of One C—C Bond ................................................................. 502
Fragment C—N—C—C—C .................................................................................. 502
Method 1: Reactions Involving Typical C—C Bond Construction ................. 502
Fragment C—C—N—C—C .................................................................................. 503
Method 1: Reactions Involving Typical C—C Bond Construction ................. 503

Synthesis by Ring Transformation ................................................................. 504
By Ring Enlargement ....................................................................................... 504
Method 1: Rearrangement of an Azabicyclo[2.1.0]pent-2-ene ....................... 504
Method 2: Rearrangement of 2-Vinyl-2H-azirines ......................................... 504

### 9.13.4.2.1 Modification of Acyl Substituents

- **Method 1:** Reduction of Acyl Groups to Alkyls 535
- **Method 2:** Addition and Condensation Reactions of Acyl Groups 537
- **Method 3:** Rearrangement of Acyl Groups 539

### 9.13.4.2.2 Modification of Alkyl Substituents

- **Method 1:** Substitution Reactions of Mannich Bases 539
- **Method 2:** Alkylation of α-Methylene Substituents 541
- **Method 3:** Halogenation of α-Methylene Substituents 541
- **Method 4:** Oxidation of α-Methylene Substituents 542

### 9.14 Product Class 14: Phospholes

**F. Mathey**

- **Product Class 14:** Phospholes 553
- **Product Subclass 1:** \(\lambda^3-1H\)-Phospholes 555

#### 9.14.1 Synthesis by Ring-Closure Reactions

- **Method 1:** Reaction of Dihalophosphines with Enamines 557
- **Method 2:** Reaction of Dilithiophosphines with 1,4-Dihalo-Substituted 1,3-Dienes 558
- **Method 3:** Reaction of Primary Phosphines with 1,3-Dienes 559
- **Method 4:** Thermal Reaction of Dihalophosphines with 1,3-Dienes 560

#### 9.14.1.2 By Formation of Two P-C Bonds

- **Method 1:** Reaction of Dihalophosphines with 1,4-Dihalo-Substituted 1,3-Dienes 558
- **Method 2:** Reaction of Dilithiophosphines with 1,4-Dilithio-Substituted 1,3-Dienes 559
- **Method 3:** Reaction of Primary Phosphines with 1,3-Dienes 559
- **Method 4:** Thermal Reaction of Dihalophosphines with 1,3-Dienes 560

#### 9.14.1.3 Aromatization

- **Method 1:** Dehalogenation of \(P\)-Halophospholium Salts Obtained from Dihalophosphines and Cyclobutadiene-Aluminum Trichloride Complexes 563
- **Method 2:** Dehydrohalogenation of 1-Halodihydrophospholium Halides 564
- **Variation 1:** P-Bromination of 2,5-Dihydro-\(\lambda^3-1H\)-phospholes Followed by Dehydrobromination 566
- **Variation 2:** Quaternization of 1-Bromo-2,5-dihydro-1\(H\)-phospholes Followed by Dehydrobromination 568
- **Method 3:** Dehydrohalogenation of \(C\)-Halophospholane 1-Oxides 568

#### 9.14.1.4 Synthesis by Substituent Modification

- **Addition Reactions** 569
Method 1: Reaction of Electrophiles with Phospholide Ions .......................... 569
Method 2: α-Functionalization of 1H-Phosphol-2-ylithiums .......................... 573
Substitution of Existing Substituents .......................................................... 575
Method 1: Reaction of Nucleophiles with Phospholes ............................... 575
Method 2: Transformation of α-Substituents ............................................. 576
Method 3: Reduction of λ3-Phospholes ..................................................... 577
Decomplexation and Thermolysis ............................................................... 578
Method 1: Decomplexation of Phosphole λ3-Complexes ............................. 578
Method 2: Thermolysis of λ3-Phospholes .................................................. 579
Product Subclass 2: Phospholide Ions ....................................................... 581
Aromatization .............................................................................................. 582
Method 1: Cleavage of the Exocyclic P–R Bond of λ3,1H-Phospholes ........ 582
Variation 1: By Alkali Metals ....................................................................... 582
Variation 2: By Base .................................................................................. 583
Method 2: Deprotonation of Transient 2H-Phospholes ................................. 584
Product Subclass 3: η5-Phospholyl Complexes ........................................... 585
Synthesis by Ring-Closure Reactions ......................................................... 588
Method 1: Assembly of a Phospholyl Ring .................................................. 588
Synthesis by Complexation ......................................................................... 588
Method 1: From Phospholide Ions .............................................................. 588
Variation 1: Via Intermediate 1-Stannyl-1H-phospholes or 1,1'-Bi-1H-phospholes ......................................................................................... 590
Method 2: From λ3,1H-Phospholes ............................................................ 592
Method 3: From λ3,2H-Phospholes ............................................................ 593
Synthesis by Substituent Modification .......................................................... 594
Method 1: Electrophilic Modification ......................................................... 594
Method 2: Modificative of α-Substituents .................................................. 595
Keyword Index ............................................................................................. 601
Author Index ............................................................................................... 613

Volume 10:
Fused Five-Membered Hetarenes with One Heteroatom

Preface .................................................................. V

Table of Contents ................................................ IX

Introduction
E. J. Thomas .............................................................. 1

10.1 Product Class 1: Benzo[b]furans
C. P. Dell ................................................................ 11

10.2 Product Class 2: Benzo[c]furans
P. G. Steel ................................................................ 87

10.3 Product Class 3: Dibenzofurans
K. Jones ................................................................ 131

10.4 Product Class 4: Benzo[b]thiophenes
C. M. Rayner and M. A. Graham .............................. 155

10.5 Product Class 5: Benzo[c]thiophenes
T. L. Gilchrist and S. J. Higgins .............................. 185

10.6 Product Class 6: Dibenzothiophenes
M. D. Andrews ....................................................... 211

10.7 Product Class 7: Benzo[b]selenophenes
P. J. Murphy .......................................................... 265

10.8 Product Class 8: Benzo[c]selenophenes
P. J. Murphy .......................................................... 301

10.9 Product Class 9: Dibenzo[selenophenes]
P. J. Murphy .......................................................... 307

10.10 Product Class 10: Benzo[b]tellurophenes
P. J. Murphy .......................................................... 325

10.11 Product Class 11: Benzo[c]tellurophenes
P. J. Murphy .......................................................... 343

10.12 Product Class 12: Dibenzo[tellurophenes]
P. J. Murphy .......................................................... 347

10.13 Product Class 13: Indole and Its Derivatives
J. A. Joule ............................................................. 361

10.14 Product Class 14: 1H- and 2H-Isoindoles
T. J. Donohoe ........................................................ 653

10.15 Product Class 15: Carbazoles
P. T. Gallagher ..................................................... 693

10.16 Product Class 16: Indolizines
M. Shipman .......................................................... 745

| 10.1    | **Product Class 1: Benzo[b]furans**  
C. P. Dell | 11 |
| 10.1.1  | Synthesis by Ring-Closure Reactions | 17 |
| 10.1.1.1| By Annulation to an Arene | 17 |
| 10.1.1.1| By Formation of One O—C and One C—C Bond | 17 |
| 10.1.1.1| Method 1: From 2-Halophenols and Alkyynes | 18 |
| 10.1.1.1.2| Variation 2: Using an Alkyne and Copper(I) Oxide | 18 |
| 10.1.1.1.3| Variation 3: Using an Alkyne and Copper Powder | 19 |
| 10.1.1.1.4| Variation 4: Using an Alkyne with Palladium(II) and Copper(I) Catalysis in the Presence of an Organic Base | 19 |
| 10.1.1.1.5| Variation 5: Using an Alkyne with Palladium(II) and Copper(I) Catalysis in the Presence of an Inorganic Base | 21 |
| 10.1.1.1.6| Variation 6: Using an Alkyne with Palladium(II) and Copper(I); Combinatorial Procedure | 21 |
| 10.1.1.1.7| Variation 7: Using an Alkyne with Palladium(II) | 22 |
| 10.1.1.1.8| Variation 8: By Photochemical Trapping of Zwitterions | 23 |
| 10.1.1.1.2| Method 2: From 1,4-Quinones | 23 |
| 10.1.1.1.3| Method 3: From 2-Hydroxybenzaldehydes and 2-Hydroxyphenyl Ketones | 24 |
| 10.1.1.1.3.1| Variation 1: Using Phenacyl Bromide | 25 |
| 10.1.1.1.3.2| Variation 2: Using Phenacyl Bromide Under Phase-Transfer Conditions | 25 |
| 10.1.1.1.3.3| Variation 3: Using Bromoacetaldehyde | 26 |
| 10.1.1.1.3.4| Variation 4: Using Chloroacetone | 26 |
| 10.1.1.1.3.5| Variation 5: Using Ethyl Bromoacetate | 27 |
| 10.1.1.1.3.6| Variation 6: Using Ethyl Chloroacetoxacetate | 28 |
| 10.1.1.1.3.7| Variation 7: Using Bromonitromethane | 28 |
| 10.1.1.1.3.8| Variation 8: Using Diethyl α-Bromomalonate | 29 |
| 10.1.1.1.3.9| Variation 9: Using Benzyl Halides | 29 |
| 10.1.1.1.4| Method 4: From Methyl 2-Hydroxybenzoates | 30 |
| 10.1.1.1.5| Method 5: From Phenols and α-Haloacyl Halides | 30 |
| 10.1.1.1.6| Method 6: By Intramolecular Wittig Reactions | 31 |
| 10.1.1.1.7| Method 7: From O-Arylketoximes | 31 |
| 10.1.1.1.8| Method 8: By Claisen Rearrangement of Phenyl Propargyl Ethers and Related Species | 32 |
Variation 1: By Claisen Rearrangement of Phenyl Propargyl Ethers

Variation 2: By Claisen Rearrangement of Phenyl Propargyl Ethers Using Cesium Fluoride

Variation 3: By Claisen Rearrangement of Aryl 2-Chloroprop-2-enyl Ethers

Variation 4: From 2-Ethynylphenols and Their Derivatives

Variation 5: From 2-(Triisopropylsiloxy)phenylalkynes

Variation 6: From 4-(2-Hydroxyaryl)-1,2,3-thiadiazoles

Variation 7: From Dealkylation of 2-Methoxyphenylalkynes

Variation 8: From Flash-Vacuum Pyrolysis of (2-Methoxybenzoyl)alkylidenetriphenylphosphoranes

Variation 9: Treatment of 2-Methoxyphenylalkynes with Mercury(II) Acetate

Method 1: By One-Pot, Acid-Catalyzed Cyclization of α-Aryloxy Ketones

Method 2: From 2-Alkenylphenols Using Palladium Reagents

Method 3: Benzofuran-3(2H)-ones and Benzofuran-3-ols from α-Halo-2-hydroxyacetophenones

Method 4: From Enol Radical Cations

Method 5: From an O-Allyl-2-halophenol with Palladium Catalysis

Method 6: From an O-Allyl-2-mercuriophenol with Stoichiometric Palladium

Method 7: From O-Propargyl- and O-Allenyl-2-iodophenols

Method 8: From a 3-(2-Halo1prop-2enylox)phenol with Palladium

Method 9: By Acid-Catalyzed Cyclization of α-Aryloxy Carbonyl Compounds and Their Derivatives
10.1.1.4.3.1 Variation 1: Cyclization of α-Aryloxy Ketones ........................................ 53
10.1.1.4.3.2 Variation 2: Cyclization of α-Aryloxy carboxylic Acids ................................. 55
10.1.1.4.3.3 Variation 3: Cyclization of α-Aryloxy carboxamides ...................................... 56
10.1.1.4.3.4 Variation 4: Cyclization of Protected α-Aryloxyaldehydes ............................. 56
10.1.1.4.4 Method 4: By Cyclization of O-Substituted 2-Hydroxybenzaldehydes and Related Species ..................................................... 57
10.1.1.4.5 Method 5: By Dieckmann Cyclization of (2-Alkoxy carbonylphenox)acetic Acids and Esters ......................................................... 58
10.1.1.4.6 Method 6: By Cyclization of 2-(Benzzyloxy) benzaldehydes and Related Species ............................................................ 59

10.1.1.4.7 By Annulation to the Heterocyclic Ring ......................................................... 60
10.1.1.4.8 By Formation of Three and Two C—C Bonds ................................................... 60
10.1.1.4.9 Method 1: From 2-Vinylfurans ...................................................................... 60
10.1.1.4.10 Variation 1: From 2-Vinylfurans (Intermolecular Cycloaddition) ..................... 61
10.1.1.4.11 Variation 2: From 2-Vinylfurans (Intramolecular Cycloaddition) ................. 61
10.1.1.4.12 Method 2: From 3-Vinylfurans (Intermolecular Cycloaddition) .................... 62
10.1.1.4.13 Method 3: From Furan Analogues of 1,2-Quinodimethane ....................... 63
10.1.1.4.14 Method 4: By Conjugate Addition–Cyclization ............................................. 64
10.1.1.4.15 Method 5: From Cyclobutenones ................................................................ 64
10.1.1.4.16 Method 6: From Benzannulation of Furfuryl Chromium Carbene Complexes 65
10.1.1.4.17 Method 7: Using 2-(Benzotriazol-1-ylmethyl)furan .................................. 65
10.1.1.4.18 Method 8: By Carbonylation of Vinylfurans ................................................. 66

10.1.1.4.19 By Formation of One C—C Bond ..................................................................... 67
10.1.1.4.20 Method 1: By Stobbe and Related Condensations ........................................... 67
10.1.1.4.21 Method 2: From Electrocyclic Reactions of 2,3-Disubstituted Furans ........... 68

10.1.2 Synthesis by Ring Transformation ........................................................................ 68
10.1.2.1 Method 1: By Ring Enlargement ....................................................................... 68
10.1.2.2 Method 2: By Formal Exchange of Ring Members with Retention of Ring Size .............................................................. 69
10.1.2.3 Method 3: By Ring Contraction ...................................................................... 70
10.1.2.4 Method 4: By Ring Contraction of 1-Benzopyrylium Salts ............................. 70
10.1.2.5 Method 5: By Ring Contraction of 4-(Halomethyl)coumarins ..................... 70

10.1.3 Aromatization ........................................................................................................ 71

10.1.4 Synthesis by Substituent Modification ................................................................... 71
10.1.4.1 Addition Reactions .......................................................................................... 71
10.1.4.2 Substitution of Existing Substituents ............................................................... 71
10.1.4.3 Of Hydrogen ..................................................................................................... 71
10.1.4.3.1 Method 1: Metalation .................................................................................... 72
10.1.4.3.2 Method 2: Acylation ..................................................................................... 72
10.1.4.3.3 Method 3: Alkylation, Alkenylation, and Arylation ..................................... 73
10.1.4.3.4 Method 4: Halogenation .............................................................................. 73
10.1.4.3.5 Method 5: Nitration ...................................................................................... 74

Science of Synthesis Original Edition Volume 10

10.1 Of Carbon Functionalities .................................................. 75
10.1.4.2 Modification of Substituents ........................................... 75
10.1.4.4 Rearrangement of Substituents ........................................ 75

10.2 Product Class 2: Benzo[\textit{c}]furans
P. G. Steel

10.2.1 Synthesis by Ring-Closure Reactions ................................. 88
10.2.1.1 By Formation of both Benzene and Furan Rings ............... 88
10.2.1.1.1 Method 1: By Cyclization–Dehydration of 1,2-Diaroylcyclohexenes ........................................ 88
10.2.1.1.1 Variation 1: From 3-Substituted 1,2-Diaroylcyclohexenes ................................... 88
10.2.1.1.2 Variation 2: From 1,2-Diaroylcyclohexadienes .................. 89
10.2.1.2 By Annulation to an Arene ........................................... 90
10.2.1.2.1 By Formation of One Heteroatom—Carbon Bond ............ 90
10.2.1.2.1.1 Method 1: From 1,2-Diacylbenzenes .......................... 90
10.2.1.2.1.1 Variation 1: Reduction with Hydride Reducing Agents .... 90
10.2.1.2.1.2 Variation 2: Reduction with Dissolving Metals ............... 91
10.2.1.2.1.3 Variation 3: Nucleophilic Addition to 2-Acylbenzaldehydes .......................... 91
10.2.1.2.2 Method 2: From 2-Acylbenzyl Alcohols .......................... 92
10.2.1.2.2.1 Variation 1: Via 2-Acylbenzyl Alcohols from Monoacetals of Phthalaldehyde ........................ 93
10.2.1.2.2.2 Variation 2: Via 2-Acylbenzyl Alcohols from o-Metalation Strategies .......................... 94
10.2.1.2.2.3 Variation 3: Via 2-Acylbenzyl Alcohols from the Anionic Fries Rearrangement of 2-Iodobenzyl Esters .......................... 95
10.2.1.2.3 Method 3: Via Intramolecular Trapping of a Benzylid Carbene .......................... 96
10.2.1.2.3.1 Variation 1: Via Carbenes from Metal-Catalyzed Diazooalkane Decomposition .......................... 97
10.2.1.2.3.2 Variation 2: Via Carbenes from 1,1-Elimination of \( \circ \)-Halosilanes .......................... 98
10.2.1.2.3.3 Variation 3: Via Carbenes from Decomposition of Tosylhydrazones .......................... 99
10.2.1.2.4 Method 4: Via Displacement of Benzyl Halogen .......................... 99
10.2.1.2.4.1 Variation 1: From 2-Alkylbenzophenones .......................... 99
10.2.1.2.4.2 Variation 2: From 2-Alkylbenzamides via Imidate Salts .......................... 100
10.2.1.2.5 Method 5: From 2-Formylstyrenes .......................... 101
10.2.1.2.6 Method 6: 1-Sulfanylbenzo[\textit{c}]furans via Pummerer Reaction .......................... 102
10.2.1.2.6.1 Variation 1: 3-Aryl(alkyl)-1-sulfanylbenzo[\textit{c}]furans via Thermal Pummerer Reaction .......................... 102
10.2.1.2.6.2 Variation 2: Sulfanylbenzo[\textit{c}]furans via Low-Temperature Pummerer Reaction .......................... 103
10.2.1.2.6.3 Variation 3: 3-Amino-1-Sulfanylbenzo[\textit{c}]furans via Pummerer Reaction of \( \circ \)-Amido Sulfoxides .......................... 103
10.2.1.3 By Annulation to a Furan ........................................... 104
10.2.1.3.1 Method 1: Via Condensations of 3,4-Diformylfurans .......................... 105

Science of Synthesis Original Edition Volume 10
© Georg Thieme Verlag KG
10.2. Synthesis by Ring Transformation

10.2.1 Method 1: Nucleophilic Additions to Phthalides

10.2.2 Method 2: Via 1,4-Elimination from 1-Alkoxyphthalans

10.2.3 Variation 1: Thermal Generation of Benzo[c]furan from Alkoxyphthalans

10.2.4 Variation 2: Via Acid-Catalyzed 1,4-Elimination of Alkoxyphthalans

10.2.5 Variation 3: Via Amide Base Promoted 1,4-Elimination of Alkoxyphthalans

10.2.6 Variation 4: Via Catalytic Amide Base Promoted 1,4-Elimination of Alkoxyphthalans

10.2.7 Variation 5: Via 1,4-Elimination of Alkoxyphthalans with in situ Silylation

10.2.8 Method 3: Via Elimination from Phthalan Hemiaminals

10.2.9 Method 4: Via Isomerization (Aromatization) of Alkylidenephthalans

10.2.10 Method 5: From Phthalide Anions (Aromatization via Deprotonation)

10.2.11 Method 6: Via Retro-Diels–Alder Reactions

10.2.12 Method 7: Via Aromatization of the Arene Ring

10.3 Product Class 3: Dibenzofurans

10.3.1 Synthesis by Ring-Closure Reactions

10.3.2 By Formation of the Furan Ring

10.3.3 By Formation of Two O–C Bonds

10.3.4 Method 1: From 2,2'-Dihalobiphenyls
10.3.1.2 By Formation of One O—C and One C—C Bond ........................................ 135

10.3.1.2.1 Method 1: From Cyclohexa-1,3-diones and 2-Halocyclohexanones (Feist–Benary Synthesis) .................................................. 135

10.3.1.2.2 Method 2: From Quinones and Cyclohexanone Enamines ..................... 136

10.3.1.2.3 Method 3: From Phenolate Ions and 2-Halocyclohexanones (Ebel’s Method) ............................................................. 136

10.3.1.2.4 Method 4: From Phenols via Oxidative Coupling .................................. 137

10.3.1.3 By Formation of One O—C Bond ............................................................ 138

10.3.1.3.1 Method 1: From 2,2′-Dihydroxybiphenyls ........................................... 138

10.3.1.3.2 Method 2: From 2-Halo-2′-hydroxybiphenyls ...................................... 139

10.3.1.3.3 Method 3: From 2-Amino-2′-methoxybiphenyls .................................. 139

10.3.1.4 By Formation of One C—C Bond ............................................................ 140

10.3.1.4.1 Method 1: From 2,2′-Diiododiphenyl Ethers ....................................... 140

10.3.1.4.2 Method 2: From 2-Aminodiphenyl Ethers .......................................... 141

10.3.1.4.2.1 Variation 1: From 2-Phenoxybenzenediazonium Salts under Acidic Conditions ......................................................... 141

10.3.1.4.2.2 Variation 2: From 2-Phenoxybenzenediazonium Salts on Treatment with Electron Donors .............................................. 142

10.3.1.4.3 Method 3: Cyclization of Diphenyl Ethers .......................................... 142

10.3.1.4.3.1 Variation 1: From Diphenyl Ethers Using Stoichiometric Palladium(II) Acetate ......................................................... 143

10.3.1.4.3.2 Variation 2: From Diphenyl Ethers Using Catalytic Palladium(II) Acetate .......................................................... 144

10.3.1.4.3.3 Variation 3: From Diphenyl Ethers by Photochemical Cyclization .......... 145

10.3.1.2 By Annulation to Benzo[b]furans .......................................................... 146

10.3.1.2.1 Method 1: From 2-Methylbenzo[b]furan-3-carbaldehydes ...................... 146

10.3.1.2.1.1 Method 2: From 2-Vinylbenzo[b]furans ......................................... 147

10.3.1.2.2 By Formation of One C—C Bond ....................................................... 147

10.3.1.2.2.1 Method 1: Via Intramolecular Claisen Condensation ......................... 148

10.3.1.2.2.2 Method 2: Via Intramolecular Friedel–Crafts Acylation ...................... 148

10.3.2 Synthesis by Ring Transformation ............................................................. 149

10.3.2.1 Method 1: From Quinone–Cyclohexadiene Cycloaddition Adducts .......... 149

10.3.2.2 Method 2: From Spirobenzo[b]furanones .............................................. 150

10.3.3 Additional Methods ............................................................................. 150
10.4 Product Class 4: Benzo[b]thiophenes
C. M. Rayner and M. A. Graham

10.4.1 Synthesis by Ring-Closure Reactions ........................................ 155
10.4.1.1 By Annulation to an Arene ................................................ 156
10.4.1.1.1 By Formation of Two S—C Bonds and One C—C Bond ............ 157
10.4.1.1.1 Method 1: Zirconium-Mediated Coupling of Aryllithium Reagents with Alkynes and Sulfur Dichloride .................................. 157
10.4.1.1.2 By Formation of Two S—C Bonds ........................................ 158
10.4.1.1.2.1 Method 1: Condensation of Styrenes with Sulfur ............. 158
10.4.1.1.3 By Formation of One S—C and One C—C Bond .................. 158
10.4.1.1.3.1 Method 1: From Phosphonium Salts ............................... 158
10.4.1.1.3.2 Method 2: Perkin Condensation .................................... 159
10.4.1.1.4 By Formation of Two C—C Bonds ..................................... 160
10.4.1.1.4.1 Method 1: By Lithiation of Thioanisole .......................... 160
10.4.1.1.5 By Formation of One S—C Bond ....................................... 161
10.4.1.1.5.1 Method 1: Oxidative Cyclization of o-Sulfanylcinnamic Acids with Subsequent Decarboxylation .................................. 161
10.4.1.1.5.2 Method 2: Electrophilic Cyclization of 2-Sulfanylcinnamic Acids ............. 162
10.4.1.1.5.3 Method 3: Cyclization of (E)-3-Chlorovinylsulfenamides to 2-Substituted 3-Chlorobenzo[b]thiophenes ............................... 163
10.4.1.1.5.4 Method 4: Cyclization of [2-(Benzylsulfanyl)phenyl]acetonitrile .......... 163
10.4.1.1.6 By Formation of One C—C Bond ..................................... 164
10.4.1.1.6.1 Method 1: Cyclization of 2-(Phenylsulfanyl)acetaldehyde Dialkyl Acetals and Related Compounds .......................... 164
10.4.1.1.6.2 Method 2: Dieckmann Condensation ............................... 166
10.4.1.1.6.3 Method 3: Intramolecular Heck Cyclization ..................... 166
10.4.1.1.7 By Annulation to the Heterocyclic Ring ............................ 167
10.4.1.2.1 By Formation of Two C—C Bonds ..................................... 167
10.4.1.2.1.1 Method 1: By the Diels–Alder Reaction .......................... 167
10.4.1.2.1.2 Method 2: By Michael Addition of a Thiénylmethyl Anion .......... 167
10.4.1.2.1.3 Method 3: By Metal-Mediated Cross Coupling of 2,3-Disubstituted 4-Chlorocyclobut-2-enones .................................. 168
10.4.1.2.1.4 Method 4: Cyclocarbonylation of 3-Thienylallyl Acetates ........ 169
10.4.1.2.2 By Formation of One C—C Bond ..................................... 169
10.4.1.2.2.1 Method 1: Photolysis of (Naphthylvinyl)thiophenes to Phenanthro[b]thiophenes ........................................ 169
10.4.2 Synthesis by Substituent Modification ..................................... 170
10.4.2.1 Substitution of Existing Substituents ................................... 170
10.4.2.1.1 Method 1: Metalation ................................................ 170
10.4.2.1.2 Method 2: C-Acylation ............................................. 171
10.4.2.1.3 Method 3: C-Alkylation ............................................. 172
10.4.2.1.4 Method 4: Cerium(IV)-Mediated Addition of a Malonyl Radical to Benzo[b]thiophene ........................................ 173
10.4.2.1.5 Method 5: C-Halogenation ........................................... 173
10.4.2.1.6 Of Metals .................................................................. 174
10.4.2.1.6.1 Method 1: Reactions Involving Organopalladium Derivatives ........................................ 174
10.4.2.1.6.2 Method 2: Reactions Involving Organolithium Intermediates ........................................ 175
10.4.2.1.6.3 Of Carbon Functionalities .......................................... 177
10.4.2.1.6.3.1 Method 1: Curtius Rearrangement of Carboxylic Acids ........................................ 177
10.4.2.1.6.4 Of Heteroatoms .......................................................... 177
10.4.2.1.6.4.1 Method 1: Metal–Halogen Exchange ........................................ 177
10.4.2.1.6.4.2 Method 2: Palladium-Mediated Coupling of Halobenzo[b]thiophenes ........................................ 178
10.4.2.1.6.4.3 Method 3: Reactions of Diazonium Salts ........................................ 179
10.4.2.2 Modification of Substituents ............................................ 181
10.4.2.2.1 Method 1: Reduction of Nitro Derivatives ........................................ 181

10.5 Product Class 5: Benzo[c]thiophenes
T. L. Gilchrist and S. J. Higgins

10.5 Product Class 5: Benzo[c]thiophenes ........................................ 185
10.5.1 Synthesis by Ring-Closure Reactions ........................................ 187
10.5.1.1 By Annulation to an Arene ............................................. 187
10.5.1.1.1 By Formation of Two S—C Bonds ........................................ 187
10.5.1.1.1.1 Method 1: From 1,2-Diacetylbenezens and Phosphorus Pentasulfide ........................................ 188
10.5.1.1.1.1.1 Variation 1: Use of Lawesson’s Reagent ........................................ 188
10.5.1.1.1.1.2 Variation 2: Reaction of 1,2-Dibenzylbenzenes with Sulfur ........................................ 189
10.5.1.1.2 By Formation of One S—C and One C—C Bond ........................................ 190
10.5.1.1.2.1 Method 1: Reaction of Thiobenzophenones with Bis(arenesulfonyl)diazomethanes ........................................ 190
10.5.1.1.3 By Formation of Two C—C Bonds ........................................ 190
10.5.1.1.3.1 Method 1: Use of the Hinsberg Thiophene Synthesis for c-Fused Thiophenes ........................................ 191
10.5.1.1.4 By Formation of One C—C Bond ........................................ 192
10.5.1.1.4.1 Method 1: Intramolecular Nucleophilic Substitution of Fluoroarenes ........................................ 192
10.5.1.2 By Annulation to a Thiophene Ring ........................................ 192
10.5.1.2.1 Method 1: Addition of (3-Thienyl)methyl 4-Tolyl Sulfoles to Conjugated Alkenes ........................................ 194
10.5.2 Synthesis by Ring Transformation ........................................ 195
  10.5.2.1 Method 1: From Isobenzofurans ................................. 195
  10.5.2.2 Method 2: Via Cyclic Rhodium Complexes Derived from
  Bis(phenylethynyl)arenes ........................................ 196
  10.5.2.3 Method 3: Ring Contraction of 1,4-Dihydrobenzodithiins .... 197
  10.5.2.4 Method 4: Ring Contraction of Benzothiins ................. 197
10.5.3 Aromatization .................................................................... 199
  10.5.3.1 Method 1: From 1,3-Dihydrobenzo[c]thiophene 2-Oxides .... 201
  10.5.3.1.1 Variation 1: Aromatization of 2-Methoxy-1,3-dihydro-
  benzo[c]thiophenyl Trifluoromethanesulfonates .................. 202
  10.5.3.2 Method 2: Dechlorination of 1,1,3,3-Tetrachloro-1,3-dihydro-
  benzo[c]thiophene ................................................. 203
10.5.4 Synthesis by Substituent Modification .................................. 203
  10.5.4.1 Method 1: Displacement Reactions Based on
  1,3-Dichlorobenzo[c]thiophene ....................................... 204
10.5.5 Synthesis of Poly(benzo[c]thiophenes) .................................. 205

10.6 Product Class 6: Dibenzothiophenes
M. D. Andrews

10.6 Product Class 6: Dibenzothiophenes ...................................... 211
  10.6.1 Synthesis by Ring-Closure Reactions .................................. 213
  10.6.1.1 By Annulation to an Arene ....................................... 214
  10.6.1.1.1 By Formation of Two S—C Bonds ............................ 214
  10.6.1.1.1.1 Method 1: From Biphenyl Using Sulfur and Aluminum Trichloride .... 214
  10.6.1.1.1.2 Method 2: From Biaryls Using Hydrogen Sulfide and a Catalyst .... 215
  10.6.1.1.1.3 Method 3: From Biaryl-2,2'-diols and Phosphorus Pentasulfide .... 215
  10.6.1.1.1.4 Method 4: From Biaryls and Sulfur Dichloride ............. 216
  10.6.1.1.1.5 Method 5: From Biaryls and Oleum or Chlorosulfonic Acid .... 217
  10.6.1.1.1.6 Method 6: From 3-Arylcyclohex-2-enones .................. 218
  10.6.1.1.2 By Formation of One S—C and One C—C Bond .................. 219
  10.6.1.1.2.1 Method 1: Via Cyclization of α-Arylsulfanyl Ketones .......... 219
  10.6.1.1.2.1.1 Variation 1: The Tilak Annulation ......................... 219
  10.6.1.1.2.1.2 Variation 2: From an Epoxycyclohexanone .............. 222
  10.6.1.1.2.2 Method 2: From Tetrafluorobenzene ...................... 223
  10.6.1.1.3 By Formation of One S—C Bond .................................. 223
  10.6.1.1.3.1 Method 1: From Arenesulfonyl or Arenesulfinyl Chlorides ...... 223
  10.6.1.1.3.2 Method 2: By Oxidation of 2-[(Trifluoromethyl)sulfanyl]biphenyls ... 224
  10.6.1.1.4 By Formation of One C—C Bond .................................. 225
  10.6.1.1.4.1 Method 1: The Pschorr Cyclization .......................... 225
  10.6.1.1.4.2 Method 2: By Treatment of Diaryl Sulfoxides with Base .......... 227
Method 3: Photocyclization of Diaryl Sulfides ........................................ 227
Method 4: Vacuum Pyrolysis of Aryl Radical Precursors ................... 228
Additional Methods ............................................................................. 229
By Annulation to the Heterocyclic Ring ........................................... 229
By Formation of Two C–C Bonds ...................................................... 229
Method 1: By Reaction of Dichloromethyl Ethers with Allylbenzo[b]thiophenes .......................................................... 229
Method 2: Diels–Alder Reactions of Benzo[b]thiophene 1,1-Dioxides ... 231
Method 3: Diels–Alder Reactions of Vinylbenzo[b]thiophenes ............. 232
Method 4: Via Coupling of Cyclobutenones with Organostannanes ...... 233
Method 5: Via Benzothieno[2,3-c]pyrylium Salts .............................. 234
Method 6: From 2-Benzoyl-3-chlorobenzo[b]thiophene 1,1-Dioxide ..... 235
Method 7: By Double Friedel–Crafts Alkylation Reactions ................ 236
By Formation of One C–C Bond ......................................................... 237
Method 1: Photocyclization of 1,2-Diarylalkenes ................................ 237
Method 2: By Cyclization of Aromatic Aldehydes or Ketones (The Bradsher Reaction) ................................................................. 239
Method 3: Intramolecular Friedel–Crafts Acylation Reactions .......... 240
Method 4: By Pyrolysis of Aroylbenzo[b]thiophenes (The Elbs Reaction) ................................................................. 241
Method 5: By Thermolysis of (Arylhydroxymethyl)thiophenes .......... 242
Additional Methods ............................................................................. 243
Synthesis by Ring Transformation .................................................... 243
Method 1: Diels–Alder Reactions of Benzothienopyranones ............. 243
Method 2: Reduction of Dibenzo[c,e]dithiins .................................. 244
Method 3: Reaction of Thianthrene 5-Oxides with Organolithiums ...... 244
Additional Methods ............................................................................. 245
Aromatization .................................................................................... 246
Method 1: By Dehydrogenation ......................................................... 246
Variation 1: Palladium on Carbon at High Temperature .................. 246
Variation 2: Heating with Selenium or Sulfur ................................. 246
Variation 3: Oxidation with Quinone ............................................... 247
Variation 4: Halogenation/Dehydrohalogenation ............................ 247
Method 2: By Elimination ................................................................. 248
Synthesis by Substituent Modification .............................................. 248
Addition Reactions ............................................................................. 248
Method 1: S-Alkylation ..................................................................... 248
Method 2: S-Oxidation ..................................................................... 249
Variation 1: Formation of Dibenzothiophene 5,5-Dioxides ............ 249
Variation 2: Formation of Dibenzothiophene 5-Oxides .................. 250
Substitution of Existing Substituents ................................................. 250
Of Hydrogen ....................................................................................... 250
10.6.4.2.1.1 Method 1: Via Metalation ............................................. 250
10.6.4.2.1.2 Method 2: Friedel–Crafts Acylation ................................... 252
10.6.4.2.1.3 Method 3: Halogenation .................................................. 253
10.6.4.2.1.4 Method 4: Nitration .......................................................... 253
10.6.4.2.2 Of Metals ............................................................................ 254
10.6.4.2.3 Of Carbon ............................................................................ 255
10.6.4.2.3.1 Method 1: Decarboxylation .............................................. 255
10.6.4.2.4 Of Heteroatoms ................................................................... 255
10.6.4.2.4.1 Method 1: Reduction of Dibenzothiophene 5-Oxides and 5,5-Dioxides .................................................. 255
10.6.4.2.4.2 Method 2: Substitution of Halogens ................................... 256
10.6.4.2.4.3 Method 3: Substitution of Nitrogen ..................................... 257
10.6.4.3 Rearrangement of Substituents .............................................. 258
10.6.4.4 Modification of Substituents ................................................. 258

10.7 Product Class 7: Benzo[b]selenophenes

P. J. Murphy

10.7.1 Synthesis by Ring-Closure Reactions ...................................... 265
10.7.1.1 By Annulation to an Arene .................................................... 265
10.7.1.1.1 By Formation of Two Se—C Bonds ...................................... 265
10.7.1.1.1.1 Method 1: From 1-Arylalk-1-ynes and Selenium Tetrahalides .................................................. 266
10.7.1.1.1.2 Method 2: From 1-Arylalk-1-ynes and Diselenium Dichloride .................................................. 267
10.7.1.1.1.3 Method 3: From 1-Arylalk-1-ynes, Selenium Dioxide, and Hydrogen Halides .................................................. 267
10.7.1.1.1.4 Method 4: From 1,5-Diphenylpenta-1,4-dien-3-one and Selenium Tetrabromide .................................................. 268
10.7.1.1.1.5 Method 5: From 1,1-Diaryalkenes and Selenium Oxychloride .................................................. 269
10.7.1.1.1.6 Method 6: From 1-(2-Chlorophenyl)ethanone and Lithium Diselenide .................................................. 269
10.7.1.1.1.7 Method 7: From Cumulenes and Selenium .................................................. 270
10.7.1.1.1.8 Method 8: From Metalated Intermediates .................................. 270
10.7.1.1.1.8.1 Variation 1: From 1-Arylalk-1-ynes .................................. 270
10.7.1.1.1.8.2 Variation 2: From 1-(2-Bromophenyl)alk-1-ynes .......................... 271
10.7.1.1.1.8.3 Variation 3: From 1-Bromo-2-phenyl- or 1-Bromo-2-(2-bromophenyl)-1-(trimethylsilyl)ethene .................................................. 271
10.7.1.1.2 By Formation of One Se—C and One C—C Bond .......................... 272
10.7.1.1.2.1 Method 1: From Diphenyl Diselenide and Dimethyl Acetylenedicarboxylate .................................................. 272
10.7.1.1.2.2 Method 2: From Diazodiphenylmethane and Benzoyl Isoselenocyanate .................................................. 272
10.7.1.1.3 By Formation of One Se—C Bond ............................................. 273
10.7.1.1.3.1 Method 1: By Free-Radical Homolytic Substitution at Selenium .................................................. 273
10.7.1.3.2 Method 2: By Electrophilic Substitution of Styrenes .................................. 273
10.7.1.3.3 Method 3: By Cyclodehydration of Ketones ........................................... 275
10.7.1.3.4 Method 4: Benzo[b]selenophen-2(3H)-one by Selenolactonization ............. 276
10.7.1.3.5 Method 5: Benzo[b]selenophen-3(2H)-ones from 2-Acetylnapheneselenenyl Bromides ................................................................. 276
10.7.1.3.6 Method 6: Benzo[b]selenophen-3(2H)-one from 1-[2-(Butylselenyl)phenyl]-2-diazoethan-1-one .................................................. 277
10.7.1.4 By Formation of One C–C Bond ............................................................. 278
10.7.1.4.1 Method 1: From Intramolecular Condensations with Aldehydes and Ketones .......................................................... 278
10.7.1.4.2 Method 2: From Intramolecular Condensations of Dicarboxylic Acids .... 280
10.7.1.4.3 Method 3: From Dieckmann Cyclizations ................................................. 281
10.7.1.4.4 Method 4: From Cyclization of 2-(Benzylselenyl)arencarboxanilides .... 281
10.7.1.4.5 Method 5: Miscellaneous Preparations .................................................. 282
10.7.1.2 By Annulation to the Heterocyclic Ring ..................................................... 282
10.7.1.2.1 Method 1: Acylation of Acetonylselenophenes ......................................... 282
10.7.2 Synthesis by Ring Transformation ................................................................ 284
10.7.2.1 Method 1: By Oxidative Ring Contraction .................................................. 284
10.7.3 Aromatization .................................................................................................. 285
10.7.3.1 Method 1: By Dehydrogenation ................................................................. 285
10.7.4 Synthesis by Substituent Modification .......................................................... 285
10.7.4.1 Addition Reactions ...................................................................................... 285
10.7.4.1.1 Method 1: Oxidation at Selenium ........................................................... 285
10.7.4.2 Substitution of Existing Substituents .......................................................... 286
10.7.4.2.1 Of Hydrogen ............................................................................................ 286
10.7.4.2.1.1 Method 1: Metallation ........................................................................ 286
10.7.4.2.1.1.1 Variation 1: Lithiation ....................................................................... 286
10.7.4.2.1.1.2 Variation 2: Mercuration ................................................................. 286
10.7.4.2.1.2 Method 2: Friedel–Crafts and Related Reactions ................................ 287
10.7.4.2.1.2.1 Variation 1: Intermolecular Acylation .............................................. 287
10.7.4.2.1.2.2 Variation 2: Intramolecular Acylation .............................................. 288
10.7.4.2.1.2.3 Variation 3: Arylations and Alkylations .......................................... 288
10.7.4.2.1.3 Method 3: Halogenation and Nitration .............................................. 289
10.7.4.2.2 Of Metals .................................................................................................. 290
10.7.4.2.2.1 Method 1: Substitution of Lithium ...................................................... 290
10.7.4.2.2.2 Method 2: Miscellaneous Substitution of Metals .............................. 291
10.7.4.2.3 Of Carbon Functionalities ....................................................................... 291
10.7.4.2.3.1 Method 1: Decarboxylation ............................................................... 291
10.7.4.2.4 Of Heteroatoms ...................................................................................... 292
10.7.4.2.4.1 Method 1: Reduction of Benzo[b]selenophen-3(2H)-ones ................. 292
10.7.4.2.2 Method 2: Reaction of Benzo[b]selenophen-3(2H)-ones with Carbon Nucleophiles ........................................ 293
10.7.4.2.4.2 Variation 1: With Grignard Reagents .......................... 293
10.7.4.2.4.2.1 Variation 2: With Wittig Reagents .......................... 294
10.7.4.2.4.3 Method 3: Reaction of Benzo[b]selenophen-3(2H)-one with Secondary Amines ........................................ 294
10.7.4.2.4.4 Method 4: Transmetalation of Halogenated Benzo[b]selenophenes .... 295
10.7.4.2.4.5 Method 5: Dehalogenation of Halogenated Benzo[b]selenophenes .... 295
10.7.4.2.4.6 Method 6: Nucleophilic Substitution of Halogenated Benzo[b]selenophenes ......................................... 296
10.7.4.3 Modification of Substituents ........................................ 296
10.7.4.4 Miscellaneous Reactions ........................................... 296

10.8 Product Class 8: Benzo[c]selenophenes

10.8.1 Synthesis by Ring-Closure Reactions .................................. 301
10.8.1.1 By Annulation to an Arene ........................................ 301
10.8.1.1.1 By Formation of Two Se—C Bonds ................................ 301
10.8.1.1.1.1 Method 1: From 2-(Bromomethyl)benzoyl Chloride .......... 301
10.8.1.1.2 By Formation of One Se—C Bond ................................ 302
10.8.1.1.2.1 Method 1: From 2-(Selanylmethyl)benzoic Acid ............ 302
10.8.2 Synthesis by Ring Transformation ..................................... 302
10.8.2.1 Method 1: From Rhodacycles ....................................... 302
10.8.3 Aromatization ................................................................... 303
10.8.3.1 Method 1: By Elimination ............................................ 303
10.8.3.2 Method 2: By Dehydrogenation ..................................... 303
10.8.4 Synthesis by Substituent Modification ............................... 304
10.8.4.1 Method 1: Benzo[c]selenophen-1(3H)-one by Hydrolysis of Benzo[c]selenophen-1(3H)-imine ............................ 304
10.8.4.2 Method 2: Benzo[c]selenophene-1(3H)-thione by Reaction of Benzo[c]selenophen-1(3H)-imine with Hydrogen Sulfide .... 304

10.9 Product Class 9: Dibenzoselenophenes

10.9.1 Synthesis by Ring-Closure Reactions .................................. 307
10.9.1.1 By Annulation to an Arene ........................................ 307
10.9.1.1.1 By Formation of Two Se—C Bonds and One C—C Bond ........ 307
10.9.1.1.1 Method 1: Miscellaneous Preparations ............................................ 307
10.9.1.1.2 By Formation of Two Se—C Bonds ............................................. 307
10.9.1.1.2.1 Method 1: From Biphenyls ...................................................... 308
10.9.1.1.2.2 Method 2: From Metalated Biphenyls ....................................... 308
10.9.1.1.2.3 Method 3: From 2,2'-Diiodobiphenyls ....................................... 309
10.9.1.1.3 By Formation of One Se—C and One C—C Bond .......................... 310
10.9.1.1.3.1 Method 1: By Photolirradiation ................................................ 310
10.9.1.1.4 By Formation of One Se—C Bond ............................................... 310
10.9.1.1.4.1 Method 1: By Intramolecular Electrophilic Aromatic Substitution of Selenenyl Halides ................................................................. 310
10.9.1.1.4.2 Method 2: By Intramolecular Electrophilic Aromatic Substitution of Selenides .......................................................... 311
10.9.1.1.4.3 Method 3: By Intramolecular Electrophilic Aromatic Substitution of Biphenyl-Z-yl Trifluoromethyl Selenides and Selenoxides ...... 312
10.9.1.1.4.4 Method 4: Miscellaneous Preparations ....................................... 312
10.9.1.1.5 By Formation of One C—C Bond .................................................. 313
10.9.1.1.5.1 Method 1: From Dimetalated Diphenyl Selenides ...................... 313
10.9.1.1.5.2 Method 2: Miscellaneous Preparations ....................................... 313
10.9.1.2 By Annulation to the Heterocyclic Ring ......................................... 314
10.9.1.2.1 Method 1: By Annulation to Benzo[b]selenophenes ...................... 314
10.9.1.2.2 Method 2: By Formylation of a Benzo[b]selenophene and Cyclization .................... 314
10.9.2 Synthesis by Ring Transformation ..................................................... 315
10.9.2.1 Method 1: Miscellaneous Preparations ........................................... 315
10.9.3 Aromatization ..................................................................................... 316
10.9.3.1 Method 1: By the Fischer Indole Synthesis ........................................ 316
10.9.4 Synthesis by Substituent Modification ............................................. 316
10.9.4.1 Addition Reactions ......................................................................... 316
10.9.4.1.1 Method 1: Oxidation at Selenium ................................................. 316
10.9.4.1.2 Method 2: Imidation at Selenium .................................................. 317
10.9.4.1.3 Method 3: Halogenation at Selenium ............................................ 317
10.9.4.2 Substitution of Existing Substituents .............................................. 318
10.9.4.2.1 Of Hydrogen ................................................................................. 318
10.9.4.2.1.1 Method 1: Metalation ................................................................ 318
10.9.4.2.1.2 Method 2: Friedel–Crafts and Related Reactions ...................... 318
10.9.4.2.2 Of Metals ....................................................................................... 321
10.9.4.2.2.1 Method 1: Electrophilic Substitution of Lithium ....................... 321
10.9.4.2.3 Of Carbon Functionalities .................................................. 321
10.9.4.2.3.1 Method 1: Substitution of Carbon Functionalities at Selenium .......... 321
10.9.4.2.4 Of Heteroatoms ...................................................................... 322
10.9.4.2.4.1 Method 1: Displacement of Heteroatoms at Selenium .................. 322
10.9.4.3 Modification of Substituents .................................................... 322

10.10 Product Class 10: Benzo[b]tellurophenes
P. J. Murphy

10.10 Product Class 10: Benzo[b]tellurophenes ........................................ 325
10.10.1 Synthesis by Ring-Closure Reactions ........................................... 325
10.10.1.1 By Annulation to an Arene ...................................................... 325
10.10.1.1.1 By Formation of Two Te—C Bonds ........................................ 325
10.10.1.1.1.1 Method 1: From 1-Arylalk-1-yynes and Tellurium Dioxide ............ 325
10.10.1.1.1.2 Method 2: From 1-Arylalk-1-yynes and Tellurium Tetrahalides ........ 326
10.10.1.1.1.3 Method 3: From Metalated Intermediates .................................. 327
10.10.1.1.1.3.1 Variation 1: From 1-Arylalk-1-ynes ...................................... 327
10.10.1.1.1.3.2 Variation 2: From 1-(2-Bromophenyl)alk-1-ynes ..................... 328
10.10.1.1.1.3.3 Variation 3: From 1-Bromo-2-phenyl- or
1-Bromo-2-(2-bromophenyl)-1-(trimethylsilyl)ethene .......................... 329
10.10.1.1.1.3.4 Variation 4: From Bis(2-bromophenyl)acetylene ................... 330
10.10.1.1.2 By Formation of One Te—C Bond ........................................ 330
10.10.1.1.2.1 Method 1: By Electrophilic Substitution of Styrenes .................. 330
10.10.1.1.2.2 Method 2: Benzo[b]tellurophen-3(2H)-one from
2-Acetylbenzenetellurenyl Bromide .................................................. 330
10.10.1.1.2.3 Method 3: Benzo[b]tellurophen-3(2H)-one from
1-[2-(Butyltellanyl)phenyl]-2-diazoethan-1-one ................................. 331
10.10.1.1.3 By Formation of One C—C Bond ........................................... 331
10.10.1.1.3.1 Method 1: From Intramolecular Condensations with
Aldehydes and Ketones ................................................................. 331
10.10.1.1.3.2 Method 2: From Intramolecular Condensations of Dicarboxylic Acids ... 332

10.10.4.1 Addition Reactions ................................................................. 334
10.10.4.1.1 Method 1: Alkylation Reactions at Tellurium ............................. 334
10.10.4.1.2 Method 2: Halogenation Reactions at Tellurium ....................... 334
Substitution of Existing Substituents ........................................ 335
  10.10.4.2.1 Of Hydrogen .......................................................... 335
  10.10.4.2.1.1 Method 1: Lithiation ............................................. 335
  10.10.4.2.1.2 Method 2: Friedel–Crafts and Related Reactions .......... 335
  10.10.4.2.1.3 Method 3: Halogenation ......................................... 336
  10.10.4.2.2 Of Metals ............................................................ 336
  10.10.4.2.2.1 Method 1: Substitution of Lithium ............................. 336
  10.10.4.2.3 Of Carbon Functionalities ........................................ 337
  10.10.4.2.3.1 Method 1: Decarboxylation .................................... 337
  10.10.4.2.4 Of Heteroatoms .................................................... 338
    10.10.4.2.4.1 Method 1: Reduction of Benzo[b]tellurophen-3(2H)-one ...... 338
    10.10.4.2.4.2 Method 2: Reaction of Benzo[b]tellurophen-3(2H)-one with Carbon Nucleophiles ........................................... 338
    10.10.4.2.4.3 Method 3: Reaction of Benzo[b]tellurophen-3(2H)-one with Amine Derivatives .................................................. 339
    10.10.4.2.4.4 Method 4: Reaction of Benzo[b]tellurophen-3(2H)-one with Halogenating Reagents ............................................. 339
    10.10.4.2.4.5 Method 5: Nucleophilic Substitution of Halogenated Benzo[b]tellurophenes ...................................................... 339
  10.10.4.3 Modification of Substituents ...................................... 340
  10.11 Product Class 11: Benzo[c]tellurophenes ............................. 343
  10.11.1 Synthesis by Ring-Closure Reactions ................................ 343
    10.11.1.1 By Annulation to an Arene ........................................ 343
    10.11.1.1.1 Method 1: From 2-(Bromomethyl)benzoyl Halides ............ 343
    10.11.1.1.2 By Formation of One Te—C Bond ................................ 344
    10.11.1.1.2.1 Method 1: From 2-(Bromocarbonyl)benzyltellurenyl Bromide 344
  10.11.2 Aromatization ............................................................ 344
    10.11.2.1 Method 1: By Elimination .......................................... 344
  10.11.3 Synthesis by Substituent Modification ................................ 345
    10.11.3.1 Method 1: Benzo[c]tellurophene-1(3H)-thione by Sulfurization of Benzo[c]tellurophen-1(3H)-one .................................. 345
10.12 Product Class 12: Dibenzotellurophenes
P. J. Murphy

10.12 Product Class 12: Dibenzotellurophenes .................................................. 347

10.12.1 Synthesis by Ring-Closure Reactions .................................................. 347

10.12.1.1 By Annulation to an Arene .......................................................... 347

10.12.1.1.1 Method 1: From 1,2-Diiodobenzenes and Tellurium ......................... 347

10.12.1.1.2 Method 1: From Biphenyls and Inorganic Tellurium Reagents .......... 348

10.12.1.1.2.1 Method 2: From Metalated Biphenyls .................................... 349

10.12.1.1.2.2 Method 3: From 2,2'-Diiodobiphenyls ..................................... 350

10.12.1.1.3 Method 1: By Intramolecular Electrophilic Aromatic Substitution of
Biphenyl-2-yltellurium Trichloride .................................................................. 351

10.12.1.1.3.1 Method 2: By Intramolecular Electrophilic Aromatic Substitution of
Biphenyl-2-yl Trifluoromethyl Telluride ......................................................... 351

10.12.2 Synthesis by Ring Transformation ......................................................... 352

10.12.2.1 Method 1: Miscellaneous Preparations ............................................. 352

10.12.3 Synthesis by Substituent Modification ............................................... 352

10.12.3.1 Addition Reactions ................................................................. 352

10.12.3.1.1 Method 1: Oxidation at Tellurium ............................................. 352

10.12.3.1.2 Method 2: Imidation at Tellurium .............................................. 353

10.12.3.1.3 Method 3: Alkylation at Tellurium ............................................ 353

10.12.3.1.4 Method 4: Halogenation at Tellurium ........................................ 353

10.12.3.2 Substitution of Existing Substituents ............................................. 354

10.12.3.2.1 Of Hydrogen ................................................................. 354

10.12.3.2.1.1 Method 1: Nitration and Sulfonation .................................... 354

10.12.3.2.2 Of Carbon Functionalities .................................................... 355

10.12.3.2.2.1 Method 1: Cleavage of the Te—C Bond in
Bis(biphenyl-2,2'-diyl)-λ₄-tellanes .............................................................. 355

10.12.3.2.3 Of Heteroatoms ................................................................. 355

10.12.3.2.3.1 Method 1: Hydrolysis of N-Tosyldibenzotellurophene-5-imine ....... 355

10.12.3.2.3.2 Method 2: Hydrolysis of 5,5-Dichlorodibenzotellurophenes ........ 356

10.12.3.2.3.3 Method 3: Substitution of Halides and Alkoxides at Tellurium ..... 356

10.12.3.2.3.4 Method 4: Bis(biphenyl-2,2'-diyl)-λ₄-tellane by
Substitution at Tellurium ............................................................................. 357

10.12.3.3 Modification of Substituents ..................................................... 357

10.12.3.4 Miscellaneous Reactions ............................................................ 357

10.15.1.1.6.2 With Formation of the 2–3 Bond ................................................. 712
10.15.1.1.6.2.1 Method 1: Rearrangement of Divinylindoles ............................... 713
10.15.1.1.6.3 With Formation of the 3–4 Bond ................................................. 713
10.15.1.1.6.3.1 Method 1: Cyclization of Propenylindoles ................................. 713
10.15.1.1.6.4 With Formation of the 4–4a Bond ................................................. 714
10.15.1.1.6.4.1 Method 1: Annulation of Chromium Carbene Complexes ................ 714
10.15.1.1.6.4.2 Method 2: Acid-Catalyzed Cyclization of 1,4-Diketones ................ 714
10.15.1.1.6.4.3 Method 3: Cycloaromatization of Hydroxyketene Dithioacetals .......... 715
10.15.1.1.6.4.4 Method 4: Synthesis from Indolopyridinium Methiodide ............... 715
10.15.1.1.6.5 With Formation of the 4a–4b Bond .............................................. 716
10.15.1.1.6.5.1 Method 1: Palladium-Promoted Cyclization of Diphenylamines ........ 716
10.15.1.1.6.5.2 Method 2: Photolytic Cyclization of Diarylamines ..................... 717
10.15.1.1.6.5.3 Method 3: The Graebe–Ullmann Synthesis ................................. 717
10.15.1.6.6 With Formation of the 9a—1 Bond ........................................... 718

10.15.1.6.6.1 Method 1: Cyclization and Dehydrogenation of Indol-3-yldienes 718
10.15.1.6.6.2 Method 2: Cyclization and Elimination of Indol-3-yldienes 719
10.15.1.6.6.3 Method 3: Cyclization of Indolybutenoic Acids to Acetoxy carbazoles 719
10.15.1.6.6.4 Method 4: Cyclization of β-Oxo Sulfoxides ............................ 720
10.15.1.6.6.5 Method 5: Cyclization of Cyanoindolylpent-3-en-2-ones 720

10.15.2 Synthesis by Ring Transformation ............................................. 721
10.15.2.1 Method 1: Desulfurization of Phenothiazines .......................... 721
10.15.3 Aromatization ............................................................................. 721
10.15.3.1 Method 1: Elimination of Sulfite .............................................. 721
10.15.3.2 Method 2: Reductive Acylation of Quinones ............................. 722
10.15.3.3 Method 3: Dehydrogenation of 1,2,3,4-Tetrahydrocarbazoles .... 722
10.15.3.3.1 Variation 1: With Palladium on Charcoal .............................. 723
10.15.3.3.2 Variation 2: With Chloranil .................................................. 723

10.15.4 Synthesis by Substituent Modification ........................................ 724
10.15.4.1 Addition Reactions ................................................................. 724
10.15.4.1.1 Method 1: Synthesis of (η²-Carbazole)(η²-cyclopentadienyl)iron(II) Hexafluorophosphate ................................................................. 724
10.15.4.1.2 Method 2: Synthesis of Carbazole(tricarbonyl)chromium(0) .... 725
10.15.4.1.3 Method 3: Protonation of Carbazoles ...................................... 725

10.15.4.2 Substitution of Existing Substituents ........................................ 725
10.15.4.2.1 Substitution of Hydrogen ....................................................... 725
10.15.4.2.1.1 Method 1: Metalation at Carbon ........................................ 726
10.15.4.2.1.2 Method 2: Acylation on Carbon ......................................... 726
10.15.4.2.1.3 Method 3: Formylation of Carbazoles ................................. 726
10.15.4.2.1.4 Method 4: Chlorination of 9-Alkylcarbazoles ..................... 727
10.15.4.2.1.5 Method 5: Bromination of 9H-Carbazole .......................... 727
10.15.4.2.1.6 Method 6: Iodination of 9H-Carbazole ............................... 728
10.15.4.2.1.7 Method 7: Sulfonation of 9H-Carbazole ............................. 728
10.15.4.2.1.8 Method 8: Nitration of 9H-Carbazole ................................. 729
10.15.4.2.1.9 Method 9: N-Metalation of 9H-Carbazole ......................... 729
10.15.4.2.1.10 Method 10: Substitution by Carbon Functionality at NH ...... 729
10.15.4.2.1.10.1 Variation 1: Synthesis of 9-Acetylcarbazole .................. 729
10.15.4.2.1.10.2 Variation 2: Microwave-Irradiation-Accelerated N-Alkylation ................................. 730
10.15.4.2.1.10.3 Variation 3: N-Alkylation with Dimethyl Sulfate ............ 730
10.15.4.2.1.11 Method 11: N-Sulfonylation with Benzenesulfonyl Chloride .... 731
10.15.4.2.1.12 Method 12: N-Nitrosation of 9H-Carbazole ..................... 731
10.15.4.2.2 Substitution of Metals .......................................................... 732
10.15.4.2.2.1 Method 1: Silylation of (9-Ethylcarbazol-3-yl)lithium ................ 732
10.15.4.2.3 Substitution of Carbon .......................................................... 732
10.15.4.2.3.1 Method 1: Decarboxylation with Copper and Quinoline ....... 733
10.15.4.2.3.2 Method 2: Decarbonylation of Carbazolecarbaldehydes ......... 733
10.15.4.2.3 Method 3: Dealkylation of tert-Butylcarbazoles ............................ 733
10.15.4.2.4 Substitution of Heteroatoms .............................................. 734
10.15.4.2.4.1 Substitution by Hydrogen ................................................ 734
10.15.4.2.4.1.1 Method 1: Reductive Removal of Sulfur ............................ 734
10.15.4.2.4.1.2 Method 2: Hydrolysis of 9-(Phenylsulfonyl)carbazoles .......... 735
10.15.4.2.4.2 Substitution by Carbon Nucleophiles ................................ 735
10.15.4.2.4.2.1 Method 1: Suzuki Reaction of 1-Hydroxycarbazole Trifluoromethanesulfonate ............................ 735
10.15.4.2.4.2.2 Method 2: Displacement of Iodide with Copper(I) Cyanide .... 735
10.15.4.2.4.3 Substitution by Other Heteroatoms ................................. 736
10.15.4.2.4.3.1 Method 1: Replacement of a Diazonium Group by Chlorine (Sandmeyer Reaction) ........................................ 736
10.15.4.2.4.3.2 Method 2: Nucleophilic Displacement of Bromine with Phenylhydrazine ........................................ 736
10.15.4.3 Modification of Substituents ................................................. 737
10.15.4.3.1 Method 1: Reduction of Aldehydes ....................................... 737
10.15.4.3.2 Method 2: Reduction of Carbazolyl Ketones ............................ 738
10.15.4.3.3 Method 3: Trimethylsiloxy Cyanohydrin Formation from Ketones 738
10.15.4.3.4 Method 4: Reductive Hydrolysis of Trimethylsilyl Cyanohydrins .... 739
10.15.4.4 Rearrangement of Substituents ............................................. 739
10.15.4.4.1 Method 1: Rearrangement of 9-(Phenylacetyl)carbazole ............ 739
10.15.4.4.2 Method 2: Acetamidocarbazoles from Beckmann Rearrangement .... 740

10.16 Product Class 16: Indolizines
M. Shipman

10.16.1 Synthesis by Ring-Closure Reactions ...................................... 745
10.16.1.1 By Formation of One N—C and One C—C Bond ....................... 747
10.16.1.1.1 With Formation of 1—2 and 3—4 Bonds ............................. 748
10.16.1.1.1.1 Method 1: From 2-Ethynylpyridines and Acetylenes ............. 748
10.16.1.1.1.2 Method 2: From 2-Substituted Pyridines and Alkenes .......... 748
10.16.1.1.1.3 Method 3: From 2-Methylpyridines and Acid Anhydrides (Scholtz Reaction) ........................................ 749
10.16.1.1.2 With Formation of 1—8a and 3—4 Bonds ............................ 750
10.16.1.1.2.1 Method 1: Palladium-Catalyzed Coupling Reactions of 2-Bromopyridines .............................................. 750
10.16.1.1.2.2 Method 2: From Pyridines and Acetylenes ......................... 751
10.16.1.1.2.3 Method 3: From Pyridines and Cyclopropene Derivatives ...... 751
10.16.1.1.3 With Formation of 2—3 and 3—4 Bonds ............................................ 752
10.16.1.1.3.1 Method 1: From 2-Vinylpyridines and Carbenes ........................................ 752
10.16.1.1.4 With Formation of 4—5 and 8—8a Bonds .................................................. 753
10.16.1.1.4.1 Method 1: Condensation of Pyrrole with Hexane-2,5-dione ....................... 753
10.16.1.2 By Formation of Two C—C Bonds ................................................................. 754
10.16.1.2.1 With Formation of 1—8a and 2—3 Bonds ...................................................... 754
10.16.1.2.1.1 Method 1: 1,3-Dipolar Cycloadditions of Pyridinium Methylides .................. 754
10.16.1.2.1.1.1 Variation 1: Pyridinium Methylides by Deprotonation .............................. 754
10.16.1.2.1.2 Variation 2: Pyridinium Methylides from Pyridines and Tetracyanoethylene Oxide ................................................................. 755
10.16.1.2.1.3 Variation 3: 1,3-Dipoles from 1-[(Trimethylsilyl)methyl]pyridinium Salts ....... 756
10.16.1.2.1.4 Variation 4: 1,3-Dipoles from Carbenes ...................................................... 757
10.16.1.2.2 Method 2: From 2-Halopyridinium Salts and /C226-Dicarbonyl Compounds ... 758
10.16.1.3 By Formation of One N—C Bond ................................................................. 759
10.16.1.3.1 With Formation of the 3—4 Bond ................................................................. 759
10.16.1.3.1.1 Method 1: Cyclizations of 2-(Functionalized propyl)pyridine Derivatives ....... 759
10.16.1.3.1.1.1 Variation 1: Oxidative Cyclizations of 3-(2-Pyridyl)propan-1-ols .............. 759
10.16.1.3.1.1.2 Variation 2: Cyclizations of 3-(2-Pyridyl)propanediols and Their Derivatives ................................................................. 760
10.16.1.3.1.1.3 Variation 3: Cyclizations of 1-(2-Pyridyl)prop-2-en-1-ols and Their Derivatives ................................................................. 760
10.16.1.3.1.1.4 Variation 4: Cyclizations of 3-(2-Pyridylmethylene)pentane-2,4-diones ..... 762
10.16.1.3.1.1.5 Variation 5: Cyclizations of 3-(2-Pyridyl)propanals and Their Derivatives ................................................................. 762
10.16.1.3.1.2 Method 2: Thermal Rearrangement of 2-(Buten-3-ynyl)pyridine N-Oxides .......... 763
10.16.1.3.2 With Formation of the 4—5 Bond ................................................................. 764
10.16.1.3.2.1 Method 1: Indolizine-8-carbonitriles by Ring-Closure Reactions of Pyrroles .... 764
10.16.1.3.2.2 Method 2: Indolizine-5,8-diones by Ring-Closure Reactions of Pyrroles ........ 764
10.16.1.4 By Formation of One C—C Bond ................................................................. 765
10.16.1.4.1 With Formation of the 1—2 Bond ................................................................. 765
10.16.1.4.1.1 Method 1: Tschitschibabin Reaction ............................................................ 765
10.16.1.4.1.1.1 Variation 1: Base-Induced Cyclizations of Pyridinium Salts .................... 766
10.16.1.4.1.1.2 Variation 2: One-Pot Tschitschibabin Reactions ....................................... 767
10.16.1.4.1.2 Method 2: Synthesis of Indolizin-2(3H)-ones ........................................... 768
10.16.1.4.1.3 Method 3: Indolizines from Pyrylium Salts ............................................... 768
10.16.1.4.1.4 Method 4: 1,2-Disubstituted Indolizines from 2-Acyl-N-(acylmethyl)pyridinium Salts ................................................................. 769
10.16.1.4.2 With Formation of the 1—8a Bond ................................................................. 770
10.16.1.4.2.1 Method 1: 1,5-Dipolar Cyclizations of N-Allylpyridinium Salts ................... 770
10.16.1.4.2.2 Method 2: Synthesis of 2,3-Benzindolizines ............................................. 770
10.16.1.4.3 With Formation of the 2–3 Bond ........................................ 771
10.16.1.4.3.1 Method 1: Cyclizations of 2-Ethynylpyridinium Salts ............ 771
10.16.1.4.3.2 Method 2: Cyclization Reactions of 2-Methylene-1,2-dihydropyridines .... 772
10.16.1.4.3.2.1 Variation 1: Cyclizations of 2-Methylene- and 2-Allylidene-1,2-dihydropyridines ........................................ 772
10.16.1.4.3.2.2 Variation 2: Metalation/Ring Closure of 2-(Benzoylmethylene)-1,2-dihydropyridines ................. 773
10.16.1.4.4 With Formation of the 8–8a Bond ........................................ 774
10.16.1.4.4.1 Method 1: Indolizine-5,8-diones from 4-(1H-Pyrrol-1-yl)cyclobutenones ................. 774
10.16.2 Synthesis by Ring Transformation ............................................. 775
10.16.2.1 Method 1: Ring Contraction of 4H-Quinolizines ...................... 775
10.16.2.2 Method 2: Ring Contraction of Dihydropyridothiazines ............... 776
10.16.2.3 Method 3: Ring Expansion of 3H-Pyrrolizine ......................... 776
10.16.3 Synthesis by Substituent Modification ...................................... 777
10.16.3.1 Substitution of Existing Substituents .................................... 777
10.16.3.1.1 Of Hydrogen .................................................................... 777
10.16.3.1.1.1 Method 1: Deuteration of Indolizines ......................... 777
10.16.3.1.1.2 Method 2: Lithiation of Indolizines ................................ 777
10.16.3.1.1.3 Method 3: Introduction of Carbon Substituents ............... 778
10.16.3.1.1.4 Method 4: Introduction of Nitrogen Substituents ............... 779
10.16.3.1.1.5 Method 5: Introduction of Sulfur Substituents .................. 780
10.16.3.1.2 Of Metals .................................................................... 781
10.16.3.1.2.1 Method 1: Substitution Reactions of 5-Lithiindolizines ....... 781
10.16.3.1.2.2 Method 2: Protodesilylation of Trimethylsilyl-Substituted Indolizines ................. 781
10.16.3.1.3 Of Carbon Functionalities .............................................. 782
10.16.3.1.3.1 Method 1: By Cleavage of C–C Bonds ......................... 782
10.16.3.2 Modification of α-Carbon Substituents ................................... 783
10.16.3.2.1 Method 1: By Manipulations at the α-Carbon Atom ............... 783

10.17 Product Class 17: Benzo[b]phospholes
R. A. Aitken

10.17 Product Class 17: Benzo[b]phospholes ....................................... 789
10.17.1 Synthesis by Ring-Closure Reactions ...................................... 790
10.17.1.1 By Annulation to an Arene ............................................... 790
10.17.1.1.1 By Formation of Two P–C Bonds .................................. 790
10.17.1.1.1.1 Method 1: Reaction of Lithiated Phenylalkyne Derivatives with Phosphorus Dihalides ................. 790
10.17.1.1.1.2 Method 2: Reaction of a Zirconacycle with Phosphorus Dihalides ................. 791
10.17.1.3 Method 3: Reaction of Phenylalkynes with Phosphorus Pentachloride 791
10.17.1.2 By Formation of One P–C Bond 792
10.17.1.2.1 Method 1: Base-Induced Cyclization of 2-Alkynylphenylphosphines 792
10.17.1.2.2 Method 2: Photochemical Cyclization of a 2-Alkynylphenylphosphine 793
10.17.1.2.3 Method 3: Thermal Cyclization of 2-(Phenylalkynyl)phenylchlorophosphines 794
10.17.1.2 By Annulation to a Phosphole 796
10.17.1.2.1 Method 1: Sulfurization of a Phosphole [2 + 2] Dimer 796
10.17.1.2.2 Method 2: Thermolysis of a Phosphole [4 + 2] Dimer 796
10.17.2 Synthesis by Ring Transformation 797
10.17.2.1 Method 1: Photochemical Rearrangement of a Phosphadiazole 797
10.17.3 Aromatization 798
10.17.3.1 By Aromatization of 2,3-Dihydrobenzo[b]phospholes 798
10.17.3.1.1 Method 1: Dehydrobromination 798
10.17.3.1.1 Variation 1: Using Triethylamine 798
10.17.3.1.2 Variation 2: Using 1,8-Diazabicyclo[5.4.0]undec-7-ene 799
10.17.3.1.2 Method 2: Gas-Phase Dehydrochlorination over a Solid Base 800
10.17.3.1.3 Method 3: Deprotonation of a Cyclic Phosphonium Salt 801
10.17.4 Synthesis by Substituent Modification 801
10.17.4.1 Modification at Phosphorus 802
10.17.4.1.1 Addition Reactions 802
10.17.4.1.1 Method 1: Oxidation 802
10.17.4.1.1 Method 2: Formation of an Ylide 802
10.17.4.1.2 Substitution Reactions 803
10.17.4.1.2.1 Method 1: Substitution of Halogen 803
10.17.4.1.2.2 Method 2: Substitution of Aryl Groups 804
10.17.4.1.3 Reduction 805
10.17.4.1.3.1 Method 1: Reduction of P-Oxides 805
10.17.4.2 Modification at Carbon 805
10.17.4.2.1 Substitution Reactions 805
10.17.4.2.1.1 Method 1: Removal of Silyl Groups 805
10.17.4.2.1.2 Method 2: Halogenation 805
10.17.4.3 Modification of Substituents 806
10.17.4.3.1 Method 1: Reaction of a 2,3-Dihydrobenzo[b]phosphol-3-one with Electrophiles 806
Product Class 18: Benzo[c]phospholes
R. A. Aitken

Synthesis by Ring-Closure Reactions

By Annulation to a Benzene Ring

By Formation of Two P—C Bonds

Method 1: From Phthaloyl Chloride

Method 2: From a Bis(phosphonium salt)

Aromatization

Of a 1,3-Dihydrobenzo[c]phosphole

Method 1: Formation of 1H-Benzophospholes

Method 2: Formation of 2H-Benzophospholes

Product Class 19: Dibenzophospholes
R. A. Aitken

Synthesis by Ring-Closure Reactions

By Annulation to an Arene

By Formation of Two P—C Bonds

Method 1: Reaction of 2,2¢-Dilithiobiaryls with Phosphorus Trihalides

Method 2: Reaction of 2,2¢-Dilithiobiaryls with Phosphinimines

Method 3: Reaction of 2,2¢-Dilithiobiphenyl with Phosphorus Pentachloride

Method 4: Reaction of 2,2¢-Biphenylenemercury with a Phosphinine

Method 5: Reaction of Biphenylene with Phenylphosphinidene

By Formation of One P—C Bond

Method 1: From Biphenyl-2-yldichlorophosphine

Method 2: From Biphenyl-2-ylmetaphosphonate

Method 3: From Biphenyl-2-yloxydichlorophosphine

Method 4: From Biphenyl-2-ylphosphinic Acids

Method 5: From Biphenyl-2,2¢-bis(phosphonium salts)

By Formation of One C—C Bond

Method 1: Palladium-Catalyzed Cyclization of Bis(2-haloaryl)phosphinic Acids

Method 2: Reaction of Triphenylphosphonium Salts and Other Triphenylphosphorus Compounds with Strong Bases

Aromatization

Method 1: Of Decahydrodibenzophospholes from the McCormack Reaction
10.19.3 Synthesis by Substituent Modification ........................................ 828
10.19.3.1 Modification at Phosphorus ........................................... 828
10.19.3.1.1 Addition Reactions .................................................... 828
10.19.3.1.1.1 Method 1: Addition of Hydride and Carbanions to Phosphonium Salts ........................................... 828
10.19.3.1.1.2 Method 2: P-Alkylation ........................................... 829
10.19.3.1.1.3 Method 3: Formation of P-Oxides, -Sulfides, and -Selenides .......... 830
10.19.3.1.1.4 Method 4: Formation of P—N Compounds ....................... 831
10.19.3.1.2 Substitution Reactions ................................................ 831
10.19.3.1.2.1 Method 1: Replacement of P-Alkyl or -Phenyl Groups by Other Alkyls ... 831
10.19.3.1.2.2 Method 2: Replacement of P-Alkyl or -Phenyl Groups by Hydroxide .... 832
10.19.3.1.2.3 Method 3: Reduction of P-Chloro Compounds .................... 833
10.19.3.1.2.4 Method 4: Reaction of P-Chloro Compounds with Grignard Reagents ... 833
10.19.3.1.2.5 Method 5: Use of P-Halo Compounds to Form Phosphoranes ............ 834
10.19.3.1.2.6 Method 6: Reduction of P-Oxides .................................. 834
10.19.3.1.2.7 Method 7: Conversion of P-Selenides into P-Oxides ................ 835
10.19.3.1.3 Reductive Elimination ................................................ 835
10.19.3.1.3.1 Method 1: Reductive Elimination at Phosphorus .................. 835

10.20 Product Class 20: Phosphorus Analogues of Indolizines
R. A. Aitken

10.20 Product Class 20: Phosphorus Analogues of Indolizines .......................... 839
10.20.1 Annulation to a Phosphole ............................................... 839
10.20.1.1 Method 1: Cycloaddition of Phospholes with Dimethyl Acetylenedicarboxylate ........................................ 839

Keyword Index .......................................................... 843
Author Index .......................................................... 861
Abbreviations .......................................................... 911
**Volume 11:**
*Five-Membered Hetarenes with One Chalcogen and One Additional Heteroatom*

11.1.3.2.2 Substitution of Existing Substituents

11.1.3.2.2.1 Method 1: Elimination of Chloride from 2-Chloro-1,3-benzodioxoles

11.1.3.2.2.1.1 Variation 1: Ionization of 2,2-Dichloro-1,3-benzodioxole

11.1.3.2.2.1.2 Variation 2: Ionization of 2,2-Dichloro-1,3-benzodioxole in the Presence of Nucleophiles

11.1.3.2.2.2 Method 2: Elimination of a Methoxy Group from 2-Methoxy-1,3-benzodioxoles and Related Systems

11.2 Product Class 2: 1,2-Oxathiolium Salts

11.2.1 Synthesis by Ring-Closure Reactions

11.2.1.1 By Formation of One O—C Bond

11.2.1.1.1 Method 1: Oxidation of a Monothio-β-Diketone

11.2.1.2 Synthesis by Substituent Modification

11.2.2 Addition Reactions

11.2.2.1 Method 1: Protonation of 1,6-Dioxa-6a-thiapentalenes

11.3 Product Class 3: 1,3-Oxathiolium Salts and Related Compounds

11.3.1 Product Subclass 1: Monocyclic 1,3-Oxathiolium Salts

11.3.1.1 Synthesis by Ring-Closure Reactions

11.3.1.1.1 Method 1: From Ketones and N-Substituted S-Chloroisothiocarbamoyl Chlorides

11.3.1.1.2 Method 2: From α-Halo Ketones and Thiocarboxamide Derivatives

11.3.1.1.2.1 Variation 1: From α-Bromo Ketones and Tetramethylthiourea (or S-Alkyl Dithiocarbamates)

11.3.1.1.2.2 Variation 2: From α-Bromo Ketones and Arenethiocarboxamides

11.3.1.1.2.3 Variation 3: From α-Bromo Ketones and Alkanethiocarboxamides in the Presence of Aryl (or Cinnamyl) Aldehydes

11.3.1.1.3 Method 3: From α-Bromo Ketones and S-Alkyl Dithiocarboxylates

11.3.1.1.2 By Formation of One O—C Bond

11.3.1.1.2.1 Method 1: Acid-Catalyzed Cyclization of 2-Oxo-2-phenylethyl Thiocyanates

11.3.1.1.2.2 Method 2: Cyclocondensations of Thiocarbamate (or Dithiocarboxylate) Derivatives

11.3.1.1.2.1 Variation 1: Via Substitution of an Oxygen Substituent: From S-(2-Oxoalkyl) Thiocarbamates (or Thiocarboxylates)
Variation 2: Via Substitution of a Sulfur Substituent: From S-(2-Oxoalkyl) Dithiocarbamates .......................... 54
Variation 3: Via Substitution of an Amino Substituent: From S-(2-Oxoalkyl) Thio carbamimidium Salts in the Presence of Aldehydes .......... 56

By Formation of One S—C Bond ........................................... 57

Method 1: Cyclocondensation of \{[(Methylsulfanyl)carbonothioyl]oxy\}(phenyl)acetic Acid .................. 57
Method 2: Cyclocondensation of a 2-Oxoalkyl Benzoate in the Presence of Hydrogen Sulfide .................. 58

Synthesis by Substituent Modification .................................. 59
Substitution of Existing Substituents .................................... 59
Method 1: Elimination of a Methoxy Group from 2-Methoxy-1,3-oxathioles ............................... 59

Product Subclass 2: Monocyclic Mesoionic 1,3-Oxathiolium-4-olates and -5-olates ......................................... 61

Synthesis by Ring-Closure Reactions .................................. 61
By Formation of One O—C Bond ........................................ 61
1,3-Oxathiolium-5-olates .................................................. 61
Method 1: Cyclocondensations of 2-(Aroylsulfanyl)acetic Acids .................................................. 61

By Formation of One S—C Bond ........................................ 62
1,3-Oxathiolium-4-olates .................................................. 62
Method 1: Cyclocondensation of Substituted Acetic Acids .................................................. 62

Synthesis by Substituent Modification .................................. 65
Substitution of Existing Substituents .................................... 65
Method 1: Substitution of a Methylsulfanyl Group in 2-(Methylsulfanyl)-1,3-oxathioli um-4-olate .............. 66

Product Subclass 3: Annulated 1,3-Oxathiolium Salts ................................................................. 69
Synthesis by Ring-Closure Reactions .................................. 69
By Annulation to an Arene ................................................ 70
By Formation of One O—C and One S—C Bond ....................... 71
Method 1: From 2-Sulfanylenphenol and Carboxylic Acid Derivatives or Equivalents ......................... 71
Variation 1: From 2-Sulfanylenphenol and Dichloro-N,N-dimethylmethaniminium Chloride ....................... 71
Variation 2: From 2-Sulfanylenphenol and Trihalomethyl- (or Triethoxymethyl)-Substituted Arenes .............. 71
Variation 3: From 2-Sulfanylenphenol and Carboxylic Acids or Derivatives ................................. 72
11.3.1.1.2 Method 2: From 1,4-Quinones and Thiocarboxylic Acid (or Thiourea) Derivatives .......................................................... 75
11.3.1.1.2.1 Variation 1: From 1,4-Quinones and Thioureas ........................................... 76
11.3.1.1.2.2 Variation 2: From 1,4-Quinones and Thiocarboxylic Acids or 4-(Arylthioyl)morpholines .................................................. 77
11.3.1.1.2.3 Variation 3: From 1,4-Quinones and 4-(2-Phenylethanethioyl)morpholine in the Presence of Aryl Aldehydes ........................................ 78
11.3.1.1.2 By Formation of One O/C45 C Bond ................................................................. 80
11.3.1.1.2.1 Method 1: From Cyclocondensations of S-(2,5-Dihydroxyaryl) Thioesters or Thiocarbamate Derivatives ................................... 80
11.3.1.1.3 By Formation of One S/C45 C Bond ................................................................. 82
11.3.1.1.3.1 Method 1: Rearrangement of O-(2,4,6-Trihalophenyl) N,N-Dimethylthiocarbamates .................................................. 82
11.3.2 Synthesis by Substituent Modification ................................................................ 83
11.3.2.1 Addition Reactions ............................................................................................ 83
11.3.2.1.1 Method 1: N-Protonation of a 1,3-Benzoxathiol-2-imine .................................... 83
11.3.2.2 Substitution of Existing Substituents ................................................................ 84
11.3.2.2.1 Method 1: Elimination of Hydride from a 1,3-Benzoxathiole ......................... 84
11.3.2.2.2 Method 2: Elimination of an Ethoxy Group from a 2-Ethoxy-1,3-benzoxathiole .............................................................................. 85
11.3.2.3 Modification of Substituents ............................................................................. 86

11.4 Product Class 4: 1,2-Oxaselenolium Salts
H. Perst

11.4.1 Synthesis by Ring-Closure Reactions ................................................................. 89
11.4.1.1 By Formation of One O—Se Bond ..................................................................... 89
11.4.1.1.1 Method 1: Rearrangement of Z-3-(Arylselanyl)propenoyl Chlorides ............ 89
11.4.2 Synthesis by Substituent Modification ............................................................... 91
11.4.2.1 Addition Reactions ............................................................................................ 91
11.4.2.1.1 Method 1: Protonation of 1,6-Dioxo-6α,4α-selenapentalenes ....................... 91

11.5 Product Class 5: 1,3-Oxaselenolium Salts
H. Perst

11.5.1 Synthesis by Ring-Closure Reactions ................................................................. 93
11.5.1.1 By Formation of One O—C and One Se—C Bond .............................................. 93
11.5.1.1.1 Method 1: Cyclocondensation of α-Bromo Ketones with Tetramethylselenourea .............................................................................. 93
Variation 1: Cyclocondensation of α-Bromo Ketones with N,N-Disubstituted Selenoamides

Synthesis by Substituent Modification

Addition Reactions

Method 1: N-Protonation of 1,3-Oxaselenol-2-imines

Product Class 6: 1,2-Oxatellurolium Compounds and Benzoannulated Analogues

Product Subclass 1: Monocyclic 1,2-Oxatellurolium Compounds

Synthesis by Ring-Closure Reactions

By Formation of One O–Te Bond

Method 1: Rearrangement of Z-3-(Aryltellanyl)propenoyl Chlorides

Substitution of Existing Substituents

Method 1: Substitution of Chloride by Other Anions

Product Subclass 2: 2,1-Benzoxatellurolium Compounds

Synthesis by Ring-Closure Reactions

By Annulation to an Arene

Method 1: Rearrangement of 2-(Aryltellanyl)benzoyl Chlorides

Synthesis by Ring Transformation

Hetero-Ring Size Retained Overall

Method 1: By Oxidation of Preformed 3H-2,1-Benzoxatelluroles

By Ring Contraction

Method 1: By Rearrangement of 1,1-Dihalo-4H-1-benzotellurin-4-ones

Product Class 7: 1,2-Dithiolium Salts and Related Compounds

Product Subclass 1: Simple 1,2-Dithiolium Salts

Synthesis by Ring-Closure Reactions

By Formation of One S–S and Two S–C Bonds

Method 1: From 1,3-Diketones, 1,3-Dialdehydes, or 3-Oxoaldehydes

Method 2: From Polyhalo-Substituted Propenes

By Formation of One S–S and One S–C Bond
Method 1: From 3-Oxothiocarboxylic Acid Derivatives
Method 2: From β-Thioxo Ketones
Method 3: From α,β-Unsaturated β-Amino Ketones

By Formation of Two S—C Bonds
Method 1: From 1,3-Dioxo Compounds and Disulfane or Polysulfanes
Method 2: From 1,3-Dioxo Compounds and Diacetyl Disulfide

By Formation of One S—C Bond
Method 1: From 1,3-Dioxo Compounds and Disulfane or Polysulfanes
Method 2: From 1,3-Dioxo Compounds and Diacetyl Disulfide

Aromatization
Method 1: From 3-Alkylidene-3H-1,2-dithioles
Method 2: By Oxidation of 3H-1,2-Dithiole-3-thiones
Method 3: From 3H-1,2-Dithiol-3-ones or 3H-1,2-Dithiole-3-thiones by Halogenation

Synthesis by Substituent Modification
Substitution of Existing Substituents
Of Hydrogen
Of Halogen or Alkylsulfanyl Groups
Addition Reactions
Protonation
Modification of Substituents
Alkylation of 3H-1,2-Dithiol-3-ones and 3H-1,2-Dithiole-3-thiones
Reactions at the α-Methyl Group
Exchange of Anions

Product Subclass 2: Mesoionic and Zwitterionic 1,2-Dithiolium Salts
1,2-Dithiolium-4-olates
Synthesis by Ring-Closure Reactions
By Formation of One S—S and Two S—C Bonds
Method 1: From Bromo-Substituted Acetones
Method 2: From Propane-1,2,3-triones
Method 3: From 1,3-Dichloroacetone
Aromatization
1,2-Dithiolium-3-yl phenolates and Analogous Compounds
Aromatization
Synthesis by Substituent Modification
## Product Subclass 3: Annulated 1,2-Dithiolium Salts

### 11.7.3.1 Synthesis by Ring-Closure Reactions
- 11.7.3.1.1 By Formation of Two S—C Bonds
- 11.7.3.1.2 By Formation of One C—C Bond
- 11.7.3.1.3 Synthesis by Ring Transformation
- 11.7.3.2 Aromatization
- 11.7.3.3 Synthesis by Substituent Modification
  - 11.7.3.3.1 Substitution of Existing Substituents
  - 11.7.3.3.2 Modification of Substituents

## Product Subclass 4: Heterapentalenes Related to the 1,2-Dithiolium System

### 11.7.4.1 1,6-Dioxa-6αH-thiapentalenes
- 11.7.4.1.1 Synthesis by Ring-Closure Reactions
- 11.7.4.1.2 Synthesis by Ring Transformation
- 11.7.4.1.3 Synthesis by Substituent Modification
  - 11.7.4.1.3.1 Substitution of Existing Substituents
    - 11.7.4.1.3.1.1 Of Hydrogen
    - 11.7.4.1.3.1.2 Of Halogen
  - 11.7.4.1.3.2 1-Oxa-6αH-dithiapentalenes
- 11.7.4.2 1,6-Dioxa-6αH-dithiapentalenes
  - 11.7.4.2.1 By Formation of One O—S, One S—S, and Two S—C Bonds
  - 11.7.4.2.2 By Formation of One O—S and One O—C Bond
  - 11.7.4.2.3 By Formation of One O—S and One C—C Bond
  - 11.7.4.2.3.1 Method 1: From 1,2-Dithiolium Salts
  - 11.7.4.2.3.2 Method 2: From 3-[(2-Aryl-2-oxoethyl)sulfanyl]-1,2-dithiolium Salts
  - 11.7.4.2.3.3 Method 3: From 3H-1,2-Dithiol-3-ones or 3H-1,2-Dithiole-3-thiones
- 11.7.4.2.4 By Formation of One O—S Bond
- 11.7.4.2.5 Synthesis by Ring Transformation
  - 11.7.4.2.5.1 Method 1: From 4H-Pyrans- or 4H-Thiopyran-4-thiones
  - 11.7.4.2.5.2 Method 2: From Other Heterapentalenes
- 11.7.4.3 1,6-Dioxa-6αH-selenapentalenes
  - 11.7.4.3.1 Synthesis by Ring Transformation
- 11.7.4.4 1,6-Dioxa-6αH-tellurapentalenes
  - 11.7.4.4.1 Synthesis by Ring-Closure Reactions
11.7.4.5 1,6,6α-Trithiapentalenes ................................................. 149
11.7.4.5.1 Synthesis by Ring-Closure Reactions ............................... 150
11.7.4.5.1.1 By Formation of Two S−S, Three S−C, and One C−C Bond ............................................. 150
11.7.4.5.1.2 By Formation of Two S−S and Three S−C Bonds ................................................................. 150
11.7.4.5.1.3 By Formation of Two S−S and Two S−C Bonds ................................................................. 151
11.7.4.5.1.4 By Formation of Two S−S and One S−C Bond ......................... 152
11.7.4.5.1.5 By Formation of One S−S, One S−C, and One C−C Bond ....... 152
11.7.4.5.1.5.1 Method 1: From Dialkylamino-Substituted 1,2-Dithiolium Salts ........................................ 152
11.7.4.5.1.5.2 Method 2: From 3H-1,2-Dithiole-3-thiones ................................................................. 153
11.7.4.5.1.6 By Formation of One S−S and One S−C Bond ....................... 153
11.7.4.5.1.6.1 Method 1: From 3-[2-(Dialkylamino)vinyl]-1,2-dithiolium Salts ........................................ 153
11.7.4.5.1.6.2 Method 2: From 2-(5-Aryl-3H-1,2-dithiol-3-ylidene)malononitriles ........................................ 154
11.7.4.5.1.7 By Formation of One S−S and One C−C Bond ....................... 155
11.7.4.5.1.7.1 Method 1: From 1,2-Dithiolium Salts .................................................. 155
11.7.4.5.1.7.2 Method 2: From 3-(Alkylsulfanyl)-1,2-dithiolium Salts .................. 155
11.7.4.5.1.7.3 Method 3: From 3H-1,2-Dithiole-3-thiones ........................................ 156
11.7.4.5.1.8 By Formation of One S−S Bond .................................................. 157
11.7.4.5.1.8.1 Method 1: From Other 1,2-Dithiole Derivatives ......................... 157
11.7.4.5.2 Synthesis by Ring Transformation ........................................ 158
11.7.4.5.2.1 Method 1: From 4H-Thiopyran-4-thiones ........................................ 158
11.7.4.5.2.2 Method 2: From 1-Oxa-6,6α-dithiapentalenes ......................... 158
11.7.4.5.3 Synthesis by Substituent Modification .................................... 160
11.7.4.5.3.1 Substitution of Existing Substituents ........................................ 160
11.7.4.5.3.1.1 Of Hydrogen .......................................................... 160
11.7.4.5.3.1.1.1 Method 1: Substitution by Bromination ........................................ 160
11.7.4.5.3.1.1.2 Method 2: Substitution by Nitration or Nitrosation ................. 160
11.7.4.5.3.1.1.3 Method 3: Substitution by Formylation ........................................ 161
11.7.4.5.3.1.2 Of Heteroatoms .......................................................... 161
11.7.4.5.3.2 Modification of Substituents .............................................. 161
11.7.4.5.3.2.1 Method 1: Condensation in the Side Chain by Aldehydes .......... 161
11.7.4.5.3.2.2 Method 2: Condensation in the Side Chain by Carbon Disulfide and Thioformamides ................. 162
11.7.4.6 1,6α,6-Dithia-6-selenapentalenes ....................................... 162
11.7.4.6.1 Synthesis by Ring-Closure Reactions ........................................ 162
11.7.4.6.2 Synthesis by Ring Transformation ........................................ 163
11.7.4.7 1,6α,6-Dithia-6-azapentalenes ........................................... 163
11.7.4.7.1 Synthesis by Ring-Closure Reactions ........................................ 163
11.7.4.7.1.1 By Formation of One S−N and One N−C Bond ......................... 163
11.7.4.7.1.1 Method 1: From 3-[2-(Methylsulfanyl)vinyl]-1,2-dithiolium Salts .................................. 163
11.7.4.7.1.2 Method 2: From 3-[2-(Dimethylamino)vinyl]-1,2-dithiolium Salts .................................. 164
11.7.4.7.1.2.1 By Formation of One S—N and One C—C Bond .................................................. 164
11.7.4.7.1.2.2 Method 2: From 5-Aryl-3-benzylidene-1,2-dithioles or 3-Methyl-1,2-dithiolium Salts and Isocyanides ............................................................... 165
11.7.4.7.2 Synthesis by Ring Transformation ................................................................. 165
11.7.4.8 1,6-Dithia-6α-4-selenapentalenes ................................................................. 165
11.7.4.8.1 Synthesis by Ring Transformation ................................................................. 166
11.7.4.9 1-Oxa-6,6α-dithia-2-azapentalenes ................................................................. 166
11.7.4.9.1 Synthesis by Ring-Closure Reactions ................................................................. 167
11.7.4.9.2 Synthesis by Ring Transformation ................................................................. 167
11.7.4.10 1-Oxa-6,6α-dithia-3-azapentalenes ................................................................. 168
11.7.4.10.1 Synthesis by Ring-Closure Reactions ................................................................. 169
11.7.4.10.1.1 By Formation of One O—S, One S—S, and One N—C Bond .................................. 169
11.7.4.10.1.2 By Formation of One O—S and One N—C Bond .................................................. 169
11.7.4.10.1.2.1 Method 1: From 3-Amino-1,2-dithiolium Salts .................................................. 169
11.7.4.10.1.2.2 Method 2: From 3H-1,2-Dithiole-3-thiones .................................................... 169
11.7.4.10.2 Synthesis by Ring Transformation ................................................................. 170
11.7.4.10.2.1 Method 1: From 1,2-Benzothiazoles ................................................................. 170
11.7.4.10.2.2 Method 2: From 1,6,6α-Trithia-3-azapentalenes .................................................. 170
11.7.4.11 1,6,6α-Trithia-3-azapentalenes ................................................................. 170
11.7.4.11.1 Synthesis by Ring-Closure Reactions ................................................................. 171
11.7.4.11.1.1 By Formation of One S—S and One N—C Bond .................................................. 171
11.7.4.11.1.1.1 Method 1: From 3-Amino-1,2-dithiolium Salts .................................................. 171
11.7.4.11.2 Synthesis by Ring Transformation ................................................................. 171
11.7.4.12 6,6α-Dithia-1,2-diazapentalenes ................................................................. 171
11.7.4.12.1 Synthesis by Ring-Closure Reactions ................................................................. 172
11.7.4.12.1.1 By Formation of One S—N and One N—C Bond .................................................. 172
11.7.4.12.1.1.1 Method 1: From 1,2-Dithiolium Salts ................................................................. 172
11.7.4.12.1.1.2 Method 2: From 3H-1,2-Dithiole-3-thiones .................................................... 172
11.7.4.12.2 Synthesis by Ring Transformation ................................................................. 173
11.7.5 **Product Subclass 5: Extended Structures Based on the 1,2-Dithiolium System** ................................................................. 173
11.7.5.1 3-[(3H-1,2-Dithiol-3-ylidene)methyl]-1,2-dithiolium Salts .................................................. 174
11.7.5.1.1 Synthesis by Ring-Closure Reactions ................................................................. 174
11.7.5.1.1.1 Method 1: From 1,2-Dithiolium Salts ................................................................. 174
11.5.1.2 Method 2: From 3\textit{H}-1,2-Dithiole-3-thiones ........................................ 175
11.5.2 2-H-[3(\textit{H}-1,2-Dithiol-3-ylidene)methyl]-1,6,6\textit{e}-trithiapentalenes and Related Systems .................................................. 175
11.5.2.1 2-H-[3(\textit{H}-1,2-Dithiol-3-ylidene)methyl]-1-oxa-6,6\textit{e}-dithiapentalenes .......... 176
11.5.2.1.1 Synthesis by Ring-Closure Reactions ................................................. 177
11.5.2.1.1.1 Method 1: From 1,2-Dithiolium Salts ............................................. 177
11.5.2.1.1.2 Method 2: From 3\textit{H}-1,2-Dithiole-3-thiones ................................... 177
11.5.2.2 2-H-[3(\textit{H}-1,2-Dithiol-3-ylidene)methyl]-1,6,6\textit{e}-trithiapentalenes .......... 178
11.5.2.2.1 Synthesis by Ring Transformation ..................................................... 178
11.6 Product Subclass 6: 1,2-Diselenolium Salts and Related Compounds ............. 179
11.6.1 1,2-Diselenolium Salts ........................................................................... 179
11.6.1.1 Synthesis by Ring-Closure Reactions ..................................................... 179
11.6.1.1.1 By Formation of One Se—Se and Two Se—C Bonds ......................... 179
11.6.1.1.1.1 Method 1: From 1,3-Diketones, 1,3-Dialdehydes, or 3-Oxoaldehydes .... 179
11.6.1.1.1.2 Method 2: From a 1,3-Dichloropropenylium Chloride .................. 180
11.6.1.1.2 By Formation of One Se—Se Bond ................................................... 180
11.6.1.2 Aromatization .................................................................................. 180
11.6.2 1,6,6\textit{e}-Triselenapentalenes .................................................................. 181
11.6.2.1 Synthesis by Ring-Closure Reactions ..................................................... 181
11.6.3 1,2-Ditellurolium Salts ........................................................................ 181
11.6.3.1 Synthesis by Ring Transformation ....................................................... 182
11.8 Product Class 8: 1,3-Dithiolium Salts, Se and Te Analogues and Benzoannulated Analogues
G. Schukat and E. Fanghanel

11.8 Product Class 8: 1,3-Dithiolium Salts, Se and Te Analogues and Benzoannulated Analogues ................................................................. 191
11.8.1 Product Subclass 1: 1,3-(Benzo)Dithiolium Salts ..................................... 191
11.8.1.1 Synthesis by Ring-Closure Reactions ..................................................... 193
11.8.1.1.1 By Formation of Two S—C Bonds ..................................................... 193
11.8.1.1.1.1 Fragments S—C—C—S and C ......................................................... 193
11.8.1.1.1.1.1 Method 1: From 1,2-Dithiols ......................................................... 193
11.8.1.1.1.1.1.1 Variation 1: Reaction with Carboxylic Acid Derivatives ............ 193
11.8.1.1.1.1.1.1.1 Variation 2: Reaction with Aldehydes and Oxidation of the Intermediate 194
11.8.1.1.1.1.2 Fragments S—C—S and C—C ..................................................... 195
11.8.1.1.1.1.2.1 Method 1: From Thioacids or Dithioacids and \textit{a}-Substituted Ketones ..... 195
11.8.1.1.1.1.2.2 By Formation of One S—C Bond ............................................. 197
11.8.1.1.1.1.2.2.1 Fragment S—C—S—C—C ..................................................... 197
Method 1: From S-(2-Oxoalkyl) Thiocarboxylates .................................. 197
Method 2: From S-(2-Oxoalkyl) Dithiocarboxylates .................................. 197
Method 3: From S-(2-Carboxyalkyl) Dithiocarboxylates ............................. 199
Method 4: From S-(1-Cyanoalkyl) Dithiocarboxylates ................................. 201
Method 5: From N,N-Disubstituted Dithiocarbamates ................................. 201

Variation 1: From 2-Oxoalkyl N,N-Disubstituted Dithiocarbamates .............. 201
Variation 2: From Alkenyl or Allyl N,N-Dialkyldithiocarbamates ................. 203

Synthesis by Ring Transformation .......................................................... 204
Method 1: From 3-(Methylsulfonyl)-1,4,2-dithiazines .................................. 204
Method 2: Protonation of 1,3-Dithiol-2-ylidenes ....................................... 204
Method 3: From 1,3-Dithioles .................................................................... 205
Variation 2: Elimination of Alkanolate or Alkanethiolate Ions or Amines ....... 206
Method 4: Oxidation of 1,3-Dithiole-2-thiones with Hydroperoxides .......... 207
Method 5: Oxidation of 2-(1,3-Dithiol-2-ylidene)-1,3-dithioles .................. 208
Method 6: Halogenation of 1,3-Dithiole-2-thiones ...................................... 209
Method 7: Alkylation of 1,3-Dithiole-2-thiones .......................................... 210
Method 8: Reaction of 2-(Alkylsulfanyl)-1,3-thiaselenolium Salts with Amines 211
Method 9: Reaction of 2-(Alkylsulfanyl)-1,3-dithiolium Salts with Azides .... 212
Method 10: Reaction of 2-Chloro-1,3-dithiolium Salts with Arenesulfonates .. 214

Synthesis by Ring-Closure Reactions ......................................................... 216
By Formation of One Se—C Bond ............................................................ 216
Fragment Se—C—S—C—C ........................................................................... 216
Method 1: From 2-Oxoalkyl N,N-Dimethylselenothiocarbamates ............... 216
Method 1: From 2-(Ethylsulfanyl)-1,4,3-thiaselenazines .............................. 216
Method 2: Elimination of Alkanethiolate Ions from 1,3-Thiaselenoles .......... 217
Method 3: Alkylation of 1,3-Thiaselenole-2-thiones .................................... 217
Method 4: Reaction of 2-(Alkylsulfanyl)-1,3-thiaselenolium Salts with Amines 218

Synthesis by Ring Transformation ............................................................ 219
Method 1: From 1,3-Diselenoles ............................................................... 219
Fragment Se—C—Se—C—C ........................................................................... 219
Method 1: From 2-Oxoalkyl N,N-Dialkyldiselenocarbamates .................... 219
Method 1: From 1,3-Diselenoles ............................................................... 220
Method 1: From 1,3-Diselenoles ............................................................... 220
Variation 1: Abstraction of a Hydride Ion ............................................... 220
Variation 2: Elimination of Alkaneselenolate Ions ...................................... 221
11.8.3.2.2 Method 2: Alkylation of 1,3-Diselenole-2-thiones or -2-selones 221

11.8.4 Product Subclass 4: 1,3-(Benzo)Ditellurolium Salts 222

11.8.4.1 Synthesis by Ring Transformation 222

11.8.4.1.1 Method 1: Elimination of Alkanolate Ions from 1,3-Ditelluroles 222

11.8.5 Product Subclass 5: 1,3-(Benzo)Thiatellurolium and 1,3-(Benzo)Selenatellurolium Salts 223

11.9 Product Class 9: Isoxazoles

B. J. Wakefield

11.9.1 Synthesis by Ring-Closure Reactions 231

11.9.1.1 By Formation of Two Heteroatom–Carbon Bonds 231

11.9.1.1.1 Method 1: By Reactions of Hydroxylamine with 1,3-Dialdehydes and Their Acetals 231

11.9.1.1.2 Method 2: By Reactions of Hydroxylamine with 3-Oxoaddehydes 232

11.9.1.1.3 Method 3: By Reactions of Hydroxylamine with 1,3-Diketones 233

11.9.1.1.4 Method 4: Synthesis of Hydroxyisoxazoles and Isoxazolones by Reactions of Hydroxylamine with 3-Oxo Esters and 1,3-Diesters 234

11.9.1.1.5 Method 5: Synthesis of Isoxazolamines by Reactions of Hydroxylamine with 3-Oxonitriles 236

11.9.1.1.6 Method 6: Synthesis of Isoxazolamines by Reactions of Hydroxylamine with 2-Cyano Esters 238

11.9.1.1.6.1 Variation 1: In the Absence of Excess Base 238

11.9.1.1.6.2 Variation 2: In the Presence of Excess Base 239

11.9.1.1.7 Method 7: By Reactions of Hydroxylamine with Miscellaneous Analogues of 1,3-Dicarbonyl Compounds 239

11.9.1.1.8 Method 8: By Reactions of Hydroxylamine with α,β-Acetylenic Carbonyl and Related Compounds 241

11.9.1.1.9 Method 9: Synthesis of Isoxazolamines by Reactions of Hydroxylamine with α,β-Acetylenic Nitriles 241

11.9.1.1.10 Method 10: By Reactions of Hydroxylamine with α,β-Unsaturated Carbonyl Compounds 242

11.9.1.1.10.1 Variation 1: Reactions of β-Amino α,β-Unsaturated Carbonyl Compounds with Hydroxylamine 243

11.9.1.1.10.2 Variation 2: Reactions of [2-(Alkylsulfonyl)alk-1-enyl] Ketones with Hydroxylamine 244

11.9.1.1.11 Method 11: By Reactions of Hydroxylamine with α,β-Unsaturated Nitriles 245

11.9.1.1.12 Method 12: By Reactions of Hydroxylamine with α,β-Dihalo Ketones, Esters, and Nitriles 245

11.9.1.1.13 Method 13: Use of the Nitrosonium Ion as the N—O Component 246

11.9.1.1.14 Method 14: Synthesis of Nitroisoxazoles from Propargyl Bromides and Sodium Nitrite 247

11.9.1.2 By Formation of One Heteroatom—Carbon and One C—C Bond 248
11.9.1.2.1 Fragments O—N—C and C—C .................................................. 248

11.9.1.2.1.1 Method 1: From Nitrile Oxides and Alkynes .......................... 249

11.9.1.2.1.2 Method 2: By Cycloaddition of Nitrile Oxides to C==C Bonds, Accompanied by Elimination or Dehydrogenation ................................. 251

11.9.1.2.1.2.1 Variation 1: Reactions with Enamines .................................. 252

11.9.1.2.1.2.2 Variation 2: Reactions with Enols and Enolates ....................... 253

11.9.1.2.2 Fragments O—N—C—C and C ................................................. 254

11.9.1.2.2.1 Method 1: From Dianions Derived from Oximes ....................... 254

11.9.1.2.2.1.1 Variation 1: Reactions of Oxime-Derived Dianions with Esters .......................... 254

11.9.1.2.2.1.2 Variation 2: Reactions of Oxime-Derived Dianions with Amides ......... 255

11.9.1.2.2.2 Method 2: Synthesis of Isoxazol-5-amines from α-Haloaximes and Isocyanides ......................................................... 256

11.9.1.3 By Formation of One Heteroatom—Carbon Bond .......................... 256

11.9.1.3.1 Fragment O—N—C—C—C ...................................................... 256

11.9.1.3.1.1 Method 1: Cyclization of β-Hydroxyimino Carbonyl Compounds .......... 256

11.9.1.3.1.1.1 Variation 1: Isoxazol-3-ols by Cyclization of Hydroxamic Acids Derived from Protected β-Oxo Esters ........................................ 256

11.9.1.3.1.2 Method 2: Oxidative Cyclization of α,β-Unsaturated Oximes .......... 257

11.9.1.3.1.3 Method 3: Reductive Cyclization of 2-Nitroalkenyl Ketones and 2-Nitroalkenylnitriles ..................................................... 258

11.9.2 Synthesis by Ring Transformation ..................................................... 259

11.9.2.1 Ring Expansion ........................................................................ 259

11.9.2.1.1 Method 1: From 2-Acyl-2H-azirines ......................................... 259

11.9.2.2 Ring Transformation ................................................................ 260

11.9.2.3 Ring Contraction ...................................................................... 260

11.9.2.3.1 Method 1: (2-Hydroxyaryl)isoxazoles from Chromones ............... 260

11.9.3 Aromatization .............................................................................. 261

11.9.3.1 Method 1: Dehydrogenation of Dihydroisoxazoles ....................... 261

11.9.3.1.1 Variation 1: Dehydrogenation with N-Bromosuccinimide and Base .... 261

11.9.3.1.2 Variation 2: Dehydrogenation with γ-Manganese(IV) Oxide .......... 262

11.9.3.2 Method 2: Elimination of HX from Dihydroisoxazoles .................. 262

11.9.3.3 Method 3: Cycloelimination from Dihydroisoxazoles ..................... 263

11.9.3.4 Method 4: C==C Bond Migration ............................................... 263

11.9.4 Synthesis by Substituent Modification ............................................. 264

11.9.4.1 Addition Reactions ................................................................... 264

11.9.4.1.1 Protonation .......................................................................... 264

11.9.4.1.2 N-Alkylation ......................................................................... 265

11.9.4.1.2.1 Method 1: Direct N-Alkylation ............................................ 265

11.9.4.1.3 Addition of Heteroatoms .......................................................... 266

11.9.4.2 Substitution of Existing Substituents ............................................ 266

11.9.4.2.1 Of Hydrogen ........................................................................ 266
Deuteration ................................................................. 266
Metalation ........................................................................ 266
By Carbofunctional Groups .................................................. 266
Method 1: Acylation of Isoxazol-5(4\(H\))-ones ..................... 267
Halogenation ...................................................................... 267
By Sulfur Functionalities ..................................................... 268
Method 1: Chlorosulfonation and Sulfonation ......................... 268
Method 2: Thiocyanation ..................................................... 269
By Nitrogen Functionalities .................................................. 269
Method 1: Nitration ............................................................ 269
Method 2: Diazocoupling ...................................................... 270
Of Metals .......................................................................... 271
By Hydrogen and by Metals .................................................. 271
By Halogens ...................................................................... 271
Method 1: Reaction of Metal Derivatives of Isoxazoles with Halogens ........................................... 271
By Carbofunctional Groups ................................................... 271
Method 1: Reactions of Isoxazol-4-ylithium Compounds ........ 271
Of Carbon Functionalities ..................................................... 272
Of Halogens ...................................................................... 272
By Metals .......................................................................... 272
By Oxygen Functionalities ................................................... 272
Method 1: Reaction of Haloisoxazoles with Alkoxides .......... 272
By Sulfur Functionalities ....................................................... 273
Method 1: Reaction of 5-Chloroisoxazoles with Alkylthiolates .. 273
By Nitrogen Functionalities ................................................... 274
Method 1: Reaction of 5-Chloroisoxazoles with Amines and Lithium Amides .............................................. 274
Method 2: Reaction of a 5-Chloroisoxazole with Sodium Azide ......................................................... 274
By Carbofunctional Groups ................................................... 275
Method 1: By Palladium-Catalyzed Cross Coupling ............. 275
Of Oxygen Functionalities ..................................................... 275
By Halogens ...................................................................... 275
Method 1: Reactions of Isoxazol-5(4\(H\))-ones with Phosphoryl Halides ........................................... 275
By Oxygen Functionalities ................................................... 276
By Nitrogen Functionalities ................................................... 276
By Carbon Functionalities ..................................................... 276
11.9.4.2.5.4.1 Method 1: Reaction of \(N\)-(Tetrahydropyran-2-yl)isoxazol-5(2\(H\))-ones with Organolithium Compounds ........................................ 276
11.9.4.2.6 Of Nitrogen Functionalities ................................................................. 276
11.9.4.2.6.1 By Halogens .................................................................................. 276
11.9.4.2.6.2 By Oxygen Functionalities ............................................................... 277
11.9.4.3 Modification of Substituents ................................................................. 277
11.9.4.3.1 Reduction of Substituents ................................................................. 277
11.9.4.3.1.1 Reduction of Carbonyl Compounds ............................................. 277
11.9.4.3.1.2 Reduction of Nitroisoxazoles ......................................................... 278
11.9.4.3.2 Reactions Involving \(\alpha\)-Deprotonation of Side Chains ...................... 278
11.9.4.3.2.1 Method 1: Condensation of 5-Methylisoxazoles with Aldehydes .... 278
11.9.4.3.2.2 Method 2: Generation of (Isoxazolylmethyl)lithium Compounds .... 279
11.9.4.3.2.3 Method 3: Reactions Involving Deprotonation of Isoxazolium Salts .. 280
11.9.4.3.3 Preparation and Reactions of Halomethylisoxazoles ....................... 280
11.9.4.3.3.1 Method 1: \(\alpha\)-Halogeneration of Methylisoxazoles ....................... 281
11.9.4.4 Rearrangement of Substituents ............................................................. 281

11.10 Product Class 10: 1,2-Benzisoxazoles and Related Compounds

R. K. Smalley

11.10 Product Class 10: 1,2-Benzisoxazoles and Related Compounds ............... 289
11.10.1 Synthesis by Ring-Closure Reactions .................................................... 291
11.10.1.1 By Annulation to an Arene or Hetarene ............................................ 291
11.10.1.1.1 By Formation of One O—C and One N—C Bond ............................. 291
11.10.1.1.2 By Formation of One O—C and One C—C Bond ............................. 292
11.10.1.1.3 By Formation of One O—N Bond .................................................... 292
11.10.1.1.3.1 Method 1: By Thermal and Base-Catalyzed Cyclization of 2-Hydroxyaryl Ketoxime and Aldoxime O-Acylates .................... 292
11.10.1.1.3.2 Method 2: By Cyclization of 2-Hydroxyaryl Aldoxime O-Sulfonates .... 295
11.10.1.1.3.3 Method 3: By Cyclization of 2-Hydroxyaryl Aldoxime O-Carbamates .... 296
11.10.1.1.3.4 Method 4: By Thermal Cyclization of N-Hydroxy-2-hydroxyarencarboximidamide Derivatives .................................... 297
11.10.1.1.3.5 Method 5: By Intramolecular Dehydration of 2-Hydroxyaryl Ketoximes and Aldoximes .................. 298
11.10.1.1.3.6 Method 6: By Cyclization of N,2-Dihydroxybenzamides ............... 299
11.10.1.1.3.7 Method 7: By Oxidative Cyclization of 2-Hydroxyaryl Ketoximes .......... 300
11.10.1.1.4 By Formation of One O—C Bond .................................................... 300
11.10.1.1.4.1 Method 1: By Cyclization of 2-Haloaryl Ketoximes ..................... 301
11.10.1.1.4.2 Method 2: By Cyclization of N-Hydroxy-2-fluoroarencarboximidamides 304
11.10.1.1.4.3 Method 3: By Cyclization of 2-Nitroaryl Ketoximes ..................... 305
### 11.10.1.4.4
Method 4: By Cyclization of 2-Methoxy-, 2-Diazo-, 2-Amino-, and 2-(4-Tosyloxy)aryl Ketoximes ........................................... 306

### 11.10.1.4.5
By Formation of One N—a C Bond ........................................... 307

### 11.10.1.5.1
Method 1: By Intramolecular Transoximation of 2-[(Isopropylideneamino)oxy]diaryl Ketones ............................................. 308

### 11.10.1.5.2
Method 2: By Cyclization of 2-[(Isopropylideneamino)oxy]benzonitriles .......................................................... 308

### 11.10.1.2
By Annulation to the Isoxazole Ring ........................................ 309

### 11.10.1.2.1
Annulation of an Arene Ring .................................................. 309

### 11.10.1.2.2
Annulation of a Five-Membered Hetarene .............................. 310

### 11.10.1.2.2.1
Method 1: By Intramolecular Transoximation of 2-[(Isopropylideneamino)oxy]diaryl Ketones .............................. 310

### 11.10.1.2.2.2
Method 2: By Cyclization of 2-[(Isopropylideneamino)oxy]benzonitriles .......................................................... 311

### 11.10.1.2.3
Annulation of a Six-Membered Hetarene .............................. 311

### 11.10.1.2.3.1
Method 1: Isoxazolopyridines .............................................. 311

### 11.10.1.2.3.2
Method 2: Isoxazolodiazines .................................................. 313

### 11.10.2
Synthesis by Ring Transformation ......................................... 315

### 11.10.2.1
Hetero-Ring Size Retained Overall ......................................... 315

### 11.10.2.1.1
Method 1: By Decomposition of 1,3,2,4-Dioxathiazole 2-Oxides ............................................. 315

### 11.10.2.1.2
Method 2: By Decomposition of 1,4,2-Dioxazol-5-one ............... 316

### 11.10.2.2
With Ring Contraction of 4-Hydroxy-2H-benzopyran-2-ones .......... 317

### 11.10.3
Aromatization .................................................................. 317

### 11.10.3.1
Method 1: Aromatization of Hydro-1,2-benzisoxazoles .......... 317

### 11.10.4
Synthesis by Substituent Modification ................................... 319

### 11.10.4.1
Addition Reactions: Protonation and N-Alkylation ...................... 319

### 11.10.4.2
Substitution of Existing Substituents ........................................ 320

### 11.10.4.2.1
Of Hydrogen ................................................................... 320

### 11.10.4.2.1.1
Method 1: Metalation .......................................................... 320

### 11.10.4.2.1.2
Method 2: Acylation and Alkylation ........................................ 321

### 11.10.4.2.1.3
Method 3: Halogenation ....................................................... 321

### 11.10.4.2.1.4
Method 4: Sulfonation .......................................................... 323

### 11.10.4.2.1.5
Method 5: Nitration ............................................................ 324

### 11.10.4.2.2
Of Metals .................................................................. 326

### 11.10.4.2.3
Of Heteroatoms .................................................................. 326

### 11.10.4.3
Modification of Substituents ................................................. 327

### 11.10.4.4
Rearrangement of Substituents ................................................. 330

### 11.11
Product Class 11: 2,1-Benzisoxazoles and Related Compounds
R. K. Smalley

### 11.11
Product Class 11: 2,1-Benzisoxazoles and Related Compounds ........ 337

### 11.11.1
Synthesis by Ring-Closure Reactions .................................... 339
11.11.1 By Annulation to an Arene or Hetarene ........................................... 339
11.11.1.1 By Formation of One O—C and One C—C Bond .......................... 339
  11.11.1.1.1 Method 1: Base-Catalyzed Condensation of an Arylacetonitrile with a 1-Halo-4-nitroarene ........................................... 339
  11.11.1.1.2 Method 2: Aminoisoxazolobenzazines by Reaction of Nitrobenzazines with Potassium Cyanide in Methanol .................. 342
11.11.1.1.2 By Formation of One O—N Bond ............................................. 343
  11.11.1.1.2.1 Method 1: Thermal Decomposition of 2-Azidoaryl Carbonyl Compounds .................................................. 343
  11.11.1.1.2.2 Method 2: Deoxygenation of 2-Nitroacylbenzenes .............. 346
  11.11.1.1.2.3 Method 3: Deoxygenation of 2-Nitrosoacylbenzenes ............ 347
11.11.2 By Formation of One O—C Bond ................................................. 347
  11.11.2.1 Method 1: Reduction of 2-Nitroaryl Carbonyl Compounds .............. 348
  11.11.2.2 Method 2: Reduction of 2-Nitrobenzonitriles .......................... 351
  11.11.2.3 Method 3: Cyclization of 2-Nitrobenzyl Derivatives ................. 353
  11.11.2.4 Method 4: Cyclization of 2-Nitrosoaryl Ketones ....................... 357
  11.11.2.5 Method 5: From 2-(Hydroxyamino)benzonitriles ....................... 358
  11.11.2.6 Method 6: Oxidation of 2-Aminoacylbenzenes .......................... 360
  11.11.2.7 Method 7: Condensation of 2-Nitroaryl Aldehydes with Electron-Rich Arenes .................................................. 361
11.11.2 By Annulation to the Isoxazole Ring ......................................... 363
  11.11.2.1 Method 1: Annulation of a Six-Membered Ring ......................... 363
11.11.2 Synthesis by Ring Transformation ............................................. 364
  11.11.2.1 Hetero-Ring Size Retained Overall ........................................ 364
  11.11.2.1.1 Method 1: Isomerization of Indole and Isoindole Derivatives .... 365
  11.11.2.2 By Ring Contraction ............................................................... 366
11.11.3 Aromatization ................................................................. 367
11.11.4 Synthesis by Substituent Modification .................................... 367
  11.11.4.1 Addition Reactions ................................................................. 367
    11.11.4.1.1 Method 1: Protonation and Complex Formation .................... 367
    11.11.4.1.2 Method 2: N-Alkylation ..................................................... 368
  11.11.4.2 Substitution of Existing Substituents .................................... 370
    11.11.4.2.1 Method 1: Of Hydrogen ..................................................... 370
    11.11.4.2.1.1 Variation 1: By Carbofunctional Groups ......................... 370
    11.11.4.2.1.2 Variation 2: Halogenation ............................................ 372
    11.11.4.2.1.3 Variation 3: Methoxylation ............................................ 372
    11.11.4.2.1.4 Variation 4: Nitration .................................................. 373
  11.11.4.3 Modification of Substituents .............................................. 374
11.12 Product Class 12: Oxazoles
G. V. Boyd

11.12.1 Synthesis by Ring-Closure Reactions

11.12.1.1 By Formation of One O—C and One N—C Bond

11.12.1.1.1 Method 1: From Carbonylnitrenes and Alkynes

11.12.1.2 Fragments O—C and C—N

11.12.1.2.1 Method 1: From α-Halo Ketones and Amides

11.12.1.2.2 Method 2: From α-Hydroxy Aldehydes and α-Hydroxy Ketones and Cyanamides

11.12.1.2.3 Method 3: From α-Hydroxy Ketones and Carbamic Acid Derivatives

11.12.1.2.4 Method 4: From α-Hydroxy Carbonyl Compounds and Thiocyanic Acid

11.12.1.2.5 Method 5: From Desyl Chloride and Alkyl or Aryl Thiocyanates

11.12.1.2.6 Method 6: By Oxidative Addition of α-Methylene Ketones to Nitriles

11.12.1.2.7 Method 7: From C,N-Diacylimines and Nitriles

11.12.1.2.8 Method 8: From Acylnitrenes and Nitriles

11.12.1.2.9 Method 9: From Nitriles and Alkynes

11.12.1.3 Fragments N—C and C—O

11.12.1.3.1 Method 1: From Vinyl Azides and Carboxylic Acids or Acyl Chlorides

11.12.1.3.2 Method 2: From Aminomalonalonitrile and Carboxylic Acids or Their Derivatives

11.12.1.3.3 Method 3: From S,S-Disubstituted Dithiooxaldiamides and Aldehydes

11.12.1.4 Fragments O—C and N

11.12.1.4.1 Method 1: By the Fischer Synthesis: Aldehyde Cyanhydrins and Aldehydes

11.12.1.4.2 Method 2: From Aroyl Cyanides and Aldehydes

11.12.1.4.3 Method 3: From Aroylthioamides, Aldehydes, and Iodomethane

11.12.1.4.4 Method 4: Oxazole 3-Oxides from Monooximes of α-Diketones and Aldehydes

11.12.1.4.5 Method 5: From α-(Hydroxyamino)phenylacetic Acid and Aldehydes

11.12.1.4.6 Method 6: From α-Azidoacetophenones, Dimethylformamide, and Phosphoryl Chloride

11.12.1.4.7 Method 7: From α-Azido Ketones

11.12.1.4.8 Method 8: From Phenacylammonium Salts and Carbon Disulfide

11.12.1.2 By Formation of Two N—C Bonds

11.12.1.2.1 Method 1: From Isoxyanides and Carbonyl Compounds

11.12.1.2.2 Method 2: From N-(Tosylmethyl)iminines and Aldehydes

11.12.1.2.3 Method 3: From N-(Tosylmethyl)-N′-tritylcobadiimide and Aldehydes

11.13 Product Class 13: Benzoxazoles and Other Annulated Oxazoles

G. V. Boyd

11.13.1 Synthesis by Ring-Closure Reactions ........................................... 481
11.13.1.1 By Formation of One O—C and One N—C Bond .......................... 481
11.13.1.1.1 Method 1: From 2-Aminophenols and Carboxylic Acids or Acid Anhydrides 481
11.13.1.1.2 Method 2: From 2-Nitrophenols and Tertiary Amines ................ 482
11.13.1.1.3 Method 3: From 3-Aminotropolones and Ortho Esters ............... 482
11.13.1.1.4 Method 4: From Phenanthra-9,10-quinone Imines and Aldehydes ...... 483
11.13.1.2 By Formation of One O—C Bond ............................................ 484
11.13.1.2.1 Fragment O—C—N—C ......................................................... 484
11.13.1.2.1.1 Method 1: Cyclization of 1-(Carboxymethyl)pyridin-2(1H)-one .................. 484
11.13.1.2.2 Fragment O—C—C—N—C .................................................... 485
11.13.1.2.2.1 Method 1: From N-Acyl- and O,N-Diacyl-2-aminophenols and Related Compounds ......................................................... 485
11.13.1.2.2.2 Method 2: Oxidative Cyclization of N-(2-Hydroxyphenyl)thiobenzamides .... 487
11.13.1.2.2.3 Method 3: From 2-Aminophenols or 2-Fluoroanilines, Aryl Iodides, and Carbon Monoxide 487
11.13.1.2.2.4 Method 4: Beckmann Rearrangement of 2-Hydroxy-Substituted Acetophenone and Propiophenone Oximes 489
11.13.1.2.2.5 Method 5: Cyclization of N-(2-Hydroxyphenyl)amidines ............ 490
11.13 By Formation of One N―C Bond

11.13.1 Fragment N―C―C―O

11.13.1.1 Method 1: Reductive Cyclization of 2-Nitrophenyl and 2-Azidophenyl Benzoate

11.13 Synthesis by Ring Transformation

11.13.1 Method 1: Benzoazole from Benzisoxazole

11.13.2 Synthesis by Substituent Modification

11.14 Product Class 14: 1,3-Oxaphospholes and Benzoannulated Analogues

D. Gudat

11.14.1 Synthesis by Ring-Closure Reactions

11.14.1.1 By Formation of Two P―C Bonds

11.14.1.1.1 Method 1: From Ketene O,N-Acetals and Phosphorus Trihalides

11.14.1.2 By Formation of One P―C and One O―C Bond

11.14.1.2.1 Fragments P―C―C―O and C

11.14.1.2.1.1 Method 1: From 2-Phosphinophenols

11.14.1.2.1.1.1 Variation 1: Condensation with Acyl Chlorides

11.14.1.2.1.1.2 Variation 2: Condensation with N-Arylimidoyl Chlorides

11.14.1.2.2 Fragments P―C, C and O―C

11.14.1.2.2.1 Method 1: From Carbene Complexes and Phosphaalkynes

11.14.1.2.3 Fragments O―C―C and P―C

11.14.1.2.3.1 Method 1: From 2-Diazo-1,3-diketones and Phosphaalkynes

11.14.1.2 Synthesis by Ring Transformation

11.14.2 Method 1: From Phosphaalkynes and Isomünchnones

11.15 Product Class 15: Isothiazoles

D. W. Brown and M. Sainsbury

11.15 Synthesis by Ring-Closure Reactions

11.15.1 By Formation of One S―C and One N―C Bond

11.15.1.1 Method 1: By Cycloaddition of Thiazyl Chloride to a Furan or a Pyrrole

11.15.1.1.2 Method 2: By Addition of Thiazyl Chloride to Alkenes

11.15.1.1.3 Method 3: By 1,3-Dipolar Cycloaddition of Nitrile Sulfides to Alkynes and Alkenes

11.15.1.1.3.1 Variation 1: From 1,3,4-Oxathiazol-2-ones

11.15.1.1.3.2 Variation 2: From 1,3,4-Oxathiazoles
Variation 3: From Difluoro-\(\alpha\)-sulfanes ........................................ 518
Variation 4: From Thiobenzamides ........................................... 521
By Formation of One S—N Bond ............................................. 521
Method 1: By Oxidative Ring Closure of 3-Aminopropenethioamides
or 3-Aminoprop-2-enethiones ............................................. 521
Variation 1: From \(\alpha\)-Cyanoketones and Ammonia ......................... 522
Variation 2: From 2,2-Bis(sulfanyl)ethene-1,1-dicarbonitriles or
2-Substituted 2-Aminoethene-1,1-dicarbonitriles and
Hydrogen Sulfide .......................................................... 524
Variation 3: From Acetamides and Phenyl Isothiocyanate ............... 525
Variation 4: From Thiobenzamides ......................................... 521
By Formation of One S/C\(_4\)N Bond ....................................... 521
Method 1: By Oxidative Ring Closure of 3-Aminopropenethioamides
or 3-Aminoprop-2-enethiones ............................................. 521
Variation 1: From \(\alpha\)-Cyanoketones and Ammonia ......................... 522
Variation 2: From 2,2-Bis(sulfanyl)ethene-1,1-dicarbonitriles or
2-Substituted 2-Aminoethene-1,1-dicarbonitriles and
Hydrogen Sulfide .......................................................... 524
Variation 3: From Acetamides and Phenyl Isothiocyanate ............... 525
Variation 4: From Thiobenzamides ......................................... 521
Method 2: From 1,2-Dithioles and Related Compounds .................... 528
Variation 1: From 3H-1,2-Dithioles ........................................ 528
Variation 2: From Ethene-1,1-dithiolates ................................... 529
Method 3: From Bis(2-cyanoethyl) Disulfides and Related Compounds .. 532
Method 4: From 3-Oxo- or 3-Hydrazinoprop-1-enyl Thiocyanates ....... 534
Method 5: From Propynones or 3-Chloroprop-2-enals ................... 536
Method 6: From 3-Thiocyanatoprop-2-enals ................................ 539
Method 7: From Propynones and Hydroxylamine O-Sulfonic Acid ...... 539
Method 8: From 1-Aminopropan-2-ones, 1-Aminopropene-2-nitriles, or
2-Arylethene-1,1-dicarbonitriles ....................................... 540
Method 9: From But-2-ynedinitrile or But-2-ynediamide ................ 542
By Formation of One N—C Bond ............................................. 542
Method 1: From Propenes or Propanols .................................. 542
Method 2: From Sulfiminic Acid or Sulfimides ............................. 543
Method 3: From Thiolates .................................................. 543
Method 4: From Prop-2-enethiones ......................................... 545
By Formation of One C—C Bond ............................................. 546
Synthesis by Ring Transformation ........................................... 547
Method 1: From 1,2-Dithiolium Salts ...................................... 547
Method 2: From 1,4-Dithiin-2,3,5,6-tetracarbonitrile .................... 549
Method 3: From 1,4,2-Dithiazines ......................................... 549
Synthesis by Substituent Modification ..................................... 550
Substitution of Existing Substituents ..................................... 550
Of Carbon Functionalities .................................................. 550
Method 1: Decarboxylation .................................................. 550
Method 2: N-Dealkylation of 2-Alkylisothiazolium Salts .................. 551
Of Heteroatoms ............................................................. 552
Method 1: Electrophilic Substitution ...................................... 552
Method 2: Nucleophilic Substitution ...................................... 554
Method 3: Isothiazole-5-carboxylic Acids, 5-carbaldehydes, and
5-Alkylisothiazoles from Isothiazol-5-yllithiums ....................... 557
Method 4: From Isothiazolamines via Diazonium Salts ................... 559

11.16.2.3.2 Addition Reactions

11.16.2.3.2.1 Method 1: N-Alkylation

11.17 Product Class 17: Thiazoles
D. Kikelj and U. Urleb

11.17.1 Synthesis by Ring-Closure Reactions

11.17.1.1 By Formation of Three Heteroatom—Carbon Bonds and One C—C Bond

11.17.1.1.1 Fragments C—N, C, C, and S

11.17.1.1.2 From Alkali Cyanides and Hydrogen Sulfide

11.17.1.2 By Formation of Three Heteroatom—Carbon Bonds

11.17.1.2.1 By Formation of Two S—C Bonds and One N—C Bond

11.17.1.2.1.1 Fragments N—C, C—C, and S

11.17.1.2.1.1.1 Method 1: From Enamines, Cyanamide, and Sulfur

11.17.1.2.2 By Formation of One S—C Bond and Two N—C Bonds

11.17.1.2.2.1 Fragments S—C, C—C, and N

11.17.1.2.2.1.1 Method 1: From α-Bromoketimines and Ammonium Thiocyanate

11.17.1.2.2.2 Fragments S—C, N, and C

11.17.1.2.2.2.1 Method 1: From 5-Hydroxy-3-sulfanylpentan-2-one, Acetaldehyde, and Hydrazine

11.17.1.3 By Formation of Two Heteroatom—Carbon Bonds and One C—C Bond
11.17.1.3.1 Fragments S—C, N—C, and C .................................................. 635
11.17.1.3.1.1 Method 1: From Chloridimidothiocarbonates, Dimethylthioformamide, and Isocyanides ................................. 635
11.17.1.4 By Formation of Two Heteroatom—Carbon Bonds ................................................. 636
11.17.1.4.1 Fragments C—C—N—C and S .................................................. 636
11.17.1.4.1.1 Method 1: From N-Vinylimines ............................................... 636
11.17.1.4.1.2 Method 2: From N-(Polychloroalkyl)imidoyl Chlorides ................................. 637
11.17.1.4.1.3 Method 3: From N-Functionalized α-Aminonitriles ........................................... 637
11.17.1.4.1.4 Method 4: From α-Acylamino Carbonyl Compounds ........................................ 638
11.17.1.4.1.5 Method 5: From 2-Isocyanoacrylates ............................................ 639
11.17.1.4.1.6 Method 6: From Sulfanyl-Substituted Alkenones ........................................... 640
11.17.1.4.1.7 Method 7: From N-Alkylimines .................................................. 641
11.17.1.4.2 Fragments S—C—N and C—C .................................................. 642
11.17.1.4.2.1 Method 1: From Hypervalent Alkynyliodonium Salts and Aminothiocarbonyl Compounds ........................................... 642
11.17.1.4.2.2 Method 2: From α-Functionalized Carboxylic Acid Derivatives and Aminothiocarbonyl Compounds ................................. 643
11.17.1.4.2.2.1 Variation 1: From α-Functionalized Carboxylic Acid Derivatives and Aminothiocarbonyl Compounds ........................................... 643
11.17.1.4.2.2.2 Variation 2: From α-Functionalized Carbonitriles and Aminothiocarbonyl Compounds ........................................... 645
11.17.1.4.2.3 Method 3: From α,β-Unsaturated Carboxylic Acid Derivatives and Aminothiocarbonyl Compounds ........................................... 646
11.17.1.4.2.4 Method 4: From α-Functionalized Ketones or Ketone Derivatives and Aminothiocarbonyl Compounds ........................................... 647
11.17.1.4.2.4.1 Variation 1: From α-Diazo Ketones and Aminothiocarbonyl Compounds ........................................... 647
11.17.1.4.2.4.2 Variation 2: From α-Halo Ketones and Aminothiocarbonyl Compounds ........................................... 647
11.17.1.4.2.4.3 Variation 3: From α-Tosyloxy-Substituted Ketones and Aminothiocarbonyl Compounds ........................................... 654
11.17.1.4.2.4.4 Variation 4: From Acyloxiranes and Aminothiocarbonyl Compounds ........................................... 656
11.17.1.4.2.4.5 Variation 5: From Ketones Halogenated In Situ and Aminothiocarbonyl Compounds ........................................... 656
11.17.1.4.2.4.6 Variation 6: From α-Halomethylketimines and Aminothiocarbonyl Compounds ........................................... 657
11.17.1.4.2.4.7 Variation 7: From 2-2-Bromo-1-phenylethylene)malononitrile and Aminothiocarbonyl Compounds ........................................... 658
11.17.1.4.2.5 Method 5: From α,β-Unsaturated Ketones and Aminothiocarbonyl Compounds ........................................... 658
11.17.1.4.2.6 Method 6: From α-Halo-Substituted Aldehydes and Aminothiocarbonyl Compounds ........................................... 658
11.17.1.4.2.6.1 Variation 1: From Thioureas .................................................. 658
11.17.1.4.2.6.2 Variation 2: From Thioamides .................................................. 659
11.17.1.4.2.7 Method 7: From Enamines and Aminothiocarbonyl Compounds ........................................... 660
11.17.1.4.2.8 Method 8: From 1-Aryl-Substituted 2,2,2-Trichloroethanols and Aminothiocarbonyl Compounds ........................................... 661
11.17.1.4.2.9 Method 9: From 3-Haloalk-1-enes or 3-Haloalk-1-ynes and Aminothiocarbonyl Compounds ........................................... 661

11.1.2.1 Method 1: By Ring Enlargement of Three- or Four-Membered Heterocycles 721
11.1.2.2 Method 2: By Formal Exchange of Ring Atoms with Retention of Ring Size 722
11.1.2.3 Method 3: By Ring Contraction of Heterocycles .......................... 724
11.1.3 Aromatization ................................................................. 725
11.1.3.1 Method 1: By Dehydration and Dehydroamination of Dihydrothiazoles 725
11.1.3.2 Method 2: Aromatization by Addition Reactions .......................... 726
11.1.3.2.1 Variation 1: Nucleophilic Additions to Exocyclic Double Bonds .......... 726
11.1.3.2.2 Variation 2: S-Alkylation of Thiazole-2(3H)-thiones ........................ 728
11.1.3.2.3 Variation 3: N-Alkylation or N-Acylation of 3-Hydroxythiazol-2(3H)-imine .... 728
11.1.3.2.4 Variation 4: Elimination of Sulfur from Thiazole-2(3H)-thiones .......... 729
11.1.3.2.5 Variation 5: Of Carbofunctional Groups ................................ 730
11.1.3.2.5.1 Oxidation of Dihydrothiazoles ........................................ 730
11.1.3.2.5.1.1 2,3-Dihydrothiazoles ................................................ 730
11.1.3.2.5.1.2 2,5-Dihydrothiazoles ................................................ 730
11.1.3.2.5.2 Oxidation of Thiazolidines ........................................... 732
11.1.3.3 Method 3: Aromatization by Rearrangement (Isomerization) ............ 733
11.1.4 Synthesis from Other Thiazoles .............................................. 735
Addition Reactions

11.17.4.1 Addition Reactions

11.17.4.1.1 Quaternization

11.17.4.1.3 Addition of Heteroatoms

11.17.4.1.3.1 Formation of Thiazole 3-Oxides

11.17.4.1.3.2 Formation of 3-Aminothiazolium Salts

11.17.4.2 Synthesis by Substituent Modification

11.17.4.2.1 Method 1: Replacement of Hydrogen by Deuterium

11.17.4.2.2 Method 2: Replacement of Hydrogen by Metals

11.17.4.2.2.1 Variation 1: Replacement of Hydrogen by Lithium, Sodium, or Potassium

11.17.4.2.2.2 Variation 2: Replacement of Hydrogen by Magnesium, Aluminum or Zinc

11.17.4.2.2.3 Variation 3: Replacement of Hydrogen by Silicon or Tin

11.17.4.2.2.4 Variation 4: Replacement of Hydrogen by Mercury

11.17.4.2.3 Method 3: Replacement of Hydrogen by Carbon Electrophiles

11.17.4.2.4 Method 4: Introduction of Nucleophiles

11.17.4.2.5 Method 5: Via Radical Reactions

11.17.4.2.6 Method 6: Replacement of Hydrogen by Metals

11.17.4.2.7 Method 7: By Electrophiles Other Than Carbon Electrophiles

11.17.4.2.7.1 Variation 1: Halogenation of Thiazoles and Thiazole 3-Oxides

11.17.4.2.7.2 Variation 2: Introduction of Chlorosulfonyl, Sulfo, or Thiocyanato Groups

11.17.4.2.7.3 Variation 3: Introduction of Alkylsulfanyl, Arylsulfanyl, Thiolate, or Arylselanyl Groups

11.17.4.2.7.4 Variation 4: Nitration and Nitrosation of Thiazoles

11.17.4.2.7.5 Variation 5: Introduction of Arylazo Groups

11.17.4.2.8 Method 8: Introduction of Amino Groups

11.17.4.2.9 Additional Methods

11.17.4.3 Synthesis of Thiazoles from Metalated Thiazoles

11.17.4.3.1 Method 1: Replacement of Lithium, Magnesium, or Zinc by Carbon Electrophiles

11.17.4.3.2 Method 2: Replacement of Sodium by Carbon Electrophiles

11.17.4.3.3 Method 3: Replacement of Silyl or Mercuro Groups by Hydrogen

11.17.4.3.4 Method 4: Replacement of Silyl and Stannyl Groups by Carbon Electrophiles

11.17.4.3.5 Method 5: Replacement of Silyl, Stannyl or Mercury Containing Groups by Halogens or Thiocyanate

11.17.4.3.6 Method 6: Replacement of Metals by Other Groups

11.17.4.3.6.1 Variation 1: Replacement of Lithium by Sulfur- or Phosphorus-Containing Reagents

11.17.4.3.7 Method 7: Modification of Other Substituents

11.17.4.3.7.1 Variation 1: Carbon Replacement by Hydrogen

11.17.4.3.7.1.1 Decarboxylation of Thiazolecarboxylic Acids and Carboxylates

11.17.4.3.7.1.2 Removal of the Benzoyl Group from 5-Benzoylthiazoles

11.17.4.3.7.1.3 Additional Methods

11.17.4.3.7.2 Variation 2: Replacement of One Carbofunctional Group by Another

11.17.4.3.7.3 Variation 3: Replacement of a Carbon Substituent by Nitrogen

11.18 Product Class 18: Benzothiazoles and Related Compounds
H. Ulrich

| Page |
|------------------|------------------|
| 11.18 | Product Class 18: Benzothiazoles and Related Compounds |
| 11.18.1 | Synthesis by Ring-Closure Reactions |
| 11.18.1.1 | By Annulation to an Arene or Hetarene Ring |
| 11.18.1.1.1 | By Formation of One S—C and One N—C Bond |
| 11.18.1.1.1.1 | Method 1: From 2-Amino(het)arenethiols |
| 11.18.1.1.1.2 | Variation 2: With Dithiocarbonates |
| 11.18.1.1.1.3 | Variation 3: With Carbon Disulfide |
| 11.18.1.1.1.4 | Variation 4: With Dithiocarbamates |
| 11.18.1.1.1.5 | Variation 5: With Isothiocyanates |
| 11.18.1.1.1.6 | Variation 6: With Cyanamides |
| 11.18.1.1.1.7 | Variation 7: With Derivatives of Cyanamides |
| 11.18.1.1.1.8 | Variation 8: With Orthoesters |
| 11.18.1.1.1.9 | Variation 9: With N-Chloromethylamines |
| 11.18.1.1.1.10 | Variation 10: With Acyl Chlorides |
| 11.18.1.1.1.11 | Variation 11: With Acyl Chlorides Generated In Situ |
| 11.18.1.1.1.12 | Variation 12: With Acyl Chlorides Using Salts of the Thiol |
| 11.18.1.1.1.13 | Variation 13: With Imidoyl Chlorides and Derivatives |
| 11.18.1.1.1.14 | Variation 14: With Carboxylic Anhydrides |
| 11.18.1.1.1.15 | Variation 15: With Carboxylic or Thiocarboxylic Esters |
| 11.18.1.1.1.16 | Variation 16: With Carboxylic Acids |
| 11.18.1.1.1.17 | Variation 17: With Ketene Acetals |
| 11.18.1.1.1.18 | Variation 18: With Dithioimidocarbonates |
| 11.18.1.1.1.19 | Variation 19: With Nitriles |
| 11.18.1.1.1.20 | Variation 20: With Trifluoromethyl(het)arenes |
| 11.18.1.1.1.21 | Variation 21: With Aliphatic Fluoro Compounds |
| 11.18.1.1.1.22 | Variation 22: With Aldehydes |
| 11.18.1.1.1.23 | Variation 23: With Activated Ketones |
| 11.18.1.1.1.24 | Variation 24: With Carbon Monoxide and Haloarenes |
| 11.18.1.1.1.25 | Variation 25: With Oxiranes |
| 11.18.1.1.1.26 | Variation 26: With a Cyclopropenylium Salt |
| 11.18.1.1.2 | Method 2: From 2-Halonitrobenzenes |
| 11.18.1.1.3 | Method 3: From 2-Unsubstituted (Het)arenamines or Derivatives and a Sulfur Component |
| 11.18.1.1.3.1 | Variation 1: With Carbon Disulfide and Sulfur |
| 11.18.1.1.3.2 | Variation 2: With Chlorocarbonylsulfinyl Chloride |
| 11.18.1.1.3.3 | Variation 3: With Thiocyanates |
| 11.18.1.1.3.4 | Variation 4: With Disulfur Dichloride |
| 11.18.1.1.3.5 | Variation 5: With Phenylphosphonothioic Dichloride |
| 11.18.1.1.3.6 | Variation 6: With Sulfur |
| 11.18.1.1.4 | Method 4: From 2-Substituted (Het)arenamines or Derivatives and a Sulfur Component |
| 11.18.1.1.4.1 | Variation 1: With Dithiocarbonates |
Table of Contents

11.1.1.1.4.2 Variation 2: With Thioureas ......................................................... 858
11.1.1.1.4.3 Variation 3: With O-Alkyl Thiocarboxylylates ........................................ 858
11.1.1.1.4.4 Variation 4: With Thioamides .......................................................... 858
11.1.1.1.4.5 Variation 5: With Benzoylsulfanyl copper ............................................. 859
11.1.1.1.5 Method 5: From 2-Substituted Nitro(het)arenes and a Sulfur Component .......... 859
11.1.1.1.6 Method 6: From Benzo-1,4-quinoines or Derivatives and a Sulfur Component .................. 860
11.1.1.1.7 Method 7: From 2-Chlorohetarencarbonitriles and Thiourea ........................................ 861
11.1.1.2 By Formation of One S—C Bond .................................................................. 861
11.1.1.2.1 Method 1: From N-Arylthioureas ............................................................. 861
11.1.1.2.1.1 Variation 1: 2-Unsubstituted N-Arylthioureas ........................................... 862
11.1.1.2.1.2 Variation 2: With a Leaving Group in the 2-Position .................................... 864
11.1.1.2.1.3 Variation 3: In Situ Preparation of Thioureas from Isothiocyanates .................. 865
11.1.1.2.1.4 Variation 4: From Guanyl Disulfides ...................................................... 865
11.1.1.2.2 Method 2: From Isothioureas ..................................................................... 866
11.1.1.2.3 Method 3: From N-Arylthioamides .............................................................. 866
11.1.1.2.3.1 Variation 1: From 2-Unsubstituted N-Arylthioamides ................................. 866
11.1.1.2.3.2 Variation 2: From N-Arylthioamides with a Halogen or Hydroxy Leaving Group in the 2-Position .............................................................. 867
11.1.1.2.3.3 Variation 3: In Situ Formation from Amides .................................................. 868
11.1.1.2.4 Method 4: From 2-Sulfanylacetophenone Oximes ........................................ 869
11.1.1.2.5 Method 5: From ortho-Nitrogen-Functionalized Aryl Sulfides or Disulfides .......... 869
11.1.1.2.5.1 Variation 1: From Amides ........................................................................ 870
11.1.1.2.5.2 Variation 2: From Isocyanides ................................................................. 871
11.1.1.2.5.3 Variation 3: From Azomethines ................................................................. 871
11.1.1.2.5.4 Variation 4: From Iminophosphoranes ..................................................... 872
11.1.1.2.5.5 Variation 5: From Amines ......................................................................... 873
11.1.1.2.6 By Formation of One N—C Bond ............................................................... 873
11.1.1.2.6.1 Method 1: From 2-Thiocyanatoanilines ..................................................... 873
11.1.1.2.6.1.1 Variation 1: Using 2-Thiocyanatoanilines ............................................... 873
11.1.1.2.6.1.2 Variation 2: Masked as a Cycloadduct with Azides ................................. 874
11.1.1.2.6.1.3 Variation 3: Formed In Situ from 2-Nitroaryl Thiocyanates ...................... 874
11.1.1.2.6.1.4 Variation 4: From S-(2-Aminohetaryl) Dithiocarbamates ......................... 875
11.1.1.2.6.1.2.1 Variation 1: Using S-(2-Aminohetaryl) Dithiocarbamates .................. 875
11.1.1.2.6.1.2.2 Variation 2: Formed In Situ from S-(2-Nitroaryl) Dithiocarbamates ........ 875
11.1.1.2.6.1.3 Method 3: From 2-(2-Nitroaryl)sulfanyl)cycloalkanones ................................ 876
11.1.1.2.7 By Annulation to the Thiazole Ring ......................................................... 876
11.1.1.2.7.1 Method 1: Of a Pyrido[2,3] System ......................................................... 876
11.1.1.2.7.1.1 Variation 1: From 3-(4-Aminothiazol-5-yl)-3-oxopropanoates .................... 876
11.1.1.2.7.1.2 Variation 2: From 4-Amino-5-benzoylthiazolium Salts .............................. 877
11.1.1.2.7.1.3 Variation 3: From 4-Amino-Substituted Thiazoles and Acetoacetates .................. 877
11.1.1.2.7.2 Method 2: Of a Pyrido[3,2] System ......................................................... 877
11.1.1.2.7.3 Method 3: Of a Pyrido[4,3] System ......................................................... 878
11.1.1.2.7.4 Method 4: Of a Pyridazino[4,5] System .................................................... 878
11.1.1.2.7.5 Method 5: Of a Pyrimido[4,5] System ...................................................... 879
11.1.1.2.7.6 Method 6: Of a Pyrimido[5,4] System ...................................................... 879
11.18.2 Synthesis by Ring Transformation ........................................ 880
  11.18.2.1 Hetero-Ring Size Retained Overall .................................. 880
    11.18.2.1.1 Method 1: From Other Heterocycles .......................... 880
    11.18.2.1.2 Method 2: By Ring Opening and Reclosure ................. 881
  11.18.2.2 With Ring Contraction .............................................. 881
    11.18.2.2.1 Method 1: From 1,4-Benzothiazines and Derivatives ...... 881
    11.18.2.2.2 Method 2: From 1,2,4-Benzothiadiazines ................. 882
    11.18.2.2.3 Method 3: From 1,5-Benzothiazepines .................... 883
    11.18.2.2.4 Method 4: From Tetrahydrodibenzo-1,6,3,8-dithiadiazecines 884
  11.18.2.3 With Simultaneous Annulation of a Phenyl Substituent .......... 884
    11.18.2.3.1 Method 1: From 5-Aryl-1,2,3-dithiazoles .................. 885
    11.18.2.3.2 Method 2: From 5-(Arylimino)thiatriazoles ............... 885
    11.18.2.3.3 Method 3: From Heteropentalenes ........................... 885
  11.18.3 Aromatization ..................................................... 886
    11.18.3.1 Method 1: Of the Thiazole Unit ................................ 886
    11.18.3.1.1 Variation 1: By Dehydrogenation ......................... 886
    11.18.3.1.2 Variation 2: By Elimination ................................ 887
    11.18.3.2 Method 2: Of the Benzene Unit ................................ 888
  11.18.4 Synthesis by Substituent Modification ............................... 888
    11.18.4.1 Addition Reactions ............................................ 888
      11.18.4.1.1 Method 1: Protonation and Complex Formation ........... 888
      11.18.4.1.2 Method 2: Alkylation .................................... 889
    11.18.4.2 Substitution of Existing Substituents .......................... 890
      11.18.4.2.1 Of Hydrogen ............................................ 890
      11.18.4.2.1.1 Method 1: By Deuterium ................................ 890
      11.18.4.2.1.2 Method 2: By Carbon Groups ............................ 891
      11.18.4.2.1.3 Method 3: By Metals ................................... 891
      11.18.4.2.1.4 Method 4: By Halogen .................................. 891
      11.18.4.2.1.5 Method 5: Sulfonation .................................. 892
      11.18.4.2.1.6 Method 6: Nitration .................................... 893
      11.18.4.2.2 Of Metals .............................................. 893
      11.18.4.2.2.1 Method 1: Alkylation .................................. 893
      11.18.4.2.2.2 Method 2: Hydroxyalkylation ........................... 894
      11.18.4.2.2.3 Method 3: Acylation ................................... 894
      11.18.4.2.2.4 Method 4: Transmetalation ............................. 895
      11.18.4.2.2.5 Method 5: By Heteroatoms .............................. 896
    11.18.4.2.3 Of Carbon Functionalities .................................... 896
      11.18.4.2.4 Of Heteroatoms .......................................... 896
      11.18.4.2.4.1 Method 1: By Addition of Oxygen ...................... 897
      11.18.4.2.4.2 Method 2: By Elimination of Oxygen ................... 897
      11.18.4.2.4.3 Method 3: By Hydrogen .................................. 898
11.18.4.2.4.4 Method 4: By Carbon Functionalities ........................................ 898
11.18.4.2.4.5 Method 5: By Hetero Functions .............................................. 900
11.18.4.2.4.6 Method 6: By Rearrangement of Substituents ................................. 901
11.18.4.3 Modification of Substituents in the \( \alpha \)-Position ............................... 902
11.18.4.3.1 Method 1: \( \alpha \)-Hydroxyalkylation ................................................. 902
11.18.4.3.2 Method 2: Condensation Reactions ............................................. 903
11.18.4.3.3 Method 3: Self-Condensation .......................................................... 904
11.18.4.3.4 Method 4: \( \alpha \)-Oxygenation ............................................................. 904
11.18.4.3.5 Method 5: Oxirane Formation ....................................................... 904
11.18.4.3.6 Method 6: Aziridine Formation ..................................................... 905
11.18.4.3.7 Method 7: Sulfur Oxidation ............................................................ 905

11.19 Product Class 19: 1,2- and 1,3-Thiaphospholes and Benzoannulated Analogues
D. Gudat

11.19.1 Product Subclass 1: 1,2-Thiaphospholes ........................................... 913
11.19.1.1 Synthesis by Ring Transformation .................................................... 913
11.19.1.1.1 Method 1: Desulfurization of 2-Thio-3\( \text{H} \)-1,2-thiaphospholes ............... 913
11.19.1.1.2 Method 2: Additional Methods .................................................. 915
11.19.1.2 Synthetic Subclass 2: 1,3-(Benzo)Thiaphospholes ............................... 915
11.19.2.1 Synthesis by Ring-Closure Reactions ............................................. 915
11.19.2.1.1 By Formation of Two P—C Bonds ................................................. 915
11.19.2.1.1.1 Method 1: From Ketene \( S,N \)-Acetals and Phosphorus Trihalides ............ 915
11.19.2.1.2 Method 2: From 2-Phosphinobenzenethiols .................................... 916
11.19.2.2 Synthesis by Ring Transformation ................................................ 917
11.19.2.2.1 Method 1: From Thiaphosphiranes and Acetylenedicarboxylates .......... 917
11.19.2.2.2 Method 2: From 1,3-Dithiolium-4-olates .................................... 917
11.19.2.2.1.1 Variation 1: Reaction with Tris(trimethylsilyl)phosphine ..................... 917
11.19.2.2.2.1 Variation 2: Reaction with Phosphaalkynes or Phosphaalkenes .......... 918

11.20 Product Class 20: Isoselenazoles
W.-D. Pfeiffer

11.20.1 Synthesis by Ring-Closure Reactions .............................................. 921
11.20.1.1 By Formation of One Se—N, One Se—C, and One N—C Bond ............. 922
11.20.1.1  Fragments C—C—C, N, and Se  ........................................ 922
11.20.1.1.1  Method 1:  From Alkynones, Hydroxylamine O-Sulfonic Acid, and Selenium  922
11.20.1.1.2  Method 2:  From 3-Chloroprop-2-eniminium Salts, Sodium Selenocyanate, and Ammonia  ......................... 923
11.20.1.2  By Formation of One Se—N and One Se—C Bond  ......................... 924
11.20.1.2.1  Fragments Se—C—C and N  ........................................ 924
11.20.1.2.1.1  Method 1:  From 3-Seleno-Substituted Enones and Ammonia  .............. 924
11.20.1.2.2  Fragments N—C—C and Se  ........................................ 925
11.20.1.2.2.1  Method 1:  From an Enamine and Selenium Dioxide  ...................... 925
11.20.1.3  By Formation of One Se—N Bond  .................................... 926
11.20.1.3.1  Fragment Se—C—C—N  ........................................ 926
11.20.1.3.1.1  Method 1:  From Seleno-Substituted Alkenoic Amides  .................... 926
11.20.2  Synthesis by Substituent Modification  ..................................... 927
11.20.2.1  By Substitution of Existing Substituents  ................................ 927
11.20.2.1.1  Of Hydrogen  .................................................. 927
11.20.2.1.1.1  Method 1:  Bromination  ........................................ 927
11.20.2.1.1.2  Method 2:  Nitration  ........................................ 928
11.20.2.1.2  Of Heteroatoms  ................................................ 928
11.20.2.1.2.1  Method 1:  Hydrolysis of 3-Chloroisoselenazolium Salts  ................. 928
11.20.2.2  Modification of Substituents  .......................................... 929
11.20.2.2.1  Method 1:  Oxidation of Methyl-Substituted Isoseleazoles  ............... 929

11.21  Product Class 21: Annulated Isoseleazole Compounds  
W.-D. Pfeiffer

11.21  Product Class 21: Annulated Isoseleazole Compounds  .................. 931
11.21.1  Synthesis by Ring-Closure Reactions  ..................................... 933
11.21.1.1  By Ring-Closure of One Se—N and C—N Bond  ......................... 933
11.21.1.1.1  Fragments Se—Aren—C and N  .................................... 933
11.21.1.1.1.1  Method 1:  From 2-Seleno-Substituted Arenecarbonyl Compounds and a Nitrogen Source  ................................. 933
11.21.1.1.1.1.1  Variation 1:  From 2-Seleno-Substituted Aldehydes or Ketones  ...... 933
11.21.1.1.1.1.2  Variation 2:  From 2-(Methylselanyl)thiophene-3-carbaldehyde or 2-(Methylselanyl)selenophene-3-carbaldehyde 934
11.21.1.1.1.1.3  Variation 3:  From 2-(Chloroselanyl)benzoyl Chloride  ................ 935
11.21.1.1.1.1.4  Variation 4:  From 2-(Selenocyanato)phenyl Ketones  ................. 935
11.21.1.2  By Formation of One Se—N Bond  .................................... 936
11.21.1.2.1  Fragment Se—Aren—C—N  ....................................... 936
11.21.1.2.1.1  Method 1:  Cyclization of 2-(Methylselanyl)benzamides  ............... 936
11.21 Synthesis by Ring Transformation

11.21.1 Method 1: 1,2-Benzisoselenazoles from 1-Benzoselenophene-2,3-dione

11.21.2 Method 2: 1,2-Benzisoselenazoles from 3,4-Diphenyl-1,2,5-selenadiazole

11.21.3 Synthesis by Substituent Modification

11.21.3.1 Nucleophilic Substitution

11.21.3.1.1 Method 1: By Potassium Amide

11.21.3.1.2 Method 2: From 3-Chloro-1,2-benzisoselenazolium Salts

11.21.4 Modification of Substituents

11.22 Product Class 22: Selenazoles

W.-D. Pfeiffer

11.22.1 Synthesis by Ring-Closure Reactions

11.22.1.1 By Formation of Two Se—C Bonds

11.22.1.1.1 Method 1: From Vinylphosphonium Salts

11.22.1.1.2 By Formation of One Se—C and One N—C Bond

11.22.1.2 Fragments Se—C—N and C—C

11.22.1.2.1 Method 1: From Selenocarboxamides and α-Halo Carbonyl Compounds

11.22.1.2.2 Variation 1: 2-Alkyl- and 2-Arylselenazoles

11.22.1.2.3 Variation 2: Selenazol-2-amines and 2-(Alkylamino)- and 2-(Arylamino)-Substituted Selenazoles

11.22.1.2.4 Variation 3: 2-Hydrazinoselenazoles and Derivatives

11.22.1.2.5 Variation 4: N-Alkylimino- and N-Arylimino-2,3-dihydroselenazol-3-amines

11.22.1.2.6 Variation 5: Bis(selenazol-2-yl)methane and Oxazol-2-yl(selenazol-2-yl)methane Derivatives

11.22.1.2.7 Variation 6: 2-(2-Furyl)-, 2-(2-Thienyl)-, 2-(Selenophen-2-yl)-, 2-(2-Pyridyl)-, and α-Ribofuranosylselenazoles

11.22.1.2.8 Variation 7: Selenazolidines from Selenoureas and α-Halo Carboxylic Acids

11.22.1.2.9 Variation 8: 4,5-Dihydropyrrolo[3,2-e]benzoselenazoles and 4,5-Dihydroselenazol[4,5-f]quinolines

11.22.1.2.10 Variation 9: 5-Fluoroselenazoles

11.22.1.2.11 Variation 10: 3-(Selenazol-4-yl)alanine

11.22.1.2.12 Method 2: Using Hypervalent Iodine Compounds

11.22.1.2.13 Method 3: From Selenocarboxamides and 2-Chlorooxiranes

11.22.1.2.14 Method 4: From Selenoureas and 3,4,6,7-Tetrachloro-2,3-dihydro-2,5-benzofuranadiol

11.22.1.2.15 Method 5: From α-Bromoacetyl Chlorides and Selenocarboxamides

11.22.1.2.16 Method 6: From Hydrazonoyl Bromides and Selenoureas

11.22.1.2.17 Method 7: From Aziridine Derivatives and Carbon Diselenide

11.22.1.2.18 Fragments N—C—Se and C

Product Class 25: Isotellurazoles, and Annulated Isotellurazole and Tellurazole Compounds

W.-D. Pfeiffer

Product Subclass 1: Isotellurazoles (1,2-Tellurazoles)

Synthesis by Ring-Closure Reactions

By Formation of One Te—N, One Te—C, and One N—C Bond

Method 1: From Acetylenic Ketones or Aldehydes and Hydroxylamine O-Sulfonic Acid

By Formation One Te—C and One N—C Bond

Fragments Te—C and N

Method 1: Ring Closure of a 2-Tellurium-Functionalized Enal with a Nitrogen Source

Variation 1: From 3-Oxoprop-1-ene-1-tellurenyl Bromides and Ammonia

Variation 2: From 3-[Dibromo(methyl)-4-tellanyl]prop-2-enals and Ammonia

Variation 3: From 3-[Dibromo(methyl)-4-tellanyl]prop-2-enals and Arylamines

Product Subclass 2: 1,2-Benzisotellurazoles

Synthesis by Ring-Closure Reactions

By Formation of One Te—N and One N—C Bond

Fragments Te—C—C and N

Method 1: Ring Closure of a 2-Tellurium-Functionalized Arylaldehyde with a Nitrogen Source

Variation 1: From 2-(Butyltellanyl)benzaldehyde

Variation 2: From 2-(Iminomethyl)benzenetellurenyl Chlorides

Product Subclass 3: Arenotellurazoles

Synthesis by Ring-Closure Reactions

By Formation of One Te—N Bond

Fragment Te—Arene—C—N

Method 1: From 2-(Butyltellanyl)benzaldehyde

Method 2: Cyclization of 2-(Iminomethyl)benzenetellurenyl Chlorides

Modification of 1,2-Benzisotellurazole Iodide by Alkylation

Product Subclass 3: Arenotellurazoles

12.6 | **Product Class 6: Azaphospholes and Azarsoles**
A. Schmidpeter and K. Karaghiosoff |

12.6 | **Product Class 6: Azaphospholes and Azarsoles** | 679 |
12.6.1 | **Product Subclass 1: 1H-1,2-Azaphospholes** | 679 |
12.6.1.1 | Synthesis by Ring-Closure Reactions | 680 |
12.6.1.1.1 | By Formation of One N–P and One P–C Bond | 680 |
12.6.1.1.1 | Method 1: Cyclocondensation of β-Methylene Ketimines with Phosphorus Trichloride or Tribromide and a Base | 680 |
12.6.1.2 | Synthesis from Other Heterocycles | 680 |
12.6.1.2.1 | By Formation of One N–C and One C–C Bond | 680 |
**Table of Contents**

12.6.1.2.1 Method 1: Cycloaddition of 1-Aza-2-phospha-4-avanadam(V)cyclobutenes and Alkynes ........................................ 680

12.6.1.2.2 By Formation of One P—C and One C—C Bond ........................................ 681

12.6.1.2.2.1 Method 1: Cycloaddition of 1H-1,3,2-Diazaphospholines and Alkynes ........ 681

12.6.1.2.3 By Formation of One C—C Bond .................................................................. 681

12.6.1.2.3.1 Method 1: Flash-Vacuum Pyrolysis of 3-Aryl-1,2,3,4-tribenzophospholes ... 681

12.6.2 **Product Subclass 2: Monocyclic 1H-1,3-Azaphospholes and 1H,1,3-Azaroles** ........................................ 682

12.6.2.1 Synthesis by Ring-Closure Reactions .................................................. 683

12.6.2.1.1 By Formation of Two P—C Bonds .................................................. 683

12.6.2.1.1.1 Method 1: 4+1 Cyclocondensation of N-[Chloro(phenyl)methylene]-
N-(2-oxo-1,2-dihydropyryl)benzenammonium Chloride with
Tris(trimethylsilyl)phosphine ...................................................................... 683

12.6.2.1.1.1 Variation 1: From Ethenediamines and Phosphorus Trichloride .......... 683

12.6.2.1.1.2 Variation 2: From 4,5-Dihydroxazolium Bromides and
4,5-Dihydrooxazolium Bromides .................................................................. 684

12.6.2.1.1.2 Method 2: Phosphorus–Oxygen Exchange in Oxazolium Compounds by
the Action of Tris(trimethylsilyl)phosphine .................................................. 685

12.6.2.1.2 By Formation of One P—C and One C—C Bond ........................................ 686

12.6.2.1.2.1 Method 1: 3+2-Cycloaddition/Reversion Reactions with
Phosphaalkynes and Phosphaalkenes .................................................. 686

12.6.3 **Product Subclass 3: 1H-1,3-Benzazaphospholes and 1H,1,3-Benzazaroles** 688

12.6.3.1 Synthesis by Ring-Closure Reactions .................................................. 689

12.6.3.1.1 By Formation of One N—C and One P—C Bond .................................. 689

12.6.3.1.1.1 Method 1: 4+1 Cyclocondensation of 2-Phosphinophenylamines and
2-Arsinophenylamines with Carbonyl Compounds .................................. 689

12.6.3.1.2 By Formation of Two P—C or Two As—C Bonds ................................. 692

12.6.3.1.2.1 Method 1: 4+1 Cyclocondensation of [N-(2-Lithiophenyl)-2,2-dimethyl-
propanimidoyl][lithium with tert-Butylphosphonous Dichloride
or tert-Butylarsinous Dichloride ................................................................. 692

12.6.4 **Product Subclass 4: [1,3]Azaphospholo[1,2-a]pyridines and Related Compounds** ........................................ 692

12.6.4.1 Synthesis by Ring-Closure Reactions .................................................. 693

12.6.4.1.1 By Formation of Two P—C or As—C Bonds ........................................ 694

12.6.4.1.1.1 Method 1: Oxygen–Phosphorus or Oxygen–Arsenic Exchange in
Oxazolo[3,2-a]pyridin-4-ium Salts with Tris(trimethylsilyl)-
phosphine or Tris(trimethylsilyl)arsine .................................................. 694
## Table of Contents

12.6.5  Product Subclass 5: [1,3]Azaphospholo[1,5-α]pyridines and Related Compounds ........................................................................................................... 694  
12.6.5.1 Synthesis by Ring-Closure Reactions ..................................................... 696  
12.6.5.1.1 By Formation of Two P–C Bonds ...................................................... 696  
12.6.5.1.1.1 Method 1: [4 + 1] Cyclocondensation of Cyclominium Salts with Phosphorus Trichloride ................................................................. 696  
12.6.5.1.1.2 Method 2: [3 + 2] Cycloaddition of Pyridinium and Related Ylides with Phospaalkynes ................................................................. 699  
12.6.5.1.1.3 Method 3: [1,5] Electrocyclization of Pyridinium Ylides ................... 700  

12.7  Product Class 7: Diphospholes  
F. Mathey

12.7  Product Class 7: Diphospholes ........................................................................... 705  
12.7.1  Product Subclass 1: 1,2-Diphospholes .......................................................... 705  
12.7.1.1 Method 1: Alkylation of 1,2-Diphospholides ............................................. 705  
12.7.2  Product Subclass 2: 1,2-Diphospholides ....................................................... 706  
12.7.2.1 Method 1: From Diylides ......................................................................... 706  
12.7.2.2 Method 2: From 1,2-Dihydrophosphetes ................................................ 707  
12.7.2.3 Method 3: From Phosphonium Salts by Ring Closure .......................... 708  
12.7.3  Product Subclass 3: 1,3-Diphospholes .......................................................... 708  
12.7.3.1 Method 1: From Phospaalkynes ............................................................... 709  
12.7.3.2 Method 2: From 1,3-Diphospholides ....................................................... 709  
12.7.3.3 Method 3: From 1,2-Bis(phosphino)arenes by Ring Closure .................. 710  
12.7.4  Product Subclass 4: 1,3-Diphospholides ....................................................... 710  
12.7.4.1 Method 1: From Phospaalkynes ............................................................... 710  
12.7.4.2 Method 2: From 1,2-Dihydro-1,2-diphosphetes ................................. 711  
12.7.4.3 Method 3: From 1,2-Bis(phosphino)arenes by Ring Closure .................. 713  
12.7.5  Product Subclass 5: 11-Diphospholyl Complexes ....................................... 714  
12.7.5.1 Method 1: From Metal-1,2-Diphosphaalkyl Complexes by Ring Closure ................................................................................................................. 715  
12.7.5.2 Method 2: From Phospaalkynes ............................................................... 716  
12.7.5.3 Method 3: From Diphospholides ............................................................. 716

Table of Contents

Introduction
R. C. Storr and T. L. Gilchrist

Introduction .............................................................. 1

13.1 Product Class 1: 1,2,5-Oxathiazoles, 1,2,3-Dithiazoles,
and Related Compounds
N. G. Argyropoulos

13.1 Product Class 1: 1,2,5-Oxathiazoles, 1,2,3-Dithiazoles,
and Related Compounds .................................................. 9

13.1.1 Product Subclass 1: Annulated 1,2,5-Oxathiazoles

13.1.1.1 Synthesis by Ring-Closure Reactions ................................. 10
13.1.1.1.1 By Formation of Two O—S Bonds and One S—C Bond, or One O—S,
One S—S, and One S—C Bond ........................................... 10
13.1.1.1.1 Method 1: 1,6-Dioxa-6a¹4-thia-2,5-diazapentalenes and
1-Oxa-6,6a¹4-dithia-2,5-diazapentalenes from 1,3-Dioximes . . 10

13.1.2 Product Subclass 2: Monocyclic 1,2,3-Dithiazoles

13.1.2.1 Synthesis by Ring-Closure Reactions ................................. 14
13.1.2.1.1 By Formation of One S—N and One S—C Bond ................. 14
13.1.2.1.1 Method 1: Appel’s Salt from Acetonitrile and Sulfur Monochloride ..... 14
13.1.2.2 Synthesis by Substituent Modification ............................... 15
13.1.2.2.1 Method 1: From Appel’s Salt and Substituted Phenols or Hydrazines . . 15

13.1.3 Product Subclass 3: Annulated 1,2,3-Dithiazoles

13.1.3.1 Synthesis by Ring-Closure Reactions ................................. 18
13.1.3.1.1 By Formation of One S—S and One S—N Bond ................. 19
13.1.3.1.1 Method 1: 1,2,3-Benzodithiazolium Salts from
2-Aminobenzenethiols and Thionyl Chloride ...................... 19
13.1.3.1.2 By Formation of One S—N and One S—C Bond ................. 20
13.1.3.1.2.1 Method 1: 1,2,3-Benzodithiazolium Salts (Herz Salts) from
Arylamines and Sulfur Monochloride ................................. 20
13.1.3.1.2.2 Method 2: Heteroannulated Herz Salts from Heteroaromatic Amines
and Sulfur Monochloride: Synthesis by Annulation to
a Heterocyclic Ring ..................................................... 21

13.1.3.2 Aromatization ............................................................ 23
13.1.3.2.1 Method 1: 1,2,3-Benzodithiazolium Salts by Oxidation of
Benzodithiazoyl Radicals ............................................. 23
13.1.3.2.2 Method 2: 1,2,3-Benzodithiazolium Salts by Dehydration of 3H-1,2,3-Benzodithiazole 2-Oxides ........................................... 23
13.1.3.3 Synthesis by Substituent Modification ........................................... 24
13.1.3.3.1 Method 1: From Other 1,2,3-Benzodithiazolium Salts and Amines ...... 24

13.2 Product Class 2: 1,2,4-Dioxazoles, 1,2,4-Oxathiazoles, and 1,2,4-Dithiazoles N. G. Argyropoulos

13.2.1 Product Class 2: 1,2,4-Dioxazoles, 1,2,4-Oxathiazoles, and 1,2,4-Dithiazoles 29
13.2.1.1 Product Subclass 1: Monocyclic 1,2,4-Dithiazoles .......................... 29
13.2.1.1.1 Synthesis by Ring-Closure Reactions ........................................... 34
13.2.1.1.1.1 By Formation of One S–S Bond, Two S–C Bonds, and One N–C Bond ...... 34
13.2.1.1.1.1.1 Method 1: 1,2,4-Dithiazolium Salts from Nitriles and Phosphorus Pentasulfide ................................................................. 34
13.2.1.1.1.2 By Formation of One S–S and Two S–C Bonds .............................. 35
13.2.1.1.1.2.1 Method 1: 3,5-Diaryl-1,2,4-dithiazolium Salts from 1,3-Dichloro-2-azoniaallene Salts and Hydrogen Sulfide .......................... 35
13.2.1.1.1.3 By Formation of One S–S and One S–N Bond .............................. 36
13.2.1.1.1.3.1 Method 1: 3,5-Diaryl-1,2,4-dithiazolium Salts by Oxidation of Aryl Thioamides .................................................. 36
13.2.1.1.1.3.1.1 Variation 1: Symmetrical 3,5-Diaryl-1,2,4-dithiazolium Salts .............................................................. 36
13.2.1.1.1.3.1.2 Variation 2: 3,5-Diaryl-1,2,4-Dithiazolium Salts by Oxidation of N-Thioaroyl Formamides and Formamidines ............................. 37
13.2.1.1.1.3.1.3 Variation 3: Unsymmetrically Substituted 3,5-Diaryl-1,2,4-dithiazolium Salts from Aryl Thioamide S-Oxides and Thiobenzoic Acid Derivatives .......................................................... 38
13.2.1.1.1.3.1.4 Variation 4: Unsymmetrically Substituted 3,5-Diaryl-1,2,4-dithiazolium Salts from the Oxidative Cyclization of Thiobenzamides ................................. 39
13.2.1.1.1.4 By Formation of One S–S and One S–N Bond .............................. 40
13.2.1.1.1.4.1 Method 1: 1,2,4-Dithiazolium Salts from N-Acylthiourea Derivatives .......................... 40
13.2.1.1.1.4.1.1 Variation 1: 3-Amino-5-aryl-1,2,4-dithiazolium Salts by Oxidation of N-Acylthiourea Derivatives ........................................ 40
13.2.1.1.1.4.1.2 Variation 2: 3-Amino-5-aryl-1,2,4-dithiazolium Salts from Transition-Metal-Coordinated N-Acylthioureas and Thionyl Chloride ...................................................... 41
13.2.1.1.1.5 By Formation of One S–S Bond .................................................. 42
13.2.1.1.1.5.1 Method 1: 1,2,4-Dithiazolium Salts by Oxidation of Dithiobiurets (Dithioimidodicarbonic Diamides) ........................................ 42
13.2.1.1.1.5.1.1 Variation 1: Oxidation of Preformed Dithiobiurets ........................ 42
13.2.1.1.1.5.1.2 Variation 2: Synthesis by Oxidation of Dithiobiurets Formed In Situ ...... 44
13.2.1.1.1.5.1.3 Variation 3: Synthesis from 1,3-Dichloro-2-azaprop-2-enimium Salts via a Dithiobiuret Intermediate ........................................ 45
13.2.1.1.1.5.1.4 Variation 4: Oxidative Dealkylation–Cyclization of Isodithiobiurets .......................... 46

13.2.1.2.2.1 Method 1: Trithiadiazapentalenes by Oxygen–Sulfur Exchange Reactions

13.2.1.2.2.1.1 Variation 1: Diazapentalenes by Oxygen–Sulfur Exchange Reactions of 3-Acylimino-3H-1,2,4-oxathiazoles and 3-Acylimino-3H-1,2,4-dithiazoles with Phosphorus Pentasulfide

13.2.1.2.2.1.2 Variation 2: 1,6,6aº4-Trithia-3-azapentalenes by Oxygen–Sulfur Exchange Reactions of 3H-1,2-Dithiol-3-ylidenebenzamide Derivatives

13.2.1.2.2.1.3 Variation 3: 1,6,6aº4-Trithia-3-azapentalenes by Oxygen–Sulfur Exchange Reactions of (1,2-Dithiol-3-ylidene)benzamide Derivatives

13.2.1.2.3 By Formation of One $S$–$S$ and One $N$–$C$ Bond

13.2.1.2.3.1 Method 1: Heterapentalenes from N-Aryl-3-imino-3H-1,2,4-dithiazol-5-amines and Aryl Isothiocyanates

13.2.1.2.3.2 Method 2: 1,6,6aº4-Trithia-3-azapentalenes from 3H-1,2-Dithiol-3-imines and Isothiocyanates

13.2.2 Synthesis by Ring Transformation

13.2.2.1 Method 1: 5-Aryl-2-(methylsulfanyl)-1,6,6aº4-trithia-3,4-diazapentalenes from 1,3,5-Triazinium Salts and Hydrogen Sulfide

13.2.3 Synthesis by Substituent Modification

13.2.3.1 Method 1: Synthesis of Amino-Substituted 1,6,6aº4-Trithia-3,4-diazapentalenes by Nucleophilic Substitution

13.3 Product Class 3: 1,3,2-Oxathiazoles, 1,3,2-Dithiazoles, and Related Compounds

13.3.1 Product Subclass 1: Monocyclic 1,3,2-Oxathiazoles

13.3.1.1 Synthesis by Ring-Closure Reactions

13.3.1.1.1 By Formation of One $S$–$N$ and One $O$–$C$ Bond

13.3.1.1.1.1 Method 1: Mesoionic 1,3,2-Oxathiazolium-5-olates from Aryl(sulfanyl)-acetic Acids by S-Nitrosation and Dehydration

13.3.2 Product Subclass 2: Monocyclic 1,3,2-Dithiazoles

13.3.2.1 Synthesis by Ring-Closure Reactions

13.3.2.1.1 By Formation of Two $S$–$N$ Bonds

13.3.2.1.1.1 Method 1: Syntheses of 1,3,2-Dithiazolium Chlorides from Ethane-1,2-disulfenyl Dichlorides

13.3.2.1.1.1.1 Variation 1: From 1-Chloroethane-1,2-disulfenyl Dichloride and Bis(trimethylsilyl)sulfur Diimide

13.3.2.1.1.1.2 Variation 2: From 1-Chloroethane-1,2-disulfenyl Chlorides and Trimethylsilyl Azide
13.3.2.1.2 By Formation of Two S—C Bonds ........................................... 80
13.3.2.1.2.1 Fragments S—N—S and C—C ........................................ 80
13.3.2.1.2.1.1 Method 1: 1,3,2-Dithiazolium Salts by Cycloaddition ............. 80
13.3.2.1.2.1.1.1 Variation 1: 1,3-Dipolar Cycloaddition of the Dithionitronium Cation to Alkynes ................................................................. 80
13.3.2.1.2.1.2 Variation 2: Cycloadditions of Dichlorodithionitronium Hexafluoroarsenate to Alkynes ............................................................. 82
13.3.2.1.2.1.3 Method 2: Mesoionic 1,3,2-Dithiazole-4-imines from Phenylacetylene and Tetrasulfur Tetranitride ........................................... 83
13.3.2.1.2.2 Method 3: Mesoionic 1,3,2-Dithiazole-4-thiones from Alkynes and 1,2,4,6-Tetrathia-3,5,7-triazepinium Chloride ............................... 83
13.3.2.2 Aromatization ............................................................................ 84
13.3.2.2.1 Method 1: 1,3,2-Dithiazolium Salts by Oxidation of 1,3,2-Dithiazolyl Free Radicals ................................................................. 84
13.3.2.3 Synthesis by Substituent Modification ........................................... 85
13.3.2.3.1 Method 1: Mesoionic 1,3,2-Dithiazole-4-thiones from 1,3,2-Dithiazolium Salts and Vice Versa ......................................................... 85
13.3.2.3.2 Method 2: 5-Amino-1,3,2-dithiazole-4-thiones from 1,3,2-Dithiazolium Salts ................................................................. 86
13.3.2.3.3 Method 3: Mesoionic 1,3,2-Dithiazol-4-ones by Oxidation of 1,3,2-Dithiazole-4-thiones ................................................................. 87
13.3.3 Product Subclass 3: Annulated 1,3,2-Dithiazoles ............................... 88
13.3.3.1 Synthesis by Ring-Closure Reactions ........................................... 89
13.3.3.1.1 By Annulation to an Arene or a Hetarene ................................ 89
13.3.3.1.1.1 By Formation of Two S—N Bonds ........................................ 89
13.3.3.1.1.1.1 Method 1: 1,3,2-Dithiazolium Salts from Sulfenyl Chlorides and Trimethylsilyl Azide ................................................................. 89
13.3.3.1.1.1.2 Method 2: 1,3,2-Benzodithiazolium Chloride from Benzene-1,2-disulfenyl Dichloride and Bis(trimethylsilyl)sulfur Diimide .................. 91
13.3.3.2 Aromatization ............................................................................ 92
13.3.3.2.1 Method 1: [1,3,2]Dithiazolo[4,5-b]quinoxalinium Salts by Oxidation of the [1,3,2]Dithiazolo[4,5-b]quinoxalin-2-yl Radical ........................................ 92

13.4 Product Class 4: 1,4,2-Oxathiazoles and Related Compounds
N. G. Argyropoulos

13.4 Product Class 4: 1,4,2-Oxathiazoles and Related Compounds .......... 95
13.4.1 Product Subclass 1: 1,3,4-Oxathiazolium Salts ................................. 95
13.4.1.1 Synthesis by Ring-Closure Reactions ........................................... 96
13.4.1.1.1 By Formation of One O—C Bond ........................................... 96
13.4.1.1.1.1 Fragment C—N—S—C—O ........................................... 96
13.4.1.1.1 Method 1: Synthesis by Intramolecular Cyclization of N-(Acylsulfanyl)amides ............................................ 96
13.4.2 Product Subclass 2: 1,4,2-Oxathiazolium Salts ........................................ 97
13.4.2.1 Aromatization .......................................................... 97
13.4.2.1.1 Method 1: Synthesis by Solvolysis of 5H-1,4,2-Oxathiazoles ............ 97
13.4.3 Product Subclass 3: 1,4,2-Dithiazolium Salts ........................................ 98
13.4.3.1 By Formation of One S—N Bond .................................... 100
13.4.3.1.1 Fragment N—C—S—C .............................................. 100
13.4.3.1.1.1 Method 1: Intramolecular Cyclization of Iminomethyl Dithiocarbamates ........................................ 100
13.4.3.1.1.2 Variation 1: From Aryl[(methylsulfonyl)oxy]imino)methyl Dithiocarbamates ........................................ 100
13.4.3.1.1.2 Variation 2: From Bromo(diethylamino)methaniminium Bromide and Sodium Pyrrolidinecarbothioate ..... 101
13.4.3.1.2 By Formation of One S—C Bond .................................... 102
13.4.3.1.2.1 Fragment C—N—S—C .............................................. 102
13.4.3.1.2.1.1 Method 1: Intramolecular Cyclization of N-(Thioacylsulfanyl)amides ........................................ 102
13.4.3.2 Aromatization .......................................................... 103
13.4.3.2.1 Method 1: By Alkylation of 1,4,2-Dithiazole-5-thiones .................. 103
13.4.3.2.2 Method 2: By Solvolysis of 5H-1,4,2-Dithiazoles ....................... 104
13.4.3.3 Synthesis by Substituent Modification .................................... 106
13.4.3.3.1 Substitution of Existing Substituents .................................. 106
13.4.3.3.1 Method 1: Nucleophilic Substitution of 5-Methylsulfanyl Groups from 1,4,2-Dithiazolium Salts ......................... 106

13.5 Product Class 5: 1,2,3-Oxadiazoles
T. L. Gilchrist

13.5 Product Class 5: 1,2,3-Oxadiazoles .................................................. 109
13.5.1 Synthesis by Ring-Closure Reactions ........................................... 111
13.5.1.1 By Formation of One O—N Bond ..................................... 111
13.5.1.1.1 Fragment O—C—C—N .............................................. 111
13.5.1.1.1 Method 1: From α-Diazocarbonyl Compounds ......................... 111
13.5.1.2 By Formation of One O—C Bond ...................................... 112
13.5.1.2.1 Fragment O—N—N—C .............................................. 112
13.5.1.2.1.1 Method 1: Via N-Nitroso Compounds .......................... 112
13.5.1.2.1.1 Variation 1: Sydnones from N-Nitroso-α-amino Acids .............. 112
13.5.1.2.1.1.1 Variation 2: Sydnone Imines from N-Nitroso-α-amino Nitriles .... 113
13.5.2 Synthesis by Substituent Modification ...................................... 114
13.5.2.1 Substitution of Existing Substituents ................................... 114
13.5.2.1.1 Of Hydrogen ............................................................. 114
13.5.2.1.1.1 Method 1: By a Metal ........................................ 114
13.5.2.1.1.2 Method 2: By a Carbon Functionality .................. 115
13.5.2.1.1.3 Method 3: By a Heteroatom ............................... 116
13.5.2.1.2 Of Organometallic Groups ...................................... 117
13.5.2.1.2.1 Method 1: By Another Metal .............................. 117
13.5.2.1.2.2 Method 2: By a Carbon Functionality .................. 118
13.5.2.1.2.3 Method 3: By a Heteroatom ............................... 119
13.5.2.1.3 Of Carbon Functionalities ...................................... 119
13.5.2.1.3.1 Method 1: By Hydrogen ..................................... 119
13.5.2.1.4 Of Heteroatoms .................................................. 120
13.5.2.1.4.1 Method 1: By Hydrogen ..................................... 120
13.5.2.1.4.2 Method 2: By a Metal ........................................ 120
13.5.2.1.4.3 Method 3: By a Carbon Functionality .................. 121
13.5.2.1.4.4 Method 4: By Another Heteroatom ..................... 121
13.5.2.2 Modification of Substituents ...................................... 122
13.5.2.2.1 Method 1: Of Side-Chain α-Carbon Substituents ......... 122
13.5.2.2.2 Method 2: Of Side-Chain α-Heteroatom Substituents .. 123

13.6 Product Class 6: 1,2,4-Oxadiazoles
K. Hemming

13.6 Product Class 6: 1,2,4-Oxadiazoles .................................. 127
13.6.1 Synthesis by Ring-Closure Reactions ............................ 128
13.6.1.1 By Formation of One O—C and One N—C Bond .......... 128
13.6.1.1.1 Fragments O—N—C and N—C ............................... 128
13.6.1.1.1.1 Method 1: By the 1,3-Dipolar Cycloaddition Reactions of Nitrile Oxides with Nitriles ..................... 128
13.6.1.1.1.1 Variation 1: By Using an Aliphatic Nitrile Oxide Generated from a Nitroalkane and Phenyl Isocyanate .......... 129
13.6.1.1.1.2 Variation 2: By Using Nitrile Oxides Generated from Imidoyl Halides (Haloximes) .............................. 130
13.6.1.1.2 Method 2: By 1,3-Dipolar Cycloaddition of Nitrile Oxides to Imines, Followed by Aromatization of the Intermediate 4,5-Dihydro-1,2,4-oxadiazole ........................ 130
13.6.1.1.2.1 Method 1: Via N-Acylamidoximes ....................... 131
13.6.1.1.2.1.1 Variation 1: Via N-Acylamidoximes Derived from the Reaction of Amide Precursors with N,N-Dialkylformamide Dialkyl Acetals .................. 132
13.6.1.1.2.1.2 Variation 2: Via N-Acylamidoximes Derived from Nitriles ........................................... 132
13.6.1.1.2.1.3 Variation 3: Via N-Acylamidoximes Derived from N-Acyi Isothiocyanates ................................. 133
13.6.1.1.2.1.4 Variation 4: Via N-Acylamidoximes Derived from N-Cyano Compounds .................................. 134
Table of Contents

13.6.1.2.2 Method 2: By Nitrosation of N-Acyl \( \alpha \)-Amino Acid Derivatives Bearing Active Hydrogens on a Carbon Atom ........................................ 135
13.6.1.1.3 Fragments O—N—C—N and C .................................................. 136
13.6.1.1.3.1 Method 1: From an Amidoxime and a Carbonic Acid Derivative .................................................. 136
13.6.1.1.3.1.1 Variation 1: From an Amidoxime and a Chloroformate .................................................. 137
13.6.1.1.3.1.2 Variation 2: From an Amidoxime and Phosgene .................................................. 138
13.6.1.1.3.1.3 Method 2: From an Amidoxime and a Carboxylic Acid or a Carboxylic Acid Derivative .................................................. 138
13.6.1.1.3.1.2.1 Variation 1: From an Amidoxime and a Carboxylic Acid .................................................. 139
13.6.1.1.3.1.2.2 Variation 2: From an Amidoxime and a Carboxylic Acid Ester .................................................. 140
13.6.1.1.3.1.2.3 Variation 3: From an Amidoxime and an Anhydride .................................................. 141
13.6.1.1.3.1.2.4 Variation 4: From an Amidoxime and an Acid Chloride .................................................. 142
13.6.1.1.3.1.3 Method 3: From an Amidoxime and a Nitrile Derivative .................................................. 143
13.6.1.1.3.1.3.1 Variation 1: From an Amidoxime and an Alkyl or Aryl Nitrile .................................................. 145
13.6.1.1.3.1.3.2 Variation 2: From an Amidoxime and a Cyanate .................................................. 145
13.6.1.1.3.1.3.3 Variation 3: From an Amidoxime and a Cyanogen Halide .................................................. 145
13.6.1.1.3.1.4 Method 4: From an Amidoxime and an Orthoformate .................................................. 146
13.6.1.1.3.1.5 Method 5: From an Amidoxime and a Cumulene or Heterocumulene .................................................. 147
13.6.1.1.3.1.6 Method 6: From an Amidoxime and an Iminium Compound .................................................. 147
13.6.1.1.3.1.7 Method 7: From an Amidoxime and an Imino Ether, Lactim Ether, Imidic Chloride, or Alkoxyimidoyl Compound .................................................. 149
13.6.1.2 By Formation of One O—N Bond .................................................. 150
13.6.1.2.1 Fragment O—C—N—C—N .................................................. 150
13.6.1.2.1.1 Method 1: From Nitrone Precursors .................................................. 150
13.6.1.2.1.1.1 Variation 1: By Using Nitrilimines Derived from N-Acylamidrazones .................................................. 151
13.6.1.2.1.2 Variation 2: By Using Nitrilimines Derived Ultimately from Trimethylsilyl Azide .................................................. 151
13.6.1.3 By Formation of One O—C Bond .................................................. 152
13.6.1.3.1 Fragment O—N—C—N—C .................................................. 152
13.6.1.3.1.1 Method 1: From N-Acylamidoximes .................................................. 152
13.6.1.3.1.2 Method 2: From N-(Dicyanovinyl)amidoximes .................................................. 153
13.6.1.3.1.3 Method 3: Cyclization of the Oxime Oxygen onto an Iminim Carbon .................................................. 153
13.6.1.4 By Formation of One N—C Bond .................................................. 154
13.6.1.4.1 Fragment N—C—O—N—C .................................................. 154
13.6.1.4.1.1 Method 1: From Imidates .................................................. 154
13.6.1.4.2 Fragment N—C—N—O—C .................................................. 154
13.6.1.4.2.1 Method 1: From O-Acylamidoximes Derived from Amidoximes .................................................. 154
13.6.1.4.2.2 Method 2: Cyclization of O-Acylamidoximes Formed as Intermediates from Purine Precursors .................................................. 155
13.6.1.4.2.3 Method 3: Staudinger/Aza-Wittig Reaction of O-Acylazidooximes .................................................. 156
13.6.2 Synthesis by Ring Transformation .................................................. 157
13.6.2.1 Method 1: From Tetrazoles .................................................. 157
13.6.2.2 Method 2: From 1,2,4-Oxadiazoles .................................................. 158
13.6.2.3 Method 3: From 1,2,5-Oxadiazoles .................................................. 159
13.6.2.4 Method 4: From Imidazoles .................................................. 159
13.6.3 Aromatization ................................................................. 161
  13.6.3.1 Method 1: By Dehydrogenation ....................................... 161
  13.6.3.2 Method 2: By the Elimination of HX or YX ....................... 162
13.6.4 Synthesis by Substituent Modification .................................. 163
  13.6.4.1 Substitution of Existing Substituents ............................... 163
    13.6.4.1.1 Of Hydrogen ..................................................... 163
       13.6.4.1.1.1 Method 1: By Metals ..................................... 163
       13.6.4.1.2 Of Metals ..................................................... 163
       13.6.4.1.2.1 Method 1: By Heteroatoms ................................ 163
    13.6.4.1.3 Of Carbon Functionalities .................................... 164
       13.6.4.1.3.1 Method 1: By Heteroatoms ................................ 164
    13.6.4.1.4 Of Heteroatoms .................................................. 165
       13.6.4.1.4.1 Method 1: By Carbon ..................................... 165
       13.6.4.1.4.2 Method 2: By Another Heteroatom ....................... 165
  13.6.4.2 Addition Reactions .................................................... 167
  13.6.4.3 Modification of Existing Substituents ............................. 167
    13.6.4.3.1 Method 1: Modification of Substituents with an α-CH .... 168
    13.6.4.3.1.1 Variation 1: Deprotonation and Reaction of 5-Alkyl Groups 168
    13.6.4.3.2 Method 2: Modification of a C3 or C5 Ester Functionality 169
    13.6.4.3.2.1 Variation 1: Synthesis of 3-Carbonitrile Derivatives 170
    13.6.4.3.2.2 Variation 2: Curtius Reaction ............................ 170
    13.6.4.3.3 Method 3: Reactions of Halomethyl-Substituted Oxadiazoles 171
    13.6.4.3.4 Method 4: Synthesis of 3- and 5-Carbaldehydes, Imines, and Related Derivatives 172
    13.6.4.3.5 Method 5: Wittig Reactions at the α-Carbon .................. 174
    13.6.4.3.6 Method 6: Modification of Nitrogen Substituents ............. 175
13.6.5 Solid-Phase Syntheses .................................................... 176
  13.6.5.1 Method 1: Synthesis from Solid-Supported Esters ................ 177
  13.6.5.2 Method 2: Synthesis Using Resin-Bound Amidoximes Derived from Resin-Bound Nitriles 178

13.7 Product Class 7: 1,2,5-Oxadiazoles
R. M. Paton

13.7 Product Class 7: 1,2,5-Oxadiazoles ........................................ 185
  13.7.1 Product Subclass 1: Monocyclic 1,2,5-Oxadiazoles (Furazans) ........ 185
    13.7.1.1 Synthesis by Ring-Closure Reactions ............................ 186
      13.7.1.1.1 By Formation of One O—N Bond ............................ 186
      13.7.1.1.1.1 Method 1: From 1,2-Dione Dioximes ...................... 186
13.7.1.2 Synthesis by Ring Transformation ........................................... 188
13.7.1.2.1 Method 1: From 1,2,4-Oxadiazoles .................................. 188
13.7.1.2.2 Method 2: From Isoxazoles ........................................... 189
13.7.1.3 Synthesis by Substituent Modification .................................... 189
13.7.1.3.1 Substitution of Existing Substituents .................................. 190
13.7.1.3.1.1 Method 1: Substitution of Halogens by Nucleophiles .......... 190
13.7.1.3.1.2 Method 2: Deoxygenation of 1,2,5-Oxadiazole 2-Oxides ...... 190
13.7.1.3.1.3 Method 3: Substitution of Nitrogen by Nucleophiles .......... 191
13.7.1.3.2 Modification of Substituents ............................................ 192
13.7.1.3.2.1 Of Oxygen ..................................................................... 192
13.7.1.3.2.2 Of Sulfur ..................................................................... 193
13.7.1.3.2.3 Of Nitrogen ................................................................. 193
13.7.1.3.2.4 Of Carbon .................................................................... 194
13.7.2 Product Subclass 2: 2,1,3-Benzoxadiazoles (Benzofurazans) and Other Annulated 1,2,5-Oxadiazoles ......................................................... 194
13.7.2.1 Synthesis by Ring-Closure Reactions ..................................... 195
13.7.2.1.1 By Annulation to an Arene ............................................ 195
13.7.2.1.1.1 By Formation of One O—N Bond .................................. 195
13.7.2.1.1.1.1 Fragment O—N—C—C—N ........................................... 195
13.7.2.1.1.1.2 Method 1: From Benzo-1,2-quinone Dioximes .............. 195
13.7.2.1.1.1.2 Method 2: From 2-Azidonitro- and 2-Azidonitrosoarenes, and 2-Azidoanilines ................................................................. 195
13.7.2.1.2 By Annulation to the Heterocyclic Ring .............................. 196
13.7.2.2 Synthesis by Ring Transformation ......................................... 197
13.7.2.3 Synthesis by Substituent Modification .................................... 197
13.7.2.3.1 Substitution of Existing Substituents .................................. 197
13.7.2.3.1.1 Method 1: Substitution of Hydrogen ................................ 197
13.7.2.3.1.2 Method 2: Substitution of Halogens by Nucleophiles ........ 197
13.7.2.3.2 Modification of Substituents ............................................ 198
13.7.2.3.2.1 Method 1: Deoxygenation of 2,1,3-Benzoxadiazole 1-Oxides .. 198
13.7.3 Product Subclass 3: Monocyclic 1,2,5-Oxadiazole 2-Oxides (Furoxans) .......................................................... 199
13.7.3.1 Synthesis by Ring-Closure Reactions ..................................... 200
13.7.3.1.1 By Formation of One O—N and One C—C Bond ............... 200
13.7.3.1.1.1 Fragments O—N—C and N—C ........................................ 200
13.7.3.1.1.1.1 Method 1: By Dimerization of Nitrile Oxides ................ 200
13.7.3.1.1.1.1 Variation 1: From Nitrile Oxides Generated from Oximes and Hydroximoyl Halides ......................................................... 202
13.7.3.1.1.1.2 Variation 2: From Nitrile Oxides Generated from Nitrolic Acids and Their Precursors ......................................................... 202
13.7.3.1.1.1.3 Variation 3: From Nitrile Oxides Generated from Nitroalkyl Compounds ................................................................. 203
13.7.3.1.2 By Formation of One O—N Bond ........................................... 203
13.7.3.1.2.1 Fragment O—N—C—C—N ............................................... 203
13.7.3.1.2.1.1 Method 1: From 1,2-Dione Dioximes ................................ 203
13.7.3.1.2.1.2 Method 2: From α-Nitro Ketoximes ............................... 204
13.7.3.2 Synthesis by Substituent Modification ....................................... 205
13.7.3.2.1 Substitution of Existing Substituents ....................................... 205
13.7.3.2.1.1 Method 1: Substitution of Halogens by Nucleophiles .......... 205
13.7.3.2.1.2 Method 2: Substitution of Sulfur by Nucleophiles .............. 206
13.7.3.2.1.3 Method 3: Substitution of Nitrogen by Nucleophiles .......... 206
13.7.3.2.2 Modification of Substituents ............................................... 207
13.7.4 Product Subclass 4: 2,1,3-Benzoxadiazole 1-Oxides (Benzofuroxans) and Other Annulated Furoxans .......................................................... 207
13.7.4.1 Synthesis by Ring-Closure Reactions ........................................ 208
13.7.4.1.1 By Annulation to an Arene ............................................... 208
13.7.4.1.1.1 By Formation of One O—N Bond ................................... 208
13.7.4.1.1.1.1 Fragment O—N—C—C—N ........................................... 208
13.7.4.1.1.1.1.1 Method 1: From 1,2-Quinone Dioximes .................... 208
13.7.4.1.1.1.1.2 Method 2: From 2-Nitroanilines ............................... 209
13.7.4.1.1.1.1.3 Method 3: From 2-Nitroaryl Azides ......................... 209
13.7.4.1.2 By Annulation to the Heterocyclic Ring ................................ 210
13.7.4.2 Synthesis by Ring Transformation ........................................... 211
13.7.4.3 Synthesis by Substituent Modification ....................................... 211
13.7.4.3.1 Substitution of Existing Substituents ................................... 211
13.7.4.3.1.1 Method 1: Substitution of Hydrogen ................................ 211
13.7.4.3.1.2 Method 2: Substitution of Halogens by Nucleophiles ....... 212

13.8 Product Class 8: 1,3,4-Oxadiazoles
G. W. Weaver

13.8 Product Class 8: 1,3,4-Oxadiazoles ................................................. 219
13.8.1 Synthesis by Ring-Closure Reactions ........................................... 220
13.8.1.1 By Formation of Two O—C Bonds ......................................... 220
13.8.1.1.1 Fragments C—N—N—C and O ........................................... 220
13.8.1.1.1.1 Method 1: Oxidation of Diazines with Lead(IV) Acetate ........ 220
13.8.1.2 By Formation of One O—C and One N—C Bond ....................... 221
13.8.1.2.1 Fragments N—N—C and O—C ........................................... 221
13.8.1.2.1.1 Method 1: Reaction of Diazo Compounds with Ketones ........ 221
13.8.1.2.2 Fragments O—C—N—N and C ........................................... 222
13.8.1.2.2.1 Method 1: Reaction of Acylhydrazines with Derivatives of Carbonic Acid 222
Variation 1: Use of Carbonyldiimidazole To Effect Cyclization 222

Variation 2: Synthesis of Mesoionic Isosydnones Using Phosgene 223

Variation 3: Cyclization Using Carbon Disulfide 223

Variation 4: Reaction of Acylhydrazines with Cyanogen Bromide 224

Method 2: Reaction of Acylhydrazines with Carboxylic Acid Derivatives 225

Variation 1: Reaction with Ortho Esters 225

Variation 2: Reaction with a Carboxylic Acid and 2-Chloro-1,3-dimethyl-4,5-dihydroimidazolium Chloride 226

Variation 3: Reaction with Imidate Hydrochlorides 227

Method 3: Reaction of Diacyl Diimides with Carbenes 228

Variation 1: From Diacylhydrazine Compounds 228

Variation 7: Dehydration Using Hexamethyldisilazane 233

Variation 8: Dehydration Using Trifluoromethanesulfonic Anhydride 234

Variation 9: Dehydration Using Tosyl Chloride 234

Variation 10: Dehydration Using 2-Chloro-1,3-dimethyl-4,5-dihydroimidazolium Chloride 235

Variation 11: Dehydration Using Burgess-Type Reagents 235

Method 2: Synthesis of 1,3,4-Oxadiazolamines from Acyl Semicarbazides 236

Variation 1: Cyclization Using Carbodiimides 236

Variation 2: Desulfurization with Mercury(II) Acetate under Microwave Irradiation 237

Variation 3: Oxidation of Aldehyde Acyl Hydrazones 238

Variation 4: Oxidation withLead(IV) Oxide 239

Variation 5: Oxidation with Bromine 240

Method 5: Ring Closure by Internal Alkylation 241

Synthesis by Ring Transformation 242

Method 1: Reactions of Azirines with Acylhydrazines 242

Method 2: By Photochemical Rearrangement of Substituted 1,2,4-Oxadiazoles 242

Method 3: Reactions of Tetrazoles with Carboxylic Acid Derivatives 243

Variation 1: Reaction with Acetic Anhydride 243

Variation 2: Reaction with Carboxylic Acid Chlorides 244

Method 4: Reactions of 1,2,4-Triazines with Bromine 245

Synthesis by Substituent Modification 245

Substitution of Existing Substituents 245
13.8.3.1 Of Hydrogen ................................................................. 245
13.8.3.1.1 Acylation Reactions .................................................. 245
13.8.3.1.2 Of Heteroatoms ....................................................... 246
13.8.3.2.1 Method 1: Displacement of Chlorine by Nucleophiles ......... 246
13.8.3.2 Addition Reactions ..................................................... 246
13.8.3.2.1 Protonation ............................................................. 247
13.8.3.2.2 N-Alkylation ............................................................ 247
13.8.3.2.3 N-Acylation ............................................................ 247
13.8.3.3 Modification of Existing Substituents .................................. 248
13.8.3.3.1 Reactions of Sulfur Substituents ................................... 248
13.8.3.3.2 Reactions of Nitrogen Substituents ................................ 248
13.8.3.3.3 Reactions of Carbon Substituents ................................. 249
13.8.3.3.3.1 Method 1: Lithiation of a Methyl Substituent, Silylation, and Peterson Alkenation with a Ketone .............................. 249

13.9 Product Class 9: 1,2,3-Thiadiazoles
D. J. Wilkins and P. A. Bradley

13.9 Product Class 9: 1,2,3-Thiadiazoles ........................................ 253
13.9.1 Product Subclass 1: Monocyclic 1,2,3-Thiadiazoles ..................... 253
13.9.1.1 Synthesis by Ring-Closure Reactions ................................... 255
13.9.1.1.1 By Formation of One S—N and One S—C Bond .................. 255
13.9.1.1.1.1 Method 1: Wolff’s Synthesis ....................................... 255
13.9.1.1.2 Method 2: Hurd–Mori Synthesis ..................................... 256
13.9.1.1.2.1 Variation 1: Use of Thionyl Chloride in the Hurd–Mori Procedure .................. 256
13.9.1.1.2.2 Variation 2: Use of Sulfur Dichloride or Sulfur Monochloride in the Hurd–Mori Procedure .................................. 257
13.9.1.1.2 By Formation of One S—N and One C—C Bond .................. 258
13.9.1.1.2.1 Method 1: Pechmann and Nold Synthesis ................. 258
13.9.1.1.2.1.1 Variation 1: Reaction of Isothiocyanates with Diazocompounds ........ 258
13.9.1.1.2.1.2 Variation 2: Modified Pechmann Synthesis .................. 259
13.9.1.1.2.1.3 Variation 3: Use of Lithium (Trimethylsilyl)diazomethane ............. 260
13.9.1.2 Synthesis by Ring Transformation ..................................... 261
13.9.1.2.1 Method 1: Synthesis From 1,2,3-Triazolethiols .................. 261
13.9.1.2.2 Method 2: Synthesis From 1,2,3-Oxadiazoles .................... 262
13.9.1.2.3 Method 3: From Isothiazolones .................................... 262
13.9.1.3 Synthesis by Substituent Modification .................................. 263
13.9.1.3.1 Method 1: Transformations Involving Metalation and Subsequent Electrophilic Quench .......................................... 263
13.9.1.3.2 Method 2: Removal of Carbonyl Substituents ..................... 264
13.9.1.3.3 Method 3: Transformations Involving Diazonium Intermediates ... 265
13.9 Method 4: Conversion of Substituents into Alkene Derivatives

13.9.2 Product Subclass 2: Annulated 1,2,3-Thiadiazoles

13.9.2.1 Synthesis by Ring-Closure Reactions

13.9.2.1.1 By Annulation to an Arene

13.9.2.1.1.1 Method 1: From 2-Aminobenzenethiols

13.9.2.1.1.2 Method 2: Reaction of Diazooxides with Phosphorus Pentasulfide

13.9.2.2 Synthesis by Ring Transformation

13.9.2.2.1 Method 1: Synthesis from Dithiazoles

13.9.2.2.2 Method 2: Synthesis from 1,2-Benzothiazol-7-amines

13.9.2.2.3 Method 3: Synthesis from 1,3-Benzothiazol-7-amines

13.9.2.2.4 Method 4: Synthesis from 1,2,3-Benzothiadiazol-7-amines

13.10 Product Class 10: 1,2,4-Thiadiazoles

13.10.1 Synthesis by Ring-Closure Reactions

13.10.1.1 By Formation of One S—N, One S—C, and One N—C Bond

13.10.1.1.1 Fragments C—N, C—N, and S

13.10.1.1.1.1 Method 1: Reaction of Nitriles with Sulfur

13.10.1.1.1.2 Method 2: Reaction of Nitriles with Sulfur Dichloride

13.10.1.2 By Formation of One S—N and One N—C Bond

13.10.1.2.1 Fragments N—C—S and N—C

13.10.1.2.1.1 Method 1: Oxidation of Thioamides

13.10.1.2.2 Fragments N—C—N and C—S

13.10.1.2.2.1 Method 1: Oxidation of N-Arylthioureas and N-Alkylthioureas

13.10.1.2.2.2 Method 2: Reaction of Amidoximes and Related Derivatives

13.10.1.2.2.2.1 Variation 1: Amidoximes and Isothiocyanates

13.10.1.2.2.2.2 Variation 2: Reaction of Amidoximes with Carbon Disulfide

13.10.1.2.2.3 Variation 3: Reaction of N-Sulfenylamidines with Isothiocyanates

13.10.1.2.2.3.1 Method 3: Synthesis from Amidines

13.10.1.2.2.3.1.1 Variation 1: Reaction of Amidines with Carbon Disulfide

13.10.1.2.2.3.2 Variation 2: Reaction of Amidines with Trichloromethylsulfonyl Chloride

13.10.1.2.3 Fragments C—N—C—S and N

13.10.1.2.3.1 Method 1: From Thioimidates with Chloramine

13.10.1.2.3.1.1 Variation 1: Reaction of Cyanothioiminocarbonates with Chloramine

13.10.1.2.3.1.2 Variation 2: Reaction of Ethoxycarbonylimidothiocarbonates with Chloramine

13.10.1.3 By Formation of One S—C and One N—C Bond

13.10.1.3.1 Fragments C—N—S and C—N
13.10. 1.3.1.1 Method 1: 1,3-Dipolar Cycloaddition Reactions of Nitrile Sulfides with Nitriles .................................................. 286
13.10. 1.4 By Formation of One S—N Bond ........................................ 287
13.10. 1.4.1 Fragments N—C—N—C—S ........................................... 287
13.10. 1.4.1.1 Method 1: Oxidation of Thioacylamidine Derivatives ........ 287
13.10. 1.4.1.1.1 Variation 1: Oxidation of Thioacylamidine Derivatives .... 288
13.10. 1.4.1.1.2 Variation 2: Oxidation of Thioacylguanidines ................. 288
13.10. 1.4.1.1.3 Variation 3: Oxidation of Aminothioureas ...................... 289
13.10. 2 Synthesis by Ring Transformation ......................................... 290
13.10. 2.1 Method 1: Rearrangement of Oxadiazoles and Isoxazoles .......... 290
13.10. 2.1.1 Variation 1: 1,2,4-Oxadiazole Rearrangements ..................... 290
13.10. 2.1.2 Variation 2: 1,2,5-Oxadiazole Rearrangements ..................... 291
13.10. 2.1.3 Variation 3: Isoxazole Rearrangements ............................ 291
13.10. 2.2 Method 2: Dithiazolidine Rearrangements ............................ 292
13.10. 3 Synthesis by Substituent Modification .................................... 292
13.10. 3.1 Method 1: Transformations Involving Diazonium Intermediates .... 292
13.10. 3.2 Method 2: Nucleophilic Substitution of Halogen Substituents ....... 293
13.11  Product Class 11: 1,2,5-Thiadiazoles and Related Compounds
P. A. Koutentis

13.11  Product Class 11: 1,2,5-Thiadiazoles and Related Compounds ........ 297
13.11.1 Product Subclass 1: Monocyclic 1,2,5-Thiadiazoles .................... 298
13.11.1.1 Synthesis by Ring-Closure Reactions ................................. 298
13.11.1.1.1 By Formation of Two S—N Bonds and One C—C Bond ............ 298
13.11.1.1.1 Fragments N—C, N—C, and S .................................. 298
13.11.1.1.1.1 Method 1: Reaction of Potassium Cyanide and Sulfur Dioxide ... 298
13.11.1.1.2 By Formation of Two S—N Bonds .................................. 300
13.11.1.1.2.1 Fragments N—C—C—N and S .................................. 300
13.11.1.1.2.1.1 Method 1: From Aliphatic 1,2-Diamines ....................... 300
13.11.1.1.2.1.2 Method 2: From 2-Aminooacetamides ........................ 301
13.11.1.1.2.1.3 Method 3: From 2-Aminoacetamidines ........................ 303
13.11.1.1.2.1.4 Method 4: From Cyanoacetamides ............................ 304
13.11.1.1.2.1.5 Method 5: From Cyanamid and Its Esters ..................... 305
13.11.1.1.2.1.6 Method 6: From 1,2-Diimines and Related Compounds ........ 307
13.11.1.1.3 By Formation of One S—N and One N—C Bond ................... 308
13.11.1.1.3.1 Fragments S—N and C—C—N .................................. 308
13.11.1.1.3.1.1 Method 1: From Aliphatic Monoamines ....................... 308
13.11.1.1.3.1.2 Method 2: From Enamines .................................... 308
13.11.1.1.3.1.3 Method 3: From Alkyl Aryl Ketonimes ........................ 309
13.11.1.1.4 By Formation of Two N—C Bonds .................................. 310
13.11.1.4.2 Rearrangement of Substituents ........................................... 328
13.11.1.4.2.1 Method 1: Curtius Rearrangement of Azidocarbonyl Compounds 328
13.11.1.4.2.2 Method 2: Rearrangement of Thionocarbamates ........................................... 328
13.11.1.4.3 Modification of Substituents ........................................... 329
13.11.1.4.3.1 Of Carbon ............................................................... 329
13.11.1.4.3.1.1 Method 1: Oxidative Degradation of 2,1,3-Benzothiadiazoles 329
13.11.1.4.3.1.2 Method 2: Beckmann Fragmentation of 2,1,3-Benzothiadiazole-4,5-dione Acetoximes 330
13.11.1.4.3.2 Of Heteroatoms ........................................... 330
13.11.2 Product Subclass 2: Annulated 1,2,5-Thiadiazoles (2,1,3-Benzothiadiazoles and Related Systems) ........................................... 331
13.11.2.1 Synthesis by Ring-Closure Reactions ........................................... 331
13.11.2.1.1 By Annulation to an Arene ........................................... 331
13.11.2.1.1.1 Method 1: From Arene-1,2-diamines ........................................... 331
13.11.2.1.1.2 Method 2: From Quinone 1,2-Dioximes ........................................... 333
13.11.2.1.1.2 By Formation of One S—N and One N—C Bond ........................................... 333
13.11.2.1.1.2.1 Method 1: From Anilines ........................................... 333
13.11.2.1.2 By Formation of Two S—C and Two N—C Bonds ........................................... 334
13.11.2.1.2.1 Method 1: From Active Hydrocarbons and Tetrasulfur Tetranitride ........................................... 334
13.11.2.1.2.1.2 Method 2: From Phenols and Related Compounds and Tetrasulfur Tetranitride ........................................... 335
13.11.2.1.3 By Formation of One S—N Bond ........................................... 339
13.11.2.1.3.1 Method 2: From Arylsulfur Diimides ........................................... 340
13.11.2.1.3.2 Method 3: From Quinones or Hydroquinones ........................................... 340
13.11.2.1.4 By Formation of One N—C Bond ........................................... 340
13.11.2.1.4.1 Method 1: From 1,2-Bis(sulfinylamino)benzene ........................................... 340
13.11.2.1.4.2 Method 1: From 1,2,5-Thiadiazole ........................................... 341
13.11.2.1.4.3 Method 2: From 1,2,5-Thiadiazole-3,4-diamine ........................................... 341
13.11.2.1.5 By Formation of One N—C Bond ........................................... 341
13.11.2.1.5.1 Method 1: From Arylsulfur Diimides ........................................... 341
13.11.2.1.6 By Annulation to 1,2,5-Thiadiazole ........................................... 341
13.11.2.1.6.1 Method 1: From 1,2,5-Thiadiazole-3,4-dicarbonitrile ........................................... 341
13.11.2.1.6.2 Method 2: From 1,2,5-Thiadiazolamines ........................................... 341
13.11.2.1.6.3 Method 3: From 1,2,5-Thiadiazole-3,4-diamine ........................................... 342
13.11.2.1.6.4 Method 4: From 1,2,5-Thiadiazole-3,4-dicarbonyl Compounds ........................................... 343

13.12 Product Class 12: 1,3,4-Thiadiazoles
S. J. Collier

13.12 Product Class 12: 1,3,4-Thiadiazoles ........................................... 349
13.12.1 Synthesis by Ring-Closure Reactions ........................................... 351
13.12.1.1 By Formation of Two S—C and Two N—C Bonds ........................................... 352
Fragments N—N, S, and Two C Fragments ........................................ 352

Method 1: Reaction of Aldehydes with Hydrazine and Sulfur ............... 352

By Formation of Two S—C Bonds and One N—C Bond ............................ 353

Fragments N—N—C, S, and C .......................................................... 353

Method 1: Reactions of Methylpyridines (or Methylquinolines) with Aroylhydrazines and Sulfur .................................................. 353

By Formation of Two S—C Bonds .................................................. 353

Fragments N—N—C, S, and C .......................................................... 353

Method 1: From 2,3-Diazabuta-1,3-dienes and a Sulfur Source ............... 353

Method 2: From Diformyl- or Diacylhydrazines and a Sulfur Source ....... 356

By Formation of One S—C and One N—C Bond .................................. 356

Fragments S—C—N—N and C .......................................................... 356

Method 1: From Thiodyrazide Derivatives ......................................... 356

Variation 1: By Reaction with Carboxylic Acid Derivatives .................. 357

Variation 2: By Reaction with Ortho Esters or Trihalomethyl Compounds ... 358

Variation 3: By Reaction with Imines and Related Compounds ............... 359

Variation 4: By Reaction with Isothiocyanates (and Isocyanates) ......... 362

Variation 5: By Reaction with Nitriles and Related Compounds ............. 363

Variation 6: By Reaction with Thiocarbonyl Compounds ....................... 365

Variation 7: By Reaction with Miscellaneous Reagents ....................... 366

Fragments N—N—C and S—C .......................................................... 367

Method 1: From Hydrazides and Thiocarbonyl Compounds ................... 367

Method 2: From Amidrazones and Thiocarbonyl Compounds .................. 368

Method 3: From Diazocompounds and Thiocarbonyl Derivatives ............. 369

By Formation of Two N—C Bonds .................................................. 370

Fragments C—S—C and N—N .......................................................... 370

Method 1: From Hydrazine and Thiocarbonyl Compounds .................... 370

By Formation of One S—C Bond .................................................... 372

Fragment S—C—N—N—C ............................................................... 372

Method 1: By Cyclization of Monothiodiaclyhydrazine Derivatives .......... 372

Method 2: By Cyclization of Dithioacylhydrazine Derivatives ............... 375

Method 3: By Cyclization of \(N'\)-Imidoylthiohydrazides .................... 376

Method 4: By Cyclization of Thiaoacylhydrazones .............................. 377

Synthesis by Ring Transformation .................................................. 380

Aromatization ................................................................................. 381

Synthesis by Substituent Modification ............................................. 383

Substitution of Existing Substituents .............................................. 383

Of Hydrogen .................................................................................. 383

Method 1: By Acylation (Through Rearrangement) .............................. 384

Method 2: By Halogen .................................................................... 384
13.12.4.1.3 Method 3: By Sulfur-Containing Groups .................................................... 384
13.12.4.1.4 Method 4: By Nitrogen-Containing Groups .................................................. 385
13.12.4.1.2 Of Carbon ........................................................................................................ 385
13.12.4.1.2.1 Method 1: By Hydrogen ........................................................................... 385
13.12.4.1.3 Of Heteroatoms ............................................................................................... 386
13.12.4.1.3.1 Substitution of Halogen ............................................................................. 386
13.12.4.1.3.1.1 Method 1: By Hydrogen ........................................................................ 386
13.12.4.1.3.1.2 Method 2: By Carbon ............................................................................ 387
13.12.4.1.3.1.3 Method 3: By Oxygen ............................................................................ 387
13.12.4.1.3.1.4 Method 4: By Sulfur .............................................................................. 388
13.12.4.1.3.1.5 Method 5: By Nitrogen ............................................................................ 388
13.12.4.1.3.2 Substitution of Oxygen .............................................................................. 389
13.12.4.1.3.3 Substitution of Sulfur .................................................................................. 389
13.12.4.1.3.3.1 Method 1: By Carbon ............................................................................ 389
13.12.4.1.3.3.2 Method 2: By Oxygen ............................................................................ 390
13.12.4.1.3.3.3 Method 3: By Nitrogen ............................................................................ 391
13.12.4.1.3.4 Substitution of Nitrogen ............................................................................. 391
13.12.4.1.3.4.1 Method 1: Reductive Deamination ............................................................ 391
13.12.4.1.3.4.2 Method 2: By Oxygen ............................................................................ 392
13.12.4.1.3.4.3 Method 3: By Halogen ............................................................................. 393
13.12.4.2 Addition Reactions .............................................................................................. 393
13.12.4.2.1 Of Organic and Heteroatom Groups ............................................................ 394
13.12.4.2.1.1 Method 1: N-Functionalization by Electrophiles .......................................... 394
13.12.4.3 Modification of Substituents .............................................................................. 396
13.12.4.3.1 Of Carbon ....................................................................................................... 396
13.12.4.3.1.1 Method 1: Alkyl Groups ............................................................................ 396
13.12.4.3.1.1.1 Variation 1: C-Metalation, Alkylation, and Acylation ................................. 396
13.12.4.3.1.1.2 Variation 2: C-Halogenation .................................................................. 398
13.12.4.3.2 Of Oxygen ...................................................................................................... 399
13.12.4.3.2.1 Method 1: O-Acylation .............................................................................. 399
13.12.4.3.2.2 Method 2: O-Dealkylation ......................................................................... 400
13.12.4.3.3 Of Sulfur Groups ........................................................................................... 400
13.12.4.3.3.1 Method 1: S-Alkylation .............................................................................. 401
13.12.4.3.3.2 Method 2: S-Dealkylation ......................................................................... 402
13.12.4.3.4 Of Nitrogen .................................................................................................... 403
13.12.4.3.4.1 Method 1: N-Functionalization .................................................................. 403

Table of Contents
Product Class 13: 1,2,3-Triazoles

A. C. Tomé

13.13 Product Class 13: 1,2,3-Triazoles

........................................ 415

13.13.1 Product Subclass 1: Monocyclic N-Unsubstituted and 1-Substituted 1,2,3-Triazoles

........................................ 418

13.13.1.1 Synthesis by Ring-Closure Reactions

........................................ 418

13.13.1.1.1 By Formation of One N—N and One N—C Bond

........................................ 418

13.13.1.1.1.1 Fragments C—C—N and N

........................................ 418

13.13.1.1.1.1.1 Method 1: From 2-Diazo-1,3-dicarbonyl Compounds and Amine Derivatives

........................................ 418

13.13.1.1.1.1.1 Variation 1: From 2-Diazo-3-oxopropanoates and Amine Derivatives

........................................ 419

13.13.1.1.1.1.1 Variation 2: From 2-Diazo-3-oxoaldehydes and Amine Derivatives

........................................ 420

13.13.1.1.1.1.3 Variation 3: From Dimethyl Diazomalonate and Amines

........................................ 421

13.13.1.1.1.2 Method 2: From Vinyldiazonium Salts and Amine Derivatives

........................................ 422

13.13.1.1.1.2.1 Method 3: From Dichloro- or Trichloroacetalddehyde Sulfonylhydrazones and Primary Amines

........................................ 423

13.13.1.1.2 Fragments C—C—N and N—N

........................................ 424

13.13.1.1.2.1 Method 1: From Enaminones and Diazotransfer Reagents

........................................ 424

13.13.1.1.2.1.1 Variation 1: From Enaminones and 3-Diazo-1,3-dihydro-2H-indol-2-one Derivatives

........................................ 424

13.13.1.1.2.1.2 Variation 2: From Enaminones and Sulfonyl Azides

........................................ 426

13.13.1.1.2 By Formation of One N—N and One C—C Bonds

........................................ 426

13.13.1.1.2.1 Fragments C—N—N and C—N

........................................ 426

13.13.1.1.2.1.1 Method 1: From Diazoolkanes and Nitriles

........................................ 426

13.13.1.1.2.1.1.1 Variation 1: From Diazoolkanes and Aryl Cyanates

........................................ 428

13.13.1.1.2.1.1.2 Variation 2: From Diazoolkanes and Activated Nitriles

........................................ 428

13.13.1.1.2.1.1.3 Variation 3: From [Diazotrimethylsilyl]methyl]lithium and Nitriles

........................................ 429

13.13.1.1.2.1.2 Method 2: From Diazoolkanes and Imines, Oximes, or Diarylazines

........................................ 430

13.13.1.1.2.1.3 Variation 1: From Diazoolkanes and Imines

........................................ 430

13.13.1.1.2.1.3.1 Variation 2: From Diazoolkanes and Oximes

........................................ 431

13.13.1.1.2.1.4 Variation 3: From Diazoolkanes and Diarylazines

........................................ 432

13.13.1.1.2.2 Method 3: From Diazoolkanes and Heterocumulenes

........................................ 432

13.13.1.1.2.2.1 Variation 1: From Diazoolkanes and Ketenimines

........................................ 433

13.13.1.1.2.2.2 Variation 2: From Diazoolkanes and Carbodiimides

........................................ 434

13.13.1.1.2.2.3 Variation 3: From Diazoolkanes and Isocyanates

........................................ 435

13.13.1.1.2.2.4 Variation 4: From Diazoolkanes and Isothiocyanates

........................................ 436

13.13.1.1.2.3 Method 4: From N-Alkyl-N-nitrosoamines and Nitriles

........................................ 437

13.13.1.1.3 By Formation of Two N—C Bonds

........................................ 438

13.13.1.1.3.1 Fragments N—N and N—C

........................................ 438

13.13.1.1.3.1.1 Addition of Azides to Alkynes

........................................ 438

13.13.1.1.3.1.1.1 Method 1: Addition of Hydrazoic Acid to Alkynes

........................................ 439

13.13.1.1.3.1.1.2 Method 2: Addition of the Azide Ion to Alkynes

........................................ 440
Table of Contents

13.1.1.1.1.3 Method 3: Addition of Alkyl, Aryl, or Hetaryl Azides to Alkynes 441
13.1.1.1.1.3.1 Variation 1: Addition of Azides to Acetylene and to Symmetrically Substituted Alkynes 442
13.1.1.1.1.3.2 Variation 2: Addition of Azides to Alk-1-yynes 443
13.1.1.1.1.3.3 Variation 3: Addition of Azides to Unsymmetrical Disubstituted Alkynes 446
13.1.1.1.1.3.4 Variation 4: Using Polymer-Supported Methods 448
13.1.1.1.1.3.5 Variation 5: Intramolecular 1,3-Dipolar Cycloadditions 450
13.1.1.1.1.3.6 Variation 6: Addition of Azides to Alkoxyalkynes 452
13.1.1.1.1.4 Method 4: Addition of Ethyl Azidoformate and Cyanogen Azide to Alkynes 453
13.1.1.1.1.5 Method 5: Addition of Sulfonyl Azides to Alkynes 454
13.1.1.1.1.6 Method 6: Addition of Azidotrimethylsilane and Azidotributylstannane to Alkynes 456
13.1.1.1.1.7 Method 7: Addition of Azides to Metal Acetylides 457
13.1.1.1.1.2 Addition of Azides to C–C Bonds 458
13.1.1.1.1.2.1 Method 1: Addition of Sodium Azide to Activated Alkenes 458
13.1.1.1.1.2.2 Method 2: Addition of Azides to Activated Alkenes 461
13.1.1.1.1.2.3 Method 3: Addition of Azides to Strained Alkenes 462
13.1.1.1.1.2.4 Method 4: Addition of Azides to Allenes 464
13.1.1.1.1.2.5 Method 5: Addition of Azides to α-Acylphosphorus Ylides 466
13.1.1.1.1.2.6 Method 6: Addition of Azides to Enamines or Enol Ethers 468
13.1.1.1.1.2.6.1 Variation 1: Addition of Azides to Enamines 469
13.1.1.1.1.2.6.2 Variation 2: Addition of Azides to Enol Ethers 473
13.1.1.1.1.2.7 Method 7: Addition of Azides to Vinyl Acetate 474
13.1.1.1.1.2.8 Method 8: Addition of Azides to Ketene Acetals 475
13.1.1.1.1.3 Reaction of Azides with Active Methylene Compounds 478
13.1.1.1.1.3.1 Method 1: Reaction of Azides with 1,3-Diketones, 3-Oxo Esters, or 3-Oxoaamides 478
13.1.1.1.1.3.2 Method 2: Reaction of Azides with Malonic Esters, Malonamides, or Acetamides 481
13.1.1.1.1.3.3 Method 3: Reaction of Azides with Acetonitrile Derivatives 483
13.1.1.1.1.3.4 Method 4: Reaction of Aryl Azides with Alkoxides 486
13.1.1.1.4 By Formation of One N—N Bond 487
13.1.1.1.4.1 Fragment N—N—C—C—N 487
13.1.1.1.4.1.1 Method 1: Cyclization of α-Diazoamides 487
13.1.1.1.4.1.2 Method 2: Thermolysis of α-Azidoacetophenone (Phenylsulfonyl)hydrazones 487
13.1.1.1.4.1.3 Method 3: Cyclization of α-Hydroxyimino Hydrazones 488
13.1.1.1.4.1.4 Method 4: Cyclization of α-Hydroxyimino Aroyl- or Arylsulfonylhydrazones 489
13.1.1.1.4.1.5 Method 5: Cyclization of 1,2-Diketone Bis(hydrazone) Derivatives 490
13.1.1.1.4.1.5.1 Variation 1: Cyclization of 1,2-Diketone Bis(hydrazone) Derivatives 490
13.1.1.1.4.1.5.2 Variation 2: Cyclization of 1,2-Diketone Bis(arylsulfonylhydrazones) 491
13.1.1.1.4.1.5.3 Variation 3: Cyclization of 1,2-Diketone Bis(semicolonbazones) 491
13.1.1.1.4.1.5.4 Variation 4: Cyclization of 1,2-Diketone Bis(acylhydrazones) 492
13.1.1.1.4.1.6 Method 6: Cyclization of (1,2-Diphenylethene-1,2-diyl)bis(trityldiazene) 493
13.1.1.5 By Formation of One N—C Bond ........................................... 494
13.1.1.5.1 Fragment N—N—N—C ........................................... 494
13.1.1.5.1.1 Method 1: Cyclization of Linear Triazenes and Tetrazenes 494
13.1.1.5.1.2 Method 2: Cyclization of Vinyl Azides .......................... 495
13.1.1.5.1.3 Method 3: Cyclization of 2-(Formyloxy)vinyl Azides ......... 496
13.1.1.2 Synthesis by Ring Transformation ..................................... 497
13.1.1.3 Aromatization ................................................................. 500
13.1.1.3.1 Method 1: By Oxidation Reactions ............................... 500
13.1.1.3.2 Method 2: By Elimination Reactions .............................. 502
13.1.1.4 Synthesis by Substituent Modification .................................. 503
13.1.1.4.1 Substitution of Existing Substituents ............................. 503
13.1.1.4.1.1 Of Hydrogen .......................................................... 503
13.1.1.4.1.1.1 Method 1: Lithiation ............................................. 503
13.1.1.4.1.1.2 Method 2: N-Trimethylsilylation ............................. 505
13.1.1.4.1.1.3 Method 3: Carboxylation ...................................... 505
13.1.1.4.1.1.4 Method 4: Acylation ........................................... 506
13.1.1.4.1.1.5 Method 5: Formylation ......................................... 507
13.1.1.4.1.1.6 Method 6: Arylation ............................................ 507
13.1.1.4.1.1.7 Method 7: Alkylation ........................................... 509
13.1.1.4.1.1.8 Method 8: Halogenation ....................................... 511
13.1.1.4.1.1.9 Method 9: N-Amination ......................................... 514
13.1.1.4.1.1.10 Method 10: N-Hydroxylation ............................... 514
13.1.1.4.1.1.11 Method 11: Nitration ........................................... 515
13.1.1.4.1.2 Of Metals ............................................................... 516
13.1.1.4.1.2.1 Method 1: Desilylation ......................................... 516
13.1.1.4.1.3 Of Carbon Functionalities ......................................... 517
13.1.1.4.1.3.1 Method 1: Decarboxylation .................................. 517
13.1.1.4.1.3.2 Method 2: Deformylation ..................................... 517
13.1.1.4.1.3.3 Method 3: Deacylation ....................................... 518
13.1.1.4.1.3.4 Method 4: Dearylation ....................................... 519
13.1.1.4.1.3.5 Method 5: Dealkylation ....................................... 519
13.1.1.4.1.4 Of Heteroatoms ...................................................... 521
13.1.1.4.1.4.1 Method 1: Substitution of Halogens by Nucleophiles .... 521
13.1.1.4.1.4.2 Method 2: Substitution of Hydroxy Groups by Halogens 522
13.1.1.4.1.4.3 Method 3: Substitution of Diazonium Groups by Nucleophiles 522
13.1.1.4.1.4.4 Method 4: Deoxygenation ................................... 523
13.1.1.4.1.4.5 Method 5: Dehalogenation ................................... 524
13.1.1.4.2 Addition Reactions ...................................................... 524
13.1.1.4.2.1 Method 1: Conversion into N-Oxides .......................... 524
13.1.1.4.3 Rearrangement of Substituents ..................................... 525
13.1.2 Product Subclass 2: Monocyclic 2-Substituted 1,2,3-Triazoles .... 528
13.1.2.1 Synthesis by Ring-Closure Reactions .................................. 528
13.13.2.1.1 By Formation of One N—N and One N—C Bond ........................................ 528
13.13.2.1.1.1 Fragments C—C=N—N and N ......................................................... 528
13.13.2.1.1.1 Method 1: From N-Aminophthalimide and Conjugated Azoalkenes .... 528
13.13.2.1.2 By Formation of Two N—C Bonds ...................................................... 528
13.13.2.1.2 Fragments N—N—N and C—C ............................................................. 528
13.13.2.1.2.1 Method 1: Addition of Azidotrimethylsilane and Azidotributylstannane to Alkynes ................................................................. 528
13.13.2.1.2.2 Method 2: Addition of Acyl or Alkoxy carbonyl Azides to \(\alpha\)-Acylphosphorous Ylides ................................................................. 529
13.13.2.1.3 By Formation of One N—N Bond ......................................................... 529
13.13.2.1.3.1 Fragment N—N—C—C—N ................................................................. 529
13.13.2.1.3.1 Method 1: Cyclization of \(\alpha\)-Hydroxyimino Hydrazones ..................... 529
13.13.2.1.3.1 Method 2: Cyclization of 1,2-Diketone Bis(arylhydrazones) ............... 532
13.13.2.1.3.1 Method 3: Cyclization of \(\alpha\)-Imino Hydrazones ................................. 534
13.13.2.1.3.1 Method 4: Cyclization of 1,2-Bis(\(N\)-alkoxy-\(N\)-nitrosoamines) ............ 535
13.13.2.2 Synthesis by Ring Transformation ............................................................ 535
13.13.2.3 Synthesis by Substituent Modification ...................................................... 540
13.13.3 Product Subclass 3: N-Unsubstituted and 1-Substituted Benzotriazoles .... 540
13.13.3.1 Synthesis by Ring-Closure Reactions ...................................................... 540
13.13.3.1.1 By Formation of Two N—N Bonds ...................................................... 540
13.13.3.1.1 Fragments N—C—C—N and N ............................................................. 540
13.13.3.1.1 Method 1: From Benzene-1,2-diamines and Nitrous Acid ....................... 540
13.13.3.1.2 By Formation of One N—N and One N—C Bond ................................. 543
13.13.3.1.2 Fragments C—C=N and N—N ............................................................. 543
13.13.3.1.2.1 Method 1: From Arylamines and 2-Azido-3-ethyl-1,3-benzothiazolium Tetrafluoroborate ................................................................. 543
13.13.3.1.2.2 Fragments C—C=N—N and N ............................................................. 544
13.13.3.1.2.2 Method 1: From \(\alpha\)-Diazo Ketones and Amines ................................. 544
13.13.3.1.3 By Formation of Two N—C Bonds ...................................................... 544
13.13.3.1.3 Fragments N—N—N and C—C ............................................................. 544
13.13.3.1.3.1 Method 1: From Azides and Dehydrobenzene ................................. 544
13.13.3.1.3.1 Method 2: From Azides and Quinones .......................................... 546
13.13.3.1.4 By Formation of One N—N Bond ...................................................... 547
13.13.3.1.4 Fragments N—N—C—C—N ................................................................. 547
13.13.3.1.4.1 Method 1: Cyclization of 2-Nitrophenylhydrazines ......................... 547
13.13.3.1.4.1.1 Variation 1: Reaction of 1-Chloro-2-nitrobenzenes or 1,2-Dinitrobenzenes with Hydrazine ................................................................. 547
13.13.3.1.4.1.2 Method 2: Cyclization of (2-Aminophenyl)hydrazine Derivatives .... 549
13.13.3.1.4.1.3 Method 3: Cyclization of (2-Aminophenyl)triazene Derivatives .... 549
13.13.3 Synthesis by Substituent Modification

13.13.3.1 Substitution of Existing Substituents

13.13.3.1.1 Of Hydrogen

13.13.3.1.1.1 Method 1: N-Trimethylsilylation

13.13.3.1.1.2 Method 2: Carboxylation

13.13.3.1.1.3 Method 3: Acylation

13.13.3.1.1.4 Method 4: N-Formylation

13.13.3.1.1.5 Method 5: Arylation

13.13.3.1.1.6 Method 6: Alkynylation

13.13.3.1.1.7 Method 7: Alkenylation

13.13.3.1.1.8 Method 8: Alkylation

13.13.3.1.1.9 Method 9: Halogenation

13.13.3.1.1.10 Method 10: Sulfonylation

13.13.3.1.1.11 Method 11: N-Amination

13.13.3.1.1.12 Method 12: Nitration

13.13.3.1.1.13 Method 13: Azo Coupling

13.13.3.2 Of Carbon Functionalities

13.13.3.2.1 Method 1: Decarboxylation

13.13.3.2.2 Method 2: Deacylation

13.13.3.3 Of Heteroatoms

13.13.3.3.1 Method 1: Deoxygenation

13.13.3.3.2 Method 2: Dehalogenation

13.13.3.4 Addition Reactions

13.13.3.4.1 Method 1: Conversion into N-Oxides or Epoxides

13.13.4 Product Subclass 4: 2-Substituted Benzotriazoles
13.13.4.2 Synthesis by Ring Transformation ........................................ 578
13.13.4.2.1 Method 1: Isomerization of 4-(Arylazo)-2,1,3-benzoxadiazoles 578
13.13.4.2.2 Method 2: Transformation of 1,3,3-Trialkyl-2-(2,4-dinitrophenyl)diaziridines 578
13.13.4.2.3 Method 3: Transformation of 1-(2-Nitrophenyl)-1H-tetrazoles 579
13.13.4.3 Synthesis by Substituent Modification ............................... 580

13.14 Product Class 14: 1,2,4-Triazoles
A. D. M. Curtis

13.14.1 Synthesis by Ring-Closure Reactions .................................... 603
13.14.1.1 By Formation of Four N—C Bonds .................................. 604
13.14.1.1.1 Method 1: Reaction of Carboxylic Acids with Hydrazine ..... 604
13.14.1.2 By Formation of Three N—C Bonds .................................. 605
13.14.1.2.1 Fragments C—N—C, N, and N .................................. 605
13.14.1.2.1.1 Method 1: From Acylhydrazines and Thioesters ............ 605
13.14.1.2.2 Fragments N—C, N—N, and C .................................. 605
13.14.1.2.2.1 Method 1: From Amidines, Hydrazine, and Esters .......... 605
13.14.1.3 By Formation of Two N—C Bonds .................................. 606
13.14.1.3.1 Fragments C—N—C and N—N .................................. 606
13.14.1.3.1.1 Method 1: From Iminoesters, Thioesters, Amidines, and Guanidines with Hydrazines 606
13.14.1.3.1.1.1 Variation 1: From N-Cyanoimines ............... 606
13.14.1.3.1.2 Variation 2: From N-Acylimines .............................. 607
13.14.1.3.1.2 Method 2: From Diacylamines and Hydrazines .......... 607
Table of Contents

13.14.1.3.2 Fragments C—N—N and C—N ...................................................... 608
13.14.1.3.2.1 Method 1: From Acylhydrazines and Carboxylic Acid Derivatives 608
13.14.1.3.2.1.1 Variation 1: From Acylhydrazines and Carboxylic Ester Imides 608
13.14.1.3.2.1.2 Variation 2: From Aroylhydrazines and Thioamides 609
13.14.1.3.2.1.3 Variation 3: From Acylhydrazines and Aromatic Nitriles 609
13.14.1.3.2.2 Method 2: From Hydrazones of Carboxylic Acid Chlorides 610
13.14.1.3.3 Fragments C—N—N—C and N ...................................................... 610
13.14.1.3.3.1 Method 1: From Aroylsemicarbazides and Amines 610
13.14.1.3.3.2 Method 2: From Diacylhydrazines and Amines 611
13.14.1.3.3.3 Method 3: From Chlorinated Azines and Amines 612
13.14.1.3.4 Fragments N—C—N—N and C ...................................................... 612
13.14.1.3.4.1 Method 1: From Aminoguanidines ............................................ 612
13.14.1.3.4.1.1 Variation 1: With Carboxylic Acids ........................................ 613
13.14.1.3.4.1.2 Variation 2: With Carboxylic Ester Imides 614
13.14.1.3.4.2 Method 2: From Amidrazones ................................................ 614
13.14.1.3.4.2.1 Variation 1: With Ortho Esters ............................................. 614
13.14.1.3.4.2.2 Variation 2: With Carboxylic Acids ........................................ 615
13.14.1.4 By Formation of One N—C Bond .................................................. 615
13.14.1.4.1 Fragments N—C—N—N—C ......................................................... 615
13.14.1.4.1.1 Method 1: From Acylated Aminoguanidines 615
13.14.1.4.1.2 Method 2: From Acylated Amidrazones 616
13.14.1.4.1.3 Method 3: From Acyclaminothioureas 616
13.14.1.4.2 Fragments C—N—C—N—N ........................................................... 617
13.14.1.4.2.1 Method 1: From Acylamidrazones ............................................ 617
13.14.1.4.2.2 Method 2: By Oxidation of Amidrazones .................................. 617
13.14.1.2 Synthesis by Ring Transformation .................................................. 618
13.14.2.1 Formal Exchange of Ring Members with Retention of the Ring Size 618
13.14.2.1.1 Method 1: From 1,3-Oxazolones ............................................... 618
13.14.2.1.1.1 Variation 1: From 1,3-Oxazol-4(5H)-ones 618
13.14.2.1.1.2 Variation 2: From 4-Hydradzono-1,3-oxazol-5(4H)-ones 619
13.14.2.1.2 Method 2: From 1,2,4-Oxadiazoles ............................................ 619
13.14.2.1.2.1 Variation 1: From 3-Arylazo-1,2,4-oxadiazoles 620
13.14.2.1.2.2 Variation 2: From N-(Anilinomethylene)-1,2,4-oxadiazol-3-amines 620
13.14.2.1.3 Method 3: From 1,3,4-Oxadiazoles ............................................ 620
13.14.2.1.3.1 Variation 1: From 2,5-Bis(trifluoromethyl)-1,3,4-oxadiazole 620
13.14.2.1.3.2 Variation 2: From 1,3,4-Oxadiazol-2-amines ............................. 621
13.14.2.1.4 Method 4: From 1,3,4-Oxadiazolium Salts .................................. 621
13.14.2.1.5 Method 5: From Tetrazoles ......................................................... 622
13.14.2.1.5.1 Variation 1: From 2,5-Disubstituted Tetrazoles and Nitriles 622
13.14.2.1.5.2 Variation 2: From 2-Substituted Tetrazoles and Benzimidoyl Chlorides 623
13.14.2.2 By Ring Contraction ................................................................. 623
13.14.2.2.1 Method 1: From 4H-1,3-Oxazin-4-ones and 4H-1,3-Benzoxazin-4-ones 623
13.14.2.2.2 Method 2: From Pyrimidine and Quinazoline Derivatives ............. 624

13.16.2.1.1.1.1.1  Variation 1: Using a Phosphaalkyne and 5-Phenyl-1,3,4-oxathiazol-2-one .......................................................... 650
13.16.2.1.1.1.1.1.1  Variation 2: Using a Phosphaalkyne and 4-Phenyl- 1,3,2-oxathiazolium-5-olate .......................................................... 650
13.16.2.1.1.1.1.1.1  Variation 3: Using a Phosphaalkene and 1,3,4-Oxathiazol-2-one ........ 651

13.16.3  Product Subclass 3: 1,3,2-Oxazaphospholes ................................................................. 652
13.16.3.1  Synthesis by Ring-Closure Reactions ..................................................................... 652
13.16.3.1.1  By Formation of One O—P and One N—P Bond ........................................ 652
13.16.3.1.1.1  Fragments O—C—C—N and P ................................................................. 652
13.16.3.1.1.1.1  Method 1: Cyclocondensation of 2-Amino Ketones or 2-Aminophenols with Phosphorus(III) Compounds ...................... 652

13.16.4  Product Subclass 4: 1,3,2-Benzothiazaphospholes and -arsoles ............................... 653
13.16.4.1  Synthesis by Ring-Closure Reactions ..................................................................... 653
13.16.4.1.1  By Formation of One S—P and One N—P Bond ........................................ 653
13.16.4.1.1.1 Fragments S—arene—N and P .................................................. 653
13.16.4.1.1.1 Method 1: Condensation of 2-Aminothiophenol with Phosphines ...... 653
13.16.4.2 Aromatization .................................................................................. 654
13.16.4.2.1 Method 1: By Halide Abstraction .............................................. 654
13.16.5 Product Subclass 5: 1,3,4-Thiazaphospholes ....................................... 655
13.16.5.1 Synthesis by Ring-Closure Reactions ............................................ 655
13.16.5.1.1 By Formation of One N—P and One P—C Bond .......................... 655
13.16.5.1.1.1 Fragments C—S—C—N and P ............................................... 655
13.16.5.1.1.1 Method 1: [4 + 1] Cyclocondensation ...................................... 655
13.16.5.1.2 By Formation of One N—P and One S—C Bond .......................... 656
13.16.5.1.2.1 Fragments S—C—N and P—C ............................................... 656
13.16.5.1.2.1.1 Method 1: [3 + 2] Cyclocondensation ...................................... 656

13.17 Product Class 17: Oxadiphospholes and Their Analogues
S. J. Collier

13.17.1 Product Subclass 1: 1,2,4-Oxadiphospholes ....................................... 660
13.17.1.1 Synthesis by Ring-Closure Reactions ............................................ 661
13.17.1.1.1 By Formation of One O—P and One P—C Bond .......................... 661
13.17.1.1.1 Method 1: From Mesitylphosphaalkenes ..................................... 661

13.17.2 Product Subclass 2: 1,2,4-Thiadiphospholes ..................................... 662
13.17.2.1 Synthesis by Ring-Closure Reactions ............................................ 665
13.17.2.1.1 By Formation of One S—P and Three P—C Bonds ..................... 665
13.17.2.1.1.1 Fragments S—C, C, and Two P Fragments ............................ 665
13.17.2.1.1.1 Method 1: From Lithium Phosphide and Carbon Disulfide ........ 665
13.17.2.1.2 By Formation of One S—P, One S—C, and One P—C Bond .......... 665
13.17.2.1.2.1 Fragments P—C, P—C, and S .............................................. 665
13.17.2.1.2.1 Method 1: From Phosphaacetylenes and a Sulfur Source .......... 665
13.17.2.1.2.1.1 Variation 1: Use of Stoichiometric Metal–Sulfur Complexes .... 666
13.17.2.1.2.1.2 Variation 2: Use of Elemental Sulfur with a Tantalum Catalyst 667
13.17.2.1.2.1.3 Variation 3: Use of Carbon Disulfide, Carbon Disulfide Ylides, 669
and Other Sulfur Sources

13.17.2.2 Synthesis by Ring Transformation ................................................ 670
13.17.2.3 Synthesis by Substituent Modification .......................................... 671
13.17.2.3.1 Addition Reactions ................................................................... 671
13.17.2.3.1.1 Formation of Metal Complexes ............................................ 671

13.19.3.1 Synthesis by Ring-Closure Reactions ................................................ 723
13.19.3.1.1 By Formation of One N—P, One N—C, and One P—C Bond .................. 723
13.19.3.1.1.1 Fragments P—C, P—C, and N .......................................................... 723
13.19.3.1.1.1.1 Method 1: Synthesis from Alkylidynephosphines and Imidometal Complexes ............................................. 723
13.19.3.1.2 By Formation of One N—P and One P—C Bond .................................. 724
13.19.3.1.2.1 Fragments N—C—P and C—P .......................................................... 724
13.19.3.1.2.1.1 Method 1: Dimerization of N-(tert-Butyl)-N-(phosphinidynemethyl)amine 724
13.19.4 Product Subclass 4: 1,2,5-Azadiphospholes ................................. 725
13.19.4.1 Synthesis by Ring-Closure Reactions ................................................ 726
13.19.4.1.1 By Formation of Two N—P Bonds and One C—C Bond ...................... 726
13.19.4.1.1.1 Fragments P—C, P—C, and N .......................................................... 726
13.19.4.1.1.1.1 Method 1: Synthesis from Alkylidyne phosphines and Imidovanadium Complexes ............................................. 726
Method 2: Direct Synthesis of $\eta^4$-1,2,5-Azadiaphosphole Complexes from Alkylidyne phosphines and Imidoiridium Complexes

Product Subclass 5: 1,3,4-Azadiaphospholes

Product Class 20: Triphospholes and Diphospharsolides
R. K. Bansal and Neelima Gupta

Product Class 20: Triphospholes and Diphospharsolides

Product Subclass 1: 1,2,3-Triphospholides

Synthesis by Aromatization

Method 1: From 1,3-Dihydro-1,2,3-triphospholes

Product Subclass 2: 1,2,4-Triphospholides and 1,2,4-Triphospholes

Synthesis by Ring-Closure Reactions

By Formation of One P–P and Two P–C Bonds

Fragments P–C, P–C, and P

Method 1: Reductive Cyclocondensation of Phosphaalkynes or Phosphaalkenes

Variation 1: By the Use of Lithium Bis(trimethylsilyl)phosphide

Variation 2: By the Use of Potassium Menthoxide

By Formation of Two P–C Bonds

Fragments P–P–C and P–C

Method 1: Synthesis from a 2,3,4-Triphosphapentadienide Anion

Ring Contraction

Method 1: Of Tri-tert-butyl-1,3,5-triphosphabenzene

Aromatization

Method 1: Of a Triphospholane

Synthesis by Substituent Modification

Addition Reactions

Method 1: Reaction of 1,2,4-Triphospholides with Electrophiles

Product Subclass 3: Diphospharsolides

Synthesis by Ring-Closure Reactions

Method 1: Reductive Cyclization of a Phosphaalkyne with Lithium Bis(trimethylsilyl)arsenide
13.21 Product Class 21: Thiadiazaphospholes
S. J. Collier

13.21 Product Class 21: Thiadiazaphospholes ............................................. 739
13.21.1 Aromatization .................................................................................. 740
13.21.1.1 Method 1: Synthesis by Chloride Abstraction ............................... 740

13.22 Product Class 22: Triazaphospholes
R. K. Bansal and Neelima Gupta

13.22 Product Class 22: Triazaphospholes ................................................... 743
13.22.1 Product Subclass 1: 1,2,3,4-Triazaphospholes .............................. 743
13.22.1.1 Synthesis by Ring-Closure Reactions ............................................. 744
13.22.1.1.1 By Formation of One N–P and One N–C Bond ......................... 744
13.22.1.1.1.1 Method 1: [3 + 2] Cycloaddition of Azides ............................. 744
13.22.1.1.1.1.1 Variation 1: Use of Phosphaalkynes ................................. 744
13.22.1.1.1.2 Variation 2: Use of Phosphaalkenes ...................................... 745
13.22.1.1.2 By Formation of One N–N and One P–C Bond .......................... 745
13.22.1.1.2.1 Fragments N–N–C and N–P ................................................. 745
13.22.1.1.2.1 Method 1: [3 + 2] Cycloaddition of Halo(imino)phosphines .... 745
13.22.1.2 Product Subclass 2: Monocyclic 1,2,4,3-Triazaphospholes .......... 746
13.22.1.2.1 Synthesis by Ring-Closure Reactions ....................................... 747
13.22.1.2.1.1 By Formation of Two N–P Bonds ...................................... 748
13.22.1.2.1.1 Fragments N–N–C and N–P ................................................. 748
13.22.1.2.1.1 Method 1: [4 + 1] Cyclocondensation ................................... 748
13.22.1.2.1.1.1 Variation 1: From Amidrazone Hydrochlorides and Hexaalkylphosphorous Triamides ...................................................... 748
13.22.1.2.1.1.2 Variation 2: From Amidrazone Hydrochlorides and Phosphorus Pentachloride ............................................................ 749
13.22.1.2.1.2 By Formation of One N–P and One N–C Bond ..................... 749
13.22.1.2.1.2 Fragments P–N–C and N–N ............................................... 749
13.22.1.2.1.2 Method 1: [3 + 2] Cyclocondensation of N-Phosphino Imidates and Hydrazines ................................................................. 749
13.22.1.2.2 Synthesis by Substituent Modification ..................................... 751
13.22.1.2.2 Substitution of Hydrogen ......................................................... 751
13.22.2 Product Subclass 3: Thiazolo[2,3-e][1,2,4,3]triazaphospholes and [1,2,4,3]Triazaphospholo[1,5-a]pyridines ...................................................... 751
13.22.2.1 Synthesis by Ring-Closure Reactions ............................................. 752
13.22.2.1.1 By Formation of Two N–P Bonds .......................................... 752
13.22.3.1.1  Fragments N—N—C—N and P .............................................................. 752
13.22.3.1.1.1 Method 1: [4 + 1] Cyclocondensation ........................................ 752

13.23  Product Class 23: Diazadiphospholes  
S. J. Collier

13.23  Product Class 23: Diazadiphospholes .............................................. 757
13.23.1  Product Subclass 1: 1,2,3,4-Diazadiphospholes ................................ 757
13.23.1.1 Synthesis by Ring-Closure Reactions .............................................. 758
13.23.1.1.1 By Formation of One N—P and One P—C Bond ................................ 758
13.23.1.1.1.1 Fragments N—N—C and P—P ...................................................... 758
13.23.1.1.1.1.1 Method 1: From Lithium Diazo(trimethylsilyl)methanide and White Phosphorus ............................ 758

13.23.1.2 Synthesis by Substituent Modification ............................................ 758
13.23.1.2.1 Substitution of Existing Substituents ........................................... 758
13.23.1.2.1.1 Of Hydrogen ............................................................................. 758
13.23.1.2.1.1.1 Method 1: By a Metal ............................................................. 758

13.23.2  Product Subclass 2: 1,2,3,5-Diazadiphospholes ................................ 759
13.23.2.1 Synthesis by Ring-Closure Reactions .............................................. 760
13.23.2.1.1 By Formation of Two N—P Bonds ........................................... 760
13.23.2.1.1.1 Fragments P—C—P and N—N ..................................................... 760
13.23.2.1.1.1.1 Method 1: Condensation of Bis(dichlorophosphino)methane with Alkyl- and Arylhydrazines ............................... 760

13.24  Product Class 24: Tetraphospholes  
S. J. Collier

13.24  Product Class 24: Tetraphospholes .................................................... 763
13.24.1 Synthesis by Ring-Closure Reactions .................................................. 764
13.24.1.1 Formation of Two P—C Bonds ....................................................... 764
13.24.1.1.1 Fragments P—P—P—P and C ...................................................... 764
13.24.1.1.1.1 Method 1: From White Phosphorus and Sodium Powder in Diglyme ...... 764

13.25  Product Class 25: Tetraazaphospholes  
S. J. Collier

13.25  Product Class 25: Tetraazaphospholes ................................................ 767
13.25.1 Synthesis by Ring-Closure Reactions ................................................ 767
13.25.1.1 By Formation of One N—N and One N—P Bond ................................ 767
13.25.1.1.1 Fragments N—N—N and N—P ...................................................... 767
13.25.1.1.1 Method 1: By 1,3-Dipolar Cycloaddition of Alkyl Azides with
\[N\text{-}N\text{-}phosphinidyneammonium~ions\] ................. 767

13.26 Product Class 26: Pentaphospholes and Pentarsoles
R. K. Bansal and Neelima Gupta

13.26 Product Class 26: Pentaphospholes and Pentarsoles ................. 771
13.26.1 Product Subclass 1: Pentaphospholides ............................... 771
13.26.1.1 Synthesis by Ring-Closure Reactions .................................. 772
13.26.1.1.1 Method 1: Synthesis of Metal Pentaphospholides from Phosphorus and
an Alkali Metal Phosphide ........................................ 772
13.26.1.1.1 Variation 1: From White Phosphorus and Sodium Dihydrogenphosphide • 772
13.26.1.1.2 Variation 2: From White Phosphorus and Lithium Dihydrogenphosphide • 773
13.26.1.1.3 Variation 3: From Red Phosphorus and Potassium Dihydrogenphosphide 773
13.26.2 Product Subclass 2: Pentarsolides ........................................ 774
13.26.2.1 Synthesis by Ring-Closure Reactions ................................. 775
13.26.2.1.1 Method 1: Synthesis of Pentarsolyl Complexes from Yellow Arsenic .... 775

13.27 Product Class 27: Selenazoles and Tellurazoles Containing One or
More Other Heteroatoms
R. A. Aitken

13.27 Product Class 27: Selenazoles and Tellurazoles Containing
One or More Other Heteroatoms ........................................ 777
13.27.1 Product Subclass 1: 1,2,3,5-Diselenadiazolium Salts and
1,2,3,5-Diselenadiazolyl-Containing Compounds .......................... 777
13.27.1.1 Synthesis by Ring-Closure Reactions .................................. 778
13.27.1.1.1 By Formation of One Se—Se and Two Se—N Bonds .................. 778
13.27.1.1.1 Method 1: Reaction of \[N\text{-},N\text{-},N\text{-}\text{Tris(trimethylsilyl)}\]amidines with
Selenium Dichloride .................................................... 778
13.27.1.2 Synthesis by Ring Transformation ...................................... 778
13.27.1.2.1 One-Electron Reduction ............................................. 778
13.27.2 Product Subclass 2: 1,2,3-Benzoxaselenazoles ........................ 779
13.27.2.1 Synthesis by Ring-Closure Reactions .................................. 780
13.27.2.1.1 By Formation of One Se—O, One Se—N, and One O—C Bond ....... 780
13.27.2.1.1 Method 1: Reaction of a Hindered Aniline with Selenium Oxychloride • 780
13.27.3 Product Subclass 3: 2,1,3-Benzoxatellurazoles and Naphth[2,1-
c][1,2,5]oxatellurazoles .................................................. 780
13.27.3.1 Synthesis by Ring-Closure Reactions .................................. 781
13.27.3.1.1 By Formation of One Te—O, One Te—C, and One N—C Bond ....... 781
13.27.3.1.1 Method 1: From \[\alpha\text{-}Tetralone Oximes\] ................................ 781
13.27.3.1.2 By Formation of One Te—O and One N—C Bond ........................................ 781
13.27.3.1.2.1 Method 1: Nitration and Reduction of an Aryltellurium Trichloride .............. 781
13.27.4 Product Subclass 4: 1,2,3-Benzothiaselenazolium Salts and
Benzobis(1,2,3-thiaselenazoles) ................................................................. 782
13.27.4.1 Synthesis by Ring-Closure Reactions ................................................. 783
13.27.4.1.1 By Formation of One Se—S and One Se—N Bond .............................. 783
13.27.4.1.1.1 Method 1: Reaction of 2-Aminobenzenethiols with Selenious Acid ............. 783
13.27.4.1.1.2 Method 2: Reaction of 1,2,3-Benzodithiazolium Salts with Selenious Acid 783
13.27.4.1.1.3 Method 3: Reaction of a Diaminobenzenedithiol with Selenium Tetrachloride ................................................................. 784
13.27.4.2 Synthesis by Substituent Modification .................................................. 784
13.27.4.2.1 Substitution of Existing Substituents .................................................. 784
13.27.4.2.1.1 Of Halogens .................................................................................. 784
13.27.4.2.1.1.1 Method 1: Reaction with Anilines .................................................. 784
13.27.4.2.1.2 Of Methoxy Groups ...................................................................... 785
13.27.4.2.1.2.1 Method 1: Reaction with Dialkylammonium Acetates ................. 785
13.27.5 Product Subclass 5: 2,1,3-Benzothiaselenazolium Salts ................................. 785
13.27.5.1 Synthesis by Ring-Closure Reactions ...................................................... 785
13.27.5.1.1 By Formation of One S—Se and One S—N Bond .................................. 785
13.27.5.1.1.1 Method 1: Reaction of 2-Aminobenzeneselenol Hydrochlorides with
Thionyl Chloride ......................................................................................... 785
13.27.5.2 Synthesis by Substituent Modification .................................................... 786
13.27.5.2.1 Substitution of Existing Substituents .................................................... 786
13.27.5.2.1.1 Of Halogens .................................................................................. 786
13.27.5.2.1.1.1 Method 1: Reaction with Anilines .................................................. 786
13.27.5.2.1.2 Of Methoxy Groups ...................................................................... 786
13.27.5.2.1.2.1 Method 1: Reaction with Dialkylammonium Acetates ................. 786
13.27.6 Product Subclass 6: 1,2,4-Diselenazolium Salts .............................................. 787
13.27.6.1 Synthesis by Ring-Closure Reactions ...................................................... 787
13.27.6.1.1 By Formation of One Se—Se and Two Se—C Bonds ...................... 787
13.27.6.1.1.1 Method 1: Reaction of a Chlorinated Iminium Salt with
Sodium Hydrogen Selenide Followed by Oxidation .................................. 787
13.27.6.1.2 By Formation of One Se—Se and One Se—C Bond ...................... 787
13.27.6.1.2.1 Method 1: Reaction of an N-Benzoylselenoureia Nickel Complex
with Diphosgene ...................................................................................... 787
13.27.6.1.3 By Formation of One Se—Se and One N—C Bond ...................... 788
13.27.6.1.3.1 Method 1: Iodine Oxidation of Aromatic Selenoamides .............. 788
Product Subclass 7: 1,2,3-Benzodiselenazolium Salts

Synthesis by Ring-Closure Reactions

By Formation of One Se—Se and One Se—N Bond

Method 1: Reaction of 2-Aminobenzeneselenol Hydrochlorides with Selenious Acid

Synthesis by Substituent Modification

Substitution of Existing Substituents

Of Halogens

Method 1: Reaction with Anilines

Of Methoxy Groups

Method 1: Reaction with Dialkylammonium Acetates

Product Subclass 8: 1,3,2-Benzodiselenazolium Salts

Synthesis by Ring-Closure Reactions

By Formation of Two Se—N Bonds

Method 1: Reaction of Benzene-1,2-diselenenyl Dichloride with Trimethylsilyl Azide

Product Subclass 9: 1,2,3-Selenadiazoles

Synthesis by Ring-Closure Reactions

By Formation of One Se—N and One Se—C Bond

Method 1: Reaction of Semicarbazones with Selenium Dioxide

Variation 1: In Acetic Acid

Variation 2: In Aqueous Dioxane

Method 2: Reaction of Tosylhydrazones with Diselenium Dichloride

Method 3: Reaction of Tosylhydrazones with Selenium Oxychloride

By Formation of One Se—N and One C—C Bond

Method 1: Reaction of an Aryl Isoselenocyanate with Diazomethane

Aromatization

Method 1: N-Debenzoylation of 2-Benzoyl-5-(benzoylimino)-2,5-dihydro-1,2,3-selenadiazoles

Synthesis by Substituent Modification

Rearrangement of Substituents

Method 1: Curtius Rearrangement of 5-(Azidocarbonyl)-1,2,3-selenadiazoles

Product Subclass 10: 1,2,3-Benzoselenadiazoles

Synthesis by Ring-Closure Reactions

By Formation of One Se—N and One N—N Bond

Method 1: Diazotization of 2-Aminobenzeneselenol

Aromatization
13.27.10.2.1 Method 1: Reaction of a 6,7-Dihydro-1,2,3-benzoselenadiazole with Selenium ................................................. 796

13.27.11 Product Subclass 11: 1,2,4-Selenadiazoles .................................................. 797

13.27.11.1 Synthesis by Ring-Closure Reactions .................................................. 797

13.27.11.1.1 By Formation of One Se—N and One N—C Bond ........................................ 797

13.27.11.1.1 Method 1: Oxidation of Selenoamides .................................................. 797

13.27.11.1.1.1 Variation 1: Using Iodine ............................................................... 797

13.27.11.1.1.2 Variation 2: Using N-Bromosuccinimide ........................................... 798

13.27.11.1.1.3 Variation 3: Using Hydrogen Peroxide ................................................. 798

13.27.11.1.1.4 Variation 4: Using 3-Chloroperoxybenzoic Acid ..................................... 799

13.27.11.1.2 Method 2: Reaction of N-Bromoamidines with Potassium Selenocyanate ....... 799

13.27.11.2 Method 2: Reaction of N-Bromoamidines with Potassium Selenocyanate ....... 799

13.27.12 Product Subclass 12: 1,2,5-Selenadiazoles .................................................. 800

13.27.12.1 Synthesis by Ring-Closure Reactions .................................................. 800

13.27.12.1.1 By Formation of Two Se—N Bonds .................................................... 800

13.27.12.1.1 Method 1: Reaction of 1,2-Diamines with Selenium Compounds ................. 800

13.27.12.1.1.1 Variation 1: Using Diselenium Dichloride ............................................ 800

13.27.12.1.1.2 Variation 2: Using Selenium Dioxide .................................................. 800

13.27.12.1.1.3 Variation 3: Using a Selenium Diamide .............................................. 801

13.27.12.1.1.4 Method 2: Reaction of 1,2-Diimines with Selenium Compounds ............... 801

13.27.12.1.1.4 Method 2: Reaction of 1,2-Diimines with Selenium Compounds ............... 801

13.27.12.1.1.5 Method 3: Reaction of 1,2-Dioximes with Selenium Compounds ............... 802

13.27.12.1.1.6 Method 4: Reaction of 1,2-Bis[(trimethylsilyl)imines] with Selenium Oxychloride .................................................. 803

13.27.12.1.2 Method 2: Reaction of 1,2-Diimines with Selenium Compounds ............... 801

13.27.12.1.2 Method 2: Reaction of 1,2-Diimines with Selenium Compounds ............... 801

13.27.12.1.2.1 Variation 1: Using Diselenium Dichloride ............................................ 801

13.27.12.1.2.2 Variation 2: Using Selenium Oxychloride ........................................... 802

13.27.12.1.2.2 Variation 2: Using Selenium Oxychloride ........................................... 802

13.27.12.1.2.3 Method 3: Reaction of 1,2-Dioximes with Selenium Compounds ............... 802

13.27.12.1.2.4 Method 4: Reaction of 1,2-Bis[(trimethylsilyl)imines] with Selenium Oxychloride .................................................. 803

13.27.12.1.3 Method 3: Reaction of 1,2-Dioximes with Selenium Compounds ............... 802

13.27.12.1.3 Method 4: Reaction of 1,2-Dioximes with Selenium Compounds ............... 802

13.27.12.1.3.1 Variation 1: Using Diselenium Dichloride ............................................ 801

13.27.12.1.3.2 Variation 2: Using Selenium Dioxide .................................................. 802

13.27.12.1.3.3 Variation 1: Using Diselenium Dichloride ............................................ 801

13.27.12.1.3.4 Variation 2: Using Selenium Dioxide .................................................. 802

13.27.12.1.4 Method 4: Reaction of 1,2-Bis[(trimethylsilyl)imines] with Selenium Oxychloride .................................................. 803

13.27.12.1.4 Method 4: Reaction of 1,2-Bis[(trimethylsilyl)imines] with Selenium Oxychloride .................................................. 803

13.27.12.2 Synthesis by Ring Transformation .......................................................... 804

13.27.12.2.1 From 1,2,5-Thiadiazoles ................................................................. 804

13.27.12.2.1 From 1,2,5-Thiadiazoles ................................................................. 804

13.27.12.2.1.1 Method 1: Reaction of 1,2,5-Thiadiazoles with Grignard Reagents and Diselenium Dichloride .................................................. 804

13.27.12.2.2 From a Pyrimidin-4(3H)-one ............................................................. 805

13.27.12.2.2 From a Pyrimidin-4(3H)-one ............................................................. 805

13.27.12.2.2.1 Method 1: Reaction of a 5-Aminopyrimidin-4(3H)-one with Selenium Dioxide .................................................. 805

13.27.12.2.2.1 Method 1: Reaction of a 5-Aminopyrimidin-4(3H)-one with Selenium Dioxide .................................................. 805

13.27.13 Product Subclass 13: 2,1,3-Benzoselenadiazoles ........................................ 805

13.27.13.1 Synthesis by Ring-Closure Reactions .................................................. 806

13.27.13.1.1 By Formation of Two Se—N Bonds .................................................... 806

13.27.13.1.1 Method 1: Reaction of 1,2-Diaminoarenes with Selenium Dioxide ............... 806

13.27.13.1.1 Method 2: Reaction of 1,2-Diaminoarenes with Selenium Oxychloride .......... 806

13.27.13.1.1.1 Method 3: Reaction of 1,2-Diaminoarenes with Selenium Tetrachloride ....... 807

13.27.13.1.1.2 Method 4: Reaction of Spiro cyclic Aminals with Selenium Dioxide ............ 808

13.27.13.1.1.3 Method 5: Reaction of 1,2-Bis[(trimethylsilyl)imines] with Selenium Oxychloride or Selenium Tetrachloride ............... 808
Synthesis by Substituent Modification ........................................ 809

13.2.1 Substitution of Existing Substituents .................................. 809

13.2.1.1 Of Hydrogen ................................................... 809

13.2.1.2 Of Bromine or Iodine ........................................ 810

13.2.1.1.1 Method 1: Nitration ..................................... 809

13.2.1.2.1 Method 1: Nucleophilic Substitution ..................... 810

13.2.2 Addition Reactions .............................................. 811

13.2.2.1 Method 1: N-Alkylation ................................... 811

Product Subclass 14: 1,3,4-Selenadiazoles and 1,3,4-Selenadiazolium Salts 811

13.2.14 Synthesis by Ring-Closure Reactions ............................. 811

13.2.14.1 By Formation of One Se—C and Two N—C Bonds ........ 811

13.2.14.1.1 Method 1: Reaction of Selenobenzamides with Hydrazine Hydrate .... 811

13.2.14.1.2 By Formation of Two Se—C Bonds ....................... 812

13.2.14.2 Method 1: Reaction of Dimethylformamide Azine with Hydrogen Selenide ........................................ 812

13.2.14.3 By Formation of One Se—C and One N—C Bond ........... 813

13.2.14.3.1 Method 1: Reaction of Isoselenocyanates with Selenosemicarbazides .... 813

13.2.14.3.2 Method 2: Reaction of Carboxylic Acids with Selenosemicarbazide and Phosphoryl Chloride .................. 813

13.2.14.4 By Formation of One Se—C Bond ........................... 814

13.2.14.4.1 Method 1: Reaction of N-Acryl-N'-selenoacylhydrazines with Acetic Anhydride/Perchloric Acid .......................... 814

Product Subclass 15: 1,2,3-Benzotelluradiazolium Salts ............... 815

13.2.15 Synthesis by Ring-Closure Reactions ............................. 815

13.2.15.1 By Formation of One Te—N Bond ................................ 815

13.2.15.1.1 Method 1: Reaction of a 2-(Arylazo)arenetellurenyl Chloride with Silver Perchlorate .................................. 815

Product Subclass 16: 1,2,5-Telluradiazoles ................................ 816

13.2.16 Synthesis by Ring Transformation ................................. 816

13.2.16.1 Method 1: Reaction of 1,2,5-Thiadiazoles or 1,2,5-Selenadiazoles with a Grignard Reagent Followed by Tellurium Tetrachloride .......................... 816

Product Subclass 17: 2,1,3-Benzotelluradiazoles ......................... 817

13.2.17 Synthesis by Ring-Closure Reactions ............................. 817

13.2.17.1 By Formation of Two Te—N Bonds .......................... 817

13.2.17.1.1 Method 1: Reaction of a 1,2-Bis[(trimethylsilyl)imine] with Tellurium Tetrachloride ....................................... 817

13.2.17.1.2 Method 2: Reaction of a 1,2-Diamine with Tellurium Tetrachloride .......................... 817
13.27.17.1.2 By Formation of One Te—N and One N—C Bond ............................ 818
13.27.17.1.2.1 Method 1: Reaction of a Lithiated Arylamine with a Silylated Tellurium Imide ............................................. 818
13.27.17.2 Synthesis by Ring Transformation ........................................................ 818
13.27.17.2.1 Method 1: Reaction of an Aromatic-Fused 1,2,5-Selenadiazole with a Grignard Reagent, Followed by Tellurium Tetrachloride .... 818

13.28 Product Class 28: Oxatriazoles
M. Begtrup

13.28.1 Product Class 28: Oxatriazoles ................................................................. 823
13.28.1.1 Product Subclass 1: 1,2,3,4-Oxatriazoles ............................................... 823
13.28.1.1.1 Synthesis by Ring-Closure Reactions .................................................. 824
13.28.1.1.1.1 By Formation of One N—N, One O—C, and One N—C Bond .............. 824
13.28.1.1.1.1 Method 1: 1,2,3,4-Oxatriazol-3-ium-5-olates from Nitromethide Anions and Arenediazonium Ions ............................................. 824
13.28.1.1.1.2 By Formation of One N—N and One O—C Bond ................................ 825
13.28.1.1.1.2 Method 1: 1,2,3,4-Oxatriazol-3-ium-5-thiolates from Nitromethide Anions and Arenediazonium Ions ............................................. 824
13.28.1.1.1.3 By Formation of One O—C and One N—C Bond .................................. 826
13.28.1.1.1.3 Method 1: 1,2,3,4-Oxatriazol-3-ium-5-olates from Nitromethide Anions and Arenediazonium Ions ............................................. 824
13.28.1.1.2 Synthesis by Ring Transformation .......................................................... 828
13.28.1.1.2 Method 1: 1,2,3,4-Oxatriazolium-5-aminides from
1,2,3,4-Oxatriazolium-5-anilides and Aryl Isocyanates ........................................ 828
13.28.1.2 Synthesis by Substituent Modification .................................................... 829
13.28.1.2.1 Method 1: 1,2,3,4-Oxatriazolium Salts by Alkylation of
1,2,3,4-Oxatriazolium-5-thiolates ................................................................. 829
13.28.1.3.2 Method 2: N-Acylation and Sulfonation of 1,2,3,4-Oxatriazolium-5-aminides ........................................ 829
13.28.1.3.3 Method 3: 1,2,3,4-Oxatriazolium-5-olates from 1,2,3,4-Oxatriazolium-5-aminides and Nitrous Acid .......... 830

13.28.2 Product Subclass 2: 1,2,3,5-Oxatriazoles ........................................ 830
13.28.2.1 Synthesis by Ring-Closure Reactions ........................................ 830
13.28.2.1.1 By Formation of One O—N and One N—C Bond ..................... 830
13.28.2.1.1.1 Fragments C—N—O and N—N ........................................ 830
13.28.2.1.1.1 Method 1: 2,3-Dihydro-1,2,3,5-oxatriazoles from Nitrile Oxides and Azo Compounds ....................... 830

13.29 Product Class 29: Thiatriazoles
M. Begtrup

13.29 Product Class 29: Thiatriazoles .................................................. 833
13.29.1 Product Subclass 1: 1,2,3,4-Thiatriazoles ..................................... 833
13.29.1.1 Synthesis by Ring-Closure Reactions ..................................... 834
13.29.1.1.1 By Formation of One S—N and One N—C Bond .................. 834
13.29.1.1.1.1 Method 1: From Thiohydrazides and Nitrous Acid ............ 834
13.29.1.1.1.1.1 Variation 1: 5-Substituted 1,2,3,4-Thiatriazoles from Thiohydrazides and Nitrous Acid .................. 834
13.29.1.1.1.1.2 Variation 2: Alkoxyl- and Aryloxyl-1,2,3,4-thiatriazoles from O-Substituted Hydrazinecarbothioates and Nitrous Acid 834
13.29.1.1.1.3 Variation 3: 5-(Alkysulfanyl)-1,2,3,4-thiatriazoles from Hydrazinecarbothioates and Nitrous Acid .......... 835
13.29.1.1.1.4 Variation 4: 1,2,3,4-Thiatriazol-5-amines from Thiosemicarbazides and Nitrous Acid .................. 835
13.29.1.1.1.5 Variation 5: 1,2,3,4-Thiatriazol-5-amines from Thiosemicarbazides and Diazonium Salts ...................... 836
13.29.1.1.1.6 Variation 6: 5-Hydrazino-1,2,3,4-thiatriazole from Thiocarbazide and Nitrous Acid .................. 836
13.29.1.1.2 By Formation of One S—N and One N—C Bond .................. 837
13.29.1.1.2.1 Method 1: 1,2,3,4-Thiatriazoles from Dithiocarboxylates and Sodium Azide ........................................ 837
13.29.1.1.2.2 Method 2: 5-Chloro-1,2,3,4-thiatriazole from Thiophosgene and Sodium Azide ............................. 837
13.29.1.1.2.3 Method 3: 5-Alkyl- and 5-Aryl-1,2,3,4-thiatriazoles from 1-Methyl-2-[(thioacyl)sulfanyl]pyridinium Iodides and Sodium Azide .... 838
13.29.1.1.2.4 Method 4: 5-Alkoxyl- and 5-Aryloxyl-1,2,3,4-thiatriazoles from O-Alkyl or O-Aryl Chloridothiocarbonates and Sodium Azide .......... 839
13.29.1.1.2.5 Method 5: From Thioketenes and Hydrazoic Acid .................. 839
13.29.1.1.2.6 Method 6: 1,2,3,4-Thiatriazol-5-amines from Isothiocyanates and Hydrazoic Acid or Trimethylsilyl Azide .......... 840
13.29.1.2.6.1 Variation 1: 1,2,3,4-Thiatriazol-5-amines from Isothiocyanates and Hydrazoic Acid ................................................. 840
13.29.1.2.6.2 Variation 2: 1,2,3,4-Thiatriazol-5-amines from Isothiocyanates and Trimethylsilyl Azide ........................................... 841
13.29.1.2.7 Method 7: 1,2,3,4-Thiatriazole-5-thiol from Carbon Disulfide and Azide Salts .................................................. 841
13.29.1.2.7.1 Variation 1: 1,2,3,4-Thiatriazole-5-thiol from Carbon Disulfide and Diazidobis(triphenylphosphine)palladium .......... 842
13.29.1.2 Synthesis by Ring Transformation ........................................ 842
13.29.1.2.1 Method 1: 1,2,3,4-Thiatriazol-3-ium-5-olates from 1,2,3,4-Oxatriazol-3-ium-5-thiolates ............................................. 842
13.29.1.2.2 Method 2: N-Substituted 1,2,3,4-Thiatriazol-5-amines from Substituted Tetrazole-5-thiols ........................................ 843
13.29.1.2.3 Method 3: 5-Diazoalkyl-1,2,3,4-thiatriazoles from 5-Chloro-1,2,3-thiadiazoles and Sodium Azide .......................... 843
13.29.1.2.4 Method 4: Sulfonylamino-1,2,3,4-thiatriazoles from 1,3-Thiazetidine-2,4-diimines and Sodium Azide ....................... 844
13.29.1.3 Synthesis by Substituent Modification ........................................ 844
13.29.1.3.1 Method 1: 5-Substituted 1,2,3,4-Thiatriazoles by Reaction of 5-Chloro-1,2,3,4-thiatriazole with Nucleophiles ..................... 844
13.29.1.3.2 Method 2: 5-Substituted 3-Alkyl-1,2,3,4-thiatriazolium Salts by Reaction of 5-Alkoxy-3-alkyl-1,2,3,4-thiatriazolium Salts with Nucleophiles ........................................................... 845
13.29.1.3.3 Method 3: 5-Substituted 1,2,3,4-Thiatriazolium Salts by Alkylation of 1,2,3,4-Thiatriazoles, 1,2,3,4-Thiatriazol-3-ium-5-olates, and 1,2,3,4-Thiatriazol-3-ium-5-aminides .................................... 845
13.29.1.3.4 Method 4: Oxidation of 5-Phenyl-1,2,3,4-thiatriazole .......................................................... 846
13.29.1.3.5 Method 5: Alkylation and Acylation of 1,2,3,4-Thiatriazole-5-thiol ................................................................. 847
13.29.1.3.6 Method 6: Alkylation and Acylation of 1,2,3,4-Thiatriazole-5-amines ................................................................. 847
13.29.2 Product Subclass 2: 1,2,3,5-Thiatriazoles ........................................ 848
13.29.2.1 Synthesis by Ring-Closure Reactions ................................................ 849
13.29.2.1.1 By Formation of Two S—N Bonds ................................................ 849
13.29.2.1.1.1 Method 1: 1,2,3,5-Thiatriazol-3-ium-4-aminides from 1-Aminoguanidines and Thionyl Chloride .......................................................... 849
13.29.2.1.1.2 Method 2: From Amidrazones and Thionyl Chloride .......................................................... 850
13.29.2.1.1.3 Method 3: From Amidrazones and Sulfuryl Fluoride .......................................................... 850
13.29.2.1.1.4 Method 4: 1,2,3,5-Thiatriazolidin-4-one 1-Oxides from Semicarbazides and Thionyl Chloride .......................................................... 851
13.29.2.1.1.5 Method 5: 1,2,3,5-Thiatriazolidine-4-thiones from 1,2,4-Triaza-3-silacyclopentane-5-thiones and Sulfur Dichloride .......................................................... 851
13.29.2.1.2 By Formation of One S—N and One N—C Bond ................................................ 852
13.29.2.1.2.1 Method 1: 2,5-Dihydro-1,2,3,5-thiatriazoles from Nitrilimines and N-Thionylalanline .......................................................... 852
13.29.2.1.2.2 Method 2: From Nitrilimines and N-Sulfonylamines .............. 852
13.29.2.1.2.3 Method 3: From \( N'-(\text{Chlorosulfonyl})\text{carbamimidic} \) Chlorides and Hydrazines ............................................ 852

13.29.2.1.2.4 Method 4: From Sulfonylcarbamoyl Chlorides and Hydrazines ............................................ 853

13.29.2.1.3 By Formation of One \( N\text{—C} \) Bond ........................................ 853

13.29.2.1.3.1 Method 1: From Hydrazinesulfonamides and Base ........................................ 853

13.29.2.2 Synthesis by Ring Transformation ........................................ 854

13.29.2.2.1 Method 1: From 1,2,5-Thiadiazol-3(2\( H \))-one 1-Oxides and Hydrazines 854

13.29.2.3 Synthesis by Substituent Modification ........................................ 855

13.29.2.3.1 Method 1: From Hydrazinesulfonamides and Base ........................................ 855

13.30 Product Class 30: Tetrazoles
A. F. Brigas

13.30.1 Synthesis by Ring-Closure Reactions ........................................ 861

13.30.1.1 By Formation of One \( N\text{—N} \) and Two \( N\text{—C} \) Bonds ........................................ 864

13.30.1.1.1 Fragments \( N\text{—N—N, N, and C} \) ........................................ 864

13.30.1.1.1.1 Method 1: From Carbon Disulfide or Carboxylic Acid Derivatives with Amine and Azide ........................................ 864

13.30.1.1.1.1 Variation 1: From Ortho Esters ........................................ 864

13.30.1.1.1.2 Variation 2: From Acid Chlorides ........................................ 864

13.30.1.1.1.3 Variation 3: From Amidines ........................................ 865

13.30.1.1.1.4 Variation 4: From Chloroalkaniminium Salts ........................................ 865

13.30.1.1.2 Method 2: Via Ketone and Azide (Schmidt Reaction) ........................................ 866

13.30.1.2 By Formation of Two \( N\text{—N} \) Bonds ........................................ 867

13.30.1.2.1 Fragments \( N\text{—C—N—N and N} \) ........................................ 867

13.30.1.2.1.1 Method 1: From Amidrazones and Sodium Nitrite ........................................ 867

13.30.1.3 By Formation of One \( N\text{—N} \) and One \( N\text{—C} \) Bond ........................................ 868

13.30.1.3.1 Fragments \( C—N—N—N \) and \( N \) ........................................ 868

13.30.1.3.1.1 Method 1: Via Azidochloroalkaniminium Chlorides and Amines ........................................ 868

13.30.1.3.1.2 Method 2: Via 1,1-Diazido-1-ethoxyalkanes and Amines ........................................ 868

13.30.1.3.2 Fragments \( N—N—N \) and \( C—N \) ........................................ 868

13.30.1.3.2.1 Method 1: From Carbonic Acid Derivatives ........................................ 869

13.30.1.3.2.1.1 Variation 1: From Carbonimidic Dichlorides ........................................ 869

13.30.1.3.2.1.2 Variation 2: From Isocyanates, Isothiocyanates, or Carbodiimides ........................................ 869

13.30.1.3.2.1.3 Variation 3: From Other Carbonic Acid Derivatives ........................................ 871

13.30.1.3.2.1.4 Variation 4: From Cyanates, Thiocyanates, and Their Derivatives ........................................ 872

13.30.1.3.2.2 Method 2: From Carboxylic Acid Derivatives ........................................ 874

Introduction
E. J. Thomas

Introduction .............................................................. 1

14.1 Product Class 1: Pyrylium Salts
T. S. Balaban and A. T. Balaban

14.1 Product Class 1: Pyrylium Salts ................................................. 11
14.1.1 Synthesis by Ring-Closure Reactions ........................................ 25
14.1.1.1 By Formation of One O—C and Two C—C Bonds ...................... 25
14.1.1.1.1 Method 1: \([C_3 + C_1 + C_1]\) Diacylation of Propene and Higher Alkenes .... 25
14.1.1.1.1.1 Variation 1: Diacylation of Acyclic Propene Derivatives ............ 25
14.1.1.1.1.2 Variation 2: Diacylation of Aryl-Substituted Alkenes ............... 37
14.1.1.1.1.3 Variation 3: Diacylation of 1-Methylcycloalkenes or Methylene
cycloalkanes ...................................................... 41
14.1.1.1.1.4 Variation 4: Diacylation of Cycloalkenes ............................. 42
14.1.1.1.1.5 Variation 5: Triacylation of Alkenes .................................... 43
14.1.1.1.2 Method 2: \([C_2 + C_1 + C_2]\) Condensation of Methyl(ene) Ketones or Their Equivalents with Aldehydes, Orthoesters, or Their Derivatives 44
14.1.1.1.2.1 Variation 1: Condensation of Methyl(ene) Ketones with Aldehydes by Dehydrocyclization ........................................... 47
14.1.1.1.2.2 Variation 2: Pyrylium Salts from Methyl(ene) Ketones and Aldehyde Derivatives (Acetals, Acylals) ................................. 55
14.1.1.1.2.3 Variation 3: Condensation of Methyl(ene) Ketones with Orthoesters ...... 57
14.1.1.1.2.4 Variation 4: Condensation of Alkynes with Aldehydes ............... 61
14.1.1.1.3 Method 3: \([C_2 + C_1 + C_1]\) Condensation of Methyl(ene) Ketones or Their Equivalents with Carboxylic Acid Derivatives ................. 62
14.1.1.1.3.1 Variation 1: Condensation of Aryl Methyl Ketones with Carboxylic Acid Derivatives .................................................. 62
14.1.1.1.3.2 Variation 2: Condensation of \(\alpha\)-Oxo Carboxylic Esters with Benza
dehydes ..................................................................... 66
14.1.1.1.3.3 Variation 3: From Alkynes and Carboxylic Acid Derivatives ........... 66
14.1.1.1.3.4 Variation 4: Acylation of Aromatic Hydrocarbons, Aromatic Heterocycles, or Phenol Ethers ........................................... 67
14.1.1.1.4 Method 1: \([C_3 + C_2]\) Condensation of Methyl(ene) Ketones or Their Synthetic Equivalents with 1,3-Dicarbonyl Compounds, \(\alpha,\beta\)- Unsaturated Oxo Compounds, or Their Synthetic Equivalents ......................... 68
14.1.1.1.4.1 Variation 1: From Methyl(ene) Ketones and 1,3-Dicarbonyl Compounds .... 68
14.1.1.1.4.2 Variation 2: From Methyl(ene) Ketones and Enols or Other Derivatives of 1,3-Dicarbonyl Compounds .............................................. 70
Variation 3: From Methyl(ene) Ketones or Their Synthetic Equivalents and β-Oxo Aldehydes or Their Synthetic Equivalents .............................................. 75

Variation 4: From Methyl(ene) Ketones and α,β-Unsaturated Ketones Followed by Dehydrocyclization ................................................................. 82

Variation 5: Directly from Two Equivalents of α,β-Unsaturated Ketones ................................................. 95

Variation 6: From α,β-Unsaturated Ketones and 1,3-Diketones, 3-Oxo Esters, or α-Acyloxy Ketones ......................................................... 95

Variation 7: From α,β-Unsaturated Ketones and Cyclic Ketones ........ 96

Variation 8: From Methyl(ene) Ketones or Their Synthetic Equivalents and 2-Benzylidenecyclohexanone Derivatives .............................. 99

Variation 9: From Ketones or Their Synthetic Equivalents and β-Chloro-α,β-unsaturated Ketones or Aldehydes ............................. 102

Variation 10: From Alkynes and α,β-Unsaturated Ketones ........................................ 104

Variation 11: From Benzil and Cyclopentadiene ........................................ 105

Variation 12: 2,4,6-Triarylpyrylium Perchlorates from 1,3-Diarylpropane-1,3-diones by Cleavage of an Aroyl Group ............................................. 105

Method 2: \([C_4^+ \cdot C_1^-]\) Forming a C_5-Chain from Two Synthons ................................................. 106

Variation 1: From α,β- or β,γ-Unsaturated Ketones and Carboxylic Acid Derivatives ................................................................. 106

Variation 2: Condensation of 1,3-Diketones with Orthoformates .......... 112

Variation 3: 2,4,6-Triarylpyrylium Salts from Acetophenone Derivatives by Cleavage of an Aroyl Group from an Initially Formed 1,3-Diarylbut-2-en-1-one Derivative .............................................. 113

By Formation of One O—C Bond ............................................................ 113

Method 1: Pyrylium Ring Closure from a Preformed Acyclic C_5 Chain .............................................. 113

Variation 1: Formation of Pyrylium Salts from Pent-2-ene-1,5-diones (Pyrylium Pseudobases) and -dioates .............................................. 113

Variation 2: From Synthetic Equivalents of Pseudobases ............................................. 118

Variation 3: Formation of Pyrylium Salts by Dehydrocyclizations of Penta-2,4-dien-1-ones and Analogous Compounds .......................... 122

Variation 4: Pyrylium Salts from 5-Oxopent-2-enenitriles or Their Tautomers ................................................................. 130

Variation 5: Formation of Pyrylium Salts by Dehydrocyclizations of Pentane-1,5-diones ................................................................. 131

Variation 6: 2,6-Diarylpyrylium Salts from 1-Arylpent-2-en-4-yn-1-ones .............................................. 143

Variation 7: Formation of Pyrylium Salts from 3-Hydroxypenta-1,4-diynes .............................................. 144

Variation 8: 2,6-Diarylpyrylium Salts by Acylation of Aralkyl Ethers with Glutaric Acid ................................................................. 145

Aromatization ................................................................. 145

Method 1: By Reaction of Pyranones with C-Nucleophiles, Followed by Dehydration ................................................................. 145

Method 2: By Hydride Abstraction from a Preformed Pyran System ........ 151

Variation 1: Formation of Pyrylium Salts by Hydride Abstraction from a 4H-Pyran ................................................................. 151

Variation 2: Formation of Pyrylium Salts by Addition to 2,6-Disubstituted Pyrylium Cations ................................................................. 152
14.1.3 Synthesis by Substituent Modification ........................................... 164
14.1.3.1 Method 1: From Pyranones or Pyranthiones and Electrophiles .... 164
14.1.3.1.1 Variation 1: By Alkylation of Pyranones or Pyranthiones ...... 164
14.1.3.1.2 Variation 2: By Protonation of Pyranones or Pyranthiones .... 166
14.1.3.2 Method 2: By Cleavage of Alkoxy or Acyloxy Substituents ....... 167
14.1.3.3 Method 3: Modification by Addition to Alkyne Substituents ...... 169
14.1.3.4 Method 4: Formation of Pyrylium Salts by Condensation of 2/4-Methyl(ene) Groups with Carbonyl Compounds .......... 172
14.1.3.4.1 Variation 1: 2-Arylviny1- and 4-Arylviny1-Substituted Pyrylium Salts .... 172
14.1.3.4.2 Variation 2: Pyrlocyanines by Condensation of 2/4-Methyl(ene)- Substituted Pyrylium Salts with Carbonyl Compounds or Orthoesters ........................................ 176
14.1.3.4.3 Variation 3: Condensation of Methyl(ene) Groups with Other Electrophiles ........................................ 182
14.1.3.4.4 Variation 4: Modification of Pyrylium Salts by Metalation of 2/4-Methyl Groups ........................................ 184
14.1.3.5 Method 5: Isotopic Exchange ........................................ 185
14.1.3.5.1 Variation 1: Isotopic Exchange of Side-chain α- and γ- ("Benzylic") Hydrogen Atoms ........................................ 185
14.1.3.5.2 Variation 2: Isotopic Exchange of the Oxygen Heteroatom .... 188
14.1.4 Anion Exchange in Pyrylium Salts ........................................ 189
14.1.4.1 Method 1: Metathetic Exchange of Anions Made Possible by Solubility Differences, or by Ion-Exchange Resins .......... 189
14.1.4.2 Method 2: Via Stable Pseudobases ...................................... 190
14.1.4.3 Method 3: Via Anion Stripping by Sodium Borohydride and Carboxylic Acids ........................................ 191

14.2 Product Class 2: Benzopyrylium Salts
M. Nógrádi

14.2.1 Product Class 2: Benzopyrylium Salts ........................................ 201
14.2.1.1 Product Subclass 1: 1-Benzopyrylium Salts (Including Flavylium Salts) .... 201
14.2.1.1.1 Synthesis by Ring-Closure Reactions ........................................ 203
14.2.1.1.1.1 Method 1: Reaction of a Phenol with a 3-Oxocarboxylic Ester ...... 204
14.2.1.1.1.2 Method 2: Reaction of a Phenol with a 2-(Ethoxymethylene)- 3-oxocarboxylic Ester ........................................ 204
14.2.1.1.1.3 Method 3: Reaction of a Phenol with a 1,3-Dioxo Compound ...... 204
14.2.1.1.1.4 Method 4: Reaction of a Phenol with a 3-Chlorovinyl Aldehyde .... 207
14.2.1.1.1.5 Method 5: Reaction of a Phenol with an Ethynyl Ketone .......... 207
14.2.1.1.1.6 Method 6: Reaction of a Phenol with a Vinyl Ketone .............. 207
14.2.1.1.7 Method 7: Reaction of a 2-Hydroxybenzaldehyde (Salicylaldehyde) with a Carbaldehyde, Ketone, or Acetal ........................................... 208
14.2.1.1.7.1 Variation 1: With an α-Methylene Aldehyde or Acetal ........................................... 208
14.2.1.1.7.2 Variation 2: With Acetophenones ................................................................. 209
14.2.1.1.7.3 Variation 3: With an ω-Substituted or Cyclic Acetophenone ........................ 210
14.2.1.1.7.4 Variation 4: With a 2-Arylvinyl Methyl Ketone ............................................. 212
14.2.1.1.8 Method 8: Reaction of a 2-Hydroxybenzaldehyde (Salicylaldehyde) with an α-Methylene Carboxylic Acid Derivative .................. 213
14.2.1.1.8.1 Variation 1: With an α-Methylene Carbonitrile ............................................. 213
14.2.1.1.8.2 Variation 2: With a 3-Oxoalkanoic Ester ....................................................... 213
14.2.1.1.9 Method 9: Reaction of a 2-Hydroxybenzaldehyde (Salicylaldehyde) with Aliphatic or Alicyclic α,α'-Bis(methylene) Ketones ............. 214
14.2.1.1.10 Method 10: Reaction of 2-Acylphenols (2-Hydroxyacetophenones or 2-Hydroxybenzophenones) with α-Methylene Ketones ............ 216
14.2.1.1.11 Method 11: Reaction of a 2-Acylphenol (2-Hydroxyacetophenone or 2-Hydroxybenzophenone) with a Compound Contributing One Carbon Atom to the Pyrylium Ring ........................................... 218
14.2.1.1.12 By Formation of One Heteroatom—Carbon Bond ............................................. 219
14.2.1.1.12.1 Method 1: Ring Closure of 3-(2-Hydroxyaryl)prop-2-en-1-ones ...................... 219
14.2.1.1.12.2 Method 2: Ring Closure of 3-Aryl-1-(2-hydroxyaryl)prop-2-en-1-ones (2'-Hydroxychalcones) to Flavylium Salts ........................................... 220
14.2.1.1.12.3 Method 3: Ring Closure of 1-(2-Hydroxyaryl)-3-phenylpropane-1,3-diones (2'-Hydroxydibenzoylmethanes) ........................................... 221
14.2.1.1.12.4 Method 4: Cyclization of 1-Aryl-3-hydroxy-3-(2-hydroxyaryl)-propan-1-ones ......................................................................... 221
14.2.1.1.12.5 Method 5: Oxidative Cyclization of 1-Aryl-3-(2-hydroxyaryl)-propan-1-ones ......................................................................... 222
14.2.1.1.12.6 Method 6: Ring Closure of a 1,3-Diarylprop-2-en-1-one ..................................... 222
14.2.1.2 Synthesis by Ring Transformation ........................................................................... 223
14.2.1.2.1 Method 1: Synthesis from 3-Acyl-2H-1-benzopyran-2-ones ............................... 223
14.2.1.3 Aromatization ........................................................................................................ 224
14.2.1.3.1 Method 1: Reduction of 2H-1-Benzopyran-2-ones and 4H-1-Benzopyran-4-ones with a Metal ............................................. 224
14.2.1.3.2 Method 2: Addition–Dehydroxylation of 2H-1-Benzopyran-2-ones and 4H-1-Benzopyran-4-ones Using Organometallic Compounds ........................................................................................................... 224
14.2.1.3.2.1 Variation 1: Aromatization of 2H-1-Benzopyran-2-ones by Addition of a Grignard Reagent and Dehydroxylation ..................... 224
14.2.1.3.2.2 Variation 2: Aromatization of 4H-1-Benzopyran-4-ones by Addition of a Grignard Reagent and Dehydroxylation ..................... 225
14.2.1.3.2.3 Variation 3: With Isolation of the Intermediate Tertiary Alcohol ...................... 226
14.2.1.3.3 Method 3: Transformations by Reaction with Activated Arenes, Arylethenes, or Hetarenes ............................................................................. 226
14.2.1.3.4 Method 4: Transformations of 2H-1-Benzopyran-2-ones and 4H-1-Benzopyran-4-ones by Reaction with C—H Acidic Pyrylium Salts ···· 227
14.2.1.3.5 Method 5: Transformation of 4H-1-Benzopyran-4-ones by Reaction with 
   \(N,N\)-Dimethylacetamide .......................... 228
14.2.1.3.6 Method 6: By Double Elimination from 2,4-Diethoxy-3,4-dihydro-
   2H-1-benzopyrans .................................. 229
14.2.1.3.7 Method 7: Aromatization by Dehydrogenation and Redox Reactions 229
14.2.1.3.7.1 Variation 1: By Acid-Induced Disproportionation ................. 229
14.2.1.3.7.2 Variation 2: Dehydrogenation with Oxidizing Agents ........... 230
14.2.1.3.8 Method 8: Aromatization by O-Alkylation or Protonation ........... 234
14.2.1.3.8.1 Variation 1: By O-Alkylation ........................................... 234
14.2.1.3.8.2 Variation 2: By Protonation of 4H-1-Benzopyran-4-ones, 2-Alkylidene-
   2H-1-benzopyrans, and 4-Alkylidene-4H-1-benzopyrans ....... 236
14.2.1.3.9 Method 9: Aromatization of a 2-Amino-2H-benzopyran by Protonation
   Combined with Elimination of the Amino Group ......... 238
14.2.1.3.10 Method 10: Aromatization of 2-Hydroxy-2H-benzopyrans by Protonation
   Combined with Dehydration ............................ 238
14.2.1.3.11 Method 11: Aromatization Combined with Substitution ............ 238
14.2.1.4 Synthesis by Substituent Modification .................................... 239
14.2.1.4.1 Method 1: Nucleophilic Addition of a Trialkyl Phosphite and Reoxidation 239
14.2.1.4.2 Method 2: Addition of an Activated Arene or Alkene Followed by
   Reoxidation or Disproportionation ...................... 240
14.2.1.4.3 Method 3: Condensation of a 1-Benzopyrylium Salt with a
   Carboxylic Acid Having an Activated Methylene Group,
   Combined with Disproportionation ..................... 240
14.2.1.4.4 Method 4: Replacement of an Alkoxy Group by
   a Substituted Amino Group ............................ 241
14.2.2 Product Subclass 2: 2-Benzopyrylium Salts ................................ 242
14.2.2.1 Synthesis by Ring-Closure Reactions ....................................... 244
14.2.2.1.1 By Formation of One Heteroatom—Carbon and One C—C Bond .... 244
14.2.2.1.1.1 Method 1: From (2-Oxoalkyl)arenes or Their Acylated Enols with
   a Carboxylic Acid Derivative (as C1 Component) ....... 244
14.2.2.1.1.1.1 Variation 1: From Arylacetones with an Aliphatic Carboxylic Anhydride and
   Perchlorylic Acid ...................................... 244
14.2.2.1.1.1.2 Variation 2: From Arylacetones with an Aromatic Acid Chloride and
   Aluminum Trichloride .................................. 244
14.2.2.1.1.1.3 Variation 3: Transformation of an Enol Lactone of a Benzyl
   2-(Carboxymethyl)aryl Ketone with an Acid Anhydride and
   Perchlorylic Acid ...................................... 245
14.2.2.1.1.2 Method 2: From a (Cyanomethyl)arene with Carboxylic Acid Derivatives
   (as C1 Component) ...................................... 246
14.2.2.1.2 By Formation of One Heteroatom—Carbon Bond ........................ 246
14.2.2.1.2.1 Method 1: Synthesis from 1,2-Dicarbofunctional Arenes ........... 246
14.2.2.1.2.1.1 Variation 1: Ring Closure of 2-Acyl-1-(2-oxoalkyl)arenes ....... 246
14.2.2.1.2.1.2 Variation 2: Ring Closure of (2-Acylaryl)acetic Acid Derivatives .... 247
14.2.2.1.2.1.3 Variation 3: Ring Closure of 2-Formyl-1-(2-oxoalkyl)arenes .... 247

Table of Contents
Variation 4: Ring Closure of 2-Cyano-1-(2-oxoalkyl)arenes

Variation 5: By Ring Closure and Aryl Migration of [2-(Diarylmethyl)phenyl]acetic Acids

By Formation of One C–C Bond

Method 1: Ring Closure of the O-Acylene Form of Aryl Benzyl Ketones with Polyphosphoric Acid

Aromatization

Method 1: By Addition of Grignard Reagents to 1H-2-Benzopyran-1-ones (Isocoumarins)

Method 2: By Oxidative Fragmentation of 1H-2-Benzopyrans (Isochromans)

Product Subclass 3: Dibenzo[b,d]pyrylium Salts

Synthesis by Ring-Closure Reactions

By Formation of One O–C and One C–C Bond

Method 1: Ring Closure of an o-Acylxybiphenyl Derivative with Polyphosphoric Acid

By Formation of One C–C Bond

Method 1: Ring Closure of a 3-(2-Carboxymethylaryl)-2-benzopyrylium Salt with Phosphorus Pentachloride

Synthesis by Ring Transformation

Method 1: By Autoxidation of a 9-Arylfluorene to a 9-Hydroperoxide Followed by Acid-Catalyzed Ring Expansion

Aromatization

Method 1: Nucleophilic Addition to the Carbonyl Group of 6H-Dibenzo[b,d]pyran-6-ones Followed by Dehydration

Method 2: Dehydrogenation of a Dibenzo[b,d]pyran by Phosphorus Pentachloride/Thionyl Chloride

Product Subclass 4: Dibenzo[b,e]pyrylium Salts (Xanthylium Salts)

Synthesis by Ring-Closure Reactions

By Formation of One O–C Bond and Two C–C Bonds

Method 1: Use of a Reagent Providing C10 of the Dibenzo[b,e]pyrylium Salt

Variation 1: Introduction of C10 with 2-Chloro-1,1-diethoxyethane Followed by Dehydrohalogenation

Variation 2: Introduction of C10 with Trifluoroacetic Anhydride

Variation 3: Introduction of C10 with an Arylcarboxylic Acid Equivalent

Variation 4: Introduction of C10 with an Arylaldehyde

Variation 5: Introduction of C10 with an Aldehyde Acetal

By Formation of One O–C and One C–C Bond

Method 1: Reaction of an Activated Phenol with a 2-Hydroxybenzaldehyde
14.2.4.1.2 Method 2: Dimerization of an o-Methylquinone ........................................ 259
14.2.4.1.3 By Formation of Two C—C Bonds ....................................................... 260
14.2.4.1.3.1 Method 1: C10 Introduced by Dichloromethyl Methyl Ether/Tin(IV) Chloride ...................................................... 260
14.2.4.2 Synthesis by Ring Transformation ............................................................ 260
14.2.4.2.1 Method 1: Thermolysis of a 1,3-Dibromo-7,7-diphenylbicyclo[4.1.0]-hept-3-ene-2,5-dione .................................................. 260
14.2.4.3 Aromatization ......................................................................................... 261
14.2.4.3.1 Method 1: Aromatization of 10H-Dibenzo[b,e]pyran-10-ones ............. 261
14.2.4.3.1.1 Variation 1: Transformation of a 10H-Dibenzo[b,e]pyran-10-one by Protonation Followed by Dehydration with Trifluoromethanesulfonic Anhydride .................................................. 261
14.2.4.3.1.2 Variation 2: Reduction and Dehydration of 10H-Dibenzo[b,e]pyran-10-ones .................................................. 262
14.2.4.3.1.3 Variation 3: Addition of a Nucleophile to a 10H-Dibenzo[b,e]pyran-10-one Followed by Dehydration .................................................. 262
14.2.4.3.1.4 Variation 4: Aromatization of a 10-Alkylidene-10H-dibenzo[b,e]pyran by Protonation .................................................. 263
14.2.4.3.2 Method 2: Aromatization by Dehydrogenation of 10H-Dibenzo[b,e]pyrans .................................................. 264
14.2.4.4 Synthesis by Substituent Modification ..................................................... 265
14.2.4.4.1 Method 1: Alkylation of Xanthylum Salts in the Pyrylium Ring ........... 265

14.3 Product Class 3: Pyranones and Pyranthiones
K. Afarinkia and V. Vinader

14.3.1 Product Subclass 1: 2H-Pyran-2-ones ......................................................... 275
14.3.1.1 Synthesis by Ring-Closure Reactions ...................................................... 277
14.3.1.1.1 By Formation of One O—C and Two C—C Bonds .................. 277
14.3.1.1.1.1 Method 1: Cyclization of Carbon Dioxide and Two Alkynes .......... 277
14.3.1.1.2 By Formation of One O—C and One C—C Bond .................. 279
14.3.1.1.2.1 Method 1: Cyclizations Utilizing Carbon Dioxide .......... 279
14.3.1.1.2.2 Method 2: Cyclizations Utilizing β-Haloacrylates .......... 279
14.3.1.1.2.3 Method 3: Reaction of Enols and Enolates with Malonyl Chlorides ........ 280
14.3.1.1.2.4 Method 4: Reaction of Enolates with Acetoacetates .......... 282
14.3.1.1.2.5 Method 5: Addition of Enolates to Propynoates and Related Reactions .................................................. 282
14.3.1.1.2.6 Method 6: From α-Oxoketene Dithioacetals and Related Compounds .................. 283
14.3.1.1.2.7 Method 7: Addition of Enolates and Enols to Enamino Esters, Enamino Ketones, and Related Compounds .................................................. 285
14.3.1.1.2.7.1 Variation 1: Of Active Methylene Compounds to β-Substituted Acrylates 286
14.3.1.2.7.2 Variation 2: Of Glycine Derivatives and Active Methylene Compounds to Enamino Ketones ........................................ 288
14.3.1.2.7.3 Variation 3: From Enols and Glycine Derivatives .......... 288
14.3.1.2.8 Method 8: Reaction of Ylides with Diphenylcyclopropenone .... 289
14.3.1.2.9 Method 9: Self-Condensation of 3-Oxo Esters and Related Compounds ........................................ 289
14.3.1.2.10 Method 10: [4 + 2] Cycloaddition Reactions .................. 291
14.3.1.1.3 By Formation of Two C–C Bonds ................................ 292
14.3.1.1.3.1 Method 1: [4 + 2] Cycloaddition Reactions .................. 292
14.3.1.1.4 By Formation of One O–C Bond ................................ 293
14.3.1.1.4.1 Method 1: Synthesis by Electrocyclization .................. 293
14.3.1.1.4.2 Method 2: Synthesis from 5-Oxo Esters and Related Compounds ........................................ 294
14.3.1.1.4.2.1 Variation 1: From 3,5-Dioxo Esters ........................ 295
14.3.1.1.4.2.2 Variation 2: From Enol Derivative Reactions of 3,5-Dioxo Esters ........................................ 297
14.3.1.1.4.2.3 Variation 3: From 5-Oxo Unsaturated Esters ............ 297
14.3.1.1.5 By Formation of One C–C Bond ................................ 298
14.3.1.1.5.1 Method 1: Synthesis by Horner–Wittig Reaction ............ 298
14.3.1.2 Synthesis by Ring Transformation ................................ 298
14.3.1.2.1 Method 1: From Rearrangements of 4H-Pyran-4-ones ....... 298
14.3.1.2.1.1 Variation 1: By Photochemical Rearrangement ............ 299
14.3.1.2.1.2 Variation 2: By Acid-Catalyzed Rearrangement .......... 299
14.3.1.2.2 Method 2: By Oxidation of Furans ............................. 300
14.3.1.2.3 Method 3: Oxidation of Catechols and Veratroles ............ 301
14.3.1.3 Aromatization ....................................................... 302
14.3.1.3.1 Method 1: By Elimination ...................................... 302
14.3.1.3.2 Method 2: By Oxidative Dehydrogenation .................. 302
14.3.1.4 Synthesis by Substituent Modification ............................ 303
14.3.1.4.1 Substitution of Hydrogen ....................................... 303
14.3.1.4.1.1 Method 1: Electrophilic Substitution of 2H-Pyran-2-ones ...... 303
14.3.1.4.1.2 Method 2: Metalation of 2H-Pyran-2-ones ................ 305
14.3.1.4.2 Substitution of Metals ........................................... 306
14.3.1.4.2.1 Method 1: Halogenation ...................................... 306
14.3.1.4.2.2 Method 2: Sulfanylation ...................................... 307
14.3.1.4.2.3 Method 3: Alkylation .......................................... 307
14.3.1.4.3 Substitution of Halogen .......................................... 307
14.3.1.4.3.1 Method 1: Halogen–Metal Exchange ......................... 308
14.3.1.4.3.2 Method 2: Alkenyl and Aryl Coupling Reactions .......... 309
14.3.1.4.3.3 Method 3: Reduction ........................................... 310
14.3.1.4.3.4 Method 4: Direct Substitution ................................ 310
14.3.1.4.4 Modification of Oxygen and Nitrogen Substituents ......... 311
14.3.1.4.4.1 Method 1: Alkylation of Oxygen or Nitrogen Substituents ...... 311
14.3.1.4.5 Modification of Carbon Substituents ............................ 311
14.3.3.4.1 Substitution of Hydrogen .................................................. 332
14.3.3.4.1.1 Method 1: Electrophilic Substitution of 4H-Pyran-4-ones 332
14.3.3.4.1.1.1 Variation 1: Deuteration ........................................ 332
14.3.3.4.1.1.2 Variation 2: Halogenation .................................... 333
14.3.3.4.1.1.3 Variation 3: Alkylation, Formylation, and Friedel–Crafts Reactions 333
14.3.3.4.2 Substitution of Halogen ................................................... 333
14.3.3.4.2.1 Method 1: Aryl Coupling Reactions .......................... 333
14.3.3.4.3 Substitution of Oxygen ................................................... 334
14.3.3.4.3.1 Method 1: Direct Substitution .................................. 334
14.3.3.4.4 Modification of Oxygen and Nitrogen Substituents .......... 334
14.3.3.4.5 Modification of Carbon Substituents .............................. 335
14.3.3.4.5.1 Method 1: Carboxy Substituents ............................... 335
14.3.3.4.5.2 Method 2: Alkyl Substituents .................................. 336
14.3.3.4.5.2.1 Variation 1: Deprotonation .................................. 336
14.3.3.4.5.2.2 Variation 2: Substitution ..................................... 336

14.3.4 Product Subclass 4: 4H-Pyran-4-thiones ................................ 337
14.3.4.1 Synthesis by Ring-Closure Reactions ............................. 337
14.3.4.1.1 By Formation of One O–C and One C–C Bond ................ 337
14.3.4.1.1.1 Method 1: From Aroylacetonitriles ............................ 337
14.3.4.2 Synthesis by Substituent Modification ............................. 337
14.3.4.2.1 Method 1: Thiation .................................................. 337

14.4 Product Class 4: Benzopyranones and Benzopyranthiones
A. C. Williams and N. Camp

14.4 Product Class 4: Benzopyranones and Benzopyranthiones .......... 347
14.4.1 Product Subclass 1: 2H-1-Benzopyran-2-ones .................... 350
14.4.1.1 Synthesis by Ring-Closure Reactions ............................. 351
14.4.1.1.1 By Annulation to an Arene ....................................... 351
14.4.1.1.1.1 Method 1: From Aroylacetonitriles ............................ 351
14.4.1.1.1.1.1 Method 1: Palladium-Catalyzed Carbonylative Annulation of Internal Alkynes by 2-Iodophenols 351
14.4.1.1.1.1.2 Method 1: Thiation ............................................. 352
14.4.1.1.1.2 Method 2: By Formation of One O–C and One C–C Bond 352
14.4.1.1.1.2.1 Method 2: By Formation of the 1–2 and 2–3 Bonds ...... 352
14.4.1.1.1.2.1.1 Method 1: Rhodium-Catalyzed Carbonylative Cyclization of (2-Hydroxyphenyl)alkynes 352
14.4.1.1.1.2.1.2 Method 2: 4-Hydroxy-2H-1-benzopyran-2-ones by Carbonylation of 2-Hydroxyphenyl Ketones 353
14.4.1.1.2.1.3 Method 3: Base-Catalyzed Reaction of 2-Hydroxyphenyl Ketones with Diethyl Carbonate ........................................... 354
14.4.1.1.2.1.4 Method 4: Base-Catalyzed Reaction of 2-Hydroxyphenyl Ketones with Alkyl Chloroformates ..................................... 355
14.4.1.1.2.2 With Formation of the 1–2 and 3–4 Bonds ............................... 355
14.4.1.1.2.2.1 Method 1: Wittig Reaction of 2-Hydroxybenzaldehydes and 2-Hydroxyphenyl Ketones ........................................ 355
14.4.1.1.2.2.2 Method 2: Condensation of 2-Hydroxybenzaldehydes and 2-Hydroxyphenyl Ketones with Acetic Acid Derivatives ...... 357
14.4.1.1.2.2.2.1 Variation 1: Condensation of 2-Hydroxybenzaldehydes with Acetic Anhydride ............................................. 357
14.4.1.1.2.2.2.2 Variation 2: Condensation of 2-Hydroxyphenyl Ketones with Halo- or Arylacetyl Chlorides ........................................... 358
14.4.1.1.2.2.2.3 Variation 3: Condensation of 2-Hydroxybenzaldehydes with Other Arylacetic Acid Derivatives .............................. 359
14.4.1.1.2.2.2.4 Variation 4: Knoevenagel Condensation of 2-Hydroxybenzaldehydes with Ethyl Nitroacetate .................................. 361
14.4.1.1.2.2.2.5 Variation 5: Knoevenagel Condensation of 2-Hydroxybenzaldehydes with Glycine and Glycolic Acid Derivatives .............. 361
14.4.1.1.2.2.2.6 Variation 6: Knoevenagel Condensation of 2-Hydroxybenzaldehydes or 2-Hydroxyphenyl Ketones with Ethyl Cyanoacetate ............ 363
14.4.1.1.2.2.2.7 Variation 7: Synthesis of 3-Substituted 2H-1-Benzopyran-2-ones by Knoevenagel Condensation of Substituted Acetic Acid Derivatives .......................................................... 364
14.4.1.1.2.2.2.8 Variation 8: Knoevenagel Condensation of 2-Hydroxybenzaldehydes with Phosphorylacetate Derivatives ................. 365
14.4.1.1.2.2.2.9 Variation 9: Knoevenagel Condensation of 2-Hydroxybenzaldehydes with Malonic Acid and Its Derivatives ................. 367
14.4.1.1.2.2.2.10 Variation 10: Knoevenagel Condensation of 2-Hydroxybenzaldehydes with β-Oxo Esters ........................................ 369
14.4.1.1.2.2.2.11 Variation 11: Knoevenagel Condensation of 2-Hydroxybenzaldehydes with Acrylates ......................................... 370
14.4.1.1.2.2.3 Method 3: Reaction of 2-Hydroxybenzaldehyde Imines and Oximes and 2-Hydroxybenzamides with Carbon Suboxide .............. 371
14.4.1.1.2.2.4 Method 4: Rearrangement of [(2-Hydroxybenzylidene)amino]acetates and N’-(2-Hydroxybenzylidene)acetohydrazides .................. 372
14.4.1.1.2.2 With Formation of the 1–2 and 4–4a Bonds .............................. 374
14.4.1.1.2.3.1 Method 1: Acid-Catalyzed Condensation of Phenols and 1,3-Dicarbonyl Compounds (The Pechmann Reaction) .............. 374
14.4.1.1.2.3.1.1 Variation 1: Sulfuric Acid as Condensing Agent .......................................................... 374
14.4.1.1.2.3.1.2 Variation 2: Zinc(II) Chloride as Condensing Agent .......... 376
14.4.1.1.2.3.1.3 Variation 3: Sulfonylic Acids as Condensing Agents ............ 377
14.4.1.1.2.3.1.4 Variation 4: Hydrogen Chloride or Fluoride as Condensing Agents .......................................................... 377
14.4.1.1.2.3.1.5 Variation 5: Aluminum Trichloride as Condensing Agent .......... 379
14.4.1.1.2.3.1.6 Variation 6: Phosphoryl Chloride as Condensing Agent .......... 379
14.4.1.1.2.3.1.7 Variation 7: Other Phosphoric Acid Derivatives as Condensing Agents .... 380
14.4.1.1.2.3.1.8 Variation 8: Montmorillonite K 10 and KSF as Condensing Agents .......... 381
14.4.1.1.2.3.1.9 Variation 9: Trifluoroacetic Acid as Condensing Agent .................. 382
14.4.1.1.2.3.1.10 Variation 10: Sulfonic Acid Resins as Condensing Agents .......... 383
14.4.1.1.2.3.2 Method 2: Reaction of Phenols with Alkynoates and Alkynoic Acids ...... 384
14.4.1.1.2.3.2.1 Variation 1: Palladium-Catalyzed Coupling of Phenols with Alkynoates and Alkynoic Acids ........................................... 384
14.4.1.1.2.3.2.2 Variation 2: Acid-Catalyzed Coupling of Phenols with Alkynoic Acids ... 385
14.4.1.1.2.3.2.3 Variation 3: Coupling of Phenols and Acetylenedicarboxylates Using Triphenylphosphine ................................................................. 386
14.4.1.1.2.3.2.4 Variation 4: Zinc-Catalyzed Coupling of Phenols with Alkynoates .... 388
14.4.1.1.2.3.2.5 Method 3: Reaction of Phenols with 3-(Dialkylamino)acrylates and Cinnamates ................................................................. 388
14.4.1.1.3 By Formation of One O—C Bond ......................................................... 389
14.4.1.1.3.1 With Formation of the 1—2 Bond ...................................................... 389
14.4.1.1.3.1.1 Method 1: Lactonization of 3-(2-Hydroxyphenyl)propanoic or -acrylic Acids ................................................................. 389
14.4.1.1.3.1.2 Method 2: Lactonization of 3-(2-Alkxyphenyl)propanoic or -acrylic Acids 391
14.4.1.1.3.1.3 Method 3: Lactonization of 3-(2-Hydroxyphenyl)propanoates or -acrylates ......................................................................................... 393
14.4.1.1.3.1.3.1 Variation 1: Acid-Catalyzed Lactonization of 3-(2-Hydroxyphenyl)-propanoates or -acrylates ........................................... 393
14.4.1.1.3.1.3.2 Variation 2: Base-Catalyzed Lactonization of 3-(2-Hydroxyphenyl)-propanoates or -acrylates ........................................... 394
14.4.1.1.3.1.3.3 Variation 3: Neutral, Thermal Lactonization of 3-(2-Hydroxyphenyl)-propanoates or -acrylates ........................................... 395
14.4.1.1.3.1.4 Method 4: Lactonization of 3-(2-Alkxyphenyl)- or 3-(2-Acyloxyphenyl)-acrylates ................................................................. 396
14.4.1.1.3.1.4.1 Variation 1: Acid-Catalyzed Lactonization of 3-(2-Alkxyphenyl)acrylates 397
14.4.1.1.3.1.4.2 Variation 2: Base-Catalyzed Lactonization of 3-(2-Alkxyphenyl)- and 3-(2-Acyloxyphenyl)acrylates ........................................... 398
14.4.1.1.3.1.4.3 Variation 3: Neutral or Thermal Lactonization of 3-(2-Alkxyphenyl)-acrylates, with Concomitant Claisen Rearrangement .......... 399
14.4.1.1.3.1.5 Method 5: Lactonization of 3-(2-Hydroxyphenyl)acrylamides .......... 401
14.4.1.1.3.1.6 Method 6: Lactonization of 3-(2-Hydroxyphenyl)-3-oxopropanamides ... 403
14.4.1.1.3.1.7 Method 7: Lactonization of 3-(2-Alkxy- and 3-(2-Hydroxyphenyl)-acrylonitriles ................................................................. 404
14.4.1.1.3.1.8 Method 8: Oxidative Cyclization of 2-Allylphenols ...................... 405
14.4.1.1.3.2 With Formation of the 1—8a Bond .................................................... 406
14.4.1.1.3.2.1 Method 1: Cyclization of 2-(2-Nitrobenzylidene)malonic Acids .......... 406
14.4.1.1.3.2.2 Method 2: Cyclization of Benzyl 3-(2-Halophenyl)acrylates .......... 407
14.4.1.1.4 By Formation of One C—C Bond .................................................... 407
14.4.1.1.4.1 With Formation of the 2—3 Bond .................................................... 407
14.4.1.1.4.1.1 Method 1: Cyclization of a 2-Propanoylphenyl N,N-Dialkylcarbamate ... 407
14.4.1.1.4.2 With Formation of the 3—4 Bond .................................................... 408
14.4.1.1.4.2.1 Method 1: Cyclization of 2-Acyloxyaryl Ketones and Cyanides .......... 408
14.4.1.1.4.2.2 Method 2: Base-Catalyzed Cyclization of 2-Acylxybenzoates .......... 409
14.4.1.1.4.2.3 Method 3: Intramolecular Bayliss–Hillman Reaction of 2-Formylphenyl Acrylate ........................................ 410
14.4.1.1.4.2.4 Method 4: Ring-Closing Metathesis of a Polymer-Supported 2-(Propenoyloxy)styrene ........................................ 410
14.4.1.1.4.3 Method 1: Palladium-Catalyzed Intramolecular Cyclization of Phenyl Propynoates ........................................ 411
14.4.1.1.4.3.1 Method 1: Baeyer–Villiger Reaction of 2,3-Dihydro-1H-inden-1-ones with Subsequent Aromatization ................................. 415
14.4.1.1.4.3.2 Method 2: Base-Catalyzed Isomerization of 3,3′-Bibenzo[b]furan-2,2′-diones .......... 416
14.4.1.1.4.3.3 Method 1: Reaction of Ethyl 4-Oxo-4H-1-benzopyran-3-carboxylates with Hydroxylamine ........................................ 417
14.4.1.1.4.3.4 Method 1: Dehydrogenation of 3,4-Dihydro-2H-1-benzopyran-2-ones with Palladium on Charcoal ........................................ 418
14.4.1.1.4.3.5 Method 1: Dehydrogenation of 3,4-Dihydro-2H-1-benzopyran-2-ones with Other Agents ........................................ 418
14.4.1.1.4.3.6 Method 1: Oxidation of 2H-1-Benzopyran-2-ones to 2H-1-Benzopyran-2-ones ........................................ 419
14.4.1.1.4.3.7 Method 1: Oxidation of 2H-1-Benzopyran-2-ols ........................................ 420
14.4.1.1.4.3.8 Method 1: Base-Catalyzed Dehydrohalogenation of 3-Halo-3,4-dihydro-2H-1-benzopyran-2-ones ........................................ 423
14.4.1.1.4.3.9 Method 1: Debromination of 3,4-Dibromo-3,4-dihydro-2H-1-benzopyran-2-ones ........................................ 424
14.4.1.1.4.3.10 Method 1: Reaction of Aldehydes with Ylides and Phosphonates of 3,4-Dihydro-2H-1-benzopyran-2-ones ........................................ 425
14.4.1.1.4.3.11 Method 1: Acylation of 3-Acyl-3,4-dihydro-2H-1-benzopyran-2-ones ........................................ 426
14.4.1.1.4.3.12 Method 1: Reactions of 3-Diazo-2H-1-benzopyran-2,4(3H)-diones ........................................ 427
14.4.1.1.4.3.13 Method 1: Reactions of 3-Acyloxyaryl Ketones and Cyanides .......... 408
14.4.1.1.4.3.14 Method 1: Base-Catalyzed Cyclization of 2-Acylxybenzoates .......... 409
14.4.1.1.4.3.15 Method 1: Ring-Closing Metathesis of a Polymer-Supported 2-(Propenoyloxy)styrene ........................................ 410
14.4.1.1.4.3.16 Method 1: Palladium-Catalyzed Intramolecular Cyclization of Phenyl Propynoates ........................................ 411
14.4.1.1.4.3.17 Method 1: Intramolecular Heck Reaction ........................................ 412
14.4.1.1.4.3.18 Method 1: Intramolecular Bayliss–Hillman Reaction of 2-Formylphenyl Acrylate ........................................ 410
14.4.1.1.4.3.19 Method 1: Acid-Catalyzed Cyclization of Aryl 3-Ethoxyacrylates ...... 412
14.4.1.1.4.3.20 Method 1: Acid-Catalyzed or Thermal Cyclization of Diaryl Malonates .......... 414
14.4.1.1.4.3.21 Method 1: Baeyer–Villiger Reaction of 2,3-Dihydro-1H-inden-1-ones with Subsequent Aromatization ................................. 415
14.4.1.1.4.3.22 Method 1: Base-Catalyzed Isomerization of 3,3′-Bibenzo[b]furan-2,2′-diones .......... 416
14.4.1.2 Synthesis by Ring Transformation ........................................ 415
14.4.1.2.1 By Ring Enlargement ........................................ 415
14.4.1.2.1.1 Method 1: Baeyer–Villiger Reaction of 2,3-Dihydro-1H-inden-1-ones with Subsequent Aromatization ................................. 415
14.4.1.2.1.2 Method 2: Base-Catalyzed Isomerization of 3,3′-Bibenzo[b]furan-2,2′-diones .......... 416
14.4.1.2.2 With Retention of Ring Size ........................................ 417
14.4.1.2.2.1 Method 1: Reaction of Ethyl 4-Oxo-4H-1-benzopyran-3-carboxylates with Hydroxylamine ........................................ 417
14.4.1.3 Aromatization ........................................ 418
14.4.1.3.1 By Oxidation ........................................ 418
14.4.1.3.1.1 Method 1: Dehydrogenation of 3,4-Dihydro-2H-1-benzopyran-2-ones with Palladium on Charcoal ........................................ 418
14.4.1.3.1.2 Method 2: Dehydrogenation of 3,4-Dihydro-2H-1-benzopyran-2-ones with Other Agents ........................................ 418
14.4.1.3.1.3 Method 3: Dehydrogenation of 5,6-Dihydro-2H-1-benzopyran-2-ones with Quinones ........................................ 419
14.4.1.3.1.4 Method 4: Oxidation of 2H-1-Benzopyrans to 2H-1-Benzopyran-2-ones ........................................ 420
14.4.1.3.1.5 Method 5: Oxidation of 2H-1-Benzopyran-2-ols ........................................ 422
14.4.1.3.2 By Elimination ........................................ 423
14.4.1.3.2.1 Method 1: Base-Catalyzed Dehydrohalogenation of 3-Halo-3,4-dihydro-2H-1-benzopyran-2-ones ........................................ 423
14.4.1.3.2.2 Method 2: Debromination of 3,4-Dibromo-3,4-dihydro-2H-1-benzo- pyran-2-ones ........................................ 424
14.4.1.3.3 By Formal Aromatizations Resulting from Tautomerism ........................................ 425
14.4.1.3.3.1 Method 1: Reactions of 3-Diazo-2H-1-benzopyran-2,4(3H)-diones ........................................ 425
14.4.1.3.3.2 Method 2: Reaction of Aldehydes with Ylides and Phosphonates of 3,4-Dihydro-2H-1-benzopyran-2-ones ........................................ 426
14.4.1.3.3.3 Method 3: Acylation of 3-Acyl-3,4-dihydro-2H-1-benzopyran-2-ones ........................................ 427
Method 4: Reaction of 4-Acyl-3,4-dihydro-2H-1-benzopyran-2-ones with Secondary Amines ........................................ 428
Method 5: Isomerization of 3-[(Arylamino)methylene]-2H-1-benzo-
pyran-2,4(3H)-diones to 4-(Arylamino)-2-oxo-2H-1-benzo-
pyran-3-carbaldehydes ........................................ 429
Method 6: Hydrolysis of 3-Acetyl- and 3-(Ethoxycarbonyl)-2H-1-benzo-
pyran-2,4(3H)-diones .......................................... 429
Method 7: Reaction of 3-[(Dialkylamino)methylene]-4-thioxo-
3,4-dihydro-2H-1-benzopyran-2-ones with Propenal .......... 430
Method 8: O-Methylation of 2H-1-Benzopyran-2,4(3H)-diones ........ 430
Method 9: Reactions of 2H-1-Benzopyran-2,7,8-triones and 
2H-1-Benzopyran-2,7,8-trione 7-(O-Methylximines) ........... 431
Method 1: Hydrolysis of 2H-1-Benzopyran-2-imines ............... 436
Method 2: Hydrolysis of 2-(Dialkylamino)-4H-1-benzopyran-4-ones .... 437
Method 1: Hydrolysis of 2H-1-Benzopyran-2-thiones ............... 437
Method 1: Condensation of 2-Hydroxyphenyl Ketones with 
Carbon Disulfide ............................................. 438
Method 1: Reaction of Phosphacumulenes with 
2-Hydroxybenzaldehydes ....................................... 438
Method 1: Reaction of Polyfluoroalkyl Phenyl Ketones with 
Sodium Sulfide ................................................ 440
Method 1: Conversion of 2H-1-Benzopyran-2-ones into 
2H-1-Benzopyran-2-thiones ................................... 440
Variation 1: Direct Thionation of 2H-1-Benzopyran-2-ones with 
Phosphorus Pentasulfide ....................................... 441
14.4.2.1.1.2 Variation 2: Direct Thionation of \(2H\)-1-Benzopyran-2-ones with Lawesson’s Reagent ........................................ 443
14.4.2.2 Addition Reactions ...................................................... 444
14.4.2.2.1 Method 1: Oxidation of \(2H\)-1-Benzopyran-2-thiones with 3-Chloroperoxybenzoic Acid ........................................ 444

14.4.3 Product Subclass 3: \(4H\)-1-Benzopyran-4-ones ........................................ 444
14.4.3.1 Synthesis by Ring-Closure Reactions ...................................................... 445
14.4.3.1.1 By Annulation to an Arene .......................................................... 445
14.4.3.1.1.1 By Formation of One \(O\)–C and Two \(C\)–C Bonds ........................................ 445
14.4.3.1.1.1.1 With Formation of the 1–2, 3–4, and 4–4a Bonds ............................ 445
14.4.3.1.1.1.1 Method 1: Reaction of 2-Iodophenols with Alkynes or Allenes and Carbon Monoxide ........................................ 445
14.4.3.1.1.2 By Formation of One \(O\)–C and One \(C\)–C Bond ........................................ 447
14.4.3.1.1.2.1 With Formation of the 1–2 and 2–3 Bonds ........................................ 447
14.4.3.1.1.2.1.1 Method 1: Condensation of 2-Hydroxyphenyl Ketones with Carboxylic Acid Derivatives ........................................ 447
14.4.3.1.1.2.1.1.1 Variation 1: Condensation of 2-Hydroxyphenyl Ketones with Carboxylic Acids ........................................ 447
14.4.3.1.1.2.1.1.2 Variation 2: Condensation of 2-Hydroxyphenyl Ketones with Acyl Chlorides ........................................ 450
14.4.3.1.1.2.1.1.3 Variation 3: Condensation of 2-Hydroxyphenyl Ketones with Carboxylic Acid Anhydrides ........................................ 455
14.4.3.1.1.2.1.1.4 Variation 4: Condensation of 2-Hydroxyphenyl Ketones with Carboxylic Esters ........................................ 456
14.4.3.1.1.2.1.1.5 Variation 5: Condensation of 2-Hydroxyphenyl Ketones with Carboxamides ........................................ 459
14.4.3.1.1.2.1.1.6 Variation 6: Condensation of 2-Hydroxyphenyl Ketones with Diaminomethyl Ethers, Formamide Acetals, or Ortho Esters ........................................ 460
14.4.3.1.1.2.1.2 Method 2: Condensation of 2-Hydroxyphenyl (Methylsulfinyl)methyl Ketones with Aldehydes ........................................ 461
14.4.3.1.1.2.1.3 Method 3: Condensation of 2-Hydroxyphenyl Ketones with Aldehydes with Subsequent Oxidation ........................................ 462
14.4.3.1.1.2.2 With Formation of the 1–2 and 3–4 Bonds ........................................ 463
14.4.3.1.1.2.2.1 Method 1: Condensation of 2-Hydroxybenzoic Acid Derivatives with 2-Hydroxybenzaldehydes and Naphthaldehydes ........................................ 463
14.4.3.1.1.2.2.1.1 Variation 1: Reaction of Enamines with Aldehydes with Subsequent Oxidation ........................................ 463
14.4.3.1.1.2.2.1.2 Variation 2: Reaction of Enamines with Mixed Anhydrides ........................................ 465
14.4.3.1.1.2.2.1.3 Variation 3: Reaction of Enamines with Acyl Chlorides ........................................ 466
14.4.3.1.1.2.2.1.4 Variation 4: Reaction of Enolates with Acyl Chlorides ........................................ 467
14.4.3.1.1.2.2.1.5 Variation 5: Reactions of Aldehyde and Ketone Enolates with Carboxylic Acid Esters ........................................ 468
14.4.3.1.2.2 Method 2: Reaction of 2-Hydroxybenzoates with Ylides and Acyl Chlorides ........................................... 471

14.4.3.1.2.3 With Formation of the 1–2 and 4–4a Bonds .................................................. 471

14.4.3.1.2.3.1 Method 1: Condensation of Phenols with 1,3-Dicarbonyl Compounds (The Simonis Reaction) ........................................... 471

14.4.3.1.2.3.1.1 Variation 1: Sulfuric Acid Catalyzed Condensation of Phenols with 1,3-Dicarbonyl Compounds .............................. 472

14.4.3.1.2.3.1.2 Variation 2: Phosphoric Acid and Phosphorus Pentoxide Catalyzed Condensation of Phenols with 1,3-Dicarbonyl Compounds .................................................. 472

14.4.3.1.2.3.1.3 Variation 3: Thermal Condensation of Phenols with 1,3-Dicarbonyl Compounds .................................................. 473

14.4.3.1.2.3.1.4 Variation 4: Trifluoroacetic Acid Catalyzed Condensation of Phenols with 1,3-Dicarbonyl Compounds ........................................... 474

14.4.3.1.2.3.1.5 Variation 5: Condensation of (Aminocarbonyl)acetic Acid Esters with Phenols .................................................. 474

14.4.3.1.2.3.2 Method 2: Condensation of Phenols with 3-Haloacrylic Acid Derivatives .............................. 475

14.4.3.1.2.3.3 Method 3: Condensation of Phenols with Alkynoic Acids or Acyl Chlorides .................................................. 478

14.4.3.1.3 By Formation of One O–C Bond ................................................................. 480

14.4.3.1.3.1 With Formation of the 1–2 Bond ................................................................. 480

14.4.3.1.3.1.1 Method 1: Cyclization of 1-(2-Hydroxyphenyl)- and 1-(2-Alkoxyphenyl)alkane-1,3-diones ........................................... 480

14.4.3.1.3.1.1.1 Variation 1: Cyclization of 1-(2-Hydroxyphenyl)alkane-1,3-diones with Hydrogen Chloride ........................................... 481

14.4.3.1.3.1.1.2 Variation 2: Cyclization of 1-(2-Hydroxyphenyl)alkane-1,3-diones with Sulfuric Acid ........................................... 482

14.4.3.1.3.1.1.3 Variation 3: Cyclization of 1-(2-Hydroxyphenyl)alkane-1,3-diones with Hydrogen Bromide ........................................... 484

14.4.3.1.3.1.1.4 Variation 4: Cyclization of 1-(2-Alkoxyphenyl)alkane-1,3-diones with Hydrogen Iodide ........................................... 484

14.4.3.1.3.1.1.5 Variation 5: Cyclization of 1-(2-Alkoxyphenyl)- or 1-(2-Hydroxyphenyl)-alkane-1,3-diones with Acetic Acid ........................................... 485

14.4.3.1.3.1.1.6 Variation 6: Cyclization of Solid-Supported 1-(2-Hydroxyphenyl)-alkane-1,3-diones with Trifluoroacetic Acid ........................................... 486

14.4.3.1.3.1.1.7 Variation 7: Cyclization of 1-(2-Hydroxyphenyl)alkane-1,3-diones with Iodine ........................................... 487

14.4.3.1.3.1.1.8 Variation 8: Cyclization of 1-(2-Hydroxyphenyl)alkane-1,3-diones with 4-Toluenesulfonic Acid ........................................... 487

14.4.3.1.3.1.1.9 Variation 9: Cyclization of 1-(2-Hydroxyphenyl)alkane-1,3-diones with Sulfonic Acid Resins ........................................... 488

14.4.3.1.3.1.1.10 Variation 10: Cyclization of 1-(2-Hydroxyphenyl)alkane-1,3-diones with Montmorillonite K 10 ........................................... 488

14.4.3.1.3.1.2 Method 2: Cyclization of 3-(Dialkylamino)-1-(2-hydroxyphenyl)-prop-2-en-1-ones ........................................... 489
14.4.3.1.3.1.2 Variation 1: Cyclization of 3-(Dialkylamino)-1-(2-hydroxyphenyl)-prop-2-en-1-ones with Hydrogen Chloride .......................... 489
14.4.3.1.3.1.2.2 Variation 2: Cyclization of 3-(Dialkylamino)-1-(2-hydroxyphenyl)-prop-2-en-1-ones with Sulfuric Acid ........................................... 489
14.4.3.1.3.1.2.3 Variation 3: Cyclization of 3-(Dialkylamino)-1-(2-hydroxyphenyl)-prop-2-en-1-ones with Halogens ........................................... 490
14.4.3.1.3.1.2.4 Variation 4: Cyclization of 3-(Dialkylamino)-1-(2-hydroxyphenyl)-prop-2-en-1-ones with Chlorosulfonyl Isocyanate and Anilines 490
14.4.3.1.3.1.2.5 Variation 5: Cyclization of Polymer-Bound 3-(Dialkylamino)-1-[2-(tert-butyldimethylsiloxy)phenyl]prop-2-en-1-ones ........................... 491
14.4.3.1.3.1.2.6 Variation 6: Other Electrophilic Cyclizations of 3-(Dialkylamino)-1-(2-hydroxyphenyl)prop-2-en-1-ones ........................................ 492
14.4.3.1.3.1.3 Method 3: Cyclization of \( N,N \)-Dialkyl-3-(2-hydroxyphenyl)-3-oxopropanamides ......................................................... 494
14.4.3.1.3.1.4 Method 4: Cyclization of 3-Halo-1-(2-hydroxyphenyl)prop-2-en-1-ones ................................................................. 495
14.4.3.1.3.1.5 Method 5: Cyclization of 1-(2-Hydroxyphenyl)prop-2-en-1-ones ................................................................. 496
14.4.3.1.3.1.5.1 Variation 1: Cyclization of 1-(2-Hydroxyphenyl)prop-2-en-1-ones with Iodine ................................................................. 496
14.4.3.1.3.1.5.2 Variation 2: Cyclization of 1-(2-Hydroxyphenyl)prop-2-en-1-ones with Selenium Dioxide ................................................................. 498
14.4.3.1.3.1.5.3 Variation 3: Cyclization of 1-(2-Hydroxyphenyl)prop-2-en-1-ones with Quinones ................................................................. 499
14.4.3.1.3.1.5.4 Variation 4: Cyclization of 1-(2-Hydroxyphenyl)prop-2-en-1-ones with Hypervalent Iodine Reagents ................................................................. 500
14.4.3.1.3.1.5.5 Variation 5: Cyclization of 1-(2-Hydroxyphenyl)prop-2-en-1-ones with Bromine ................................................................. 501
14.4.3.1.3.1.6 Method 6: Oxidative Cyclization of 1-(2-Hydroxyphenyl)-prop-2-en-1-ones with Thallium(III) Salts ................................................................. 501
14.4.3.1.3.1.7 Method 7: Oxidative Cyclization of 1-(2-Hydroxyphenyl)-prop-2-en-1-ones with Alkaline Peroxide ................................................................. 503
14.4.3.1.3.1.8 Method 8: Cyclization of 1-(2-Hydroxyphenyl)prop-2-yn-1-ones ................................................................. 504
14.4.3.1.3.1.8.1 Variation 1: Acid-Catalyzed Cyclization of 1-(2-Hydroxyphenyl)-prop-2-yn-1-ones ................................................................. 504
14.4.3.1.3.1.8.2 Variation 2: Base-Catalyzed Cyclization of 1-(2-Hydroxyphenyl)-prop-2-yn-1-ones ................................................................. 505
14.4.3.1.3.1.8.3 Variation 3: Cyclization of 1-(2-Hydroxyphenyl)prop-2-yn-1-ones with Secondary Amines ................................................................. 506
14.4.3.1.3.2 With Formation of the 1–8a Bond ................................................................. 507
14.4.3.1.3.2.1 Method 1: Cyclization of 1-(2-Fluorophenyl)-1,3-diones ................................................................. 507
14.4.3.1.3.4 By Formation of One C–C Bond ................................................................. 509
14.4.3.1.4.1 With Formation of the 2–3 Bond ................................................................. 509
14.4.3.1.4.1.1 Method 1: Cyclization of 2-Acyloxyphenyl Ketones ................................................................. 509
14.4.3.1.4.1.1.1 Variation 1: Cyclization of 2-Acyloxyphenyl Ketones with Inorganic Bases ................................................................. 509
14.4.3.1.4.1.1.2 Variation 2: Cyclization of 2-Acyloxyphenyl Ketones with Organic Bases ................................................................. 510
14.4.3.1.4.1.3 Variation 3: Thermal Cyclization of 2-Acyloxyphenyl Ketones ................................................................. 511
14.4.1.4.1.2 Method 2: Cyclization of 2-Acyloxyphenyl Ketones by Intramolecular Wittig Reaction ........................................... 512
14.4.1.4.2 With Formation of the 4—a Bond .............................................. 513
14.4.1.4.2.1 Method 1: Intramolecular Friedel–Crafts Reaction of 3-Phenoxyacrylic Acid Derivatives ........................................... 513
14.4.2 Synthesis by Ring Transformation ............................................. 514
14.4.2.1 By Ring Enlargement .............................................................. 514
14.4.2.1.1 Method 1: Cyanide-Catalyzed Rearrangement of 2-Benzylidene-benzo[b]furan-3-ones ........................................... 514
14.4.2.2 By Formal Exchange of Ring Members with Retention of Ring Size .................................................. 515
14.4.2.2.1 Method 1: Rearrangements of 4H-1-Benzopyran-4-one Containing Systems ........................................... 515
14.4.3 Aromatization ........................................................................... 517
14.4.3.1 By Oxidation ........................................................................... 517
14.4.3.1.1 Method 1: Aromatization of 2,3-Dihydro-4H-1-benzopyran-4-ones Using Thallium(III) Salts and Hypervalent Iodine Reagents .......................... 517
14.4.3.1.2 Method 2: Aromatization of 2,3-Dihydro-4H-1-benzopyran-4-ones with Quinones ........................................... 518
14.4.3.1.3 Method 3: Oxidative Rearrangement of 2-Monosubstituted and 2,2-Disubstituted 2,3-Dihydro-4H-benzopyran-4-ones ........................................... 518
14.4.3.1.4 Method 4: Oxidation of 4H-1-Benzopyran-4-ones to 4H-1-Benzopyran-4-ones ........................................... 520
14.4.3.1.5 Method 5: Oxidation of 2H-1-Benzopyran-4-ones to 4H-1-Benzopyran-4-ones ........................................... 521
14.4.3.2 By Elimination ........................................................................... 522
14.4.3.2.1 Method 1: Dehydrohalogenation ........................................... 522
14.4.3.2.2 Method 2: Dehydration of 2-Hydroxy-2,3-dihydro-4H-1-benzopyran-4-ones ........................................... 525
14.4.3.2.3 Method 3: Elimination of Alcohols from 2-Alkoxy-2,3-dihydro-4H-1-benzopyran-4-ones ........................................... 526
14.4.3.2.4 Method 4: Elimination of Benzenesulfonic Acid from 3-Alkyl-3-(phenylsulfonyl)-2,3-dihydro-4H-benzopyran-4-ones ........................................... 527
14.4.3.4 Synthesis by Substituent Modification ........................................... 527
14.4.3.4.1 Substitution of Existing Substituents ........................................... 527
14.4.3.4.1.1 Of Hydrogen ........................................................................... 527
14.4.3.4.1.1.1 Method 1: Oxidation and Hydrolysis of 1-Benzopyrylium Salts to 4H-1-Benzopyran-4-ones ........................................... 527
14.4.3.4.1.2 Of Carbon ........................................................................... 528
14.4.3.4.1.2.1 Method 1: Oxidative Cleavage of 4,4’-Bi-4H-1-benzopyranyldienes to 4H-1-Benzopyran-4-ones ........................................... 528
14.4.3.4.1.3 Of Sulfur ........................................................................... 529
14.4.3.4.1.3.1 Method 1: Conversion of 4H-1-Benzopyran-4-thiones into 4H-1-Benzopyran-4-ones ........................................... 529
14.4.3.2 Modification of Substituents .............................................. 530

14.4.3.4.2 Formal Oxidation State Changes Resulting from Tautomerism .......... 530

14.4.3.4.2.1 Method 1: Base-Catalyzed Condensation of 2,3-Dihydro-4H-1-benzopyran-4-ones and Aldehydes ................................. 530

14.4.3.4.2.2 Method 2: Oxidation of 3-Benzylidene-2-phenyl-2,3-dihydro-4H-1-benzopyran-4-ones ........................................ 530

14.4.3.4.2.3 Method 3: S-Alkylation of 4-Hydroxy-2H-1-benzopyran-2-thiones ...... 532

14.4.4 Product Subclass 4: 4H-1-Benzopyran-4-thiones ..................................... 532

14.4.4.1 Synthesis by Substituent Modification ........................................ 533

14.4.4.1.1 Substitution of Existing Substituents ....................................... 533

14.4.4.1.1.1 Of Oxygen ........................................................................... 533

14.4.4.1.1.1.1 Method 1: Conversion of 4H-1-Benzopyran-4-ones into 4H-1-Benzopyran-4-thiones ......................................................... 533

14.4.4.1.1.1.1.1 Variation 1: Direct Conversion of 4H-1-Benzopyran-4-ones into 4H-1-Benzopyran-4-thiones ........................................................... 533

14.4.4.1.1.1.2 Variation 2: Indirect Conversion via Imines ................................ 535

14.4.4.4.5 Product Subclass 5: 1H-2-Benzopyran-1-ones .................................. 536

14.4.5 Synthesis by Ring-Closure Reactions ................................................. 536

14.4.5.1 By Annulation to an Arene ............................................................. 536

14.4.5.1.1 By Formation of One O—C and One C—C Bond .............................. 536

14.4.5.1.1.1 Method 1: Cyclization of Derivatives of 2-(Formylmethyl)- and 2-(2-Oxoethyl)benzoic Acids ........................................ 544

14.4.5.1.1.2 Variation 2: Cyclization Using Palladium and Zinc Catalysis .............. 542

14.4.5.1.1.2.1 Variation 1: Cyclization Using Palladium and Lithium Catalysis .... 542

14.4.5.1.1.2.2 Variation 3: Cyclization Using Palladium and Copper Acetylides .................. 543

14.4.5.1.1.2.3 Variation 4: Cyclization Using Preformed Copper Acetylides .......... 543

14.4.5.1.1.3 With Formation of the 2—3 and 3—4 Bonds .................................. 538

14.4.5.1.1.3.1 Method 1: From 2-Benzoyl- or 2-Acetylbenzoates with Trimethylsulfoxonium Ylide ....................................................... 538

14.4.5.1.1.4 With Formation of the 2—3 and 4—4a Bonds ................................ 539

14.4.5.1.1.4.1 Method 1: Cyclization of Thallated Benzoic Acids with Alkenes under Palladium Catalysis ........................................ 539

14.4.5.1.1.4.2 Method 2: Cyclization of 2-Iodobenzoates with Alkynes .................. 541

14.4.5.1.1.4.2.1 Variation 1: Cyclization Using Palladium Catalysis .................. 541

14.4.5.1.1.4.2.2 Variation 2: Cyclization Using Palladium and Zinc Catalysis ............. 542

14.4.5.1.1.4.2.3 Variation 3: Cyclization Using Palladium and Lithium Catalysis .... 542

14.4.5.1.1.4.2.4 Variation 4: Cyclization Using Preformed Copper Acetylides .......... 543

14.4.5.1.1.5 By Formation of One O—C Bond ............................................. 544

14.4.5.1.1.6 With Formation of the 1—2 Bond ............................................. 544

14.4.5.1.1.7 Method 1: Cyclization of Derivatives of 2-(Formylmethyl)- and 2-(2-Oxoethyl)benzoic Acids ........................................ 544
Variation 1: From 2-Halobenzoates via Palladium Catalysis Followed by Acid-Mediated Cyclization ........................................ 544
Variation 2: Cyclization of 2-(Formylmethyl)benzoic Acids .................. 546
Variation 3: Cyclization of 2-(2-Oxoethyl)benzoic Acids .................... 546
Variation 4: Cyclization of 2-(Formylmethyl)benzoates ....................... 548
Variation 5: Cyclization of 2-(2-Oxoethyl)benzoates ......................... 549
Variation 6: Cyclization of 2-(Formylmethyl)benzamides .................... 550
Variation 7: Cyclization of 2-(2-Oxoethyl)benzonitriles ..................... 551
Variation 1: Cyclization with Stoichiometric Palladium .................... 552
Variation 2: Cyclization with Palladium Catalysts and Oxygen ............... 552
Variation 3: Cyclization with N-(Phenylselanyl)succinimide and Acid .... 553
Method 2: Cyclization of 2-Allylbenzoic Acids ................................ 554
Variation 1: Using Stoichiometric Palladium .................................. 554
Variation 2: Using Catalytic Palladium ........................................ 555
Method 3: Cyclization of 2-(2-Bromovinyl)benzoates ....................... 555
Method 4: Cyclization of 2-Alk-1-ynylbenzoic Acids ......................... 556
Variation 1: Cyclization Using Palladium Catalysts ......................... 556
Variation 2: Cyclization Using Mercury Salts ................................. 557
Variation 3: Halolactonization .................................................. 558
Method 5: Cyclization of 2-(Phenylethynyl)benzonitrile ..................... 559
Method 1: Acid-Catalyzed Cyclization of 2-Oxopropyl Benzoates .......... 560
Method 1: Base-Catalyzed Condensation of 2-Methylbenzoates and 4-Methoxy-2H-pyrans-2-ones .......................... 561
Method 1: Acid-Catalyzed Rearrangement of 3-(1-Hydroxyalkyl)-3H-benzo[c]furans-1-ones ...................... 561
Method 1: Acid-Catalyzed Rearrangement of Dibenzo[b,f]azocine-6,12-diones .................. 562
Aromatization .............................................................................. 562
Method 1: Elimination of Hydrogen Bromide .................................. 562
Method 2: Other Eliminations .................................................. 564
Synthesis by Substituent Modification ......................................... 564
### 14.4.5.4.1 Substitution of Existing Substituents
- Of Carbon
- Method 1: Oxidation of 1-Benzylidene-1H-2-benzopyrans
- Method 1: Reaction of 4-Acyl-1H-2-benzopyran-1,3(4H)-diones with Hydrazine

### 14.4.6 Product Subclass 6: 1H-2-Benzopyran-1-thiones
- Synthesis by Substituent Modification
- Of Oxygen
- Method 1: Conversion of 1H-2-Benzopyran-1-ones into 1H-2-Benzopyran-1-thiones with Lawesson’s Reagent

### 14.4.7 Product Subclass 7: 3H-2-Benzopyran-3-ones
- Synthesis by Ring-Closure Reactions
- By Annulation to an Arene
- By Formation of One O–C Bond
- With Formation of the 2–3 Bond
- Method 1: Cyclization of 2-Substituted Arylacetic Acids
- Variation 1: Dehydration of (2-Acylphenyl)acetic Acids with Acetic Anhydride or Carbodiimides
- Variation 2: Cyclization of 9,10-Dioxo-9,10-dihydroanthracene-1-acetates
- Method 2: Photocyclization of a 2-(Diazoacetyl)benzoate
- Method 1: Intramolecular Friedel–Crafts Alkylation of 1-Naphthyl Acetates

### 14.4.8 Product Subclass 8: 6H-Dibenzo[b,d]pyran-6-ones
- Synthesis by Ring-Closure Reactions
- By Annulation to an Arene
- By Formation of One O–C and One C–C Bond
- With Formation of the 5–6 and 10a–10b Bonds
- Method 1: Reaction of 2-Bromobenzonitriles with Phenols and Phenyl Ethers
- By Formation of One O–C Bond
14.4.8.1.1.2.1  With Formation of the 4a–5 Bond ................................................. 573
14.4.8.1.1.2.1.1  Method 1: Cyclization of 2′-Nitrobi nenyl-2-carboxylic Acids ................. 573
14.4.8.1.1.2.1.2  Method 2: Oxidative Cyclization of Biphenyl-2-carboxylic Acid ........... 574
14.4.8.1.1.2.2  With Formation of the 5–6 Bond ...................................................... 574
14.4.8.1.1.2.2.1  Method 1: Cyclization of 2¢-Nitrobiphenyl-2-carboxylic Acids .............. 574
14.4.8.1.1.2.2.1.1  Variation 1: Oxidative Cyclization of Biphenyl-2-carboxylic Acid ....... 577
14.4.8.1.1.2.2.1.2  Variation 2: Lactonization of Hydroxy Esters ............................. 577
14.4.8.1.1.2.2.1.3  Variation 3: Lactonization of Hydroxy Amides ........................... 577
14.4.8.1.1.2.2.1.4  Variation 4: Lactonization of 2-(2′-Hydroxy-2-bisphenyl)-4,5-dihydrooxazoles ................................................................................................. 577
14.4.8.1.1.2.2.1.5  Variation 5: Reductive Lactonization of Naphthoquinones .......... 578
14.4.8.1.1.3  By Formation of One C—C Bond ............................................................ 579
14.4.8.1.1.3.1  With Formation of the 10a–10b Bond ................................................. 579
14.4.8.1.1.3.1.1  Method 1: Intramolecular Metal-Catalyzed Arylation ............................ 579
14.4.8.1.1.3.1.1.1  Variation 1: Palladium-Catalyzed Cyclization of 2-(Trifluoromethylsulfonyloxy)benzoates ........................................................................... 579
14.4.8.1.1.3.1.1.2  Variation 2: Palladium-Catalyzed Cyclization of 2-Bromobenzoates .... 580
14.4.8.1.1.3.1.1.3  Variation 3: Copper-Catalyzed Cyclization of 2-Bromobenzoates ...... 582
14.4.8.1.1.3.1.1.4  Variation 4: Palladium-Catalyzed Cyclization of 2-Iodobenzoates ..... 583
14.4.8.1.2  By Annulation to a Heterocycle ............................................................... 584
14.4.8.1.2.1  By Formation of Two C—C Bonds ......................................................... 584
14.4.8.1.2.1.1  With Formation of the 6a–7 and 10–10a Bonds ...................................... 584
14.4.8.1.2.1.1.1  Method 1: Base-Catalyzed Addition of 3-(Phenylsulfanyl)-benzo[c]furan-1(3H)-one to 2H-1-Benzopyran-2-one ............................................. 584
14.4.8.1.2.1.2  With Formation of the 7–8 and 9–10 Bonds ........................................... 584
14.4.8.1.2.1.2.1  Method 1: Condensation of 4-Methyl-2-oxo-2H-1-benzopyran-3-carbonitrile with Malononitrile and Aldehydes ...................................................... 584
14.4.8.1.2.2  By Formation of One C—C Bond ............................................................ 586
14.4.8.1.2.2.2  With Formation of the 7–8 Bond ........................................................... 586
14.4.8.1.2.2.3  With Formation of the 7–8 Bond ........................................................... 586
14.4.8.1.2.2.4  Method 1: Intramolecular Friedel–Crafts Reaction ................................ 586
14.4.8.2  Synthesis by Ring Transformation ............................................................... 586
14.4.8.2.1  Ring Enlargement ...................................................................................... 586
14.4.8.2.1.1  Method 1: Baeyer–Villiger Reaction of 9H-Fluoren-9-one ......................... 586
14.4.8.3  Aromatization ............................................................................................ 587
14.4.8.3.1  Method 1: Aromatization of 1,2,3,4-Tetrahydro-6H-dibenzo[b,d]pyran-6-ones with Palladium ............................................................... 587
14.4.8.3.2  Method 2: Aromatization of 1,2,3,4-Tetrahydro-6H-dibenzo[b,d]pyran-6-ones by Additional Methods ............................................................ 588
14.4.9  Product Subclass 9: 6H-Dibenzo[b,d]pyran-6-thiones .................................... 588
14.4.9.1  Synthesis by Substituent Modification ......................................................... 588
14.4.9.1.1 Substitution of Existing Substituents ........................................... 588
14.4.9.1.1.1 Of Oxygen ................................................................. 588
14.4.9.1.1.1.1 Method 1: Conversion of 6H-Dibenzo[b,d]pyran-6-ones into
  6H-Dibenzo[b,d]pyran-6-thiones with Lawesson’s Reagent .......... 588
14.4.9.1.2 Addition Reactions ............................................................. 588
14.4.9.1.2.1 Method 1: Oxidation of 6H-Dibenzo[b,d]pyran-6-thione .......... 589
14.4.10 Product Subclass 10: 9H-Xanthen-9-ones ....................................... 589
14.4.10.1 Synthesis by Ring-Closure Reactions ........................................... 590
14.4.10.1.1 By Annulation to an Arene ................................................. 590
14.4.10.1.1.1 By Formation of One O—C and One C—C Bond ...................... 590
14.4.10.1.1.1.1 With Formation of the 4a—10 and 9—9a, the 8a—9 and 10—10a,
  the 4a—10 and 8a—9, or the 9—9a and 10—10a Bonds ............... 590
14.4.10.1.1.1.1.1 Method 1: Condensation of Phenols and Naphthols with
  2-Hydroxybenzoates ............................................................... 590
14.4.10.1.1.1.1.1.1 Variation 1: Thermal Condensation of Phenols and Naphthols with
  2-Hydroxybenzoates ............................................................... 590
14.4.10.1.1.1.1.2 Variation 2: Lewis Acid Catalyzed Condensation of Phenols and
  Naphthols with 2-Hydroxybenzoic Acids .................................... 591
14.4.10.1.1.1.1.3 Variation 3: Friedel–Crafts Acylation of Dimethoxybenzenes with
  2-Alkoxybenzoic Halides with Concomitant Cyclization .......... 591
14.4.10.1.1.1.2 Method 2: Biaryl Ether Formation with Subsequent
  Intramolecular Friedel–Crafts Cyclization ............................... 593
14.4.10.1.1.1.2.1 Variation 1: O-Arylation Using 2-Halobenzoic Acids with Subsequent
  Acid-Mediated Cyclization ....................................................... 593
14.4.10.1.1.1.2.2 Variation 2: Rearrangement of Phenyl Benzoates with Subsequent
  Intramolecular Friedel–Crafts Cyclization ............................... 593
14.4.10.1.1.1.3 Method 3: Pyrolysis of Phenyl 2-Hydroxybenzoate ............ 594
14.4.10.1.1.2 By Formation of Two C—C Bonds ...................................... 595
14.4.10.1.1.2.1 With Formation of the 8a—9 and 9—9a Bonds ...................... 595
14.4.10.1.1.2.1.1 Method 1: Lithiation and Carboxylation of Diphenyl Ethers ....... 595
14.4.10.1.1.2.1.2 Method 2: Friedel–Crafts Reaction of Diphenyl Ethers .......... 596
14.4.10.1.1.3 By Formation of One O—C Bond ...................................... 596
14.4.10.1.1.3.1 With Formation of the 4a—10 or 10—10a Bonds .................... 596
14.4.10.1.1.3.1.1 Method 1: Ring Closure of 2,2'-Disubstituted Benzophenones .... 596
14.4.10.1.1.3.1.1.1 Variation 1: Base-Catalyzed Ring Closure of (2-Hydroxyphenyl)(2-halo- or
  2-methoxyphenyl)methanones ................................................. 596
14.4.10.1.1.3.1.1.2 Variation 2: Ring Closure of Bis(2-alkoxyphenyl)methanones .... 597
14.4.10.1.1.3.1.1.3 Variation 3: Ring Closure of Bis(2-hydroxyphenyl)methanones .... 598
14.4.10.1.1.3.1.2 Method 2: Base-Catalyzed Condensation of 2-Hydroxyphenyl
  Methyl Ketones and 2-(Methoxycarbonyl)phenylacetates ........... 599
14.4.10.1.1.4 By Formation of One C—C Bond ...................................... 599

Table of Contents XXXIII

Science of Synthesis Original Edition Volume 14
© Georg Thieme Verlag KG
14.4.10.1.1.1 With Formation of the 8a—9 or 9—9a Bonds ........................................... 599
14.4.10.1.1.1 Method 1: Intramolecular Friedel–Crafts Acylation .............................. 599
14.4.10.1.1.1.1 Variation 1: Polyphosphoric Acid Catalyzed Intramolecular
Friedel–Crafts Acylation of 2-Phenoxybenzoic Acids .............................. 599
14.4.10.1.1.1.2 Variation 2: Intramolecular Friedel–Crafts Acylation of 2-Phenoxybenzoic
Acids Catalyzed by Phosphorus Pentoxide/Methanesulfonic
Acid ........................................................................................................ 600
14.4.10.1.1.1.3 Variation 3: Sulfuric Acid Catalyzed Intramolecular Friedel–Crafts
Acylation of 2-Phenoxybenzoic Acids .................................................. 601
14.4.10.1.1.1.4 Variation 4: Nafion-H Resin-Catalyzed Intramolecular
Friedel–Crafts Acylation of 2-Phenoxybenzoic Acids .............................. 601
14.4.10.1.1.1.5 Variation 5: Intramolecular Friedel–Crafts Acylation via
Mixed Anhydride Formation .................................................................. 602
14.4.10.1.1.2 Method 2: Base-Catalyzed Cyclization of
N,N-Dialkyl-2-phenoxybenzamides .................................................. 602
14.4.10.1.1.3 Method 3: Copper(II)-Catalyzed Cyclization of 2-Phenoxybenzaldehydes 603
14.4.10.1.2 By Annulation to a Heterocycle ......................................................... 604
14.4.10.1.2.1 By Formation of Two C—C Bonds ............................................... 604
14.4.10.1.2.1.1 With Formation of the 1—9a and 4—4a Bonds ......................... 604
14.4.10.1.2.1.1.1 Method 1: CycloadDITION of 3-(Phenylsulfinyl)-4H-1-benzopyran-4-ones
and Danishefsky’s Diene .................................................................. 604
14.4.10.1.2.1.2 With Formation of the 2—3 and 4—4a Bonds ......................... 604
14.4.10.1.2.1.2.1 Method 1: CycloadDITION of 3,3-Dialkyl-3,4-dihydro-9H-xanthen-9-ones
with Dimethyl Acetylenedicarboxylate ........................................ 604
14.4.10.1.2.2 By Formation of One C—C Bond ............................................... 605
14.4.10.1.2.2.1 With Formation of the 1—9a Bond ........................................ 605
14.4.10.1.2.2.1.1 Method 1: Photochemical Rearrangement of
2-Styryl-4H-1-benzopyran-4-ones .................................................. 605
14.4.10.1.2.2.4 With Formation of the 3—4 or 5—6 Bonds ............................... 606
14.4.10.1.2.2.4.1 Method 1: Intramolecular Friedel–Crafts Reaction of
3-Benzyl-4-oxo-4H-1-benzopyran-2-carboxylic Acid ......................... 606
14.4.10.1.2.2.3 With Formation of the 4—4a Bond ........................................ 606
14.4.10.1.2.2.3.1 Method 1: Photochemical Cyclization of 3-(2-Methylbenzoyl)-
4H-1-benzopyran-4-one ................................................................. 606
14.4.10.2 Aromatization ..................................................................................... 607
14.4.10.2.1 Method 1: Oxidation of 1,2,3,4-Tetrahydro-9H-xanthen-9-ones
Using Quinones .................................................................................. 607
14.4.10.2.2 Method 2: Oxidation of 1,2,3,4-Tetrahydro-9H-xanthen-9-ones
Using Sulfur ....................................................................................... 607
14.4.10.2.3 Method 3: Oxidation of 1,2,3,4,4a,9a-Hexahydro-9H-xanthen-9-ones
Using Palladium on Charcoal .............................................................. 608
14.4.10.3 Synthesis by Substituent Modification ............................................... 609
14.4.10.3.1 Substitution of Existing Substituents
14.4.10.3.1.1 Of Hydrogen

14.4.10.3.1.1.1 Method 1: Oxidation of 9H-Xanthenes to 9H-Xanthen-9-ones
14.4.10.3.1.1.1.1 Variation 1: Oxidation with Manganese Reagents
14.4.10.3.1.1.1.2 Variation 2: Oxidation with Cerium Reagents

14.4.10.3.1.1.2 Method 1: Oxidation of 9H-Xanthenes to 9H-Xanthen-9-ones

14.4.10.3.1.1.3 Method 1: Conversion of 9-(Trimethylsilyl)-9H-Xanthene into 9H-Xanthene-9-thione S-Oxide
14.4.10.3.1.1.3.1 Variation 1: Direct Thionation of 9H-Xanthene-9-one with Lawesson’s Reagent
14.4.10.3.1.1.3.2 Variation 2: Indirect Thionation of 9H-Xanthen-9-ones via Imines
14.4.10.3.1.1.3.3 Variation 3: Synthesis of 9H-Xanthene-9-thiones from 9H-Xanthene-9-ones via 9,9-Dichloro-9H-xanthenes

14.4.11 Product Subclass 11: 9H-Xanthene-9-thiones
14.4.11.1 Synthesis by Ring-Closure Reactions
14.4.11.1.1 By Annulation to the Heterocyclic Ring
14.4.11.1.1.1 With Formation of the 1–9a and 4–4a Bonds
14.4.11.1.1.1.1 Method 1: Cycloaddition of 4-Thioxo-4H-1-benzopyran-3-carbonitriles and Buta-1,3-dienylamines

14.4.11.1.1.1.2 Method 2: Conversion of 9-(Trimethylsilyl)-9H-Xanthene into a 9H-Xanthene-9-thione S-Iminide
14.4.11.2 Synthesis by Substituent Modification
14.4.11.2.1 Substitution of Existing Substituents
14.4.11.2.1.1 Of Silicon
14.4.11.2.1.1.1 Method 1: Conversion of 9-Alkylidene-9H-xanthenes into 9H-Xanthene-9-thione
14.4.11.2.1.1.2 Method 2: Conversion of Bi-9H-xanthen-9-ylidene Sulfide into 9H-Xanthene-9-thione
14.4.11.2.1.2 Of Carbon
14.4.11.2.1.2.1 Method 1: Conversion of 9-Alkylidene-9H-xanthenes into 9H-Xanthene-9-thione
14.4.11.2.1.2.2 Method 2: Conversion of Bi-9H-xanthen-9-ylidene Sulfide into 9H-Xanthene-9-thione
14.4.11.2.1.3 Of Oxygen
14.4.11.2.1.3.1 Method 1: Conversion of 9H-Xanthen-9-ones into 9H-Xanthene-9-thiones
14.4.11.2.1.3.1.1 Variation 1: Direct Thionation of 9H-Xanthen-9-one with Lawesson’s Reagent
14.4.11.2.1.3.1.2 Variation 2: Indirect Thionation of 9H-Xanthen-9-ones via Imines
14.4.11.2.1.3.1.3 Variation 3: Synthesis of 9H-Xanthene-9-thiones from 9H-Xanthen-9-ones via 9,9-Dichloro-9H-xanthenes

14.4.11.2.2 Modification of Substituents
14.4.11.2.2.1 Cycloreversion
14.4.11.2.2.1.1 Method 1: Thermolysis of 4’,5’-Dimethyl-3’,6’-dihydrospiro[9H-xanthene-9,2’-2H-thiopyran]
### Product Class 5: 3-Oxidopyrylium Salts and Their Thio and Benzo-Fused Analogues

#### 14.5.1 Synthesis of Product Class 5

1. **Method 1:** By Condensation of an α,β-Unsaturated Ketone and an α-Acyloxy Ketone
2. **Method 2:** By Deacylation of 3-(Acyloxy)pyrylium or 3-(Acyloxy)thiopyrylium Salts
3. **Method 3:** By Oxidation of Thiopyran-3-ones
4. **Method 4:** By Oxidation of Thiabenzenes with Molecular Oxygen

#### 14.5.2 Applications of Product Class 5 in Organic Synthesis

1. **Method 1:** [3 + 2]-Cycloaddition Reactions of 3-Oxidopyrylium Salts
2. **Variation 1:** In Situ Generation of the 3-Oxidopyrylium Salt from a 6-(Acyloxy)-2H-pyran-3(6H)-one
3. **Variation 2:** In Situ Generation of the 3-Oxidopyrylium Salt from Methyl 2-(Diazoacetyl)benzoate
4. **Variation 3:** In Situ Generation of the 3-Oxidopyrylium Salt by Migration of a Silyl Group

### Product Class 6: Thiopyrylium Salts

#### 14.6.1 Synthesis by Ring-Closure Reactions

1. **Method 1:** By Formation of Two S–C and Two C–C Bonds
2. **Method 2:** By Formation of Two S–C Bonds and One C–C Bond
3. **Method 3:** By Formation of Two S–C Bonds
4. **Method 4:** By Formation of One S–C and One C–C Bond

#### 14.6.1.1 Method 1: Reaction of Methyl Ketones with Triethyl Orthoformate and Hydrogen Sulfide

#### 14.6.1.2 Method 2: Reaction of 3-Aryl-3-chloroprop-2-eniminium Salts with Cyanoacetic Acid Derivatives and Sulfur Transfer Reagents

#### 14.6.1.3 Method 3: Reaction of 1,5-Diketones with Sulfur Transfer Reagents

#### 14.6.1.4 Method 4: Reaction of 1,5-Diketones with Hydrogen Sulfide in the Presence of Phosphorus Pentasulfide

#### 14.6.1.5 Variation 1: With Phosphorus Pentasulfide

#### 14.6.1.6 Variation 2: With Hydrogen Sulfide in the Presence of Acid

#### 14.6.1.7 Variation 3: With Hydrogen Sulfide in the Presence of Hydride Acceptors

#### 14.6.1.8 Variation 4: With Hydrogen Sulfide in the Presence of a Lewis Acid

#### 14.6.1.9 Variation 5: From Unsaturated 1,5-Diketones with Hydrogen Sulfide

#### 14.6.1.10 Method 5: By Formation of One S–C and One C–C Bond

---

**Table of Contents**

14.5 Product Class 5: 3-Oxidopyrylium Salts and Their Thio and Benzo-Fused Analogues .......................... 639

14.5.1 Synthesis of Product Class 5 ........................................... 640
14.5.1.1 Method 1: By Condensation of an α,β-Unsaturated Ketone and an α-Acyloxy Ketone ......................... 640
14.5.1.2 Method 2: By Deacylation of 3-(Acyloxy)pyrylium or 3-(Acyloxy)thiopyrylium Salts .......................... 640
14.5.1.3 Method 3: By Oxidation of Thiopyran-3-ones ........................................... 641
14.5.1.4 Method 4: By Oxidation of Thiabenzenes with Molecular Oxygen ........................................... 641

14.5.2 Applications of Product Class 5 in Organic Synthesis ........................................... 642
14.5.2.1 Method 1: [3 + 2]-Cycloaddition Reactions of 3-Oxidopyrylium Salts ........................................... 642
14.5.2.1.1 Variation 1: In Situ Generation of the 3-Oxidopyrylium Salt from a 6-(Acyloxy)-2H-pyran-3(6H)-one ............. 643
14.5.2.1.2 Variation 2: In Situ Generation of the 3-Oxidopyrylium Salt from Methyl 2-(Diazoacetyl)benzoate ............... 644
14.5.2.1.3 Variation 3: In Situ Generation of the 3-Oxidopyrylium Salt by Migration of a Silyl Group ..................... 644

14.5.2.2 Method 2: Dimerization of 3-Oxidopyrylium and 3-Oxidothiopyrylium Salts by [3 + 3] Cycloaddition ............... 645

14.6 Product Class 6: Thiopyrylium Salts .......................................... 649

14.6.1 Synthesis by Ring-Closure Reactions .......................................... 652
14.6.1.1 Method 1: Reaction of Methyl Ketones with Triethyl Orthoformate and Hydrogen Sulfide ................. 652
14.6.1.2 Method 2: Reaction of 3-Aryl-3-chloroprop-2-eniminium Salts with Cyanoacetic Acid Derivatives and Sulfur Transfer Reagents .................................. 653

14.6.1.3 Method 3: By Formation of Two S–C Bonds .......................................... 655
14.6.1.3.1 Method 1: Reaction of 1,5-Diketones with Sulfur Transfer Reagents .......................................... 655
14.6.1.3.2 Variation 1: With Phosphorus Pentasulfide .......................................... 656

14.6.1.3.3 Variation 2: With Hydrogen Sulfide in the Presence of Acid .......................................... 657
14.6.1.3.4 Variation 3: With Hydrogen Sulfide in the Presence of Hydride Acceptors .......................................... 659
14.6.1.3.5 Variation 4: With Hydrogen Sulfide in the Presence of a Lewis Acid .......................................... 659

14.6.1.3.6 Variation 5: From Unsaturated 1,5-Diketones with Hydrogen Sulfide .......................................... 660
14.6.1.4 Method 5: By Formation of One S–C and One C–C Bond .......................................... 661
14.6.1.1 Method 1: Condensation of 3-Aminoprop-2-enethiones and
Cyanoacetic Acid Derivatives ........................................ 661
14.6.1.2 Method 2: Reaction of 3-Aminoprop-2-enethiones with
N-(1-Chloroalkylidine)formamidinium Perchlorates .......... 661
14.6.1.3 Method 3: Reaction of Thiophene-2- or Thiophene-3-thiols with
1,3-Diketones .......................................................... 662
14.6.1.4 Method 4: Reaction of 1,3-Dihydro-2H-indole-2-thiones with
1,3-Diketones .......................................................... 662
14.6.1.5 Method 5: Reaction of 3-Aryl-3-chloroprop-2-eniminium Salts with
Thioacetamides .......................................................... 663
14.6.1.6 Method 6: Reaction of Buta-1,3-dienes with Thiophosgene .... 663
14.6.1.5.1 Method 1: Reaction of Bis-hetaryl Sulfides with
Dichloromethyl Methyl Ether ........................................ 664
14.6.1.6 By Formation of One S–C Bond ........................................ 665
14.6.1.6.1 Method 1: Reaction of 6-Sulfanylhexa-3,5-dien-2-ones in the Presence of
Phosphoryl Chloride .................................................. 665
14.6.1.6.2 Method 2: Reaction of 5-(Dimethylamino)penta-2,4-dienethioamides
with Perchloric Acid .................................................. 665
14.6.2 Synthesis by Ring Transformation ........................................ 666
14.6.2.1 Ring Enlargement .................................................. 666
14.6.2.1.1 Method 1: Rearrangement of a 2-Thiabicyclo[3.1.0]hex-3-ene .... 666
14.6.2.2 Formal Exchange of Ring Members with Retention of Ring Size .... 667
14.6.2.2.1 Method 1: From Pyrylium Salts ........................................ 667
14.6.2.2.2 Method 2: From 4H-Pyrans ........................................ 671
14.6.3 Aromatization .......................................................... 671
14.6.3.1 By Elimination .................................................. 671
14.6.3.1.1 Method 1: Dehydration–Hydride Abstraction of Fused Dihydro-
thiopyranols or Tetrahydrothiopyranols ......................... 671
14.6.3.1.2 Method 2: Reaction of 4H-Thiopyran-4-ones with Grignard Reagents and
Subsequent Elimination ............................................... 674
14.6.3.1.3 Method 3: Reduction of Thiopyranones with Hydrides and
Subsequent Elimination ............................................... 677
14.6.3.1.4 Method 4: Reformatsky Reaction of 4H-Thiopyran-4-ones .......... 678
14.6.3.1.5 Method 5: Reaction of Tetrahydro-4H-thiopyran-4-ones with
Grignard Reagents and Subsequent Dehydration–Dehydro-
genation .............................................................. 679
14.6.3.1.6 Method 6: Reaction of 2H-Thiopyran-2-thiones with Peroxyacetic Acid .... 680
14.6.3.2 By Dehydrogenation ............................................. 680
14.6.3.2.1 Method 1: Dehydrogenation of Dihydrothiopyranones ................ 681
14.6.3.2.2 Method 2: Dehydrogenation of Fused Hydrothiopyrans ............ 681
14.6.3.2.3 Method 3: Dehydrogenation of 2H-Thiopyrans .................... 682

Product Class 7: Benzothiopyrylium Salts
W.-D. Rudorf

Product Subclass 1: 1-Benzothiopyrylium Salts

Synthesis by Ring-Closure Reactions

By Annulation to an Arene

By Formation of One S—C and One C—C Bond

Method 1: Cyclization of Benzenethiols with 1,3-Diketones
Method 2: Cyclization of Benzenethiols with Alkynals
Method 3: Cyclization of Benzenethiols with Haloalkenones
Method 4: Condensation of Benzenethiols with (2Z)-2-(Hydroxymethylene)cyclohexanones

By Formation of Two C—C Bonds

Method 1: Reaction of Diarylsulfanes with 1,1-Dichlorodimethyl Ether
Method 2: Intramolecular Condensation of (Arylsulfanyl)ketones and Subsequent Intermolecular Disproportionation
Method 2: Intramolecular Condensation of (Arylsulfanyl)ketones in the Presence of Trityl Chloride/Perchloric Acid

Aromatization

By Elimination

Method 1: From 2H-1-Benzothiopyrans
Method 2: From 4H-1-Benzothiopyrans
Method 3: From 4-Hydroxy-3,4-dihydro-2H-1-benzothiopyran S-Oxides
Method 4: From 1-Benzothiopyran-4(4H)-ones with Phosphoryl Chloride
Method 5: From 2-Hydroxy-2H-1-benzothiopyrans
Method 6: From 4-Hydroxy-4H-1-benzothiopyrans
Method 7: From 4-Hydroxy-3,4-dihydro-2H-1-benzothiopyrans

By Dehydrogenation

Method 1: From 2H-1-Benzothiopyrans
Method 2: From 4H-1-Benzothiopyrans
Method 3: From 3,4-Dihydro-2H-1-benzothiopyrans

By Reduction or Grignard Addition and Dehydration

Method 1: Grignard Addition and Dehydration of 1-Benzothiopyran-4(4H)-ones
Method 2: Reduction–Dehydration of 1-Benzothiopyran-4(4H)-ones
Method 1: From 1-Benzothiopyran-2(2H)- or 1-Benzothiopyran-4(4H)-ones

By Oxidation
14.7.1.2.5.1 Method 1: From 4-Alkylidene-4H-1-benzothiopyrans
14.7.1.3 Synthesis by Substituent Modification
14.7.1.3.1 Of Hydrogen
14.7.1.3.1.1 Method 1: Reaction with 1-Benzothiopyrylium Perchlorate
14.7.1.3.1.2 Method 2: Reaction with N,N-Dialkylanilines
14.7.1.3.1.3 Method 3: Oxidative Addition of Malonic Acid
14.7.1.3.2 Substitution of Heteroatoms
14.7.1.3.2.1 Method 1: Replacement of Halogen by Amines
14.7.2 Product Subclass 2: 2-Benzothiopyrylium Salts
14.7.2.1 Synthesis by Ring Transformation
14.7.2.1.1 By Formal Exchange of Ring Members with Retention of Ring Size
14.7.2.1.1.1 Method 1: Synthesis from Condensed Benzopyrylium Salts
14.7.2.2 Aromatization
14.7.2.2.1 By Elimination
14.7.2.2.1.1 Method 1: From 4-Hydroxy-3,4-dihydro-1H-2-benzothiopyrans
14.7.2.2.1.2 Method 2: Reaction of 1-Methyl-3-phenyl-2-benzopyrylium Salt with 1H-2-Benzothiopyran-1-thione
14.7.2.2.2 By Dehydrogenation
14.7.2.2.2.1 Method 1: From 1H-2-Benzothiopyrans
14.7.2.2.3 By Hydrolysis and Decarboxylation
14.7.2.2.3.1 Method 1: Cleavage of 1-(2,2-Dimethyl-4,6-dioxo-1,3-dioxan-5-ylidene)-3-phenyl-1H-2-benzothiopyran
14.7.2.2.4 By O-Functionalization
14.7.2.2.4.1 Method 1: Reaction of 1H-2-Benzothiopyran-4(3H)-ones with Triphenylcarbenium Perchlorate
14.7.3 Product Subclass 3: Dibenzo[b,d]thiopyrylium Salts
14.7.3.1 Aromatization
14.7.3.1.1 By Dehydrogenation
14.7.3.1.1.1 Method 1: From 6H-Dibenzo[b,d]thiopyrans with Sulfuryl Chloride/Perchloric Acid or Trifluoromethanesulfonic Acid
14.7.3.1.1.2 Method 2: From 6H-Dibenzo[b,d]thiopyrans with Triphenylcarbenium Perchlorate
14.7.3.1.2 By Elimination
14.7.3.1.2.1 Method 1: From 6H-Dibenzo[b,d]thiopyran 5-Oxides with Perchloric Acid
14.7.3.1.2.2 Method 2: From 6-Hydroxy-6H-dibenzo[b,d]thiopyrans with Perchloric Acid
14.7.4 Product Subclass 4: Dibenzo[b,e]thiopyrylium Salts
14.7.4.1 Synthesis by Ring-Closure Reactions
14.7.4.1 By Formation of Two S—C Bonds ............................................. 760
14.7.4.1.1 Method 1: From Diarylmethanes and Sulfur ................................. 760
14.7.4.1.2 By Formation of Two C—C Bonds ............................................. 760
14.7.4.1.2.1 Method 1: From Diarylsulfanes and 1,1-Dichlorodimethyl Ether ...... 760
14.7.4.1.2.2 Method 2: From Diarylsulfanes and an Acid Chloride .................. 761
14.7.4.2 Aromatization ............................................................................. 762
14.7.4.2.1 By Elimination ........................................................................... 762
14.7.4.2.2 By Dehydrogenation ................................................................. 764
14.7.4.2.2.1 Method 1: From 10-Hydroxy-10H-dibenzo[b,e]thiopyrans ............. 762
14.7.4.2.2.2 By Reduction or Grignard Addition and Dehydration ................. 765
14.7.4.2.3 By Reduction or Grignard Addition and Dehydration ..................... 765

14.8 Product Class 8: Thiopyranones and Thiopyranthiones
S. Faulkner, R. C. Whitehead, and R. J. Aarons

14.8 Product Class 8: Thiopyranones and Thiopyranthiones .......................... 771
14.8.1 Product Subclass 1: 2H-Thiopyran-2-ones ........................................ 771
14.8.1.1 Synthesis by Ring-Closure Reactions ............................................ 771
14.8.1.1.1 By Formation of One S—C and One C—C Bond ......................... 771
14.8.1.1.1.1 Method 1: Cyclization of Ester Enolates with Unsaturated Thiocarbonyl Compounds .................................................. 771
14.8.1.1.1.1.1 Variation 1: Using Acyclic Thiocarbonyl Compounds ................ 771
14.8.1.1.1.1.2 Variation 2: Using Cyclic Thiocarbonyl Compounds ............... 772
14.8.1.1.2 By Formation of One S—C Bond ............................................... 773
14.8.1.1.2.1 Method 1: Cyclization of 2,3,4,5-Tetrachloro-5-(methylsulfanyl)-penta-2,4-dienoyl Chloride ............................................ 773
14.8.1.2 Synthesis by Ring Transformation ................................................ 773
14.8.1.2.1 Method 1: Rearrangement of 2H-Pyran-2-thiones .......................... 773
14.8.1.2.1.1 Variation 1: Thermal Rearrangement by Reversible Electroyclic Ring Opening .................................................. 773
14.8.1.2.1.2 Variation 2: Hydrolytic Ring Opening Followed by Ring Closure .... 774
14.8.1.3 Synthesis by Substituent Modification .......................................... 775
14.8.1.3.1 Method 1: Transchalcogenation of 2H-Thiopyran-2-thiones ............. 775
14.8.1.3.1.1 Variation 1: Lewis-Acid Mediated Hydrolysis ............................ 775
14.8.1.3.1.2 Variation 2: Oxidation Using the Nitronium Ion .......................... 775
14.8.2 Product Subclass 2: 2H-Thiopyran-2-thiones .................................... 776
14.8.2.1 Synthesis by Ring-Closure Reactions ........................................... 776
14.8.2.1.1 By Formation of One S—C and Two C—C bonds ........................................ 776
14.8.2.1.1.1 Method 1: Reaction of Enamines with Carbon Disulfide ........................ 776
14.8.3 Product Subclass 3: 4H-Thiopyran-4-ones ......................................................... 776
14.8.3.1 Synthesis by Ring-Closure Reactions ............................................................. 777
14.8.3.1.1 By Formation of One S—C and Two C—C Bonds ....................................... 777
14.8.3.1.1.1 Method 1: Cyclization of Ketones with Thiocarbonyl Compounds ............. 777
14.8.3.1.1.1.1 Variation 1: Base-Mediated Cyclization with Carbon Disulfide ............... 777
14.8.3.1.1.1.2 Variation 2: Sequential Thio-Claisen Reactions ..................................... 778
14.8.3.1.1.1.3 Variation 3: Reaction of 2-Acylketene Dithioacetals with Aryl Isothiocyanates ...................................................... 778
14.8.3.1.2 By Formation of Two S—C Bonds ............................................................... 779
14.8.3.1.2.1 Method 1: Addition of Hydrogen Sulfide, or its Equivalent, to Dialkynyl Ketones ................................................................................................................. 779
14.8.3.1.2.1.1 Variation 1: Addition of Hydrogen Sulfide in Ethanol ......................... 780
14.8.3.1.2.1.2 Variation 2: Addition of Thioureas ......................................................... 780
14.8.3.1.2.1.3 Variation 3: Addition of Hydrogen Sulfide under Basic Conditions ....... 781
14.8.3.2 Aromatization .................................................................................................. 781
14.8.3.2.1 Method 1: Dehydrogenation of Tetrahydrothiopyran-4-ones .................... 781
14.8.3.2.1.1 Variation 1: With Phosphorus Pentachloride ............................................. 781
14.8.3.2.1.2 Variation 2: With 2,3-Dichloro-5,6-dicyanobenzo-1,4-quinone ............... 782
14.8.3.2.1.3 Variation 3: Dehydrogenation via an Intermediate Dihydrothiopyran-4-one ................................................................................................................................. 783
14.8.3.3 Synthesis by Substituent Modification ............................................................ 784
14.8.3.3.1 Method 1: Transchalcogenation of 4H-Thiopyran-4-thiones ..................... 784
14.8.4 Product Subclass 4: 4H-Thiopyran-4-thiones ....................................................... 784
14.8.4.1 Synthesis by Substituent Modification ............................................................ 784
14.8.4.1.1 Method 1: Transchalcogenation of Thiopyran-4-thiones ............................ 784
14.8.5 Product Subclass 5: 3-Hydroxythiopyrylium Salts .............................................. 785
14.8.5.1 Aromatization .................................................................................................. 785
14.8.5.1.1 Method 1: Hydride Abstraction from Dihydrothiopyran-3-ones ............... 785

14.9 Product Class 9: Benzothiopyranones and Benzothiopyranthiones
A. Nelson

14.9 Product Class 9: Benzothiopyranones and Benzothiopyranthiones ............ 787
14.9.1 Product Subclass 1: 2H-1-Benzothiopyran-2-ones and 2H-1-Benzothiopyran-2-thiones ................................................................................................................................. 787
14.9.1.1 Synthesis by Ring-Closure Reactions ............................................................. 788
14.9.1.1.1 By Formation of One Heteroatom—Carbon and One C—C Bond ............... 788
14.9.1.1.1 Method 1: Synthesis of 4-Hydroxy-2H-1-benzothiopyran-2-ones by Condensation of Benzenethiols with Malonic Acid Derivatives 788
14.9.1.1.2 Method 2: Synthesis of 4-Hydroxy-2H-1-benzothiopyran-2-ones by Claisen Condensation of a 2-Sulfanylbenzoate Ester with an Acetate Ester 788
14.9.1.1.3 Method 3: Synthesis of 4-Hydroxy-2H-1-benzothiopyran-2-thiones by Condensation of 2-Chlorophenyl Ketones with Carbon Disulfide 789

14.9.1.2 By Formation of One Heteroatom—Carbon Bond 790
14.9.1.2.1 Method 1: Cyclization of 3-(2-Sulfanylphenyl)prop-2-enoate Esters and Related Compounds 790
14.9.1.2.1.1 Variation 1: Cyclization of 3-(2-Sulfanylphenyl)prop-2-enoic Acids 790
14.9.1.2.1.2 Variation 2: Cyclization of 3-[2-(tert-Butylsulfanyl)phenyl]prop-2-enitriles and Related Compounds 790

14.9.1.3 By Formation of One C—C Bond 791
14.9.1.3.1 Method 1: Cyclization of Substituted S-Aryl Prop-2-enethioate Esters 791
14.9.1.3.1.1 Variation 1: Cyclization of an S-Aryl 3-Phenylprop-2-enethioate Ester 791
14.9.1.3.1.2 Variation 2: Cyclization of an S-Aryl 3-Methoxyprop-2-enethioate Ester 792
14.9.1.3.2 Method 2: Cyclization of an S-Aryl β-Oxo Thioate Ester 792
14.9.1.3.3 Method 3: Intramolecular Aldol Reactions 793
14.9.1.3.4 Method 4: Synthesis of 2H-1-Benzothiopyran-2-thiones by Rearrangement of Allyl Phenyl Sulfoxide and Oxidation 794

14.9.1.4 Aromatization 794
14.9.1.4.1 Method 1: Oxidation of a 3,4-Dihydro-2H-1-benzothiopyran-2-one 794

14.9.1.5 Synthesis by Substituent Modification 795
14.9.1.5.1 Modification of Heteroatoms 795
14.9.1.5.1.1 Method 1: Synthesis of 2H-1-Benzothiopyran-2-thiones by Reaction of 2H-1-Benzothiopyran-2-ones with Phosphorus Pentasulfide 795

14.9.2 Product Subclass 2: 4H-1-Benzothiopyran-4-ones and 4H-1-Benzothiopyran-4-thiones 795

14.9.2.1 Synthesis by Ring-Closure Reactions 796

14.9.2.2 By Formation of One Heteroatom—Carbon and Two C—C Bonds 796
14.9.2.2.1 Method 1: Coupling of 2-Iodobenzenethiol, an Allene, and Carbon Monoxide 796
14.9.2.2.2 By Formation of One Heteroatom—Carbon and One C—C Bond 797
14.9.2.2.2.1 Method 1: Condensation of a Benzenethiol Derivative with a β-Oxo Ester 797
14.9.2.2.2.2 Method 2: Condensation of a 2-Sulfanylbenzoic Acid with a β-Diketone 798
14.9.2.2.2.3 Method 3: Condensation of a 2-Sulfanylbenzoate Ester with a Penta-2,3-dienedioate 798
14.9.2.2.3 By Formation of Two C—C Bonds 799
14.9.2.2.3.1 Method 1: Reaction of Phosphorus Ylides with a 2-(Benzoylsulfanyl)benzoate Derivative 799
14.9.2.1.4 By Formation of One Heteroatom—Carbon Bond ........................................ 800
14.9.2.1.4.1 Method 1: Cyclization of 2-(Methylsulfanyl)phenyl Alkynyl Ketones .......... 800
14.9.2.1.4.2 Method 2: Cyclization of an 2-[2-(Acetylsulfanyl)benzoyl]-3-oxobutanoate ........................................ 800
14.9.2.1.5 By Formation of One C—C Bond .......................................................... 801
14.9.2.1.5.1 Method 1: Base-Catalyzed Cyclization of S-(2-Acetylsulfanyl)Dialkylthiocarbamate Esters ........................................ 801
14.9.2.2 Synthesis by Ring Transformation ............................................................. 801
14.9.2.2.1 Method 1: Tautomerization of a 4-Hydroxy-2H-1-benzothiopyran-2-thione ........................................ 801
14.9.2.3 Aromatization ......................................................................................... 802
14.9.2.3.1 Method 1: Oxidation of a 2,3-Dihydro-4H-1-benzothiopyran-4-one ................. 802
14.9.2.4 Synthesis by Substituent Modification ..................................................... 802
14.9.2.4.1 Method 1: Aldol Reaction and Isomerization ........................................... 802
14.9.2.4.2 Method 2: Synthesis of 4H-1-Benzothiopyran-4-thiones by Reaction of 4H-1-Benzothiopyran-4-ones with Phosphorus Pentasulfide ........................................ 803
14.9.3 Product Subclass 3: 1H-2-Benzothiopyran-1-ones and 1H-2-Benzothiopyran-1-thiones ........................................................................................................... 803
14.9.3.1 Synthesis by Ring-Closure Reactions ......................................................... 804
14.9.3.1.1 By Formation of One Heteroatom—Carbon and Two C—C Bonds ............... 804
14.9.3.1.1.1 Method 1: From 2-Chlorobenzoic Acid Derivatives by Halogen–Metal Exchange and Reaction with Carbon Disulfide and Iodomethane ........................................ 804
14.9.3.1.2 By Formation of One Heteroatom—Carbon and One C—C Bond ................. 805
14.9.3.1.2.1 Method 1: From N,N-Diethyl-2-methylbenzamide by Lithiation and Reaction with an O-Alkyl Benzenecarbothioate ........................................ 805
14.9.3.1.3 By Formation of One Heteroatom—Carbon Bond ..................................... 805
14.9.3.1.3.1 Method 1: By Hydrolysis and Cyclization of a Rhodanine Derivative .......... 805
14.9.3.2 Aromatization ......................................................................................... 806
14.9.3.2.1 Method 1: From 4-Bromo-3,4-dihydro-1H-2-benzothiopyran-1-ones by Elimination ........................................ 806
14.9.4 Product Subclass 4: 6H-Dibenzo[b,d]thiopyran-6-ones and 6H-Dibenzo[b,d]thiopyran-6-thiones ........................................................................................................... 807
14.9.4.1 Synthesis by Ring-Closure Reactions ......................................................... 807
14.9.4.1.1 By Formation of One Heteroatom—Carbon and One C—C Bond ............... 807
14.9.4.1.1.1 Method 1: Synthesis of 6H-Dibenzo[b,d]thiopyran-6-ones from Dibenzo[b,d]thiophene by Reductive Cleavage, Condensation with Carbon Dioxide, and Cyclization ........................................ 807
14.9.4.1.2 By Formation of One Heteroatom—Carbon Bond ..................................... 807
14.9.4.1.2.1 Method 1: Synthesis of 6H-Dibenzo[b,d]thiopyran-6-ones by Intramolecular Acylation ............................................. 807
14.9.4.1.3 By Formation of One C—C Bond ................................................................. 808
14.9.4.1.3.1 Method 1: Synthesis of 6H-Dibenzo[b,d]thiopyran-6-thiones by Intramolecular Friedel–Crafts Reaction of a Chlorido-dithiocarbonate ................................................................. 808
14.9.5 Product Subclass 5: 10H-Dibenzo[b,e]thiopyran-10-ones and 10H-Dibenzo[b,e]thiopyran-10-thiones ...................................................... 808
14.9.5.1 Synthesis by Ring-Closure Reactions .............................................................. 809
14.9.5.1.1 By Formation of Two Heteroatom—Carbon Bonds ...................................... 809
14.9.5.1.1.1 Method 1: From Diaryl Ketones by Reaction with Methanethiol Under Basic Conditions ......................................................... 809
14.9.5.1.2 By Formation of One Heteroatom—Carbon and One C—C Bond .................. 810
14.9.5.1.2.1 Method 1: Condensation of a 2-Sulfanylbenzoic Acid with an Arene .......... 810
14.9.5.1.2.2 Method 2: Condensation of a 2-Sulfanylbenzoate Derivative with a Benzyne ................................................................. 810
14.9.5.1.3 By Formation of Two C—C Bonds ................................................................. 811
14.9.5.1.3.1 Method 1: Diels–Alder Reactions of 3-Vinyl-4H-1-benzothiopyran-4-ones 811
14.9.5.1.4 By Formation of One C—C Bond ................................................................ 812
14.9.5.1.4.1 Method 1: Cyclization of 2-(Arylsulfanyl)benzoic Acids ......................... 812
14.9.5.2 Aromatization ................................................................................................. 812
14.9.5.2.1 Method 1: Oxidation of a 10H-Dibenzo[b,e]thiopyran .................................. 812
14.9.5.3 Synthesis by Substituent Modification ............................................................. 813
14.9.5.3.1 Modification of Heteroatoms ................................................................... 813
14.9.5.3.1.1 Method 1: Conversion of 10H-Dibenzo[b,e]thiopyran-10-ones into 10H-Dibenzo[b,e]thiopyran-10-thiones ......................................................... 813

14.10 Product Class 10: Selenopyrylium and Benzoselenopyrylium Salts
P. J. Murphy

14.10 Product Class 10: Selenopyrylium and Benzoselenopyrylium Salts ........................ 817
14.10.1 Product Subclass 1: Selenopyrylium Salts ......................................................... 818
14.10.1.1 Synthesis by Ring-Closure Reactions .............................................................. 818
14.10.1.1.1 By Formation of Two Heteroatom—Carbon Bonds .................................. 818
14.10.1.1.1.1 Method 1: By Reaction of 1,5-Diketones with Hydrogen Selenide ............ 818
14.10.1.1.2 Method 2: By Reaction of 5-Chloropenta-2,4-dienenitriles with Sodium Hydrogen Selenide ................................................................. 820
14.10.1.1.2 Method 2: By Formation of One Heteroatom—Carbon and One C—C Bond 820
14.10.1.2 Method 1: From 2-Aminovinyl Selenoketones and Active Methylene Compounds ........................................ 820
14.10.1.2 Aromatization .................................................................................................................. 820
14.10.1.2.1 Method 1: By Aromatization of Selenopyrans ....................................................... 820
14.10.1.2.2 Method 2: By Dehydration of 4-Hydroxyselepyrans ............................................. 823
14.10.1.3 Synthesis by Substituent Modification ...................................................................... 824
14.10.1.3.1 Substitution of Existing Substituents ................................................................. 825
14.10.1.3.2 Modification of Substituents .................................................................................. 825
14.10.1.3.2.1 Of Carbon Functionalities ................................................................................. 825
14.10.1.3.2.1.1 Method 1: By Protonation of 4-Methylene-4-H-selenopyrans ....................... 825
14.10.1.3.2.1.2 Method 2: From 4-Methylene-4-H-selenopyrans by Modification of Remote Functions .......................................................... 826
14.10.1.3.2.1.3 Method 3: Condensation of 2- and 4-Alkylselepyrylium Salts with Carbonyl Compounds .................................................. 826
14.10.1.3.2.1.4 Method 4: Condensation of 4-Alkylselepyrylium Salts with Ethyl N-Phenylformimidate .................................................. 833
14.10.1.3.2.2 Of Oxygen Functionalities .................................................................................. 835
14.10.1.3.2.2.1 Method 1: By Condensation of Selenopyran-4-ones with 4-Methyl-2,6-diorganotelluropyrylium Salts .................. 835
14.10.1.3.2.2.2 Method 2: By Chlorination of Selenopyran-4-ones Using Oxalyl Chloride 835
14.10.1.4 Miscellaneous Reactions ......................................................................................... 836
14.10.2 Product Subclass 2: Benzo- and Dibenzo-Selepyrylium Salts ........................................ 836
14.10.2.1 Synthesis by Ring-Closure Reactions ........................................................................ 836
14.10.2.1.1 By Formation of Two Heteroatom—Carbon Bonds ............................................ 836
14.10.2.1.1.1 Method 1: From N,N,N’,N’-Tetramethyl-4,4’-methyleneedianiline and Selenious Acid .................................................. 836
14.10.2.1.2 By Formation of One Heteroatom—Carbon Bond .............................................. 836
14.10.2.1.2.1 Method 1: From Bis-selenocyanates ................................................................... 836
14.10.2.2 Aromatization ....................................................................................................... 837
14.10.2.2.1 Method 1: By Aromatization of Benzo- and Dibenzo-Selepyrylium Salts ........ 837
14.10.2.2.2 Method 2: By Decarbonylation or Decarboxylation of Dibenzo-Selepyrylium Salts .................................................. 840
14.10.2.2.3 Method 3: By Elimination of N-Methyltoluenesulfonamide from Arylsulfonylselenimines .................................................. 840
14.10.2.2.4 Method 4: By Dehydration of 4-Hydroxyselepyrylium Salts ................................ 841
14.10.2.3 Synthesis by Substituent Modification ...................................................................... 843
14.10.2.3.1 Substitution of Existing Substituents ................................................................. 843

14.10.2.3.1.2 Of Heteroatoms .......................................................... 844
14.10.2.3.2 Modification of Substituents .............................................. 844
14.10.2.3.2.1 Of Carbon Functionalities ............................................. 844
14.10.2.3.2.1.1 Method 1: By Condensation of 4-Alkyl-1-benzoselenopyrylium and 10-Alkyl dibenzoselenopyrylium Salts with Aldehydes 844
14.10.2.3.2.1.2 Method 2: By Condensation of 4-Alkyl-1-benzo- and 10-Alkyl dibeno[b,e]selenopyrylium Salts with Formamides 847
14.10.2.3.2.1.3 Method 3: By Condensation of 4-Alkyl-1-benzoselenopyrylium Salts with Ethyl N-Phenylformimidate 848
14.10.2.3.2.1.4 Method 4: By Condensation of 4-Alkyl-1-benzoselenopyrylium Salts with Thiazolium Betaines 849
14.10.2.3.2.1.5 Method 5: By Condensation of 10H-Dibenzo[b,e]selenopyran-10-ylidene- acetaldehyde with Active Methyl Compounds 849
14.10.2.3.2.2 Of Oxygen Functionalities .............................................. 850
14.10.2.3.2.2.1 Method 1: By Methylation of Selenopyran-4-ones 850
14.10.2.3.2.2.2 Of Oxygen Functionalities .............................................. 850
14.11 Product Class 11: Selenopyranones and Benzoselenopyranones

14.11.1 Product Subclass 1: 2H-Selenopyran-2-ones and 4H-Selenopyran-4-ones

14.11.1.1 Synthesis by Ring-Closure Reactions ......................................... 856
14.11.1.1.1 Method 1: 4H-Selenopyran-4-ones by Addition of Dibasic Selenide to Diethynyl Ketones 856
14.11.1.1.2 By Formation of One Se—C and One C—C Bond 858
14.11.1.1.2.1 Method 1: 2H-Selenopyran-2-ones from 2-Aminovinyl Selenoketones 858
14.11.1.2 Synthesis by Substituent Modification ....................................... 858
14.11.1.2.1 Substitution of Existing Substituents .................................. 858
14.11.1.2.1.1 Of Hydrogen ................................................................. 858
14.11.1.2.1.1.1 Method 1: Lithiation of 4H-Selenopyran-4-ones 858
14.11.1.2.1.1.2 Method 2: 4H-Selenopyran-4-ones by Oxidation of 4H-Selenopyrans 859
14.11.1.2.1.1.3 Method 3: 4H-Selenopyran-4-ones by Oxidation of 1-Methyl-1\(\alpha^4\)-selenopyrans 859
14.11.1.2.1.2 Of Metals ................................................................. 860
14.11.1.2.1.2.1 Of Lithium ................................................................. 860
14.11.1.2.1.2.1.1 Method 1: Reaction of (2,6-Di-tert-butyl-4-oxo-4H-selenopyran-3-yl)- lithium with Electrophiles 860
14.11.1.2.1.3 Of Carbon Functionalities ............................................. 860
14.11.2.1.3.1 Method 1: 4H-Selenopyran-4-ones by Oxidation of 4-Methylene-4H-selenopyrans ............................. 860
14.11.2.1.2 Method 1: 4H-Selenopyran-4-thiones from 4H-Selenopyran-4-ones ................................. 861
14.11.2 Product Subclass 2: Benzo- and Dibenzoselenopyranones ........................................ 862
14.11.2.1 Synthesis by Ring-Closure Reactions .................................................................................. 862
14.11.2.1.1 By Annulation to an Arene ......................................................................................... 862
14.11.2.1.1.1 Method 1: By Reaction of 2-Bromophenyl Ethynyl Ketones with Sodium Hydrogen Selenide ................................................................. 862
14.11.2.1.1.2 By Formation of One Se—C Bond ........................................................................... 863
14.11.2.1.1.2.1 Method 1: By the Simonis Reaction ...................................................................... 863
14.11.2.1.1.2.2 Method 2: From 2-(Chloroselanyl)benzoyl Chloride via Electrophilic Aromatic Substitution ......................................................... 863
14.11.2.1.1.2.3 Method 3: By Reaction of Se-Lithiated Selenosalicylamide Derivatives with Benzyne ................................................................. 864
14.11.2.1.1.2.4 Method 4: By Photochemical Rearrangement of Aryl Selenoesters ........................... 865
14.11.2.1.1.3 By Formation of One Se—C Bond ........................................................................... 865
14.11.2.1.1.3.1 Method 1: By Cyclization of Ethynyl 2-(Methylselanyl)phenyl Ketones ...................... 865
14.11.2.1.1.3.2 Method 2: By Cyclization of Phenyl Selenocinnamates ........................................ 866
14.11.2.1.1.3.3 Method 3: By Electrophilic Cyclization of Methyl Selenides .................................. 866
14.11.2.1.1.3.4 Method 4: By Selenolactonization ...................................................................... 868
14.11.2.1.1.4 By Formation of One C—C Bond ........................................................................... 868
14.11.2.1.1.4.1 Method 1: By Aromatic Electrophilic Substitution ................................................... 868
14.11.2.2 Synthesis by Ring Transformation .................................................................................. 872
14.11.2.2.1 Method 1: By Rearrangement of Substituted Benzo[b]selenophen-3(2H)-ones ......... 872
14.11.2.2.3 Aromatization ............................................................................................................. 872
14.11.2.3.1 Method 1: By Dehydrogenation of 2,3-Dihydro-4H-1-benzoselenopyran-4-ones .......... 872
14.11.2.3.2 Method 2: Oxidation of Benzoselenopyrans .................................................................. 873
14.11.2.4 Synthesis by Substituent Modification ........................................................................... 873
14.11.2.4.1 Substitution of Existing Substituents ....................................................................... 873
14.11.2.4.1.1 Of Hydrogen ......................................................................................................... 874
14.11.2.4.1.1.1 Method 1: Lithiation of 4H-1-Benzoselenopyran-4-ones ........................................ 874
14.11.2.4.1.1.2 Method 2: Electrophilic Alkylation of 4-Hydroxy-2H-1-benzoselenopyran-2-one .... 874
14.11.2.4.1.1.3 Method 3: Oxidation of Dibenzoselenopyrylium Salts ........................................ 875
14.11.2.4.1.2 Of Carbon Functionalities ..................................................................................... 875
14.11.2.4.1.2.1 Method 1: Decarboxylation .................................................................................. 875
14.11.2.4.1.3 Of Oxygen ............................................................... 875
14.11.2.4.1.3.1 Method 1: Preparation of a 10H-Dibenzo[b,e]selenopyran-10-one Ylide 875
14.11.2.4.2 Addition Reactions .................................................. 876
14.11.2.4.2.1 Method 1: Oxidation of the Selenium Atom .................... 876
14.11.2.4.2.2 Method 2: Addition of Dihalogen to the Selenium Atom ........... 876
14.11.2.4.3 Modification of Substituents ........................................ 876
14.11.2.4.3.1 Method 1: Preparation of Benzo- and Dibenzoselenopyranthiones 877
14.11.2.4.3.2 Method 2: By Condensation of 2-Methyl-4H-1-benzoselenopyran-4-one with a Thiazolium Betaine 877

14.12 Product Class 12: Telluropyrylium and Benzotelluropyrylium Salts
P. J. Murphy

14.12.1 Product Class 12: Telluropyrylium and Benzotelluropyrylium Salts ...... 881
14.12.1.1 Aromatization ............................................................. 882
14.12.1.1.1 Method 1: By Aromatization of Telluropyrans ....................... 882
14.12.1.1.2 Method 2: By Dehydration of Telluropyran-4-ols ................. 882
14.12.1.2 Synthesis by Substituent Modification .................................. 884
14.12.1.2.1 By Modification of Carbon Functionalities .......................... 884
14.12.1.2.1.1 Method 1: By Isomerization of 4-Methylenetelluropyrans ........ 884
14.12.1.2.1.2 Method 2: By Hydrolysis of 4-Methylenetelluropyrans .......... 884
14.12.1.2.1.3 Method 3: By Condensation of 4-Alkyltelluropyrylium Salts with Carbonyl and Thiocarbonyl Compounds ....................... 885
14.12.1.2.1.4 Method 4: By Condensation of 4-(Formylmethylene)telluropyran with 4-Alkyl-2,6-diorganochalcogenopyrylium Salts .................. 888
14.12.1.2.2 By Modification of Oxygen Functionalities ........................... 889
14.12.1.2.2.1 Method 1: By Alkylation of 4H-Telluropyran-4-ones ............ 889
14.12.2 Product Subclass 2: Benzo- and Dibenzotelluropyrylium Salts ........ 890
14.12.2.1 Aromatization ............................................................. 890
14.12.2.1.1 Method 1: By Aromatization of Benzo- and Dibenzotelluropyrans .... 890
14.12.2.1.2 Method 2: By Dehydration of Benzotelluropyran-4-ols ........... 891
14.12.2.2 Synthesis by Substituent Modification .................................. 893
14.12.2.2.1 By Modification of Carbon Functionalities .......................... 893
14.12.2.2.1.1 Method 1: By Condensation of 2-Methylbenzotelluropyrylium Salts with Carbonyl Compounds .................................. 893
14.12.2.2.2 By Modification of Oxygen Functionalities ........................... 894
14.12.2.2.2.1 Method 1: By Alkylation of Benzotelluropyran-4-ones ............ 894
14.12.2.2.2.2 Method 2: By Reaction with Fluorides ............................. 894
14.13 Product Class 13: Telluropyranones and Benzotelluropyranones
P. J. Murphy

14.13.1 Product Subclass 1: 2H-Telluropyran-2-ones and 4H-Telluropyran-4-ones

14.13.1.1 Synthesis by Ring-Closure Reactions

14.13.1.1.1 By Formation of Two Te—C Bonds

14.13.1.1.1 Method 1: By Addition of Sodium/Lithium Telluride to Diethynyl Ketones

14.13.1.1.2 Synthesis by Substituent Modification

14.13.1.2.1 Substitution of Existing Substituents

14.13.1.2.1.1 Of Hydrogen

14.13.1.2.1.1 Method 1: Lithiation of 4H-Telluropyran-4-ones

14.13.1.2.1.2 Of Metals

14.13.1.2.1.2.1 Of Lithium

14.13.1.2.1.2.1 Method 1: Telluration of (2,6-Di-tert-butyl-4-oxo-4H-telluropyran-3-yl)-lithium

14.13.1.2.1.2.2 Method 2: Reaction of (2,6-Di-tert-butyl-4-oxo-4H-telluropyran-3-yl)-lithium with Benzaldehyde

14.13.1.2.1.3 Of Carbon Functionalities

14.13.1.2.1.3.1 Method 1: Oxidation of 4-Methylene-4H-telluropyrans

14.13.1.2.2 Addition Reactions

14.13.1.2.2.1 Method 1: Addition of Dihalogen to the Tellurium Atom

14.13.1.2.2.2 Method 2: Formation of Te,Te-Diacetates

14.13.1.2.3 Modification of Substituents

14.13.1.2.3.1 Method 1: 4H-Telluropyran-4-thiones from 4H-Telluropyran-4-ones

14.13.2 Product Subclass 2: Benzo- and Dibenzotelluropyranones

14.13.2.1 Synthesis by Ring-Closure Reactions

14.13.2.1.1 By Annulation to an Arene

14.13.2.1.1.1 By Formation of Two Te—C Bonds

14.13.2.1.1.1 Method 1: By Reaction of 2-Bromophenyl Ethynyl Ketones with Sodium Hydrogen Telluride

14.13.2.1.1.2 Method 2: Preparation of 10H-Dibenzo[b,e]telluropyran-10-one from a Bis-diazonium Salt

14.13.2.1.1.2 By Formation of One Te—C and One C—C Bond

14.13.2.1.2.1 Method 1: By Photochemical Rearrangement of Phenyl Telluroesters

14.13.2.1.3.1 Method 1: 4H-1-Benzotelluropyran-4-ones by Cyclization of Benzenetellurenyl Bromides

14.13.2.1.3.2 Method 2: By Electrophilic Cyclization of Methyl Tellurides
14.13.2.1.4  By Formation of One C—C Bond ........................................ 906
14.13.2.1.4.1  Method 1:  By Cyclization of Carboxyvinyl Phenyl Tellurides .......................... 906
14.13.2.2  Synthesis by Substituent Modification ........................................... 908
14.13.2.2.1  Substitution of Existing Substituents ........................................... 908
14.13.2.2.1.1  Of Hydrogen ................................................................................. 908
14.13.2.2.1.1.1  Method 1:  Lithiation of 4H-1-Benzotelluropyran-4-one .................. 908
14.13.2.2.1.1.2  Method 2:  Oxidation of Dibenzotelluropyrans .................................. 908
14.13.2.2.1.1.3  Method 3:  Hydrolysis of Benzotelluropyrylium Salts ........................... 909
14.13.2.2.2  Addition Reactions ......................................................................... 909
14.13.2.2.2.1  Method 1:  Addition of Dihalogen to the Tellurium Atom .................... 909
14.13.2.2.2.2  Method 2:  Formation of Te,Te-Diacetates ........................................ 910
14.13.2.2.3  Modification of Substituents ............................................................. 910
14.13.2.2.3.1  Method 1:  Preparation of Benzo- and Dibenzotelluropyranthiones
Using Lawesson’s Reagent ........................................................................... 910
14.13.2.2.3.2  Method 2:  Reduction of Te,Te-Dihalo- and Te,Te-Bis(acetyloxy)-
dibenzo[telluropyranones ........................................................................ 911
14.13.2.2.3.3  Method 3:  Hydrolysis of Benzotelluropyrylium Salts ........................... 912

Introduction
D. StC. Black

15.1 Product Class 1: Pyridines
D. Spitzner

15.1 Product Class 1: Pyridines .............................................................. 11
15.1.1 Product Subclass 1: Pyridines ................................................ 11
15.1.1.1 Synthesis by Ring-Closure Reactions ................................. 13
15.1.1.1.1 By Formation of Two N—C and Two C—C Bonds .................. 13
15.1.1.1.1.1 Fragments C—C, C—C, N, and C ........................................ 13
15.1.1.1.1.1.1 Method 1: From 1,3-Diketones or β-Oxo Esters, Aldehydes, and Ammonia, with Subsequent Oxidation (Hantzsch Pyridine Synthesis) ...... 13
15.1.1.1.1.1.1 Variation 1: An Abnormal Ring Closure .............................. 14
15.1.1.1.1.1.1 Variation 2: From β-Oxo Cyanides, Aldehydes, and Ammonium Salts ...... 15
15.1.1.1.1.1.1 Variation 3: Alkyl- and Arylpyridines from Aldehydes and Ammonium Salts (Tschitschibabin Synthesis) ........................................ 15
15.1.1.1.1.1.1 Variation 4: From Ketones, Iminium Compounds, and Ammonium Salts .. 16
15.1.1.1.2 By Formation of One N—C Bond and Three C—C Bonds .............. 16
15.1.1.1.2.1 Fragments N—C, C—C, C, and C ............................................. 16
15.1.1.1.2.1 Method 1: From Aldehydes, Nitriles, and Methylphosphonates ...... 17
15.1.1.1.3 By Formation of Two N—C Bonds and One C—C Bond ............... 18
15.1.1.1.3.1 Fragments C—C—C, C—C, and N ........................................... 18
15.1.1.1.3.1.1 Method 1: From Enamines, α,β-Unsaturated Carbonyl Compounds, and Hydroxylamine or Ammonium Salts .............................. 18
15.1.1.1.3.1.1 Variation 1: From Enamines, α,β-Unsaturated Aldehydes, and Hydroxylamine ................................................................. 18
15.1.1.1.3.1.2 Variation 2: From Acyl Enamines, Ketones, and Ammonium Salts .......................... 18
15.1.1.1.3.1.2 Variation 3: From Ketones, α,β-Unsaturated Aldehydes or Ketones, and Ammonium Salts .................................................. 19
15.1.1.1.3.1.2 Method 2: From Acylketene Dithioacetals, Ketones, and Ammonium Salts .......................... 21
15.1.1.1.3.1.3 Method 3: From Sulfonium Salts or Sulfur Ylides, α,β-Unsaturated Carbonyl Compounds, and Ammonium Salts ................................ 22
15.1.1.1.3.1.4 Method 4: From 1-(2-Oxoalkyl)pyridinium (or Quinolinium/Isoquinolinium) Compounds, α,β-Unsaturated Carbonyl Compounds, and Ammonium Salts .................................................. 23
15.1.1.1.3.1.4 Variation 1: Cyclization of Ketones with Mannich Salts in the Presence of Ammonium Salts .................................................. 24
15.1.1.1.3.1.5 Method 5: From Propynols, Enamines, and Ammonium Salts by a Four-Component, One-Pot Procedure ................................. 25
Variation 1: From Propynols, Ketones, and Ammonium Salts

By Formation of One N—C Bond and Two C—C Bonds

Fragments N—C, C—C, and C—C

Method 1: From Nitriles and Alkynes

Variation 1: From Nitriles and Alkynes by Catalyzed [2+2+2] Cycloaddition

Method 2: From Hydrazones and Alkynes

Method 3: From Imines and Aldehydes

Method 4: From 1-Substituted Phthalazines and Ynamines

Fragments N—C—C, C—C, and C

Method 1: From Malononitrile, Aldehydes, and Nucleophiles

Variation 1: From Malononitrile, Aldehydes, Ketones, and Ammonium Salts

Variation 2: From Malononitrile and 1,1-Diethoxy-N,N-dimethylalkanamines or Orthoformates

Method 2: From Lithiated Dimethylhydrazones, α,β-Unsaturated Ketones, and α-Oxo Cyanides

Method 3: From Enamines, Aldehydes, and 1,3-Dicarbonyl Compounds (Hantzsch Variation)

Method 4: From [(Diphenylphosphoryl)imino]ethanes and Aromatic Aldehydes

Method 5: From [(Triphenylphosphoranylidene)amino]alkenes, Isocyanates, and Enamines

Fragments C—C—C, N—C, and C

Method 1: Pyridin-3-ols from (2-Azaallenyl)pentacarbonylchromium Complexes, Alkynes, and Carbon Monoxide

By Formation of Three C—C Bonds

Fragments C—N—C, C—C, and C

Method 1: Pyridin-3-ols from (2-Azaallenyl)pentacarbonylchromium Complexes, Alkynes, and Carbon Monoxide

By Formation of Two N—C Bonds

Fragments C—C—C—C—C and N

Method 1: From 1,5-Dioxo Compounds and Hydroxylamine

Variation 1: From Partially or Fully Protected 1,5-Dioxo Compounds and Hydroxylamine

Variation 2: From Penta-2,4-dienals and Hydroxylamine

Method 2: From 1,5-Dioxo Compounds and Ammonia or Ammonium Salts

Variation 1: From Hydroxy- or Halo-1,5-dioxa Compounds and Ammonia or Ammonium Salts

Variation 2: From α,β-Unsaturated 1,5-Dioxo Compounds (or Partially Protected Compounds) and Ammonia or Ammonium Salts

Method 3: From Pentamethinammonium Salts and Ammonium Salts
By Formation of One N—C and One C—C Bond ........................................ 44

Fragments N—C—C—C and C—C .......................................................... 44

Method 1: From (Alkoxymethylene)malononitriles, Enamines, and Ammonia ............................................................ 44

Variation 1: From Aryldienemalononitriles and Ketones ....................... 45

Method 2: From Malononitrile and Alkyl Halides under Lewis Acid Catalysis 46

Variation 1: From N-Alklycyanooacetamides or N,N-Dialklycyanooacetamides in the Presence of Phosphoryl Chloride ....................... 47

Method 3: From 3-Aminopropanals and Ketones or 1,3-Dicarbonyl Compounds ............................................................. 48

Method 4: From 1-Aza-1,3-dienes and Alkenes or Alkynes ...................... 48

Variation 1: From Aryldienemalononitriles and Ketones ....................... 49

Variation 2: From 1-Alkoxybuta-1,3-dienes and Activated Nitriles ............ 51

Variation 3: Cyclization of an Intermediate 1-(Dimethylamino)-1-aza-1,3,5-triene .......................................................... 51

Variation 4: From 1-Aza-1,3-dienes and Alkenes or Alkynes ................... 52

Variation 5: From 3-[(Triphenylphosphoranylidene)amino]propenals and Acetylenic Esters .................................................. 53

Variation 6: From 1-Aza-1,3-dienes (Fischer Carbene Complexes) and Alkynes ............................................................. 55

Method 5: From Acrylonitrile and 2,2-Dichlorinated Aldehydes ............... 55

Method 6: From β-Oxo Carbonyl Compounds and Enaminonitriles ............ 57

Fragments C—C—C—C and N—C .......................................................... 58

Method 1: From Alkylidenemalononitriles and Activated Nitriles ............ 58

Method 2: From Lithiated α,β-Unsaturated Aldimines and Nitriles .......... 59

Method 3: From Bicyclic Acetals and Nitriles ................................... 60

Method 4: From Hetero-[4 + 2] Cycloaddition of Dienes with Nitriles .......... 60

Variation 1: From Push–Pull "Captodative" Activated 1,3-Dienes and Nitriles 61

Variation 2: From 1-Alkoxybuta-1,3-dienes and Activated Nitriles .......... 61

Variation 3: Intramolecular Hetero-[4 + 2] Cycloaddition of Dienes with (Hydroxyimino)malonates ......................................... 62

Variation 4: Hetero-[4 + 2] Cycloaddition of Dienes with N-(Sulfonyloxy)imines ............................................................. 62

Fragments N—C—C and C—C—C .......................................................... 63

Method 1: From α-Halogenated Cyanides and α,β-Unsaturated Aldehydes .... 63

Variation 1: From α-(1H-1,2,3-Benzotriazol-1-yl)-Substituted Cyanides and α,β-Unsaturated Ketones ........................................ 64
15.1.1.7.3.2 Method 2: From Malonamide Derivatives and Unsaturated Compounds

15.1.1.7.3.2.1 Variation 1: From Malononitrile and Unsaturated Compounds in the Presence of a Nucleophile

15.1.1.7.3.3 Method 3: From Enamines and α,β-Unsaturated Cyanides

15.1.1.7.3.4 Method 4: From Enamines or Imines and [3-(Dimethylamino)allylidene]-ammonium Salts

15.1.1.7.3.5 Method 5: From Acyl Enamines and α,β-Unsaturated Carbonyl Compounds

15.1.1.7.3.5.1 Variation 1: From Functionalized Enamines and Alkynes (Bohlmann–Rahtz Synthesis)

15.1.1.7.3.5.2 Variation 2: From Functionalized Enamines and α,β-Unsaturated Carbonyl Compounds

15.1.1.7.3.5.3 Variation 3: From Enaminonitriles and 1,3-Diketone Enol Ethers (Guareschi–Thorpe-Type Reaction)

15.1.1.7.3.5.4 Variation 4: From Enaminonitriles and 1,3-Diketone Enol Ethers

15.1.1.7.3.5.5 Variation 5: From N,N-Bis(silylated) Enamines and α,β-Unsaturated Carbonyl Compounds

15.1.1.7.3.5.6 Variation 6: From 3-Oxoalkanimidamides or Acyl Enamines and 1,1,3,3-Tetraalkoxypropanes

15.1.1.7.3.5.7 Variation 7: From 3-Oxoalkanimidamides or Acyl Enamines and 1,1,3,3-Tetraalkoxypropanes

15.1.1.7.3.5.8 Variation 8: From 3-Oxoalkanimidamides or Acyl Enamines and 1,1,3,3-Tetraalkoxypropanes

15.1.1.7.3.5.9 Variation 9: From Enaminonitriles and α,β-Unsaturated Carbonyl Compounds

15.1.1.7.3.6 Method 6: From Enaminonitriles and Alkynyl Ortho Amides

15.1.1.7.3.7 Method 7: From Lithiated Imines and α,β-Unsaturated Carbonyl Compounds

15.1.1.7.3.8 Method 8: From (Vinylimino)phosphoranes and α,β-Unsaturated Carbonyl Compounds (Aza-Wittig Reaction)

15.1.1.7.3.9 Variation 1: From [Diphenylphosphoryl]imino]alkanes and α,β-Unsaturated Aldehydes or Ketones

15.1.1.7.4 Fragments N—C—C—C and C—C

15.1.1.7.4.1 Method 1: From Iminophosphoranes and Isocyanates by a Domino Aza-Wittig Electrocyclization Reaction

15.1.1.7.4.2 Method 2: From Alkylidenemalononitriles

15.1.1.7.4.3 Method 3: From 1-Amino-4-nitro-1,3-dienes and Orthoformates or Acetic Anhydride

15.1.1.8 By Formation of Two C—C Bonds

15.1.1.8.1 Fragments C—N—C—C and C—C

15.1.1.8.1.1 Method 1: From N-Vinylcarbodiimides and Alkynes

15.1.1.8.1.2 Method 2: From 2-Azabuta-1,3-dienes and Alkynes

15.1.1.8.1.2.1 Variation 1: From 2-Aza-1,3-dienes and Enamines
Variation 2: Intramolecular Reaction of Neutral 2-Aza-1,3-dienes with Alkynes or Alkenes ........................................ 84

Method 3: From Vinyl Isocyanides and Alkynes ........................ 85

Fragments C—N—C and C—C—C ........................................ 85

Method 1: From 2-Azaallyl Anions and 2-(Iodomethyl)-3-(trimethylsilyl)prop-1-ene ........................................... 85

Method 2: From Nitrile Ylides and Methylenecyclopropenes 85

Method 3: From 2-Azapropenylium Salts and Enamines ........ 86

Fragments C—C—N—C—C and C ........................................ 86

Method 1: From 3-Azapenta-1,3-dienes by Carbonylation ........ 86

Method 2: From 3-Azapenta-1,3-dienes and Aldehydes or Imines 87

By Formation of One N—C Bond ........................................ 87

Fragment N—C—C—C—C—C ................................................ 87

Method 1: Cyclization of 2-Substituted Pentanedinitriles with Nucleophiles ........................................ 87

Variation 1: Cyclization of 1,1,3,3-Tetracyanopropenide Salts with Nucleophiles ........................................ 88

Variation 2: Cyclization of Pentanedinitriles with Carbon Nucleophiles ..... 89

Method 2: From Halogenated 5-Oxoalkanenitriles (or Their Acetals) ..... 90

Variation 1: Cyclization of 3-Hydroxy-5,5-bis(methylsulfanyl)pent-4-enenitriles with Acid ........................................ 90

Variation 2: Cyclization of 4-Oxopentane-1,1,2,2-tetracarbonitrile with Nucleophiles ........................................ 91

Method 3: From Push–Pull Alka-2,4-dienenitriles .......................... 91

Method 4: From Alka-2,4-dienal Oximes (1-Hydroxy-1-azahexa-1,3,5-trienes) ................................................... 92

Variation 1: Selenium-Induced Cyclization of Alk-4-enone Oximes 94

Variation 2: Cyclization of 5-Aminoalk-4-enal Oximes ................... 94

Method 5: From Pentane-1,5-dione Mono(dimethylhydrazone) Equivalents .................................................. 95

Variation 1: From Pentane-1,5-dione Mono- or Dioximes ........ 95

Variation 2: From Oxo Imidates ........................................... 96

Method 6: From Tri-O-acetylated Sugar Diamides ..................... 97

Method 7: From 5-(Hydroxyimino)alkanenitriles .......................... 97

Method 8: From 4-Amino-1-aza-1,3,5-trienes (3-Amino-2,4-dienone Imines) ................................................... 98

Variation 1: Thermal Condensation of Alka-2,4-dienal Dimethylhydrazones [1-(Dimethylamino)-1-aza-1,3,5-trienes] 98

Method 9: Cyclization of Iminoalkenynes in Polyphosphoric Acid 99

By Formation of One C—C Bond ........................................ 99

Fragment C—N—C—C—C—C ................................................ 99

Method 1: From N-(Buta-1,3-dienyl)carbodiimides ..................... 99

Method 2: From N-Acylbuta-1,3-dien-1-amines .......................... 100

Method 3: From 2-Azahexa-1,3,5-trienes ................................ 100

Fragment C—C—N—C—C—C ................................................ 100
15.1.1.10.2.1 Method 1: From O-Allyloximes by Thermal Rearrangement, Followed by Cyclization ............................................ 100
15.1.1.10.2.2 Method 2: By Amino-Claisen Rearrangement .......................... 101
15.1.1.10.2.3 Method 3: From 3-Azahepta-1,3,5-trienes .............................. 101
15.1.1.10.2.3.1 Variation 1: Model for Prebiotic Pyridine Synthesis ................. 102
15.1.1.10.2.4 Method 4: From 3-Azahepta-1,3-dien-5-yne................. 102
15.1.1.10.2.5 Method 5: From [(2-(Pyrrolidin-1-yl)prop-1-enyl]iminomalononitriles ... 103
15.1.1.10.2.6 Method 6: Oxidative Cyclization of Hydroxy Enaminones ............ 103
15.1.1.10.2.3.1 Variation 1: Model for Prebiotic Pyridine Synthesis ................. 102
15.1.1.10.2.4 Method 4: From 3-Azahepta-1,3-dien-5-yne................. 102
15.1.1.10.2.5 Method 5: From [(2-(Pyrrolidin-1-yl)prop-1-enyl]iminomalononitriles ... 103
15.1.1.10.2.6 Method 6: Oxidative Cyclization of Hydroxy Enaminones ............ 103
15.1.1.10.3 Synthesis by Ring Transformation ........................................ 103
15.1.1.10.3.1 Method 1: From 2,2-Dichlorocyclopropanecarbaldehydes .......... 103
15.1.1.10.3.2 Method 2: From 2,2-Dihydroazetes ................................... 106
15.1.1.10.3.3 Method 3: From 2,3-Dihydroazete 1-Oxides ........................... 106
15.1.1.10.3.4 Method 4: From Dewar Pyridines ...................................... 107
15.1.1.10.3.5 Method 5: From 2-Acylfurans and Ammonium Salts ............... 110
15.1.1.10.3.6 Method 6: From 2-Alkoxy-3,4-dihydro-2H-pyrans and Hydroxylamine ... 116
15.1.1.10.4 By Formal Exchange of Ring Members with Retention of the Ring Size ...... 114
15.1.1.10.4.1 Method 1: From Cyclopenadienones and Nitriles ................. 107
15.1.1.10.4.2 Method 2: From Furan-2-ones ........................................ 108
15.1.1.10.4.3 Method 3: From Furfurylamines ..................................... 108
15.1.1.10.4.4 Variation 2: From 2-Azido-2H-thiopyrans ............................. 110
15.1.1.10.4.5 Method 4: From Isoxazoles ........................................ 111
15.1.1.10.4.6 Method 5: From Oxazoles ........................................ 111
15.1.1.10.4.7 Method 6: From Dihydrooxazolones ................................. 113
15.1.1.10.4.8 Method 7: From Oxazoles and Malononitrile ......................... 113
15.1.1.10.4.9 Method 8: From Sulfoxy-3,4-dihydro-2H-pyrans and Hydroxylamine ... 116
15.1.1.10.4.10 Method 9: From 1,n-Oxazines .................................... 119
15.1.1.10.5 By Formal Exchange of Ring Members with Retention of the Ring Size ...... 114
15.1.1.10.5.1 Method 1: From Pyrylium Salts and Ammonium Salts ............... 114
15.1.1.10.5.2 Method 2: From 2-Acetylfuran-2-ones or 4H-Pyrans and Ammonium Salts .... 115
15.1.1.10.5.3 Method 3: From 2-Acetylfuran-4-ones and Ammonium Salts ........ 115
15.1.1.10.5.4 Method 4: From Pyridinium Compounds or Pyridinones ............ 117
15.1.1.10.5.5 Method 5: From Pyridinium Compounds by an S_N(ANRORC) Mechanism . 117
15.1.1.10.5.6 Method 6: From Pyridin-2(1H)-ones, Ketones or Enamines, and Ammonia 118
15.1.1.10.5.7 Method 7: From 1,n-Oxazines .................................... 119

15.1.1.4.1.4.8.1 Method 1: Reaction with Nitrogen Nucleophiles 174
15.1.1.4.1.4.8.1.1 Variation 1: Palladium-Catalyzed Bromine–Nitrogen Exchange 174
15.1.1.4.1.4.8.1.2 Variation 2: Alkylation under High Pressure 175

By Phosphorus ........................................................... 175

15.1.1.4.1.4.9 Method 1: Direct Phosphorylation 175
15.1.1.4.1.4.9.2 Method 2: Phosphorylation via Metalation 176
15.1.1.4.1.4.9.2.1 Variation 1: Photochemical Phosphorylation 176

Of Oxygen or Sulfur ..................................................... 177

By Hydrogen ............................................................... 177

15.1.1.4.1.4.10 Method 1: Desulfurization 177
15.1.1.4.1.4.10.2 Method 2: Deoxygenation 177

By a Carbon Functionality ........................................... 178

15.1.1.4.1.4.10.2.1 Method 1: Displacement with Carbon Nucleophiles 178
15.1.1.4.1.4.10.2.2 Method 2: Exchange via Diazotization 182

15.1.1.4.2 Addition Reactions .......................................... 183
15.1.1.4.3 Rearrangement of Substituents ............................ 183

15.1.1.4.3.1 Method 1: Isomerization 183
15.1.1.4.3.2 Method 2: Rearrangement of Halogens 183

Modification of Substituents ........................................... 184

15.1.1.4.4 Method 1: From Annulated Pyridines by Selective Degradation 184
15.1.1.4.4.1 Method 1: From Quinolines or Isoquinolines 184
15.1.1.4.4.1.1 Variation 1: Oxidation of Quinolines 184
15.1.1.4.4.1.1.2 Variation 2: Oxidation of Isoquinolines 185
15.1.1.4.4.1.1.3 Variation 3: Partial Hydrogenation of Quinolines 185
15.1.1.4.4.1.1.4 Variation 4: Partial Hydrogenation or Reduction of Isoquinolines 186
15.1.1.4.4.1.1.5 Variation 5: Ionic Hydrogenation of Quinolines or Isoquinolines 186
15.1.1.4.4.1.2 Method 2: From 1H-1,2,3-Triazol[1,5-a]pyridines 187
15.1.1.4.4.1.2.1 Variation 1: From 1H-1,2,3-Triazol[4,5-c]pyridin-1-amine 188
15.1.1.4.4.1.3 Method 3: From Quinolizinium Salts 189
15.1.1.4.4.1.4 Method 4: From Furo[2,3-c]pyridines 189
15.1.1.4.4.2 Method 4: From Pyridine 1-Oxides by Deoxygenation 190
15.1.4.4.2.1 Method 1: Reduction .................................................. 190
15.1.4.4.2.2 Method 2: Reaction with Acid Chlorides or Phosphoryl Chloride ........ 191
15.1.4.4.2.3 Method 3: Reaction with Acid Anhydrides [Deoxygenation and Side-Chain Substitution (The Boekelheide Reaction)] .......... 192
15.1.4.4.2.3.1 Variation 1: Deoxygenation and Side-Chain Halogenation .......... 192
15.1.4.4.2.4 Method 4: Addition–Elimination Reactions ......................... 193
15.1.4.4.2.4.1 Variation 1: Decarboxylation–Substitution Reactions ............... 194
15.1.4.4.3 From Pyridinium Compounds ............................................. 194
15.1.4.4.3.1 Method 1: Addition–Elimination Reactions .......................... 194
15.1.4.4.4 By Addition to Existing Substituents .................................... 195
15.1.4.4.4.1 Method 1: Aromatization of Pyridinones and Pyridinethiones by Alkylation, Acylation, or Silylation ................................. 195
15.1.4.4.4.2 Method 2: Oxidative Aromatization of Pyridinethiones ............... 197
15.1.4.4.5 By Modification of Side Chains .......................................... 197
15.1.4.4.5.1 Method 1: Oxidation of (Hydroxymethyl)pyridines ..................... 197
15.1.4.4.5.2 Method 2: Deprotonation of Alkylpyridines ............................ 197
15.1.4.4.5.2.1 Variation 1: Deuteration of Alkyl Groups .......................... 198
15.1.4.4.5.2.2 Variation 2: Deprotonation with Strong Bases, Followed by Alkylation or Silylation .................................................. 198
15.1.4.4.5.3 Method 3: Side-Chain Deoxygenation .................................. 199
15.1.4.4.5.4 Method 4: Formation of o-Quinodimethanes by Dehalogenation ..... 199
15.1.2 Product Subclass 2: Pyridine 1-Oxides .................................... 200
15.1.2.1 Synthesis by Ring-Closure Reactions ...................................... 201
15.1.2.1.1 By Formation of Two N—C Bonds and One C—C Bond ................ 201
15.1.2.1.1.1 Fragments C—C—C, C—C, and N ........................................ 201
15.1.2.1.1.1 Method 1: From Vinylogous Amidinium Salts, Ketones, and Hydroxylamine ................................................................. 201
15.1.2.1.1.2 By Formation of Two N—C Bonds ........................................ 202
15.1.2.1.1.2 Fragments C—C—C—C and N ............................................ 202
15.1.2.1.1.1 Method 1: From 1,5-Dioxopent-2-enes and Hydroxylamine ........ 202
15.1.2.1.1.1 Variation 1: From Acyl Dienamines or Masked 1,5-Dioxo Compounds and Hydroxylamine .............................................. 202
15.1.2.1.1.1.1 Variation 2: From 1,1-Dicyanobutadienes and Hydroxylamine ... 203
15.1.2.1.1.1.1 Variation 3: From 5,5-Dichloropentadienals and Hydroxylamine .. 204
15.1.2.1.1.1.3 By Formation of One N—C and One C—C Bond ................. 204
15.1.2.1.1.1.3 Fragments C—C—C—C and N—C ........................................ 204
15.1.2.1.1.1.1 Method 1: From Ethylidenemalononitriles and N-Hydroxybenzimidoyl Chlorides ...................................................... 204
15.1.2.1.1.4 By Formation of One N—C Bond ........................................ 205
15.1.2.1.1.4 Fragment N—C—C—C—C .................................................. 205
15.1.2.1.1.1 Method 1: Cyclization of Pentadienal Oximes ....................... 205
15.1.2.1.1.1.1 Method 2: Cyclization of Enynal Oximes ............................ 205

Science of Synthesis Original Edition Volume 15
© Georg Thieme Verlag KG
15.1.2.2 Synthesis by Ring Transformation ................................................. 206
15.1.2.2.1 By Ring Enlargement ............................................................... 206
15.1.2.2.1.1 Method 1: From Isoxazoles ................................................. 206
15.1.2.2.1.1.1 Variation 1: From 4,5-Dihydroisoxazoles ............................. 206
15.1.2.2.2 By Formal Exchange of Ring Members with Retention of the Ring Size ...... 207
15.1.2.2.2.1 Method 1: From Pyrylium Salts and Hydroxylamine ...................... 207
15.1.2.2.2.2 Method 2: From Pyridinium Salts and Hydroxylamine .................. 207
15.1.2.2.2.3 Method 3: From 3-Acyl-6-alkoxy-5,6-dihydro-4H-1,2-oxazines ............. 208
15.1.2.3 Synthesis by Substituent Modification .............................................. 208
15.1.2.3.1 Substitution of Existing Substituents ........................................... 208
15.1.2.3.1.1 Of Hydrogen ...................................................................... 208
15.1.2.3.1.1.1 By Metals ................................................................... 208
15.1.2.3.1.1.1.1 Method 1: Intermediate Lithiation ....................................... 208
15.1.2.3.1.1.2 By a Carbon Functionality ................................................... 209
15.1.2.3.1.1.2.1 Method 1: Mannich Reaction .............................................. 209
15.1.2.3.1.1.2.2 Method 2: Alkylation and Acylation via Metalation ................. 209
15.1.2.3.1.1.3 By a Halogen ..................................................................... 210
15.1.2.3.1.1.3.1 Method 1: Bromination ..................................................... 210
15.1.2.3.1.1.3.1.1 Variation 1: Bromination via Metalation ......................... 211
15.1.2.3.1.1.4 By Nitrogen ........................................................................ 211
15.1.2.3.1.1.4.1 Method 1: Nitration .......................................................... 211
15.1.2.3.1.2 Of Carbon Functionalities .......................................................... 212
15.1.2.3.1.2.1 By Hydrogen ..................................................................... 212
15.1.2.3.1.2.1.1 Method 1: Decarboxylation and Deacylation ......................... 212
15.1.2.3.1.2.2 By Nitrogen ........................................................................ 212
15.1.2.3.1.2.2.1 Method 1: Curtius Rearrangement ....................................... 212
15.1.2.3.1.3 Of a Halogen ........................................................................ 213
15.1.2.3.1.3.1 By Hydrogen ..................................................................... 213
15.1.2.3.1.3.1.1 Method 1: Protonation via Metalation .................................... 213
15.1.2.3.1.3.2 By a Carbon Functionality .................................................... 213
15.1.2.3.1.3.2.1 Method 1: Metal-Catalyzed Aryl–Hetaryl or Hetaryl–Hetaryl Coupling ...................................................................................... 213
15.1.2.3.1.3.2.1.1 Variation 1: Stille Coupling ................................................. 214
15.1.2.3.1.3.2.1.2 Variation 2: Suzuki–Miyaura-Type Coupling ....................... 214
15.1.2.3.1.3.2.1.3 Variation 3: Zinc-Promoted Coupling ................................... 215
15.1.2.3.1.3.3 By Oxygen ......................................................................... 215
15.1.2.3.1.3.3.1 Method 1: Reaction with Oxygen Nucleophiles ....................... 215
15.1.2.3.1.3.4 By Nitrogen ......................................................................... 216
15.1.2.3.1.3.4.1 Method 1: Reaction with Amino Compounds .......................... 216
15.1.2.3.1.4 Of Nitrogen ............................................................................... 216
15.1.2.3.1.4.1 By a Halogen ............................................................. 216
15.1.2.3.1.4.1.1 Method 1: Replacement of a Nitro Group by Reaction with Acetyl Halides 216
15.1.2.3.1.4.2 By Oxygen ........................................................... 217
15.1.2.3.1.4.2.1 Method 1: Replacement of a Nitro Group by Reaction with Oxygen Nucleophiles ........................................... 217
15.1.2.3.1.4.3 By Another Nitrogen .................................. 218
15.1.2.3.1.4.3.1 Method 1: Replacement of a Nitro Group by Reaction with Ammonia ... 218
15.1.2.3.2 Addition Reactions .................................................. 218
15.1.2.3.2.1 Method 1: N-Oxidation of Pyridines ...................... 218
15.1.2.3.3 Modification of Substituents ..................................... 219
15.1.2.3.3.1 Method 1: Alkylation and Acylation of Alkyl Substituents .... 219
15.1.2.3.3.2 Method 2: Oxidation of Side Chains ...................... 220
15.1.2.3.3.3 Method 3: Reduction of Acyl Substituents .......... 220
15.1.3 Product Subclass 3: Pyridinium Salts ................................. 221
15.1.3.1 Synthesis by Ring-Closure Reactions .................................. 222
15.1.3.1.1 By Formation of Two N—C Bonds and One C—C Bond ............... 222
15.1.3.1.1.1 Fragments C—C—C, C—C, and N .............................. 222
15.1.3.1.1.1.1 Method 1: From α,β-Unsaturated Ketones, Amines, and a Michael Donor 222
15.1.3.1.1.1.2 Method 2: From α-Bromo Ketones and Primary Amines .......... 223
15.1.3.1.1.2 Fragments C—C—C—C, C, and N ......................... 224
15.1.3.1.1.2.1 Method 1: From an α,β-Unsaturated Aldehyde, a Primary Amine, and an Aldehyde 224
15.1.3.1.1.2 By Formation of Two N—C Bonds ......................... 224
15.1.3.1.1.2.1 Fragments C—C—C—C and N ......................... 224
15.1.3.1.2 Method 1: From Protected or Free 1,5-Dioxo Compounds and Primary Amines .................................................. 224
15.1.3.1.2.2 Method 2: 1-Aminopyridinium Compounds from Oxonium Salts and Hydrazides .................................................. 225
15.1.3.1.2.3 Method 3: From 2H-1,2-Thiazine-6-carbaldehyde 1,1-Dioxides and Primary Amines .................................................. 226
15.1.3.1.2.4 Method 4: From Acyl Enynes and Primary Amines ................ 226
15.1.3.1.3 By Formation of One N—C and One C—C Bond .................. 227
15.1.3.1.3.1 Fragments N—C—C—C and C—C .............................. 227
15.1.3.1.3.1.1 Method 1: From [β-(Monoalkylamino)vinyl]carbene–Chromium Complexes and Alkynes .......................................... 227
15.1.3.1.3.1.2 Method 2: Cyclization of Enamino Iminium Salts with 1,3-Dicarbonyl Compounds .................................................. 227
15.1.3.1.3.2 Fragments C—C—C—C and N—C .............................. 228
15.1.3.1.3.2.1 Method 1: From β,γ-Unsaturated Ketones and Imines ............. 228
15.1.3.1.3.2.2 Method 2: From 1,3-Diketones and Formanilides .......... 228
15.1.3.3  Fragments N—C—C and C—C—C  ................................................. 229
15.1.3.3.1  Method 1: From α-(Aminomethylene) Carbonyl Compounds and Methyl Imines  ................................................. 229
15.1.3.3.1.1  Variation 1: From 1,3-Dicarbonyl Compounds and Methyl Imines  .... 230
15.1.3.3.2  Method 2: From N-Alkyl-2-cyanoacetamides in the Presence of Phosphoryl Chloride  ................................................. 230
15.1.3.4  By Formation of One N—C Bond  ................................................. 231
15.1.3.4.1  Fragment N—C—C—C—C—C  ................................................ 231
15.1.3.4.1.1  Method 1: Cyclization of 1-Aza-1,3,5-trienes  ........................... 231
15.1.3.5  By Formation of One C—C Bond  ................................................. 231
15.1.3.5.1  Fragment C—C—N—C—C—C  ................................................ 231
15.1.3.5.1.1  Method 1: Cyclization of 3-Alkyl-1,5-dioxo-3-azahexanes  ............... 231
15.1.3.5.1.2  Method 2: Cyclization of Diethyl 2-[(Alkylamino)methylene]succinates  232
15.1.3.6  Synthesis by Ring Transformation  .............................................. 233
15.1.3.6.1  By Ring Enlargement  ................................................................. 233
15.1.3.6.1.1  Method 1: From Furans  ......................................................... 233
15.1.3.6.1.1.1  Variation 1: From 5-(Hydroxymethyl)furan-2-carbaldehyde and Amino Compounds  ................................................. 234
15.1.3.6.2  By Formal Exchange of Ring Members with Retention of the Ring Size  .... 234
15.1.3.6.2.1  From Pyrylium Compounds  ..................................................... 234
15.1.3.6.2.1.1  Method 1: From Pyrylium Compounds and Primary Amines  ........... 234
15.1.3.6.2.1.2  Method 2: Formation of 1-Aminopyridinium Compounds from Pyrylium Salts and Hydrazines  ................................................. 235
15.1.3.6.2.1.3  Method 3: From Pyrylium Compounds and Methyl Imines  ............ 236
15.1.3.6.2.2  From 4H-Pyran-4-ones  ............................................................. 237
15.1.3.6.2.2.1  Method 1: From 4H-Pyran-4-ones and Primary Amines  ................ 237
15.1.3.6.2.2.3  From Other Pyridinium Compounds  ......................................... 237
15.1.3.6.2.2.3.1  Method 1: From Pyridinium Compounds and Primary Amines or Hydrazines by an S_n(ANRORC) Mechanism  ........................... 237
15.1.3.7  Aromatization  .................................................................................. 238
15.1.3.7.1  Method 1: Oxidation of 1-Alkyl- or 1-Aryl-1,4-dihydropyridines  .......... 238
15.1.3.7.2  Method 2: Oxidation of 1-Substituted Tetrahydropyridines  ................. 239
15.1.3.7.3  Method 3: Elimination from 4-Substituted Dihydropyridines  .............. 240
15.1.3.8  Synthesis by Substituent Modification  ............................................. 241
15.1.3.8.1  Substitution of Existing Substituents  .......................................... 241
15.1.3.8.1.1  Of Hydrogen  ........................................................................... 241
15.1.3.8.1.1.1  By Metals  ............................................................................ 241
15.1.3.8.1.1.1.1  Method 1: Lithiation  ............................................................. 241
15.1.3.8.1.1.2  By a Carbon Functionality  .................................................... 241
15.1.3.8.1.1.2.1  Method 1: Alkylation and Arylation  ...................................... 241
15.1.3.4.1.1.3 By Phosphorus ............................................................ 242
15.1.3.4.1.1.3.1 Method 1: Phosphorylation ........................................... 242
15.1.3.4.1.2 Of Halogens .............................................................. 243
15.1.3.4.1.2.1 By a Carbon Functionality .................................................. 243
15.1.3.4.1.2.1.1 Method 1: Reaction with Enamines ........................................ 243
15.1.3.4.1.2.1.2 Method 2: Stille Coupling ............................................ 244
15.1.3.4.1.2.2 By Sulfur .................................................................. 245
15.1.3.4.1.2.2.1 Method 1: Reaction with Sulfur Nucleophiles ..................... 245
15.1.3.4.1.2.3 By Nitrogen ............................................................... 245
15.1.3.4.1.2.3.1 Method 1: Reaction with Nitrogen Nucleophiles ................. 245
15.1.3.4.1.3 Of Oxygen ................................................................ 246
15.1.3.4.1.3.1 By a Halogen ................................................................. 246
15.1.3.4.1.3.1.1 Method 1: Chlorination of N-Substituted Pyridinones .......... 246
15.1.3.4.2 Addition Reactions .......................................................... 246
15.1.3.4.2.1 Method 1: Protonation of 4-Ylidene-1,4-dihydropyridines .......... 246
15.1.3.4.2.2 Method 2: N-Silylation of Pyridines ........................................ 247
15.1.3.4.2.3 Method 3: N-Alkylation of Pyridines ........................................ 248
15.1.3.4.2.3.1 Variation 1: N-Halomethylation with Formaldehyde and Thiophyl Halides 249
15.1.3.4.2.3.2 Variation 2: N-Arylation with Electrophilic Aryl or Hetaryl Groups 249
15.1.3.4.2.3.3 Variation 3: N-Acylation with Acyl Halides .......................... 250
15.1.3.4.2.4 Method 4: N-Fluorination of Pyridines ..................................... 250
15.1.3.4.2.5 Method 5: N-Sulfonylation of Pyridines ................................... 250
15.1.3.4.2.6 Method 6: N-Amination and N-Nitration of Pyridines ............... 251
15.1.3.4.2.7 Method 7: N-Phosphorylation of Pyridines ............................ 252
15.1.3.4.3 Modification of Substituents ................................................. 252
15.1.3.4.3.1 Method 1: Alkylation of Alkyl Substituents ............................. 252
15.1.3.4.3.2 Method 2: Reduction of Acyl Substituents ............................. 253
15.1.3.4.3.3 Method 3: O-Alkylation or O-Acylation of Pyridine 1-Oxides ....... 253
15.1.3.4.3.4 Method 4: O-Alkylation of N-Substituted Pyridinones ............... 254
15.1.3.4.3.5 Method 5: S-Alkylation or S-Acylation of N-Substituted Pyridinelhiones 255

15.2 Product Class 2: Pyridinones and Related Systems
P. A. Keller

15.2 Product Class 2: Pyridinones and Related Systems .......................... 285
15.2.1 Product Subclass 1: Pyridin-2(1H)-ones ....................................... 285
15.2.1.1 Synthesis by Ring-Closure Reactions .......................................... 285
15.2.1.1.1 By Formation of Two N—C and Two C—C Bonds ....................... 286
15.2.1.1.1.1 Fragments C—C, C—C, C, and N ........................................... 286
15.2.1.1.1.1.1 Method 1: From an Aldehyde, a Ketone, an Active Methylene Ester, and an Ammonium Salt .................................................. 286
### 15.2.1.5
**By Formation of One N—C Bond**

<table>
<thead>
<tr>
<th>Fragment N—C—C—C—C—C</th>
<th>308</th>
</tr>
</thead>
</table>

#### 15.2.1.5.1
**Method 1:** Acid-Catalyzed Cyclization of Oxoamides

#### 15.2.1.5.1.1
**Variation 1:** Hydrolysis of 5-Amino-3-oxopent-4-enenitriles

#### 15.2.1.5.1.2
**Method 2:** Resin-Supported Ring-Closing Reactions of Diesters with Amines

#### 15.2.1.5.1.3
**Method 3:** Zinc Reduction of Nitroso-Diels–Alder Adducts

#### 15.2.1.5.1.4
**Method 4:** Cyclization of Ketene Dithioacetals

### 15.2.1.6
**By Formation of One C—C Bond**

<table>
<thead>
<tr>
<th>Fragment C—N—C—C—C—C</th>
<th>312</th>
</tr>
</thead>
</table>

#### 15.2.1.6.1
**Method 1:** Intramolecular Cyclization of an In Situ Generated Diene Isocyanate

#### 15.2.1.6.1.2
**Method 2:** Intramolecular Cyclization of Alka-1,3-dienyl Isocyanates

#### 15.2.1.6.1.3
**Method 3:** Insertion of Amines into Diketones

#### 15.2.1.6.2
**Fragment C—C—N—C—C—C**

#### 15.2.1.6.2.1
**Method 1:** Thermal Cyclization of Ketene Dithioacetals

### 15.2.1.2
**Aromatization**

| Method 1: By Utilization of an Exocyclic Alkene | 317 |
| Method 2: By Elimination of Two Hydrogen Atoms Using Nitrous Acid | 318 |
| Variation 1: By Oxidation of 3,4-Dihydropyridin-2(1H)-ones Using Nitrosylsulfuric Acid | 318 |
| Variation 2: By Oxidation of 6-Hydroxytetrahydropyridin-2(1H)-ones Using Thionyl Chloride and Pyridine | 319 |

#### 15.2.1.2.3
**Variation 3:** By Oxidation Using 2,3-Dichloro-5,6-dicyanobenzo-1,4-quinone

#### 15.2.1.2.4
**Variation 4:** By Dehydrogenation under Alcoholic Basic Conditions

#### 15.2.1.2.5
**Variation 5:** By Controlled Use of Nitrous Acid

### 15.2.1.3
**Synthesis by Substituent Modification**

| Method 1: By Intramolecular Oxygen-Transfer Reactions | 321 |
| Variation 1: By Alkyl Elimination from 2-Ethoxypyridinium Oxide | 322 |
| Method 2: By Oxidation of Pyridines | 323 |
| Variation 1: By Oxidation of 1-Aminopyridinium Salts | 324 |
| Variation 2: By Oxidation of 1-Alkylpyridinium Salts | 325 |
| Method 3: By Oxidation of 2-Methylpyridinium Salts | 326 |
| Method 4: By Displacement from Pyridinium Salts | 327 |
| Variation 1: By Methoxy Substitution of 2-Chloropyridines | 328 |
| Variation 2: By Nucleophilic Substitution of 2-(Methylsulfonyl)pyridines | 329 |
| Variation 3: By Substitution and Subsequent Rearrangement | 329 |
| Variation 4: By Resin-Supported Conversion of 2-Halopyridines | 330 |
| Variation 5: By Oxidative Demethylation of Methylpyridinium Cations | 331 |
| Method 5: By Rearrangement of 2-Allylopyridines | 332 |
| Method 6: By Oxidation of Pyridine-2(1H)-thiones | 334 |

#### 15.2.1.3.1
**Method 1:** By Intramolecular Oxygen-Transfer Reactions

#### 15.2.1.3.1.1
**Variation 1:** By Alkyl Elimination from 2-Ethoxypyridinium Oxide

#### 15.2.1.3.2
**Method 2:** By Oxidation of Pyridines

#### 15.2.1.3.2.1
**Variation 1:** By Oxidation of 1-Aminopyridinium Salts

#### 15.2.1.3.2.2
**Variation 2:** By Oxidation of 1-Alkylpyridinium Salts

#### 15.2.1.3.3
**Method 3:** By Oxidation of 2-Methylpyridinium Salts

#### 15.2.1.3.4
**Method 4:** By Displacement from Pyridinium Salts

#### 15.2.1.3.4.1
**Variation 1:** By Methoxy Substitution of 2-Chloropyridines

#### 15.2.1.3.4.2
**Variation 2:** By Nucleophilic Substitution of 2-(Methylsulfonyl)pyridines

#### 15.2.1.3.4.3
**Variation 3:** By Substitution and Subsequent Rearrangement

#### 15.2.1.3.4.4
**Variation 4:** By Resin-Supported Conversion of 2-Halopyridines

#### 15.2.1.3.4.5
**Variation 5:** By Oxidative Demethylation of Methylpyridinium Cations

#### 15.2.1.3.5
**Method 5:** By Rearrangement of 2-Allylopyridines

#### 15.2.1.3.6
**Method 6:** By Oxidation of Pyridine-2(1H)-thiones

### 15.2.2
**Product Subclass 2: Pyridin-4(1H)-ones**

| Method 1: Synthesis by Ring-Closure Reactions | 335 |

---

*Science of Synthesis Original Edition Volume 15 © Georg Thieme Verlag KG*
15.2.2.1.1 By Formation of Two N—C Bonds and One C—C Bond ........................................ 335
15.2.2.1.1.1 Fragments C—C—C, C, and N ....................................................... 335
15.2.2.1.2 Method 1: In Situ Acylation of Enaminone Anions with Cyclization .............. 335
15.2.2.1.2.1 By Formation of One N—C and Two C—C Bonds ............................ 337
15.2.2.1.2.1.1 Fragments C—C—C, N—C, and C ........................................... 337
15.2.2.1.1.1 Method 1: Addition of an N-Silyl-1-azaallyl Anion to Alkoxyalkenes ......... 337
15.2.2.1.3 By Formation of One N—C and Two C—C Bonds .................................... 337
15.2.2.1.3.1 Fragments C—C—C, N—C, and C ........................................... 337
15.2.2.1.3.1.1 Method 1: Addition of an N-Silyl-1-azaallyl Anion to Alkoxyalkenes ......... 337
15.2.2.1.3.1.2 Method 2: Ring Closure of Triketones ....................................... 338
15.2.2.1.3.1.3 Method 3: Cyclization of 5-Methoxypent-4-en-1-ones Followed by Amination with Hydroxylamine Hydrochloride ........................................... 339
15.2.2.1.4 By Formation of One N—C and One C—C Bond ........................................ 341
15.2.2.1.4.1 Fragments C—C—C, C, and N ....................................................... 341
15.2.2.1.4.1.1 Method 1: Addition of β-Cyano Ketones to Cyclic Imines .................. 341
15.2.2.1.4.1.2 Method 2: Solid-Phase Synthesis of Dihydropyridinones ................. 341
15.2.2.1.4.2 Fragments N—C—C and C—C—C .............................................. 343
15.2.2.1.4.2.1 Method 1: Thermal Cyclization of Enaminones with Ketenes ............. 343
15.2.2.1.4.2.2 Method 2: Claisen Addition of Pyridylacetonitriles to Alk-2-ynoates ......... 344
15.2.2.1.5 By Formation of Two C—C Bonds ................................................. 346
15.2.2.1.5.1 Fragments C—C—N—C—C and C ........................................... 346
15.2.2.1.5.1.1 Method 1: Carboxylation of 2-Aza-1,3-dienes ............................ 346
15.2.2.1.6 By Formation of One N—C Bond ......................................................... 346
15.2.2.1.6.1 Fragment N—C—C—C—C ......................................................... 346
15.2.2.1.6.1.1 Method 1: Cyclization with Nitrogen Nucleophiles onto Cyano Electrophiles ................................................................. 346
15.2.2.1.6.1.2 Method 2: Metal Carbonyl Induced Cleavage of Isoxazoles ............... 347
15.2.2.1.7 By Formation of One C—C Bond ......................................................... 348
15.2.2.1.7.1 Fragment C—C—N—C—C ......................................................... 348
15.2.2.1.7.1.1 Method 1: Addition of Amines to α,β-Unsaturated Esters .................. 348
15.2.2.2 Synthesis by Ring Transformation ......................................................... 349
15.2.2.2.1 Method 1: By Heteroatom Exchange in Pyran-4-ones Using Amines ........ 349
15.2.2.2.1.1 Variation 1: By Heteroatom Exchange Using Pyranones and Ammonia ... 351
15.2.2.2.1.2 Variation 2: By Heteroatom Exchange Using Hydroxylactones ............ 352
15.2.2.2.2 Method 2: By Cyclic Nitrone Cycloaddition to Acetylenes ...................... 353
15.2.2.2.3 Aromatization .................................................................................. 353
15.2.2.2.3.1 Method 1: By Michael Addition to Cyclic Diones .............................. 353
15.2.2.2.3.2 Method 2: By Formation of Diselenides Followed by Oxidation ............ 354
15.2.2.2.3.3 Method 3: By the Generation of Imines from Dihydropyridin-4(1H)-ones 355
15.2.2.4 Synthesis by Substituent Modification ................................................. 355
15.2.4.1 Method 1: By Substitution and Subsequent Rearrangement .......... 355
15.2.4.2 Method 2: By Rearrangement of 2-Substituted 4-Methoxypyridines .... 356
15.2.4.3 Method 3: From Pyridin-2(1H)-ones by Functional Group Transformations 357
15.2.4.4 Method 4: By Oxidative Demethylation of Methylpyridinium Cations .... 358
15.2.4.5 Method 5: Via Metalation of Dichloropyridines .......................... 359
15.2.4.6 Method 6: By Oxidative Addition to Halopyridines .................... 359
15.2.4.7 Method 7: By Substitution of 4-Nitropyridine 1-Oxides ................ 360
15.2.4.7.1 Variation 1: By Methoxy Substitution of Nitropyridines ............. 361
15.2.3 Product Subclass 3: Pyridine-2(1H)-thiones ............................. 362
15.2.3.1 Synthesis by Ring-Closure Reactions .................................... 362
15.2.3.1.1 By Formation of One N—C and One C—C Bond ....................... 363
15.2.3.1.1.1 Fragments C—C—C—C and N—C ...................................... 363
15.2.3.1.1.1 Method 1: By Reaction of the Glutacondialdehyde Anion with Isothiocyanates ........................................ 363
15.2.3.1.2 Fragments N—C—C and C—C—C ................................................. 363
15.2.3.1.2.1 Method 1: Addition of Activated Methylene Compounds to α,β- Unsaturated Ketones in the Absence of Base .......... 363
15.2.3.1.2.1.1 Variation 1: Addition of Activated Methylene Compounds to α,β- Unsaturated Ketones in the Presence of Base .......... 364
15.2.3.1.2.2 Method 2: Addition of Activated Methylene Compounds to α,β-Unsaturated Aldehydes ........................................ 365
15.2.3.1.2.3 Method 3: Addition of Thioamide–Cyano Activated Methylene Groups to β-Dicarbonyls ........................................... 365
15.2.3.1.2.4 Method 4: Addition of Thioamide–Amide Activated Methylene Groups to β-Diketones .............................................. 366
15.2.3.1.2.5 Method 5: Addition of Thioamide–Cyano Activated Methylene Groups to α,β-Unsaturated Dicyanides ............................ 366
15.2.3.1.2.6 Method 6: Addition of Thioamide–Cyano Activated Methylene Groups to α,β-Unsaturated α-Cyano Esters ............................. 367
15.2.3.2 Synthesis by Substituent Modification ........................................ 368
15.2.3.2.1 Method 1: Substitution of 2-Halopyridines with Hydrogen Sulfide or Thiourea .............................................................. 368
15.2.3.2.2 Method 2: Reactions of Dihydropyridin-2(1H)-ones with Phosphorus Pentasulfide ........................................................ 369
15.2.3.2.3 Method 3: Rearrangement of Thio Salts of 1-Oxidopyridine-2(1H)-thione 369
15.2.3.2.4 Method 4: By Reaction of 1-Alkylpyridinium Salts with Sodium Sulfide 370
15.2.4 Product Subclass 4: Pyridine-4(1H)-thiones ..................................... 371
15.2.4.1 Synthesis by Ring Transformation ............................................. 371
15.2.4.1.1 Method 1: By Heteroatom Exchange in Pyran-4-thiones Using Amines 371
15.2.4.1.1.1 Variation 1: By Methyamine Exchange with 4H-Pyran-4-thiones 372
15.2.4.2 Synthesis by Substituent Modification ....................................... 373
15.2.4.2.1 Method 1: Reaction of Pyridin-4(1H)-ones with Phosphorus Pentasulfide 373
15.2.5 Product Subclass 5: Pyridine-2(1H)-selones and Pyridine-2(1H)-tellones . 374
15.2.5.1 Synthesis by Ring-Closure Reactions ........................................... 374
15.2.5.1.1 By Formation of One N—C and One C—C Bond .............................. 374
15.2.5.1.1.1 Fragments C—C—C—C—C and N—C ........................................ 374
15.2.5.1.1.1 Method 1: Reaction of the Glutacondialdehyde Anion with Isoselenocyanates ...................................................... 374
15.2.5.1.2 Fragments N—C—C and C—C—C ............................................. 375
15.2.5.1.2.1 Method 1: Addition of Cyanoselenoacetamide to \( \alpha,\beta \)-Unsaturated Ketones ...................................................... 375
15.2.5.1.2.2 Method 2: Addition of Cyanoselenoacetamide to \( \beta \)-Diketones ........ 378
15.2.5.1.2.3 Method 3: Addition of Selenoamide–Cyano Activated Methylene Groups to \( \alpha,\beta \)-Unsaturated Dicyanides ........................................ 378
15.2.5.1.2 By Formation of One N—C Bond ............................................. 379
15.2.5.1.2.1 Fragment N—C—C—C—C—C ................................................ 379
15.2.5.1.2.1 Method 1: Addition of Hydrogen Selenide to 1-Aryl-4,4-dicyanobutan-1-ones ...................................................... 379
15.2.5.2 Synthesis by Substituent Modification ........................................... 380
15.2.5.2.1 Method 1: By Substitution of 2-Halopyridines with Selenium Reagents 380
15.2.6 Product Subclass 6: Pyridine-4(1\( H \))-selones and Pyridine-4(1\( H \))-tellones 382
15.2.6.1 Synthesis by Substituent Modification ........................................... 383
15.2.6.1.1 Method 1: By Heteroatom Exchange from Pyridine-4(1\( H \))-thiones .... 383
15.3 Product Class 3: Quinolines
R. D. Larsen and D. Cai

15.3 Product Class 3: Quinolines .......................................................... 389
15.3.1 Product Subclass 1: Quinolines ...................................................... 389
15.3.1.1 Synthesis by Ring-Closure Reactions ........................................... 391
15.3.1.1.1 By Annulation to an Arene ...................................................... 391
15.3.1.1.1 By Formation of One N—C and Two C—C Bonds ............................... 391
15.3.1.1.1.1 With Formation of the 1—2, 2—3, and 4—4a Bonds .......................... 391
15.3.1.1.1.1 Method 1: From Arylamines .......................................................... 391
15.3.1.1.1.1 Variation 1: Reaction with an In Situ Generated Enal or Enone (The Doebner–von Miller Reaction) ........................................ 391
15.3.1.1.1.1 Variation 2: Reaction with Pyruvic Acid and an Aldehyde (The Doebner Reaction) ...................................................... 392
15.3.1.1.1.1 Variation 3: Metal-Mediated Three-Component Coupling ............... 393
15.3.1.1.1.2 Method 2: From Nitroarenes ...................................................... 394
15.3.1.1.1.2 With Formation of the 1—2, 3—4, and 4—4a Bonds ............................... 394
15.3.1.1.1.2 Method 1: From Arylamines ...................................................... 394
15.3.1.1.1.3 With Formation of the 1—8a Bond and Two C—C Bonds ................. 395
15.3.1.1.1.3 Method 1: From Aryl Ketoximes ...................................................... 395
Table of Contents

15.3.1.1.2  By Formation of Two N—C Bonds  ................................................................. 396
15.3.1.1.2.1  Method 1:  From 1-(2-Haloaryl)allyl Acetates  ........................................ 396
15.3.1.1.3  By Formation of One N—C and One C—C Bond ............................................... 396
15.3.1.1.3.1  With Formation of the 1—2 and 2—3 Bonds .................................................. 396
15.3.1.1.3.1.1  Method 1:  From (2-Alkenyaryl)amines ..................................................... 396
15.3.1.1.3.1.2  Method 2:  From (2-Acylaryl)amines .......................................................... 397
15.3.1.1.3.2  With Formation of the 1—2 and 3—4 Bonds .................................................. 398
15.3.1.1.3.2.1  Method 1:  From 2-Acylarylamines ............................................................ 398
15.3.1.1.3.2.1.1  Variation 1:  Friedländer Synthesis ............................................................ 398
15.3.1.1.3.2.1.2  Variation 2:  Oximino Derivatives of Aldehydes and Ketones .................. 400
15.3.1.1.3.2.1.3  Variation 3:  Reaction with Alkynes or Allenes ....................................... 401
15.3.1.1.3.2.1.4  Variation 4:  Reaction with Vinyl Sulfides .............................................. 402
15.3.1.1.3.2.2  Method 2:  From Isatins (The Pfitzinger Reaction) .................................... 402
15.3.1.1.3.2.3  Method 3:  From N-(2-Aminobenzylidene)-p-toluidines (The Borsche Modification of the Friedländer Synthesis) ........................ 404
15.3.1.1.3.2.4  Method 4:  From 2-(Perfluoroalkyl)arylamines ......................................... 405
15.3.1.1.3.3  With Formation of the 1—2 and 4—4a Bonds ................................................ 406
15.3.1.1.3.3.1  Method 1:  From Arylamines ........................................................................ 406
15.3.1.1.3.3.1.1  Variation 1:  Reaction with Glycerol (The Skraup Reaction) .................. 406
15.3.1.1.3.3.1.2  Variation 2:  Reaction with Propenal Derivatives; Modified Skraup and Doebner–von Miller Reactions .......................................................... 408
15.3.1.1.3.3.1.3  Variation 3:  Reaction with α,β-Unsaturated Ketones ................................. 410
15.3.1.1.3.3.1.4  Variation 4:  Reaction with β-Heterosubstituted α,β-Unsaturated Aldehydes and Ketones .......................................................... 411
15.3.1.1.3.3.1.5  Variation 5:  Ruthenium-Catalyzed Cyclization with Propane-1,3-diol or 1-Aminopropan-3-ol ...................................................................................... 413
15.3.1.1.3.3.1.6  Variation 6:  From Cyclopropyl Building Blocks ...................................... 414
15.3.1.1.3.3.1.7  Variation 7:  Reaction with Malonic Acid ................................................. 415
15.3.1.1.3.3.2  Method 2:  From Nitroarenes ....................................................................... 415
15.3.1.1.3.3.2.1  Variation 1:  Reaction with Allyl Aryl Sulfones ......................................... 415
15.3.1.1.3.3.2.2  Variation 2:  Smiles Rearrangement of 3-(2-Nitrobenzoyl)pentane-2,4-dione .................................................................................................................. 416
15.3.1.1.3.3.3  Method 3:  From (2-Haloaryl)amines ............................................................ 417
15.3.1.1.3.3.4  Method 4:  From (2-Sulfanylaryl)amines ...................................................... 417
15.3.1.1.3.4  With Formation of the 1—8a and 4—4a Bonds ................................................ 418
15.3.1.1.3.4.1  Method 1:  From Quinones and Azadienes .................................................... 418
15.3.1.1.4  By Formation of Two C—C Bonds ................................................................. 419
15.3.1.1.4.1  With Formation of the 2—3 and 4—4a Bonds ................................................ 419
15.3.1.1.4.1.1  Method 1:  From Arylidene N-Arylamines ..................................................... 419
15.3.1.1.4.1.1.1  Variation 1:  Reaction with Alkenes ............................................................ 419
15.3.1.1.4.1.1.2  Variation 2:  Reaction with Vinyl Ethers .................................................... 420
15.3.1.1.4.1.1.3  Variation 3:  Reaction with Alkynes ............................................................ 420
15.3.1.1.4.1.1.4  Variation 4:  Cross Coupling with Allylamines ........................................ 421
15.3.1.1.4.1.2  Method 2:  From N-Arylimidates ................................................................. 422

15.3.1.4.6.2.3 Method 3: Preparation of Oxidized Carbon Functionalities ....................... 493
15.3.1.4.6.2.3.1 Variation 1: Oxidation of Methyl-Substituted Quinolines ......................... 493
15.3.1.4.6.2.4 Of C-Heteroatom Functionalities ................................................................. 495
15.3.1.4.6.2.4.1 Method 1: Reactions of C-Oxygen Groups ................................................. 495
15.3.1.4.6.2.4.2 Variation 1: Alkylation of Quinolinones ...................................................... 495
15.3.1.4.6.2.4.3 Variation 2: Oxidation of Heterosubstituted Quinolines to the Quinolinediones ................................................................. 495
15.3.1.4.6.2.4.4 Method 2: Reactions of C-Sulfur Groups .................................................... 496
15.3.2 Product Subclass 2: Quinoline 1-Oxides ...................................................................... 496
15.3.2.1 Synthesis by Ring-Closure Reactions ..................................................................... 497
15.3.2.1.1 By Annulation to an Arene ................................................................................ 497
15.3.2.1.1.1 By Formation of One N—C and One C—C Bond .............................................. 497
15.3.2.1.1.1.1 With Formation of the 1—2 and 3—4 Bonds ................................................... 497
15.3.2.1.1.1.1.1 Method 1: From 2-Nitrobenzaldehydes ....................................................... 497
15.3.2.1.1.1.1.2 Method 2: From 2-Nitrobenzyl Sulfones ..................................................... 498
15.3.2.1.1.1.2 By Formation of One N—C Bond ................................................................. 498
15.3.2.1.1.1.2.1 With Formation of the 1—2 Bond .................................................................. 498
15.3.2.1.1.1.2.1.1 Method 1: From 2'-Nitrocinnamoyl Derivatives ..................................... 498
15.3.2.1.1.1.2.1.2 Method 2: From (2-Nitrobenzoyl)acetates ............................................. 499
Method 3: From 1-(2-Nitrophenyl)allylic Alcohols (Baylis–Hillman Adducts) .................................................. 500
Method 4: From 1-(2-Nitrophenyl)propenes ................................... 500
With Formation of the 1—8a Bond ........................................ 501
Method 1: From Oximes and Alkoxyamines .................................. 501
Synthesis by Ring Transformation .............................................................. 502
Aromatization ........................................................................ 503
Synthesis by Substituent Modification .................................................. 503
Substitution of Existing Substituents ............................................. 503
Of Hydrogen ........................................................................ 503
Method 1: Metalation ........................................................................ 503
Method 2: Alkylation ........................................................................ 503
Method 3: Halogenation ................................................................... 504
Method 4: Nitration ......................................................................... 504
Method 5: Oxidation ......................................................................... 505
Of Heteroatoms ........................................................................... 506
Method 1: Substitution of 4-Heterosubstituted Quinoline 1-Oxides ..... 506
Addition Reactions ............................................................................. 508
Method 1: N-Oxidation ....................................................................... 508
Modification of Substituents ............................................................... 509
Of N-Heteroatom Functionalities .................................................... 509
Method 1: O-Alkylation of Quinoline 1-Oxide .................................. 509
Product Subclass 3: 1-Alkyl- and 1-Arylquinolinium Salts .................. 510
Synthesis by Ring-Closure Reactions ................................................. 511
By Annulation to an Arene ................................................................. 511
By Formation of One N—C and Two C—C Bonds ............................. 511
Method 1: From 1-Aryl- or 1-Alkylanilines ....................................... 511
By Formation of One N—C and One C—C Bond ............................... 512
With Formation of the 1—2 and 4—4a Bonds .................................... 512
Method 1: From N-Aryl- or N-Alkylarylamines ............................... 512
By Formation of Two C—C Bonds ......................................................... 513
With Formation of the 2—3 and 4—4a Bonds .................................... 513
Method 1: From N-Alkylanilides ......................................................... 513
Method 2: From N-Alkyl-(benzotriazol-1-ylmethyl)arylamines ....... 513
With Formation of the 3—4 and 4—4a Bonds .................................... 514
Method 1: From N-Arylenamines ......................................................... 514
By Formation of One C—C Bond .......................................................... 515
Method 1: From β-Arylamino Ketones .............................................. 515
15.3.2 Synthesis by Ring Transformation ........................................... 515
15.3.3 Aromatization ........................................................................... 516
15.3.4 Synthesis by Substituent Modification ................................. 517
15.3.4.1 Substitution of Existing Substituents .............................. 517
15.3.4.1.1 Of Metal ................................................................. 517
15.3.4.1.2 Of Carbon Functionalities ......................................... 517
15.3.4.1.3 Of Heteroatoms ...................................................... 517
15.3.4.1.3.1 Method 1: From Quinoline 1-Oxides ......................... 517
15.3.4.1.3.2 Method 2: From 2- or 4-Heterosubstituted Quinolinium Intermediates .................................................................................. 517
15.3.4.2 Addition Reactions ........................................................... 518
15.3.4.2.1 Method 1: N-Alkylation ............................................... 518
15.3.4.3 Modification of Substituents ............................................. 519
15.3.4.3.1 Of C-Carbon Functionalities ........................................ 519
15.3.4.3.1.1 Method 1: Alkylation Reactions .............................. 519
15.4 Product Class 4: Quinolinones .............................................. R. D. Larsen
15.4.1 Product Class 4: Quinolinones ............................................... 551
15.4.1.1 Product Subclass 1: Quinolin-2(1H)-ones ............................ 551
15.4.1.1.1 Synthesis by Ring-Closure Reactions ............................ 553
15.4.1.1.1.1 By Annulation to an Arene ...................................... 553
15.4.1.1.1.1.1 By Formation of One N—C and One C—C Bond .... 553
15.4.1.1.1.1.2 With Formation of the 1—2 and 2—3 Bonds ............. 553
15.4.1.1.1.1.1.2 Method 1: From 2-Aminostyrenes ...................... 553
15.4.1.1.1.1.1.2.1 Variation 1: Reaction with Acetates: The Friedländer Quinolinone Synthesis ................................................................. 554
15.4.1.1.1.1.1.2.1.1 Method 2: From (2-Acylaryl)amines ............ 554
15.4.1.1.1.1.1.2.1.2 Variation 2: Reaction with Diethoxyphosphorylketenes ............................................................... 555
15.4.1.1.1.1.1.2.1.2.1 Method 2: From Anils of 2-Aminobenzaldehydes .................................................................................. 555
15.4.1.1.1.1.1.2.1.2.2 Method 3: From Anthranilates or 2-Aminobenzonitriles ............................................................. 556
15.4.1.1.1.1.1.2.1.2.3 Method 4: From 2-Tolylformamides ......... 557
15.4.1.1.1.1.1.2.1.2.4 Method 1: From Arylamines ...................... 557
15.4.1.1.1.1.1.1.1 Method 1: From (2-Haloaryl)amines .................. 557
15.4.1.1.1.1.1.1.2 Method 1: From 2-Halobenzaldehydes ............ 559
15.4.1.1.1.1.1.1.3 Method 1: From 2-Halobenzaldehydes .......... 559
15.4.1.1.1.1.1.1.3.1 Method 1: From 2-Halobenzaldehydes .......... 559
15.4.1.1.1.1.1.1.1 By Formation of Two C—C Bonds ................. 559
15.4.1.1.1.1.1.1.1.1 Method 1: From 2-Halobenzaldehydes .......... 559
With Formation of the 2—3 and 4—4a Bonds

Method 1: From Aryl Isocyanates

Variation 1: Reaction with Alkynes

Variation 2: Reaction with Triphenylphosphonium Malonate

With Formation of the 3—4 and 4—4a Bonds

Method 1: From N-Acylarylamines

By Formation of One N—C Bond

With Formation of the 1—2 Bond

Method 1: From 2-Aminocinnamates

Method 2: From a 3-(2-Acylaminophenyl)-3-hydroxypropanoate

Method 3: From 3-{2-[2-(Alkoxycarbonyl)amino]phenyl}-3-hydroxyacrylates

Method 4: From 2-Nitrocinnamates

Method 5: From Methyl 2-[(Acetyloxy)(2-nitrophenyl)methyl]acrylate

Method 6: From 2-Nitrobenzoylacetates

By Annulation to the Heterocyclic Ring

Synthesis by Ring Transformation

By Ring Enlargement

Method 1: From Isatin

Method 2: From Indoles

Formal Exchange of Ring Members with Retention of the Ring Size

Method 1: From Isatoic Anhydrides (Benzoxazinones)

By Ring Contraction

Aromatization

15.4.2.4.1.4  Of Carbon Functionalities ................................. 611
15.4.2.4.1.5  Of Heteroatoms ........................................... 612
15.4.2.4.1.5.1  Method 1: Hydrolysis of 4-Heterosubstituted Quinolines .......... 612
15.4.2.4.1.5.2  Method 2: Substitution of 7-Haloquinolin-4(1H)-ones .......... 613
15.4.2.4.2  Modification of Substituents ................................ 614
15.4.2.4.2.1  Of C-Heteroatom Functionalities .......................... 614
15.4.2.4.2.1.1  Method 1: Of C-Oxygen Quinolines ......................... 614
15.4.2.4.2.1.1.1  Variation 1: Dealkylation of 4-Alkoxyquinolines .......... 614
15.4.2.4.2.1.1.2  Variation 2: Oxidation of 5,8-Dihydroxyquinolin-4(1H)-one to Quinoline-4,5,8(1H)-trione .......... 614
15.4.3  Product Subclass 3: Quinoline-2(1H)-thiones and Quinoline-4(1H)-thiones 614
15.4.3.1  Synthesis by Ring-Closure Reactions .......................... 615
15.4.3.1.1  By Annulation to an Arene .................................. 615
15.4.3.1.1.1  By Formation of One N—C and One C—C Bond ............... 615
15.4.3.1.1.1.1  Method 1: From (2-Alkenylaryl)amines .................... 615
15.4.3.1.1.2  By Formation of One C—C Bond ............................. 616
15.4.3.1.1.2.1  With Formation of the 4—4a Bond ....................... 616
15.4.3.1.1.2.1.1  Method 1: From Diethyl (Anilinocarbonothioyl)malonates .......... 616
15.4.3.2  Synthesis by Ring Transformation ................................ 616
15.4.3.2.1  Formal Exchange of Ring Members with Retention of the Ring Size ........ 616
15.4.3.2.2  By Ring Contraction .......................................... 616
15.4.3.3  Synthesis by Substituent Modification .......................... 617
15.4.3.3.1  Substitution of Existing Substituents .......................... 617
15.4.3.3.1.1  Of Metals .................................................... 617
15.4.3.3.1.2  Of Heteroatoms ............................................. 617
15.4.3.3.1.2.1  Method 1: Conversion of 2- or 4-Heterosubstituted Quinolines into Quinolinethiones ............................................. 617
15.4.4  Product Subclass 4: Amine Derivatives of Quinolinones .................. 618
15.4.4.1  Synthesis by Ring-Closure Reactions .......................... 619
15.4.4.1.1  By Annulation to an Arene .................................. 619
15.4.4.1.1.1  By Formation of One N—C and Two C—C Bonds ............... 619
15.4.4.1.1.1.1  With Formation of the 1—2, 3—4, and 4—4a Bonds .......... 619
15.4.4.1.1.1.1.1  Method 1: From N-Aryl Isocyanates, N-Arylcarbodiimides, or N-Arylthioureas ............................................. 619
15.4.4.1.1.2  By Formation of One N—C and One C—C Bond ............... 619
15.4.4.1.1.2.1  With Formation of the 1—2 and 2—3 Bonds ................ 619
15.4.1.1.2.1.1 Method 1: From 2-Acylaryl Azides ........................................... 619
15.4.1.1.2.1.2 Method 2: From (2-Alkynylaryl)amines .................................... 620
15.4.1.1.2.2 With Formation of the 1—2 and 3—4 Bonds .................................... 621
15.4.1.1.2.2.1 Method 1: From (2-Acylaryl)amines ....................................... 621
15.4.1.1.2.2.1.1 Variation 1: Reaction with Alkylcarbonitriles .......................... 621
15.4.1.1.2.2.1.2 Variation 2: Reaction with Amide Derivatives .......................... 621
15.4.1.1.2.2.2 Method 2: From 2-(Perfluoroalkyl)anilines .............................. 622
15.4.1.1.2.2.3 Method 3: From Anthranilates ............................................. 623
15.4.1.1.2.2.4 Method 4: From (2-Cyanoaryl)amines ..................................... 623
15.4.1.1.2.2.5 Method 5: From (2-Acylaryl)azides ....................................... 624
15.4.1.1.2.2.6 Method 6: From 2-(Perfluoroalkyl)anilines .............................. 625
15.4.1.1.2.3 With Formation of the 1—2 and 4—4a Bonds ................................ 625
15.4.1.1.2.3.1 Method 1: From Arylamines ................................................. 625
15.4.1.1.2.3.2 Method 2: From N-Arylhydroxylamines ................................ 625
15.4.1.1.2.4 By Formation of Two C—C Bonds ............................................. 626
15.4.1.1.2.4.1 With Formation of the 2—3 and 4—4a Bonds ........................... 626
15.4.1.1.2.4.1.1 Method 1: From N-Arylketenimines .................................... 626
15.4.1.1.2.4.1.2 Method 2: From N-Arylimidoylphosphoranes ....................... 627
15.4.1.1.2.5 By Formation of One N—C Bond .............................................. 627
15.4.1.1.2.5.1 With Formation of the 1—2 Bond ........................................... 627
15.4.1.1.2.5.1.1 Method 1: From N-(2-Alkenylphenyl)-N¢-arylcarbodiimides ...... 627
15.4.1.1.2.5.1.2 Method 2: From N-(2-Vinylaryl)ureas ................................... 630
15.4.1.1.2.5.1.3 Method 3: From 2-Alkynylphenyl isocyanates ....................... 631
15.4.1.1.2.5.2 With Formation of the 3—4 Bond .......................................... 631
15.4.1.1.2.5.2.1 Method 1: From N-(2-Acylaryl)imidates/Amidines ................. 631
15.4.1.1.2.5.2.2 Method 2: From N-Acetylanthranilates ............................... 632
15.4.1.1.2.5.2.3 Method 3: From 2-(Ethylideneamino)benzonitriles ................ 632
15.4.1.1.2.5.2.4 Method 4: From N-(2-Perfluoroalkyl)phenylketimines ............ 633
15.4.1.1.2.5.3 With Formation of the 4—4a Bond ........................................ 634
15.4.1.1.2.5.3.1 Method 1: From Bis(arylamo) Enones and Acrylates .............. 634
15.4.1.1.2.5.3.2 Method 2: From 3-(Arylamino)acrylonitriles or 3-(Arylamino)acrylamides .......................... 635
15.4.1.1.2.5.3.3 Method 3: From Propynimidamides ................................. 635
15.4.1.1.2.6 By Annulation to the Heterocyclic Ring ................................... 636
15.4.1.2.1 By Formation of Two C—C Bonds ........................................... 636
15.4.1.2.1.1 Method 1: From 2-Amino-6-methylpyridine-3,4,5-tricarbonitrile .... 636
15.4.2 Synthesis by Ring Transformation ............................................. 637
15.4.2.1 By Ring Enlargement .............................................................. 637
15.4.2.2 Formal Exchange of Ring Members with Retention of the Ring Size .... 637
15.4.2.3 By Ring Contraction .............................................................. 638
15.4.3 Synthesis by Substituent Modification .......................................... 638
15.4.3.1 Substitution of Existing Substituents ........................................ 638
15.4.3.1.1 Of Hydrogen ........................................................................ 638
15.4.3.1.1.1 Method 1: Amination (The Chichibabin Reaction) ................. 638
15.4.3.1.2 Of Metals ............................................................................. 639
15.4.3.1.3 Of Carbon Functionalities ...................................................... 639
15.4.3.1.4 Of Heteroatoms ................................................................... 640
15.4.3.1.4.1 Method 1: From Quinoline 1-Oxides ................................ 640
15.4.3.1.4.2 Method 2: Substitution of Heteroatoms in the 2- or 4-Position .... 640
15.4.3.2 Rearrangement of Substituents ................................................ 642

15.5 Product Class 5: Isoquinolines
M. Álvarez and J. A. Joule

15.5 Product Class 5: Isoquinolines ....................................................... 661
15.5.1 Product Subclass 1: Isoquinolines ............................................... 661
15.5.1.1 Synthesis by Ring-Closure Reactions ....................................... 664
15.5.1.1.1 By Annulation to an Arene .................................................. 665
15.5.1.1.1.1 Method 1: From 1,5-Dicarbonyl Compounds ....................... 665
15.5.1.1.1.1.1 Variation 1: From 2-Formylbenzylcarbonyl Compounds .... 665
15.5.1.1.1.1.2 Variation 2: From 1,5-Diketones ...................................... 666
15.5.1.1.1.1.3 Variation 3: From 2-[(Cyclohexylimino)methyl]benzyl Ketones ... 667
15.5.1.1.1.1.2 By Formation of One N—C and One C—C Bond ............... 668
15.5.1.1.1.2.1 With Formation of the 2—3 and 1—8a Bonds ...................... 668
15.5.1.1.1.2.1.1 Method 1: From Arylacetic Acids and Derivatives ........ 668
15.5.1.1.1.2.1.1.1 Variation 1: From Arylacetic Esters .......................... 668
15.5.1.1.1.2.1.1.2 Variation 2: From Arylacetamides ........................... 668
15.5.1.1.1.2.1.1.2 Method 2: From 1-Aryl-2-bromoalkenes and a Nitrile .... 670
15.5.1.1.1.2.1.3 Method 3: From 3-Arylprop-1-enes and a Nitrile ............ 670
15.5.1.1.1.2.1.4 Method 4: From Benzyl Ketones ................................. 671
15.5.1.1.1.2.1.4.1 Variation 1: By Gatterman Reaction .......................... 671
15.5.1.1.1.2.1.4.2 Variation 2: Via ortho Lithiation ............................... 672
15.5.1.1.2.2 With Formation of the 2—3 and 4—4a Bonds ........................................... 672
15.5.1.1.2.2.1 Method 1: From 2-Iodobenzylamine ................................................. 672
15.5.1.1.2.2.2 Method 2: From N-Acetyl-2-iodobenzylamine .................................... 673
15.5.1.1.2.2.3 Method 3: From 1-(2-Iodoaryl)alkan-1-imines ..................................... 673
15.5.1.1.2.2.3.1 Variation 1: From N-tert-Butyl-2-iodoaryl-methanimines and Alkynes .... 673
15.5.1.1.2.2.3.2 Variation 2: From 1-(2-Iodophenyl)alkan-1-imines and Allenes ............ 674
15.5.1.1.2.2.4 Method 4: From 1-Arylalkan-1-imines .................................................. 675
15.5.1.1.2.3 With Formation of the 1—2 and 1—8a Bonds ........................................... 676
15.5.1.1.2.3.1 Method 1: From Arylacetonitriles ....................................................... 676
15.5.1.1.2.3.1.1 Variation 1: Synthesis of 1,3-Dichloroisoquinolines Using Phosgene .... 676
15.5.1.1.2.3.1.2 Variation 2: Synthesis of 3-Chloroisoquinolines Using a Vilsmeier Reaction ..... 676
15.5.1.1.2.3.2 Method 2: Synthesis of 1,2,3,4-Tetrahydroisoquinolines: The Pictet–Spengler Synthesis ............................................................... 677
15.5.1.1.2.3.2.1 Variation 1: Pictet–Spengler Synthesis Using a Superacid ................ 679
15.5.1.1.2.3.2.2 Variation 2: Using an Acyl Chloride ................................................... 680
15.5.1.1.2.3.2.3 Variation 3: Using 2-Aryl-N-(arylsulfonyl)ethylamines ..................... 680
15.5.1.1.2.3.2.4 Variation 4: Using 2-Aryl-N-(phenylsulfonyl)ethylamines with Ethyl Chloro(methylsulfanyl)- or Chloro(phenylselenyl)acetates ...................... 681
15.5.1.1.2.3.2.5 Variation 5: Using N-Acyl- or N-(Alkoxy-carbonyl)-2-arylethylamines .... 682
15.5.1.1.2.3.2.6 Variation 6: Using Carboxyl Component Synthons ............................. 684
15.5.1.1.2.3.2.7 Variation 7: Generation of Intermediates Using Aza-Wittig Reactions ...... 686
15.5.1.1.2.3.3 Method 3: From 2-Arylethylamines, Carboxylic Acids, and Polyphosphoric Acid ............................................................ 688
15.5.1.1.2.3.4 Method 4: Stereo- and Enantioselective Pictet–Spengler-Type Syntheses of 1,2,3,4-Tetrahydroisoquinolines ........................................ 688
15.5.1.1.2.4 With Formation of the 1—2 and 3—4 Bonds ........................................... 691
15.5.1.1.2.4.1 Method 1: From 1,2-Diacylarenes ....................................................... 692
15.5.1.1.2.4.1.1 Variation 1: Using Diethyl [(Triphenylphosphoranylidene)amino]methylphosphonate ................................................................. 692
15.5.1.1.2.4.1.2 Variation 2: From 1,2-Diacylarenes and an Iminophosphorane Generated In Situ ............................................................. 692
15.5.1.1.2.4.2 Method 2: From ortho-Substituted Arenecarbonitriles and Arenecarboxamides ................................................................. 693
15.5.1.1.2.4.2.1 Variation 1: From (2-Cyanophenyl)acetoneitrile ............................. 693
15.5.1.1.2.4.2.2 Variation 2: From 2-Methylbenzonitriles ......................................... 693
15.5.1.1.2.4.2.3 Variation 3: From 3-(2-Cyanophenyl)acrylamide ............................. 694
15.5.1.1.2.4.2.4 Variation 4: From 2-Methylbenzamides ........................................... 694
15.5.1.1.3 By Formation of Two C—C Bonds ......................................................... 694
15.5.1.1.3.1 With Formation of the 1—8a and 4—4a Bonds ........................................ 694
15.5.1.1.3.1.1 Method 1: From 2-Aza-1,3-dienes ....................................................... 694
15.5.1.1.3.1.2 Method 2: From Heterocyclic 2-Aza-1,3-dienes ................................. 695
15.5.1.1.4 By Formation of One N—C Bond ........................................................... 696
15.5.1.1.4.1 With Formation of the 1—2 Bond ......................................................... 696
15.5.1.1.4.1.1 Method 1: From (2-Formylphenyl)acetoneitrile .................................... 696
Method 2: From 3-(2-Acylphenyl)-2-azidoacrylates with Phosphorus(III) Reagents: Intramolecular Aza-Wittig Reactions

Method 3: From 2-(2-Acylaryl)ethylamines

Method 1: From 1-{2-[t(ert-Butylimino)methyl]phenyl}alk-1-ynes

Variation 1: With Proton, Iodine, Sulfur, or Selenium Electrophiles

Variation 2: With Carbon Monoxide and an Electrophile

Variation 3: Vinylation by the Heck Reaction

Variation 4: With Addition of Aryl or Alkyl Halides

Method 2: Palladium(0)-Catalyzed Cyclization of 2-Allylbenzaldehyde O-(Pentafluorobenzoyl)oximes

Method 3: Electrocyclization of 2-Vinylbenzaldehyde Oximes

Method 4: From N-Acetyl-2-(2-acylaryl)ethylamines

Method 5: From 2-(1-Cyano-2-phenylvinyl)benzonitrile

Method 6: From 2-(2,2-Difluorovinyl)benzonitriles

Method 7: From (2-Cyanophenyl)acetonitriles

Method 8: From 2-(Cyanomethyl)benzoic Acids

Method 9: From 2-Vinylbenzaldehyde Imines

Method 10: From Sulfinamides

Method 11: From Chiral 2-[Tosylamino)methyl]phenylacetaldehyde Acetals

Method 12: From a Protected 2-(2-Oxoalkyl)benzonitrile

By Formation of One C–C Bond

With Formation of the 4–4a Bond

Method 1: From 2,2-Dialkoxy-N-benzylideneeethylamine: The Pomeranz–Fritsch Synthesis

Variation 1: From 1-Arylalkylamines and Glyoxal Monoacetal

Variation 2: Pomeranz–Fritsch Syntheses Using Alternative Acids for the Cyclizations

Variation 3: Pomeranz–Fritsch Synthesis Using Ethyl Chloroformate/Trialkyl Phosphite Followed by Titanium(IV) Chloride

Variation 4: From 2,2-Dialkoxy-N-benzylylethylamines in the Presence of an Aldehyde

Variation 5: From 2,2-Dialkoxy-N-(1-Arylalkyl)ethylamines Using Chlorosulfonic Acid

Variation 6: From 2,2-Dialkoxy-N-benzyl-N-tosylethylamines

Variation 7: From 2,2-Dialkoxy-N-(1-arylalkyl)-N-(benzylsulfonyl)ethylamines

Variation 8: From N-Acetyl-2,2-dialkoxy-N-benzylylethylamines

Variation 9: From (Benzylamino)acetates

Method 2: Stereo- and Enantioselective Syntheses of 1,2,3,4-Tetrahydroisoquinolines with Formation of the 4–4a Bond

With Formation of the 1–8a Bond

Method 1: From N-Acyl-2-arylethylamines: The Bischler–Napieralski Synthesis

Table of Contents

15.5.1.3  Synthesis by Substituent Modification .............................................. 744
15.5.1.3.1  Substitution of Existing Substituents ........................................... 744
15.5.1.3.1.1  Of Hydrogen .............................................................................. 744
15.5.1.3.1.1.1  Method 1: Protonation/Deuteration ........................................ 744
15.5.1.3.1.1.2  Method 2: Metalation ............................................................. 745
15.5.1.3.1.1.3  Method 3: Acylation ............................................................... 745
15.5.1.3.1.1.3.1  Variation 1: Reaction with Acyl Radicals ............................ 745
15.5.1.3.1.1.3.2  Variation 2: Electrophilic Acylation ....................................... 746
15.5.1.3.1.1.4  Method 4: Alklyation and Arylation .......................................... 746
15.5.1.3.1.1.4.1  Variation 1: Reaction with Radicals ....................................... 746
15.5.1.3.1.1.4.2  Variation 2: Electrophilic Alkylation ....................................... 747
15.5.1.3.1.1.4.3  Variation 3: Nucleophilic Alkylation/Arylation ......................... 748
15.5.1.3.1.1.4.4  Variation 4: By Rearrangement ............................................. 752
15.5.1.3.1.1.5  Method 5: Halogenation .......................................................... 752
15.5.1.3.1.1.6  Method 6: Sulfonylation and Seleninylation .............................. 754
15.5.1.3.1.1.7  Method 7: Nitration and Nitrosation .......................................... 755
15.5.1.3.1.1.7.1  Variation 1: Electrophilic Substitution .................................... 755
15.5.1.3.1.1.7.2  Variation 2: Nucleophilic Substitution ................................... 757
15.5.1.3.1.1.8  Method 8: Diazoc Coupling ..................................................... 758
15.5.1.3.1.1.9  Method 9: Amination ............................................................... 758
15.5.1.3.1.1.10  Method 10: Hydroxylation ..................................................... 759
15.5.1.3.1.1.11  Method 11: Oxidation ............................................................. 760
15.5.1.3.1.1.12  Method 12: Using Reissert Compounds .................................. 764
15.5.1.3.1.1.12.1  Variation 1: Synthesis of 1-Alkylisoquinolines ....................... 766
15.5.1.3.1.1.12.2  Variation 2: Synthesis of 1-(Hydroxyalkyl)isoquinolines ......... 769
15.5.1.3.1.1.12.3  Variation 3: Synthesis of Isoquinoline-1-carbonitriles .......... 770
15.5.1.3.1.1.12.4  Variation 4: Synthesis of 1-Hetarylisoquinolines .................. 771
15.5.1.3.1.1.12.5  Variation 5: Synthesis of 1-Benzoylisoquinoline .................. 771
15.5.1.3.1.1.12.6  Variation 6: Synthesis of 1-Pyrrol-2-ylisoquinolines ............... 772
15.5.1.3.1.1.12.7  Variation 7: Synthesis of Phenyl 1-Allyl-1,2-dihydroisoquinoline-2-carboxylates .............................................................. 772
15.5.1.3.1.1.13  Method 13: Using N-Oxides .................................................... 773
15.5.1.3.1.1.13.1  Variation 1: Synthesis of Isoquinolines ............................... 773
15.5.1.3.1.1.13.2  Variation 2: Synthesis of 1-Haloisoquinolines ....................... 773
15.5.1.3.1.1.13.3  Variation 3: Synthesis of 1-Acetoxyisoquinolines and Isoquinolin-1(2H)-ones .............................................................. 774
15.5.1.3.1.1.13.4  Variation 4: Synthesis of Isoquinoline-1-carbonitriles ............ 775
15.5.1.3.1.1.13.5  Variation 5: Introduction of Carbon Acids at C1 .................... 776
15.5.1.3.1.1.13.6  Variation 6: Reaction with Dichloroketene .......................... 778
15.5.1.3.1.1.13.7  Variation 7: Reaction with Diketene ................................... 779
15.5.1.3.1.1.13.8  Variation 8: Conversion into 1-Benzoylisoquinolines ............. 779
15.5.1.3.1.1.13.9  Variation 9: Introduction of 1-Nitrogen Substituents ............. 780
15.5.1.3.1.1.13.10  Variation 10: Using 2-(Acylimino)isoquinolinium Salts ......... 782
15.5.1.3.1.1.13.11  Variation 11: Using 2-(2,6-Dimethyl-4-oxo-1,4-dihydro-1-pyridyl)isoquinolinium Salts .............................................................. 782
15.5.1.3.1.1.13.12  Variation 12: Using Isoquinolinium Salts and Ethyl (Trimethylsilyl)acetate or (Trimethylsilyl)acetonitrile ................................. 783

Science of Synthesis Original Edition Volume 15
© Georg Thieme Verlag KG
15.5.1.3.1.2 Of Metals .................................................. 783
Method 1: Substitution of Metalated Isoquinolines .............. 783
Method 2: Metal-Catalyzed Cross Coupling ...................... 785
15.5.1.3.1.3 Of Carbon Functionalities .................................. 786
15.5.1.3.1.4 Of Halogens .................................................. 788
Method 1: Nucleophilic Substitutions .............................. 788
Method 2: Hydrogenolysis of C-Halo Groups .................... 794
Method 3: Exchange of C-Halo Groups ............................ 795
Method 4: Metal-Catalyzed Cross Coupling ...................... 795
15.5.1.3.1.5 Of Oxygen .................................................. 800
Method 1: Modification of Isoquinolin-1(2H)-ones ............... 800
Method 2: Of Hydroxy or Alkoxy Groups ......................... 802
Method 3: Of 4-Toluenesulfonates .................................. 803
15.5.1.3.1.6 Of Sulfur .................................................... 803
Method 1: Of Sulfonic Acids ........................................... 803
15.5.1.3.1.7 Of Nitrogen .................................................. 804
15.5.1.3.2 Modification of Substituents .............................. 805
15.5.1.3.2.1 Of C-Carbon Substituents ............................... 805
Method 1: Carboxy and Related Functional Groups .............. 805
Method 2: Aldehyde, Ketone, and Related Groups ............... 806
Method 3: Alkyl and Hydroxyalkyl Groups ....................... 808
15.5.1.3.2.2 Of C-Oxygen Substituents .............................. 813
15.5.1.3.2.3 Of C-Nitrogen Substituents ............................. 814
15.5.2 Product Subclass 2: Isoquinoline 2-Oxides ............... 815
15.5.2.1 Synthesis by Ring-Closure Reactions .................... 815
15.5.2.1.1 By Annulation to an Arene .............................. 815
15.5.2.1.1.1 By Formation of One N—C Bond .................... 815
15.5.2.1.1.1.1 With Formation of the 2—3 Bond .................. 815
15.5.2.1.1.1.1 Method 1: From 2-Alk-1-ynylbenzaldehyde Oximes 815
15.5.2.2 Synthesis by Ring Transformation ....................... 816
15.5.2.3 Synthesis by Substituent Modification .................... 817
15.5.2.3.1 Substitution of Existing Substituents ................... 817
15.5.2.3.1.1 Of Hydrogen .............................................. 817
15.5.2.3.1.1.1 Method 1: Nitration ................................. 817
15.5.2.3.1.2 Of C-Halogen Substituents ............................ 817
15.5.2.3.1.3 Of N-Oxygen Substituents ........................... 817
15.5.3 Product Subclass 3: Isoquinolinium Salts ................. 817
15.5.3.1 Synthesis by Ring-Closure Reactions .................... 818
15.5.3.1.1 By Annulation to an Arene .............................. 818
15.5.3.1.1 By Formation of Two N—C Bonds .................................................. 818
15.5.3.1.1.1 With Formation of the 1—2 and 2—3 Bonds ........................................ 818
15.5.3.1.1.1 Method 1: From 1,5-Diketones .................................................... 818
15.5.3.1.2 By Formation of One N—C and One C—C Bond ................................. 819
15.5.3.1.2.1 With Formation of the 2—3 and 4—4a Bonds .................................. 819
15.5.3.1.1.1 With Formation of the 1—2 and 2—3 Bonds ........................................ 820
15.5.3.1.3 By Formation of One N—C Bond ..................................................... 820
15.5.3.1.3.1 With Formation of the 1—2 Bond .................................................. 820
15.5.3.1.4 By Formation of One C—C Bond ..................................................... 820
15.5.3.1.4.1 With Formation of the 1—8a Bond ................................................ 820
15.5.3.2 Synthesis by Ring Transformation ...................................................... 820
15.5.3.2.1 Method 1: From Isoquinolines ......................................................... 820
15.5.3.2.2 Method 2: From 2-Benzopyrylium Salts ............................................. 823
15.5.3.2.3 Method 3: From 2-Alkyl-1,2-dihydro- and 2-Alkyl-1,2,3,4-tetrahydro-isoquinolines ..................................................... 824
15.5.3.2.4 Method 4: From 5H-2,3-Benzodiazipines ............................................ 824
15.5.3.2.5 Method 5: From 1a,6a-Dihydroinden[1,2-b]azirin-6(1H)-ones ............... 825
15.5.3.3 Synthesis by Substituent Modification ............................................... 825
15.5.3.3.1 Substitution of Existing Substituents ............................................... 825
15.5.3.3.1.1 Of Hydrogen .................................................................................. 825
15.5.3.3.1.1 Method 1: Oxidation ................................................................. 825
15.5.3.3.2 Modification of Substituents ............................................................ 825
15.5.3.3.2.1 Of C-Carbon Substituents ......................................................... 825
15.5.3.3.2.2 Of C-Oxygen Substituents ......................................................... 826
15.5.3.3.2.3 Of N-Carbon Substituents ......................................................... 826
15.5.3.3.2.4 Of N-Nitrogen Substituents .......................................................... 827
15.6 Product Class 6: Isoquinolinones
   M. Álvarez and J. A. Joule

15.6.1 Product Class 6: Isoquinolinones ......................................................... 839
15.6.1.1 Product Subclass 1: Isoquinolin-1(2H)-ones ....................................... 841
15.6.1.1.1 Synthesis by Ring-Closure Reactions .............................................. 841
15.6.1.1.1 By Annulation to an Arene ............................................................ 841
15.6.1.1.1 By Formation of One N—C and One C—C Bond ............................... 841
15.6.1.1.1.1 With Formation of the 1—2 and 3—4 Bonds .................................. 841
15.6.1.1.1.1 Method 1: From 2-Acylbenzoates ................................................. 841
15.6.1.1.1.2 Method 2: From N,N-Diethyl-2-methylbenzamides and Imines ........ 842
15.6.1.1.1.3 Method 3: Self-Condensation of Potassium 2-(Cyanomethyl)benzoate . 843
15.6.1.1.1.2 With Formation of the 2—3 and 3—4 Bonds .................................. 844
15.6.1.1.1.2 Method 1: From (2-Alkylaryl)carboxamides .................................. 844
15.6.1.1.1.1 Variation 1: From 2-Methylbenzamides ................................ 844
15.6.1.1.1.1.2 Variation 2: From O-Methyl-2-alkylbenzohydroxamates .......... 845
15.6.1.1.1.1.2.1 Method 2: From 2-Methylisophthalonitrile ..................... 845
15.6.1.1.1.1.2.1.1 Method 3: From 2-Alkynylbenzonitriles ..................... 846
15.6.1.1.1.1.2.4 Method 4: From 2-Methylbenzoic Acid Hydrazides .......... 846
15.6.1.1.1.1.3 With Formation of the 2—3 and 4—4a Bonds .................... 847
15.6.1.1.1.1.3.1 Method 1: From N-Methylbenzamide .......................... 847
15.6.1.1.1.1.4 By Formation of One N—C Bond ..................................... 848
15.6.1.1.1.1.4.1 With Formation of the 1—2 Bond ..................................... 848
15.6.1.1.1.1.4.1.1 Method 1: From 2-(Cyanomethyl)benzoates ................. 848
15.6.1.1.1.1.4.1.2 Method 2: From Methyl 2-(Oxazol-5-yl)benzoates .......... 848
15.6.1.1.1.1.4.1.3 Method 3: From 2-[2-(Hydroxyimino)ethyl]benzoic Acid ..... 849
15.6.1.1.1.1.4.1.4 Method 4: From Chiral 2-(2-Aminoethyl)benzamides ........ 849
15.6.1.1.1.1.4.1.5 Method 5: From Alkyl 2-(2-Aminoethyl)benzoates .......... 850
15.6.1.1.1.1.4.2 With Formation of the 2—3 Bond ..................................... 850
15.6.1.1.1.1.4.2.1 Method 1: From 2-(1-Cyano-2-phenylvinyl)benzonitrile .... 850
15.6.1.1.1.1.4.2.2 Method 2: From Azidocinnamates with Phosphorus(III) Reagents: Intramolecular Aza-Wittig Reactions ............................................... 851
15.6.1.1.1.1.4.2.3 Method 3: From 2-[2-(Dimethylamino)vinyl]isophthalonitrile .... 852
15.6.1.1.1.1.4.2.4 Method 4: From 2-(2-Ethoxyvinyl)benzonitrile ............. 852
15.6.1.1.1.1.4.2.5 Method 5: From Benzamides ....................................... 853
15.6.1.1.1.1.4.2.5.1 Variation 1: From 2-Halobenzamides ...................... 853
15.6.1.1.1.1.4.2.5.2 Variation 2: From 2-Cyanobenzyl Ketones ...... 853
15.6.1.1.1.1.4.2.6 Method 6: From 2-Bromobenzamide ............................ 854
15.6.1.1.1.1.4.2.7 Method 7: From 2-Chloro-5-nitrobenzonitrile ................. 854
15.6.1.1.1.1.4.2.8 Method 8: From 2-(2-Phenylvinyl)benzamide and N-(Phenylselenyl)succinimide .......... 855
15.6.1.1.1.1.4.2.9 Method 9: From 2-(2-Hydroxyethyl)benzamides .......... 855
15.6.1.1.1.5 By Formation of One C—C Bond ......................................... 856
15.6.1.1.1.5.1 With Formation of the 1—8a Bond ..................................... 856
15.6.1.1.1.5.1.1 Method 1: From the Acyl Azide of a Cinnamic Acid .......... 856
15.6.1.1.1.5.1.2 Method 2: From 2-Phenylvinyl Isothiocyanates .............. 858
15.6.1.1.1.5.1.3 Method 3: From 2-Arylethanamine Carbamates ............... 858
15.6.1.1.1.5.2 With Formation of the 3—4 Bond ..................................... 858
15.6.1.1.1.5.2.1 Method 1: From Phosphorylated 2-Aroylbenzamides .......... 858
15.6.1.1.1.5.2.2 Method 2: From N-Acylbenzamides ............................ 859
15.6.1.1.1.5.2.3 Method 3: From N-Alkyl-N-(silylmethyl)benzamides .......... 860
15.6.1.1.1.5.3 With Formation of the 4—4a Bond ..................................... 860
15.6.1.1.1.5.3.1 Method 1: From Allenes ............................................. 860
15.6.1.1.1.5.3.2 Method 2: From N-(2,2-Dimethoxyethyl)benzamides .......... 861
15.6.1.1.2 By Annulation to a Pyridine ............................................... 861
15.6.1.1.2.1 By Formation of Two C—C Bonds ....................................... 861
15.6.1.1.2.1.1 With Formation of the 4a—5 and 8—8a Bonds .................... 861

**Method 1**: Protonation/Deuteration 875

**Method 2**: Acylation 876

**Method 3**: Alkylation at Carbon 877

**Method 4**: Alkylation at Nitrogen 878

**Method 5**: Halogenation 879

**Method 6**: Nitration 880

**Method 7**: Oxidation 881

**Method 8**: Using Copper Salts 882

**Method 9**: By Lithiation of Isobenzofuran-1(3H)-ones 883

**Method 10**: From 1-(Trimethylsiloxy)isoquinolines 884

**Method 11**: Synthesis from 1-(Allyloxy)isoquinoline 885

**Method 12**: From Isoindolones 886

**Method 13**: Synthesis from Indanones 887

**Method 14**: From 2-(Carboxymethyl)benzoic Acids 888

**Method 15**: From Benzopyrancarbonitriles 889
Method 2: Metal-Catalyzed Cross Coupling ........................................ 884
Of Oxygen .......................................................................................... 885
Method 1: Reduction of 2-Hydroxyisoquinolin-1(2H)-ones .................. 885
Method 2: Conversion into Isoquinolin-1(2H)-thiones ....................... 885
Modification of Substituents ............................................................... 886
Of C-Carbon Substituents ................................................................. 886
Method 1: Modification of Carboxyl and Related Functional Groups .... 886
Method 2: Modification of Carbonyl and Related Groups .................. 886
Method 3: Modification of Alkyl and Hydroxyalkyl Groups ............... 886
Of C-Oxygen Substituents ................................................................. 887
Method 1: Modification of a 4-Hydroxy Substituent ......................... 887
Of C-Nitrogen Substituents ............................................................... 887
Product Subclass 2: Isoquinolin-3-ones and Isoquinolin-3-ols .......... 888
Synthesis by Ring-Closure Reactions .................................................. 888
By Annulation to an Arene ................................................................. 888
By Formation of Two N—C Bonds ...................................................... 888
With Formation of the 1—2 and 2—3 Bonds ........................................ 888
Method 1: From 1,5-Dicarbonyl Compounds ..................................... 888
Variation 1: From Alkyl (2-Acylphenyl)acetates ............................... 888
Variation 2: From 2-(2-Formylphenyl)-N,N-dimethylacetamides .......... 889
Variation 3: From Homophthalic Acids .............................................. 889
By Formation of One N—C and One C—C Bond ............................... 890
With Formation of the 1—8a and 2—3 Bonds ...................................... 890
Method 1: From Phenylacetyl Chlorides and Imidoyl Chlorides .......... 890
With Formation of the 1—8a and 1—2 Bonds ...................................... 890
Method 1: From Phenylacetamides and Hexamethylenetetramine ........ 890
By Formation of Two C—C Bonds ...................................................... 891
With Formation of the 4—4a and 1—8a Bonds ...................................... 891
Method 1: From Benzo-1,4-quinones .................................................. 891
By Formation of One N—C Bond ....................................................... 892
With Formation of the 2—3 Bond ....................................................... 892
Method 1: From (2-Cyanoaryl)acetyl Chlorides ............................... 892
Method 2: From Methyl (2-Cyanoaryl)acetates .................................. 893
By Formation of One C—C Bond ....................................................... 893
With Formation of the 4—4a Bond ...................................................... 893
Method 1: From N-Benzyl-2,2-diethoxyacetamides .......................... 893
Method 2: From N-Benzyl-2-hydroxy-2-phenylacetamide .................. 894
Method 3: From N-Benzyl-N-tert-butyl-2-(2-sulfinylphenyl)acetamides .. 895
15.6.2.1.2 From Acyclic Precursors ................................................... 895
15.6.2.1.2.1 By Formation of Two C—C bonds ........................................... 895
15.6.2.1.2.1.1 With Formation of the 4a—8a and 7—8 Bonds .............................. 895
15.6.2.1.2.1.1.1 Method 1: From N-Prop-2-ynylhexadienlamides .................... 895
15.6.2.2 Synthesis by Ring Transformation ........................................ 896
15.6.2.2.1 Method 1: From Isoquinolin-3-amines ........................................ 896
15.6.2.2.2 Method 2: From Benzo[c]pyrylium Salts ....................................... 896
15.6.2.2.3 Method 3: By Dehydrogenation of 1,4-Dihydroisoquinolin-3(2H)-ones . 897
15.6.2.2.3.1 Variation 1: Without Incorporating Other Substituents ....................... 897
15.6.2.2.3.2 Variation 2: With Incorporation of a 4-Alkyl Group ......................... 898
15.6.2.2.3.3 Variation 3: With Incorporation of a 4-Halogen ................................ 899
15.6.2.2.3.4 Variation 4: With Incorporation of a 4-Oxygen ................................ 900
15.6.2.3 Synthesis by Substituent Modification ........................................ 900
15.6.2.3.1 Substitution of Existing Substituents ........................................... 900
15.6.2.3.1.1 Of Hydrogen .............................................................. 900
15.6.2.3.1.1.1 Method 1: Halogenation .................................................. 900
15.6.2.3.1.1.2 Method 2: Nitrification and Nitrosation .................................. 901
15.6.2.3.2 Modification of Substituents .................................................. 901
15.6.2.3.2.1 Of C-Oxygen Substituents ................................................... 901
15.6.2.3.2.2 Of C-Nitrogen Substituents ................................................... 902

15.7 Product Class 7: Quinolizinium Salts and Benzo Analogues
H. Ihmels

15.7.1.1.1 Synthesis by Ring-Closure Reactions .......................................... 909
15.7.1.1.1.1 By Annulation to an Arene ................................................. 909
15.7.1.1.1.1.1 By Formation of One N—C and One C—C Bond ......................... 909
15.7.1.1.1.1.1 Method 1: From 2-Pyridylacetonitrile and β-Dicarbonyl Derivatives .... 909
15.7.1.1.1.1.2 Method 2: From Ethyl 2-Pyridylacetate and 3-Ethoxyprop-2-en-1-one Derivatives .................................................. 909
15.7.1.1.1.2 By Formation of Two C—C Bonds ........................................... 910
15.7.1.1.1.2.1 Method 1: From 1,2-Dialkylpyridinium Salts and 1,2-Diketones ........ 910
15.7.1.1.1.3 By Formation of One N—C Bond ............................................ 911
15.7.1.1.1.3 Method 1: Cyclization of Hydroxy-Substituted 1-Oxo-4-(2-pyridyl)butane Derivatives ............................................... 911
15.7.1.1.1.3.1 Variation 1: Cyclization of 4-Alkoxy-1-(2-pyridyl)pent-3-en-2-ol Derivatives 911
15.7.1.1.1.3.2 Variation 2: Cyclization of 4,4-Dialkoxy-1-(2-pyridyl)butan-2-ol Derivatives 912
15.7.1.1.1.3.3 Variation 3: From 8-[(Dimethylamino)methylene]-5H-pyrano[4,3-b]pyridine-5,7(8H)-dione .... 913
Method 2: Cyclization of 4,4-Bis(methylsulfanyl)-1-(2-pyridyl)but-3-en-2-ol Derivatives ................................................. 914

By Formation of One C—C Bond .................................................. 915

Method 1: Cyclization of 2-(1,3-Dioxolan-2-yl)-1-(2-oxopropyl)pyridinium Derivatives ................................................. 915

Method 2: Cyclization of 2-Acetyl-1-(2-oxoethyl)pyridinium Derivatives .......................................................... 915

Aromatization ........................................................................... 916

Method 1: Of 1-Oxo-1,2,3,4-tetrahydroquinolizinium Derivatives .......................................................... 916

Method 2: Of 2H-Quinolizin-2-one ............................................... 917

Method 3: Of Dihydroquinolizine and Tetrahydroquinolizinium Derivatives .......................................................... 917

Synthesis by Substituent Modification ......................................... 919

Substitution of Existing Substituents .......................................... 919

Of Hydrogen ............................................................................... 919

Method 1: Introduction of Bromine ............................................... 919

Method 2: Introduction of Nitrogen Substituents ....................... 919

Of Carbon Functionalities ......................................................... 920

Method 1: Cleavage of C—C Bonds ............................................. 920

Of Heteroatoms ........................................................................ 920

Method 1: Stille Coupling of Bromoquinolizinium Derivatives .......................................................... 920

Method 2: Replacement of a Diazonium Group by Bromine ........ 921

Method 3: Replacement of Halogens ............................................ 922

Modification of Substituents ......................................................... 922

Method 1: Oxidation of Methyl Groups ........................................ 922

Method 2: Oxidation of Benzo[b]quinolizinium Derivatives ........ 923

Method 3: Reduction of Methoxycarbonyl Groups ..................... 923

Method 4: Knoevenagel-Type Condensation of Methylquinolizinium Derivatives .......................................................... 923

Product Subclass 2: Benzo[b]quinolizinium Salts .............................. 924

Synthesis by Ring-Closure Reactions ........................................... 924

By Annulation to an Arene .......................................................... 924

By Formation of One N—C and One C—C Bond ......................... 924

Method 1: From 2-Benzylpyridine Derivatives and Acylating Reagents .......................................................... 924

Method 2: From 2-Benzylpyridine Derivatives and Alkynes ........... 924

By Formation of One N—C Bond .................................................. 925

Method 1: Cyclization of 2-(2-Pyridylmethyl)benzaldehyde Oxime Derivatives .......................................................... 925

Method 2: Cyclization of 2-(2-Pyridylmethyl)benzonitrile Derivatives .......................................................... 926

Method 3: Cyclization of [2-(Chloromethyl)phenyl][2-pyridyl]methanol Derivatives .......................................................... 927

By Formation of One C—C Bond .................................................. 928
15.7.2.1.3.1 Method 1: Cyclization of 1-Benzyl-2-formylpyridinium Derivatives ........................................ 928

15.7.2.2 Method 1: Aromatization ....................................................... 930

15.7.2.2.1 Method 1: Of 7,8-Dioxo-7,8-dihydrobenzo[b]quinolizinium Derivatives ........................................ 930

15.7.2.2.2 Method 2: Of 1-Oxo-1,2,3,4-tetrahydrobenzo[b]quinolizinium Derivatives ........................................ 930

15.7.2.2.3 Method 3: Of 6H-Benzo[b]quinolizine-6-carbonitrile Derivatives ........................................ 931

15.7.2.2.4 Method 4: Of 7,8,9,10-Tetrahydro-7,8,9,10-tetrahydrobenzo[b]quinolizinium Derivatives ........................................ 932

15.7.2.3 Method 1: Synthesis by Substituent Modification ........................................ 932

15.7.2.3.1 Method 2: Substitution of Existing Substituents ........................................ 932

15.7.2.3.1.1 Method 1: Of Hydrogen ....................................................... 932

15.7.2.3.1.1.1 Method 1: Introduction of Bromine ....................................................... 932

15.7.2.3.1.1.2 Method 2: Introduction of Nitrogen Substituents ........................................ 933

15.7.2.3.1.1.3 Method 3: Introduction of Sulfur Substituents ........................................ 934

15.7.3 Product Subclass 3: Benzo[c]quinolizinium Salts ........................................ 934

15.7.3.1 Method 1: Synthesis by Ring-Closure Reactions ........................................ 934

15.7.3.1.1 Method 1: By Annulation to an Arene ........................................ 934

15.7.3.1.1.1 Method 1: By Formation of One N—C and One C—C Bond ........................................ 934

15.7.3.1.1.1.1 Method 1: Condensation between Pyrylium Salts and 2-Aminobenzaldehyde ........................................ 934

15.7.3.1.1.1.2 Method 1: By Formation of One N—C Bond ........................................ 935

15.7.3.1.1.2 Method 1: Cyclization of 2-[2-(2-Chlorophenyl)vinyl]pyridine Derivatives ........................................ 935

15.7.3.1.1.2.1 Method 2: Cyclization of 1-(2-Chlorophenyl)-2-(2-pyridyl)ethanone Derivatives ........................................ 936

15.7.3.2 Method 1: Aromatization ....................................................... 936

15.7.3.2.1 Method 1: Of 4-Oxo-1,2,3,4-tetrahydropyridobenzo[c]quinolizinium Derivatives ........................................ 936

15.7.3.3 Method 1: Synthesis by Substituent Modification ........................................ 937

15.7.3.3.1 Method 1: Substitution of Existing Substituents ........................................ 937

15.7.3.3.1.1 Method 1: Of Hydrogen ....................................................... 937

15.7.3.3.1.1.1 Method 1: Introduction of Nitrogen Substituents ........................................ 937

15.7.3.3.1.1.2 Method 2: Introduction of Sulfur Substituents ........................................ 938

15.7.3.3.2 Method 1: Modification of Substituents ........................................ 938

15.7.3.3.2.1 Method 1: Knoevenagel-Type Condensation of Methylbenzo[c]quinolinizinium Derivatives ........................................ 938

15.7.4 Product Subclass 4: Benzo[a]quinolizinium Salts ........................................ 938

15.7.4.1 Method 1: Synthesis by Ring-Closure Reactions ........................................ 938

15.7.4.1.1 Method 1: By Annulation to an Arene ........................................ 938

15.7.4.1.1.1 Method 1: By Formation of One N—C and One C—C Bond ........................................ 938
15.7.1.1.1 Method 1: From N-Alkylated 1-Alkylisoquinolinium Salts and 1,2-Diketones .................................................. 938
15.7.1.1.2 By Formation of Two C—C Bonds ........................................... 939
15.7.1.1.2.1 Method 1: From Isoquinolinium Salts and Mesityl Oxide ................. 939
15.7.1.1.3 By Formation of One C—C Bond .................................................. 939
15.7.1.1.3.1 Method 1: Cyclization of 1-(2-Oxoalkyl)-2-phenylpyridinium Derivatives · 939
15.7.1.1.3.2 Method 2: Cyclization of 1-Styrylpyridinium Derivatives ................ 940
15.7.2 Synthesis by Ring Transformation .................................................. 941
15.7.2.1 Method 1: Ring Contraction of Pyrido[2,1-b][1,3]benzothiazepinium Derivatives ........................................ 941
15.7.3 Aromatization ................................................................. 941
15.7.3.1 Method 1: Of 1-Oxo-1,2,3,4-tetrahydrobenzo[a]quinolizinium Derivatives ........................................ 941
15.7.4 Synthesis by Substituent Modification ........................................ 942
15.7.4.1 Substitution of Existing Substituents ........................................ 942
15.7.4.1.1 Of Hydrogen .............................................................. 942
15.7.4.1.1.1 Method 1: Introduction of Nitrogen Substituents ........................... 942

15.8 Product Class 8: Naphthyridines
P.-W. Phuan and M. C. Kozlowski

15.8 Product Class 8: Naphthyridines ........................................ 947
15.8.1 Synthesis by Ring-Closure Reactions ........................................... 949
15.8.1.1 By the Direct Formation of Naphthyridine Rings ............................ 949
15.8.1.1.1 Method 1: Friedel–Crafts Tetraacylation of 2-Methylpropene ............. 949
15.8.1.1.2 By Formation of Two N—C Bonds .......................................... 951
15.8.1.1.2.1 Method 1: Multiple Iminoalkylation of Alkenes with the Vilsmeier Reagent, Followed by Cyclization .................. 951
15.8.1.1.2.2 Method 2: Conversion of a Pyranylideneiminium Salt ............... 952
15.8.1.2 By Annulation to the Heterocyclic Ring .................................... 952
15.8.1.2.1 By Formation of Two N—C Bonds .......................................... 952
15.8.1.2.1.1 Method 1: The Sonogashira Reaction ..................................... 952
15.8.1.2.1.1.1 Variation 1: Electrophilic Ring Closure of Iminoalkynes .......... 955
15.8.1.2.2 By Formation of One N—C and One C—C Bond ........................ 956
15.8.1.2.2.1 Method 1: The Skraup Reaction ............................................. 956
15.8.1.2.2.2 Method 2: Ethoxymethylenemalonic Ester Condensation ............. 959
15.8.1.2.2.3 Method 3: The Heck Reaction .............................................. 964
15.8.1.2.2.4 Method 4: The Suzuki and Stille Reactions ............................. 966
15.8.1.2.2.4.1 Variation 1: Synthesis of Thieno-Fused Naphthyridines via a Suzuki Coupling ........................................... 966

Product Class 14: $1\lambda^5$-Phosphinines

R. Streubel

Method 1: By Ligand Displacement with $1\lambda^3$-Phosphinines

Product Class 14: $1\lambda^5$-Phosphinines

Synthesis by Ring Transformation

Method 1: Reaction of Primary Phosphines with Pyrylium Salts in the Presence of Nucleophiles

Method 2: Oxidation of $1\lambda^3$-Phosphinines to $1\lambda^5$-Phosphinines

Variation 1: Consecutive Reaction of $1\lambda^3$-Phosphinines with Nucleophiles and Electrophiles

Variation 2: Addition of Radicals to $1\lambda^3$-Phosphinines

Variation 3: Consecutive Reaction of $1\lambda^3$-Phosphinines with Electrophiles and Nucleophiles

Variation 4: Oxidative Addition of Protic Nucleophiles

Variation 5: Reaction of $1\lambda^3$-Phosphinine Dianions with Electrophiles

Method 3: Thermal Ring Contraction of a 1-Phosphacyclonona-2,4,8-triene

Aromatization

Method 1: Dehydrobromination of a 1,1-Diphenylphosphinanium Bromide

Method 2: Reaction of 1,2,3,4-Tetrahydro- and 1,2- and 1,4-Dihydro-$1\lambda^5$-phosphinine 1-Oxides with Alkylating Agents in the Presence of Base

Method 3: Reaction of 1,2,5,6-Tetrahydro-$1\lambda^5$-phosphinine 1-Oxides with Phosphorus Pentachloride

Method 4: Rearrangement of 1,2- and 1,4-Dihydro-$1\lambda^3$-phosphinines

Variation 1: Acid-Catalyzed Rearrangement

Variation 2: Thermal Rearrangement

Synthesis by Substituent Modification

Substitution of Existing Substituents

Method 1: C2 Acylation of 4-Aryl-Substituted $1\lambda^5$-Phosphinines

Method 2: Transformation of 4-Methyl- into 4-(Arylazo)-$1\lambda^5$-phosphinines

Method 3: Substitution of $P$-Substituents of $1\lambda^5$-Phosphinines

Variation 1: Substitution of Halogen Substituents

Variation 2: Substitution of Other Functional Groups

Decomplexation of (2,3,4,5,6-$\eta$)-$1\lambda^5$-Phosphinine Complexes

Product Subclass 2: (2,3,4,5,6-$\eta$)-$1\lambda^5$-Phosphinine Complexes

Synthesis by Complexation of $1\lambda^5$-Phosphinines
Method 1: Reaction of 1\(\lambda^2\)-Phosphinines with Metal(0)–Carbonyl Complexes ........................................ 1175

Synthesis by Reaction of \(\eta^1\)-1\(\lambda^3\)-Phosphinine Complexes .......................... 1176

Method 1: Consecutive Reaction of 1\(\lambda^3\)-Phosphinine Complexes with Nucleophiles and Electrophiles ............................ 1176

Product Class 15: Benzo-Fused And Other Annulated Phosphinines
U. Bergsträßer

Product Class 15: Benzo-Fused And Other Annulated Phosphinines ........................ 1181

Product Subclass 1: Phosphinolines .......................................................... 1182

Synthesis by Ring-Closure Reactions .................................................. 1182

By Formation of One P—C and One C—C Bond ................................ 1182

Method 1: From a Phosphaalkyne ......................................................... 1182

Synthesis by Ring Transformation .................................................... 1182

Formal Exchange of Ring Members with Retention of the Ring Size ............. 1182

Method 1: Oxygen–Phosphorus Exchange from a Naphthopyrylium Salt 1182

Aromatization ..................................................................................... 1183

Method 1: From a 1,2-Dihydrophosphinoline ........................................ 1183

Synthesis by Substituent Modification ............................................. 1183

Method 1: Substitution of Hydrogen .................................................. 1183

Product Subclass 2: Isophosphinolines ................................................ 1184

Synthesis by Ring-Closure Reactions ................................................ 1184

By Formation of One P—C and One C—C Bond ................................ 1184

Method 1: From Phosphaalkenes and Phosphaalkynes ............................ 1184

Synthesis by Ring Transformation .................................................... 1186

By Ring Contraction .......................................................................... 1186

Method 1: From Polycyclic Phosphaalkenes ......................................... 1186

Aromatization ..................................................................................... 1186

Method 1: Desulfuration of a 1,2-Dihydroisophosphinoline 2-Sulfide ....... 1186

Method 2: Dehydrohalogenation of 2-Chloro-1,2-dihydroisophosphinolines ................................................................. 1187

Product Subclass 3: Acidophosphines .................................................. 1188

Aromatization ..................................................................................... 1188

Method 1: From 5-Chloro-5,10-dihydroacridophosphines ....................... 1188

Product Subclass 4: Benzo[c]phosphinolines ....................................... 1189

Aromatization ..................................................................................... 1189

Method 1: From 5,6-Dihydrobenzo[c]phosphinolines ............................. 1189

1. Introduction .............................................................. 1

16.1 Product Class 1: 1,2-Dioxins and Benzo- and Dibenzo-Fused Derivatives  
M. Matsumoto

16.1 Product Class 1: 1,2-Dioxins and Benzo- and Dibenzo-Fused Derivatives  
. 13

16.2 Product Class 2: 1,4-Dioxins and Benzo- and Dibenzo-Fused Derivatives  
M. Matsumoto

16.2 Product Class 2: 1,4-Dioxins and Benzo- and Dibenzo-Fused Derivatives  
. 15

16.2.1 Synthesis by Ring-Closure Reactions  
. 18

16.2.1.1 By Formation of Two O—C Bonds  
. 18

16.2.1.1.1 Fragments O—C—C—O and C—C  
. 18

16.2.1.1.1 Method 1: 1,4-Benzodioxins by Condensation of Benzene-1,2-diols with an Unsaturated Dielectricphile  
. 18

16.2.1.1.2 Method 2: Dibenzo[b,e][1,4]dioxins by Base-Induced Coupling of Benzene-1,2-diols with Activated Chlorobenzenes  
. 19

16.2.1.1.3 Method 3: Dibenzo[b,e][1,4]dioxins from Benzene-1,2-diols and 1,2-Dichlorobenzenes Activated by Complexation with Metals  
. 20

16.2.1.1.2 Fragments O—C—C and O—C—C  
. 21

16.2.1.2.1 Method 1: Dibenzo[b,e][1,4]dioxins from 2-(2-Halophenoxy)phenolates  
. 21

16.2.2 Aromatization  
. 23

16.2.2.1 Method 1: 1,4-Dioxins by Elimination of Halogens or Hydrogen Halides from Polyhalo-1,4-dioxanes  
. 23

16.2.2.2 Method 2: 1,4-Dioxins by Elimination of Methanol from 2,5-Dimethoxy-1,4-dioxanes  
. 24

16.2.2.3 Method 3: 1,4-Benzodioxins by Elimination of Bromine or Hydrogen Bromide from 2,3-Dibromo-2,3-dihydro-1,4-benzodioxins  
. 25

16.2.2.4 Method 4: 1,4-Benzodioxins by Elimination of Water from 2-Hydroxy-2,3-dihydro-1,4-benzodioxins  
. 26
16.2.3 Synthesis by Substituent Modification ........................................... 27
16.2.3.1 Substitution of Existing Substituents ........................................... 27
16.2.3.1.1 Of Hydrogen ................................................................. 27
16.2.3.1.1.1 Method 1: Friedel–Crafts Acylation of 1,4-Benzodioxins Bearing
an Electron-Withdrawing Substituent at the 2-Position ............... 27
16.2.3.1.1.2 Method 2: Friedel–Crafts Acylation of Dibenzo[\textit{b,e}][1,4]dioxins
................................................... 27
16.2.3.1.1.3 Method 3: Lewis Acid Catalyzed Acylation of 2-(Trimethylsilyl)1,4-benzodioxin ........................................... 28
16.2.3.1.1.4 Method 4: Polyhalogenated Dibenzo[\textit{b,e}][1,4]dioxins by Direct
Halogenation of Dibenzo[\textit{b,e}][1,4]dioxins with Chlorine or
Bromine ................................................... 28
16.2.3.1.1.4.1 Variation 1: Halogenation with Inorganic Chlorides or Bromides .. 29
16.2.3.1.1.5 Method 5: Nitration of Dibenzo[\textit{b,e}][1,4]dioxins ...................... 30
16.2.3.1.2 Of Metals ........................................................................ 30
16.2.3.1.2.1 Method 1: 2-Substituted 1,4-Benzodioxins from 2-Lithio-1,4-benzodioxins
................................................... 30
16.2.3.1.2.2 Method 2: 1-Monosubstituted and 1,9-Disubstituted Dibenzo[\textit{b,e}][1,4]-
dioxins from 1-Lithio- or 1,9-Dilithiodibenzo[\textit{b,e}][1,4]dioxin ...... 32
16.2.3.1.2.3 Method 3: 5-Substituted 1,4-Benzodioxins via Lithiation of
\textit{n}\textsuperscript{1}-Chromium(0) Complexes of 1,4-Benzodioxins ........... 33
16.2.3.1.2.4 Method 4: Metal-Catalyzed Coupling of 1,4-Benzodioxin-2-ylmagnesium
Bromide with Halides ........................................... 33
16.2.3.1.3 Of Heteroatoms .................................................................. 33
16.2.3.1.3.1 Method 1: Metal-Catalyzed Coupling of 2-Bromo-1,4-benzodioxin with
Organometallics ........................................... 33
16.2.3.1.3.2 Method 2: Sandmeyer Reaction of Polychlorodibenzo[\textit{b,e}][1,4]-
dioxinamines ........................................... 34
16.2.3.2 Modification of Substituents .................................................... 35
16.2.3.2.1 Method 1: Dibenzo[\textit{b,e}][1,4]dioxinamines by Reduction of
Nitrodibenzo[\textit{b,e}][1,4]dioxins ........................................... 35
16.2.3.2.2 Method 2: 1,4-Dioxins by Isomerization of Exocyclic Double Bonds of
Substituted 1,4-Dioxanes ........................................... 35
16.2.3.2.3 Method 3: Diels–Alder Addition of 2,3-Bis(methylene)-2,3-dihydro-
1,4-dioxin with Dienophiles ........................................... 36
16.3 Product Class 3: 1,2-Dithiins
R. Sato
16.3 Product Class 3: 1,2-Dithiins ............................................................. 39
16.3.1 Synthesis by Ring-Closure Reactions ............................................. 41
16.3.1.1 By Formation of One S—S Bond ............................................. 41
16.3.1.1.1 Method 1: Ring Closure of Butan-1,3-diene-1,4-dithiol .............. 41
16.3.1.1.1.1 Variation 1: Synthesis of 1,2-Dithiin .................................. 41
16.3.1.1.1.2 Variation 2: Synthesis of a Substituted 1,2-Dithiin ............... 41
16.3.1.1.1.3 Variation 3: Synthesis of 1,2-Dithiin-3,6-diyldimethanol ........ 42
16.3.1.1.4 Variation 4: Synthesis of Thiarubrine A .......................... 43
16.3.1.1.2 Method 2: Synthesis from 1,1’-Binaphthalene-2,2’-dithiol .... 44
16.3.1.1.3 Method 3: Synthesis from Biphenyl-2,2’,6,6’-tetrol .......... 45
16.3.1.1.4 Method 4: Ring Closure with Sulfur Monochloride ........ 45
16.3.1.1.5 Method 5: Synthesis via the Thermolysis or Photolysis of 1,9-Bis(methylsulfanyl)dibenzo[b,d]thiophene ...................... 46
16.3.1.1.6 Method 6: Synthesis of 1,4-Dihydro-2,3-benzodithiin ...... 46
16.3.1.1.7 Method 7: Synthesis of 1,4-Diphenyl-1,4-dihydro-2,3-benzodithiin ................................. 47
16.3.2 Synthesis by Ring Transformation ................................. 48
16.3.2.1 Method 1: Synthesis from 1,2,3-Benzothiadiazole .......... 48
16.3.2.2 Method 2: Synthesis of [1]Benzothieno[2,3-b]:5,6[1,2]dithiino[4,3-b][1]-benzothiophene ......................... 48
16.3.3 Synthesis by Other Methods ........................................ 49
16.3.3.1 Method 1: Reaction of Diphenylmethanethione with Tetracyanoethene ......................... 49
16.3.4 Synthesis by Substituent Modification ............................ 50
16.3.4.1 Addition of Heteroatoms ........................................ 50
16.3.4.1.1 Formation of a Sulfonium Salt ............................. 50
16.3.4.1.1.1 Method 1: Synthesis of 3-(Methylsulfanyl)dinaphtho[1,2-e:2’,1’-c][1,2]-dithiin-3-ium Salt .......... 50
16.3.4.1.2 Oxidation of the Dithiin Ring ................................ 50
16.3.4.1.2.1 Method 1: Oxidation of Dibenzo[c,e][1,2]dithiin with (+)-Percamphoric Acid ...................... 50
16.3.4.1.2.2 Method 2: Oxidation with 3-Chloroperoxybenzoic Acid .... 51
16.3.4.1.2.2.1 Variation 1: Oxidation of 1,2-Dithiin .................... 51
16.3.4.1.2.2.2 Variation 2: Oxidation of 1,4-Diphenyl-1,4-dihydro-2,3-benzodithiin ...... 52

16.4 Product Class 4: 1,4-Dithiins
R. Sato

16.4 Product Class 4: 1,4-Dithiins ........................................ 57
16.4.1 Synthesis by Ring-Closure Reactions ............................. 62
16.4.1.1 By Formation of Four S—C Bonds ............................ 62
16.4.1.1.1 Fragments C—C, C—C and Two S Fragments ............ 62
16.4.1.1.1.1 Method 1: From 2,3-Dihaloquinones ..................... 62
16.4.1.1.1.2 Method 2: From a 1,2-Dihalobenzene .................. 63
16.4.1.1.1.3 Method 3: From 2-Chloro-1,3-dinitro-5-(trifluoromethyl)benzene ................................ 64
16.4.1.1.1.4 Method 4: From Alkynes or Aryne Precursors and Sulfur ................................. 65
16.4.1.1.1.5 Method 5: From Arenes .................................. 66
16.4.1.1.1.5.1 Variation 1: With Sulfur Monochloride .......... 66
16.4.1.1.1.6 Method 6: From 1,2-Dilithioheteroarenes and Sulfur(II) Compounds .............. 66
16.4.1.2 By Formation of Two S—C Bonds and One C—C Bond ........ 67
16.4.1.2.1 Fragments S—C, S—C, and C—C .......................... 67
16.4.1.1 Method 1: Formation of 2,3-Diphenyl-1,4-dithin .......................... 67
16.4.1.2 By Formation of Two S—C Bonds ............................................. 68
16.4.1.3 Method 1: Fragments C—C—S—C—C and S ............................. 68
16.4.1.4 Method 1: From Bis(3-bromoquinolin-4-yl) Sulfide with Sodium Sulfide 68
16.4.1.5 Method 2: From Bis(2-oxoalkyl) Sulfides .................................. 68
16.4.1.6 Method 3: From Dialkynyl Sulfides with Sodium Sulfide ............... 69
16.4.1.7 Method 4: From Bis(2-lithioaryl) Sulfides ................................ 70
16.4.1.8 Method 5: By Arylsulfanyl Migration ........................................ 70
16.4.1.9 Method 1: Formation of Two S—C Bonds ................................. 71
16.4.1.10 Method 1: From Benzopentathiepins and Arenes ...................... 71
16.4.1.11 Method 2: From 1,2-Dithiones .................................................. 71
16.4.1.12 Method 3: From 1,2-Dithiones and Alkynes .............................. 72
16.4.1.13 Method 4: From 1,2-Dithiones and Alkenes .............................. 73
16.4.1.14 Method 5: From 1,2-Dihalo Compounds ................................. 74
16.4.1.15 Method 6: From Arene-1,2-dithiols and Substituted Acetyl Halides 76
16.4.1.16 Method 1: From 4,5-Disulfanyl-3H-1,2-dithiole-3-thione .............. 77
16.4.1.17 Method 2: From Substituted Sodium Thiosulfates ...................... 77
16.4.1.18 Method 3: From Two Halosulfanylarenes ................................. 78
16.4.1.19 Method 4: Pyrolysis of an Isoxazole ........................................ 80
16.4.1.20 Method 5: Photolysis and Thermolysis of Benzothiodiazoles .......... 81
16.4.1.21 Method 1: From Substituted Propynyl Sulfides ........................ 81
16.4.1.22 By Formation of One S—C and One C—C Bond ......................... 81
16.4.1.23 Method 1: Fragments C—C—S—C and C—S ............................ 81
16.4.1.24 Method 1: From 1-Ethyl-1,2-diphenyldisulfan-1-ium ................... 83
16.4.1.25 By Ring Enlargement ............................................................ 83
16.4.1.26 Method 1: From 1,2-Benzodithiole Sulfoxide .......................... 83
16.4.1.27 Method 2: From a Bisfulvene Tetraester ................................ 84
16.4.1.28 By Ring Contraction ............................................................... 84
16.4.1.29 Method 1: By Photolysis of 1,2,5,6-Tetrathiocins ....................... 84
16.4.1.30 Aromatization ................................................................. 85
16.4.1.31 Method 1: Oxidation of 1,4-Dithianes ...................................... 85
16.4.1.32 Method 2: Aromatization Using 2,3-Dichloro-5,6-dicyanobenzo-1,4-quinone 86
16.4 Synthesis by Substituent Modification

16.4.1 Addition Reactions

16.4.1.1 Addition of Heteroatoms

16.4.1.1.1 Method 1: Oxidation Using Benzenediazonium Salts

16.4.1.1.2 Method 2: Oxidation Using 3-Chloroperoxybenzoic Acid

16.4.1.1.3 Method 3: Oxidation Using Hydrogen Peroxide

16.4.1.1.4 Method 4: Asymmetric Oxidation Using the Sharpless Reagent

16.4.1.1.5 Method 5: Formation of a Tetraone

16.4.2 Modification of Substituents

16.4.2.1 Method 1: Reaction of 1,4-Dithiin-2,3,5,6-tetracarbonitrile with Sulfur

16.4.2.2 Method 2: Diels–Alder Reaction with Dimethylacetylene Dicarboxylate

16.4.5 Formation of Radical Cations

16.4.5.1 Method 1: With Sulfuric Acid

16.4.5.2 Method 2: Oxidation with Antimony(V) Fluoride

16.4.5.3 Method 3: Oxidation with Nitrosonium Hexafluorophosphate

16.5 Product Class 5: 1,2-Diselenins

16.6 Product Class 6: 1,4-Diselenins
16.6.1.1 Fragments C—C, C—C, and Two Se Fragments ........................................... 103
16.6.1.1.1 Method 1: From Benzylene and Elemental Selenium ................................. 103
16.6.1.1.2 Method 2: From 1,2-Dimethoxybenzene and a Selenium Reagent ............ 104
16.6.1.1.2.1 Variation 1: Cyclization with Selenium Dioxide .................................. 104
16.6.1.1.2.2 Variation 2: Cyclization with Dimethyl Diselenide ............................ 104
16.6.1.1.3 Method 3: From 1,2,3,4-Tetrafluoro-5,6-diiodobenzene and Selenium ....... 105
16.6.1.1.4 Method 4: From 2,3-Dichloronaphthoquinone and Sodium Selenide ......... 105
16.6.1.1.5 Method 5: From Selenium and an Organometallic Compound .................. 105
16.6.1.2 By Formation of Two Se—C Bonds .......................................................... 107
16.6.1.2.1 Fragments C—C—Se—C and Se .......................................................... 107
16.6.1.2.1.1 Method 1: From a Diaryl Selenide and Selenium Dioxide .................... 107
16.6.1.2.2 Fragments Se—C—C—Se and C—C ..................................................... 107
16.6.1.2.2.1 Method 1: Diels–Alder Reaction of a 1,2-Diselone ............................... 107
16.6.1.2.2.2 Method 2: From Zinc Selenolates ................................................... 108
16.6.1.2.3 Fragments C—C—Se and C—C—Se ..................................................... 109
16.6.1.2.3.1 Method 1: Thermolysis of Selenadiazoles ......................................... 109
16.6.1.2.3.2 Method 2: Oxidative Coupling of 2-Chloroetheneselenol Derivatives ....... 110
16.6.1.2.3.3 Method 3: From a Selenide and Selenourea ....................................... 111
16.6.1.2.3.4 Method 4: From Diphenyl Selenide with Potassium Amide ................. 111
16.6.2 Synthesis by Ring Transformation .............................................................. 112
16.6.2.1 By Ring Enlargement .............................................................................. 112
16.6.2.1.1 Method 1: Transformation of a 1,3-Diselenol-1-ium Salt ......................... 112
16.6.3 Synthesis by Substituent Modification ....................................................... 113
16.6.3.1 Method 1: Formation of Metal Complexes with 1,4-Diselenins .................. 113
16.6.3.2 Method 2: Formation of a Charge-Transfer Complex ............................. 114
16.6.3.3 Method 3: Oxidation of the Selenium Atoms in Selenanthrene ................. 115
16.6.3.3.1 Variation 1: With Nitric Acid ............................................................ 115
16.6.3.3.2 Variation 2: With Sulfuryl Chloride .................................................... 115

16.7 Product Class 7: 1,4-Ditellurins
R. Sato

16.7.1 Synthesis by Ring-Closure Reactions ....................................................... 119
16.7.1.1 By Formation of Four Te—C Bonds ..................................................... 119
16.7.1.1.1 Fragments C—C, C—C, and Two Te Fragments ................................. 119
16.7.1.1.1.1 Method 1: 1,4-Ditellurin from Acetylene and Elemental Tellurium ....... 119
16.7.1.1.1.2 Method 2: Telluranthrenes from 1,2-Diiodobenzene Derivatives and Tellurium ................................................................. 120
16.7.1.1.1.2.1 Variation 1: From 1,2,3,4-Tetrafluoro-5,6-diiodobenzene and Tellurium .......... 120
16.7.1.1.1.2.2 Variation 2: From 1,2-Diiodo-4-nitrobenzene and a Tellurium–Copper Reagent ................................................................. 121
16.7.1.1.3 Method 3: A 1,4-Ditellurin from a Tetrathiafulvalene and a Bis(alkynyl) Telluride ........................................ 121
16.7.1.1.4 Method 4: Telluranthrene from Tellurium and an Organomercury Compound ........................................... 122

16.7.1.2 By Formation of Two Te—C Bonds .................................. 123
16.7.1.2.1 Fragments C—C—Te—C—C and Te .................................. 123
16.7.1.2.1.1 Method 1: Telluranthrene from Diaryl Telluride and Tellurium ...................................................... 123

16.8 Product Class 8: Pyridazines
N. Haider and W. Holzer

16.8 Product Class 8: Pyridazines .................................................. 125
16.8.1 Synthesis by Ring-Closure Reactions ...................................... 130
16.8.1.1 By Formation of Two N—C Bonds and One C—C Bond .................. 130
16.8.1.1.1 Fragments N—N, C—C, and C—C ...................................... 130
16.8.1.1.1 Method 1: Condensation of 1,2-Diketones with Cyanoacetic Acid Derivatives and Hydrazine .................. 130
16.8.1.1.1.2 Method 2: Reaction of 1-Aryl-2-nitroprop-1-enes with Acetoacetic Acid Derivatives and Hydrazine ............ 131
16.8.1.2 By Formation of Two N—C Bonds ........................................ 132
16.8.1.2.1 Fragments C—C—C and N—N ........................................ 132
16.8.1.2.1.1 Method 1: Condensation of 4-Oxo Acids and Derivatives with Hydrazine ................................................. 132
16.8.1.2.1.1.1 Variation 1: From Saturated 4-Oxo Acids and Derivatives, with Subsequent Oxidation ......................... 133
16.8.1.2.1.1.2 Variation 2: From 2-Hydroxy-4-oxo Acids .......................... 134
16.8.1.2.1.2 Method 2: Condensation of 3-Formyl Acids with Hydrazine .................................................. 136
16.8.1.2.1.3 Method 3: Condensation of Maleic Acids or Derivatives with Hydrazine ...................................................... 136
16.8.1.2.1.4 Method 4: Condensation of 1,4-Dicarbonyl Compounds with Hydrazine ...................................................... 137
16.8.1.3 By Formation of One N—C and One C—C Bond ...................... 138
16.8.1.3.1 Fragments N—N—C—C and C—C ...................................... 138
16.8.1.3.1 Method 1: Reaction of Methylene-Activated Acid Hydrazides with 1,2-Dicarbonyl Compounds .................. 138
16.8.1.3.1.1 Method 2: Reaction of 1,2-Dicarbonyl Monohydradzones with Methylene-Activated Compounds .................. 139
16.8.1.3.1.3 Method 3: Hetero-Diels–Alder Reactions of Electron-Rich Alkenes .................................................. 141
16.8.1.3.1.3.1 Variation 1: With 1,2-Diaza-1,3-dienes ................................ 141
16.8.1.3.1.3.2 Variation 2: With Halogen-Substituted 1,2-Diaza-1,3-dienes .............................................. 142
16.8.1.3.1.4 Method 4: Reaction of Alkyl 3-(Carbamoyldiazenyl)but-2-enoates with Alkyl 2-Acetylacetoacetates and Similar Compounds .................................................. 145
16.8.1.4 By Formation of One N—N Bond ........................................ 148
16.8.1.4.1 Fragment N—C—C—C—C—N ........................................ 148
Chapter 16: Synthesis of Pyridazines

16.8.1.1 Method 1: Oxidative Cyclization of Unsaturated 1,4-Dioximes into Pyridazine 1,2-Dioxides
16.8.1.5 By Formation of One N–C Bond
16.8.1.5.1 Fragment N–N–C–C=C
16.8.1.5.1.1 Method 1: Cyclization of Hydrazones of 4-Oxoalkenoic Acid Derivatives
16.8.1.5.1.2 Method 2: Reductive Cyclization of Diazovinylmethanes Bearing a Carbonyl Group
16.8.1.6 By Formation of One C–C Bond
16.8.1.6.1 Fragment C–C=N–N–C=C
16.8.1.6.1.1 Method 1: Cyclization of N-Chloroacetyl Derivatives of 1,2-Dicarbonyl Monophenylhydrazones

Chapter 16: Synthesis by Ring Transformation

16.8.2 Synthesis by Ring Transformation
16.8.2.1 By Ring Enlargement
16.8.2.1.1 Method 1: From Furan Derivatives
16.8.2.1.2 Method 2: By Addition of Diazooalkanes to Bromocyclopropenes
16.8.2.2 Formal Exchange of Ring Members with Retention of the Ring Size
16.8.2.2.1 Method 1: By [4 + 2]-Cycloaddition Reactions of 1,2,4,5-Tetrazines
16.8.2.2.1.1 Variation 1: With Dienophiles Containing a C=C Bond
16.8.2.2.1.2 Variation 2: With Dienophiles Containing a C≡C Bond
16.8.2.2.2 Method 2: By Rearrangement of 1,2,4-Triazines
16.8.2.3 By Ring Contraction
16.8.2.3.1 Method 1: From 1,2-Diazepines
16.8.2.3.2 Method 2: From Seven-Membered Rings Containing an Additional Heteroatom

Chapter 16: Aromatization

16.8.3 Aromatization
16.8.3.1 Method 1: Oxidation of Dihydro Compounds
16.8.3.2 Method 2: Elimination Reactions

Chapter 16: Synthesis by Substituent Modification

16.8.4 Synthesis by Substituent Modification
16.8.4.1 Substitution of Existing Substituents
16.8.4.1.1 Of Hydrogen
16.8.4.1.1.1 At a Ring Nitrogen Atom of a Pyridazinone
16.8.4.1.1.1.1 Method 1: N-Alkylation
16.8.4.1.1.1.1.1 Variation 1: Via a Pyridazinone Anion
16.8.4.1.1.1.1.2 Variation 2: Via an Alkyl or Silyl Lactim Ether (The Hilbert–Johnson Reaction)
16.8.4.1.1.1.2 At a Ring Carbon Atom
16.8.4.1.1.1.2.1 Method 1: By Lithiation
16.8.4.1.1.1.2.2 Method 2: By Radical Substitution Reactions
16.8.4.1.1.1.2.2.1 Variation 1: Introduction of Carboxylic Acid Functionalities
16.8.4.1.1.1.2.2.2 Variation 2: Introduction of Acyl and Aroyl Groups
16.8.4.1.1.1.2.3 Variation 3: Introduction of Alkyl and Other Groups

Table of Contents

16.8.1.4.1.1 Method 1: Oxidative Cyclization of Unsaturated 1,4-Dioximes into Pyridazine 1,2-Dioxides
16.8.1.5 By Formation of One N–C Bond
16.8.1.5.1 Fragment N–N–C–C=C
16.8.1.5.1.1 Method 1: Cyclization of Hydrazones of 4-Oxoalkenoic Acid Derivatives
16.8.1.5.1.2 Method 2: Reductive Cyclization of Diazovinylmethanes Bearing a Carbonyl Group
16.8.1.6 By Formation of One C–C Bond
16.8.1.6.1 Fragment C–C=N–N–C=C
16.8.1.6.1.1 Method 1: Cyclization of N-Chloroacetyl Derivatives of 1,2-Dicarbonyl Monophenylhydrazones

16.8.2 Synthesis by Ring Transformation
16.8.2.1 By Ring Enlargement
16.8.2.1.1 Method 1: From Furan Derivatives
16.8.2.1.2 Method 2: By Addition of Diazooalkanes to Bromocyclopropenes
16.8.2.2 Formal Exchange of Ring Members with Retention of the Ring Size
16.8.2.2.1 Method 1: By [4 + 2]-Cycloaddition Reactions of 1,2,4,5-Tetrazines
16.8.2.2.1.1 Variation 1: With Dienophiles Containing a C=C Bond
16.8.2.2.1.2 Variation 2: With Dienophiles Containing a C≡C Bond
16.8.2.2.2 Method 2: By Rearrangement of 1,2,4-Triazines
16.8.2.3 By Ring Contraction
16.8.2.3.1 Method 1: From 1,2-Diazepines
16.8.2.3.2 Method 2: From Seven-Membered Rings Containing an Additional Heteroatom

16.8.3 Aromatization
16.8.3.1 Method 1: Oxidation of Dihydro Compounds
16.8.3.2 Method 2: Elimination Reactions

16.8.4 Synthesis by Substituent Modification
16.8.4.1 Substitution of Existing Substituents
16.8.4.1.1 Of Hydrogen
16.8.4.1.1.1 At a Ring Nitrogen Atom of a Pyridazinone
16.8.4.1.1.1.1 Method 1: N-Alkylation
16.8.4.1.1.1.1.1 Variation 1: Via a Pyridazinone Anion
16.8.4.1.1.1.1.2 Variation 2: Via an Alkyl or Silyl Lactim Ether (The Hilbert–Johnson Reaction)
16.8.4.1.1.1.2 At a Ring Carbon Atom
16.8.4.1.1.1.2.1 Method 1: By Lithiation
16.8.4.1.1.1.2.2 Method 2: By Radical Substitution Reactions
16.8.4.1.1.1.2.2.1 Variation 1: Introduction of Carboxylic Acid Functionalities
16.8.4.1.1.1.2.2.2 Variation 2: Introduction of Acyl and Aroyl Groups
16.8.4.1.1.1.2.3 Variation 3: Introduction of Alkyl and Other Groups
## 16.8.4.1.2.3 Method 3: Introduction of Cyano Groups by the Reissert Reaction

16.8.4.1.2.4 Method 4: Direct Cyanation of Electron-Deficient Pyridazinones

16.8.4.1.2.5 Method 5: Vicarious Nucleophilic Substitution

16.8.4.1.2.6 Method 6: Direct Amination

16.8.4.1.2.7 Method 7: Electrophilic Substitution Reactions

Variation 1: Vilsmeier Formylation of Pyridazinones

Variation 2: Introduction of Hetero Substituents

16.8.4.1.2.8 Of Metals

Method 1: Replacement of Stannyl or Silyl Groups by Carbon Substituents

Method 2: Replacement of Magnesium Halide in Pyridazinyl Grignard Compounds

16.8.4.1.2.9 Of Carbon Functionalities

Method 1: By Decarboxylation

Method 2: By Hofmann or Curtius Degradation of Appropriate Carboxylic Acid Derivatives

16.8.4.1.2.10 Of Heteroatoms

Method 1: By Hydrogen

Variation 1: Reductive Dehalogenation of Halopyridazines

Variation 2: Oxidative Dehydrazination of Hydrazinopyridazines

Method 2: By Metal–Halogen Exchange

Method 3: By Carbon Nucleophiles via Nucleophilic Substitution

Method 4: By Carbon Substituents via Cross-Coupling Reactions

Variation 1: Introduction of Ester Groups

Variation 2: Introduction of Aryl Groups

Variation 3: Introduction of Alkynyl Groups

Method 5: By Hetero Nucleophiles via Nucleophilic Substitution

Variation 1: Introduction of Halogen Substituents

Variation 2: Introduction of Oxygen Substituents

Variation 3: Introduction of Sulfur Substituents

Variation 4: Introduction of Nitrogen Substituents

Method 6: Deoxygenation of N-Oxides

Addition Reactions

Method 1: N-Alkylation (Quaternization)

Addition of Heteroatoms

Method 1: N-Oxidation

Method 2: N-Amination

Modification of Substituents

Method 1: Modification of Carboxylic Acids and Derivatives

Method 2: Modification of Ketones, Aldehydes, and Derivatives

Method 3: Modification of Hydroxyalkyl and Similar Substituents

Method 4: Modification of Alkyl Substituents

Table of Contents XIX
16.8.4.1.4.1 Variation 1: Oxidation .................................................. 220
16.8.4.1.4.2 Variation 2: Condensation Reactions .......................... 221
16.8.4.2 Of Heteroatom Substituents .............................................. 223
16.8.4.2.1 Method 1: Modification of Hydroxy Groups ...................... 223
16.8.4.2.1.1 Variation 1: Acylation ................................................ 223
16.8.4.2.1.2 Variation 2: Alkylation ............................................. 223
16.8.4.2.2 Method 2: Modification of Sulfur-Containing Groups ............ 224
16.8.4.2.2.1 Variation 1: Alkylation of Sulfanyl Groups ....................... 224
16.8.4.2.2.2 Variation 2: Oxidation of Sulfanyl and Alkylsulfanyl Groups 225
16.8.4.2.3 Method 3: Reduction of Nitro Groups ................................ 226
16.8.4.2.4 Method 4: Modification of Azido Groups ............................ 227
16.8.4.2.5 Method 5: Reduction of Hydrazino Groups ......................... 227
16.8.4.2.6 Method 6: Modification of Amino Groups ........................... 228
16.8.4.2.6.1 Variation 1: Acylation ................................................ 228
16.8.4.2.6.2 Variation 2: Alkylation ............................................. 229
16.8.4.3 Ring Opening of Bicyclic Pyridazines .................................. 231
16.8.4.3.1 Method 1: Oxidative Cleavage of Benzo-1,2-diazines ............. 231
16.8.4.3.2 Method 2: Oxidative or Reductive Cleavage of Isoxazolopyridazines 231
16.8.4.3.3 Method 3: Reductive Cleavage of [1,2,5]Oxadiazolopyridazines 232
16.8.4.3.4 Method 4: Cleavage of Tetrazolopyridazines with Phosphines (The Staudinger Reaction) ........................................ 233

16.9 Product Class 9: Cinnolines
N. Haider and W. Holzer

16.9.1 Synthesis by Ring-Closure Reactions ..................................... 251
16.9.1.1 By Annulation to an Arene ............................................ 253
16.9.1.1.1 By Formation of Two N—C Bonds .................................. 253
16.9.1.1.1.1 Fragments Arene—C—C and N—N ................................. 253
16.9.1.1.1.1 Method 1: By Reaction of Cyclopentadienyliron Complexes of 2-Chlorobenzyl Ketones with Hydrazine ........................ 253
16.9.1.1.2 By Formation of One N—N Bond .................................... 254
16.9.1.1.2.1 Fragment N—Arene—C—C—N ....................................... 254
16.9.1.1.2.1 Method 1: Cyclization of Aminohetarenes Containing a 2-Nitrophenyl Substituent ........................................ 254
16.9.1.1.3 By Formation of One N—C Bond .................................... 256
16.9.1.1.3.1 Fragment N—N—Arene—C—C ....................................... 256
16.9.1.1.3.1 Method 1: Cyclization of Diazotized 2-(Alken-1-yl)anilines (The Widman–Stoermer Synthesis) .......................... 256
16.9.1.1.3.1.2 Method 2: Cyclization of Diazotized 2-Acylanilines (The Borsche Synthesis) ........................................ 257
Method 3: Cyclization of (2-Hydrazinophenyl)(hydroxy)acetic Acids (The Neber–Bossel Synthesis) ........................................ 260
Method 4: Cyclization of Diazotized 2-Alkynylanilines (The Richter Synthesis) ................................................... 260
Method 5: Cyclization of (2-Ethynylphenyl)triazenes .................................................. 261

By Formation of One C–C Bond ............................................................................. 262

Fragment Arene—N—N—C—C .............................................................................. 262

Method 1: Cyclization of Phenylhydrazones .................................................. 262
Variation 1: Cyclization of Oxomalonic Acid Derivatives ................................ 263
Variation 2: Cyclization of Aryltrifluoromethyl Ketone Derivatives .................. 266
Variation 3: Synthesis of 3-Aroylcinnolines from Aryl Methyl Ketones .......... 267
Variation 4: Synthesis of 3-Arylcinnoline-4-carbonitriles by Reaction of Acetophenone Methyl(phenyl)hydrazones and Tetracyanoethene ........................................................................ 268

Fragment C—N—N—Arene—C .............................................................................. 268

Method 1: Cyclization of Benzaldehyde [2-(Trifluoromethyl)phenyl]-hydrazones ........................................................................ 268
Method 2: Cyclization of Hydrazones Derived from Diazotized 2-Formyl- or 2-Acetylanilines ........................................................................ 270

Synthesis by Ring Transformation ........................................................................ 271
By Ring Enlargement ......................................................................................... 271
Method 1: From Isatin and Isatogen Derivatives ............................................. 271
Method 2: From 1H-Indol-1-amines ................................................................. 272
Aromatization ................................................................................................. 273
Method 1: Oxidation of Dihydrocinnolines .................................................... 273

Synthesis by Substituent Modification .......................................................... 274
Substitution of Existing Substituents ............................................................. 274
Of Hydrogen .................................................................................................... 274
Method 1: By Lithiation .................................................................................... 274
Method 2: By Halogenation ............................................................................ 275
Method 3: By Nitration .................................................................................... 276
Method 4: By Amination .................................................................................. 276

Of Metals ......................................................................................................... 277
Method 1: Replacement of a Silyl Substituent by Hydrogen ......................... 277

Of Carbon Functionalities ............................................................................... 278
Method 1: By Decarboxylation ....................................................................... 278
Method 2: By Nucleophilic Displacement of Nitrile Groups ......................... 279

Of Heteroatoms .............................................................................................. 279
Method 1: By Hydrogen .................................................................................. 279
Variation 1: Reductive Dehalogenation of Halocinnolines ............................ 279
Variation 2: Oxidative Dehydrazination of Hydrazinocinnolines .................. 281
Method 2: By Halogen–Metal Exchange .......................................................... 281
16.9.4.3 Method 3: By Carbon Nucleophiles via Nucleophilic Substitution 282
16.9.4.4 Method 4: By Carbon Substituents via Cross-Coupling Reactions 284
16.9.4.5 Method 5: By Heteroatom Nucleophiles via Nucleophilic Substitution 286
16.9.4.5.1 Variation 1: Introduction of Halogen Substituents 286
16.9.4.5.2 Variation 2: Introduction of Chalcogen Substituents 287
16.9.4.5.3 Variation 3: Introduction of Nitrogen Substituents 289
16.9.4.6 Method 6: Deoxygenation of \( \text{N-Oxides} \) 292

16.9.4.2 Addition Reactions 293
16.9.4.2.1 Addition of Organic Groups 293
16.9.4.2.1.1 Method 1: N-Alkylation (Quaternization) 293
16.9.4.2.2 Addition of Heteroatoms 296
16.9.4.2.2.1 Method 1: N-Oxidation 296

16.9.4.3 Modification of Substituents 296
16.9.4.3.1 Of Carbon Substituents 296
16.9.4.3.1.1 Method 1: Of Carboxylic Acids and Derivatives 296
16.9.4.3.1.2 Method 2: Of Ketones, Aldehydes, and Derivatives 297
16.9.4.3.1.3 Method 3: Of Hydroxyalkyl and Similar Substituents 299
16.9.4.3.1.4 Method 4: Of Alkyl Substituents 300
16.9.4.3.2 Of Heteroatom Substituents 303
16.9.4.3.2.1 Method 1: Of Hydroxy, Alkoxy, and Aryloxy Groups 303
16.9.4.3.2.2 Method 2: Of Sulfur-Containing Groups 304
16.9.4.3.2.3 Method 3: Of Nitro Groups 305
16.9.4.3.2.4 Method 4: Of Amino Groups 306

16.10 Product Class 10: Phthalazines
N. Haider and W. Holzer

16.10 Synthesis by Ring-Closure Reactions 318
16.10.1 By Annulation to an Arene 318
16.10.1.1 By Formation of Two N—C Bonds 318
16.10.1.1.1 Fragments C—Arene—C and N—N 318
16.10.1.1.1.1 Method 1: Condensation of Phthalic Acid Derivatives with Hydrazine 318
16.10.1.1.1.2 Method 2: Condensation of 2-Acyl- and 2-Formylbenzoic Acid Derivatives with Hydrazine 322
16.10.1.1.1.3 Method 3: Condensation of 1,2-Diacetylbenzenes and Phthalaldehyde Derivatives with Hydrazine 325
16.10.1.1.2 By Formation of One N—C and One C—C Bond 327
16.10.1.1.2.1 Fragments Arene—C and N—N—C 327
16.10.1.1.2.1.1 Method 1: Reaction of 2-(Alkoxycarbonyl)quinones with Methylglyoxal 1-Methylhydrazone 327
16.10.1.1.3 By Formation of Two C—C Bonds 327
16.10.1.1.3.1 Fragments Arene and C—N—N—C ................................. 327
16.10.1.1.3.1.1 Method 1: [4 + 2]-Cycloaddition Reactions of 1,2,4,5-Tetrazines with Benzyne ........................................... 327
16.10.1.1.4 By Formation of One N—C Bond ........................................... 328
16.10.1.1.4.1 Fragment N—N—C—Arene—C ........................................... 328
16.10.1.1.4.1.1 Method 1: Cyclization of Arylhydrazones of 2-Acyl- and 2-Formylbenzoic Acid Derivatives ............................ 328
16.10.1.1.5 By Formation of One C—C Bond ........................................... 329
16.10.1.1.5.1 Fragment C—N—N—C—Arene ........................................... 329
16.10.1.1.5.1.1 Method 1: Acid-Promoted Cyclization of Azines .................. 329
16.10.1.1.5.1.1.1 Variation 1: Cyclization of 2-Amino-2-(arylhydrazono)ethyl Aryl Ethers ................................................ 330
16.10.1.1.5.1.1.2 Variation 2: Cyclization of 1-Aroyl-2-benzylidenehydrazines .... 331
16.10.1.2 By Annulation to the Heterocyclic Ring .................................. 332
16.10.1.2.1 Method 1: Condensation Reactions of 4,5-Disubstituted Pyridazines ...... 332
16.10.1.2 Synthesis by Ring Transformation ........................................ 333
16.10.1.2.1 By Ring Enlargement .............................................................. 333
16.10.1.2.1.1 Method 1: From Benzofuran Derivatives .............................. 333
16.10.1.2.1.2 Method 2: From Isoindole Derivatives .................................. 335
16.10.1.2.1.3 Method 3: From Indane-1,3-dione Derivatives ....................... 338
16.10.1.2.2 Formal Exchange of Ring Members with Retention of the Ring Size .... 338
16.10.1.2.2.1 Method 1: By [4 + 2]-Cycloaddition Reactions of Pyridazino[4,5-d]-pyridazines with Electron-Rich C—C Dienophiles .... 338
16.10.1.3 Aromatization ........................................................................ 340
16.10.1.3.1 Method 1: Oxidation of Dihydrophthalazines ......................... 340
16.10.1.4 Synthesis by Substituent Modification .................................... 341
16.10.1.4.1 Substitution of Existing Substituents ..................................... 341
16.10.1.4.1.1 Of Hydrogen .................................................................... 341
16.10.1.4.1.1.1 At a Ring Nitrogen Atom of a Phthalazinone ...................... 341
16.10.1.4.1.1.1.1 Method 1: N-Acylation ................................................... 341
16.10.1.4.1.1.1.2 Method 2: N-Arylation ................................................... 342
16.10.1.4.1.1.1.3 Method 3: N-Alkylation ................................................... 342
16.10.1.4.1.1.2 At a Ring Carbon Atom .................................................... 343
16.10.1.4.1.1.2.1 Method 1: By Lithiation .................................................. 343
16.10.1.4.1.1.2.2 Method 2: Introduction of Cyano Groups by the Reissert Reaction ......................................................... 344
16.10.1.4.1.1.2.3 Method 3: Nitration ....................................................... 345
16.10.1.4.1.1.2 Of Carbon Functionalities ............................................. 346
16.10.1.4.1.1.2.1 Method 1: By N-Dealkylation ....................................... 346
16.10.1.4.1.1.3 Of Heteroatoms ............................................................... 346
16.10.1.4.1.1.3.1 Method 1: By Hydrogen ............................................... 346
16.10.1.4.1.1.3.1.1 Variation 1: Reductive Dehalogenation of Halophthalazines .... 346
16.10.4.1.3.2 Variation 2: Oxidative Dehydrazination of Hydrazinophthalazines 347
16.10.4.1.3.2 Method 2: By Carbon Nucleophiles via Nucleophilic Substitution 348
16.10.4.1.3.3 Method 3: By Hetero Nucleophiles via Nucleophilic Substitution 350
16.10.4.1.3.3.1 Variation 1: Introduction of Halogen Substituents 350
16.10.4.1.3.3.2 Variation 2: Introduction of Chalcogen Substituents 352
16.10.4.1.3.3.3 Variation 3: Introduction of Nitrogen Substituents 353
16.10.4.1.3.4 Method 4: Deoxygenation of N-Oxides 355
16.10.4.2 Addition Reactions 356
16.10.4.2.1 Addition of Organic Groups 356
16.10.4.2.1.1 Method 1: N-Alkylation (Quaternization) 356
16.10.4.2.2 Addition of Heteroatoms 357
16.10.4.2.2.1 Method 1: N-Oxidation 357
16.10.4.3 Modification of Substituents 358
16.10.4.3.1 Of Carbon Substituents 358
16.10.4.3.1.1 Method 1: Modification of Carboxylic Acids and Derivatives 358
16.10.4.3.2 Method 3: Modification of Alkyl Substituents 359
16.10.4.3.2 Of Heteroatom Substituents 360
16.10.4.3.2.1 Method 1: Modification of Hydroxy Groups 360
16.10.4.3.2.2 Method 2: Modification of Sulfur-Containing Groups 361
16.10.4.3.2.3 Method 3: Modification of Amino Groups 362

16.11 Product Class 11: Pyridazino[1,2-a]pyridazines
N. Haider and W. Holzer

16.11.1 Product Class 11: Pyridazino[1,2-a]pyridazines 373
16.11.1 Synthesis by Ring-Closure Reactions 373
16.11.1.1 By Formation of Four N-C Bonds 374
16.11.1.1.1 Fragments C-C-C-C, C-C-C-C, and N-N 374
16.11.1.1.1 Method 1: By Condensation of Succinonitrile with Hydrazine 374
16.11.1.2 By Formation of Two N-C Bonds 375
16.11.1.2.1 Fragments Hetarene and C-C-C-C 375
16.11.1.2.1 Method 1: By Cycloaddition Reactions of Pyridazine-3,6-diones 375

16.12 Product Class 12: Pyrimidines
S. von Angerer

16.12 Product Class 12: Pyrimidines 379
16.12.1 Synthesis by Ring-Closure Reactions 384
16.12.1.1 By Formation of Four N-C Bonds and One C-C Bond 384
16.12.1.1.1 Fragments C-C, N, N, C, and C 384

Science of Synthesis Original Edition Volume 16
© Georg Thieme Verlag KG
Method 2: Reaction of Amidinoacetamides with Formamide .......... 399

Method 3: Reaction of Malonimide Esters with Acid Chlorides .......... 399

Method 4: Reaction of Malonimidamides with Esters .......... 400

Method 5: Reaction of 3-Aminoaacrylamides with Acid Derivatives .......... 400

Method 6: Reaction of 3-Amino-2-cyanoacrylamides with Anhydrides .......... 401

Method 1: Reaction of N-Acylacrylamides with Ammonia .......... 402

Method 2: Reaction of N,2-Diacylvinylamines with Formamide .......... 403

Method 1: Reaction of 3-Chloroacrylonitriles with Nitriles .......... 404

Method 3: Reaction of 3,3-Bis(methylsulfanyl)acrylonitrile with Amides .......... 404

Method 3: Reaction of 3-Aminoacrylates .......... 405

Variation 1: Reaction with Amides .......... 406

Variation 2: Reaction with Benzimidate .......... 406

Variation 3: Reaction with Nitriles .......... 407

Method 5: Reaction of 1,3-Diketimines with Benzonitrile .......... 408

Method 6: Reaction of 3-Aminopropenals with Formamide .......... 409

Method 7: Reaction of 3-Aminoaacrylonitriles with Nitriles .......... 410

Method 1: Reaction of 3-Chloroaacrylonitriles with Nitriles .......... 410

Method 2: Reaction of 3,3-Bis(methylsulfanyl)acrylonitrile with Amides .......... 410

Method 3: Reaction of 3-Aminoacrylates .......... 405

Variation 1: Reaction with Amides .......... 406

Variation 2: Reaction with Benzimidate .......... 406

Variation 3: Reaction with Nitriles .......... 407

Method 5: Reaction of 1,3-Diketimines with Benzonitrile .......... 408

Method 6: Reaction of 3-Aminopropenals with Formamide .......... 409

Method 7: Reaction of 3-Aminoaacrylonitriles with Nitriles .......... 410

Fragments N—C—N and C—C—C ........................................... 410

Fragments C—С—N and N—C ........................................... 404

Fragments C—С—N and N—C ........................................... 404

Method 1: Reaction of 3-Chloroaacrylonitriles with Nitriles .......... 404

Method 2: Reaction of 3,3-Bis(methylsulfanyl)acrylonitrile with Amides .......... 404

Method 3: Reaction of 3-Aminoacrylates .......... 405

Variation 1: Reaction with Amides .......... 406

Variation 2: Reaction with Benzimidate .......... 406

Variation 3: Reaction with Nitriles .......... 407

Method 5: Reaction of 1,3-Diketimines with Benzonitrile .......... 408

Method 6: Reaction of 3-Aminopropenals with Formamide .......... 409

Method 7: Reaction of 3-Aminoaacrylonitriles with Nitriles .......... 410

Fragments N—C—N and C—C—C ........................................... 410

Method 1: Reaction of β-Diketones with Amidine Derivatives .......... 410

Variation 1: Reaction with Guanidines .......... 410

Variation 2: Reaction with O-Methyluronium Salts .......... 411

Variation 3: Reaction with Urea .......... 412

Method 2: Reaction of Prop-2-yn-1-ones with Amidine Derivatives .......... 413

Method 3: Reaction of α-Formyl Esters or Equivalents with Amidine Derivatives .......... 413

Method 4: Reaction of 3-Alkoxyacrylates with Amidine Derivatives or Cyanamide .......... 414

Method 5: Reaction of β-Oxo Esters with Amidine Derivatives .......... 417

Method 6: Reaction of β-Dialdehydes or Equivalents with Amidine Derivatives .......... 418

Variation 1: Reaction of Malonaldehydes .......... 418

Variation 2: Reaction of Sodium 3,3-Dimethoxy-2-(methoxycarbonyl)-prop-1-en-1-olate with Amides .......... 419

Variation 3: Reactions of Malonaldehyde Diacetals .......... 420

Variation 4: Reaction of 3-Heterosubstituted Propenals with Amidine Derivatives .......... 421

Method 7: Reaction of 3,3-Dialkoxypropan-1-ones with Amidine Derivatives .......... 423

Method 8: Reaction of 3-Heterosubstituted Prop-2-en-1-ones with Amidine Derivatives .......... 424

Variation 1: Reaction of 3-Alkoxy-Substituted Prop-2-en-1-ones .......... 424

Variation 2: Reaction of 3-Sulfanyl-Substituted Prop-2-en-1-ones .......... 425

Variation 3: Reaction of 3-Amino-Substituted Prop-2-en-1-ones .......... 425
16.12.1.5.4.9 Method 9: Reaction of 3,3-Disulfanylprop-2-en-1-ones with Amidine Derivatives ........................................ 426
16.12.1.5.4.10 Method 10: Reaction of 3,3-Diaminoprop-2-en-1-one Derivatives with Amidine Derivatives ........................................ 427
16.12.1.5.4.11 Method 11: Reaction of 1,1-Difluoroprop-2-enes with Amidine Derivatives ........................................ 428
16.12.1.5.4.12 Method 12: Reaction of Vinamidinium Salts with Amidine Derivatives ........................................ 428
16.12.1.5.4.13 Method 13: Reaction of Prop-2-ynoates and Alka-2,3-dienoates with Amidine Derivatives ........................................ 429
16.12.1.5.4.14 Method 14: Reaction of 3-Heterosubstituted Acrylonitriles with Amidine Derivatives ........................................ 430
16.12.1.5.4.14.1 Variation 1: 3-Haloacrylonitriles ........................................ 430
16.12.1.5.4.14.2 Variation 2: 3-Alkoxy- and 3,3-Dialkoxyacrylonitriles ........................................ 431
16.12.1.5.4.14.3 Variation 3: 3-(Methylsulfonyl)- and 3,3-Bis(Methylsulfonyl)acrylonitriles ........................................ 433
16.12.1.5.4.14.4 Variation 4: 3-Aminoacrylonitriles ........................................ 434
16.12.1.5.4.14.5 Variation 5: Propynenitriles and Buta-2,3-dienenitriles ........................................ 435
16.12.1.5.4.15 Method 15: Reaction of Malonates with Amidine Derivatives ........................................ 436
16.12.1.5.4.16 Method 16: Reaction of 3,3-Diheterosubstituted Acrylates with Amidine Derivatives ........................................ 437
16.12.1.5.4.16.1 Variation 1: Reaction of 3,3-Dialkoxyacrylates with Amidine Derivatives ........................................ 437
16.12.1.5.4.16.2 Variation 2: Reaction of 3,3-Bis(methylsulfonyl)acrylates with Amidine Derivatives ........................................ 438
16.12.1.5.4.16.3 Variation 3: Reaction of 3-Amino-3-(methylsulfonyl)acrylates with Guanidine and Thiourea ........................................ 438
16.12.1.5.4.17 Method 17: Reaction of Cyanoacetates with Amidine Derivatives ........................................ 439
16.12.1.5.4.18 Method 18: Reaction of Malononitriles with Amidine Derivatives ........................................ 439
16.12.1.5.4.19 Method 19: Reaction of 3-Arylprop-2-en-1-ones with Amidine Derivatives ........................................ 440
16.12.1.5.4.20 Method 20: Reaction of 3-Arylacrylonitriles with Amidine Derivatives ........................................ 441
16.12.1.5.4.21 Method 21: Reaction of Resin-Bound 3-Arylacrylates with Amidine Derivatives ........................................ 442
16.12.1.5.4.22 Method 22: Reaction of 2-Bromoacrylates with Benzimidamide ........................................ 443
16.12.1.6 By Formation of One N—C and One C—C Bond ........................................ 443
16.12.1.6.1 Fragments N—C—N—C and C—C ........................................ 443
16.12.1.6.1.1 Method 1: Reaction of 3-Cyano-2-methylisothiourea or 2-Cyanoguanidine with Ketones ........................................ 443
16.12.1.6.1.2 Method 2: Reaction of 1,3-Diazabuta-1,3-dienes with Alkynes ........................................ 444
16.12.1.6.1.2.1 Variation 1: Reaction of 4,4-Bis(methylsulfonyl)-1,3-diazabuta-1,3-diene ........................................ 444
16.12.1.6.1.2.2 Variation 2: Reaction of 4-(Dimethylamino)-1,3-diazabuta-1,3-dienes ........................................ 445
16.12.1.6.2 Fragments C—C—N—C and N—C ........................................ 446
16.12.1.6.2.1 Method 1: Reaction of Azapropenylidium Perchlorates with 1,1,3,3-Tetramethylguanidine ........................................ 446
16.12.1.6.2.2 Method 2: Reaction of 2-Azabuta-1,3-dienes with Nitriles ........................................ 447
16.12.1.6.2.3 Method 3: Reaction of Ethyl (Cyanoacetyl)carbamate with Trifluoroacetonitrile ........................................ 448
16.12.1.6.2.4 Method 4: Dimerization of N-Cyanothioacetimidate ........................................ 449
16.12.1.6.3 Fragments N—C—C and C—N—C ........................................ 449
16.12.1.6.3.1 Method 1: Reaction of Enamines with \(N\)-(Dichloromethylene)-trichloromethylamine ........................................ 449
16.12.1.6.3.2 Method 2: Reaction of Enamines with Acyl Isothiocyanates ........ 450
16.12.1.6.3.3 Method 3: Reaction of Cyanothioacetamide with Benzoyl Isothiocyanate 451
16.12.1.6.3.4 Method 4: Reaction of Enamines with [Bis(methylsulfanyl)methylene]-cyanamide ................................................ 451
16.12.1.6.3.5 Method 5: Reaction of Acetonitriles with \(N\)-(Dichloromethylene)-trichloromethylamine ........................................ 451
16.12.1.6.3.6 Method 6: Reaction of Acetamides with \(N\)-Cyanoimidates or \(N\)-Acylimidates ............................................ 452

16.12.1.7 By Formation of One \(N\)-\(C\) Bond ........................................ 453
16.12.1.7.1 Fragment \(N\)-\(C\)-\(C\)-\(C\)-\(N\)-\(C\) ........................................ 453
16.12.1.7.1.1 Method 1: Cyclization of 3-(Acamino)but-2-enamides .............. 453
16.12.1.7.1.2 Method 2: Cyclization of 3-Amino-\(N\)-acylthioacrylamides .......... 454
16.12.1.7.1.3 Method 3: Cyclization of 3-Amino-\(N\)-cyano-3-methoxyacrylimidate 455
16.12.1.7.1.4 Method 4: Cyclization of 3-(Acamino)-2-cyano- and 2-Cyano-3-(thioacrylamino)acrylates ........................................ 456
16.12.1.7.1.5 Method 5: Cyclization of \(N\)-(2-Cyanovinyl)imidamides ............ 457
16.12.1.7.1.6 Method 6: Cyclization of 1-(Dimethylamino)-5-(dimethyliminio)-2-azapenta-1,3-dienes ........................................ 458
16.12.1.7.1.7 Method 7: Cyclization of 3-(Vinylamino)but-2-enamide ............ 458
16.12.1.7.2 Fragment \(N\)-\(C\)-\(C\)-\(N\)-\(C\)-\(N\)-\(C\) ........................................ 459
16.12.1.7.2.1 Method 1: Cyclization of 1-Acetyl-3-cyanoura ........................ 458
16.12.1.7.2.2 Method 2: Cyclization of 3-Ureidoacrylates ........................ 459
16.12.1.7.2.3 Method 3: Cyclization of \(N\)-[2-(Methoxycarbonyl)ethylidene]ureas 461
16.12.1.7.2.4 Method 4: Cyclization of 3-Ureidoacrylonitriles ..................... 461
16.12.1.7.2.5 Method 5: Cyclization of \(N\)-(2-Cyanovinyl)imidamides ............. 462
16.12.1.7.2.6 Method 6: Cyclization of 1-(Cyanocetyl)-2-methylisoureas ........ 463
16.12.1.7.2.7 Method 7: Cyclization of 3-(Cyaanoamino)acrylonitriles .......... 463
16.12.1.7.2.8 Method 8: Cyclization of (Cyanocetyl)cyanamides and Equivalents 464

16.12.1.8 By Formation of One \(C\)-\(C\) Bond ........................................ 466
16.12.1.8.1 Fragment \(C\)-\(C\)-\(N\)-\(C\)-\(C\)-\(N\) ........................................ 466
16.12.1.8.1.1 Method 1: Cyclization of 1-Acetyl-3-cyanoura ........................ 466
16.12.1.8.1.2 Method 2: Cyclization of \(N\)-[2-Carbamoyl-\(N\)\(^\prime\)-vinylbenzimidamides 467

16.12.2 Synthesis by Ring Transformation ........................................ 467
16.12.2.1 By Ring Enlargement .................................................. 467
16.12.2.1.1 Of Three-Membered Carbocycles ...................................... 467
16.12.2.1.1.1 Method 1: Reaction of Cyclopropanones with Amidoximes ........ 467
16.12.2.1.2 Of Four-Membered Heterocycles ....................................... 468
16.12.2.1.2.1 Method 1: Reaction of Azetes with Nitriles ......................... 468
16.12.2.1.2.2 Method 2: Reaction of Azetidine with Imidates ..................... 468
16.12.2.1.3 Of Five-Membered Heterocycles ....................................... 469
16.12.2.1.3.1 Method 1: Reaction of Furans ....................................... 469
16.12.2.1.3.2 Method 2: Reaction of 3-Acyl-2-oxo-tetrahydrothiophenes with Amidine Derivatives ........................................ 470
16.12.2.1.3.3 Method 3: Reaction of 2,3,4,5-Tetraphenylpyrrole with Sulfenamides .................................................. 471
16.12.2.1.3.4 Method 4: Reaction of Isoxazoles ............................................................................................................ 471
16.12.2.1.3.4.1 Variation 1: Rearrangement of 5-(Acylamino)isoxazoles ............................................................... 471
16.12.2.1.3.4.2 Variation 2: Rearrangement of N-(Isoxazol-4-ylcarbonyl)urea and N\(^1\)-(Isoxazol-4-ylcarbonyl)benzimidamide .......................................................... 472
16.12.2.1.3.5 Method 5: Reaction of Oxazoles ...................................................................................................................... 472
16.12.2.1.3.6 Method 6: Reaction of Pyrazoles .................................................................................................................. 473
16.12.2.1.3.7 Method 7: Reaction of Imidazoles .................................................................................................................. 474
16.12.2.1.3.7.1 Variation 1: Rearrangement of 5-(Acylamino)isoxazoles ............................................................... 474
16.12.2.1.3.7.2 Variation 2: Rearrangement of \(N\)-(Isoxazol-4-ylcarbonyl)urea and \(N\(^1\)-(Isoxazol-4-ylcarbonyl)benzimidamide .......................................................... 475
16.12.2.1.3.7.3 Variation 3: Reaction with Acetylenes ........................................................................................................ 475
16.12.2.1.3.7.4 Variation 4: Reaction with Chloroform .................................................................................................... 476
16.12.2.1.3.8 Method 8: Reaction of Isoxazoles ..................................................................................................................... 476
16.12.2.1.3.9 Method 9: Reaction of Isoxazoles .................................................................................................................... 477
16.12.2.2 Formal Exchange of Ring Members With Retention of the Ring Size ............................................................. 478
16.12.2.2.1 Method 1: Reaction of Pyran-2-ones with Amidine Derivatives ................................................................. 478
16.12.2.2.2 Method 2: Reaction of Pyran-4-ones with Amidine Derivatives ............................................................... 480
16.12.2.2.3 Method 3: Reaction of 1,3-Oxazines .................................................................................................................. 481
16.12.2.2.3.1 Variation 1: Reaction of 1,3-Oxazin-4-ones with Ammonia ........................................................................ 481
16.12.2.2.3.2 Variation 2: Rearrangement of 2-Amino-1,3-oxazin-4-one ................................................................. 481
16.12.2.2.3.3 Variation 3: Reaction of 1,3-Oxazin-4-ones with Thiocarbamides .......................................................... 482
16.12.2.2.3.4 Variation 4: Reaction of 1,3-Oxazin-6-ones with Ammonia ................................................................. 482
16.12.2.2.3.5 Variation 5: Rearrangement of 1,3-Oxazine-5-carboxamide ............................................................ 483
16.12.2.2.3.6 Variation 6: Reaction of 1,3-Oxazinonium Perchlorates with Ammonia .................................................. 483
16.12.2.2.4 Method 4: Reaction of 1,3-Thiazinones or 1,4-Benzothiazines ................................................................. 483
16.12.2.2.5 Method 5: Reaction of Pyrimidinones ............................................................................................................ 485
16.12.2.2.6 Method 6: Rearrangement of 1,2,4-Oxadiazines .......................................................................................... 486
16.12.2.2.7 Method 7: Rearrangement of 3,5-Oxadiazinium or 3,5-Thiadiazinium Salts ...................................................... 486
16.12.2.2.8 Method 8: Rearrangement of 2-(Acylimethyl)-1,3,5-triazines .............................................................. 487
16.12.2.2.9 Method 9: Rearrangement of N,N-Diethylprop-1-ynamine ................................................................. 487
16.12.2.2.10 Method 10: Rearrangement of 1,3,5-Triazines with Active Methylene Compounds ........................................................ 491
16.12.2.2.11 Method 11: Rearrangement of 2-(Acylimethyl)-1,3,5-triazines .............................................................. 491
16.12.2.2.12 Method 12: Rearrangement of 2-Alkyl-1,2-dihydro-1,3,5-triazines ............................................................ 492
16.12.2.2.13 Method 13: Rearrangement of 1,3,5-Triazinediones ................................................................................. 492
16.12.2.2.14 Method 14: Rearrangement of 1,2,3,5-Oxathiadiazine 2,2-Dioxide with Active Methylene Compounds ................................................................................. 492
16.12.2.3 By Ring Contraction ................................................................................................................................. 493
16.12.2.4 Aromatization .................................................................................................................................................. 494
16.12.2.4.1 By Oxidation ................................................................................................................................................ 494
16.12.2.4.1 Method 1: Rearrangement of 1,3,5-Triazines with Active Methylene Compounds ........................................................ 494
16.12.2.5 Aromatization .................................................................................................................................................. 494
16.12.2.5.1 Method 1: Rearrangement of 1,3,5-Triazines with Active Methylene Compounds ........................................................ 494
16.12.3.1.2 Method 2: By Dehydrogenation of Tetrahydropyrimidines ........................ 495
16.12.3.1.3 Method 3: Pyrimidinones by Dehydrogenation .............................. 496
16.12.3.2 By Elimination .................................................................................. 497
16.12.3.2.1 Method 1: Acid-Catalyzed Elimination of Water ............................ 497
16.12.3.2.2 Method 2: Base-Catalyzed Elimination of HX .............................. 497
16.12.4 Synthesis by Substituent Modification .................................................. 499
16.12.4.1 Substitution of Existing Substituents .................................................. 499
16.12.4.1.1 Method 1: Hydrogen/Deuterium Exchange .................................... 499
16.12.4.1.2 Method 2: Metalation ................................................................... 499
16.12.4.1.3 Method 3: Silylation ...................................................................... 500
16.12.4.1.4 Method 4: C-Acylation ................................................................. 501
16.12.4.1.4.1 Variation 1: Formylation ................................................................ 501
16.12.4.1.4.2 Variation 2: Acylation by Radicals ........................................... 501
16.12.4.1.4.3 Variation 3: Carboxylation ......................................................... 502
16.12.4.1.5 Method 5: Cyanation ..................................................................... 503
16.12.4.1.6 Method 6: Hydroxyalkylation and Related Reactions ...................... 504
16.12.4.1.7 Method 7: C-Alkylation .................................................................. 504
16.12.4.1.8 Method 8: Halogenation ............................................................... 505
16.12.4.1.9 Method 9: Nitration ...................................................................... 507
16.12.4.1.10 Method 10: Nitrosation ................................................................. 508
16.12.4.1.11 Method 11: Amination .................................................................. 508
16.12.4.1.2 Substitution of (Trialkylstannyl)pyrimidines with Acid Chlorides and Aryl Halides .......................................................... 509
16.12.4.1.3 Of Carbon Functionalities ................................................................ 510
16.12.4.1.3.1 Method 1: Decarboxylation ....................................................... 510
16.12.4.1.3.2 Method 2: N-Deacylation .......................................................... 511
16.12.4.1.3.3 Method 3: N-Dealkylation .......................................................... 511
16.12.4.1.3.4 Method 4: Removal of Protecting Groups ..................................... 512
16.12.4.1.3.4.1 Variation 1: Benzyloxymethyl Group ....................................... 512
16.12.4.1.3.4.2 Variation 2: Cyanoethyl Group ............................................. 513
16.12.4.1.3.4.3 Variation 3: Benzyl Group ...................................................... 513
16.12.4.1.4 Of Heteroatoms ............................................................................. 514
16.12.4.1.4.1 Dehalogenation ........................................................................ 514
16.12.4.1.4.1.1 Method 1: Dehalogenation with Palladium on Carbon .......... 514
16.12.4.1.4.1.2 Method 2: Dechlorination by Zinc Dust ................................. 515
16.12.4.1.4.1.3 Method 3: Dechlorination of 3-Chloropyrimidines with Tosylhydrazine ................................................................. 515
16.12.4.1.4.2 Halogen-Exchange Reactions ..................................................... 516
16.12.4.1.4.2.1 Method 1: Exchange of Chlorine for Fluorine ....................... 516
16.12.4.1.4.2.2 Method 2: Exchange of Chlorine for Iodine ......................... 516
16.12.4.1.4.3 Substitution of Halogen by Oxygen Functions ............................ 517
16.12.4.1.3.1 Method 1: Exchange of Halogen for Alkoxides ........................................ 517
16.12.4.1.3.2 Method 2: Hydrolysis of Halopyrimidines ........................................... 520
16.12.4.1.4 Substitution of Halogens by Sulfur Functionalities ...................................... 520
16.12.4.1.4.1 Method 1: Reaction of Halopyrimidines with Thiolates .............................. 520
16.12.4.1.4.2 Method 2: Conversion of Halopyrimidines into Thiols .............................. 521
16.12.4.1.4.5 Substitution of Halogens by Nitrogen Functionalities ................................ 523
16.12.4.1.4.5.1 Method 1: Aminolysis of Halopyrimidines ............................................. 523
16.12.4.1.4.5.2 Method 2: Substitution of Halogens by Hydrazine ................................. 527
16.12.4.1.4.5.3 Method 3: Substitution of Halogens by Azide ....................................... 528
16.12.4.1.4.6 Substitution of Halogens by Carbofunctional Groups .................................. 528
16.12.4.1.4.6.1 Method 1: Reaction with Carbonyl Compounds via Lithiated Intermediates ............................................................... 528
16.12.4.1.4.6.2 Method 2: Palladium-Catalyzed Cross Coupling with Alkenes and Alkynes (Heck-Type Reactions) .............................. 530
16.12.4.1.4.6.2.1 Variation 1: Coupling with Alkenes ..................................................... 530
16.12.4.1.4.6.2.2 Variation 2: Coupling with Alkynes ..................................................... 531
16.12.4.1.4.6.3 Method 3: Palladium-Catalyzed Cross Coupling with Organostannanes (Stille Reaction) .......................................................... 533
16.12.4.1.4.6.4 Method 4: Reaction with Grignard Reagents ............................................ 536
16.12.4.1.4.6.5 Method 5: Reaction with Arylboronic Acids (Suzuki Coupling) ................. 537
16.12.4.1.4.6.6 Method 6: Reaction with Active Methylene Compounds ......................... 537
16.12.4.1.4.6.7 Method 7: Reaction with Perfluoroalkyl Iodides ..................................... 538
16.12.4.1.4.7 Substitution of Oxygen Functions ............................................................ 539
16.12.4.1.4.7.1 Method 1: Exchange of Hydroxy for Halogen ......................................... 539
16.12.4.1.4.7.1.1 Variation 1: Introduction of Chlorine .................................................... 539
16.12.4.1.4.7.1.2 Variation 2: Introduction of Bromine .................................................... 540
16.12.4.1.4.7.2 Method 2: Exchange of Oxygen for Sulfur ............................................. 540
16.12.4.1.4.8 Desulfurization ......................................................................................... 542
16.12.4.1.4.8.1 Method 1: Of Pyrimidinethiols with Raney Nickel .................................. 542
16.12.4.1.4.8.2 Method 2: Detosylation ............................................................................. 542
16.12.4.1.4.9 Substitution of Sulfur Functions by Hydroxy and Alkoxy Groups .................. 543
16.12.4.1.4.9.1 Method 1: Conversion of (Alkylsulfonyl)pyrimidines into Pyrimidinones .... 543
16.12.4.1.4.10 Substitution of Sulfur Functions for Amines ............................................. 543
16.12.4.1.4.10.1 Method 1: Aminolysis of Sulfur-Containing Functional Groups .................. 543
16.12.4.1.4.11 Substitution of Sulfur by Carbofunctional Groups ...................................... 546
16.12.4.1.4.11.1 Method 1: Sulfur Extrusion from [(Acylmethyl)sulfanyl]pyrimidines ........ 546
16.12.4.1.4.12 Substitution of Amino Groups by Halogens and Hydroxy Groups ................ 546
16.12.4.2 Addition Reactions .......................................................................................... 547
16.12.4.2.1 Addition of Organic Groups ............................................................................ 547
16.12.4.2.1.1 Method 1: N-Alkylations ............................................................................. 547
16.12.4.2.1.2 Method 2: C-Alkylations ............................................................................. 547
16.12.4.2.2 Addition of Heteroatoms ................................................ 548
16.12.4.2.2.1 Method 1: Generation of N-Oxides ............................ 548
16.12.4.3 Rearrangement of Substituents ................................. 550
16.12.4.3.1 Method 1: Dimroth Rearrangement ................................. 550
16.12.4.3.2 Method 2: Conversion of 3-Phenyl-2H-isoxazolo[2,3-a]pyrimidin-2-ones into 2-Benzoylpyrimidines ................................. 552
16.12.4.3.3 Method 3: Conversion of a 3H-[1,2,4]Thiazolo[4,3-c]pyrimidin-3-one into Pyrimidin-4-ylcarbamate and Related Examples ................................. 552
16.12.4.4 Modification of Substituents .............................................. 552
16.12.4.4.1 Method 1: O-Alkylation .............................................. 553
16.12.4.4.2 Method 2: O-Acylation ............................................... 553
16.12.4.4.3 Method 3: O-Silylation .............................................. 554
16.12.4.4.4 Method 4: S-Oxidation ............................................... 554
16.12.4.4.5 Method 5: S-Alkylation ............................................... 555

16.13 Product Class 13: Quinazolines
D. Kikelj

16.13 Product Class 13: Quinazolines .............................................. 573
16.13.1 Synthesis by Ring-Closure Reactions .................................... 581
16.13.1.1 By Annulation to an Arene ............................................ 581
16.13.1.1.1 By Formation of Three N—C Bonds ............................... 581
16.13.1.1.1.1 Fragments Arene—C, N—C, and N ............................... 581
16.13.1.1.1.1 Method 1: From 2-Hydroxybenzoyl or 2-Chlorobenzoyl Chlorides and Carboxamides .................................................. 581
16.13.1.1.2 By Formation of Two N—C Bonds .................................. 582
16.13.1.1.2.1 Fragments Arene—C and N—C—N ............................... 582
16.13.1.1.2.1 Method 1: From 2-Halobenzonitriles or 2-Alkoxybenzonitriles and Guanidine .................................................. 582
16.13.1.1.2.1.2 Method 2: From 2-Fluorophenyl Ketones and Guanidine .................................................. 582
16.13.1.1.2.1.3 Method 3: From 2-Fluorobenzaldehydes and Amidines .................................................. 583
16.13.1.1.2.1.4 Method 4: From Acetates of 6-Acyl-o-quinol and Amidines, Guanidine, 2-Alkylisoureas, or 2-Alkylisothioureas .................................................. 583
16.13.1.1.2.1.5 Methods 5: Additional Methods .................................. 584
16.13.1.1.2.2 Fragments N—Arene—C and N—C ............................... 584
16.13.1.1.2.2 Method 1: From Anthranilic Acid Derivatives and Cyanates, Thiocyanates, Urea, or Carbamates .................................................. 584
16.13.1.1.2.2.2 Method 2: From Anthranilic Acid Derivatives and Guanidine, Imidates, or Formimidamides .................................................. 585
16.13.1.1.2.2.3 Method 3: From Anthranilic Acid Derivatives and Nitriles .................................................. 586
16.13.1.1.2.2.4 Method 4: From Anthranilic Acid Derivatives and Amides or Thioamides (Niementowski’s Synthesis) .................................................. 588
Method 5: From Anthranilic Acid Derivatives and Other N—C Synthons
(1,3,5-Triazine, Gold’s Reagent, Activated Nitriles) .......................... 589

Method 6: From 2-Aminobenzonitriles and Chlorosulfonyl Isocyanate,
Urea, or Thiourea ................................. 590

Method 7: From 2-Aminobenzonitriles and Guanidines, Imidates,
or Formimidamides ........................................ 591

Method 8: From 2-Aminobenzonitriles and Nitriles .......................... 592

Method 9: From 2-Aminobenzonitriles and Formamide or 1,3,5-Triazine
or Thiocyanates ........................................... 594

Method 10: From 2-Aminophenyl Ketones and Cyanates, Isocyanates,
Urea, Carbamates, Guanidine, Imidates, or Carboxamides .... 595

Method 11: From 2-Aminophenyl Ketones or 2-Aminobenzaldehydes and
Urea, Carbamates, Guanidine, Imidates, or Carboxamides .......... 596

Methods 12: Additional Methods ........................................ 597

Method 1: From 2-(Azidomethyl)benzenediazonium Tetrafluoroborate
and Nitriles ............................................ 597

Method 1: From N-(2-Alkoxycarbonylphenyl)- or N-(2-Cyanophenyl)carbodiimides,
N-(2-Cyanophenyl-S-methylisothioureas, or -isocyanates and Ammonia, Ammonium Chloride,
or Hydroxylamine ........................................ 597

Method 2: From 2-(Acylamino)benzoic Acid Derivatives and Ammonia ... 599

Method 3: From N'-[2-(Trifluoromethyl)phenyl]carboximidamides ....... 601

Method 4: From 2-(Acylamino)benzaldehydes or 2-(Acylamino)phenyl
Ketones and Ammonia (Bischler’s Synthesis) ..................... 602

Methods 5: Additional Methods ........................................ 604

Method 1: From 2-Nitrobenzonitrile and Alcohols ............................ 605

Method 2: From 2-Aminobenzohydroxamic Acids and Formic Acid or
Carboxylic Acid Derivatives .................................. 606

Method 3: From 2-Aminobenzamides or 2-Aminothiobenzamides and
Carbon Monoxide, Carbon Disulfide, Alkyl Chloroformates,
Chlorocarbonylsulfenyl Chloride, or Chloroformamidine
Hydrochloride ............................................. 606

Method 4: From 2-Aminobenzamides and Carboxylic Acids, Esters,
Ortho Esters, or Carboxamides .................................. 607

Method 5: From 2-Aminobenzamides and Aldehydes ....................... 609

Method 6: From 2-Aminobenzamides and Other One-Carbon-Unit
Transfer Reagents .......................................... 609
16.13.1.1.2.6.7 Method 7: From 2-Aminobenzonitriles and Carbon Dioxide, Carbon Monoxide, Carbon Disulfide, or Potassium O-Ethyl Dithiocarbonate ................................. 611

16.13.1.1.2.6.8 Method 8: From 2-Aminobenzonitriles and Formic Acid ............................... 612

16.13.1.1.2.6.9 Method 9: From 2-Aminobenzonitriles and Thioamides or Thioacetic Acid ................................. 613

16.13.1.1.2.6.10 Method 10: From 2-Aminobenzonitriles, Grignard Reagents, and Carbonyl Compounds or Phosgene Iminium Chlorides ................................. 614

16.13.1.1.2.6.11 Method 11: From 2-Aminobenzonitriles and Formic Acid ............................... 612

16.13.1.1.2.6.12 Method 12: From Oximes of 2-Aminobenzonitriles and One-Carbon-Unit Transfer Reagents ................................. 615

16.13.1.1.2.6.13 Methods 13: Additional Methods ................................. 616

16.13.1.1.3 By Formation of One N—C and One C—C Bond ................................. 617

16.13.1.1.3.1 Fragments N—C—N—C and Arene ................................. 617

16.13.1.1.3.1.1 Method 1: From Pentachlorophenyllithium and Aryl Nitriles ................................. 617

16.13.1.1.3.2 Fragments C—N—Arene and N—C ................................. 618

16.13.1.1.3.2.1 Method 1: From Phenyl Isothiocyanates and Dialkylcyanamides ................................. 618

16.13.1.1.3.2.2 Method 2: From N-Arylcarbodiimides or N-Arylketenimines and Ethyl Aminocarbonylcarbamate or N,N-Disubstituted Cyanamides ................................. 618

16.13.1.1.3.2.3 Method 3: From Anilides and Carbamates, Isocyanates, or N,N-Disubstituted Cyanamides ................................. 619

16.13.1.1.3.2.4 Method 4: From N-Arylnitrilium Salts, N-Arylimidoyl Chlorides, or N-Arylimidates and Nitriles (Meerwein’s Quinazoline Synthesis) ................................. 621

16.13.1.1.3.2.5 Method 5: From N-(α-Alkoxyalkyl)benzotriazoles and Nitriles ................................. 623

16.13.1.1.3.2.6 Methods 6: Additional Methods ................................. 623

16.13.1.1.3.3 Fragments N—Arene and C—N—C ................................. 623

16.13.1.1.3.3.1 Method 1: From Arenediazonium Salts and Nitriles ................................. 623

16.13.1.1.3.3.2 Method 2: From Anilines and N-(Chlorocarbonyl) Isocyanate, 1,3,3-Trichloro-2-azapropenes, N-Vinylformimidamides, or N-Vinylbenzimidoyl Chlorides ................................. 624

16.13.1.1.3.3.3 Methods 3: Additional Methods ................................. 625

16.13.1.1.3.4 Fragments N—C—N—Arene and C ................................. 626

16.13.1.1.3.4.1 Method 1: From N-Aryguanidines, N-Arylbenzimidamides, or N-Arylisothioureas and Aryl Isothiocyanates, 4-Tosylcarbonimidic Dichloride, Phosgene, Alkyl Chloroformates, or Carbon Monoxide ................................. 626

16.13.1.1.3.4.2 Method 2: From N-Aryl-N′-ylidenebenzimidamides and Enamines, Aldehydes, or Ketenes ................................. 627

16.13.1.1.4 By Formation of One N—C Bond ................................. 628

16.13.1.1.4.1 Fragment N—C—N—Arene—C ................................. 628

16.13.1.1.4.1.1 Method 1: From 2-Ureidobenzoic Acids or Derivatives ................................. 628

16.13.1.1.4.1.2 Method 2: From 2-Ureidobenzonitriles ................................. 629

16.13.1.1.4.1.3 Method 3: From 2-Ureidophenyl Ketones or N-(2-Acylphenyl)amidines ................................. 630
16.13.1.1.4.4 Method 6: From 2-
[(4-Chloro-5H-1,2,3-dithiazol-5-ylidene)amino]benzonitrile 
(Riedel's Synthesis) ............................................. 643
16.13.1.1.4.7 Method 7: From 2-(Vinylamino)benzamides ................. 643
16.13.1.1.4.8 Method 8: From N-[2-(1-Amino-3-oxoalk-1-enyl)phenyl]acetonitriles ... 644
16.13.1.1.4.9 Methods 9: Additional Methods ........................................ 645
16.13.1.1.5 By Formation of One C—C Bond ..................................... 645
16.13.1.1.5.1 Fragment C—N—C—N—C .............................................. 645
16.13.1.1.5.11 Method 1: From Carbamimidoyl Isothiocyanates ............... 645
16.13.1.1.5.12 Method 2: From Imidoyl Isocyanates, Imidoyl Isothiocyanates, 
Imidoylcarbodiimides, or Imidoylketenimines .......................... 646
16.13.1.1.5.13 Method 3: From 1-Acyl-3-phenylureas ............................. 647
16.13.1.1.5.14 Method 4: From N'-Substituted N-Arylimidamides or N-Arylisothioureas 648
16.13.1.1.5.15 Method 5: From N-Aryl-N'-[(dimethylaminomethylene)guanidines or 
N-Aryl-N'-[(dimethylaminomethylene)imidamides ......................... 649
16.13.1.1.5.16 Methods 6: Additional Methods ....................................... 650
16.13.1.2 By Annulation to the Heterocyclic Ring ................................. 650
16.13.1.2.1 Method 1: From 6-Methylpyrimidine-5-carboxylates and 
Alkynes or Alkenes ............................................ 650
16.13.1.2.2 Method 2: From 4-Methyl-6-thioxo-1,6-dihydropyrimidine-5-carbonitriles 
and 2-Ylidenemalononitriles ........................................ 651
**16.13.1.2.3** Method 3: From Annulated Pyrimidine-2,4-diones and Dimethyl Acetylenedicarboxylate ........................................ 651

**16.13.1.2.4** Method 4: From 3H-1,2,3-Triazolo[4,5-d]pyrimidin-3-amines and 2,3,4,5-Tetraarylcyclopentadienone ........................................ 651

**16.13.1.2.5** Methods 5: Additional Methods ........................................ 652

**16.13.2** Synthesis by Ring Transformation ........................................ 652

**16.13.2.1** By Ring Enlargement .................................................... 652

**16.13.2.1.1** Method 1: From Isoindole Derivatives ........................................ 652

**16.13.2.1.2** Method 2: From Indole Derivatives ........................................ 653

**16.13.2.1.3** Method 3: From Benzisothiazole Derivatives .......................... 655

**16.13.2.1.4** Method 4: From Benzisoxazole Derivatives .......................... 655

**16.13.2.1.5** Method 5: From Indazole Derivatives ........................................ 655

**16.13.2.2** Formal Exchange of Ring Members with Retention of the Ring Size ........................................ 656

**16.13.2.2.1** Method 1: From Quinolines ................................................. 656

**16.13.2.2.2** Method 2: From 3,1-Benzoxazinium Salts .......................... 658

**16.13.2.2.3** Method 3: From 2H-3,1-Benzoxazine-2,4(1H)-diones (Isatoic Anhydrides) ........................................ 658

**16.13.2.2.4** Method 4: From 4H-3,1-Benzoxazin-4-ones, 4H-3,1-Benzothiazin-4-ones, and 4H-3,1-Benzothiazine-4-thiones ........................................ 661

**16.13.2.2.5** Method 5: From 2H-3,2,1-Benzothiazidine-2,4(1H)-dione ........ 663

**16.13.2.2.6** Method 6: From Cinnolines ............................................... 664

**16.13.2.2.7** Method 7: From Phthalazines ............................................. 664

**16.13.2.2.8** Method 8: From 1,2,3-Benzotriazin-4(3H)-ones .................. 664

**16.13.2.3** By Ring Contraction .......................................................... 665

**16.13.2.3.1** Method 1: Of 4,1-Benzoxazepine-2,5(1H,3H)-diones ................. 665

**16.13.2.3.2** Method 2: Of 4,1-Benzodiazepines ........................................ 665

**16.13.2.3.3** Method 3: Of 1,3,4-Benzotriazepines ........................................ 668

**16.13.2.3.4** Method 4: Of 4,1,5-Benzoxadiazocines ........................................ 669

**16.13.2.3.5** Method 5: Of 1,5-Benzodiazocines ........................................ 669

**16.13.3** Aromatization ................................................................. 670

**16.13.3.1** Of the Heterocyclic Ring .................................................... 670

**16.13.3.1.1** Method 1: Oxidation of Hydro Precursors ........................................ 670

**16.13.3.1.2** Method 2: Removal of Carbofunctional Groups from Hydro Precursors ........................................ 673

**16.13.3.1.3** Method 3: Removal of Heterofunctional Groups .......................... 675

**16.13.3.2** Of the Carbocyclic Ring ..................................................... 676

**16.13.3.2.1** Method 1: Oxidation of Hydro Precursors ........................................ 676

**16.13.3.2.2** Method 2: Removal of Heterofunctional Groups from Hydro Precursors ........................................ 677

**16.13.4** Synthesis by Substituent Modification ........................................ 678

**16.13.4.1** Substitution of Existing Substituents ........................................ 678

**16.13.4.1.1** Of Hydrogen ................................................................. 678

**16.13.4.1.1.1** Method 1: By Deuterium or Metals ........................................ 678

**16.13.4.1.1.2** Method 2: By Carbofunctional Groups ........................................ 679

**16.13.4.1.1.3** Method 3: By Heterofunctional Groups ........................................ 683

**16.13.4.1.1.3.1** Variation 1: Halogenation ................................................. 683
Variation 2: Introduction of an Oxygen Functionality
Variation 3: Introduction of a Sulfur Functionality
Variation 4: Introduction of a Nitrogen Functionality

Of Metals
Of Carbon Functionalities
Of Heteroatoms

Method 1: Reduction of Quinazoline N-Oxides
Method 2: By Hydrogen
Method 3: By Deuterium or Metals
Method 4: By Heterofunctional Groups

Variation 1: Oxo Group Transformations
Variation 2: Thioxo Group Transformations
Variation 3: Alkoxy, Aryloxy, Alkylsulfanyl, and Arylsulfanyl Group Transformations
Variation 4: Amino Group Transformations
Variation 5: Halogen Group Transformations

Addition Reactions
Protonation
Addition of Carbofunctional Groups
Method 1: Quaternization
Method 2: N-Alkylation
Addition of Heteroatoms
Method 1: N-Oxidation
Rearrangement of Substituents
Modification of Substituents
O/S-Functional Group Modification
Nitro Group Modification
Methyl Group Modification

Product Class 14: Pyrazines
N. Sato

Synthesis by Ring-Closure Reactions
By Formation of Four N–C Bonds
Fragments C–C, C–C, and Two N Fragments
Method 1: From a 1,2-Bifunctional Compound and Ammonia or Ammonium
By Formation of Two N–C and Two C–C Bonds
Fragments N–C, N–C, and Two C Fragments

16.15.1.1.1.11 Method 11: From Benzene-1,2-diamines and Aryl(arylimino)acetonitriles 854
16.15.1.1.1.12 Method 12: From Benzene-1,2-diamines and 2,2-Bis(trifluoromethyl)-oxazol-5(2H)-ones ........................................ 854
16.15.1.1.1.13 Method 13: From Benzene-1,2-diamine and α-Methylsulfinyl Ketones 855
16.15.1.1.1.14 Method 14: From Benzene-1,2-diamines and 3-Arylisoxazol-5(4H)-ones 855
16.15.1.1.1.15 Method 15: From Benzene-1,2-diamines and α-Azido Carbonyl Compounds .................................................. 855
16.15.1.1.1.16 Method 16: From Benzene-1,2-diamines and Epoxides .................. 856
16.15.1.1.1.16.1 Variation 1: From Benzene-1,2-diamine and Epoxides by a Bismuth-Catalyzed Coupling ........................................ 856
16.15.1.1.1.16.2 Variation 2: From Benzene-1,2-diamine and Chlorocyanohydrins Obtained from Epoxides ........................................ 857
16.15.1.1.1.17 Method 17: Solid-Phase Synthesis from a Polymer-Bound Benzene-1,2-diamine and α-Bromo Ketones 857
16.15.1.1.1.2 Fragments N—C—C—N and C—C (Arene) .......................... 857
16.15.1.1.1.2.1 Method 1: From Ethane-1,2-diamine and Benzo-1,4-quinones .... 857
16.15.1.1.1.3 Fragments N—Arene and N—C—C .................................. 858
16.15.1.1.1.3.1 Method 1: From 1-Halo-2-nitroarenes and Phenylacetimidamides .... 858
16.15.1.1.4 Fragments Arene—N—C—C and N ................................. 858

16.15.1.1.4.1 Method 1: 2-Chloroquinoxalines from Anilides under Vilsmeier Conditions .......................... 858

16.15.1.1.2 By Formation of One N—C and One C—C Bond ........................................ 858

16.15.1.1.2.1 Fragments N—Arene—N—C and C ........................................ 858

16.15.1.1.2.1.1 Method 1: Cyclization of N-(2-Nitrobenzylidene)benzene-1,2-diamine with Potassium Cyanide ........................................ 858

16.15.1.1.3 By Formation of One N—C Bond ........................................ 859

16.15.1.1.3.1 Fragment N—Arene—N—C ........................................ 859

16.15.1.1.3.1.1 Method 1: Intramolecular Cyclization of N-(2-Nitrobenzylidene)benzene-1,2-diamine with Potassium Cyanide ........................................ 858

16.15.1.1.3.1.2 Method 2: Intramolecular Cyclization of Enamino Ketones ........................................ 859

16.15.1.1.3.1.3 Method 3: Intramolecular Cyclization of N-(2-Nitrophenyl)acetamides ........................................ 860

16.15.1.1.3.1.4 Method 4: Intramolecular Cyclization of N-(2-Nitro-4-substituted phenyl)-3-oxobutanamides ........................................ 861

16.15.1.1.3.1.5 Method 5: Intramolecular Reductive Cyclization of DL-N-(4-Bromo-2-nitrophenyl)alanine ........................................ 861

16.15.1.1.3.1.6 Method 6: Intramolecular Reductive Cyclization of N-(3,5-Dimethoxy-2-nitrophenyl)-2-oxo-2-phenylacetamide ........................................ 862

16.15.1.1.3.1.7 Method 7: Intramolecular Cyclization of 4-Nitro-N'-prop-2-ynylbenzene-1,2-diamine ........................................ 862

16.15.1.1.3.1.8 Method 8: Intramolecular Cyclization of 3-[(2-Aminophenyl)amino]-2-chlorobut-2-enenitrile ........................................ 862

16.15.1.1.3.1.9 Method 9: Intramolecular Cyclization of [(2-Aminophenyl)amino]acetanitrile ........................................ 863

16.15.1.1.3.1.10 Method 10: Intramolecular Cyclization of N-(3-Arylprop-2-ynyl)-N,N'-1,2-phenylenebis(4-toluenesulfonamides) through Copper Catalysis ........................................ 863

16.15.1.1.3.2 Fragment Arene—N—C—C—N ........................................ 864

16.15.1.1.3.2.1 Method 1: Intramolecular Cyclization of (Phenylimino)acetaldehyde O-Acetyloxime Derivatives ........................................ 864

16.15.1.1.3.2.1.1 Variation 1: 2,3-Diphenylquinoxaline 1-Oxides by Oxidative Cyclization of 2-(Arylimino)-1,2-diphenylethanone Oximes ........................................ 865

16.15.1.1.2 By Annulation to the Heterocyclic Ring ........................................ 865

16.15.1.1.2.1 By Formation of Two C—C Bonds ........................................ 865

16.15.1.1.2.1.1 Fragments C—Hetaren—C and C—C ........................................ 865

16.15.1.1.2.1.1.1 Method 1: Cycloaddition of 2,3-Bis(bromomethylene)-2,3-dihydropyrazine to Electron-Rich Dienophiles ........................................ 865

16.15.1.2 Synthesis by Ring Transformation ........................................ 866

16.15.1.2.1 By Ring Enlargement ........................................ 866

16.15.1.2.1.1 Method 1: Quinoxaline 1,4-Dioxides from Benzofuroxan Derivatives and Enamines or Ynamines ........................................ 866

16.15.1.2.1.2 Method 2: Quinoxaline 1,4-Dioxides from Benzofuroxan and Enolate Anions Prepared In Situ ........................................ 867
16.15.2.1.3 Method 3: Quinoxaline 1,4-Dioxides from Benzofuroxan and Dienamines 868
16.15.2.1.4 Method 4: 3-(2-Hydroxyaryl)quinoxaline 1-Oxides from Benzofuroxan and Benzo[b]furan-3(2H)-ones 869
16.15.2.1.5 Methods 5: Additional Methods 869
16.15.2.2 By Ring Contraction 870
16.15.2.2.1 Method 1: 2-Acrylquinazolines by Oxidative Ring Contraction of 2,4-Disubstituted 1,5-Benzodiazepines 870
16.15.3 Aromatization 871
16.15.3.1 Method 1: Oxidation of 1,2,3,4-Tetrahydroquinazolines 871
16.15.3.2 Method 2: Oxidation of 1,2-Dihydroquinazolizine Derivatives 871
16.15.3.3 Method 3: Oxidation of Quinoxaline-2,3(1H,4H)-dione Derivatives 872
16.15.3.4 Method 4: Oxidation of 3,4-Dihydroquinazolin-2(1H)-one Derivatives 872
16.15.4 Synthesis by Substituent Modification 874
16.15.4.1 Substitution of Existing Substituents 874
16.15.4.1.1 Of Hydrogen 874
16.15.4.1.1.1 Method 1: Hydrogen–Deuterium Exchange 874
16.15.4.1.1.2 Method 2: Alkylation 874
16.15.4.1.1.3 Method 3: Acylation 875
16.15.4.1.1.4 Method 4: Cyanation 877
16.15.4.1.1.5 Method 5: Halogenation 878
16.15.4.1.1.6 Method 6: Sulfonation and Chlorosulfonation 879
16.15.4.1.1.7 Method 7: Oxidation 879
16.15.4.1.1.8 Method 8: Nitration 879
16.15.4.1.1.9 Method 9: Amination 881
16.15.4.1.2 Of Carbon Functionalities 882
16.15.4.1.2.1 Method 1: By Hydrogen 882
16.15.4.1.2.2 Method 2: By Heterofunctional Groups 882
16.15.4.1.3 Of Heteroatoms 883
16.15.4.1.3.1 Reduction of Quinoxaline N-Oxides 883
16.15.4.1.3.1.1 Method 1: Deoxygenation of Quinoxaline 1-Oxides and Quinoxaline 1,4-Dioxides 883
16.15.4.1.3.2 By Hydrogen 885
16.15.4.1.3.3 By Carbofunctional Groups 885
16.15.4.1.3.3.1 Method 1: Substitution of Halogen 885
16.15.4.1.3.3.2 Method 2: Substitution of an Oxygen Functionality 888
16.15.4.1.3.3.3 Method 3: Substitution of a Sulfur Functionality 888
16.15.4.1.3.4 By Heterofunctional Groups 889
16.15.4.1.3.4.1 Substitution of Halogen 889
16.15.4.1.3.4.1.1 Method 1: With Halogens 889
16.15.4.1.3.4.1.2 Method 2: With O-Nucleophiles 889
16.15.4.1.3.4.1.3 Method 3: With S-Nucleophiles 891
16.15.4.1.3.4.1.4 Method 4: With N-Nucleophiles 891
16.15.4.1.3.4.2 Substitution of an Oxygen Functionality .............................................. 892
16.15.4.1.3.4.2.1 Method 1: Haloquinoxalines from the Corresponding Oxo Derivatives • 892
16.15.4.1.3.4.2.2 Method 2: Quinoxalinethiones from the Corresponding Oxo Derivatives 893
16.15.4.1.3.4.3 Substitution of a Sulfur Functionality .............................................. 894
16.15.4.1.3.4.4 Substitution of a Nitrogen Functionality .............................................. 894
16.15.4.2 Addition Reactions .................................................................................. 895
16.15.4.2.1 Protonation .................................................................................. 895
16.15.4.2.2 Addition of Carbofunctional Groups ................................................. 896
16.15.4.2.2.1 Method 1: N-Alkylation .................................................................. 896
16.15.4.2.2.2 Method 2: Synthesis of Onium Salts ............................................. 896
16.15.4.2.2.3 Cycloaddition Reactions .................................................................. 897
16.15.4.2.2.4 Additions of Grignard Reagents .................................................... 898
16.15.4.2.3 N-Oxidation .................................................................................. 898
16.15.4.3 Modification of Substituents .................................................................. 899
16.15.4.3.1 Method 1: Alkylation of an α-Methyl Substituent ......................... 899
16.15.4.3.2 Method 2: Oxidation of Alkyl Groups to Aldehydes ..................... 901
16.15.4.3.3 Method 3: Bromination .................................................................. 901
16.15.4.3.4 Method 4: O-Methylation and O-Demethylation ......................... 901
16.15.4.5 Method 5: Reduction of a Nitro Group ................................................. 902

16.16 Product Class 16: Phenazines
U. Urleb and S. Gobec

16.16.1 Product Class 16: Phenazines .................................................................. 913
16.16.1.1 Synthesis by Ring-Closure Reactions .................................................. 915
16.16.1.1.1 By Annulation to an Arene .............................................................. 915
16.16.1.1.1.1 By Formation of Two N─C Bonds .............................................. 915
16.16.1.1.1.1.1 Fragments N─Arene─N and Arene .......................................... 915
16.16.1.1.1.1.1 Method 1: From Benzene-1,2-diamines and Benzo-1,2-quinones • 915
16.16.1.1.1.1.2 Method 2: Oxidation of Benzene-1,2-diamine .......................... 916
16.16.1.1.1.1.3 Method 3: From Benzene-1,2-diamine and 1-Nitroso-2-naphthol • 916
16.16.1.1.1.1.4 Method 4: Electrochemical Reduction of Benzo-1,2-quinone Dioxime • 916
16.16.1.1.1.2 Fragments N─Arene and N─Arene .............................................. 917
16.16.1.1.1.2.1 Method 1: Phenazine 5-Oxides by Oxidative Condensation of Anilines and Substituted Nitrobenzenes ............................................................ 917
16.16.1.1.1.2.2 Method 2: Condensation of 2-Halonitrobenzenes ................... 918
16.16.1.1.1.2.3 Method 3: Cyclodimerization of 4-Substituted Nitrobenzenes • 918
16.16.1.1.1.2.4 Method 4: Oxidation of 4-Substituted Benzenesulfenanilides • 918
16.16.1.1.2 By Formation of One N─C Bond .................................................... 919
16.16.1.1.2.1 Fragment N─Arene─N─Arene ..................................................... 919
16.16.1.1.2.1.1 Method 1: Cyclization of N,N-Bis(nitrophenyl)amines ............. 919

16.17.1.2.2 Method 2: Cyclization with Ortho Esters and Diethoxymethyl Acetate .............................................. 946
16.17.1.2.2.1 Variation 1: Cyclization with an Ortho Ester Alone ....... 946
16.17.1.2.2.2 Variation 2: Cyclization with an Ortho Ester/Acid Mixture .................................................. 946
16.17.1.2.2.3 Variation 3: Cyclization with an Ortho Ester/Acid Anhydride Mixture ....................................... 946
16.17.1.2.2.4 Variation 4: Cyclization with Diethoxymethyl Acetate .... 946
16.17.1.2.3 Method 3: Cyclization with Aldehydes ........................ 946
16.17.1.2.3.1 Variation 1: Oxidative Cyclization with Iodine/1,2-Dimethoxyethane .......................................... 946
16.17.1 Variation 2: Oxidative Cyclization with Iron(III) Chloride/Ethanol .......... 976
16.17.1 Variation 3: Oxidative Cyclization with Air .................................. 977
16.17.1.3 From Other Disubstituted Pyrimidines .................................. 977
16.17.1.3.1 Method 1: Syntheses from 5-Nitrosopyrimidin-4-amines ........ 977
16.17.1.3.2 Method 2: Synthesis from 5-Diazenylypyrimidin-4-amines .... 980
16.17.1.3.3 Method 3: Synthesis from 5-Substituted Pyrimidin-4-amines ... 981
16.17.1.4 From Imidazole Precursors .................................................. 983
16.17.1.4.1 Method 1: From 4(5)-Aminoimidazole-5(4)-carboxamides .... 983
16.17.1.4.2 Method 2: From 5-Amino-1H-imidazole-4-carboxamide Riboside and Related Compounds ............................................................. 985
16.17.1.4.3 Method 3: From 4(5)-Aminoimidazole-5(4)-carbonitriles .... 988
16.17.1.4.4 Method 4: From 5-Aminoimidazole-4-carbonitrile Riboside or 2'-Deoxyriboside ............................................................. 989
16.17.1.4.5 Method 5: From 4(5)-Aminoimidazole-5(4)-carboxylates and Related Compounds ............................................................. 991
16.17.1.4.6 Method 6: From 4(5)-Aminoimidazole-5(4)-carbaldehydes .... 992
16.17.1.4.7 Method 7: From 4(5)-Aminoimidazole-5(4)-carbothioamides ... 993
16.17.1.4.8 Method 8: From 4-[Cyano(imino)methyl]imidazol-5-amines .... 994
16.17.1.4.9 Method 9: Syntheses from 5-Aminoimidazole-4-carboximidamide Derivatives ............................................................. 995
16.17.2 Synthesis by Ring Transformation .............................................. 996
16.17.2.1 From Pyrimidine-Containing Heterocycles ............................... 996
16.17.2.1.1 Method 1: From Thiazolo- or Oxazolo[5,4-d]pyrimidines .... 996
16.17.2.1.2 Method 2: From Furazano[3,4-d]pyrimidines ..................... 996
16.17.3 Synthesis by Substituent Modification ....................................... 997
16.17.3.1 By Introduction of Substituents Using Oxidation ...................... 997
16.17.3.1.1 Method 1: Oxidation with Peracids .................................. 997
16.17.3.1.2 Method 2: Enzymatic Oxidation ..................................... 999
16.17.3.2 By Removal of Substituents .................................................. 1000
16.17.3.2.1 Method 1: Dehalogenation ............................................. 1000
16.17.3.2.2 Method 2: Desulfurization ............................................ 1002
16.17.3.3 By Introduction of Substituents (Exchange of Hydrogen) .......... 1003
16.17.3.3.1 Method 1: By Deuteration and Tritiation ........................... 1003
16.17.3.3.2 Method 2: By Halogenation ........................................... 1004
16.17.3.3.2.1 Variation 1: By Fluorination ..................................... 1005
16.17.3.3.2.2 Variation 2: By Chlorination ..................................... 1005
16.17.3.3.2.3 Variation 3: By Bromination ..................................... 1007
16.17.3.3.2.4 Variation 4: By Iodination ........................................ 1009
16.17.3.3.3 Method 3: By Nitration .................................................. 1010
16.17.3.3.4 Method 4: By C-Alkylation ............................................ 1011
16.17.3.3.4.1 Variation 1: By Photochemical Reaction ...................... 1011
16.17.3.3.4.2 Variation 2: By Free-Radical Reaction Catalyzed by Iron(II) Ions . 1013
16.17.3.3.4.3 Variation 3: By Addition of Grignard Reagents .............. 1014
16.17.3.3.4.4 Variation 4: By Lithiation-Based Electrophilic Substitution . 1015
Table of Contents

16.17.3.4.5 Variation 5: By Electrochemical Approach ................................................. 1017
16.17.3.4.5 Method 5: By N-Alklylation ................................................................. 1018
16.17.3.4.5 Variation 1: By Base-Induced Coupling .................................................... 1018
16.17.3.4.5 Variation 2: By Phase-Transfer Catalysis .................................................. 1020

Product Class 18: Pyridopyridazines

M. Sako

Product Subclass 1: Pyrido[2,3-c]pyridazines

Synthesis by Ring-Closure Reactions

By Formation of Two N—C Bonds and One C—C Bond

Method 1: Intermolecular Cyclizations of Malononitrile Dimer and
Hydrazones, or Acetonitriles and Pyridazinediones

By Formation of Two N—C Bonds

Method 1: Cycloamination with Diazenes and Hydrazines

By Formation of One N—C and One C—C Bond

Method 1: Condensation of Enamines, Acetamide Acetals,
and Acetoacetates with Suitably Activated Pyridazines

By Formation of One N—C Bond

Method 1: Intramolecular Cyclization of Suitably Modified
Diazocompounds, Hydrazones, Azides, and Hydrazides

By Formation of One C—C Bond

Method 1: Intramolecular Cyclizations Induced by Base Treatment of
Active Methylene and Methine Compounds

Synthesis by Ring Transformation

Formal Exchange of Ring Members with Retention of the Ring Size

Method 1: Intramolecular [4 + 2] Cycloaddition of
3-(Alkynylamino)-1,2,4,5-tetrazines

Aromatization

Synthesis by Substituent Modification

Substitution of Existing Substituents

Addition Reactions

Product Subclass 2: Pyrido[2,3-d]pyridazines

Synthesis by Ring-Closure Reactions

By Formation of Two N—C Bonds and One C—C Bond

Method 1: Condensation of Hydrazones with Malononitriles

By Formation of Two N—C Bonds

Method 1: Condensation of Pyridine-2,3-dicarbonyl Compounds with
Hydrazines

By Formation of One N—C and One C—C Bond

Method 1: Condensation of 5-Chloropyridazine-4-carbonyl Chloride
with Enamines

Method 2: Condensation of 5-Acylpyridazin-4-amines with Acetals
**16.18.2.1.3.3** Method 3: Condensation of 5-Aminopyridazin-3(2H)-ones with Malonates ........................................ 1122

**16.18.2.1.4** By Formation of One N—C Bond ........................................................................................................ 1123

**16.18.2.4.3.1** Method 1: Oxidation of Pyridazino[4,5-b]quinoline ................................................................................ 1129

**16.18.3** Product Subclass 3: Pyrido[3,2-c]pyridazines ............................................................................................... 1129

**16.18.3.1** Synthesis by Ring-Closure Reactions ........................................................................................................ 1129

**16.18.3.1.1** By Formation of Two N—C and Two C—C Bonds .................................................................................. 1129

**16.18.3.1.1.1** Method 1: Cyclocondensation of Arylhydrazones with Malononitrile ...................................................... 1129

**16.18.3.1.2** By Formation of One N—N and One N—C Bond ..................................................................................... 1130

**16.18.3.1.2.1** Method 1: Diazotization of 2-Vinylpyridin-3-amines ............................................................................. 1130

**16.18.3.1.3** By Formation of Two N—C Bonds .......................................................................................................... 1131

**16.18.3.1.3.1** Method 1: Hetero-Diels–Alder Reactions of 2-Vinylpyridines ................................................................. 1131

**16.18.3.1.4** By Formation of One N—C and One C—C Bond ....................................................................................... 1132

**16.18.3.1.4.1** Method 1: Cyclocondensation of 4-Amino-6-methylpyridazine-3-carbaldehyde with Ketones ............ 1132

**16.18.3.1.4.2** Method 2: Cyclocondensation of 4-Chloropyridazine-3-carbonyl Chloride with Enamines ................. 1132

**16.18.3.1.5** By Formation of One N—C Bond .......................................................................................................... 1133

**16.18.3.1.5.1** Method 1: Intramolecular Cyclization of 2-Substituted 3-Hydrazone-pyridines ................................... 1133

**16.18.3.2** Aromatization ............................................................................................................................................. 1133

**16.18.3.3** Synthesis by Substituent Modification .................................................................................................... 1133
Product Subclass 4: Pyrido[3,4-c]pyridazines

Synthesis by Ring-Closure Reactions

By Formation of One N—N and One N—C Bond

Method 1: Cyclization of 4-Vinylpyridin-3-amines by Diazotization

By Formation of Two N—C Bonds

Method 1: Hetero-Diels–Alder Reactions of 4-Vinylpyridine with Diazones

Method 2: Cycloamination of 4-Vinylpyridazine-3-carboxylates

By Formation of One N—C and One C—C Bond

Method 1: Cycloamination of 3-Hydrazonopyridines with Aldehydes

Method 2: Cyclocondensation of Pyridazine-3-carbohydrazides with Aldehydes

By Formation of One C—C Bond

Method 1: Intramolecular Cyclization of 3-Pyridylhydrazones

Product Subclass 5: Pyrido[3,4-d]pyridazines

Synthesis by Ring-Closure Reactions

By Formation of Two N—C Bonds

Method 1: Cycloamination of Pyridine-3,4-dicarboxylates with Hydrazines

Method 2: Cycloamination of 4-Carbofunctional 5-Vinylpyridazines

By Formation of One N—C and One C—C Bond

Method 1: Condensation of 4,5-Dicarbofunctional Pyridazines with Amines

Method 2: Condensation of 4-(Iminomethyl)pyridazines with Enolates

By Formation of One C—C Bond

Method 1: Intramolecular Cyclization of 3-Pyridylhydrazones

Synthesis by Ring Transformation

By Ring Enlargement

Method 1: Reaction of Furo[3,4-c]pyridine-1,3-diones with Hydrazines

Method 2: Reaction of 1H-Pyrrolo[3,4-c]pyridine-1,3(2H)-diones with Hydrazines

Formal Exchange of Ring Members with Retention of the Ring Size

Method 1: Reaction of 8-Phenyl-5H-pyrido[3,4-d]pyridazin-5-one with Amines

Method 2: Intermolecular [4 + 2] Cycloaddition of 1,2,4,5-Tetrazines

By Ring Contraction

Method 1: Of 2H-1,2,4-Triazepines

Aromatization
16.18.4 Synthesis by Substituent Modification ........................................ 1145
16.18.6 Product Subclass 6: Pyrido[4,3-c]pyridazines ............................ 1145
16.18.6.1 Synthesis by Ring-Closure Reactions ..................................... 1145
16.18.6.1.1 By Formation of Two N—C Bonds .................................. 1145
16.18.6.1.1 Method 1: Cyclocondensation of 4-Oxopiperidine-3-acetates with Hydrazines ................................................ 1145
16.18.6.1.1.2 Method 2: Hetero-Diels–Alder Reactions of 2-Methyl-5-vinylpyridine with Diazenes .................................................. 1145
16.18.6.1.1.3 Method 3: Cycloamination of 3-Vinylpyrazine-4-carboxylates .... 1146
16.18.6.1.2 By Formation of One N—C and One C—C Bond .................. 1146
16.18.6.1.2.1 Method 1: Condensation of 1,2,3,6-Tetrahydropyridine-4-amines with Semicarbazones ......................................... 1146
16.18.6.2 Synthesis by Ring Transformation ........................................... 1147
16.18.6.2.1 By Ring Enlargement ........................................................ 1147
16.18.6.2.1.1 Method 1: Reaction of Furo[3,2-c]pyridines with Hydrazine .... 1147
16.18.6.3 Aromatization .............................................................. 1147

16.19 Product Class 19: Pyridopyrimidines
M. Sako

16.19.1 Product Class 19: Pyridopyrimidines ........................................ 1155
16.19.1.1 Product Subclass 1: Pyrido[2,3-d]pyrimidines ........................... 1158
16.19.1.1 Synthesis by Ring-Closure Reactions ..................................... 1158
16.19.1.1.1 By Formation of Three N—C Bonds and One C—C Bond .......... 1158
16.19.1.1.1.1 Method 1: Cyclization of Arylidenedialmononitriles or Enamines with Isothiocyanates or Isocyanates ......................... 1158
16.19.1.1.1.2 Method 2: Cyclization of Pyridin-2-amines with Carbon Dioxide .... 1158
16.19.1.1.1.2 By Formation of Three N—C Bonds ................................ 1159
16.19.1.1.1.2.1 Method 1: Condensation of 2-Aminonicotinic Acids with Acid Anhydrides and Ammonia ........................................ 1159
16.19.1.1.3 By Formation of Two N—C Bonds and One C—C Bond ........... 1159
16.19.1.1.3.1 Method 1: Cyclization of N',2-Dicyanoamidethanimide and 1,3-Diketones ................................................................. 1159
16.19.1.1.4 By Formation of One N—C and Two C—C Bonds .................. 1160
16.19.1.1.4.1 Method 1: Condensation of 6-Aminouracils with Aldehydes and Acetoacetates ......................................................... 1160
16.19.1.1.5 By Formation of Two N—C Bonds ..................................... 1160
16.19.1.1.5.1 Method 1: Cycloamination of 2-Halonicotinamides ............... 1160
16.19.1.1.5.2 Method 2: Cycloamination of N-Substituted 2-Aminonicotinates .... 1161
16.1.5 Method 3: Cyclization of 2-Aminonicotinamides and 2-Aminonicotinonitriles by Carbonates ........................................ 1163
16.1.5.4 Method 4: Cyclization of Nicotinamides ........................................ 1167
16.1.5.5 Method 5: Cyclization of 2-Aminonicotinates with Carboxamides or Ureas ..................................................... 1168
16.1.5.6 Method 6: Condensation of 2-Halonicotinates with Ureas and Amidines .................................................... 1174
16.1.5.7 Method 7: Cycloamination of (4-Halopyrimidin-5-yl)propanoates .............. 1175
16.1.6 By Formation of One N—C and One C—C Bond ........................................ 1176
16.1.6.1 Method 1: Cyclization of 5-Acetylpyrimidin-4-amines or 5-Vinylpyrimidin-4-amines with Active Carbonyl Compounds .................................................... 1176
16.1.6.2 Method 2: Condensation of 5-Formyl- or 5-Carboxypyrimidin-4-amines with Malonates ........................................ 1176
16.1.6.3 Method 3: Condensation of 5-Carbo-Functionalized Pyrimidines with Enamines, Acetamides, or Acetonitriles .................................................... 1178
16.1.6.4 Method 4: Condensation of Pyrimidin-4-amines with a Three-Carbon Synthon .................................................... 1180
16.1.6.5 Method 5: Base-Catalyzed Cyclization of Uracils with Nitriles ............. 1191
16.1.7 By Formation of Two C—C Bonds .................................................... 1192
16.1.7.1 Method 1: Cyclization of 6-(Acylamino)pyrimidines with a One-Carbon Synthon .................................................... 1192
16.1.7.2 Method 2: Hetero-Diels–Alder Reaction of 6-(Methyleneamino)pyrimidines with Alkenes .................................................... 1192
16.1.8 By Formation of One N—C Bond .................................................... 1193
16.1.8.1 Method 1: Intramolecular Cyclization of N-(Aminocarbonothioyl)-2-chloronicotinamides .................................................... 1193
16.1.8.2 Method 2: Intramolecular Cyclization of 3-(Acylamidino)-pyridin-2-amines .................................................... 1194
16.1.8.3 Method 3: Intramolecular Cyclization of 2-(Acylamino)nicotinamides or 2-(Acylamino)nicotinonitriles .................................................... 1194
16.1.8.4 Method 4: Intramolecular Cyclization of Ethyl 2-[(Anilinocarbonyl)-amino]nicotinates or 2-[(Anilinocarbonothioyl)amino]nicotinates .................................................... 1197
16.1.8.5 Method 5: Intramolecular Cyclization of 6-Amino-5-(cyanoacetyl)uracils or 6-Amino-5-propenyluracils .................................................... 1198
16.1.8.6 Method 6: Intramolecular Cyclization of [(Pyrimidin-5-yl)methylene]malononitriles .................................................... 1202
16.1.9 By Formation of One C—C Bond .................................................... 1202
16.1.9.1 Method 1: Intramolecular Cyclization of [(Pyrimidin-4-yl)amino-methylene]malonates .................................................... 1202
16.1.9.2 Method 2: Intramolecular Cyclization of Ethyl N-[5-(2-Ethoxy-2-oxoethyl)pyrimidin-4-yl]-N-ethyl-β-alaninates .................................................... 1204
16.1.9.3 Method 3: Intramolecular Cyclization of [(4-Arylmethylamino)-pyrimidin-5-yl)methylene]malonates .................................................... 1205
16.1.10 Synthesis by Ring Transformation .................................................... 1205
16.1.10.1 By Ring Enlargement .................................................... 1205
16.19.1.2.1 Method 1: Of [1,2,4]Thiazolo[2,3-a]pyridines

16.19.1.2.2 Formal Exchange of Ring Members with Retention of the Ring Size

16.19.1.2.2.1 Method 1: From Pyrans or Pyrylium Salts

16.19.1.2.2.2 Method 2: From Oxazinones or Thiazinones

16.19.1.2.2.3 Method 3: From Oxazinones or Thiazinones

16.19.1.2.2.4 Method 4: From 1,2,4-Triazines

16.19.1.2.2.5 Method 5: From Pyrimidines

16.19.1.2.2.6 Method 6: From Pyrido[4,3-d]pyrimidines

16.19.1.2.2.7 Method 7: From Other Pyrido[2,3-d]pyrimidines

16.19.1.2.2.8 Method 8: From 1,3,5-Triazines

16.19.1.2.3 By Ring Contraction

16.19.1.2.3.1 Method 1: Of Pyrimido[4,5-c][1,2]diazepines

16.19.1.3 Aromatization

16.19.1.3.1 Method 1: Of Pyrido[2,3-d]pyrimidines with a Hydrogenated Pyrimidine Ring

16.19.1.3.2 Method 2: Of Pyrido[2,3-d]pyrimidines with a Hydrogenated Pyridine Ring

16.19.1.4 Synthesis by Substituent Modification

16.19.1.4.1 Substitution of Existing Substituents

16.19.1.4.2 Addition Reactions

16.19.1.4.3 Rearrangement of Substituents

16.19.2.1 Synthesis by Ring-Closure Reactions

16.19.2.1.1 By Formation of Two N—C Bonds

16.19.2.1.1.1 Method 1: Cyclization of 3-Aminopyridine-2-carboxamides with Acetals

16.19.2.1.1.2 Method 2: Cycloamination of 3-Isothiocyanatopyridine-2-carboxylates

16.19.2.1.1.3 Method 3: Condensation of (3-Chloro-2-pyridyl)(phenyl)methanimines with Nitriles

16.19.2.1.1.4 Method 4: Condensation of 3-Aminopyridine-2-carboxylates with Isocyanates

16.19.2.1.2 By Formation of One N—C and One C—C Bond

16.19.2.1.2.1 Method 1: Condensation of 5-Amino(or 5-Nitro)-4-methylpyrimidines with Esters or Aldehydes

16.19.2.1.2.2 Method 2: Condensation of Pyrimidin-5-amines with But-2-enal

16.19.2.1.3 By Formation of One N—C Bond

16.19.2.1.3.1 Method 1: Intramolecular Cyclization of 3-(Acetylamino)pyridine-2-carboxamides or 3-(Acetylamino)-2-pyridyl Oximes

16.19.2.1.3.2 Method 2: Intramolecular Cyclization of 3-[(Aminocarbonyl)amino]-pyridine-2-carboxylates

16.19.2.1.3.3 Method 3: Intramolecular Cyclization of 6-(3-Oxoalkyl)pyrimidin-5-amines
16.19.2.1.4 By Formation of One C—C Bond ........................................ 1220
16.19.2.1.4.1 Method 1: Electrocyclization of 5-(Methyleneamino)-6-vinylpyrimidines 1220
16.19.2.1.4.2 Method 2: Intramolecular Cyclization of 6-Methyl-5-(methyleneamino)pyrimidines .......................... 1220
16.19.2.1.4.3 Method 3: Intramolecular Cyclization of 5-(Methyleneamino)pyrimidines .......................... 1220

16.19.2.2 Synthesis by Ring Transformation ........................................ 1222
16.19.2.2.1 By Ring Enlargement .................................................................. 1222
16.19.2.2.1.1 Method 1: Of Quinolinimides via Rearrangement or Ring Opening and Cyclization ............................... 1222
16.19.2.2.1.1.1 Variation 1: Of N-[(Phenylsulfonyl)oxy]quinolinimide .......................................................... 1223
16.19.2.2.1.2 Method 2: Of 6-Phenylisoselenazolo[4,3-d]pyrimidin-7(6H)-one .............................. 1223
16.19.2.2.1.3 Method 3: Intermolecular [4 + 2] Cycloadditions of 1,2,4-Triazines with Imidazoles ............................................ 1224
16.19.2.2.2 Formal Exchange of Ring Members with Retention of the Ring Size .......................... 1224
16.19.2.2.2.1 Method 1: From 1,3-Oxazines ........................................................................ 1224
16.19.2.2.2.2 Method 2: From 1,2,4-Triazines ................................................................ 1224
16.19.2.2.2.3 Method 3: From 1,5-Naphthyridines .................................................. 1225
16.19.2.2.3 Aromatization ........................................................................... 1225
16.19.2.4 Synthesis by Substituent Modification ........................................ 1225
16.19.3 Product Subclass 3: Pyrido[3,4-d]pyrimidines ............................ 1225
16.19.3.1 Synthesis by Ring-Closure Reactions ........................................... 1225
16.19.3.1.1 By Formation of Two N—C Bonds and One C—C Bond .............................. 1225
16.19.3.1.1.1 Method 1: Condensation of 3-Nitropyridines or 4-Pyridyllithiums with Nitriles .......................... 1225
16.19.3.1.2 By Formation of Two N—C Bonds .................................................. 1226
16.19.3.1.2.1 Method 1: Cyclization of 3-Aminopyridine-4-carboxamides or 3-Aminopyridine-4-carbonitriles ........................................ 1226
16.19.3.1.2.2 Method 2: Cyclization of 3-Aminopyridine-4-carboxylates with a N—C Unit ............................ 1227
16.19.3.1.2.3 Method 3: Cyclization of 3-Oxopiperidine-4-carboxylates and Related Compounds with Ureas or Amidines .......................... 1227
16.19.3.1.2.4 Method 4: Cycloamination of 5-Ethynylpyrimidine-4-carboxylates ..... 1228
16.19.3.1.3 By Formation of One N—C and One C—C Bond .................................. 1228
16.19.3.1.3.1 Method 1: Condensation of Appropriately Modified Pyrimidine-5-carbaldehydes with Amines ........................... 1228
16.19.3.1.4 By Formation of One N—C Bond .................................................. 1229
16.19.3.1.4.1 Method 1: Intramolecular Cyclization of Ethyl 3-[[Benzoylaminocarbonothioyl]amino]pyridine-4-carboxylates ........................... 1229
16.19.3.1.4.2 Method 2: Intramolecular Cyclization of 3-(Acylamino)pyridine-4-carboxamides .......................... 1230
16.1.9.3.1.4.3 Method 3: Intramolecular Cyclization of Pyridine-3,4-dicarboxamides via Rearrangement ............................................ 1230

16.1.9.3.1.4.5 By Formation of One C—C Bond ................................................ 1231

16.1.9.3.1.5.1 Method 1: Intramolecular Cyclization of [(Pyridylamino)methylene]-
carbamates .......................................................... 1231

16.1.9.3.2 Synthesis by Ring Transformation .......................................................... 1231

16.1.9.3.2.1 Method 1: From N-(1,3-Oxazol-5-yl)ureas ........................................ 1231

16.1.9.3.2.2 Formal Exchange of Ring Members with Retention of the Ring Size ........ 1232

16.1.9.3.2.2.1 Method 1: From 4H-Pyrido[3,4-d][1,3]oxazin-4-ones .................. 1232

16.1.9.3.2.2.2 Method 2: From Fused Lactones or Thiolactones ....................... 1232

16.1.9.3.2.2.3 Method 3: From 1,7-Naphthyridines ........................................... 1232

16.1.9.3.3 Aromatization ...................................................................................... 1233

16.1.9.3.4 Synthesis by Substituent Modification ................................................ 1233

16.1.9.4 Product Subclass 4: Pyrido[4,3-d]pyrimidines ....................................... 1233

16.1.9.4.1 Synthesis by Ring-Closure Reactions .................................................. 1233

16.1.9.4.1.1 Method 1: Cycloamination of Malononitrile Dimers .......................... 1233

16.1.9.4.1.2 By Formation of Two N—C and Two C—C Bonds ......................... 1233

16.1.9.4.1.2.1 Method 1: Cyclization of 6-Methyl-3,4-dihydropyrimidine-2(1H)-thiones Using the Mannich Reaction .............................. 1233

16.1.9.4.1.3 By Formation of Three N—C Bonds ................................................. 1234

16.1.9.4.1.3.1 Method 1: Cyclization of 4-Aminonicotinic Acids with Acid Anhydrides and Ammonia .................................................. 1234

16.1.9.4.1.4 By Formation of Two N—C Bonds .................................................. 1234

16.1.9.4.1.4.1 Method 1: Condensation of 3-(Aminomethyl)pyridin-4-amines with a One-Carbon Donor ............................................. 1234

16.1.9.4.1.4.2 Method 2: Cycloamination of 4-(Acylamino)pyridine-3-carboxylates,
-3-carbaldehydes, or -3-carbonitriles .............................................. 1235

16.1.9.4.1.4.3 Method 3: Cycloamination of 4-Vinylpyrimidine-5-carbaldehydes or 4-Ethynlypyrimidine-5-carboxylates ......................... 1236

16.1.9.4.1.4.4 Method 4: Cyclization of 4-Aminonicotinates or 4-Aminonicotinonitriles with a N—C Donor ........................................ 1237

16.1.9.4.1.4.5 Method 5: Cyclization of 4-Sulfanylnicotinonitriles or 4-Oxopiperidine-3-carboxylates with Amidines .......................... 1238

16.1.9.4.1.5 By Formation of One N—C and One C—C Bond ............................... 1239

16.1.9.4.1.5.1 Method 1: Cyclization of 4-Methylpyrimidine-5-carboxamides or 4-Methylpyrimidine-5-carbonitriles with a One-Carbon Donor ................................................................. 1239

16.1.9.4.1.5.2 Method 2: Cyclization of 4-Methylpyrimidine-5-carboxylates with a N—C Donor ............................................................. 1239

16.22.2.1.1 By Annulation to an Arene ..................................................................... 1348 
16.22.2.1.1.1 By Formation of Two N—C Bonds ......................................................... 1348 
16.22.2.1.1.1 Method 1: From Substituted Pyridazines .............................................. 1348 
16.22.2.1.1.2 Method 2: From Substituted Pyrimidines ............................................ 1350 
16.22.2.1.1.2 By Formation of One N—C and One C—C Bond ................................. 1351 
16.22.2.1.1.2.1 Method 1: From a 1,2-Dicarbonyl Compound .................................. 1351 
16.22.2.1.1.3 By Formation of One N—C Bond ......................................................... 1351 
16.22.2.1.1.3.1 Method 1: From a 2,4,5-Trisubstituted Pyrimidine ......................... 1351 
16.22.2.2 Synthesis by Ring Transformation ............................................................ 1352 
16.22.2.2.1 Method 1: By Ring Enlargement ............................................................ 1352 
16.22.2.2.2 Method 2: By Exchange of Sulfur for Nitrogen ...................................... 1352 
16.22.2.3 Synthesis by Substituent Modification ....................................................... 1352 
16.22.2.3.1 Substitution of Existing Substituents ...................................................... 1352 
16.22.2.3.1.1 Method 1: By Substitution of Chlorine ................................................ 1352 
16.22.2.3.1.2 Method 2: By Substitution of Hydroxy Groups .................................. 1354 
16.22.2.3.1.3 Method 3: By Substitution of a Sulfur-Containing Group .................. 1355 
16.22.2.3.2 Addition Reactions .................................................................................. 1356 
16.22.2.3.2.1 Addition of Organic Groups ............................................................... 1356 
16.22.2.3.2.1.1 Method 1: Addition of an Aryl Group .............................................. 1356 
16.22.2.3.2.1.2 Method 2: Addition of an Alkyl Group ........................................... 1356 
16.22.2.3.2.2 Addition of Heteroatoms .................................................................... 1357 
16.22.2.3.2.2.1 Method 1: Addition of Chlorine ...................................................... 1357 
16.22.2.3.2.2.2 Method 2: N-Oxidation .................................................................... 1358 
16.22.2.3.3 Rearrangement of Substituents .............................................................. 1358 
16.22.2.3.3.1 Method 1: The Hofmann Rearrangement .......................................... 1358 

16.22.3 Product Subclass 3: Pyrazinopyridazines ..................................................... 1359 
16.22.3.1 Synthesis by Ring-Closure Reactions .......................................................... 1360 
16.22.3.1.1 By Annulation to an Arene .................................................................... 1360 
16.22.3.1.1.1 By Formation of Two N—C Bonds ...................................................... 1360 
16.22.3.1.1.1 Method 1: From 2,3-Disubstituted Pyrazines ....................................... 1360 
16.22.3.1.1.1.2 Method 2: From 3,4-Dihalopyridazines ........................................... 1361 
16.22.3.1.1.1.3 Method 3: From 1,2-Dicarbonyl Compounds .................................. 1362 
16.22.3.1.2 By Cycloaddition Reactions ................................................................. 1363 
16.22.3.1.2.1 By Formation of One N—C and One C—C Bond ............................... 1363

Volume 17:
Six-Membered Hetarenes with Two Unlike or More than Two Heteroatoms and Fully Unsaturated Larger-Ring Heterocycles

Preface .............................................................................................................. V

Table of Contents .................................................................................................. VII

Introduction .......................................................................................................... 1

17.1 Product Class 1: Six-Membered Hetarenes with Two Unlike Heteroatoms

17.1.1 Product Subclass 1: Two Unlike Oxygen, Sulfur, Selenium, or Tellurium Atoms
S. Yamazaki and K. Yamamoto ........................................................................... 19

17.1.2 Product Subclass 2: One Oxygen and One Nitrogen or Phosphorus Atom
H. Ulrich .............................................................................................................. 55

17.1.3 Product Subclass 3: One Sulfur, Selenium, or Tellurium Atom and One Nitrogen or Phosphorus Atom
H. Ulrich .............................................................................................................. 117

17.2 Product Class 2: Six-Membered Hetarenes with Three Heteroatoms

17.2.1 Product Subclass 1: 1,2,3-Triazines and Phosphorus Analogues
H. Döpp and D. Döpp .......................................................................................... 223

17.2.2 Product Subclass 2: 1,2,4-Triazines
C. W. Lindsley and M. E. Layton ......................................................................... 357

17.2.3 Product Subclass 3: 1,3,5-Triazines and Phosphorus Analogues
S. von Angerer ...................................................................................................... 449

17.3 Product Class 3: Six-MemberedHetarenes with More Than Three Heteroatoms
M. Bohle .............................................................................................................. 585

17.4 Product Class 4: Seven-Membered Hetarenes with One Heteroatom

17.4.1 Product Subclass 1: Oxepins
S. von Angerer .................................................................................................. 627

17.4.2 Product Subclass 2: Benzoxepins
S. von Angerer .................................................................................................. 653

17.4.3 Product Subclass 3: Thiepins and Selenium Analogues
A. L. Schwan ...................................................................................................... 705

17.1.2.4.2.1.1.1 Method 1: By Reduction of 4-Substituted Oxaphosphinines 4-Oxides 110
Product Subclass 3: One Sulfur, Selenium, or Tellurium Atom and One Nitrogen or Phosphorus Atom

H. Ulrich

17.1.3.1 1,4-Thiazines

17.1.3.1.1 Synthesis by Ring-Closure Reactions

17.1.3.1.1.1 Method 1: From Ketones, Aziridine, and Sulfur

17.1.3.1.1.2 Method 2: From β-Aminoacrylates and Sulfur Dichloride or Sulfur Monochloride

17.1.3.1.2 By Formation of One S—C and One N—C Bond

17.1.3.1.2.1 Method 1: From 2-Sulfanylacetamides and 2-Halocarbonyl Compounds

17.1.3.1.2.2 Method 2: From 2-Aminoethanethiols

17.1.3.1.2.3 Method 3: From 1-Aza-4-thiabutadienes and Alkynes or Alkenes

17.1.3.1.2.4 Method 4: From α-Sulfanyl Ketones and Aziridine

17.1.3.1.3 By Formation of Two N—C Bonds

17.1.3.1.3.1 Method 1: From Bis(2-oxoalkyl) Sulfides

17.1.3.1.4 By Formation of One S—C and One C—C Bond

17.1.3.1.4.1 Method 1: From Alkyl [(3-Phenyl-2-propynoyl)anilino]acetates and Aryl Isothiocyanates

17.1.3.1.5 By Formation of Two C—C Bonds

17.1.3.1.5.1 Method 1: From Cyanodithioimidocarbonates and Dimethyloxosulfonium Methyldide

17.1.3.1.6 By Formation of One N—C Bond

17.1.3.1.6.1 Method 1: From (Acetonylsulfanyl)acetamides

17.1.3.2 Synthesis by Ring Transformation

17.1.3.2.1 By Ring Enlargement

17.1.3.2.1.1 Method 1: From 1,3-Thiazoles

17.1.3.2.1.2 Method 2: From 2-Oxazolidinones and Thioglycolates

17.1.3.2.2 Formal Exchange of Ring Members with Retention of the Ring Size

17.1.3.2.2.1 Method 1: From 1,4-Oxathiin-3-carboxamides

17.1.3.2.2.2 Method 2: From 2,5-Diphenyl-1,4-dithiin 1,1,4,4-Tetroxide and Sodium Azide

17.1.3.3 Aromatization

17.1.3.3.1 Method 1: By Deprotonation and S-Alkylation of 2H-1,4-Thiazines

17.1.3.4 Synthesis by Substituent Modification

17.1.3.4.1 Method 1: By Deamination of 3,4-Dihydro-2H-1,4-thiazin-4-amines

17.1.3.4.2 Method 2: By Dealkoxylation of Pyrrolothiazines

17.1.2.3.2 Addition Reactions .................................................. 154
17.1.2.3.2.1 Of Hydrogen .................................................... 154
17.1.2.3.3 Rearrangement of Substituents ............................... 157
17.1.2.3.3.1 Method 1: Of an Acetoxy Group ......................... 157
17.1.2.3.3.2 Method 2: Of an Alkoxy carbonyl Group ................ 157
17.1.2.3.3.3 Method 3: Of a Methyl Group ............................ 158
17.1.2.3.3.4 Method 4: Of an Allyl Group ............................ 158
17.1.2.3.3.5 Method 5: Configurational Isomerization .......... 158
17.1.2.3.4 Modification of Substituents .................................. 159
17.1.2.3.4.1 Method 1: By Aldolization ................................ 159
17.1.2.3.4.2 Method 2: By Lithiation and Electrophilic Attack .... 159
17.1.3.3 Phenothiazines ......................................................... 160
17.1.3.3.1 Synthesis by Ring-Closure Reactions ....................... 163
17.1.3.3.1.1 Annulation to an Arene or a Hetarene ................. 163
17.1.3.3.1.1.1 By Formation of Two S—C Bonds ................. 163
17.1.3.3.1.1.1 Method 1: From S-[2-Amino-5-(dimethylamino)phenyl] Hydrogen Thiosulfate and $N,N$-Dimethylanilinilne ................. 163
17.1.3.3.1.1.2 Method 2: From Arylamines and Sulfur .......... 164
17.1.3.3.1.1.2.1 Variation 1: From Diarylamines and Sulfur ...... 164
17.1.3.3.1.1.2.2 Variation 2: From Oligomeric Diphenylamines and Related Compounds .. 168
17.1.3.3.1.1.2.3 Variation 3: From Hetarylamines ............... 170
17.1.3.3.1.1.2.4 Variation 4: From Diarylamines and Sulfur Dichloride, Thionyl Chloride, or Sulfur Dichloride ......................... 171
17.1.3.3.1.1.2.5 Variation 5: From (Arylamino)-1,4-quinones and Sodium Sulfide .......... 172
17.1.3.3.1.1.2 By Formation of One S—C and One N—C Bond .......... 172
17.1.3.3.1.1.2.1 Method 1: From Arylamines and 1-(Anilinosulfanyl)-2-nitrobenzenes ... 172
17.1.3.3.1.1.2.2 Method 2: From Aminoarenethiols ................ 173
17.1.3.3.1.1.2.2.1 Variation 1: From 2-Aminoarenethiols and Quinones .......... 173
17.1.3.3.1.1.2.2.2 Variation 2: From Heterocyclic Quinones ....... 175
17.1.3.3.1.2.3 Variation 3: From 4,8-Bis(alkylamino)naphtho-1,5-quinones .......... 177
17.1.3.3.1.2.4 Variation 4: From 1,3-Diketones and Related Compounds .......... 177
17.1.3.3.1.2.5 Variation 5: From Polycyclic Quinones .............................. 178
17.1.3.3.1.2.3 Method 3: From Zinc Aminoarenethiolates and Haloquinones .. 178
17.1.3.3.1.2.3.1 Variation 1: From Chlorohydroquinones .......................... 178
17.1.3.3.1.2.3.2 Variation 2: From Haloquinones ................................. 179
17.1.3.3.1.3 By Formation of One N—C Bond ....................................... 183
17.1.3.3.1.3.1 Method 1: From Diaryl Sulfides and Related Compounds ......... 183
17.1.3.3.1.3.1.1 Variation 1: From 2-Azidophenyl Phenyl Sulfides ............... 183
17.1.3.3.1.3.1.2 Variation 2: From 2-Nitrophenyl Phenyl Sulfides ............... 184
17.1.3.3.1.3.1.3 Variation 3: From 2-Aminophenyl 2-Nitrophenyl Sulfides or
                              2-(Acylamino)phenyl 2-Nitrophenyl Sulfides .................................. 185
17.1.3.3.1.3.1.4 Variation 4: From 2-Aminophenyl 2-Nitrophenyl Sulfides via
                              2-Aminobenzenethiol and Halodinitrobenzenes ............................... 187
17.1.3.3.1.3.1.5 Variation 5: From 2-Aminophenyl 2-Halophenyl Sulfides ....... 189
17.1.3.3.1.3.1.6 Variation 6: From 2-Aminophenyl and 2-Aminohetaryl 2-Halodiazinyl
                              Sulfides ........................................................................ 192
17.1.3.3.1.3.1.7 Variation 7: From 5-[(2-Aminoaryl)sulfanyl]pyrimidin-4-ol, or from
                              6-[(2-Acetylaminophenyl)sulfanyl]-1,3-dimethyluracil .................. 195
17.1.3.3.1.4 Miscellaneous Ring-Closure Reactions .................................... 196
17.1.3.3.1.4.1 Method 1: By Thermolysis of 1,2,4-Triazines ...................... 196
17.1.3.3.2 Synthesis by Ring Transformation ........................................... 197
17.1.3.3.2.1 By Ring Enlargement ......................................................... 197
17.1.3.3.2.1.1 Method 1: Of 2,3-Dihydrobenzothiazoles with N-Bromosuccinimide
                              .................................................................................. 197
17.1.3.3.2.1.2 Method 2: Of 2,3-Dihydrobenzothiazoles with Sulfuryl Chloride .. 197
17.1.3.3.2.1.3 Method 3: Of 1,2,3-Benzothiadiazole .................................. 198
17.1.3.3.2.2 Formal Exchange of Ring Members with Retention of the Ring Size 198
17.1.3.3.2.2.1 Method 1: From 10-Chloro-5,10-dihydrophenarsenazine and Sulfuryl
                              Chloride ........................................................................... 198
17.1.3.3.2.3 By Ring Contraction .............................................................. 198
17.1.3.3.2.3.1 Method 1: Of Pyrimido[1,5]benzothiazepines ...................... 198
17.1.3.3.3 Synthesis by Substituent Modification ........................................ 199
17.1.3.3.3.1 Substitution of Existing Substituents ....................................... 199
17.1.3.3.3.1.1 Of Hydrogen .................................................................... 199
17.1.3.3.3.1.1.1 Method 1: By Metals ..................................................... 199
17.1.3.3.3.1.1.2 Method 2: By Acylation or Alkylation ............................ 200
17.1.3.3.3.1.1.3 Method 3: By Halogenation .......................................... 201
17.1.3.3.3.1.1.4 Method 4: By Nitration .................................................. 202
17.1.3.3.3.1.1.2 Of Halogen .................................................................. 202
17.1.3.3.3.1.2 Method 1: By Metals ........................................................ 202
17.1.3.3.3.1.2.2 Method 2: By Hydrogen ............................................... 203
17.1.3.3.3.2 Addition Reactions ............................................................... 203

Product Class 2: Six-Membered Hetarenes with Three Heteroatoms

Product Subclass 1: 1,2,3-Triazines and Phosphorus Analogues
H. Döpp and D. Döpp

Monocyclic 1,2,3-Triazines

Synthesis by Ring-Closure Reactions

By Formation of One N—N and One N—C Bond

Method 1: Condensations of 3-Diazo-2-oxopropanoic Acid Derivatives with Hydrazine Hydrate or Hydroxylamine

By Formation of Two N—C Bonds

Method 1: Cyclization of Triazenes with (Chloroformyl)ketenes

By Formation of One N—N Bond

Method 1: Cyclization of \(N\)-Benzyl-3-diazo-2-oxopropanamide

Synthesis by Ring Transformation

By Ring Enlargement

Method 1: From 2-Chloro-2,3-diphenyl-2\(H\)-azirine with Diazomethane

Variation 1: From 4-Methyl-\(N\)¢-[aryl(3-arylaziridin-2-yl)methylene]-benzenesulfonylhydrazides

Method 2: From Tetrahalocyclopropenes and Trimethylsilyl Azide

Method 3: By Rearrangement of Cyclopropenyl Azides

Method 4: By Oxidation of Pyrazol-1-amines

Variation 1: From Pyrazol-1-amines by Oxidation and Halogenation

Method 5: Reactions of Substituted 1,2,3-Triazole 1-Oxides with Dialkyl Acetylenedicarboxylates

Variation 1: By Thermal Rearrangement of Pyrrolo[2,3-\(d\)][1,2,3]triazoles

Aromatization

Method 1: Dehydrogenation and Oxidation of 2,5-Dihydro-1,2,3-triazines

Substitution of Existing Substituents

Of Hydrogen

Method 1: Metalation

Method 2: Introduction of Amide Functions at C5

Method 3: Vicarious Nucleophilic Substitution

Method 4: C-Alkylation with Silyl Enol Ethers or Ketene Silyl Acetals in the Presence of 1-Chloroethyl Chloroformate

Variation 1: C-Alkylation (Arylation) of 2-Methyl-1,2,3-triazinium Iodides

Method 5: Halogenation

Method 6: Hydroxylation and Oxidation

Of Metals
17.2.1.1.4.2.
Method 1: Protonation of 1,2,3-Triazines by Tetrafluoroboric Acid 253
Method 2: N-Acylation, N-Alkylation, and N-Arylation 254
Method 3: N-Methylation 256
Method 4: Demethylation and Demethylation 256
Method 5: Oxidation to N-Oxides 256
Method 6: N-Amination 257
Method 7: Reduction of 1,2,3-Triazine N-Oxides 258
Method 8: Diazotization of 2-Amino-4,6-dimethyl-1,2,3-triazinium 258
Method 9: Modification of Substituents 258
Method 10: Oxidation of α-Hydroxy-Substituted Benzyl Groups 258
Method 11: Acylation of 4,6-Disubstituted 2-Amino-1,2,3-triaziniums 259
17.2.1.2.
Annulated 1,2,3-Triazines 260
17.2.1.2.1.
Synthesis by Ring-Closure Reactions 260
17.2.1.2.1.1.
By Formation of Two N—N Bonds 260
17.2.1.2.1.1.1.
Method 1: Reaction of (2-Aminophenyl)arylimines with Nitrous Acid 260
Variation 1: Reaction of 2-Aminoaryl Oximes with Nitrous Acid 260
Variation 2: Reaction of 2-Aminobenzamides and Aminohetarencarboxamides with Nitrous Acid 260
17.2.1.2.1.1.2.
Method 2: Reaction of 2-Aminobenzonitriles and Related Compounds with Nitric Acid 261
17.2.1.2.1.1.2.1.
Variation 1: Reaction of 2-Aminoarenehydroxamic Acids and 2-Aminoarencarbohydrazides with Nitrous Acid 265
Variation 2: Reaction of 2-Aminothiobenzamides and Aminohetarencarbothioamides with Nitrous Acid 266
Variation 3: Reaction of 2-Aminobenzonitriles and Related Compounds with Nitrous Acid 267
Variation 4: Reaction of Aminohetarencarbonitriles with Nitrous Acid and Hydrochloric Acid 268
Variation 5: Reaction of Aminohetarencarbonitriles with Nitrous Acid and Hydrochloric Acid 268
17.2.1.2.1.1.3.
Method 3: Cyclization of 2-Aminobenzonitriles and Related Compounds with Nitric Acid 269
17.2.1.2.1.1.4.
Method 4: Diazotization of Naphthalene-1,8-diamines 270
Variation 1: Diazotization of (Aminohetaryl)razoles 271
17.2.1.2.1.1.4.2.
Variation 2: Diazotization of 2-(2-Aminophenyl)pyridines 274
17.2.12.1.1.4.3 Variation 3: Diazotization of 2-(2-Aminophenyl)quinazolin-4-amines and 2-(2-Aminophenyl)-1,3,5-triazine-4,6-diamines 275

17.2.12.1.1.2 By Formation of One N—N and One N—C Bond 275

17.2.12.1.1.2.1 Method 1: Diazotization of Ethyl Aminohetarenecarboxylates and Alkyl 2-Aminobenzacarboxylates/Cyclization with Ammonia and Primary Amines 275

17.2.12.1.1.2.1.1 Variation 1: Diazotization of 2-Aminobenzonitrile or Aminohetarencarbonitriles/Cyclization with Primary Amines 279

17.2.12.1.1.2.2 Method 2: Nitrosation of Methylhetarenamines 280

17.2.12.1.1.2.2.1 Variation 1: Nitrosation of Ethyl (1-Methylindol-2-yl)acetate 282

17.2.12.1.1.3 By Formation of Two N—C Bonds 282

17.2.12.1.1.3.1 Method 1: Cyclization of Pyrazol-1-amines and 1,2,3-Triazol-N-arnines with C—C—C Fragments 282

17.2.12.1.1.4 By Formation of One N—N Bond 284

17.2.12.1.1.4.1 Method 1: Oxidation of 2-(Aminophenyl) Ketone Hydrazones 284

17.2.12.1.1.4.2 Method 2: Oxidation of 2-Nitrobenzaldehyde Hydrazones 284

17.2.12.1.1.4.3 Method 3: Cyclization of N-Aroyl-2-azidobenzamides 285

17.2.12.1.1.4.4 Method 4: Cyclization of Diazaoazolecarboxamides 286

17.2.12.1.1.4.4.1 Variation 1: Cyclization of 5-Diazoimidazole-4-carbonitrile 288

17.2.12.1.1.5 By Formation of One N—C Bond 288

17.2.12.1.1.5.1 Method 1: Cyclization of Azidohetarenecarbonyl Compounds 288

17.2.12.1.1.5.2 Method 2: Cyclization of Pyrazol-1-ylaminomethylene Meldrum Acid 289

17.2.12.1.1.6 By Formation of One C—C Bond 289

17.2.12.1.1.6.1 Method 1: Cyclization of 1-Aryl-3,3-dialkyltriazenes 289

17.2.12.1.2 By Annulation to the 1,2,3-Triazine Ring 290

17.2.12.1.2.1 Method 1: Annulation with (Chlorocarbonyl)phenylketene 290

17.2.12.1.2.2 Method 2: Cyclization of Annulated N-(2-Nitrophenyl)-1,2,3-triazines 290

17.2.12.1.2.3 Method 3: Reaction of 1,2,3-Benzotriazin-4(3H)-one or 1,2,3-Benzotriazine-4(3H)-thione with α-Halo Ketones 290

17.2.12.1.2.4 Method 4: Cyclization of 4-(ω-Chloroalkylamino)pyrimido[5,4-d]-[1,2,3]triazines 291

17.2.12.1.2.5 Method 5: Condensation Reactions of Annulated 4-Hydrizin-1,2,3-triazines 291

17.2.12.1.2.6 Method 6: Thermolysis of 1,2,3-Benzotriazin-4(3H)-one 292

17.2.12.1.2.7 Method 7: Condensation Reactions of 4-Aroyl-5-ethoxy-1,2,3-triazines 292

17.2.12.2 Synthesis by Ring Transformation 293

17.2.12.2.1 Method 1: From 3-(Aryldiazenyl)-2,1-benzisoxazoles 293

17.2.12.2.2 Method 2: From Annulated Pyrazol-N-arnines 293

17.2.12.2.3 Method 3: From Annulated 1,2,3-Triazolium-1-arylimides 295

17.2.12.2.4 Method 4: From Imidazo[4,5-d][1,2,3]thiadiazin-4-imines 296

17.2.12.2.5 Method 5: From N-Aminoquinazolin-2-ones and Related Compounds 296

17.2.12.3 Aromatization 297

17.2.12.4 Synthesis by Substituent Modification 298

17.2.1.3.1.1 By Formation of One P—C and One C—C Bond ........................................ 317
17.2.1.3.1.1 Method 1: Reaction of N-Phosphino-C-thiophosphoranylnitrilimine with Dimethyl Acetylenedicarboxylate .................................................. 317
17.2.1.4 Annulated 1,2,3\(\lambda^3\)-Diazaphosphinines ......................................................... 318
17.2.1.4.1 Synthesis by Ring-Closure Reactions ............................................................... 318
17.2.1.4.1.1 By Formation of One N—P and One P—C Bond ........................................... 318
17.2.1.4.1.1.1 Method 1: Cyclization of Hetarencarbaldehyde Phenylhydrazones with Phosphorus Bromides ......................................................... 318
17.2.1.5 Monocyclic 1,3,2\(\lambda^3\)-Diazaphosphinines and 1,3,2-Diazaphosphinines ............ 320
17.2.1.5.1 Synthesis by Ring-Closure Reactions ............................................................... 320
17.2.1.5.1.1 By Formation of Two N—P Bonds .............................................................. 320
17.2.1.5.1.1.1 Method 1: From Malononitriles and Phosphorus Pentachloride .................. 320
17.2.1.5.1.1.1 Variation 1: From Malononitrile and Tetrachlorophosphoranes .................... 321
17.2.1.5.1.2 Method 2: From Substituted 3-Aminopropenenitriles and Tetra- or Trichlorophosphorane ................................................................. 322
17.2.1.5.1.3 Method 3: From Substituted 1-Azabutadien-4-amines and Various Phosphorus Chlorides ......................................................... 323
17.2.1.5.1.2 By Formation of One N—P and One C—C Bond ........................................... 324
17.2.1.5.1.2.1 Method 1: From (1,1-Dichloroalkyl)phosphorimidic Acid Trichlorides and Alkynitriles or Propenenitrile ........................................ 324
17.2.1.5.1.3 By Formation of One N—P Bond .............................................................. 325
17.2.1.5.1.3.1 Method 1: Cyclization of (2-Cyanoalk-1-enyl)phosphorimidic Acid Trichlorides ................................................................. 325
17.2.1.5.2 Synthesis by Ring Transformation ................................................................. 326
17.2.1.5.2.1 Method 1: From 1,3,2-Diazatitanacyclohexadienes with Phosphorus Trichloride ................................................................. 326
17.2.1.5.3 Synthesis by Substituent Modification ............................................................. 326
17.2.1.5.3.1 Substitution of Existing Substituents ............................................................ 326
17.2.1.5.3.1.1 Of Hydrogen ......................................................................................... 326
17.2.1.5.3.1.1 Method 1: By Chlorination ................................................................. 326
17.2.1.5.3.1.2 Of Heteroatoms .................................................................................. 327
17.2.1.5.3.1.2 Method 1: Replacement of Chloro Substituents by Oxygen Functionalities ................................................................. 327
17.2.1.5.3.1.2 Method 2: Replacement of Chloro Substituents by Amino Groups .......... 329
17.2.1.5.6 Annulated 1,3,2\(\lambda^3\)-Diazaphosphinines ......................................................... 330
17.2.1.6.1 Synthesis by Ring-Closure Reactions ............................................................. 330
17.2.1.6.1.1 By Annulation to a Heterocycle or Carbocycle ......................................... 330
17.2.1.6.1.1 By Formation of Two N—P Bonds .............................................................. 330

Table of Contents
17.2.1.6.1.1.1 Method 1: Cyclization of Aminohetarenecarboxamides, Aminohetarenecarbothioamides, 2-Aminobenzamides, and Related Compounds with Phosphorus(V) Reagents 330
17.2.1.6.1.1.1 Variation 1: Cyclization of Aminohetarenecarbonitriles with Lawesson’s Reagent 331
17.2.1.6.1.2 Method 2: Cyclization of 2-Aminobenzamides with Phosphorus Trichloride 332
17.2.1.6.1.2.1 Variation 1: Cyclization of 2-[(ω-Hydroxyalkyl)amino]benzamides with Tris(diethylamino)phosphine 334
17.2.1.6.1.3 Method 3: Cyclization of Naphthalene-1,8-diamine with Phosphorus(V) Dichlorides 334
17.2.1.6.1.2 By Formation of One N—P Bond 335
17.2.1.6.1.2.1 Method 1: Cyclization of \(N\)-(2-Cyanophenyl)phosphinimidic Acid Chlorides 335
17.2.1.6.1.3 By Formation of One N—C Bond 336
17.2.1.6.1.3.1 Method 1: Cyclization of \(N\)-(Trimethylsilyl)-\(N\)-(phosphoranyl)benzamides 336
17.2.1.6.2 By Annulation to the 1,3,2\(\lambda^5\)-Diazaphosphinine Ring 337
17.2.1.6.2.1 Method 1: Cyclization of 1- or 3-(ω-Haloalkyl)-1,3,2\(\lambda^5\)-benzodiazaphosphinines 337
17.2.1.6.2.2 Method 2: Cyclization of 4-Chloro-1,3,2\(\lambda^5\)-diazaphosphinine-5-carbonitriles with Hydrazines 338
17.2.1.6.2 Synthesis by Substituent Modification 338
17.2.1.6.2.1 Substitution of Existing Substituents 338
17.2.1.6.2.1.1 Of Hydrogen 338
17.2.1.6.2.1.1 Method 1: Substitution at Phosphorus with Carbon Functional Groups 338
17.2.1.6.2.1.2 Of Heteroatoms 339
17.2.1.6.2.1.2.1 Method 1: Replacement of Chloro Substituents by Amino Groups 339
17.2.1.6.2.1.2.2 Method 2: Replacement of Alkylsulfanyl Substituents by Alkyl, Alkoxy, or Amino Groups 340
17.2.1.6.2.2 Modification of Substituents 340
17.2.1.6.2.2.1 Method 1: Alkylation of Sulfanyl and Thioxo Groups 340
17.2.1.7 Monocyclic 1,2\(\lambda^5\),6\(\lambda^5\)-Azadiphosphinines 341
17.2.1.7.1 Synthesis by Ring-Closure Reactions 341
17.2.1.7.1.1 By Formation of Two P—C Bonds 341
17.2.1.7.1.1 Method 1: Cyclization of Propenes with Diphosphazanes 341
17.2.1.8 Monocyclic 1\(\lambda^5\),2,3\(\lambda^5\)-Triphosphinines 343
17.2.1.8.1 Synthesis by Ring-Closure Reactions 343
17.2.1.8.1.1 By Formation of Two P—P Bonds 343
17.2.1.8.1.1 Method 1: Cyclization of 3-(Diphenylphosphino)-2-[(diphenylphosphino)-methyl]prop-1-ene with Phosphorus Trichloride 343

</table>
Method 1: Reactions of Ethanedial Hydrazone Oximes with Ortho Esters or Related One-Carbon Donors

Variation 1: Condensation of Hydrazono(phenyl)acetaldehyde Oxime with Aldehydes

Method 2: Synthesis of [1,2,3]Triazolo[5,1-f][1,2,4]triazine

Method 3: Cyclization of 4-Hydrazonepyrazol-3(4H)-amines with Acyl Nitriles

Method 4: Reactions of Iminophosphoranes with Isocyanates

Fragments C—C—N—N—C and N

Method 1: Cyclization of 2-Acylhydrazone Ketones with Ammonia or Ammonium Acetate

Variation 1: Cyclization of (N,N-Dimethylamino)ethylenehydrazones and Related Compounds with Ammonium Acetate

Method 2: Cyclization of 1,2-Diketone Monohydrazones with Hydroxylamine

Method 3: Reactions of 3,5-Disubstituted 4-Nitrosopyrazoles with Phosphorus Pentachloride

Method 4: Cyclization of Uracil Hydrazones with Potassium Nitrate

Variation 1: Microwave Reactions of 2-Hydrazinoquinolines with Nitrous Acid

Method 5: Reaction of 1-Phenyl-3-(pyrrol-1-yl)pyrazol-4-amine with Nitrous Acid

By Formation of One N—C Bond

Fragment C—C—N—N—C

Method 1: Photolysis of 1,2-Bis(2-diazido-1-phenylethylidene)diazine

Method 2: Cyclization of N-(1-Phenylethylidene)guanidin-2-amines

Method 3: Cyclization of 1-Cyanoalkanone 1-Aminoalkylidenehydrazones

Method 1: Cyclization of \( \alpha-\{1,2\text{-Bis(ethoxycarbonyl)hydrazino}\}-\alpha-\{\text{ethoxycarbonyl}\}\)acetimidamide

Variation 1: Cyclization of 3-(Acylhydrazino)pyridin-2-amines

Annulation by the Formation of a Second Heterocyclic Ring

Method 1: From 1,2,4-Triazine-5,6-diamines

Method 2: From 3-Hydrazino-1,2,4-triazines

Variation 1: Synthesis of 1,2,4-Triazolo[3,4-c][1,2,4]triazine 7-Oxide

Method 3: Synthesis of Pyrazino[2,3-e][1,2,4]triazines

Method 4: Cyclization of 5-Acyl-1,2,4-triazines with Arylhydrazines

Method 5: Cyclization of 3-Allylamino-1,2,4-triazine with Bromine

Synthesis by Ring Transformation

Method 1: Oxidation of Imidazole-1,2-diamines

Method 2: Acidic Rearrangement of 2-(Hydroxyimino)imidazol-5-imines
Method 3: Reactions of Pyrazolo[3,4-e][1,2,4]oxadiazine with Amines ........................................ 387

Method 4: Reactions of 1,2,4,5-Tetrazines with Imidates or Thioimidates ........................................ 387

Variation 1: Reactions of 1,2,4,5-Tetrazines with Cyanimides .................................................... 388

Method 5: Intramolecular Cycloaddition of Cyano-1,2,4,5-tetrazines ........................................... 389

Method 6: Reactions of 1,2,4,5-Tetrazines with N-(Trimethylsilyl)aldimines Followed by Oxidation ................................................................. 389

Variation 1: Reactions of 1,2,4,5-Tetrazines with Benzaldehyde O-Methyloximes ........................................ 390

Method 7: Reactions of 1,2,4,5-Tetrazines with Dimethylamine ........................................................ 390

Aromatization .................................................................................................................................................. 390

Method 1: Conversion of 1,2,4-Triazin-5(2H)-ones or 1,2,4-Triazine-5(2H)-thiones into 1,2,4-Triazines ................................................................. 391

Synthesis by Substituent Modification ........................................................................................................ 392

Substitution of Existing Substituents ........................................................................................................... 392

Of Hydrogen ........................................................................................................................................................ 392

Method 1: Lithiation ......................................................................................................................................... 392

Method 2: Reactions with Grignard Reagents .............................................................................................. 393

Variation 1: Reactions with Enolate Anions ................................................................................................. 394

Variation 2: Reactions with Nitroalkanes and Base .................................................................................... 395

Variation 3: Reactions with Chloromethyl Phenyl Sulfone and Base ......................................................... 395

Method 3: Reactions with Hydrogen Cyanide ............................................................................................ 396

Method 4: Vicarious Nucleophilic Substitution .......................................................................................... 396

Method 5: Dimerization to 5,5'-Bi(1,2,4-triazines) ...................................................................................... 398

Method 6: Coupling with Arenes and Indoles ............................................................................................ 398

Method 7: Electrophilic Halogenation of 1,2,4-Triazine N-Oxides ................................................................ 399

Method 8: By Nucleophilic Substitution with Ammonia, Amines, and Related Nucleophiles .................. 399

Variation 1: Other Chichibabin-Type Reactions ......................................................................................... 400

Variation 2: Reactions with Hydrazine ......................................................................................................... 401

Variation 3: C3-Amination of 1,2,4-Triazine 4-Oxides .............................................................................. 401

Of Carbon Functionalities .......................................................................................................................... 402

Method 1: Decarboxylation of 1,2,4-Triazine-3-carboxylic Acid ................................................................. 402

Method 2: Reactions of 3-Trichloromethyl-1,2,4-triazines with Nucleophiles ........................................ 402

Method 3: Reactions of 1,2,4-Triazinecarbonitriles with Nucleophiles .................................................... 402

Of Heteroatoms ................................................................................................................................................. 403

Method 1: Reactions of Chloro-1,2,4-triazines with Nucleophiles ............................................................. 403

Variation 1: Reactions of 3-Bromo-1,2,4-triazine 2-Oxides with Nucleophiles .......................................... 404

Variation 2: Reactions of Alkoxy-1,2,4-triazines with Nucleophiles .......................................................... 404

Variation 3: Reactions of 3-Substituted 1,2,4-Triazine N-Oxides with Nucleophiles .............................. 405
17.2.1.5.1.3.1.4 Variation 4: Reactions of 3-(Methylsulfonyl)-1,2,4-triazines with Nucleophiles .............................................. 405
17.2.1.5.1.3.1.5 Variation 5: Reactions of 3-(Alkylsulfonyl)-1,2,4-triazines with Nucleophiles .............................................. 405
17.2.1.5.1.3.2 Method 2: Suzuki Coupling Reactions with 3-(Alkylsulfonyl)-1,2,4-triazines .............................................. 406
17.2.1.5.1.3.3 Method 3: By Diazotization .............................................. 407
17.2.1.5.2 Addition Reactions ....................................................... 407
17.2.1.5.2.1 Method 1: Synthesis of 1,2,4-Triazine N-Oxides from 1,2,4-Triazines .............................................. 407
17.2.1.5.2.2 Method 2: Alkylation of 1,2,4-Triazine N-Oxides .............................................. 408
17.2.1.5.3 Modification of Substituents .............................................. 409
17.2.1.5.3.1 Method 1: C—C Bond Formation at a Methyl Group .............................................. 409
17.2.1.5.3.2 Method 2: Oxidation of 3-Hydrazino-1,2,4-triazine 1-Oxides .............................................. 409
17.2.2 1,2,4-Benzotriazines and Related Compounds .............................................. 410
17.2.2.1 Synthesis by Ring-Closure Reactions .............................................. 410
17.2.2.1.1 By Formation of One N—N and One N—C Bond .............................................. 410
17.2.2.1.1.1 Fragments N—C—C—N and N—C  .............................................. 410
17.2.2.1.1.1.1 Method 1: Reaction of 2-Nitroaniline with Cyanamide .............................................. 410
17.2.2.1.1.2 Fragments N—C—N and N—C—C  .............................................. 411
17.2.2.1.1.2.1 Method 1: Reactions of 2-Nitroarenes with Guanidines .............................................. 411
17.2.2.1.1.2.2 Method 2: Reactions of Nitronaphthalenes with Guanidine .............................................. 412
17.2.2.1.1.3 Fragments N—C—N—C—C and N  .............................................. 413
17.2.2.1.1.3.1 Method 1: Reactions of Arylbenzamidoximes with Nitrile Oxides .............................................. 413
17.2.2.1.2 By Formation of Two N—C Bonds .............................................. 414
17.2.2.1.2.1 Fragments N—N—C—N and C—C  .............................................. 414
17.2.2.1.2.1.1 Method 1: Reactions of Cycloalkane-1,2-diones with Amidrazones .............................................. 414
17.2.2.1.2.1.2 Method 2: Cycloaddition of N-(Phenylmethylene)aniline and Diethyl Azodicarboxylate .............................................. 415
17.2.2.1.2.2 Fragments N—N—C and N—C—C  .............................................. 415
17.2.2.1.2.2.1 Method 1: Reactions of 6-Nitroquinoline with Aldehyde Hydrazones .............................................. 415
17.2.2.1.2.3 Fragments N—C—C—N—N and C  .............................................. 416
17.2.2.1.2.3.1 Method 1: Cyclization of 3,4-Dihydronaphthalene-1,2-dione 1-Hydrazone 2-Oxime with Ortho Esters .............................................. 416
17.2.2.1.3 By Formation of One N—N Bond .............................................. 417
17.2.2.1.3.1 Fragment N—C—N—C—C—N  .............................................. 417
17.2.2.1.3.1.1 Method 1: Cyclization of (2-Nitronaphthyl)thioureas .............................................. 417
17.2.2.1.3.1.1.1 Variation 1: Cyclization of 2-(2-Nitrophenyl)pyrazol-3-amines .............................................. 417
17.2.2.1.4 By Formation of One N—C Bond .............................................. 418
17.2.2.1.4.1 Fragment N—N—C—N—C—C  .............................................. 418
17.2.2.1.4.1.1 Method 1: Oxidation of N-Phenylsulfonylbenzimidrazones .......................... 418
17.2.2.1.4.1.2 Method 2: Cyclization of N\textsuperscript{1}-Isopropylidene-N\textsuperscript{3}-arylamidrazones ................................................. 419
17.2.2.1.4.1.1 Method 1: Reactions of 1,2-Dicarbonyl Compounds with Amidrazones and Related Compounds .................................................. 420
17.2.2.1.4.2 Variation 2: Cyclization of (2-Nitrophenyl)hydrazones ........................................ 421
17.2.2.1.4.2.1 Method 2: Cyclization of Formazans ............................................. 420
17.2.2.1.4.2.2 Variation 1: Cyclization of 1-(2-Nitrophenyl)-2-[nitro(phenyl)methylene]-hydrazines .......................................................... 422
17.2.2.1.4.3 Fragment C—C—N—N—C—N ............................................................................. 419
17.2.2.1.4.3.1 Method 1: Cyclization of 1-(2-Nitrophenyl)-2-[nitro(phenyl)methylene]-hydrazines .......................................................... 422
17.2.2.1.4.3.1.1 Variation 1: Cyclization of N-(2-Nitrophenyl)benzenecarboxyhydrasonoyl Bromide ............................................................ 422
17.2.2.1.4.3.1.2 Variation 2: Cyclization of (2-Nitrophenyl)hydrazones ........................................ 423
17.2.2.1.4.3.2 Method 2: Cyclization of N\textsuperscript{2}-(2-Aminophenyl)acetohydrazide .............. 424
17.2.2.1.4.3.2.1 Variation 1: Cyclization of Ethyl 2-(2-aminophenyl)hydrazinecarboxylate .. 424
17.2.2.2 Annulation by Formation of a Benzenoid Ring .......................................................... 425
17.2.2.2.1 Method 1: Cycloaddition of 5,6-Bis(bromomethylene)-1,2,4-triazine with a Dieneophile .......................................................... 425
17.2.2.2.2 Method 2: Photocyclization of 1-Methyl-3,5,6-triphenyl-1,2,4-triazinium Iodide ........................................................ 426
17.2.2.2.3 Synthesis by Ring Transformation .............................................................................. 426
17.2.2.2.3.1 Method 1: Cyclization of 3-(2-Acylaminophenyl)sydrones with Hydrogen Cyanide .......................................................... 426
17.2.2.2.3.2 Method 2: Ring Enlargement of 2,1,3-Benzoxadiazole 1-Oxide with Diethylamine .......................................................... 427
17.2.2.2.3.3 Method 3: Reactions of [1,2,5]-Oxadiazolo[3,4-b]quinoxaline 1-Oxides with Nitrile Oxides .......................................................... 427
17.2.2.2.3.4 Method 4: Ring Scission of N\textsuperscript{2}-(2-1\textsubscript{H}-1,2,3-Benzotriazol-1-yl)ethylidene]-4-methylbenzenesulfonohydrazides .......................................................... 428
17.2.2.2.3.5 Method 5: Flash-Vacuum Pyrolysis of α-(1-Benzotriazolyl)-β-oxotributylphosphorus Ylides .......................................................... 428
17.2.2.2.3.6 Method 6: Oxidation of Benzimidazole-1,2-diamines ........................................ 429
17.2.2.2.3.7 Method 7: Oxidation of 1-Amino-2-quinoxalones ........................................... 429
17.2.2.2.4 Aromatization .............................................................................................................. 430
17.2.2.2.4.1 Method 1: By Oxidation of 1,2-Dihydro-1,2,4-benzotriazines .......................... 430
17.2.2.2.4.2 Method 2: Aromatization of 5,6,7,8-Tetrahydro-1,2,4-benzothiazines .......... 430
17.2.2.2.4.3 Method 3: Conversion of 1,2,4-Benzotriazinones into 3-Halo-1,2,4-benzotriazines .......................................................... 430
17.2.2.2.5 Synthesis by Substituent Modification ............................................................................. 431
17.2.2.2.5.1 Substitution of Existing Substituents ................................................................. 431
17.2.2.2.5.1.1 Of Carbon ........................................................................................................ 431
17.2.2.2.5.1.2 Of Heteroatoms ............................................................................................. 432
17.2.2.2.5.1.2.1 Method 1: Substitution of Halogens .............................................................. 432
17.2.2.2.5.1.2.2 Method 2: Deoxygenation of N-Oxides ...................................................... 433
17.2.2.5.1.2.3 Method 3: Displacement of Alkoxy Substituents 434
17.2.2.5.1.2.4 Method 4: Substitution of Sulfanyl and Sulfonyl Substituents 434
17.2.2.5.1.2.5 Method 5: Substitution of Amino Groups by Diazotization 435
17.2.2.5.2 Method 4: Substitution of Sulfanyl and Sulfonyl Substituents 434
17.2.2.5.2.1 Method 1: O-Alkylation of 1,2,4-Benzotriazin-3(4H)-one 1-Oxides 435
17.2.2.5.2.2 Method 2: Alkylation of 3-Sulfanylphenanthro[9,10-e][1,2,4]triazine 436
17.2.2.5.2.3 Method 3: N-Alkylation of 1,2,4-Benzotriazin-3-amine 1-Oxide 437
17.2.2.5.2.4 Method 4: Oxidation of 1,2,4-Benzotriazines 437
17.2.2.5.2.4.1 Variation 1: Oxidation of 1,2,4-Benzotriazine 1-Oxides to 1,2,4-Benzotriazine 1,4-Dioxides 438
17.2.2.5.3 Method 4: Substitution of Amino Groups by Diazotization 435
17.2.2.5.3.1 Method 1: Oxidation of 3-Ethyl-1,2,4-benzotriazine to 3-Acetyl-1,2,4-benzotriazine 438
17.2.2.5.3.2 Method 2: Oxidation of 3-Methylsulfanyl-1,2,4-benzotriazine 439
17.2.2.5.3.3 Method 3: Oxidation of 3-Hydrazinyl-1,2,4-benzotriazine 439
17.2.2.5.3.4 Method 4: Reduction of 3-Azido-1,2,4-benzotriazine 440
17.2.2.5.3.5 Method 5: Reaction of 3-Hydrazinyl-1,2,4-benzotriazines 440
17.2.3 Product Subclass 3: 1,3,5-Triazines and Phosphorus Analogues
S. von Angerer
17.2.3 Product Subclass 3: 1,3,5-Triazines and Phosphorus Analogues 449
17.2.3.1 1,3,5-Triazines 452
17.2.3.1.1 Synthesis by Ring-Closure Reactions 452
17.2.3.1.1.1 By Formation of Three N–C Bonds 452
17.2.3.1.1.1.1 Method 1: Trimerization of Nitriles 453
17.2.3.1.1.1.1.1 Variation 1: Synthesis of Unsubstituted 1,3,5-Triazine 453
17.2.3.1.1.1.1.2 Variation 2: Synthesis of 2,4,6-Trialkyl-1,3,5-triazines 453
17.2.3.1.1.1.1.3 Variation 3: Synthesis of 2,4,6-Triaryl-1,3,5-triazines 455
17.2.3.1.1.1.1.4 Variation 4: Synthesis of 2,4,6-Trihalo-1,3,5-triazines 457
17.2.3.1.1.1.1.5 Variation 5: Trimerization of 1,3,5-Triazine-2,4,6(1H,3H,5H)-trione and Derivatives 458
17.2.3.1.1.1.1.6 Variation 6: Synthesis of 1,3,5-Triazine-2,4,6-triamines 459
17.2.3.1.1.1.1.7 Variation 7: Synthesis of Disubstituted Cyanamides with Formamides 460
17.2.3.1.1.1.1.8 Variation 8: Cotrimerization of Two Nitriles with Guanidine 462
17.2.3.1.1.1.1.9 Variation 9: Cotrimerization of Two Cyanates with 2-Alkyl- or 2-Arylisothiourea 463
17.2.3.1.1.1.1.10 Variation 10: Synthesis of Two Cyanates with 2-Alkyl- or 2-Arylisothiourea 463
17.2.3.1.1.1.1.11 Method 1: Trimerization of Nitriles 464
17.2.3.1.1.1.1.12 Method 2: Trimerization of Imidates 464
17.2.3.1.1.1.1.13 Method 3: Trimerization of Amidines 465
17.2.3.1.1.1.1.14 Method 4: Trimerization of Urea 467
17.2.3.1.1.1.1.15 Method 5: Cyclocondensation of Imidates with Amidines 467
17.2.3.1.1.1.1.16 Fragments N–C–N, N–C, and C 469
| 17.2.3.1.1.2.1 | Method 1: | Reaction of 2-Alkylisothiouronium Salts with Formic Acid Derivatives | 469 |
| 17.2.3.1.1.2.2 | Method 2: | Reaction of Substituted Guanidines with Dimethylformamide Acetals | 470 |
| 17.2.3.1.1.2.3 | Method 3: | Reaction of Amidines with Carboxylates | 471 |
| 17.2.3.1.1.2.4 | Method 4: | Reaction of Amidines with Phosgene | 472 |
| 17.2.3.1.1.2.5 | Method 5: | Reaction of Urea with Benzonitriles | 473 |
| 17.2.3.1.1.3.1 | Method 1: | One-Pot Tandem Reaction of Aldehydes with Ammonia and Guanidine-1-carbonitrile | 473 |
| 17.2.3.1.1.2.1.1 | Method 1: | Reaction of Dimethyl Cyanodithioimidocarbonate with Amides | 474 |
| 17.2.3.1.1.2.1.2 | Method 2: | Reaction of 2-Arylisourea-1-carbonitriles with Aryl Cyanates | 475 |
| 17.2.3.1.1.2.1.3 | Method 3: | Reaction of Guanidine-1-carbonitrile with Cyanamide | 475 |
| 17.2.3.1.1.2.1.4 | Method 4: | Reaction of Imidodicarbonimidates with Aryl Cyanates | 477 |
| 17.2.3.1.1.2.1.5 | Method 5: | Reaction of Guanidine-2-carbaldehydes with \(N\)-Formylformimidamide | 478 |
| 17.2.3.1.1.2.1.6 | Method 6: | Reactions of Guanidine-2-carbaldehydes with \(N\)-Acylguanidines with Nitriles | 478 |
| 17.2.3.1.1.2.2.1 | Method 1: | Reaction of Cyanodithioimidocarbonates with Amidine Derivatives | 479 |
| 17.2.3.1.1.2.2.2 | Method 2: | Reaction of 2-Phenylisourea-3-carbonitriles with Amidines | 481 |
| 17.2.3.1.1.2.2.3 | Method 3: | Reaction of \(N\)-Cyanoimidates with Amidine Derivatives | 481 |
| 17.2.3.1.1.2.2.4 | Method 4: | Reaction of \(N\)-Functionalized Imidoyl Chlorides with Amidine Derivatives | 482 |
| 17.2.3.1.1.2.2.4.1 | Variation 1: | Reaction of \(N\)-1-Chloroalkylidenecarbamoyl Chlorides | 482 |
| 17.2.3.1.1.2.2.4.2 | Variation 2: | Reaction of \(N\)-Polychloroalkyl-Substituted Imidoyl Chlorides | 483 |
| 17.2.3.1.1.2.2.4.3 | Variation 3: | Reaction of \(N\)-(Trichlorovinyl)benzimidoyl Chlorides | 484 |
| 17.2.3.1.1.2.2.4.4 | Variation 4: | Reaction of \(N\)-Acylchloroformimidates | 485 |
| 17.2.3.1.1.2.2.4.5 | Variation 5: | Reaction of \(N\)-Acylchloroformimidamides | 485 |
| 17.2.3.1.1.2.2.4.6 | Variation 6: | Reaction of 1,3-Diamino-1-chloro-2-azapropenylum Salts with Amidines | 486 |
| 17.2.3.1.1.2.2.5 | Method 5: | Reaction of Imidodicarbonates with \(N\)'-tert-Butyl-Substituted Amidines | 487 |
| 17.2.3.1.1.2.2.6 | Method 6: | Reaction of Acylthioimidocarbonates with Amidine Derivatives | 488 |
| 17.2.3.1.1.2.2.7 | Method 7: | Reaction of \(N\)-Acyl-1H-benzo[d]thiazole-1-carboximidamides with Urea or Thiourea | 489 |
| 17.2.3.1.1.2.2.8 | Method 8: | Reaction of \(N\)-Acylimidates or \(N\)-Acylthioimidates with Amidine Derivatives | 489 |
| 17.2.3.1.1.2.2.9 | Method 9: | Reaction of \(N\)-Acylamidines with Amidine Derivatives | 491 |
| 17.2.3.1.1.2.2.10 | Method 10: | Reaction of Acyl Isothiocyanates with Amidine Derivatives | 493 |
| 17.2.3.1.1.2.2.11 | Method 11: | Reaction of \(N\)-Acylthioamides with Amidine Derivatives | 493 |
Method 12: Reaction of \([1-(Acylamino)-2-chlorovinyl]triphenylphosphonium\) Chlorides with Benzimidamides

Method 13: Reaction of \(N-(2,2-Dicyanovinyl)thioimidates\) with Amidine Derivatives

Fragments \(N—C—N—C—N\) and \(C—N\)

Method 1: Reaction of \(N^2\)-Cyanoamidine Derivatives with Chloromethaniminium Salts

Method 2: Reaction of Biuret with Carboxylic Acid Derivatives

Method 3: Reaction of Imidodicarbonimidates with \(C_1\) Fragments

Method 4: Reaction of 2-Alkylisourea-1-carboximidamide and Its Thio Analogues or Thiourea-1-carboximidamide with Carboxylic Acid Derivatives

Method 5: Reaction of Sodium Dicyanamide or Guanidine-1-carbonitrile with Acid Derivatives

Method 6: Reaction of Biguanides with Carboxylic Acid Derivatives

Method 7: Reaction of 1-Carboximidoylguanidines with Carboxylic Acid Derivatives

Fragments \(C—N—C—N—C\) and \(N\)

Method 1: Reaction of \(N_1,N_2\)-Dicyanoamidines with Hydroxylamine

By Formation of One \(N—C\) Bond

Fragment \(N—C—N—C—N—C\)

Method 1: Cyclization of Guanidine-1,2-dicarbonitriles and Their Salts

Variation 1: With Hydrogen Halides

Variation 2: With Hydrogen Sulfide

Variation 3: With Amines

Method 2: Cyclization of 3-Acylguanidine-1-carbonitriles

Method 3: Cyclization of \(N_1,N_2\)-Diacylamidine Derivatives

Method 4: Cyclization of 1,3,5-Triazahexa-1,4-dienylium Perchlorates

Synthesis by Ring Transformation

By Ring Enlargement

Method 1: From 2-(Cyanoimino)thiazolidines and Amines

Method 2: From Imidazoles

Method 3: Thermolysis of 3-Phenyl-1,2,4-oxadiazol-5-amines

Method 4: Electroreduction of 3,4-Diphenyl-1,2,5-thiadiazole 1-Oxide

Formal Exchange of Ring Members with Retention of the Ring Size

Method 1: Reaction of 4\(H\)-1,3-Benzoxazin-4-ones with Amidine Derivatives

Method 2: Rearrangement of Pyrimidine Derivatives

Variation 1: Conversion of 5-Nitrosopyrimidin-4-amines into 1,3,5-Triazine-2-carbonitriles

Variation 2: Reaction of 4-Chloropyrimidines with Potassium Amide

Variation 3: Oxidation of Pyrimidinediamines

Method 3: Conversion of 1,3,5-Oxadiazines and Their Salts into 1,3,5-Triazines
17.2.3.2.4 Method 4: Conversion of 1,2,4-Triazines into 1,3,5-Triazines
17.2.3.2.5 Method 5: Conversion of 1,2,3,5-Oxathiadiazine 2,2-Dioxides into 1,3,5-Triazines
17.2.3.2.6 Method 6: Conversion of 1,2,3,5-Tetrazines into 1,3,5-Triazines
17.2.3.2.7 Method 7: Conversion of 1,3,5,2\underline{1},4\underline{1},6\underline{1},5-Triazatriphosphinines into 1,3,5-Triazines
17.2.3.1.3 Aromatization
17.2.3.3.1 Synthesis by Substituent Modification
17.2.3.3.1.1 Method 1: Reaction of 1,3,5-Triazinyllithium with Ketones
17.2.3.4.1 Substitution of Existing Substituents
17.2.3.4.1.1 Of Hydrogen
17.2.3.4.1.1.1 Method 1: Cyanation
17.2.3.4.1.1.2 Method 2: C-Alkylation
17.2.3.4.1.1.2.1 Variation 1: Reaction of 2,4-Diphenyl-1,3,5-triazine with Active Methylene Compounds
17.2.3.4.1.1.2.2 Variation 2: Reaction of 1,3,5-Triazine with Amidines and Imidates
17.2.3.4.1.1.2.3 Variation 3: Dimroth Rearrangements
17.2.3.4.1.1.2.4 Method 4: Amination
17.2.3.4.1.2 Of Metals
17.2.3.4.1.2.1 Method 1: Reaction of 1,3,5-Triazinylithium with Ketones
17.2.3.4.1.3 Of Carbon Functionalities
17.2.3.4.1.3.1 Method 1: Decarboxylation
17.2.3.4.1.3.2 Method 2: Substitution of Trichloromethyl Groups
17.2.3.4.1.3.3 Method 3: Substitution of Trinitromethyl Groups
17.2.3.4.1.4 Of Heteroatoms
17.2.3.4.1.4.1 Dehalogenation
17.2.3.4.1.4.1.1 Method 1: Reductive Dechlorination
17.2.3.4.1.4.2 Substitution of Halogens by Carbon Functionalities
17.2.3.4.1.4.2.1 Method 1: Reaction with Organolithium Reagents
17.2.3.4.1.4.2.2 Method 2: Reaction with Grignard Reagents
17.2.3.4.1.4.2.3 Method 3: Reaction with Arylboronic Acids (Suzuki Coupling)
17.2.3.4.1.4.2.4 Method 4: Reaction with Perfluoroalkysilanes
17.2.3.4.1.4.2.5 Method 5: Reaction with Organotin Reagents
17.2.3.4.1.4.2.6 Method 6: Friedel–Crafts Reactions
17.2.3.4.1.4.2.7 Method 7: Reaction with Active Methylene Compounds
17.2.3.4.1.4.2.8 Method 8: Reaction with Cyanide
17.2.1.4.1.4.9 Method 9: Reaction with Diazomethane .............................. 535
17.2.1.4.1.4.10 Method 10: Reaction with Pyrroles and Indoles ................ 536
17.2.1.4.1.4.11 Method 11: Addition to Perfluoropropene ...................... 537
17.2.1.4.1.4.12 Halogen-Exchange Reactions ........................................ 537
17.2.1.4.1.4.13 Method 1: Exchange of Chlorine for Fluorine ..................... 537
17.2.1.4.1.4.14 Substitution of Halogens by Oxygen Functionalities .......... 538
17.2.1.4.1.4.15 Method 1: Exchange of Halogen for Alkoxide and Aryloxide .... 538
17.2.1.4.1.4.16 Variation 1: Exchange of Chlorine in 2,4,6-Trichloro-1,3,5-triazine 538
17.2.1.4.1.4.17 Variation 2: Exchange of Chlorine in Substituted Chloro-1,3,5-triazines 539
17.2.1.4.1.4.18 Variation 3: Exchange of Chlorine for an Acyloxy Group ........ 540
17.2.1.4.1.4.19 Variation 4: Exchange of Chlorine for Peroxides ................. 540
17.2.1.4.1.4.20 Method 2: Hydrolysis of Chloro-1,3,5-triazines ................. 541
17.2.1.4.1.4.21 Substitution of Halogens by Sulfur Functionalities ............ 542
17.2.1.4.1.4.22 Method 1: Reaction of Chloro-1,3,5-triazines with Sulfur and Dimethyl Sulfate .......................................................... 542
17.2.1.4.1.4.23 Method 2: Exchange of Chlorine for an Alkylsulfanyl Group .... 542
17.2.1.4.1.4.24 Method 3: Conversion of 2,4,6-Trichloro-1,3,5-triazine into 1,3,5-Triazine-2,4,6(1H,3H,5H)-trithione .............................. 543
17.2.1.4.1.4.25 Substitution of Halogens by Nitrogen Functionalities ......... 543
17.2.1.4.1.4.26 Method 1: Reaction of 2,4,6-Trifluoro-1,3,5-triazine with Amines ...... 544
17.2.1.4.1.4.27 Method 2: Reaction of 2,4,6-Trichloro-1,3,5-triazine with Amines .... 544
17.2.1.4.1.4.28 Variation 1: Monosubstitution ........................................ 545
17.2.1.4.1.4.29 Variation 2: Disubstitution ............................................ 546
17.2.1.4.1.4.30 Variation 3: Trisubstitution ............................................ 546
17.2.1.4.1.4.31 Method 3: Reaction of 2,4-Dichloro-1,3,5-triazines with Amines .... 547
17.2.1.4.1.4.32 Method 4: Reaction of 2-Chloro-1,3,5-triazines with Amines ...... 549
17.2.1.4.1.4.33 Substitution of Halogens by Phosphorus Functionalities ...... 550
17.2.1.4.1.4.34 Method 1: Reaction of 2,4,6-Trichloro-1,3,5-triazine with Trialkyl Phosphites .......................................................... 550
17.2.1.4.1.4.35 Method 2: Reaction of 2,4,6-Trichloro-1,3,5-triazine with Diphenylphosphine ...................................................... 551
17.2.1.4.1.4.36 Generation of 1,3,5-Triazine Libraries by Substitution of Chlorine by Oxygen or Nitrogen Functionalities ........................................ 551
17.2.1.4.1.4.37 Method 1: Parallel Synthesis in Solution ............................ 551
17.2.1.4.1.4.38 Method 2: Parallel Synthesis on Solid Support .................. 553
17.2.1.4.1.4.39 Substitution of Oxygen Functionalities ............................ 554
17.2.1.4.1.4.40 Method 1: Reaction of 2-Methoxy-1,3,5-triazines with Active Methylene Compounds ...................................................... 554
17.2.1.4.1.4.41 Method 2: Reaction of 2-Methoxy-1,3,5-triazines with Hydrazine ...... 554
17.2.1.4.1.4.42 Substitution of Sulfur Functionalities ............................... 555
17.2.1.4.1.4.43 Method 1: Reaction of (Methylsulfanyl)- and (Alkylsulfanyl)-1,3,5-triazines with Amines ...................................................... 555
17.2.3.1.4.11 Substitution of Nitrogen Functionalities ........................................ 556

17.2.3.1.4.11.1 Method 1: Reaction of (1,3,5-Triazin-2-yl)trimethylammonium Chloride with Nucleophiles ........................................ 556

17.2.3.1.4.11.2 Method 2: Reaction of 2-(Pyrrozol-2-yl)-1,3,5-triazine with Amines ........ 557

17.2.3.1.4.12 Substitution of Phosphorus Functionalities .................................. 557

17.2.3.1.4.12.1 Method 1: Reaction of 2,4,6-Tris(diethoxyphosphoryl)-1,3,5-triazines with Amines ........................................ 557

17.2.3.1.4.2 Addition Reactions ........................................................................ 558

17.2.3.1.4.2.1 Method 1: Preparation of N-Oxides ............................................ 558

17.2.3.1.4.3 Rearrangement of Substituents .................................................. 559

17.2.3.1.4.3.1 Method 1: Smiles Rearrangement ............................................ 559

17.2.3.1.4.3.2 Method 2: Photo-Fries Rearrangement .................................. 560

17.2.3.1.4.4 Modification of Substituents .......................................................... 560

17.2.3.1.4.4.1 Method 1: O-Alkylation ......................................................... 560

17.2.3.1.4.4.2 Method 2: S-Alkylation .......................................................... 561

17.2.3.1.4.4.3 Method 3: S-Oxidation .......................................................... 562

17.2.3.1.4.4.4 Method 4: Modification at the α-Carbon .................................. 563

17.2.3.1.4.4.4.1 Variation 1: Reduction of Halomethyl Groups ....................... 563

17.2.3.1.4.4.4.2 Variation 2: Conversion of Methyl Groups into Aldoximes and Aldehydes 563

17.2.3.1.4.4.4.3 Variation 3: Substitution Reactions of 2,4,6-Tris[tert-butoxyphosphoryl]methyl]-1,3,5-triazines ........................................ 564

17.2.3.2 1,3,5-Diazaphosphinines ..................................................................... 566

17.2.3.2.1 Synthesis by Ring Transformation .................................................... 566

17.2.3.2.1.1 Method 1: 2,4,6-Triaryl-1,3,5-diazaphosphinines from 2,4,6-Triaryl-1,3,5-oxadiazin-1-ium Tetrafluoroborates ........................................ 566

17.2.3.3 1λ5,3λ5,5λ5-Triphosphinines ............................................................... 566

17.2.3.3.1 Synthesis by Ring-Closure Reactions ............................................. 566

17.2.3.3.1.1 By Formation of Three P—C Bonds .......................................... 566

17.2.3.3.1.1.1 Fragments P—C, P—C, and P—C ............................................ 566

17.2.3.3.1.1.1.1 Method 1: Reaction of Bis(dimethylamino)(difluoro)methylphosphorane with Butyllithium ........................................ 566

17.2.3.4 1λ5,3λ5,5-Triphosphinines ............................................................... 567

17.2.3.4.1 Synthesis by Ring-Closure Reactions ............................................. 567

17.2.3.4.1.1 By Formation of Two P—C Bonds .......................................... 567

17.2.3.4.1.1.1 Fragments P—C—P—C and P—C ............................................ 567

17.2.3.4.1.1.1.1 Method 1: Cycloaddition of 1λ5,3λ5-Diposphetres with Phosphaalkynes 567

17.2.3.5 1,3,5-Triphosphinines ............................................................... 567

17.2.3.5.1 Synthesis by Ring-Closure Reactions ............................................. 567

17.2.3.5.1.1 By Formation of Three P—C Bonds .......................................... 567
17.2.3.5.1.1 Fragments P—C, P—C, and P—C ................................................. 567
17.2.3.5.1.1.1 Method 1: Transition-Metal-Catalyzed Cyclotrimerization of Phosphaalkynes ................................................. 567
17.2.3.5.2 Aromatization ........................................................................... 570
17.2.3.5.2.1 Method 1: Dehalogenation of 1,3,5-Trichloro-1,3,5-triphosphinanes .... 570

17.3 Product Class 3: Six-Membered Hetarenes with More Than Three Heteroatoms
M. Bohle

17.3.1 Product Subclass 1: 1,2,3,4-Tetrazines ........................................... 585
17.3.1.1 Method 1: Synthesis of 1,2,3,4-Tetrazine N-Oxides ..................... 586
17.3.1.1.1 Variation 1: Via Diazotization .................................................. 586
17.3.1.1.2 Variation 2: Via Nitration ......................................................... 588

17.3.2 Product Subclass 2: 1,2,3,5-Tetrazines ......................................... 588

17.3.3 Product Subclass 3: 1,2,4,5-Tetrazines ......................................... 589
17.3.3.1 Synthesis by Ring-Closure Reactions ........................................ 592
17.3.3.1.1 By Formation of Four N—C Bonds .......................................... 593
17.3.3.1.1.1 Fragments N—N, N—N, and Two C Fragments ................. 593
17.3.3.1.1.1 Method 1: Dimerization of Activated Hydrazidic Acid Derivatives .... 593
17.3.3.1.1.1.1 Variation 1: From Nitriles .................................................. 593
17.3.3.1.1.1.2 Variation 2: From Carboxylic Acid Derivatives ................ 594
17.3.3.1.1.1.3 Variation 3: From Carbonyl Compounds .......................... 596
17.3.3.1.1.1.4 Variation 4: From Alkenes (Masked Carbonyl Compounds) ........ 597
17.3.3.1.2 By Formation of Two N—C Bonds ......................................... 598
17.3.3.1.2.1 Fragments C—N—N—C and N—N ....................................... 598
17.3.3.1.2.1.1 Method 1: Oxidation of Dihydrotetrazines ..................... 598
17.3.3.1.2.1.1 Method 1: Dimerization of Diazo Compounds .................. 600
17.3.3.1.2.2 Method 2: Dimerization of Nitrile Imines ............................ 602
17.3.3.1.2.3 Method 2: Fragments N—N—C—N—N and C ...................... 602
17.3.3.1.2.3.1 Method 1: From Hydrazonohydrazides ............................ 602
17.3.3.1.2.3.2 Method 2: From Guanidine-1,2,3-triamine ....................... 603
17.3.3.1.2.3.3 Method 3: From Carbohydrazides .................................. 604
17.3.3.1.2.3.4 Method 4: From Thiocarbohydrazides and Related Compounds ...... 605
17.3.3.1.3 By Formation of One N—C Bond ........................................ 606
17.3.3.1.3.1 Fragment C—N—N—C—N—N ........................................... 606
17.3.3.1.3.1 Method 1: By Cyclization of Tetrazolylguanidines ................ 606
17.3.2 Synthesis by Ring Transformation ........................................... 607
17.3.3 Aromatization ................................................................. 608
17.3.4 Synthesis by Substituent Modification .................................... 608
17.3.4.1 Substitution of Existing Substituents .................................... 608
17.3.4.1.1 Of Hydrogen ............................................................ 608
17.3.4.1.2 Of Carbon Functionalities ............................................. 609
17.3.4.1.3 Of Heteroatoms .......................................................... 610
17.3.4.1.3.1 Method 1: Substitution of Halogen Substituents .............. 610
17.3.4.1.3.2 Method 2: Substitution of Oxygen Substituents ............... 612
17.3.4.1.3.3 Method 3: Substitution of Sulfur Substituents .................. 613
17.3.4.1.3.4 Method 4: Substitution of Nitrogen Substituents ............... 614
17.3.4.2 Addition of Heteroatoms (N-Oxidation) .............................. 615
17.3.4.3 Modification of Substituents ............................................. 616

17.4 Product Class 4: Seven-Membered Heterenes with One Heteroatom

17.4.1 Product Subclass 1: Oxepins
S. von Angerer

17.4.1 Product Subclass 1: Oxepins ............................................. 627
17.4.1.1 Synthesis by Ring-Closure Reactions .................................. 630
17.4.1.1.1 By Formation of One O—C and One C—C Bond ................. 630
17.4.1.1.1 Method 1: From Cyclopropenes and Alk-1-ynes ................. 630
17.4.1.1.2 By Formation of One O—C Bond .................................... 631
17.4.1.1.2 Method 1: Synthesis from Acyclic Precursors .................... 631
17.4.1.2 Synthesis by Ring Transformation ..................................... 631
17.4.1.2.1 Method 1: Valence Isomerization of 3-Oxatricycloheptenes ... 631
17.4.1.2.2 Method 2: Valence Isomerization of 3-Oxaquadricyclanes ....... 632
17.4.1.2.3 Method 3: Valence Isomerization of 7-Oxanorbornadienes ....... 636
17.4.1.2.4 Method 4: Ring Enlargement of Cyclohexa-1,4-diienes ........... 638
17.4.1.2.5 Method 5: Ring Enlargement of 4H-Pyrans ....................... 639
17.4.1.3 Aromatization .............................................................. 640
17.4.1.3.1 Method 1: By Dehydrohalogenation ................................ 640
17.4.1.3.2 Method 2: By Dehalogenation ...................................... 646
17.4.1.3.3 Method 3: By Decarboxylation ...................................... 647
17.4.1.4 Synthesis by Substituent Modification ................................ 648
17.4.1.4.1 Substitution of Existing Substituents ............................... 648
17.4.1.4.1 Of Hydrogen ........................................................... 648
17.4.1.4.2 Of Bromine ............................................................ 648
17.4.2 **Product Subclass 2: Benzoxepins**
S. von Angerer

17.4.2 **Product Subclass 2: Benzoxepins** ........................................ 653
17.4.2.1 Synthesis by Ring-Closure Reactions ................................. 656
17.4.2.1.1 By Formation of One O—C and One C—C Bond ................ 656
17.4.2.1.1.1 Method 1: From Pyridazine 1-Oxide and Benzyne .......... 656
17.4.2.1.1.2 Method 2: From Resorcinol and Ethyl (2-Oxocyclohexyl)acetate 657
17.4.2.1.1.3 Method 3: Synthesis of Napth[1,8-b,c]oxepinium Salts .... 657
17.4.2.1.2 By Formation of Two C—C Bonds ................................ 658
17.4.2.1.2.1 Method 1: Reaction of Phthalaldehydes with C—H Acidic Ethers 658
17.4.2.1.2.1.1 Variation 1: Reaction of Phthalaldehydes and Diglycolic Acid Diester 658
17.4.2.1.2.1.2 Variation 2: Reaction of Phthalaldehyde and Bis(phosphonium) Salts 659
17.4.2.1.2.2 Method 2: Friedel–Crafts Reaction of 2-(Chloromethyl)phenyl Chloroformate with Benzene ................................. 659
17.4.2.1.3 Method 3: Insertion of Acetylenes into Cobaltaxanthenes 660
17.4.2.1.3 By Formation of One C—C Bond ................................... 661
17.4.2.1.3.1 Method 1: Base-Catalyzed Condensations (Including the Wittig Reaction) ......................................................... 661
17.4.2.1.3.1.1 Variation 1: Of Methyl 4-(2-Formylphenoxy)but-2-enoate 661
17.4.2.1.3.1.2 Variation 2: Of N-[2-(3-Phenylprop-2-ynyloxy)benzylidene]isopropylamine 661
17.4.2.1.3.1.3 Variation 3: Of [2-Hydroxy-3-(2-formylphenoxy)propyl]triphenylphosphonium Bromide ........................................... 662
17.4.2.1.3.2 Method 2: Oxidative Coupling .................................... 662
17.4.2.1.3.3 Method 3: Synthesis of Dibenz[b,f]oxepins by Electrophilic Aromatic Substitution (Intramolecular Arylation) ............... 664
17.4.2.1.3.3.1 Variation 1: Of 1-(2-Phenoxyphenyl)-2-phenylacetylenes 664
17.4.2.1.3.3.2 Variation 2: Of 2-Phenoxybromostilbenes .................... 665
17.4.2.1.3.3.3 Variation 3: Of (2-Phenoxyphenyl)-2-oxopropanoic Acids 666
17.4.2.1.3.3.4 Variation 4: Of 2-Phenoxyphenylacetic Acids ................ 667
17.4.2.1.3.3.5 Variation 5: Of 2-Phenoxybenzaldehyde and Hippuric Acid 668
17.4.2.1.3.4 Method 4: Synthesis of Dibenz[b,e]oxepin-11(6H)-ones by Electrophilic Aromatic Substitution (Intramolecular Arylation) .... 669

17.4.2 Synthesis by Ring Transformation ......................................... 672
17.4.2.1 Valence Isomerization ..................................................... 672
17.4.2.1.1 Method 1: Of 3-Oxa-4,5-benzotricycloheptenes ................ 672
17.4.2.1.2 Method 2: Of Phenanthrene Oxide and Related Compounds ........ 672
17.4.2.1.3 Method 3: Of Naphthalene 1,4-Oxides .............................. 674
17.4.2.1.4 Method 4: Of Cyclobutabenzoferans ............................... 674
17.4.2.2 By Ring Enlargement ...................................................... 675
17.4.2.2.1 Method 1: Of Benzofurans ........................................... 675
17.4.2.2.1.1 Variation 1: With Dimethyl Acetylenedicarboxylate 676
17.4.2.2.1.2 Variation 2: With 1-Phenyl-2-pyrrolidin-1-ylacetylene 676
### Table of Contents

17.4.2.2.2 Method 2: Of 2-Benzofuran-1(3\(H\))-ones .................................................. 677
17.4.2.2.3 Method 3: Of 1,4-Dihydropthalene .............................................................. 677
17.4.2.2.4 Method 4: Of 1-Acetoxy-2,4-dibromotetrahydronaphthalenes .................. 678
17.4.2.2.5 Method 5: Of 2H-Benzopyrans ................................................................. 678
17.4.2.2.6 Method 6: Of Xanthenes ............................................................................ 680
17.4.2.2.6.1 Variation 1: By Addition of Diazomethane ........................................ 680
17.4.2.2.6.2 Variation 2: By Dehydration ................................................................. 680
17.4.2.3 Aromatization ................................................................................................. 680
17.4.2.3.1 Method 1: By Dehydrohalogenation ....................................................... 681
17.4.2.3.2 Method 2: By Dehalogenation ................................................................... 683
17.4.2.3.3 Method 3: By Dehydration ........................................................................ 683
17.4.2.3.3.1 Variation 1: Of Secondary Alcohols .................................................... 683
17.4.2.3.3.2 Variation 2: Of Tertiary Alcohols .......................................................... 685
17.4.2.3.4 Method 4: By Deamination ....................................................................... 686
17.4.2.3.4.1 Variation 1: Of Quaternary Ammonium Salts (Hofmann Degradation) .. 686
17.4.2.3.4.2 Variation 2: Of N-Oxides (Cope Elimination) ....................................... 687
17.4.2.3.4.3 Variation 3: Of Acetylamines ................................................................... 687
17.4.2.3.5 Method 5: By Decarbonylation ................................................................. 688
17.4.2.4 Synthesis by Substituent Modification .......................................................... 688
17.4.2.4.1 Substitution of Existing Substituents ....................................................... 688
17.4.2.4.1.1 Of Hydrogen ......................................................................................... 688
17.4.2.4.1.1.1 Method 1: By Deuteration or by Nitration ........................................ 688
17.4.2.4.1.2 Of Carbon Functionalities ..................................................................... 689
17.4.2.4.1.2.1 Method 1: By Decarboxylation ....................................................... 689
17.4.2.4.1.3 Of Heteroatoms .................................................................................... 689
17.4.2.4.1.3.1 Method 1: Substitution of Halogen .................................................... 689
17.4.2.4.1.3.1.1 Variation 1: Of Bromine ................................................................. 689
17.4.2.4.1.3.1.2 Variation 2: Of Amino Groups .................................................... 691
17.4.2.4.1.3.1.3 Variation 3: Of Hydroxy Groups ................................................ 691
17.4.2.4.2 Addition Reactions ..................................................................................... 694
17.4.2.4.2.1 Of Benzoepinones and Benzoxepindiones ........................................ 694
17.4.2.4.2.1.1 By O-Alkylation .............................................................................. 694
17.4.2.4.2.1.1.1 Method 1: O-Methylation of 1-Benzoxepin-3(2\(H\))-ones and 1-Benzoxepin-5(4\(H\))-ones ................................................................. 694
17.4.2.4.2.1.2 Method 2: O-Methylation of 1-Benzoxepin-3,5(2\(H\),4\(H\))-diones .......... 695
17.4.2.4.2.1.3 Method 3: O-Ethylation of Dibenzo[b,f]oxepin-10(11\(H\))-ones .......... 696
17.4.2.4.2.1.4 Method 4: O-Methylation of 11-Hydroxydibenzo[b,f]oxepin-10(11\(H\))-one 697
17.4.2.4.2.1.2 By O-Acetylation ............................................................................. 697
17.4.2.4.2.1.2.1 Method 1: O-Acetylation of 2,3-Dihydro-1-benzoxepin-3-ones and 2,5-Dihydro-1-benzoxepin-5-ones ....................................................... 697
17.4.2.4.2.1.2.2 Method 2: O-Acetylation of Benzoxepindiones and Dibenzoepindiones 698
17.4.3 Product Subclass 3: Thiepins and Selenium Analogues
A. L. Schwan

17.4.3.1 Thiepins ................................................................. 705

17.4.3.1.1 Synthesis by Ring Transformation .................................. 706

17.4.3.1.1.1 Method 1: Using One-Carbon Ring Expansions .......... 706
17.4.3.1.1.1.1 Variation 1: Ring Expansion of Exocyclic Diazo Compounds .... 706
17.4.3.1.1.1.2 Variation 2: Ring Expansion via a Carbocation .......... 708
17.4.3.1.1.2 Method 2: Using Two-Carbon Ring Expansions ............ 709
17.4.3.1.1.2.1 Variation 1: By Michael Addition of Electron-Rich Thiophenes and Electron-Poor Alkynes ........................................ 709
17.4.3.1.1.2.2 Variation 2: Diels–Alder Reactions of Highly Substituted Thiophenes ... 709

17.4.3.1.2 Synthesis by Substituent Modification .......................... 710

17.4.3.1.2.1 Method 1: Organometallic Capture, Reduction, and Stabilization .... 710

17.4.3.2 Thiepin 1-Oxides and 1,1-Dioxides ................................ 711

17.4.3.2.1 Synthesis by Ring Transformation ................................ 711

17.4.3.2.1.1 Method 1: Through Pericyclic Reactions and Sulfur Dioxide Introduction 711
17.4.3.2.1.1.1 Variation 1: Cheletropic Introduction of Sulfur Dioxide ........ 711
17.4.3.2.1.1.2 Variation 2: Electrocyclic Chemistry .................... 712
17.4.3.2.1.2 Method 2: Using Two-Carbon Ring Expansions ............ 713
17.4.3.2.1.2.1 Variation 1: Using Organometallic Capture and Stabilization .... 713
17.4.3.2.1.2.2 Variation 2: Photochemical Ring Expansion ............... 714

17.4.3.2.2 Synthesis by Substituent Modification .......................... 714

17.4.3.2.2.1 Method 1: Oxidation of Thiepins ............................ 714

17.4.3.3 Selenepins .......................................................... 715

17.4.3.3.1 Synthesis by Ring Transformation ............................ 715

17.4.3.3.1.1 Method 1: Using One-Carbon Ring Expansions ............ 715

17.4.4 Product Subclass 4: Benzothiepins and Selenium/Tellurium Analogues
A. L. Schwan

17.4.4.1 1-Benzothiepins and Their S-Oxides ............................. 717

17.4.4.1.1 Synthesis by Ring-Closure Reactions ........................... 718

17.4.4.1.1.1 By Formation of Two Heteroatom—Carbon Bonds ............ 719
17.4.4.1.1.1.1 Method 1: Using Organometallic Methods ............... 719
17.4.4.1.1.1.1.1 Variation 1: Stepwise Formation of Two S—C Bonds ....... 719
17.4.4.1.1.1.1.2 Variation 2: Simultaneous Formation of Two S—C Bonds .... 719

17.4.4.1.2 Synthesis by Ring Transformation ................................ 720

17.4.4.1.2.1 Method 1: One-Carbon Ring Expansions ........................ 720
17.4.4.1.2.2 Method 2: Two-Carbon Ring Expansion of Benzothiophenes .... 721

© Georg Thieme Verlag KG
17.4.5.2.4 Method 4: Conversion of Dibenzo\[b,f\]thiepin-10(11H)-ones into Alcohols and Elimination of Water or Its Equivalents .......................... 736
17.4.5.2.4.1 Variation 1: By Organometallic Addition to the Carbonyl and Elimination of Water ................................................................. 736
17.4.5.2.4.2 Variation 2: By Reduction of the Carbonyl Function and Elimination of Water ................................................................. 738
17.4.5.3 Synthesis by Ring Transformation ................................................................................................................. 739
17.4.5.3.1 Method 1: Acid-Mediated One-Carbon Ring Expansions .......................................................... 740
17.4.6 Dibenzo\[b,f\]thiepin S-Oxides and S-Imines .................................................. 740
17.4.6.1 Synthesis by Substituent Modification ................................................................................................................. 740
17.4.6.1.1 Method 1: Oxidation of Dibenzo\[b,f\]thiepins to Oxides of Sulfur ............................................. 740
17.4.6.1.2 Method 2: Sulfur Imination of Dibenzo\[b,f\]thiepins ............................................. 741
17.4.6.7 Dibenzo\[b,f\]selenepins .................................................................................................................. 742
17.4.6.7.1 Aromatization .............................................................. 742
17.4.6.7.1.1 Method 1: Conversion into Enamine Forms of Dibenzo\[b,f\]selenepin-10(11H)-ones Using Titanium(IV) Chloride .................................. 742
17.4.6.8 Tribenzo\[b,d,f\]thiepins and Their S-Oxides .......................................................................................... 743
17.4.6.8.1 Synthesis by Construction of a Fused Ring ..................................................................................... 743
17.4.6.8.1.1 Method 1: From Dibenzo\[b,f\]thiepin-10-yne .......................................................... 743
17.4.6.8.1.2 Method 2: From Dibenzo\[b,f\]thiepin-10,11-dione .......................................................... 744

17.4.5 Product Subclass 5: Azepines, Cyclopentazepines, and Phosphorus Analogues
M. D. Surman and R. H. Hutchings

17.4.5 Product Subclass 5: Azepines, Cyclopentazepines, and Phosphorus Analogues ................................................. 749
17.4.5.1 Synthesis by Ring-Closure Reactions ................................................................................................................. 750
17.4.5.1.1 By Formation of Two N—C Bonds ................................................................................................. 750
17.4.5.1.1.1 Fragments C—C—C—C—C and N ................................................................................................. 750
17.4.5.1.1.1.1 Method 1: From 2,6-Bifunctional Fulvenes and Ammonia .................................................. 750
17.4.5.1.2 By Formation of One N—C and One C—C Bond ..................................................................................... 751
17.4.5.1.2.1 Fragments N—C—C—C—C and C—C ................................................................................................. 751
17.4.5.1.2.1.1 Method 1: Condensation of 4-Hydroxy-2,3,4-triphenylcyclopent-2-enone with Pyrrolidine .................................................................................. 751
17.4.5.1.2.1.2 Method 2: Condensation of 2-Vinyl-2H-azirines with Dimethyl Acetylenedicarboxylate .................................................................................. 752
17.4.5.1.2.2 Fragments N—C—C and C—C—C ................................................................................................. 753
17.4.5.1.2.2.1 Method 1: Annulation of Fischer Carbenes with Azadienes ............................................. 753
17.4.5.1.2.2.2 Method 2: Condensation of 3-Phenyl-2H-azirine-2-carbaldehyde with Methyl 4-(Triphenylphosphorylidyne)but-2-enolate ............................................. 754
17.4.5.1.2.3 Fragments C—C—C—C and N—C—C 

17.4.5.1.2.3.1 Method 1: Condensation of 2,6-Bifunctional Fulvenes with Amidines 

17.4.5.1.2.3.2 Method 2: Condensation of (Vinylimino)phosphoranes with 6-(Dimethylamino)fulvene-2-carbaldehyde 

17.4.5.1.2.3.3 Method 3: Cycloaddition of Cyclopentadienones with 2H-Azirines 

17.4.5.1.3 By Formation of Two C—C Bonds 

17.4.5.1.3.1 Fragments C—N—C—C—C and C—C—C 

17.4.5.1.3.2 Fragments C—N—C—C and C—C—C 

17.4.5.1.4 By Formation of One N—C Bond 

17.4.5.1.4.1 Fragment N—C—C—N—C—C—C 

17.4.5.1.5 By Formation of One C—C Bond 

17.4.5.1.5.1 Fragment C—C—C—P—C—C—C 

17.4.5.2 Synthesis by Ring Transformation 

17.4.5.2.1 By Ring Enlargement 

17.4.5.2.1.1 Of Three-Membered Heterocycles 

17.4.5.2.1.1.1 Method 1: From 7-Azabicyclo[4.1.0]hept-3-enes 

17.4.5.2.1.1.2 Method 2: Thermolysis of 2-Ethynyl-3-vinylaziridines 

17.4.5.2.1.2 Of Four-Membered Heterocycles 

17.4.5.2.1.2.1 Method 1: Base-Induced Rearrangement of 4-Tolyl 1,3,4,5-Tetraphenyl-6-azabicyclo[3.2.0]hept-3-ene-6-sulfonate 

17.4.5.2.1.3 Of Five-Membered Heterocycles 

17.4.5.2.1.3.1 Method 1: Thermal Isomerization of 3-Azaquadricyclanes 

17.4.5.2.1.3.2 Method 2: Pyrolysis of 2-Azabicyclo[3.2.0]hepta-2,6-dienes 

17.4.5.2.1.3.3 Method 3: From 2-Azabicyclo[3.2.0]heptane-3,4-diones 

17.4.5.2.1.3.4 Method 4: Photolysis of 2,1-Benzisoxazoles 

17.4.5.2.1.3.5 Method 5: Addition of Dichlorocarbene to 2,5-Dihydro-1H-phosphole 1-Oxides 

17.4.5.2.1.4 Of Six-Membered Heterocycles 

17.4.5.2.1.4.1 Method 1: Base-Induced Rearrangement of Pyridinium Salts 

17.4.5.2.1.4.2 Method 2: Base-Induced Rearrangement of Dihydropyridines 

17.4.5.2.1.4.3 Method 3: Base-Induced Rearrangement of Dihydropyridinium Salts

17.4.6.2.3 Aromatization .......................................................... 852
17.4.6.2.3.1 Method 1: By syn-Dehydrobromination ..................................... 852
17.4.6.2.4 Synthesis by Substituent Modification ............................................. 853
17.4.6.2.4.1 Substitution of Existing Substituents ............................................. 853
17.4.6.2.4.1.1 Of Hydrogen .......................................................... 853
17.4.6.2.4.1.1.1 Method 1: By an Oxygen Functionality .................................. 853
17.4.6.2.4.1.1.2 Method 2: By Tautomerism .................................................. 853
17.4.6.2.4.1.2 Of Heteroatoms .......................................................... 853
17.4.6.2.4.1.2.1 Method 1: Palladium(0)-Catalyzed Carboalkoxylation of 5-Bromo-5H-2-benzazepines ........................................ 853
17.4.6.2.4.2 Addition Reactions .......................................................... 854
17.4.6.2.4.2.1 Of Hydrogen .......................................................... 854
17.4.6.2.4.2.2 Of Organic Groups .......................................................... 854
17.4.6.2.2.3 Of Heteroatoms .......................................................... 855
17.4.6.2.4.2.3.1 Method 1: Of Bromine ............................................ 855
17.4.6.2.4.2.3.2 Method 2: N-Oxidation .......................................... 855
17.4.6.2.4.2.3.3 Method 3: Formation of an Annulated Benzazepine .......... 855
17.4.6.3 3H-3-Benzazepines .......................................................... 856
17.4.6.3.1 Synthesis by Ring-Closure Reactions .................................. 856
17.4.6.3.1.1 By Formation of Two N—C Bonds .................................. 856
17.4.6.3.1.1.1 Method 1: From 1,2-Phenylenediacetyl Chloride ............ 856
17.4.6.3.1.2 By Formation of Two C—C Bonds .................................. 857
17.4.6.3.1.2.1 Method 1: From Phthalaldehyde ............................... 857
17.4.6.3.1.2.1.1 Variation 1: From 1,2-Dibenzoylbenzene with N,N-Bis(cyanomethyl)isopropylamine ........... 857
17.4.6.3.1.3 By Formation of One N—C Bond .................................. 858
17.4.6.3.1.3.1 Method 1: By Halogen Acid Induced Cyclization of Benzene-1,2-diacetonitrile ............ 858
17.4.6.3.1.3.2 Method 2: Thermolysis of Vinyl Azides ....................... 858
17.4.6.3.1.4 By Formation of One C—C Bond .................................. 860
17.4.6.3.1.4.1 Method 1: From Phenylacetimidates ........................... 860
17.4.6.3.1.5 By Annulation to the Heterocyclic Ring ......................... 861
17.4.6.3.1.5.1 Method 1: By [4 + 2] Cycloaddition of Methyl 2-Pyrene-5-carboxylate with Ethyl 1H-Azepine-1-Carboxylate .......................... 861
17.4.6.3.2 Synthesis by Ring Transformation .................................... 862
17.4.6.3.2.1 By Ring Enlargement ............................................... 862
17.4.6.3.2.1.1 Method 1: From 2,3-Benzo-7-azabicyclo[2.2.1]hepta-2,5-dienes .......................... 862
17.4.6.3.2.1.2 Method 2: From Azirino[2,1-a]isoquinolines .................. 862
17.4.6.3.2.1.3 Method 3: From 2-(1a,2,7,7a-Tetrahydro-1H-naphtho[2,3-b]aziren-1-yl)-1H-isoindole-1,3(2H)-dione ........................................ 863
17.4.6.3.3 Aromatization .............................................................. 864
17.4.6.3.3.1 Method 1: By Oxidation (Dehydrogenation) of 7,8-Dimethoxy-5-phenyl-1,3,4,5-tetrahydro-2H-3-benzazepin-2-one ................ 864
17.4.6.3.4 Synthesis by Substituent Modification ................................ 864
17.4.6.3.4.1 Substitution of Existing Substituents ............................... 864
17.4.6.3.4.1.1 Of Hydrogen ......................................................... 864
17.4.6.3.4.1.1.1 Method 1: Nitration of 1H-3-Benzazepin-2-amine ........ 864
17.4.6.3.4.1.2 Method 2: C1-Methylation of 2,7,8-Trimethoxy-1H-3-benzazepine ......................... 865
17.4.6.3.4.2 Of Heteroatoms .......................................................... 865
17.4.6.3.4.2.1 Method 1: Debromination with Palladium on Charcoal ........ 865
17.4.6.3.4.2.2 Method 2: Formation of 2-Ethoxy-7,8-dimethoxy-5-phenyl-1H-3-benzazepine ............ 866
17.4.6.3.4.2.3 Method 3: By ipso-Substitution of 2-Alkoxy Substituents .......... 866
17.4.6.3.5 Addition Reactions ................................................................. 867
17.4.6.3.5.1 Of Hydrogen ........................................................................ 867
17.4.6.3.5.1.1 Method 1: By Reduction of 3-Acetyl-3H-3-benzazepine .......... 867
17.4.6.3.5.2 Of Organic Groups ............................................................. 867
17.4.6.3.5.2.1 Method 1: Quaternization of 1H-3-Benzazepin-2-amine with Iodomethane .................................................. 867
17.4.6.3.6 Modification of Substituents ..................................................... 867
17.4.6.3.6.1 Method 1: Acetylation of 4-Bromo-1H-3-benzazepin-2-amine .......... 867
17.4.6.4 5H-Dibenz[b,d]azepines .............................................................. 868
17.4.6.4.1 Synthesis by Ring-Closure Reactions ........................................ 868
17.4.6.4.1.1 Method 1: By Intramolecular Cyclization under Friedel–Crafts Conditions 868
17.4.6.4.2 Aromatization ........................................................................ 869
17.4.6.4.2.1 Method 1: Manganese(IV) Oxide Oxidation of 5,6-Dihydro-7H-dibenz[b,d]azepin-7-ones ........................................... 869
17.4.6.4.2.1.1 Variation 1: Lead(IV) Acetate Oxidation of 5,6-Dihydro-7H-dibenz[b,d]azepin-7-ones ........................................... 869
17.4.6.4.3 Synthesis by Substituent Modification ......................................... 870
17.4.6.5 11H-Dibenz[b,e]azepines ............................................................ 870
17.4.6.5.1 Synthesis by Ring-Closure Reactions ........................................ 871
17.4.6.5.1.1 By Formation of One N—C and One C—C Bond ....................... 871
17.4.6.5.1.1.1 Method 1: By the Thermal Decomposition of Diphenylmethane-2-diazonium Tetrafluoroborates ......................... 871
17.4.6.5.1.2 By Formation of One N—C Bond ........................................... 871
17.4.6.5.1.2.1 Method 1: Reduction–Cyclodehydration of 2-(2-Nitrophenyl)benzophenones ......................................................... 871
17.4.6.5.1.3 By Formation of One C—C Bond ........................................... 872
17.4.6.5.1.3.1 Method 1: By Bischler–Napieralski Cyclodehydration ................ 872
17.4.6.5.2 Synthesis by Ring Transformation ............................................ 872
17.4.6.5.2.1 By Ring Enlargement ........................................................... 872
17.4.6.5.2.1.1 Method 1: By Beckmann Rearrangement of 10H-Anthracen-9-one Oximes .......................................................... 872
17.4.6.5.2.1.2 Method 2: By the Schmidt Reaction of Anthraquinones ............ 873
17.4.6.5.3 Aromatization ........................................................................ 874
17.4.6.5.3.1 Method 1: By Dehydrogenation of 1,4-Dimethyl-6,11-dihydro-5H-dibenz[b,e]azepine ......................................................... 874
17.4.6.5.3.2 Method 2: From 6H-Dibenz[b,e]azepin-6-ones ............................ 875
17.4.6.5.4 Synthesis by Substituent Modification ......................................... 875
17.4.6.5.4.1 Substitution of Existing Substituents ........................................ 875
17.4.6.5.4.1.1 Method 1: By Displacement of 2-Halo Substituents ................ 875
17.4.6.5.4.2 Addition Reactions ....................................................... 876
17.4.6.5.4.2.1 Of Hydrogen ........................................................ 876
17.4.6.5.4.2.1.1 Method 1: Reduction without Ring Opening .............. 876
17.4.6.5.4.2.2 Of Heteroatoms .................................................. 876
17.4.6.5.4.2.2.1 Method 1: Formation of N-Oxides ......................... 876
17.4.6.5.4.3 Modification of Substituents ..................................... 877
17.4.6.5.4.3.1 Method 1: Substitution of 6-Chloromethyl-11H-dibenz[b,e]azepine .... 877
17.4.6.6 5H-Dibenzo[c,e]azepines .............................................. 877
17.4.6.6.1 Synthesis by Ring-Closure Reactions ................................ 877
17.4.6.6.1.1 By Formation of Two N—C Bonds ................................ 877
17.4.6.6.1.1.1 Method 1: By Acid-Mediated Cyclization of 2’-(Aminoalkyl)biphenyl-2-carbaldehydes ............................................. 877
17.4.6.6.1.1.1 Variation 1: By Acid-Mediated Cyclization of 2’-[2’-(1,3-Dioxolan-2-yl)-1,1’-biphenyl-2-yl]-4,4-dimethyl-4,5-dihydro-1,3-oxazole .................. 878
17.4.6.6.1.1.2 Method 2: From 2’-Biphenyldicarboxaldehyde ............... 879
17.4.6.6.1.1.3 Method 3: Ring Closure of 2’-(Bromomethyl)biphenyl-2-carbaldehyde with Arylamines under Acidic Conditions ....................... 880
17.4.6.6.1.1.3.1 Variation 1: Ring Closure of 2’-(1-Bromoalkyl)biphenyl-2-carbaldehydes under Basic Conditions ............................... 880
17.4.6.6.1.1.3.2 Variation 2: Ring Closure of [2’-(Bromomethyl)-4-chloro-1,1’-biphenyl-2-yl](2-fluorophenyl)methanone ......................... 880
17.4.6.6.1.2 By Formation of One N—C Bond .................................. 881
17.4.6.6.1.2.1 Method 1: By 1,7-Electrocyclization of Diene-Conjugated Nitrile Ylides · 881
17.4.6.6.2 Aromatization ........................................................... 883
17.4.6.6.2.1 Method 1: By Elimination from an N-Substituted 6,7-Dihydro-5H-dibenzo[c,e]azepine .................................................. 883
17.4.6.6.2.2 Method 2: By Dehydrochlorination ............................. 884
17.4.6.6.2.3 Method 3: Oxidation with Mercury(II) Oxide .................. 884
17.4.6.6.2.4 Method 4: Via Dibenzo[c,e]azepinium Salts .................... 885
17.4.6.6.3 Synthesis by Substituent Modification ............................... 885
17.4.6.6.3.1 Substitution of Existing Substituents ............................. 885
17.4.6.6.3.1.1 Of Hydrogen ........................................................ 885
17.4.6.6.3.1.1 Method 1: Deprotonation of 5H-Dibenzo[c,e]azepines with Lithium Diisopropylamide .................................................. 885
17.4.6.6.3.1.1.2 Method 2: Aerial Oxidation under Phase-Transfer Conditions .......................................................... 886
17.4.6.6.3.1.2 Of Heteroatoms .................................................. 887
17.4.6.6.3.1.2.1 Method 1: Introduction of Carbofunctional Groups by the Suzuki Reaction .................................................. 887
17.4.6.6.7 5H-Dibenzo[b,f]azepines .............................................. 887
17.4.6.6.7.1 Synthesis by Ring-Closure Reactions ................................ 887
17.4.6.7.1 By Formation of Two C—C Bonds ............................................. 888
17.4.6.7.1.1 Method 1: From 2,2'-Bis(bromomethyl)diphenylamine .......................... 888
17.4.6.7.1.1.1 Variation 1: From Bis(2'-formylphenyl)amine ........................................ 888
17.4.6.7.2 Synthesis by Ring Transformation ................................................. 888
17.4.6.7.2.1 By Ring Enlargement ................................................................. 888
17.4.6.7.2.1.1 Method 1: From 2,2¢-Bis(bromomethyl)diphenylamine ......................... 888
17.4.6.7.2.1.2 Method 2: From 9,10-Dihydroacridin-9-ylmethanol ............................ 890
17.4.6.7.2.1.2.1 Variation 1: From 9-(Hydroxymethyl)-9,10-dihydroacridine and Sulfuric Acid .............................................................. 891
17.4.6.7.2.1.2.2 Variation 2: Base-Promoted Ring Expansion of Acridine Methanesulfonates .................................................. 892
17.4.6.7.3 Aromatization .................................................................................. 893
17.4.6.7.3.1 Method 1: Bromination–Dehydrobromination ........................................ 893
17.4.6.7.3.2 Method 2: Catalytic Dehydrogenation .............................................. 893
17.4.6.7.4 Synthesis by Substituent Modification ............................................... 894
17.4.6.7.4.1 Substitution of Existing Substituents ................................................. 894
17.4.6.7.4.1.1 Of Hydrogen .................................................................................. 894
17.4.6.7.4.1.1.1 Method 1: Nitration of 5H-Dibenz[b,f]azepines ................................. 894
17.4.6.7.4.1.1.2 Method 2: Friedel–Crafts Acylation of 5-Acyl-5H-dibenz[b,f]azepines ..... 895
17.4.6.7.4.1.1.3 Method 3: N-Alkylation of 5H-Dibenz[b,f]azepines ......................... 895
17.4.6.7.4.1.1.3.1 Variation 1: By Phase-Transfer Catalysis ...................................... 896
17.4.6.7.4.1.1.3.2 Variation 2: By Reductive Amination ........................................... 896
17.4.6.7.4.1.1.4 Method 4: N-Acylation of 5H-Dibenz[b,f]azepines .......................... 897
17.4.6.7.4.1.1.5 Method 5: Chlorocarbonylation of 5H-Dibenz[b,f]azepines with Phosgene Equivalents .................................................. 897

17.4.6.7.4.4.2.1 Method 1: Halogenation ............................................................ 901
17.4.6.7.4.4.3 Oxidation Reactions ..................................................................... 902
17.4.6.7.4.4.3.1 Method 1: Formation of N-Oxides ............................................... 902
17.4.6.7.4.4.3.2 Method 2: Formation of Epoxides ............................................... 902
Cycloadditions ............................................................ 903

Method 1: Cyclopropanation by the Simmons–Smith Reaction ............. 903

Method 2: 1,3-Dipolar Cycloaddition with Diarylnitrilimines ............... 904

Method 4: [4 + 2] Cycloaddition of Dibenzazepynes ....................... 905

Method 1: Cyclopropanation with Dichlorocarbene ....................... 904

Variation 1: Cyclopropanation with Dichlorocarbene ....................... 904

Method 2: 1,3-Dipolar Cycloaddition with Diarylnitrilimines ............... 904

Method 4: [4 + 2] Cycloaddition of Dibenzazepynes ....................... 905

Method 1: From N,N-Diphenyl-1,1'-biphenyl-2,2'-diamine .................. 906

Method 1: From 5-Acetyl-10-bromo-5H-dibenz[b,f]azepine and Furan ... 907

Method 1: From 5-Acetyl-10-bromo-5H-dibenz[b,f]azepine and Cyclohexa-1,3-diene ....................................................... 908

Synthesis by Substituent Modification ........................................ 909

Other Group 15 Benzoheteroepins ........................................... 910

1H-1-Benzoheteroepins ...................................................... 910

Synthesis by Ring-Closure Reactions ......................................... 911

Method 1: Thermal Valence Isomerization of Dihydrocyclobut[b]hetero-
indoles ........................................................................... 911

Method 2: From [(1Z,3Z)-1-Bromo-4-(2-bromophenyl)buta-1,3-
dien-1-yl](trimethyl)silane ................................................. 912

3-Benzoheteroepins .................................................................. 914

Synthesis by Ring-Closure Reactions ........................................... 914

Method 1: Potassium Hydroxide/18-Crown-6 Catalyzed Addition of
Phenylphosphine to 1,2-Diethynylbenzene .................................. 914

Method 2: From (Z,Z)-2-Bis(β-bromovinyl)benzene ....................... 914

Dibenz[b,d]heteroepins .......................................................... 916

Synthesis by Ring-Closure Reactions ........................................... 916

Method 1: From [(Z)-1-Bromo-2-(2'-bromophenyl-1,1'-biphenyl-
2-yl)vinyl](trimethyl)silane ................................................. 916

Dibenz[b,f]heteroepins .......................................................... 917

Synthesis by Ring-Closure Reactions ........................................... 917

Method 1: From 1-Bromo-2-[(Z)-2-(2-bromophenyl)vinyl]benzene ..... 917

Tribenzo[b,d,f]heteroepins ...................................................... 918

Synthesis by Ring-Closure Reactions ........................................... 918

Method 1: Transition-Metal-Catalyzed Trimerization of Phenyl[bis[2-
(phenylethynyl)phenyl]]phosphate Oxide ................................ 918

Reactions of Other Group 15 Benzoheteroepins .............................. 920
Product Class 5: Seven-Membered Heteroaromatics with Two or More Heteroatoms

**Product Subclass 1: 1,2-Diazepines**

**Synthesis by Ring-Closure Reactions**

**By Formation of Two N—C Bonds**

**Method 1:** Tosylhydrazine Condensation with α,β-γ,δ-Unsaturated Ketones

**Method 2:** Hydrazine Condensation with Oxo Esters and Oxo Acids

**By Formation of One N—N Bond**

**Method 1:** Azo Formation from Linked Bis(nitroaromatics)

**Method 2:** Diazooalkane Formation from Tosylhydrazones

**By Formation of One C—C Bond**

**Method 1:** 1,7-Dipolar Cyclization of Nitrile Imines

**Product Subclass 2: 1,3-Diazepines**

**Synthesis by Ring-Closure Reactions**

**Method 1:** Cyclization Reactions of 2,2'-Diaminobiphenyls with Imidates, Thioimidates, and Ortho Esters

**Method 2:** Formation of 6H-Dibenzo[d,f][1,3]diazpin-6-ones and Derivatives

**Synthesis by Ring Transformation**
17.5.2.1 Method 1: Photolysis Reaction of Azidopyridines with Nucleophiles 948
17.5.2.2 Method 2: Photochemical Conversion of N-Imides into 1,3-Diazepines 948
17.5.2.3 Synthesis by Substituent Modification 949
17.5.2.3.1 Method 1: N,N'-Diacylation of 6H-Dibenzo[d,f][1,3]diazepin-6-ones 949
17.5.2.3.2 Method 2: Displacement of Isothioureas 950
17.5.3 Product Subclass 3: 1,4-Diazepines 951
17.5.3.1 Synthesis by Ring-Closure Reactions 952
17.5.3.1.1 By Formation of Two N—C Bonds 952
17.5.3.1.1.1 Method 1: Reaction of Benzene-1,2-diamines with 1,3-Diketones 952
17.5.3.1.1.2 Method 2: Reaction of Benzene-1,2-diamines with 2-Halobenzoic Acids 954
17.5.3.1.1.3 Method 3: Reaction of Benzene-1,2-diamines with 2-Chloronicotinic Acids 954
17.5.3.1.1.4 Method 4: Reaction of 2-Aminobenzoic Acids with 2-Halonitrobenzenes 956
17.5.3.1.1.5 Method 5: Reaction of 2-Aminobenzoic Acids with 2-Chloro-3-pyridinamines 957
17.5.3.1.2 By Formation of Two N—C Bonds and One C—C Bond 958
17.5.3.1.2.1 Method 1: Intramolecular Ring Closures Using Dimethylformamide Dimethyl Acetal 958
17.5.3.1.2.2 Method 2: Intramolecular Ring Closures through Imino Chlorides 959
17.5.3.2 Synthesis by Ring Transformation 960
17.5.3.2.1 Method 1: Intramolecular Nitrene Insertion Reactions of Azidopyridines 960
17.5.3.2.2 Method 2: Intramolecular Nitrene Insertion Reactions of Azidoquinolines 960
17.5.3.3 Synthesis by Substituent Modification 962
17.5.3.3.1 By Replacement of Hydrogen 962
17.5.3.3.1.1 Method 1: N-Acylation of 1,4-Diazepines 962
17.5.3.3.1.2 Method 2: C3 Substitution of 1,5-Benzodiazepines by Direct Alkylation 964
17.5.3.3.1.3 Method 3: C3 Substitution of 1,4-Benzodiazepines by Rearrangement 966
17.5.3.3.2 1,4-Diazepine Amidines from 1,4-Diazepinones 968
17.5.3.3.2.1 Method 1: Lewis Acid Mediated Formation from Dihydro-1,4-diazepinones 968
17.5.3.3.2.2 Method 2: Imino Chloride Mediated Formation from Dihydrodibenzo[1,4]diazepinones 969
17.5.3.3.2.3 Method 3: 1,5-Benzodiazepine Amidines from Dihydro-1,5-benzodiazepine-2-thiones 970
17.5.3.3.2.4 Method 4: 1,4-Benzodiazepine Amidines from Dihydro-1,4-benzodiazepine-2-thiones 972
17.6 Product Class 6: Eight- and Nine-Membered Hetarenes and Heteroannulenes with One or More Heteroatoms

R. M. Borzilleri

17.6.1 Product Subclass 1: Azocines

17.6.1.1 Synthesis by Ring Transformation

17.6.1.1.1 Valence Isomerization

17.6.1.1.1 Method 1: From 2-Azabicyclo[4.2.0]octa-2,4,7-triene via Diazabasketene

17.6.1.1.2 Method 2: From Substituted Methoxyazabicyclo[4.2.0]octa-3,7-dienes

17.6.1.1.3 Method 3: Photocycloaddition of Benzonitriles and Phenols

17.6.1.1.4 Method 4: Cycloaddition of 2-Phenylbenzazetes

17.6.1.1.5 Method 5: Photocyclodimerization of Pyridines

17.6.1.1.6 Method 6: Thermolysis of Tricyclo[4.2.2.02,5]deca-3,7,9-trienes and 1,2,4-Triazines

17.6.1.1.2 By Rearrangement

17.6.1.1.2.1 Method 1: Of Benzocycloheptatriene Azides

17.6.1.2 Aromatization

17.6.1.2.1 Method 1: Bromination/Dehydrobromination of Dihydroazocines

17.6.1.3 Synthesis by Substituent Modification

17.6.1.3.1 Modification of Substituents

17.6.1.3.1.1 Method 1: O-Methylation of Dihydroazocinones with Meerwein’s Reagent

17.6.2 Product Subclass 2: Diazocines and Diheterocines

17.6.2.1 Synthesis by Ring-Closure Reactions

17.6.2.1.1 By Formation of Two N—C Bonds

17.6.2.1.1.1 Method 1: 1,2-Diazocines by Condensation of Biphenyl Dicarbonyl Compounds with Hydrazines

17.6.2.1.1.2 Method 2: 1,4-Diazocines by Condensations of Diones with Diamines

17.6.2.1.1.2.1 Variation 1: Condensations of 1,2-Diones with Biphenyl-2,2’-diamines

17.6.2.1.1.2.2 Variation 2: By Condensations of 1,4-Diones with Benzene-1,2-diamines

17.6.2.1.1.3 Method 3: Annulated 1,5-Diazocines by Self-Condensation of 2-(Trimethoxymethyl)aniline

17.6.2.1.1.4 Method 4: 1,5-Diazocines by Bimolecular Condensation of 2-Aminobenzophenones

17.6.2.1.1.4.1 Variation 1: From the Acid-Catalyzed Intermolecular Condensation of 2-Aminobenzophenones

17.6.2.1.1.4.2 Variation 2: Condensation of 2-Aminobenzophenones or 2-Aminothio-benzophenones Derived from Benz[c]isoxazoles or Benz[c]isothiazoles
Variation 3: Condensation of Imines Derived from 2-Aminobenzophenones .................................. 994

Synthesis by Ring Transformation ................................................................. 994

Valence Isomerization of Diazabicyclo[4.2.0]octatriene Systems .......................... 994

Method 1: 1,2-Diazocine from a Polycyclic Azoalkane ....................................... 994
Method 2: Annulated Diazocines by Cycloaddition of Fused Pyridazines and Pyrimidines with Electron-Rich Ynamines .......................................................... 995

Variation 1: Synthesis of Bicyclic 1,2-Diazocines ............................................ 995
Variation 2: Synthesis of Bicyclic 1,3-Diazocines .............................................. 996
Variation 3: Synthesis of Bicyclic 1,5-Diazocines .............................................. 997
Method 3: Annulated 1,5-Diazocines by Photolysis of 1,2,3-Triazines .................. 998

Valence Isomerization of Diazasemibullvalenes .............................................. 999

Method 1: 1,5-Diazocines by Thermolysis of 2,6-Diazasemibullvalenes ............... 999

Valence Isomerization of syn-o-Homobenzene Derivatives ................................ 999

Method 1: 1,4-Dioxocins by Thermolysis of syn-Benzene Dioxides .................... 999
Method 2: 1,4-Oxazocines by Thermolysis of 3-Oxa-8-azatricyclo[5.1.0.0²⁴]oct-5-enes .......................................................... 1000

By Thermal Rearrangement .............................................................................. 1002

Method 1: 1,4-Oxathiocins from Thiophenium Methylides ................................... 1002

Aromatization .................................................................................................. 1002

Method 1: Halogenation/Dehydrohalogenation of Dihydro-1,2-diazocines ............ 1002

Synthesis by Substituent Modification ................................................................ 1003

Substitution of Existing Substituents ............................................................... 1003

Method 1: Substitution of Chlorine Atoms ........................................................ 1003
Variation 1: Bonded to 1,2-Diazocines ........................................................... 1003
Variation 2: Bonded to 1,5-Diazocines ........................................................... 1004
Method 2: Substitution of Methanesulfonyl and Other Groups Bonded to the Nitrogen Atoms of 1,4-Dihydro-1,4-diazocines ........................................ 1005

Product Subclass 3: Triazocines and Tetrazocines .......................................... 1006

Synthesis by Ring-Closure Reactions .................................................................. 1007

By Formation of Two N—C Bonds ..................................................................... 1007

Method 1: 1,3,5-Triazocines by Condensation of Biguanides with β-Diketones .......... 1007

Synthesis by Ring Transformation ..................................................................... 1007

Valence Isomerization of Azabicyclo[4.2.0]octatriene ..................................... 1007
Method 1: 1,2,4-Triazocines by Cycloaddition of 2-Phenyldiazocenes with Tetrazines .......................................................... 1007

Valence Isomerization of Tetraazasemibullvalene .......................................... 1008

Method 1: 1,3,5,7-Tetrazocines by Oxidation of Tetraazapentalenes ................... 1008

Product Class 7: Cyclazines ................................................ 1025

Product Subclass 1: [2.2.2]Cyclazine (Pyrrolo[2,1,5-cd]pyrrolizine) ........ 1025

Product Subclass 2: [2.2.3]Cyclazines (Pyrrolo[2,1,5-cd]indolizines) and Related Compounds ................................................. 1026

[2.2.3]Cyclazines (Pyrrolo[2,1,5-cd]indolizines) .......................... 1027

Synthesis by Ring-Closure Reactions ..................................... 1027

By Formation of Two C—C Bonds ........................................ 1027

Method 1: [8π+2π]-Cycloaddition Reactions .......................... 1027

Method 2: From Methyl Indolizines via Intramolecular Cyclization of Indolizine Carboxyaldehydes ........................................ 1030

Method 3: Addition of Vilsmeier Salts to Nitromethane ................ 1031

Method 4: Reaction of 3H-Pyrrolizine with Vinyleanimidinium Salt .... 1031

By Formation of One C—C Bond .......................................... 1032

Method 1: Intramolecular Cyclization of Hexahydroindolizinone Followed by Dehydrogenation ........................................ 1032

Synthesis by Substituent Modification .................................. 1033

Substitution of Existing Substituents .................................... 1033

Of Hydrogen ........................................................................ 1033

Method 1: Friedel–Crafts Acylation of [2.2.3]Cyclazine ............... 1033

Method 2: Nitration of [2.2.3]Cyclazine Followed by Reductive Ayclation of Nitrocyclazine ................................................ 1033

Of Carbon Functionalities .................................................. 1034

Method 1: Hydrolysis of Dimethyl Pyrrolo[2,1,5-cd]indolizine-1,2-dicarboxylate .......................................................... 1034

Benzo- and Dibenzo[2.2.3]cyclazines ..................................... 1035

Synthesis by Ring-Closure Reactions ..................................... 1035

By Formation of Two C—C Bonds ........................................ 1035

Method 1: [8π+2π]-Cycloaddition Reactions .......................... 1035

Aza- and Diaza[2.2.3]cyclazines ............................................ 1037

Synthesis by Ring-Closure Reactions ..................................... 1038

By Formation of Two N—C Bonds ........................................ 1038

Method 1: Reaction of a Pyrrolizinium Perchlorate with Ammonia ... 1038

By Formation of Two C—C Bonds ........................................ 1039
17.7.2.3.1.2 Method 1: \([8\pi + 2\pi]\)-Cycloaddition Reactions ................................. 1039
17.7.2.3.1.2.2 Method 2: Reaction of Imidazo[2,1-\(a\)]pyridine with Dimethylformamide .............................................. 1039
17.7.2.3.1.3 By Formation of One N–C Bond ................................................. 1040
17.7.2.3.1.3.1 Method 1: Cyclization of Ethyl 5-Aminoimidazo[1,2-\(a\)]pyridine-3-carboxylate Followed by Reduction ................................. 1040
17.7.2.3.2 Synthesis by Substituent Modification ........................................... 1041
17.7.2.3.2.1 Substitution of Existing Substituents ........................................ 1041
17.7.2.3.2.1.1 Of Hydrogen ............................................................................. 1041
17.7.2.3.2.1.1.1 Method 1: Oxidation of Methyl 3-Aryl-5,6-dihydro-4-\(H\)-pyrrolizino[2,3,4,5-\(i\)-\(j\)]quinoline-1-carboxylate ................................. 1041
17.7.2.3.2.1.2 Of Carbon Functionalities .......................................................... 1042
17.7.2.3.2.1.2.1 Method 1: Decarboxylation of Dimethyl 2-(Methylsulfanyl)imidazo [5,1,2-\(cd\)]indolizine-3,4-dicarboxylate ................................. 1042
17.7.2.3.2.1.2.2 Method 2: Oxidation of Imidazo[5,1,2-\(cd\)]indolizine-4-carbaldehyde ................................................................. 1043
17.7.2.3.2.1.3 Of Heteroatoms ........................................................................ 1043
17.7.2.3.2.1.3.1 Method 1: Reduction of 2-(Methylsulfanyl)imidazo[5,1,2-\(cd\)]indolizine Using Raney Nickel ..................................................... 1043
17.7.2.3.2.1.3.1.1 Variation 1: Reduction of 2-(Methylsulfanyl)benzo[\(f\)]imidazo[5,1,2-\(cd\)]indolizine Using Raney Nickel ........................................ 1044
17.7.2.3.3 Cyclazines (Pyrrolo[2,1,5-de]quinolizines) and Related Compounds ......................................................................................... 1044
17.7.3.1 \([2.3.3]\)Cyclazinylium (Pyrrolo[2,1,5-de]quinolizinium) and Benzo[2.3.3]cyclazinylium Salts .............................................................. 1045
17.7.3.1.1 Synthesis by Ring-Closure Reactions ............................................. 1045
17.7.3.1.1.1 By Formation of Two C–C Bonds ................................................... 1045
17.7.3.1.1.1.1 Method 1: Reaction of a Benzo[\(a\)][2.3.3]cyclazinylium Salt with Glyoxal ................................................................. 1045
17.7.3.1.2 Aromatization ................................................................................. 1046
17.7.3.1.2.1 Method 1: Reaction of a Cyclazinone with Phosphorus Pentasulfide ..................................................................................... 1046
17.7.3.1.2.2 Method 2: Reaction of a Cyclazinone with Phosphoryl Bromide ..................................................................................... 1047
17.7.3.1.3 Synthesis by Substituent Modification ........................................... 1047
17.7.3.1.3.1 Substitution of Existing Substituents ........................................ 1047
17.7.3.1.3.1.1 Of Carbon Functionalities .......................................................... 1047
17.7.3.1.3.1.1.1 Method 1: Hydrolysis of 1-(Ethoxycarbonyl)pyrrolo[2,1,5-de]quinolininium Using Hydrochloric Acid .................................................... 1047
17.7.3.1.3.1.2 Of Heteroatoms ........................................................................ 1048
17.7.3.1.3.1.2.1 Method 1: Reduction of 1-(Methylsulfanyl)pyrrolo[2,1,5-de]quinolininium Using Raney Nickel ..................................................... 1047
17.7.3.1.3.1.2.2 Method 2: Reduction of 3-Bromopyrrolo[2,1,5-de]quinolininium Using Palladium ................................................................. 1048
17.7.3.2 [2.3.3]Cyclazinones ...................................................... 1049

17.7.3.2.1 Synthesis by Ring-Closure Reactions .......................... 1049

17.7.3.2.1.1 By Formation of Two C—C Bonds ............................. 1049

17.7.3.2.1.1.1 Method 1:  
[8π + 3π]-Cycloaddition Reaction of a Pyrrolo[1,2-c]pyrimidine  
with 1,3-Dibromo-1,3-diphenylacetone .................................. 1049

17.7.3.2.1.1.2 Method 2:  
Cycloaddition of 3-Hydroxyquinolizinium Bromide with  
Acetylene Derivatives .................................................. 1050

17.7.3.2.1.2 By Formation of One C—C Bond .............................. 1050

17.7.3.2.1.2.1 Method 1:  
Intramolecular Condensation of an Indolizine ......................... 1050

17.7.3.2.1.2.2 Method 2:  
Hydrolysis of an Indolizine with Hydrochloric Acid Followed by  
Treatment with Alumina ............................................. 1051

17.7.3.2.1.2.3 Method 3:  
Intramolecular Cyclization of a Quinolizine Ester Followed by  
De-ethoxycarbonylation ............................................. 1052

17.7.3.2.2 Synthesis by Substituent Modification ........................... 1053

17.7.3.2.2.1 Substitution of Existing Substituents ......................... 1053

17.7.3.2.2.1.1 Of Carbon Functionalities .................................. 1053

17.7.3.2.2.1.1.1 Method 1:  
Hydrolysis of a Pyrroloquinolizine Using Hydrochloric Acid  
Followed by Decarboxylation Using Copper(I) Oxide ............... 1053

17.7.3.3 Benzo-Fused [2.3.3]Cyclazines .................................... 1053

17.7.3.3.1 Synthesis by Ring-Closure Reactions .......................... 1054

17.7.3.3.1.1 By Formation of Two C—C Bonds ............................. 1054

17.7.3.3.1.1.1 Method 1:  
From N-[2,6-Bis(2-phenyl-1,3-dithian-2-yl)phenyl]-1H-pyrrole  
Using Mercury(II) Chloride ........................................... 1054

17.7.3.3.1.2 By Formation of One C—C Bond .............................. 1054

17.7.3.3.1.2.1 Method 1:  
Reaction of a Formamide with Polyphosphoric Acid ................ 1054

17.7.3.4 Polyheteroaza[2.3.3]cyclazines .................................... 1055

17.7.3.4.1 Synthesis by Ring-Closure Reactions .......................... 1056

17.7.3.4.1.1 By Formation of Three N—C Bonds ........................... 1056

17.7.3.4.1.1.1 Method 1:  
Reaction of a Cyanoacrylate with Formic Acid ....................... 1056

17.7.3.4.1.2 By Formation of One N—C and One C—C Bond ............ 1056

17.7.3.4.1.2.1 Method 1:  
Reaction of a Diacetamide with Phosphoryl Chloride ............... 1056

17.7.4 Product Subclass 4: [3.3.3]Cyclazines (Pyrido[2,1,6-de]quinolizines)  
and Related Compounds ............................................. 1057

17.7.4.1 [3.3.3]Cyclazine (Pyrido[2,1,6-de]quinolizine) ..................... 1058

17.7.4.1.1 Synthesis by Ring-Closure Reactions .......................... 1058

17.7.4.1.1.1 By Formation of Two C—C Bonds ............................. 1058

17.7.4.1.1.1.1 Method 1:  
Reaction of Quinolizin-4-ylideneacetate with an  
Acetylenecarboxylate ............................................. 1058

Method 1: The Vilsmeier Reaction of a [2.2.4]Cyclazine with Dimethylformamide ...................................... 1070
Method 2: Nitration with Tetranitromethane .................... 1071

Product Subclass 6: [2.3.4]Cyclazines (Azepino[2,1,7-cd]indolizines) .... 1071
Synthesis by Ring-Closure Reactions ........................................ 1072
By Formation of Two C—C Bonds ........................................... 1072
Method 1: Wittig Reaction of an Aldehyde Followed by Intramolecular Cyclization of an Oxo Diester ......................... 1072

Product Subclass 7: Annulenes Bridged by Two Nitrogen Atoms .... 1072
Aromatization ........................................................................ 1073
Method 1: From 3,4,7,8-Tetrahydro-8b,8c-diazacyclopenta[fg]acenaphthylene .............................................. 1073

Product Class 8: Porphyrins and Related Compounds
K. M. Smith and M. G. H. Vicente

Product Class 8: Porphyrins and Related Compounds .................... 1081
Product Subclass 1: Porphyrins .............................................. 1085
Syntheses of Intermediates Used in Porphyrin Syntheses ................ 1087
Dipyrrroles ........................................................................... 1088
Method 1: Dipyrrromethenes .................................................. 1088
Variation 1: Condensation of 2-Formyl-1H-pyrroles with 2-Unsubstituted 1H-Pyrroles ........................................... 1088
Variation 2: Reaction of 2-(Bromomethyl)-1H-pyrroles with 2-Bromo-1H-pyrroles ........................................ 1089
Variation 3: Self-Condensation of Monopyrroles ...................... 1090
Variation 4: Oxidation of Dipyrrromethanes .............................. 1091
Method 2: Dipyrrromethanes ............................................... 1091
Variation 1: Unsymmetrically Substituted Dipyrrromethanes by Reaction of 2-Substituted 1H-Pyrroles with 2-Unsubstituted 1H-Pyrroles ........................................... 1091
Variation 2: Unsymmetrically Substituted Dipyrrromethanes by Reduction of Dipyrrromethenes ................................. 1093
Variation 3: Symmetrically Substituted Dipyrrromethanes by Self-Condensation of 2-Substituted 1H-Pyrroles ............... 1094
Variation 4: Symmetrically Substituted Dipyrrromethanes from 2-Unsubstituted 1H-Pyrroles ..................................... 1095
Method 3: Dipyrraketones ..................................................... 1096
Method 4: Bipyrroles ............................................................ 1098
Tripyrroles ........................................................................... 1100
Method 1: The [2 + 1] Approach to Tripyrranes ....................... 1100
Method 2: The [1]+[1]2 Approach to Symmetrical Tripyrranes ....... 1102
Open-Chain Tetrapyrrolic Intermediates .................................. 1103
17.8.1.3.1 Method 1: Oxobilanes .............................................. 1104
17.8.1.3.1.1 Variation 1: a-Oxobilanes ............................................. 1104
17.8.1.3.1.2 Variation 2: b-Oxibilanes ............................................. 1105
17.8.1.3.2 Method 2: b-Bilenes ................................................ 1106
17.8.1.3.2.1 Variation 1: 1,19-Dimethyl-b-bilenes ................................ 1106
17.8.1.3.2.2 Variation 2: b-Bilene-1,19-dicarboxylates ...................... 1107
17.8.1.3.3 Method 3: a,c-Biladienes ............................................ 1108
17.8.1.3.3.1 Variation 1: Symmetrical 1,19-Dimethyl-a,c-biladiene Salts ............. 1108
17.8.1.3.3.2 Variation 2: Unsymmetrical 1,19-Dimethyl-a,c-biladiene Salts ........... 1110
17.8.1.3.3.3 Variation 3: 1-Bromo-19-methyl-a,c-biladiene Salts ................. 1115

17.8.1.2 Syntheses of Porphyrins .................................................. 1116
17.8.1.2.1 Method 1: From Monopyrrole Tetramerization ...................... 1116
17.8.1.2.2 Method 2: From Dipyrryl Intermediates: The [2 + 2] Routes .............. 1124
17.8.1.2.2.1 Variation 1: Using Dipyrrymethenes ................................ 1126
17.8.1.2.2.2 Variation 2: Using Dipyrrymethanes ................................ 1129
17.8.1.2.2.3 Variation 3: Using Dipyrryketones ................................ 1135
17.8.1.2.2.4 Method 3: From Tripyrryl Intermediates: The [3 + 1] Route ............ 1138
17.8.1.2.2.5 Variation 1: Using a Tripyrrane and a 2,5-Diformyl-1H-pyrrole ........ 1139
17.8.1.2.2.6 Variation 2: Using a Tripyrrane and a 2,5-Bis[(dimethylamino)methyl]-1H-pyrrole ............ 1141
17.8.1.2.4 Method 4: From Open-Chain Tetrapyrryl Intermediates .................. 1143
17.8.1.2.4.1 Variation 1: Using a-Oxobilanes .................................... 1145
17.8.1.2.4.2 Variation 2: Using b-Oxibilanes .................................... 1147
17.8.1.2.4.3 Variation 3: Using 1,19-Dimethyl-b-bilenes .......................... 1148
17.8.1.2.4.4 Variation 4: Using b-Bilene-1,19-diesters .................................. 1149
17.8.1.2.4.5 Variation 5: Using Other b-Bilenes .................................. 1150
17.8.1.2.4.6 Variation 6: Using 1,19-Dimethyl-a,c-biladienes ..................... 1151
17.8.1.2.4.7 Variation 7: Using 1-Bromo-19-methyl-a,c-biladienes .................. 1159
17.8.1.2.4.8 Variation 8: Using Other a,c-Biladienes ................................ 1159

17.8.2 Product Subclass 2: Reduced Porphyrins .................................. 1161
17.8.2.1 Chlorins (β,β'-Dihydroporphyrins) ................................ 1161
17.8.2.1.1 Method 1: By Ring Synthesis ........................................ 1161
17.8.2.1.2 Method 2: By Reduction of Porphyrins or Metal Porphyrinates ......... 1165
17.8.2.1.3 Method 3: By Oxidation of Porphyrins or Metal Porphyrinates .......... 1171
17.8.2.2 Bacteriochlorins and Isobacteriochlorins (β,β',β'',β'''-Tetrahydroporphyrins) 1173
17.8.2.3 Syntheses of Benzoporphyrins ........................................... 1174
17.8.2.3.1 Method 1: Tetrabenzoporphyrins ...................................... 1175
17.8.2.3.2 Method 2: Monobenzoporphyrins, Dibenzoporphyrins, and Benzoporphyrin Derivatives 1178

17.8.3 Product Subclass 3: Isomeric, Contracted, and Expanded Porphyrin Systems 1180
17.8.3.1 Syntheses of [18]Porphyrin (1,1,1,1) Isomers .......................... 1180
17.8.3.1.1 Method 1: Porphycene ([18]Porphyrin (2,0,2,0)) ...................... 1180
17.8.3.1.2 Method 2: Corrphycene (Porphycerin) ([18]Porphyrin (2,1,0,1)) ....... 1181
### Contracted Porphyrins: Syntheses of Corroles

17.8.3.2

**Method 1:** From Monopyrroles

**Variation 1:** Using 2-Substituted 1H-Pyrroles

**Variation 2:** Using 2,5-Di-unsubstituted 1H-Pyrroles and Aldehydes

**Method 2:** From Dipyroles

**Method 3:** From a,c-Biladiene Salts

**Method 4:** By Porphyrin Ring Contraction

17.8.3.3

**Expanded Porphyrins**

17.8.3.3.1

**Method 1:** Syntheses of Sapphyrins

**Variation 1:** The [3 + 2] Approach

**Variation 2:** The [3 + (1)²] Approach

**Variation 3:** The [4 + 1] Approach

**Variation 4:** The [1]² Approach

**Method 2:** Syntheses of Pentaphyrins

17.8.4

**Reactions around the Porphyrin Periphery**

17.8.4.1

**Method 1:** Electrophilic Substitution Reactions

**Variation 1:** Halogenation

**Variation 2:** Nitration

**Variation 3:** Formylation and Acylation

**Variation 4:** Peripheral Metalation

**Variation 5:** Reactions with Carbenes and Nitrenes

**Method 2:** Reactions with Nucleophiles

**Method 3:** Oxidation Reactions

**Method 4:** Cycloaddition Reactions

**Variation 1:** Intermolecular Reactions

**Variation 2:** Intramolecular Reactions

17.9

**Product Class 9: Phthalocyanines and Related Compounds**

N. B. McKeown

17.9.1

**Product Class 9: Phthalocyanines and Related Compounds**

**Product Subclass 1: Metal-Free Phthalocyanine**

**Method 1:** From Phthalonitrile

**Variation 1:** From Generation and Demetalation of a Labile Metal Complex

**Method 2:** From Isoindolinediimine

**Product Subclass 2: Metal–Phthalocyanine Complexes**

**Method 1:** From Phthalonitrile

**Method 2:** From Phthalic Anhydride

**Method 3:** From Phthalimide

**Method 4:** From Isoindolinediimine

**Method 5:** From 2-Cyanobenzamide

**Method 6:** From Phthalocyanine

**Method 7:** Metal Exchange of Dilithium or Disodium Complex
17.9.3 Product Subclass 3: 1,8(11),15(18),22(25)-Tetrasubstituted Phthalocyanines and 1:25,11:15-Bridged Phthalocyanines

17.9.3.1 Method 1: From Phthalonitriles

17.9.3.1.1 Variation 1: Regioselective Preparation of 1,8,15,22-Tetrasubstituted Phthalocyanines from Phthalonitriles

17.9.3.1.2 Variation 2: Side-Strapped 1:25,11:15-Tetrasubstituted Phthalocyanines from bis(phthalonitriles)

17.9.3.2 Method 2: From Phthalic Acids

17.9.3.3 Method 3: From Phthalic Anhydrides

17.9.3.4 Method 4: From Phthalimides

17.9.3.5 Method 5: From Isoindolinediimines

17.9.3.6 Method 6: From the Modification of Preformed Phthalocyanines

17.9.4 Product Subclass 4: 2,9(10),16(17),23(24)-Tetrasubstituted Phthalocyanines and 1:24,10:16-Bridged Phthalocyanines

17.9.4.1 Method 1: From 4-Substituted Phthalonitriles

17.9.4.1.1 Variation 1: Side-Strapped 2:24,10:16-Bridged Phthalocyanines from 4,4′-Substituted Bis(phthalonitriles)

17.9.4.2 Method 2: From 4-Substituted Phthalic Acids

17.9.4.3 Method 3: From 4-Substituted Phthalic Anhydrides

17.9.4.4 Method 4: From 4-Substituted Phthalimides

17.9.4.5 Method 5: From 5-Substituted Isoindolinediimines

17.9.4.6 Method 6: From 4-Substituted 1,2-Dibromobenzenes

17.9.4.7 Method 7: From 1-Imino-3-methylthioisoindolene

17.9.4.8 Method 8: From 3(4)-Substituted 2-Cyanobenzamides

17.9.4.9 Method 9: From the Modification of Preformed Phthalocyanines

17.9.5 Product Subclass 5: 1,2,8,9(10,11),15,16(17,18),22,23(24,25)-Octasubstituted Phthalocyanines

17.9.5.1 Method 1: From 3,4-Disubstituted Phthalonitriles

17.9.5.2 Method 2: From 3,4-Disubstituted Phthalic Anhydrides

17.9.6 Product Subclass 6: 1,3,8,10(9,11),15,17(16,18),22,24(23,25)-Octasubstituted Phthalocyanines

17.9.6.1 Method 1: From 3,5-Disubstituted Phthalonitriles

17.9.6.2 Method 2: From 3,5-Disubstituted Phthalic Acids

17.9.6.3 Method 3: From 3,5-Disubstituted Phthalic Anhydrides

17.9.6.4 Method 4: From 3,5-Disubstituted 1,2-Dibromobenzenes

17.9.6.5 Method 5: By Reaction of Substituents

17.9.7 Product Subclass 7: 1,4,8,11,15,18,22,25-Octasubstituted Phthalocyanines

17.9.7.1 Method 1: From 3,6-Disubstituted Phthalonitriles

17.9.7.2 Method 2: From Phthalic Anhydrides

17.9.7.3 Method 3: From Isoindolinediimines

17.9.7.4 Method 4: By Reaction of Substituents

17.9.8 Product Subclass 8: 2,3,9,10,16,17,23,24-Octasubstituted Phthalocyanines

17.9.8.1 Method 1: From 4,5-Disubstituted Phthalonitriles

17.9.8.2 Method 2: From 4,5-Disubstituted Phthalic Anhydrides
17.9.8.3 Method 3: From 5,6-Disubstituted Isoindolinediimines .......................... 1285
17.9.8.4 Method 4: From 4,5-Disubstituted 1,2-Dibromobenzenes .......................... 1286
17.9.8.5 Method 5: By Reaction of Substituents .................................................. 1287

17.9.9 Product Subclass 9: 2:3,9:10,16:17,23:24-Bridged Phthalocyanines ......... 1287

17.9.9.1 Method 1: From 4:5-Bridged Phthalonitriles ......................................... 1288
17.9.9.2 Method 2: From 5:6-Bridged Isoindolinediimines ................................. 1290
17.9.9.3 Method 3: From 4:5-Bridged 1,2-Dibromobenzenes ............................... 1291
17.9.9.4 Method 4: By Reaction of Substituents .................................................. 1293

17.9.10 Product Subclass 10: Dodecasubstituted Phthalocyanines .................... 1295
17.9.10.1 Method 1: From 3,4,5-Trisubstituted Phthalonitriles ............................. 1295
17.9.10.2 Method 2: From 3,4,6-Trisubstituted Phthalonitriles ............................. 1296

17.9.11 Product Subclass 11: 1,2,3,4,8,9,10,11,15,16,17,18,22,23,24,25-Hexadeca-
substituted Phthalocyanines, 1:2,3:4,8,9,10:11,15:16,17:18,22,23,24:25-
Bridged Phthalocyanines, and 1:2:3,4,8,9:10,11,15:16,17,18,22,23:24,25-
Bridged Phthalocyanines ................................................................. 1296

17.9.11.1 Method 1: From 3,4,5,6-Tetrasubstituted Phthalonitriles ....................... 1297
17.9.11.1.1 Variation 1: Hexadecasubstituted Phthalocyanines Possessing Two Types
of Substituents .................................................................................. 1298
17.9.11.1.2 Variation 2: 1,4,8,11,15,18,22,25-Octasubstituted 2:3,9:10,16:17,23:24-
Bridged Phthalocyanines from Phthalonitriles ...................................... 1299
17.9.11.1.3 Variation 3: 1:2,3:4,8,9,10:11,15:16,17:18,22:23,24:25-Bridged
Phthalocyanines from Phthalonitriles .................................................. 1299
17.9.11.2 Method 2: From 3,4,5,6-Tetrasubstituted Phthalic Anhydrides ............. 1300
17.9.11.2.1 Variation 1: 1:2,3:4,8,9,10:11,15:16,17:18,22:23,24:25-Bridged
Phthalocyanines from Mellitic Anhydride .............................................. 1301
17.9.11.3 Method 3: 1,4,8,11,15,18,22,25-Octasubstituted-2:3,9:10,16:17,23:24-
bridged Phthalocyanines from 1,2-Dibromobenzenes .......................... 1301
17.9.11.4 Method 4: By Reaction of Substituents .................................................. 1302
17.9.11.4.1 Variation 1: 1,4,8,11,15,18,22,25-Octasubstituted-2:3,9:10,16:17,23:24-
bridged Phthalocyanines by Reaction of Substituents .......................... 1302
17.9.11.4.2 Variation 2: 1:2,3:4,8,9,10:11,15:16,17:18,22:23,24:25-Bridged
Phthalocyanines by Reaction of Substituents ........................................ 1303

17.9.12 Product Subclass 12: Tetraazaporphyrins ............................................. 1304
17.9.12.1 Method 1: From 1,2-Disubstituted Maleonitriles .................................... 1304
17.9.12.1.1 Variation 1: 2:3,7,8,12:13,17,18-Bridged Tetraazaporphyrins from Cyclic
Maleonitriles .................................................................................... 1306
17.9.12.2 Method 2: From the Modification of Preformed Tetraazaporphyrins ...... 1307

17.9.13 Product Subclass 13: 1,2-Naphthalocyanines ....................................... 1308
17.9.13.1 Method 1: From 1,2-Dicyanonaphthalenes .......................................... 1309

17.9.14 Product Subclass 14: 2,3-Naphthalocyanines ....................................... 1310
17.9.14.1 Method 1: From 2,3-Dicyanonaphthalenes .......................................... 1310
17.9.14.2 Method 2: From Benzoisoindolinediimines ......................................... 1312
17.9.14.3 Method 3: By Reaction of Substituents .................................................. 1312
Product Subclass 15: 9,10-Phenanthrenocyanines .................................................................. 1313
Method 1: From 9,10-Dicyanophenanthrenes ................................................................ 1313

Product Subclass 16: 2,3-Triphenylenocyanines ......................................................... 1314
Method 1: From 2,3-Dicyanotriphenylene .................................................................. 1314

Product Subclass 17: Fluoranthenocyanine ............................................................... 1315
Method 1: From 8,9-Dicyanofluoranthenes ................................................................ 1315

Product Subclass 18: 2,3-Anthracenocyanines ......................................................... 1316
Method 1: From 2,3-Dicyanoanthracenes .................................................................. 1316

Product Subclass 19: Tetra- and Octaazaphthalocyanines ..................................... 1318
Method 1: From 2,3-Dicyanopyridine ...................................................................... 1318
Method 2: From Pyridine-2,3-dicarboxylic Acid ...................................................... 1319
Method 3: From Pyridine-2,3-dicarboxylic Anhydride ............................................. 1320
Method 4: From 2(3)-Cyanopyridine-3(2)-carboxamide ......................................... 1320
Method 5: From 2,3-Dicyanopyrazines .................................................................... 1321
Variation 1: Preparation of 2,3,11,12(13,14),20,21(22,23),29,30(31,32)-Tetrabenzo-1,6,10,15,19,24,29,33-Octaaza-2,3-naphthalocyanines from Benzo[f]quinoxaline-2,3-dicarbonitrile .................................................................................................................. 1322
Variation 2: Preparation of 1,8,12,19,23,30,34,41-Octaaza-2,3-anthracenocyanines from Benzo[g]quinoxaline-2,3-dicarbonitrile ................................................................. 1323
Variation 3: Preparation of 1,10,14,23,27,36,40,49-Octaaza-2,3-triphenylenocyanine from 2,3-Dicyano-1,4-diazatriphenylenes ...................................................................................... 1324
Method 6: From 4,7-Diazaisoindolinediimine ............................................................. 1326
Method 7: By Reaction of Substituents ...................................................................... 1326

Product Subclass 20: Subphthalocyanines ............................................................... 1327
Method 1: From Phthalonitriles .................................................................................. 1328
Variation 1: Trisubstituted Subphthalocyanines from Phthalonitriles ...................... 1328
Variation 2: Hexasubstituted Subphthalocyanines from Phthalonitriles ................. 1330
Method 2: By Reaction of Substituents ...................................................................... 1331

Product Subclass 21: Superphthalocyanines ............................................................. 1332
Method 1: From Phthalonitriles .................................................................................. 1332

Product Subclass 22: Nonuniformly Substituted Phthalocyanines ..................... 1333
Method 1: By Mixed Cyclotetramerizations ............................................................. 1333
Variation 1: The Synthesis of AAAB Nonuniformly Substituted Phthalocyanines ................................................................................................................................. 1337
Variation 2: Side-Strapped AABB-Type Phthalocyanines from Mixed Cyclotetramerizations .................................................................................................................. 1339
Variation 3: AABBA-Type Phthalocyanines from a Dimeric Intermediate of Phthalonitrile Cyclotetramerization ................................................................. 1340
Variation 4: AAAB-Type Phthalocyanines Using a Polymer Support ...................... 1341
Method 2: AAAB-Type Phthalocyanines from the Ring Expansion of Subphthalocyanines .................................................................................................................. 1342
17.9.22.3 Method 3: ABAB Type Phthalocyanines from Cross-Cyclotetramerization Reactions ................................................ 1344
17.9.22.4 Method 4: Reactions of Preformed Phthalocyanines .............. 1345

17.9.23 Product Subclass 23: Multinuclear Phthalocyanines ............... 1347
17.9.23.1 Method 1: Dimers from Cyclotetramerization Reactions Containing a Phthalonitrile and a Bis(phthalonitrile) .......................... 1347
17.9.23.1.1 Variation 1: Tetrameric Phthalocyanine from a Mixed Cyclotetramerization Reaction of a Tetrakis(isoindolinediimine) ...... 1349
17.9.23.1.2 Variation 2: Conjugated Fused Phthalocyanine Dimers ........ 1350
17.9.23.2 Method 2: By Reaction of Preformed Phthalocyanines .......... 1352

Volume 18: Four Carbon—Heteroatom Bonds: 
\( X\equiv C\equiv X, \ X\equiv C\equiv X, \ X_2C\equiv X, \ CX_4 \)

Preface ................................................................. V

Volume Editor’s Preface ........................................ VII

Table of Contents ................................................ XI

Introduction
J. G. Knight .......................................................... 1

18.1 Product Class 1: Cyanogen Halides, Cyanates and Their Sulfur, Selenium, and Tellurium Analogues, Sulfinyl and Sulfonyl Cyanides, Cyanamides, and Phosphaalkynes
Y.-Q. Wu .............................................................. 17

18.2 Product Class 2: Carbon Dioxide, Carbonyl Sulfide, Carbon Disulfide, Isocyanates, Isothiocyanates, Carbodiimides, and Their Selenium, Tellurium, and Phosphorus Analogues
S. Braverman, M. Cherkinsky, and M. L. Birsa ............................. 65

18.3 Product Class 3: Carbonic Acid Halides
J.-P. G. Senet .......................................................... 321

18.4 Product Class 4: Acyclic and Cyclic Carbonic Acids and Esters, and Their Sulfur, Selenium, and Tellurium Analogues
K. W. Jung and A. S. Nagle ........................................ 379

18.5 Product Class 5: Polymeric Carbonic Acids and Esters, and Their Sulfur Analogues
S. C. Moratti and Y. C. Charalambides .................................. 451

18.6 Product Class 6: Acyclic and Cyclic Carbamic Acids and Esters, and Their Sulfur, Selenium, Tellurium, and Phosphorus Analogues
L. Rossi ................................................................. 461

18.7 Product Class 7: Polymeric Carbamic Acids and Esters, and Their Sulfur Analogues
S. C. Moratti and Y. C. Charalambides .................................. 649

18.8 Product Class 8: Acyclic and Cyclic Ureas
G. Sartori and R. Maggi .............................................. 665

18.9 Product Class 9: Polymeric Ureas and Their Phosphorus Analogues
G. Guichard .......................................................... 759

  18.1.4.1.4.2 Variation 2: From N,N-Disubstituted Formamides by a Curtius-like Rearrangement ................................................................. 42
  18.1.4.1.4.3 Variation 3: By Palladium-Catalyzed Coupling of Isocyanides, Allyl Carbonate, and Trimethylsilyl Azide through a Curtius-like Rearrangement ................. 42
  18.1.4.1.5 Method 5: By Decomposition of Heterocyclic Compounds .................... 43
  18.1.4.1.6 Method 6: Palladium-Catalyzed Formation of N,N-Diallyl Cyanamides ...... 45
  18.1.4.1.7 Method 7: Lewis Acid Catalyzed Reactions of Carbonyl Groups with N,N′-Bis(trimethylsilyl)carbodiimide ......................................................... 46

18.1.4 Applications of Product Subclass 4 in Organic Synthesis ..................................... 46
  18.1.4.2 Method 1: Formation of Heterocyclic Compounds .................................. 46
  18.1.4.2.1 Method 2: Nucleophilic and Electrophilic Additions of Cyanamides .......... 47
  18.1.4.2.3 Method 3: The Cyanamide Group as a Protected Amine Group ............. 49

18.1.5 Product Subclass 5: Cyanophosphines and Cyanophosphonates and Their Derivatives ................................................................. 50
  18.1.5.1 Synthesis of Product Subclass 5 ............................................................ 50
  18.1.5.1.1 Method 1: By Cyanation ................................................................. 50
  18.1.5.1.1.1 Variation 1: Of Phosphines and Phosphites with Cyanogen Halides ...... 50
  18.1.5.1.1.2 Variation 2: Of Halophosphorus Precursors with Cyanides ............... 51
  18.1.5.1.1.3 Variation 3: Of Halophosphorus Precursors with Trimethylsilyl Cyanide 52
  18.1.5.1.1.4 Variation 4: Of Pyrophosphites with Alkyl Thiocyanates .................. 52
  18.1.5.2 Applications of Product Subclass 5 in Organic Synthesis .......................... 53
  18.1.5.2.1 Method 1: Diethyl Cyanophosphonate as a Coupling Reagent in Acylation Reactions ................................................................. 53
  18.1.5.2.1.1 Variation 1: Formation of Amides, Esters, and Thioesters ................ 53
18.1.6 Product Subclass 6: Heterosubstituted Phosphaalkynes

18.1.6.1 Synthesis of Product Subclass 6

18.1.6.1.1 Method 1: By Elimination

18.1.6.1.1.1 Variation 1: α-Halide Elimination from a Phosphaalkene

18.1.6.1.1.2 Variation 2: α,β-Elimination from Alkylphosphines

18.1.6.2 Applications of Product Subclass 6 in Organic Synthesis

18.1.6.2.1 Method 1: Formation of Phosphorus-Containing Heterocycles by Cycloaddition

18.2 Product Class 2: Carbon Dioxide, Carbonyl Sulfide, Carbon Disulfide, Isocyanates, Isothiocyanates, Carbodiimides, and Their Selenium, Tellurium, and Phosphorus Analogues

S. Braverman, M. Cherkinsky, and M. L. Birsa

18.2.1 Product Subclass 1: Carbon Dioxide

18.2.1.1 Applications of Product Subclass 1 in Organic Synthesis

18.2.1.1.1 Method 1: Supercritical Carbon Dioxide as a Reaction Medium for Chemical Syntheses

18.2.1.1.2 Method 2: Reduction of Carbon Dioxide

18.2.1.1.3 Method 3: Reactions with Oxygen Nucleophiles

18.2.1.1.3.1 Variation 1: Synthesis of Organic Carbonates

18.2.1.1.3.2 Variation 2: Synthesis of Polycarbonates

18.2.1.1.4 Method 4: Reactions with Nitrogen Nucleophiles

18.2.1.1.4.1 Variation 1: Synthesis of Carbamic Acid Derivatives

18.2.1.1.4.2 Variation 2: Synthesis of Urea Derivatives

18.2.1.1.4.3 Variation 3: Synthesis of Isocyanates

18.2.1.1.4.4 Variation 4: Synthesis of Heterocycles

18.2.1.1.5 Method 5: Reactions with Carbon Nucleophiles

18.2.1.1.5.1 Variation 1: Carboxylation of Organometallic Derivatives

18.2.1.1.5.2 Variation 2: Carboxylation of Other Carbanions

18.2.1.1.6 Method 6: Carbon Dioxide as Protecting and Activating Group

18.2.1.1.7 Method 7: Reaction of Carbon Dioxide with Butadiene

18.2.1.1.8 Method 8: Carbon Dioxide in Aza-Wittig-Type Reactions

18.2.1.1.9 Methods 9: Additional Applications

18.2.2 Product Subclass 2: Carbonyl Sulfide

18.2.2.1 Synthesis of Product Subclass 2

18.2.2.1.1 Method 1: Via Thiocyanates
18.2.2 Method 2: Via Phosphorus Pentasulfide ............................ 76
18.2.2.2 Method 3: Via Carbonyl Selenide ..................................... 76
18.2.2.3 Method 4: Additional Applications ............................... 79
18.2.2.4 Applications of Product Subclass 2 in Organic Synthesis ....... 77
18.2.2.5 Method 1: Synthesis of Thiocarbonates .......................... 77
18.2.2.6 Method 2: Synthesis of Thiocarbamates .......................... 77
18.2.2.7 Method 3: Synthesis of Thiocarboxylic Acids and Derivatives 78
18.2.2.8 Method 4: Additional Applications ............................... 79
18.2.3 Product Subclass 3: Carbonyl Selenide .............................. 79
18.2.3.1 Synthesis of Product Subclass 3 ..................................... 80
18.2.3.2 Method 1: Acidification of Tetrahydrofuran Solutions of 80
18.2.3.3 Method 2: Synthesis of Thiocarbonates .......................... 80
18.2.3.4 Method 3: Synthesis of Thiocarbamates .......................... 80
18.2.3.5 Method 4: Synthesis of Thiocarboxylic Acids and Derivatives 80
18.2.3.6 Method 5: Synthesis of Carbonyl Selenide as a Reducing Agent 81
18.2.4 Product Subclass 4: Isocyanates ...................................... 83
18.2.4.1 Synthesis of Product Subclass 4 ..................................... 84
18.2.4.2 Method 1: Carbonylation of Primary Amines with Phosgene 84
18.2.4.3 Method 2: Carbonylation of Amines with Carbon Dioxide 88
18.2.4.4 Variation 1: Isocyanates from Primary Amines and Carbon Dioxide; 89
18.2.4.5 Variation 2: Isocyanates from Primary Amines and Carbon Dioxide Using 89
18.2.4.6 Method 3: Carbonylation of Primary Amines with Other 90
18.2.4.7 Method 4: Carbonylation of Amine Derivatives ............... 91
18.2.4.8 Method 5: Reductive Carbonylation of Nitro Aromatic Compounds 91
18.2.4.9 Method 6: From Organic Halides and Sulfates ............... 91
| Variation 2: | By Reaction with Metal Nitrocyranamides | 109 |
| Variation 1: | Thermal Decomposition of Carbamates | 110 |
| Variation 2: | Silane-Induced Cleavage of Carbamates | 111 |
| Variation 3: | Cleavage of Carbamates with Boron Derivatives | 113 |
| Variations 4: | Additional Variations | 114 |
| Method 8: | From Thiocarbamates | 115 |
| Variation 1: | From S-Alkyl Thiocarbamates | 115 |
| Variation 2: | From O-Alkyl Thiocarbamates | 117 |
| Method 9: | Thermolysis of Ureas | 117 |
| Method 10: | By Cleavage of Nitrogen Heterocycles | 118 |
| Variation 1: | From Three-Membered Nitrogen Heterocycles | 118 |
| Variation 2: | From Four-Membered Nitrogen Heterocycles | 119 |
| Variation 3: | From Five-Membered Nitrogen Heterocycles | 120 |
| Method 11: | From N-Substituted Trihaloacetamides | 122 |
| Method 12: | By the Addition of Isocyanic Acid and Its Derivatives to Alkenes | 122 |
| Variation 1: | Addition of Isocyanic Acid | 122 |
| Variation 2: | Addition of Iodine Isoyanate | 123 |
| Method 13: | Curtius Rearrangement | 124 |
| Variation 1: | Using Sodium Azide | 125 |
| Variation 2: | Using Trimethylsilyl Azide | 130 |
| Variation 3: | Using Diphenyl Azidophosphate | 131 |
| Method 14: | Hofmann Rearrangement | 132 |
| Method 15: | Lossen Rearrangement | 133 |
| Method 16: | From Aminimides | 135 |
| Method 17: | Sigmatropic Rearrangements | 135 |
| Method 18: | By Oxidation | 138 |
| Method 19: | Via Isomerization of Nitrile Oxides | 140 |
| Method 20: | Preparation of Functionalized Isocyanates from Other Isocyanates | 141 |
| Variation 1: | By Substitution Reactions | 141 |
| Variation 2: | By Addition to a Double Bond | 144 |
| Variation 3: | Trimethylsilyl Isocyanate in the Synthesis of Isocyanates | 144 |
| Variation 4: | Chlorocarbonyl Isocyanate | 146 |
| Variation 5: | Sulfonyl Isocyanates | 147 |
| Applications of Product Subclass 4 in Organic Synthesis | 148 |
| Method 1: | Nucleophilic Additions | 149 |
| Variation 1: | Reactions with Heteroatom Nucleophiles | 149 |
| Variation 2: | Reactions with Carbon Nucleophiles | 150 |
| Method 2: | Cycloaddition Reactions | 154 |
| Variation 1: | [2 + 2]-Cycloaddition Reactions | 154 |
| Variation 2: | [2 + 4]-Cycloaddition Reactions | 156 |
| Variation 3: | [2 + 3]-Cycloaddition Reactions | 158 |
| Variation 4: | Cyclodimerization and Cyclotrimerization of Isocyanates | 160 |
| Method 3: | Reactions of Isocyanates with Iminophosphoranes | 161 |
## 18.2.4.2.4 Method 4: Friedel–Crafts Reactions of Isocyanates  

### 18.2.5 Product Subclass 5: 1-Oxa-3-phosphapropadienes and 1-Phospha-3-thiapropadienes  

#### 18.2.5.1 Synthesis of Product Subclass 5  

##### 18.2.5.1.1 Method 1: Phosgenation and Thiophosgenation of Disilylated Phosphines  

#### 18.2.5.2 Applications of Product Subclass 5 in Organic Synthesis  

##### 18.2.5.2.1 Method 1: Synthesis of 1-Phosphapropadiene by a Wittig-Type Reaction  

##### 18.2.5.2.2 Method 2: Synthesis of Polyphosphadienes  

##### 18.2.5.2.3 Method 3: Photochemical and Metal-Catalyzed Decarbonylation of 1-Oxa-3-phosphapropadiene  

## 18.2.6 Product Subclass 6: Carbon Disulfide  

#### 18.2.6.1 Applications of Product Subclass 6 in Organic Synthesis  

##### 18.2.6.1.1 Method 1: Reactions with Oxygen Nucleophiles  

###### 18.2.6.1.1.1 Variation 1: Synthesis of Orthocarbonic Acid Derivatives  

###### 18.2.6.1.1.2 Variation 2: Synthesis of Dithiocarbonates  

###### 18.2.6.1.1.3 Variations 3: Additional Variations  

##### 18.2.6.1.2 Method 2: Reactions with Sulfur Nucleophiles  

###### 18.2.6.1.2.1 Variation 1: Synthesis of Trithiocarbonates  

###### 18.2.6.1.2.2 Variation 2: Synthesis of Tetrathiomalonic Acid Derivatives  

##### 18.2.6.1.3 Method 3: Reactions with Nitrogen Nucleophiles  

###### 18.2.6.1.3.1 Variation 1: Synthesis of Dithiocarbamates  

###### 18.2.6.1.3.2 Variation 2: Synthesis of Thioureas  

###### 18.2.6.1.3.3 Variation 3: Synthesis of Isothiocyanates  

###### 18.2.6.1.3.4 Variation 4: Synthesis of Heterocycles via Amine Derivatives Bearing an Additional Nucleophilic Group  

##### 18.2.6.1.4 Method 4: Reactions with Carbon Nucleophiles  

###### 18.2.6.1.4.1 Variation 1: Synthesis of Thiocarboxylic Acid Derivatives  

###### 18.2.6.1.4.2 Variation 2: Synthesis of Dithiocarboxylic Acid Derivatives  

###### 18.2.6.1.4.3 Variation 3: Synthesis of Ketene Dithioacetals  

###### 18.2.6.1.4.4 Variation 4: Synthesis of Thiocarbamates  

##### 18.2.6.1.4.5 Variation 5: Synthesis of Thioamides  

##### 18.2.6.1.6 Method 5: Reactions with Organosilicon Compounds  

##### 18.2.6.1.7 Method 6: Carbon Disulfide in Cycloaddition Reactions  

##### 18.2.6.1.8 Method 7: Carbon Disulfide in Aza-Wittig-Type Reactions  

##### 18.2.6.1.9 Method 8: Carbon Disulfide as a Protecting Group  

##### 18.2.6.1.10 Methods 10: Additional Applications  

## 18.2.7 Product Subclass 7: Carbon Sulfide Selenide  

## 18.2.8 Product Subclass 8: Isothiocyanates  

#### 18.2.8.1 Synthesis of Product Subclass 8  

---

Science of Synthesis Original Edition Volume 18  
© Georg Thieme Verlag KG
18.2.8.1 Method 1: By Thiocarbonylation of Primary Amines with Thiophosgene 189

18.2.8.1.1 Variation 1: In Biphasic Systems ........................................ 189
18.2.8.1.2 Variation 2: In Organic Solvents ........................................ 190

18.2.8.1.2 Method 2: By Thiocarbonylation of Primary Amines with Carbon Disulfide via Cleavage of Dithiocarbamate Salts or Esters .......................... 191

18.2.8.1.2.1 Variation 1: Cleavage with Heavy Metal Salts .................. 191
18.2.8.1.2.2 Variation 2: Cleavage under Oxidative Conditions ........ 192
18.2.8.1.2.3 Variation 3: Cleavage by Phosphorus Derivatives .......... 193
18.2.8.1.2.4 Variation 4: Cleavage by Alkyl Chloroformates ............. 195
18.2.8.1.2.5 Variation 5: Cleavage with Carbodiimides ................. 196
18.2.8.1.2.6 Variation 6: Cleavage of Alkyl Esters of Dithiocarbamates .... 198

18.2.8.1.2.7 Variations 7: Additional Variations .............................. 199

18.2.8.1.3 Method 3: Thiocarbonylation of Primary Amines with Other Thiocarbonyl Transfer Agents ........................................... 200

18.2.8.1.4 Method 4: Thiocarbonylation of Amine Derivatives ............ 201

18.2.8.1.4.1 Variation 1: Thiocarbonylation of Amide Anions ........ 202

18.2.8.1.4.2 Variation 2: Thiocarbonylation of Iminophosphoranes .... 203

18.2.8.1.5 Method 5: By Nucleophilic Substitution of Organic Halides with Thiocyanate Anion .................................................. 204

18.2.8.1.5.1 Variation 1: Alkyl and Aryl Isothiocyanates ................. 205

18.2.8.1.5.2 Variation 2: Acyl, Thioacetyl, and Imidoyl Thiocyanates ... 208

18.2.8.1.5.3 Variation 3: Sugar Isothiocyanates .......................... 210

18.2.8.1.5.4 Variation 4: Alkyl and Allenyl Isothiocyanates ............. 211

18.2.8.1.5.5 Variation 5: Solid-Phase Synthesis ............................... 213

18.2.8.1.5.6 Variation 6: Silyl Isothiocyanates .............................. 214

18.2.8.1.6 Method 6: By the Addition of Thiocyanic Acid and Its Derivatives to Alkenes and Alkynes ............................................. 215

18.2.8.1.6.1 Variation 1: Addition of Thiocyanic Acid and Its Derivatives to Alkenes .................................................. 215

18.2.8.1.6.2 Variation 2: Addition of Iodine Thiocyanate and Selenyl Thiocyanates to Alkenes .......................................................... 217

18.2.8.1.6.3 Variation 3: Addition of Thiocyanic Acid and Its Derivatives to Alkynes .............................................................. 218

18.2.8.1.7 Method 7: By Cleavage of Nitrogen and Sulfur Containing Heterocycles ................................................................. 219

18.2.8.1.8 Method 8: By Cleavage of Nitrogen-Containing Heterocycles ................................................................. 222

18.2.8.1.9 Method 9: By Direct Sulfurization of Isocyanides ................ 224

18.2.8.1.10 Method 10: Isothiocyanates from Aldehydes and Ketones .... 225

18.2.8.1.11 Method 11: Preparation of Functionalized Isothiocyanates from Other Isothiocyanates ................................................ 226

18.2.8.1.11.1 Variation 1: Isothiocyanates by Substitution Reactions of Isothiocyanates .................................................. 226

18.2.8.1.11.2 Variation 2: Alkenyl Isothiocyanates by Elimination Reactions of Isothiocyanates ................................................ 228

18.2.8.1.11.3 Variation 3: Addition Reactions of Alkenyl Isothiocyanates ................................................................. 229

18.2.8.1.12 Methods 12: Additional Methods ..................................... 230

18.2.8.2 Methods 12: Additional Methods ..................................... 230
18.2.8.2.2 Method 2: Cycloaddition Reactions ........................................ 235
18.2.8.2.2.1 Variation 1: [2 + 2]-Cycloaddition Reactions .......... 235
18.2.8.2.2.2 Variation 2: [2 + 4]-Cycloaddition Reactions .......... 236
18.2.8.2.2.3 Variation 3: [2 + 3]-Cycloaddition Reactions .......... 238
18.2.8.2.3 Method 3: Synthesis of Carbodiimides by Reaction with
Iminophosphoranes ........................................................... 239
18.2.8.2.4 Method 4: Synthesis of Thioamides by Friedel–Crafts Reaction .. 240
18.2.8.2.5 Method 5: Reduction of Isothiocyanates .......................... 242
18.2.9 Product Subclass 9: Carbon Diselenide .................................. 243
18.2.9.1 Synthesis of Product Subclass 9 ......................................... 243
18.2.9.1.1 Method 1: Reaction of Selenium with Dichloromethane .......... 243
18.2.9.2 Applications of Product Subclass 9 in Organic Synthesis ................. 244
18.2.9.2.1 Method 1: Synthesis of Diselenocarbonates ....................... 244
18.2.9.2.2 Method 2: Synthesis of Triselenocarbonates ..................... 244
18.2.9.2.3 Method 3: Synthesis of Diselenocarbamates ................... 245
18.2.9.2.4 Method 4: Synthesis of Isoiselenocyanates ..................... 245
18.2.9.2.5 Method 5: Synthesis of Selenoureas ................................ 246
18.2.9.2.6 Method 6: Synthesis of Ketene Diselenocetals .................... 246
18.2.9.2.7 Method 7: Cycloaddition Reactions Involving Carbon Diselenide .. 246
18.2.9.2.8 Method 8: Polymerization of Carbon Diselenide ................... 247
18.2.9.2.9 Methods 9: Additional Applications ............................... 247
18.2.10 Product Subclass 10: Isoiselenocyanates .............................. 248
18.2.10.1 Synthesis of Product Subclass 10 ..................................... 249
18.2.10.1.1 Method 1: By Nucleophilic Substitution of Organic Halides with
Selenocyanate Anion ............................................................ 249
18.2.10.1.1.1 Variation 1: Alkyl Isoiselenocyanates ......................... 249
18.2.10.1.1.2 Variation 2: Acyl and Imidoyl Isoiselenocyanates .......... 250
18.2.10.1.1.3 Variation 3: Isoiselenocyanates by Isomerization of Selenocyanates.
.................................................................................. 251
18.2.10.1.1.4 Variation 4: Silyl Isoiselenocyanates ......................... 252
18.2.10.1.2 Method 2: By Addition Reactions of Isocyanides with Elemental Selenium 252
18.2.10.1.2.1 Variation 1: Reaction of Preformed Isocyanides with Elemental Selenium 252
18.2.10.1.2.2 Variation 2: Via “In Situ” Formation of Isocyanides ............ 253
18.2.10.1.3 Method 3: From Primary Amines and Carbon Diselenide via
Diselenocarbamates ............................................................ 254
18.2.10.1.4 Method 4: From Imidoyl Dihalides ................................ 255
18.2.10.1.5 Methods 5: Additional Methods ................................... 256
18.2.10.2 Applications of Product Subclass 10 in Organic Synthesis ........... 257
18.2.10.2.1 Method 1: Reactions with Nucleophiles ......................... 257
18.2.10.2.1.1 Variation 1: Reactions with Heteroatom Nucleophiles .... 257
18.2.10.2.1.2 Variation 2: Reactions with Carbon Nucleophiles ......... 258
18.2.10.2.2 Method 2: Cycloaddition Reactions of Isoiselenocyanates ........ 259
18.2.11 Product Subclass 11: Isotellurocyanates .............................. 261
18.2.12 Product Subclass 12: Carbodiimides ..................................... 261

18.3 Product Class 3: Carbonic Acid Halides

J.-P. G. Senet

18.3 Product Class 3: Carbonic Acid Halides ........................................................................... 321
18.3.1 Product Subclass 1: Carbonic Dihalides ................................................................. 330
18.3.1.1 Synthesis of Product Subclass 1 ............................................................................. 331
18.3.1.1.1 Method 1: By Halogen Exchange .................................................................... 331
18.3.1.1.2 Method 2: Through Decomposition of Perhalogenated Carbonates ............ 332
18.3.2 Product Subclass 2: Haloformate Esters .................................................................... 334
18.3.2.1 Synthesis of Product Subclass 2 ............................................................................ 334
18.3.2.1.1 Method 1: By Halogen Exchange .................................................................... 334
18.3.2.1.1.1 Variation 1: Chlorine–Fluorine Exchange ...................................................... 334
18.3.2.1.1.2 Variation 2: Chlorine–Bromine Exchange ...................................................... 335
18.3.2.1.2 Method 2: From α-C-Metalated Aldehydes and Ketones ................................. 336
18.3.2.1.3 Method 3: From Hydroxylic Compounds ......................................................... 339
18.3.2.1.3.1 Variation 1: By the Reaction of Carboxyl Difluoride .................................... 339
18.3.2.1.3.2 Variation 2: By the Reaction of Phosgene (Carbonic Dichloride) ............... 340
18.3.2.1.3.3 Variation 3: By the Reaction of Bis(trichloromethyl) Carbonate .................. 341
18.3.2.1.4 Method 4: From 1-Haloalkyl Carbonates by Elimination Reactions ............... 343
18.3.2.1.5 Method 5: From Oxiranes by Phosgene Addition .............................................. 344
18.3.2.1.6 Method 6: From Carbonyl Compounds by Addition Reactions ....................... 345
18.3.2.1.6.1 Variation 1: Reaction of Phosgene with Aldehydes ...................................... 346
18.3.2.1.6.2 Variation 2: Reaction of Bis(trichloromethyl) Carbonate with Aldehydes ........ 348
18.3.2.1.6.3 Variation 3: Zinc-Mediated Reaction of Phosgene with Carbonyl Compounds ............................................................................................................................. 349
18.3.2.1.7 Method 7: Synthesis with Retention of the Haloformic Acid Groups ............... 351
18.3.2.1.7.1 Variation 1: By Radical Chlorination of Alkyl Chloroformate Esters .......... 351
18.3.2.1.7.2 Variation 2: By Zinc-Induced Boord Elimination of Chlorine ......................... 353
18.3.2.1.7.3 Variation 3: Rearrangement of 1-Chloroprop-2-enyl Chloroformates .......... 354
18.3.2.1.8 Method 8: From O,S-Disubstituted Thiocarbonates by Chlorination with Sulfuryl Chloride ............................................................................................................. 354
18.3.3 Product Subclass 3: Chlorothioformate S-Esters ........................................... 355
18.3.3.1 Synthesis of Product Subclass 3 ......................................................... 356
18.3.3.1.1 Method 1: By Catalytic Decomposition of Alkoxydichloromethylsulfanyl Chlorides ......................................................... 356
18.3.3.1.2 Method 2: From Sulfanyl Compounds ............................................. 356
18.3.4 Product Subclass 4: Haloselenoformic Se-Acids .......................................... 357
18.3.5 Product Subclass 5: Carbamoyl Halides ................................................. 358
18.3.5.1 Synthesis of Product Subclass 5 ......................................................... 358
18.3.5.1.1 Method 1: By Halogen Exchange .................................................... 358
18.3.5.1.2 Method 2: From N,N-Bis(C-substituted) Nitrogen Compounds ........ 359
18.3.5.1.2.1 Variation 1: By the Reaction of Phosgene with Secondary Amines ..... 359
18.3.5.1.2.2 Variation 2: By the Reaction of Bis(trichloromethyl) Carbonate with Secondary Amines .......................................................... 360
18.3.5.1.2.3 Variation 3: By the Reaction of Phosgene with Imines ............... 361
18.3.5.1.2.4 Variation 4: By the Reaction of Phosgene with Formamidines ........ 362
18.3.5.1.2.5 Variation 5: By the Reaction of Phosgene with N-Carbonyl Compounds ... 363
18.3.5.1.2.6 Variation 6: By the Reaction of Bis(trichloromethyl) Carbonate with N-Carbonyl Compounds .......................................................... 364
18.3.5.1.3 Method 3: By the Reaction of Phosgene with Hydroxylamines .......... 365
18.3.5.1.4 Method 4: By N-Dealkylation of Tertiary Amines ......................... 366
18.3.5.1.5 Method 5: By Chlorination of N,N-Disubstituted Carbamic Acid Derivatives .......................................................... 368
18.3.5.1.5.1 Variation 1: From Carbamates Generated from Secondary Amines and Carbon Dioxide in the Presence of a Tertiary Amine Base .... 368
18.3.5.1.5.2 Variation 2: From N,N-Dialkylcarbamic Acid Silyl Esters Generated from N-Silyl Secondary Amines and Carbon Dioxide ........ 369
18.3.5.1.5.3 Variation 3: From N,N-Dialkylcarbamic Acid Alkyl Esters .......... 370
18.3.5.1.6 Method 6: From (Carbamoyl)palladium(II) Complexes Using Carbon Monoxide and Chlorine .......................................................... 370
18.3.5.1.7 Method 7: From 1-Haloalkyl Carbamates by Elimination Reactions .... 371
18.3.6 Product Subclass 6: P-Halocarbonyl Organophosphorus Compounds .......... 372
18.3.6.1 Synthesis of Product Subclass 6 ......................................................... 372
18.3.6.1.1 Method 1: From Primary and Secondary Phosphines with Phosgene .... 372
18.3.6.1.2 Method 2: From Trialkyl Phosphites with Phosgene [or Bis(trichloromethyl) Carbonate] by the Arbuzov Reaction ......................... 373

18.4 Product Class 4: Acyclic and Cyclic Carbonic Acids and Esters, and Their Sulfur, Selenium, and Tellurium Analogues
K. W. Jung and A. S. Nagle

18.4.1 Product Subclass 1: Carbonic Acid Monoesters ........................................ 380
18.4.1.1 Synthesis of Product Subclass 1 ........................................................ 380
18.4.2 Product Subclass 2: Organometallic Derivatives and Metal Salts of Carbonic Acid Monoesters ............................................ 380

18.4.2.1 Synthesis of Product Subclass 2 ........................................ 380
18.4.2.1.1 Method 1: Addition of Metal Alkoxides to Carbon Dioxide ........................................ 380
18.4.2.2 Applications of Product Subclass 2 in Organic Synthesis ........................................ 382
18.4.2.2.1 Method 1: Carboxylations Using Magnesium Methyl Carbonate ................. 382

18.4.3 Product Subclass 3: Acyclic Carbonate Diesters ........................................ 383

18.4.3.1 Synthesis of Product Subclass 3 ........................................ 383
18.4.3.1.1 Method 1: Addition of Alcohols to Formate Derivatives ................. 383
18.4.3.1.1.1 Variation 1: Addition of Aldehydes or Ketones ......................... 384
18.4.3.1.2 Variation 2: Synthesis Using Dialkyl Azodicarboxylates ......................... 387
18.4.3.1.2.1 Method 2: Transfer of the Carbonyl Group to Alcohols ......................... 387
18.4.3.1.2.1.1 Variation 1: Coupling Using 1,1'-Carbonyldiimidazole ......................... 388
18.4.3.1.2.2 Variation 2: Transcarbonylation Using Dimethyl or Diethyl Carbonate .......... 389
18.4.3.1.3 Method 3: Addition to Carbon Dioxide ........................................ 390
18.4.3.1.3.1 Variation 1: Synthesis Using Diethyl Azodicarboxylate ......................... 392
18.4.3.1.4 Method 4: Addition to Carbon Monoxide ........................................ 392
18.4.3.1.5 Method 5: Alkylative Self-Condensation ........................................ 393
18.4.3.1.6 Method 6: Coupling Using Urea as a Carbonyl Source ......................... 393
18.4.3.1.7 Method 7: Enzyme-Catalyzed Transcarbonylation ........................................ 394

18.4.4 Product Subclass 4: Cyclic Carbonate Diesters ........................................ 395

18.4.4.1 Synthesis of Product Subclass 4 ........................................ 396
18.4.4.1.1 Method 1: Transfer of the Carbonyl Group to Diols ......................... 396
18.4.4.1.1.1 Variation 1: Coupling Using 1,1'-Carbonyldiimidazole ......................... 397
18.4.4.1.1.2 Variation 2: Transcarbonylation Using Dimethyl or Diethyl Carbonate .......... 398
18.4.4.1.2 Method 2: Addition to Carbon Dioxide ........................................ 399
18.4.4.1.2.1 Variation 1: Reaction with Halohydrins ........................................ 399
18.4.4.1.2.2 Variation 2: Iodolactonization ........................................ 400
18.4.4.1.2.3 Variation 3: Reaction with Propargylic Alcohols ......................... 400
18.4.4.1.2.4 Variation 4: Reaction with Oxiranes ........................................ 401
18.4.4.1.3 Method 3: Addition to Carbon Monoxide ........................................ 402
18.4.4.2 Applications of Product Subclass 4 in Organic Synthesis ........................................ 402
18.4.4.2.1 Method 1: Oxidation of Cyclic Carbonate Diesters to Unsaturated Analogues .......... 402

18.4.5 Product Subclass 5: Bis(trihaloalkyl) Carbonates ........................................ 403

18.4.5.1 Synthesis of Product Subclass 5 ........................................ 403

18.4.6 Product Subclass 6: Acyclic Carbonic Carboxylic Anhydrides ........................................ 404

18.4.6.1 Synthesis of Product Subclass 6 ........................................ 404
18.4.6.1.1 Method 1: Addition of Acids to Formate Derivatives ......................... 404
18.4.6.1.2 Method 2: Addition of Carbonates to Acid Chlorides ......................... 404

18.4.7 Product Subclass 7: Cyclic Carbonic Carboxylic Anhydrides ........................................ 405

18.4.7.1 Synthesis of Product Subclass 7 ........................................ 405
18.4.8  Product Subclass 8: Halodicarbonate Monoesters  ........................................... 406
18.4.8.1  Synthesis of Product Subclass 8 ................................................................. 406
18.4.9  Product Subclass 9: Dicarbonate Diesters ......................................................... 407
18.4.9.1  Synthesis of Product Subclass 9 ................................................................. 407
18.4.10  Product Subclass 10: Tricarbonate Diesters ..................................................... 407
18.4.10.1  Synthesis of Product Subclass 10 .............................................................. 407
18.4.11  Product Subclass 11: Dithiotricarbonate S,S-Diesters ....................................... 408
18.4.11.1  Synthesis of Product Subclass 11 .............................................................. 408
18.4.12  Product Subclass 12: Carbamic Carbonic Anhydride O,N-Diesters ..................... 408
18.4.12.1  Synthesis of Product Subclass 12 .............................................................. 408
18.4.13  Product Subclass 13: Monoperoxycarbonic Acid O-Monoesters, Monoperoxycarbonate Diesters, and Peroxydicarbonate Diesters ..................................... 408
18.4.13.1  Synthesis of Product Subclass 13 .............................................................. 409
18.4.14  Product Subclass 14: Carbonic Sulfonic Anhydride Esters .................................. 410
18.4.14.1  Synthesis of Product Subclass 14 .............................................................. 410
18.4.14.1.1  Method 1: Addition of Sulfonic Acids to Formate Derivatives ....................... 410
18.4.14.1.2  Method 2: Oxidation and Rearrangement of Thiocarbonates ................. 411
18.4.15  Product Subclass 15: O-Amino Carbonate Derivatives ....................................... 411
18.4.15.1  Synthesis of Product Subclass 15 .............................................................. 411
18.4.15.1.1  Method 1: Addition of Alcohols to Formate Derivatives ......................... 411
18.4.15.1.2  Method 2: Transfer of the Carbonyl Group to Hydroxylamines .............. 413
18.4.16  Product Subclass 16: Metal Salts of Thiocarbonic Acid O-Monoesters and S-Monoesters ................................................................. 413
18.4.16.1  Synthesis of Product Subclass 16 .............................................................. 413
18.4.16.2  Applications of Product Subclass 16 in Organic Synthesis ......................... 414
18.4.16.2.1  Method 1: Synthesis of Bis(alkoxycarbonyl) Disulfides and Trisulfides .... 414
18.4.17  Product Subclass 17: Acyclic Thiocarbonate O,S-Diesters .................................. 414
18.4.17.1  Synthesis of Product Subclass 17 .............................................................. 415
18.4.17.1.1  Method 1: Addition of Thiols or Alcohols to Formate Derivatives ............. 415
18.4.17.1.2  Variation 1: Addition of Metal Enolates .................................................. 416
18.4.17.1.3  Method 2: Oxidation of Dithiocarbonate O,S-Diesters .............................. 416
18.4.17.1.3  Method 3: Rearrangement of O,O-Diaryl Thiocarbonates ....................... 417
18.4.18  Product Subclass 18: Cyclic Thiocarbonate O,S-Diesters ................................... 417
18.4.18.1  Synthesis of Product Subclass 18 .............................................................. 417
18.4.18.1.1  Method 1: Addition to Carbonyl Equivalents ......................................... 417
18.4.18.1.1  Variation 1: Coupling Using 1,1'-Carbonyldiimidazole ............................ 418
18.4.18.1.2  Variation 2: Hydrolysis of Ammonium Salts .......................................... 419
18.4.18.1.2  Method 2: Addition to Carbon Monoxide ............................................. 420
18.4.18.1.3 Method 3: Rearrangements ........................................ 420
18.4.18.1.3.1 Variation 1: Isomerization of Thiocarbonate O,O-Diesters ........ 421
18.4.19 Product Subclass 19: Thiocarbonate O,S-Diester S-Oxides and S,S-Dioxides 421
18.4.19.1 Synthesis of Product Subclass 19 ........................................ 421
18.4.20 Product Subclass 20: Carboxylic Thiocarbonic Anhydride S-Esters ........ 422
18.4.20.1 Synthesis of Product Subclass 20 ........................................ 422
18.4.20.1.1 Method 1: Addition of Acids to Chlorothioformate S-Esters .......... 422
18.4.20.1.2 Method 2: Addition of O-Metal Thiocarbonate S-Esters to Acid Chlorides 423
18.4.20.2 Applications of Product Subclass 20 in Organic Synthesis ................ 423
18.4.20.2.1 Method 1: Macrolactonization of Hydroxy Acids .................... 423
18.4.21 Product Subclass 21: Carbamic Thiocarbonic Anhydride S-Esters .......... 424
18.4.21.1 Synthesis of Product Subclass 21 ........................................ 424
18.4.22 Product Subclass 22: O-Amino Thiocarbonate S-Esters .......................... 424
18.4.22.1 Synthesis of Product Subclass 22 ........................................ 424
18.4.23 Product Subclass 23: S-Acyl Thiocarbonate O-Esters ...................... 425
18.4.23.1 Synthesis of Product Subclass 23 ........................................ 425
18.4.24 Product Subclass 24: Bis(alkoxycarbonyl) Sulfides .......................... 425
18.4.24.1 Synthesis of Product Subclass 24 ........................................ 425
18.4.25 Product Subclass 25: S-(Imidocarbonyl) Thiocarbonate O-Esters ........... 426
18.4.25.1 Synthesis of Product Subclass 25 ........................................ 426
18.4.26 Product Subclass 26: Alkoxycarbonyl Thiocyanates .......................... 426
18.4.26.1 Synthesis of Product Subclass 26 ........................................ 426
18.4.27 Product Subclass 27: S-Halo Thiocarbonate O-Esters ...................... 427
18.4.27.1 Synthesis of Product Subclass 27 ........................................ 427
18.4.27.1.1 Method 1: Addition of Alcohols to Thioformate Derivatives .......... 427
18.4.27.1.2 Method 2: Halogenation of S-Acyl Thiocarbonate O-Esters .......... 427
18.4.27.2 Applications of Product Subclass 27 in Organic Synthesis ............... 428
18.4.27.2.1 Method 1: Nucleophilic Displacement of Thiol Derivatives .......... 428
18.4.28 Product Subclass 28: S-Sulfanyl Derivatives of Thiocarbonate O-Esters ...... 429
18.4.28.1 Synthesis of Product Subclass 28 ........................................ 429
18.4.28.1.1 Method 1: Disulfides and Trisulfides by Addition to S-Substituted Chlorothioformates 429
18.4.28.1.2 Method 2: Addition of Sodium Thiosulfate to Chloroformates ........ 430
18.4.28.1.3 Method 3: Oxidation of Alkoxycarbonyl Alkyl Disulfides .......... 430
18.4.28.1.4 Method 4: Rearrangements ........................................ 431
18.4.29 Product Subclass 29: S-Amino Thiocarbonate O-Esters ........................ 432
18.4.29.1 Synthesis of Product Subclass 29 ........................................ 432
18.4.30 Product Subclass 30: Acyclic Dithiocarbonate S,S-Diesters .................................. 432
18.4.30.1 Synthesis of Product Subclass 30 ................................................................. 432
18.4.30.1.1 Method 1: Addition of Thiols to Chlorothioformate S-Esters ...................... 432
18.4.30.1.2 Method 2: Activation of O-Metal Thiocarbonate S-Esters ....................... 433
18.4.30.1.3 Method 3: Rearrangement of Dithiocarbonate O,S-Diesters .................... 433
18.4.30.1.3.1 Variation 1: Isomerization Using Acids .............................................. 434
18.4.30.1.3.2 Variation 2: Isomerization Using Bases ............................................. 434
18.4.30.1.3.3 Variation 3: [3,3]-Sigmatropic Rearrangement ..................................... 434
18.4.31 Product Subclass 31: Cyclic Dithiocarbonate S,S-Diesters .................................. 435
18.4.31.1 Synthesis of Product Subclass 31 ................................................................. 435
18.4.31.1.1 Method 1: Addition of Dithiols/Dithiones to the Carbonyl Group .......... 435
18.4.31.1.2 Method 2: Oxidation of Cyclic Trithiocarbonates .................................. 436
18.4.31.1.2.1 Variation 1: Conversion of Thiones into Carbonyl Compounds Using Oxiranes .......................................................... 436
18.4.31.1.3 Method 3: Halocyclization of S-Allyl Dithiocarbonate O-Esters ............ 436
18.4.31.1.4 Method 4: Acid-Catalyzed Cyclization of O-Alkyl S-(2-Oxoalkyl) Dithiocarbonates ................................................................. 437
18.4.31.1.5 Method 5: Cycloaddition of Dithiocarbonate O,S-Diesters with Alkynes ................................................................. 438
18.4.31.1.6 Method 6: Isomerization of Dithiocarbonate O,S-Diesters .................... 438
18.4.32 Product Subclass 32: Dithiocarbonate S,S-Diester S-Oxides .............................. 438
18.4.32.1 Synthesis of Product Subclass 32 ................................................................. 438
18.4.33 Product Subclass 33: S-Acyl Dithiocarbonate S-Esters ....................................... 439
18.4.33.1 Synthesis of Product Subclass 33 ................................................................. 439
18.4.34 Product Subclass 34: S,S-Bis[(dialkylamino)thiocarbonyl] Dithiocarbonates ............. 439
18.4.34.1 Synthesis of Product Subclass 34 ................................................................. 439
18.4.35 Product Subclass 35: (Alkylsulfanyl)carbonyl Thiocyanates ............................ 440
18.4.35.1 Synthesis of Product Subclass 35 ................................................................. 440
18.4.36 Product Subclass 36: S-Sulfanyl Derivatives of Dithiocarbonate S-Esters ............... 440
18.4.36.1 Synthesis of Product Subclass 36 ................................................................. 440
18.4.37 Product Subclass 37: Acyclic Selenocarbonate O,Se-Diesters ............................ 441
18.4.37.1 Synthesis of Product Subclass 37 ................................................................. 441
18.4.37.1.1 Method 1: Selenation of Tellurocarbonate O,Te-Diesters ....................... 441
18.4.37.1.2 Method 2: Addition of Selenols to Chloroformates ............................... 441
18.4.37.1.2.1 Variation 1: Reaction with (Arylselanyl)magnesium Bromides ........... 442
18.4.37.1.2.2 Variation 2: Synthesis from Diselenides ............................................ 442
18.4.37.1.2.3 Variation 3: Synthesis Using 1,1'-Carbonyldimidazole ....................... 442
18.4.37.1.3 Method 3: Palladium-Catalyzed Coupling of Selenides with Chloroformates ................................................................. 443
18.4.37.2 Applications of Product Subclass 37 in Organic Synthesis ...................... 443
18.4.37.2.1 Method 1: Formation of γ- and δ-Lactones .......................................... 443
18.4.38 Product Subclass 38: Cyclic Selenocarbonate \( O,Se \)-Diesters .......................... 444
18.4.38.1 Synthesis of Product Subclass 38 ........................................ 444
18.4.39 Product Subclass 39: Bis(alkoxycarbonyl) Selenides ................................. 445
18.4.39.1 Synthesis of Product Subclass 39 ........................................ 445
18.4.40 Product Subclass 40: Cyclic Selenothiocarbonate \( S,Se \)-Diesters .................. 445
18.4.40.1 Synthesis of Product Subclass 40 ........................................ 445
18.4.41 Product Subclass 41: Acyclic Diselenocarbonate \( Se,Se \)-Diesters .................. 446
18.4.41.1 Synthesis of Product Subclass 41 ........................................ 446
18.4.42 Product Subclass 42: Cyclic Diselenocarbonate \( Se,Se \)-Diesters .................. 446
18.4.42.1 Synthesis of Product Subclass 42 ........................................ 446
18.4.43 Product Subclass 43: Acyclic Tellurocarbonate \( O,Te \)-Diesters ..................... 446
18.4.43.1 Synthesis of Product Subclass 43 ........................................ 446
18.4.44 Product Subclass 44: Bis(alkoxycarbonyl) Tellurides ................................. 446
18.4.44.1 Synthesis of Product Subclass 44 ........................................ 446

18.5 Product Class 5: Polymeric Carbonic Acids and Esters, and Their Sulfur Analogues
S. C. Moratti and Y. C. Charalambides

18.5 Product Class 5: Polymeric Carbonic Acids and Esters, and Their Sulfur Analogues .......... 451
18.5.1 Product Subclass 1: Polycarbonates ................................................. 451
18.5.1.1 Synthesis of Product Subclass 1 ............................................. 452
18.5.1.1.1 Method 1: Diol Addition to Carbonic Acid Derivatives .................. 452
18.5.1.1.1.1 Variation 1: Condensation of Phosgene and Diphenols ............... 452
18.5.1.1.1.2 Variation 2: Condensation of Diaryls with Diaryl and Dialkyl Carbonates .......... 453
18.5.1.1.1.3 Variation 3: Direct Condensation of Diols with Carbon Dioxide .......... 453
18.5.1.1.4 Variation 4: Copolymerization of Epoxides with Carbon Dioxide .......... 454
18.5.1.1.2 Method 2: Ring-Opening Polymerization .................................. 455
18.5.1.1.2.1 Variation 1: Ring-Opening Polymerization of Cyclic Carbonates .......... 455
18.5.1.1.2.2 Variation 2: Ring-Opening Polymerization of Cyclic Spiroorthocarbonates 456
18.5.1.1.3 Method 3: Coupling of Diphenols with Carbon Monoxide ............... 456
18.5.2 Product Subclass 2: Polythiocarbonates ............................................. 457
18.5.2.1 Synthesis of Product Subclass 2 ............................................. 457
18.5.2.1.1 Method 1: Condensation of Phosgene with Dithiols ..................... 457
18.5.2.1.2 Method 2: Ring-Opening Polymerization .................................. 458
Product Class 6: Acyclic and Cyclic Carbamic Acids and Esters, and Their Sulfur, Selenium, Tellurium, and Phosphorus Analogues

18.6 Product Subclass 1: Carbamic Acids and Derivatives

18.6.1 Synthesis of Product Subclass 1

18.6.1.1 Method 1: Reaction of Amines with Carbon Dioxide

18.6.1.2 Synthesis of Metal Carbamates

18.6.1.2.1 Method 1: Reaction of Ammonium Carbamates with Alkali Metals

18.6.1.2.1 Method 1: Synthesis of Amides from Alkylammonium Carbamates

18.6.1.2 Applications of Product Subclass 1 in Organic Synthesis

18.6.1.3 Synthesis of Product Subclass 2

18.6.1.3.1 Method 1: Reaction with Alcohols Using Phosgene

18.6.1.3.2 Method 2: Reaction with Carbonates

18.6.1.3.2 Variation 1: With Organic Carbonates

18.6.1.3.2 Variation 2: With Alkyl and Aryl Isopropenyl and \( \alpha \)-Methoxyvinyl Carbonates

18.6.1.3.3 Variation 3: Other Noncatalyzed Reactions with Organic Carbonates

18.6.1.3.4 Variation 4: Reaction of Aromatic Amines with Organic Carbonates

18.6.1.3.5 Variation 5: Reaction with Inorganic Carbonates

18.6.1.3.6 Variation 6: Reaction with Ammonium Carbonates and Ammonium Hydrogen Carbonates

18.6.1.3.7 Variation 7: Reaction with Organic Dicarbonates

18.6.1.3.8 Variation 8: Enzyme-Catalyzed Reactions with Organic Carbonates

18.6.1.3.9 Variation 9: Solid-Phase Reaction of Amines with Organic Carbonates

18.6.1.3.10 Method 3: Reaction with Haloformates

18.6.1.3.11 Variation 1: Reaction with In Situ Generated Haloformates

18.6.1.3.12 Variation 2: Reaction of Tertiary Amines with Haloformates

18.6.1.3.13 Method 4: Reaction with Carbon Dioxide

18.6.1.3.14 Variation 1: Base-Catalyzed Reaction with Carbon Dioxide

18.6.1.3.14 Variation 2: Base-Catalyzed Reaction with Carbon Dioxide on a Solid Phase

18.6.1.3.14 Variation 3: Metal-Catalyzed Reaction with Carbon Dioxide

18.6.1.3.14 Variation 4: Via Ammonium Carbamates by Reaction of Amines and Carbon Dioxide

18.6.1.3.14 Variation 5: Reaction with Supercritical Carbon Dioxide

18.6.1.3.14 Method 5: Reaction with Carbonyl Sulfide

18.6.1.3.14 Method 6: Reaction with Ureas and Alcohols

18.6.1.3.14 Method 7: Metal-Catalyzed Carboxylation Using Carbon Monoxide
Method 8: Oxidative Alkoxycarbonylation of Amines .......................... 496

Variation 1: Homogeneous Oxidative Alkoxycarbonylation .................. 496

Variation 2: Heterogeneous Oxidative Alkoxycarbonylation .................. 497

Variation 3: Oxidative Alkoxycarbonylation of Tertiary Amines .............. 500

Method 9: Reaction with Alkoxycarbonylazoles and
Alkoxycarbonyltriazoles ...................................................... 500

Variation 1: Selective Reaction of 1,1'-Carbonyldiimidazole with
Amines and Alcohols .......................................................... 502

Method 10: Reaction of Carbamoylimidazolium Salts with
Phenols or Alcohols ............................................................. 503

Synthesis from Ureas ............................................................ 504

Method 1: Reaction with Alcohols ............................................. 504

Variation 1: Metal-Catalyzed Reaction with Alcohols ....................... 505

Variation 2: Acid- and Base-Catalyzed Reaction with Alcohols ............. 506

Method 2: Reaction with Carbon Monoxide .................................. 508

Method 3: Reaction with Organic Carbonates .................................. 509

Method 4: Reaction with Oxiranes ............................................ 510

Synthesis from Cyanates and Isocyanates .................................... 511

Method 1: Reaction of Isocyanates with Alcohols ............................ 511

Variation 1: Synthesis of Unsubstituted Carbamates by Reaction of
Trichloroacetyl Isocyanates with Alcohols ................................ 514

Variation 2: Reaction of Inorganic Cyanates with Alcohols ................ 515

Variation 3: Reaction of Triethylammonium Isocyanate with Alcohols .... 515

Variation 4: Reaction of Inorganic Cyanates with Alcohols and
Alkyl Halides ........................................................................ 516

Variation 5: Reaction of Chlorosulfonyl Isocyanate with Allyl Ethers ...... 518

Synthesis from Carbamoyl Halides .............................................. 518

Method 1: Reaction with Alcohols and Derivatives ............................. 518

Synthesis from Azides .................................................................. 520

Method 1: Reaction with Organic Carbonates and Dicarbonates .......... 520

Variation 1: Reductive Transformation of Azides to
(tert-Butoxycarbonyl)carbamates ............................................. 520

Variation 2: Modified Staudinger Reaction of Azides ........................ 521

Method 2: Reaction with Haloformates ........................................ 522

Synthesis from Amides .................................................................. 523

Method 1: Reaction of Aromatic Amides with Organic Carbonates ....... 523

Method 2: Hofmann Rearrangement of Carboxamides ...................... 524

Variation 1: Hofmann Rearrangement of Carboxamides Mediated by
Bromonium Ion Equivalents ..................................................... 524

Variation 2: Hofmann Rearrangement of Carboxamides Mediated by
Other Systems ........................................................................ 526

Variation 3: Electrochemically Induced Hofmann Rearrangement of
Carboxamides ........................................................................ 528
18.6.2.1.7 Synthesis from Carbamates ................................................................. 529
18.6.2.1.7.1 Method 1: By Transesterification .................................................. 529
18.6.2.1.7.1.1 Variation 1: Reaction with Alcohols ........................................... 529
18.6.2.1.7.1.2 Variation 2: Reaction via Silyl Carbamates ............................... 532
18.6.2.1.7.1.3 Variation 3: Transesterification on a Solid Phase ....................... 533
18.6.2.1.7.2 Method 2: By N-Alkylation ............................................................ 534
18.6.2.1.7.2.1 Variation 1: Reaction with Alkyl Halides and Base .................. 534
18.6.2.1.7.2.2 Variation 2: Reaction with Amines ......................................... 535
18.6.2.1.7.2.3 Variation 3: Reaction with Alkenes ....................................... 536
18.6.2.1.7.2.4 Variation 4: Reaction with Aldehydes and Aromatic Compounds .... 537
18.6.2.1.8 Synthesis by Other Methods ............................................................. 538
18.6.2.1.8.1 Method 1: Curtius Rearrangement of Carboxylic Acids and Derivatives .... 538
18.6.2.1.8.2 Method 2: Reductive Carbonylation of Aromatic Nitro Compounds .... 539
18.6.2.1.8.2.1 Variation 1: Metal-Catalyzed Reductive Carbonylation of Aromatic Nitro Compounds .................................................. 539
18.6.2.1.8.2.2 Variation 2: Selenium-Catalyzed Carbonylation of Aromatic Nitro Compounds .................................................. 543
18.6.2.1.8.2.3 Variation 3: Palladium-Catalyzed Reductive Carbonylation of Nitrobenzene .................................................. 544
18.6.2.1.8.3 Method 3: Reaction of Cyanogen Chloride with Alcohols .............. 545
18.6.2.1.8.4 Method 4: Ene Reaction of Alkenes with Diethyl Azodicarboxylate .... 546
18.6.2.1.8.5 Method 5: Carbamates from O-Alkyl and S-Alkyl Thiocarbamates .... 547
18.6.2.2 Applications of Product Subclass 2 in Organic Synthesis .................. 549
18.6.2.2.1 Method 1: Synthesis of Isocyanates .............................................. 549
18.6.2.2.2 Method 2: Reaction of Carbamates with Carbonyl Compounds and Derivatives .................................................. 550
18.6.2.2.3 Method 3: Synthesis of Amines from Carbamates .......................... 551
18.6.2.2.4 Method 4: Synthesis of Ureas from Carbamates ............................ 553
18.6.2.2.4.1 Variation 1: Diiodosilane-Mediated Synthesis of Ureas from Carbamates .... 553
18.6.3 Product Subclass 3: Cyclic Carbamates .................................................. 554
18.6.3.1 Synthesis of Product Subclass 3 .......................................................... 555
18.6.3.1.1 Synthesis from Amino Alcohols ..................................................... 555
18.6.3.1.1.1 Method 1: Reaction with Phosgene, Trichloromethyl Chloroformate, and Bis(trichloromethyl) Carbonate .................................................. 555
18.6.3.1.1.2 Method 2: Reaction with Organic Carbonates ............................. 559
18.6.3.1.1.2.1 Variation 1: Reaction with Alkylammonium Carbonates ............ 560
18.6.3.1.1.2.2 Variation 2: Reaction with Organic Dicarbonates ..................... 561
18.6.3.1.1.2.3 Variation 3: Reaction with Polymer-Supported Carbonate ........ 562
18.6.3.1.1.3 Method 3: Reaction with Ureas .................................................. 563
18.6.3.1.1.4 Method 4: Reaction with Carbon Dioxide .................................. 563
18.6.3.1.1.4.1 Variation 1: Electrochemical Reaction with Carbon Dioxide ........ 564
18.6.3.1.1.5 Method 5: Reaction with Carbon Monoxide ................................ 565
18.6.3.1.1.6 Method 6: Reaction with Trihaloacetic Acid Derivatives ............... 566
18.6.3.1.1.7 Method 7: Reaction with Isocyanates ........................................ 567
18.6.3.1.8 Method 8: Reaction with 1,1′-Carbonyldiimidazole ...................................... 568
18.6.3.1.2 Synthesis from Cyclic Carbonates .......................................................... 569
18.6.3.1.2.1 Method 1: Reaction with Isocyanates .................................................. 569
18.6.3.1.2.2 Method 2: Reaction with Aromatic Amines ......................................... 570
18.6.3.1.2.3 Method 3: Reaction with Formamide and with Ammonium Carbonate
and Potassium Cyanide ............................................................................... 571
18.6.3.1.3 Synthesis from Oxiranes ................................................................. 571
18.6.3.1.3.1 Method 1: Reaction with Isocyanates .................................................. 571
18.6.3.1.3.1.1 Variation 1: Reaction with 1,3,5-Triazinane-2,4,6-trione .................. 573
18.6.3.1.3.1.2 Variation 2: Reaction with Isothiocyanates ....................................... 574
18.6.3.1.3.2 Method 2: Reaction with Carbamates .............................................. 575
18.6.3.1.3.3 Method 3: Reaction of 2-(Aminomethyl)oxiranes with Carbon Dioxide .. 575
18.6.3.1.4 Synthesis from Carbamates ..................................................................... 576
18.6.3.1.4.1 Method 1: Cyclization of Carbamates .............................................. 576
18.6.3.1.4.1.1 Variation 1: Pyrolytic Cyclization of Carbamates ............................. 576
18.6.3.1.4.1.2 Variation 2: Cyclization of Hydroxycarbamates and Derivatives ........ 577
18.6.3.1.4.1.3 Variation 3: 4-Toluenesulfonyl Chloride Mediated Cyclization of
N-tert-Butyloxycarbonyl Derivatives of β-Amino Alcohols ............................ 578
18.6.3.1.4.1.4 Variation 4: Cyclization of N-Substituted β-Chloroethyl Carbamates .. 579
18.6.3.1.4.1.5 Variation 5: Cyclization via Silyl Carbamates .................................. 580
18.6.3.1.4.1.6 Variation 6: Cyclization of Unsaturated Carbamates ..................... 581
18.6.3.1.4.2 Method 2: Reaction with Alkenes ..................................................... 582
18.6.3.1.4.3 Method 3: Reaction with α-Halo Carbonyl Compounds ....................... 582
18.6.3.1.5 Synthesis from Unsaturated Compounds ........................................ 583
18.6.3.1.5.1 Method 1: Reaction of Terminal Alkynyl Alcohols with Isocyanates .... 583
18.6.3.1.5.2 Method 2: Reaction of Terminal Alkynyl Alcohols with Amines and
Carbon Dioxide ............................................................................. 584
18.6.3.1.5.3 Method 3: Reaction of Unsaturated Amines with Carbon Dioxide ...... 585
18.6.3.1.5.3.1 Variation 1: Reaction of Allylamines and Homoallylamines with
Carbon Dioxide ............................................................................. 585
18.6.3.1.5.3.2 Variation 2: Reaction of Propargylamines with Carbon Dioxide ......... 586
18.6.3.1.6 Synthesis from Aziridines ........................................................................ 587
18.6.3.1.6.1 Method 1: Reaction with Carbon Dioxide .......................................... 587
18.6.3.1.6.2 Method 2: Reaction with Organic Dicarbonates .................................. 588
18.6.3.1.7 Synthesis by Other Methods ................................................................. 589
18.6.3.1.7.1 Method 1: One-Pot Synthesis of Oxazolidin-2-ones from Amino Acids 589
18.6.3.1.7.2 Method 2: Hofmann-Type Rearrangement of Hydroxy Amides .......... 592
18.6.3.1.7.3 Method 3: Curtius Rearrangement of β-Hydroxy Acids ....................... 593
18.6.3.1.7.4 Method 4: Reaction of β-Aminoalkylsulfuric Acids with
Inorganic Carbonates ............................................................................. 593
18.6.3.1.7.5 Method 5: Synthesis of 1,3-Oxazetidin-2-ones ..................................... 594
18.6.3.1.7.5.1 Variation 1: Reaction of Halo Ketones with Isocyanates ................... 594
18.6.3.1.7.5.2 Variation 2: Hydrolysis of Halo Isocyanates ...................................... 595

Product Class 8: Acyclic and Cyclic Ureas
G. Sartori and R. Maggi

Product Subclass 1: Unfunctionalized Ureas

Synthesis of Product Subclass 1

Method 1: From Phosgene

Method 2: From Ureas and Thioureas

Variation 1: From Cyclic Ureas by N-Alkylation

Variation 2: From N-(ω-Functionalized) Ureas

Variation 3: Transamidation of Ureas

Variation 4: By Reaction with Bifunctional Compounds

Variation 5: Reductive N-Alkylation of Ureas

Variation 6: By Three-Component Reaction with Aldehydes and \( \beta \)-Dicarboxyl Compounds (Biginelli Reaction)

Variation 7: Transformation of Thioureas

Method 3: From Isoureas by Isomerization

Method 4: From Isocyanates

Variation 1: By Reaction with Amines or Imines

Variation 2: By Reaction with Azirines and Aziridines

Variations 3: Miscellaneous Reactions

Method 5: From Carbon Dioxide

Method 6: From Carbon Monoxide

Method 7: From Alkyl Carbonates and Dithiocarbonates

Variation 1: Reaction of Amines with Dimethyl Carbonate, Diethyl Carbonate, and Bis(4-nitrophenyl) Carbonate

Variation 2: Reaction of Amines with Di-\( \text{\textsuperscript{tert}} \)-butyl Dicarbonate

Variation 3: Reaction of Amines with Bis(trichloromethyl) Carbonate (Triphosgene)

Variation 4: Reaction of Amines with Dithiocarbonates

Method 8: From Carbamates or Thio carbamates

Variation 1: By Reaction with Amines

Variation 2: By Reaction with Imines

Variations 3: Miscellaneous Reactions

Method 9: From \( \alpha \)-Aminoarenecarboxylic Acid Derivatives

Methods 10: Miscellaneous Reactions

Product Subclass 2: \( \text{\textsuperscript{N}} \)-Haloureas

Synthesis of Product Subclass 2

Product Subclass 3: \( \text{\textsuperscript{N}} \)-Hydroxyureas

Synthesis of Product Subclass 3

Method 1: By Reaction of Phenyl (Phenoxy carbonyloxy) carbamates with Ammonia

Method 2: From Isocyanates and Hydroxylamine Derivatives

18.8.16 Product Subclass 16: $N$-Carbamimidoylureas .................................................. 734
18.8.16.1 Synthesis of Product Subclass 16 ............................................................ 734
18.8.17 Product Subclass 17: $N$-(Iminomethyl)ureas .............................................. 735
18.8.17.1 Synthesis of Product Subclass 17 ............................................................ 735
18.8.18 Product Subclass 18: 1,2,4-Oxadiazolidin-3-ones, 1,2,4-Thiadiazolidin-3-ones, 1,2,4-Triazolidinones, and 1,2,4-Triazolones ........................................ 736
18.8.18.1 Synthesis of Product Subclass 18 ............................................................ 736
18.8.19 Product Subclass 19: 1,3,5-Oxadizacin-4-ones, 1,3,5-Thiazidiazin-4-ones, 1,3,5-Triazon-2-ones, and 1,2,4-Triazin-3-ones ........................................... 741
18.8.19.1 Synthesis of Product Subclass 19 ............................................................ 741
18.8.20 Product Subclass 20: 1,3,5-Oxadizacin-4,6-diones, 1,3,5-Thiazidiazin-4,6-diones, 1,3,5-Triazon-4,6-diones, 1,2,4-Triazin-3,5-diones, and 1,2,4-Triazin-3,6-diones ........................................ 747
18.8.20.1 Synthesis of Product Subclass 20 ............................................................ 747
18.8.21 Product Subclass 21: Tetrazinones ............................................................. 751
18.8.21.1 Synthesis of Product Subclass 21 ............................................................ 751

18.9 Product Class 9: Polymeric Ureas and Their Phosphorus Analogues
G. Guichard

18.9.1 Product Subclass 1: Polyisocyanates (1-Nylons) ........................................ 760
18.9.1.1 Synthesis of Product Subclass 1 ............................................................. 760
18.9.1.1.1 Method 1: By Anionic Polymerization of Monoisocyanates ............. 760
18.9.1.1.1 Variation 1: Living Anionic Polymerization ..................................... 764
18.9.1.1.2 Method 2: By Living Polymerization Using Organotitanium(IV) Catalysts 765
18.9.1.1.3 Method 3: By Anionic Cyclopolymerization of Diisocyanates and Triisocyanates ................................................................. 767
18.9.1.1.3 Variation 1: Through Organotitanium(IV)-Catalyzed Cyclopolymerization of 1,2-Diisocyanates ................................................... 769
18.9.2 Product Subclass 2: Polyisocyanurates ....................................................... 770
18.9.2.1 Synthesis of Product Subclass 2 ............................................................. 771
18.9.2.1.1 Method 1: Isocyanatoisocyanurates by Partial Trimerization of Polyisocyanates ................................................................. 771
18.9.2.1.1 Variation 1: Poly(urethane isocyanurate) Foams from Diisocyanates and Polyols ................................................................. 773
18.9.3 Product Subclass 3: Polyurylenes, Polysemicarbazides, and Polybiurets .... 774
18.9.3.1 Synthesis of Product Subclass 3 ............................................................. 774
18.9.3.1.1 Method 1: Polyurylenes: Reaction of Diisocyanates with Hydrazine .... 774
18.9.3.1.1 Variation 1: Reaction of a Diisocyanate or a Diisothiocyanate with Piperazine-1,4-diamine: Polysemicarbazides and Polythiosemicarbazides ................................................. 774

18.9.3.1.2 Method 2: Polybiurets: Reaction of Diisocyanates with Primary Amines or O-Benzylhydroxylamine ......................................................... 775

18.9.3.1.2.1 Variation 1: Reaction of Polyisocyanates with Polyalkylene Polyureas .... 776

18.9.4 Product Subclass 4: Poly[4(5)-iminoimidazolidine-2,5(4)-diones] and Poly(imidazolidine-2,4,5-triones) .......................................................... 777

18.9.4.1 Synthesis of Product Subclass 4 .......................................................... 777

18.9.4.1.1 Method 1: Poly(iminoimidazolidinediones) and Poly(imidazolidine-2,4,5-triones) from Diisocyanates and Hydrogen Cyanide ... 777

18.9.4.1.1.1 Variation 1: From Diisocyanates and Bis[(cyanocarbonyl)amino] Derivatives ............................................................................................ 780

18.9.4.1.2 Method 2: Poly(imidazolidine-2,4,5-triones) from Diisocyanates and (Arylenediimino)bis(oxoacetate) Diesters ........................................ 781

18.9.4.1.3 Method 3: From Polycarbodiimides and Oxalyl Chloride .................... 782

18.9.4.1.4 Method 4: From Polyureas and Oxalyl Chloride ............................. 783

18.9.5 Product Subclass 5: Polyhydantoins and Poly(iminoimidazolidinones) .... 783

18.9.5.1 Synthesis of Product Subclass 5 .......................................................... 784

18.9.5.1.1 Method 1: From Diisocyanates and Bis(alkyl glycinates) .................... 784

18.9.5.1.1.1 Variation 1: Poly(iminoimidazolidinones) from N,N'-Bis(1-cyanocycloalkyl) Diamines and Diisocyanates .................................................. 786

18.9.5.1.2 Method 2: From Bishydantoins and Formaldehyde .......................... 787

18.9.6 Product Subclass 6: Polyhydouracils and Poly(quinazolinediones) ........ 788

18.9.6.1 Synthesis of Product Subclass 6 .......................................................... 788

18.9.6.1.1 Method 1: Polyhydouracils by Cyclization of 2-(Methoxycarbonyl)ethyl-Substituted Polyureas ......................................................... 788

18.9.6.1.2 Method 2: Poly(quinazolinediones) from Aromatic Diisocyanates and Bisanthranilic Acids ................................................................. 789

18.9.7 Product Subclass 7: Urea–Formaldehyde Resins ...................................... 790

18.9.7.1 Synthesis of Product Subclass 7 .......................................................... 791

18.9.7.1.1 Method 1: By Reaction of Urea with Formaldehyde .......................... 791

18.9.8 Product Subclass 8: Polyureas and Copolyureas ..................................... 793

18.9.8.1 Synthesis of Product Subclass 8 .......................................................... 794

18.9.8.1.1 Method 1: By Polyaddition of Diamines and Diisocyanates ............... 794

18.9.8.1.1.1 Variation 1: Hyperbranched Polymers from Diaminophenyl Isocyanate Monomers ............................................................. 797

18.9.8.1.2 Method 2: By Reaction of Diamines with Carbon Dioxide ............... 798

18.9.8.1.2.1 Variation 1: By Reaction of Diamines with Phosgene .................... 799

18.9.8.1.2.2 Variation 2: By Reaction of Diamines with Urea .......................... 800

18.9.8.1.2.3 Variation 3: By Reaction of Diamines with Dicarbonates .......... 801

18.9.8.1.2.4 Variation 4: By Reaction of Diamines with Diurethanes ............ 802
Method 3: By Reaction of Polyisocyanates with Water .................. 802
Method 4: By Cationic Ring-Opening Polymerization of Polycyclic Pseudoureas ............................................... 803
Method 5: Poly(N,N'-diacyureas) by Polyaddition of Diamides to Bis(N-acyl isocyanates) .................................................... 805
Applications of Product Subclass 8 in Organic Synthesis .................. 806
Method 1: Hydrogenation and Hydrogen-Transfer Reduction .......... 806
Method 2: Polyurea-Encapsulated Palladium as a Catalyst .......... 807
Product Subclass 9: Short-Chain Oligomers ............................ 808
Synthesis of Product Subclass 9 ........................................... 808
Method 1: N,N'-Linked Oligoureas: Sequential Reaction of 1-Substituted 2-Phthalimidoethyl Isocyanates ...................... 808
Variation 1: Sequential Reaction of Activated Carbamates Derived from Monoprotected Diamines ....................... 810
Variation 2: Sequential Reaction of N-(2-Nitrobenzenesulfonyl)-imidazolidinone ............................................ 811
Method 2: Azatides: Sequential Reaction of Activated N-Protected N-Alkylhydrazines .............................................. 812
Product Subclass 10: Organophosphorus Polymers ..................... 814
Synthesis of Product Subclass 10 ......................................... 814
Method 1: Condensation Reaction between Diisocyanates and Substituted Phosphines and Phosphate Oxides .......... 814
Product Class 10: Thiocarbonic Acids and Derivatives S. Sato and N. Furukawa
Product Class 10: Thiocarbonic Acids and Derivatives ................. 821
Product Subclass 1: Thiocarbonyl Dihalides ............................ 821
Synthesis of Product Subclass 1 ......................................... 821
Method 1: Synthesis of Thiocarbonyl Difluoride ...................... 821
Method 2: Synthesis of Thiophosgene .................................. 822
Method 3: Synthesis of Thiocarbonyl Dibromide ...................... 823
Method 4: Synthesis of Thiocarbonyl Diiodide ......................... 824
Method 5: Synthesis of Thiocarbonyl Chloride Fluoride ............... 824
Method 6: Synthesis of Thiocarbonyl Bromide Fluoride ............... 825
Applications of Product Subclass 1 in Organic Synthesis .......... 825
Product Subclass 2: Dihalosulfines (Thiocarbonyl Dihalide S-Oxides) 826
Synthesis of Product Subclass 2 ......................................... 826
Method 1: Synthesis of Difluorosulfine ................................ 826
Method 2: Synthesis of Dichlorosulfine ................................ 826
Method 3: Synthesis of Dibromosulfine ................................ 827
Method 4: Synthesis of Chlorofluorosulfine ............................ 827
18.10.3 Product Subclass 3: Halothioformate O-Esters (Carbonohalidothioate O-Esters) ........................................... 828
18.10.3.1 Synthesis of Product Subclass 3 ........................................ 829
18.10.3.1.1 Method 1: From Thiocarbonyl Dihalides and Alcohols and Phenols 829
18.10.3.1.2 Method 2: From Bis(alkoxythiocarbonyl) Disulfide and Sulfuryl Chloride  or Chlorine 832
18.10.3.1.3 Methods 3: Miscellaneous Methods 833
18.10.3.2 Applications of Product Subclass 3 in Organic Synthesis 834
18.10.4 Product Subclass 4: Halodithioformates and Halothioselenoformate Se-Esters ........................................ 834
18.10.4.1 Synthesis of Product Subclass 4 ........................................... 835
18.10.4.1.1 Method 1: From Alkali Metal Chlorodithioformates and Alkyl Iodides 835
18.10.4.1.2 Method 2: Halogen Substitution of Thiocarbonyl Dihalides with Thiolates and Selenolates 836
18.10.4.1.3 Method 3: From Carbon Disulfide 838
18.10.4.1.4 Method 4: By Halogen Exchange 839
18.10.5 Product Subclass 5: Thiocarbonate O,O-Diesters ........................................ 839
18.10.5.1 Synthesis of Product Subclass 5 840
18.10.5.1.1 Method 1: From Thiophosgene and Alcohols and Phenols 840
18.10.5.1.1.1 Variation 1: Synthesis of Thiocarbonate O,O-Esters of Sugars 842
18.10.5.1.1.2 Variation 2: By Macrocyclization 844
18.10.5.1.2 Method 2: From Carbon Disulfide 845
18.10.5.1.3 Method 3: From Chlorothioformate O-Esters 846
18.10.5.1.4 Method 4: From 1,1'-Thiocarbonylbisdiazoles 849
